

9 Responses to Comments

9.1 Topical Responses

9.1.1 Topical Response 1 - Aesthetics

In response to various comments received on the Draft EIR, this topical response addresses commonly raised issues regarding aesthetics so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable. The topical response includes a summary of the aesthetics analysis in the Draft EIR and provides further information in response to comments raised on the analyses included in Section 4.1, Aesthetics, of the Draft EIR.

EIR Analysis

The aesthetics analysis in the EIR describes the existing visual character of the Project site and its surroundings, identifies regulatory requirements, evaluates potential impacts, and identifies mitigation measures associated with implementation of the Project, as applicable. The aesthetic impacts of the Project's buildout scenario are discussed in detail in Section 4.1, Aesthetics, of the EIR. As explained in the EIR, in addition to the proposed Specific Plan Area, the Project also includes the establishment of a 445.43-acre Conservation Easement, which primarily consists of undeveloped open space. No new development would occur within the Conservation Easement, and it would provide a buffer of at least 300 feet of open space on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

The EIR identified 16 aesthetic project design features (PDF-AES) that are incorporated in the Specific Plan for the proposed Project. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Using established thresholds based on the 2022 March JPA CEQA Guidelines, Section 4.1.5, Impacts Analysis, in the EIR separately evaluated each component of the proposed Project: the Campus Development, the Park, Infrastructure Improvements, and the Conservation Easement. The Project would result in less than significant impacts associated with the degradation of existing visual character. With implementation of mitigation measure **MM-AES-1**, which requires large construction equipment and vehicles to be screened from public view when not in use, the Project would also result in less than significant impacts related to effects upon a scenic vista. With implementation of **MM-AES-2**, which requires a photometric study as part of the building permit application, and **MM-AES-3**, which requires use of anti-reflective coatings on PV panels, the Project would also result in less than significant impacts related to the creation of a new source of light and/or glare. Further, the Project would not result in cumulatively considerable aesthetics impacts.

Existing Visual Character and Quality and Views/Viewpoints

A number of comments expressed concern about changes to existing visual character from the viewpoints included in the Draft EIR. As explained in the Draft EIR, the proposed Specific Plan Area covers a previously developed area which is currently developed with a non-operational water tower, electrical poles, dirt and partially paved access roads, and 14 bunkers and related structures associated with the prior operations for munitions storage by the Air Force. The remainder of the Project site, which is proposed as the Project's Conservation Easement, is mostly undeveloped open space. The nearest residential area is a single-family residential development within the County of Riverside and City of Riverside and is approximately 300 feet north of the proposed Specific Plan Area.

As shown in Figure 4.1-1, March JPA General Plan – Scenic and Viewshed Areas, of the Draft EIR, the Project site is not a scenic vista. The Project area and its immediate surroundings are mostly flat; however, the San Bernardino

Mountain Range and its foothills are approximately 20 miles to the northeast, and Mount San Jacinto is located to the east of the Project site. Distant views of this terrain are available from the Project site and the Project area. Views toward the Project site and to the mountainous terrain in the broader surrounding area are available from public roadways in the Orangecrest neighborhood (Barton Drive and Dayton Street) and along Camino Del Sol, near Alessandro Boulevard.

As such, the aesthetics analysis identified public viewpoints that warrant detailed consideration in preparation of the Specific Plan. The EIR analyzed these five viewpoints in detail and included photosimulations from each viewpoint in the aesthetics analysis. These viewpoints are:

1. Looking south towards the Project site along Camino Del Sol, near East Alessandro Boulevard;
2. Looking southeast towards the Project site along the corner of Saltcoats Drive and Greenock Way at the terminus of Barton Road;
3. Looking northeast towards the Project site in the Orangecrest neighborhood at the intersection of Deercreek Drive and Grove Community Drive, near the Grove Community Church;
4. Looking north towards the Project site in the Orangecrest neighborhood, along the eastern end of Dayton Street; and
5. Looking northwest towards the Project site in the Orangecrest neighborhood along the western end of Iris Canyon Road.

The five viewpoints identified for the visual analysis are shown in Figure 4.1-2, Key Points Viewpoint Map, of the Draft EIR. The intent of Figure 4.1-2 is to show both the location and elevation from which each of the five existing condition photographs was taken and not to serve as a specific site plan or topographic plan. The Specific Plan Area and the Conservation Easement are shown for informational purposes so that the reader can understand what portion of the Project each viewpoint is capturing. Information about grades and sightlines are included in Appendix B and discussed further below.

Photosimulations

A number of comments expressed concern about the photosimulations prepared for the Project. As explained in the Draft EIR, to visually identify anticipated changes from public viewpoints surrounding the Campus Development, and to specifically identify if the Campus Development would have a substantial adverse effect on a scenic vista, visual simulations were prepared from the five key vantage points discussed above. To prepare the photosimulations, the five viewpoint photographs were used as a base layer in AutoCAD, and the Project buildout scenario was overlaid, including setbacks, height, materials, color palettes, and landscaping consistent with the plant palette and Design Guidelines in the proposed Specific Plan. For ornamental and screening landscaping within the Development Area, a 10-year growth factor was applied to each plant species. Additionally, the photosimulations accounted for the proposed grades within the Campus Development. The five photosimulations are included as Figures 4.1-3 through 4.1-7 in Section 4.1 of the EIR.

As explained in the Draft EIR, the proposed Specific Plan would establish design standards for future development within the Project site. As such, renderings of buildings under the Project buildout scenario used the materials and color palette specified in Chapter 4, Design Guidelines, of the proposed West Campus Upper Plateau Specific Plan, consistent with PDF-AES-1, which requires development to comply with the Specific Plan Design Standards which dictate building heights, setbacks, color palettes and materials intended to minimize visual obstructions and maximize visual compatibility. Specifically, and as explained in the aesthetics analysis, the Campus Development would be characterized by simple and distinct cubic masses with interlocking wall planes, colors, and materials. Exterior building colors would be light and gray tones with use of stone, glass windows, or steel materials. These

design elements would be compatible in character, massing, and materials to existing similar development in the vicinity. Furthermore, building materials used on building exteriors would be similar to building materials incorporated into existing development in the Project vicinity. As explained in the Draft EIR, the proposed Specific Plan would require that future development be similar in design and scale to the adjacent industrial development along the I-215 corridor by incorporating similar architectural design and accents displayed by existing development and through the use of similar building materials.

For reference, the photosimulation included as Figure 4.1-3, Viewpoint No. 1, has been updated. The Figure 4.1-3 included in the Draft EIR utilized a maximum building height of 50 feet as well as an earlier version of the Specific Plan Area site plan where four larger business park buildings would be constructed instead of seven smaller business park buildings. Figure 4.1-3 has been revised in the Final EIR to reflect a 45-foot building height and the construction of smaller-scale buildings under the Project buildout scenario. The updated Figure 4.1-3 is provided in Section 4.1, Aesthetics, of the Final EIR. These changes do not affect the conclusions in the Draft EIR, and impacts would remain less than significant.

Sight Line Sections

A number of comments questioned the relevance of Appendix B to the Draft EIR. Section 4.1, Aesthetics, and Appendix B, Meridian Upper Plateau Sight Line Sections, describe sight line sections that show existing and proposed grades at five sections through the Project site to match the locations of the viewpoints described above. These sections were prepared to demonstrate the general scope of grading required for the Project as well as the elevations of the Specific Plan Area as they relate to the Conservation Easement and neighboring off-site residential areas. They show the topography of the Project at these locations under existing and proposed conditions.

Evaluation of the Project's Aesthetic Impacts on Existing Visual Character and Quality

While some comments questioned the adequacy of the evaluation of the Project's aesthetic impacts, the aesthetics analysis in the EIR is based on established thresholds in compliance with CEQA and based on the 2022 March JPA CEQA Guidelines. Under Threshold AES-2, the Draft EIR analyzed the potential for implementation of the Project buildout scenario to degrade the existing visual character or quality of public views of the site and its surroundings and concluded impacts would be less than significant. Regarding Viewpoint No. 1, the Draft EIR stated that, setbacks, the Conservation Easement, compliance with PDF-AES-1, and landscaping would soften the changes in the view by partially screening Campus Development. The revised photosimulation in Figure 4.1-3 discussed above shows reduced visual impacts from Viewpoint No. 1 with smaller, and shorter, buildings. For Viewpoint No. 2, the Conservation Easement would act as a visual buffer and shrub and tree landscaping would partially screen the Project buildout scenario's Mixed Use buildings. Viewpoint No. 5 would not have any views of the proposed Project. The Draft EIR referenced discussion under Threshold AES-1 for Viewpoints No. 3 and 4.

To provide additional clarification regarding the potential visual impacts of the Project buildout scenario, additional discussion regarding Viewpoint Nos. 3 and 4 has been added to the aesthetics analysis under Threshold AES-2 in Section 4.1, Aesthetics, of the Final EIR. As explained therein, while the existing visual character would change from both viewpoints, setbacks, the Conservation Easement, compliance with **PDF-AES-1**, and landscaping would soften the changes in the view by partially screening Campus Development and retaining views of vegetation and the San Bernardino Mountain foothills. This additional discussion does not affect the conclusions in the Draft EIR, and impacts would remain less than significant.

As explained in the aesthetics analysis in Section 4.1, Aesthetics, the Campus Development would not fully conceal and/or obstruct scenic features from the view of motorists and pedestrians traveling in the Project vicinity, and it would not physically alter or otherwise modify the views of the local hills and mountainous terrain. The bulk and

scale of the Campus Development would be consistent with the surrounding area, the Campus Development would comply with **PDF-AES-1**, and a Conservation Easement would be established around the Specific Plan Area. In addition, setbacks and landscaping would soften the changes in view by partially screening the Campus Development and retaining views of open space and vegetation. As such, potential aesthetic impacts to scenic vistas would be minimized and the Campus Development would not degrade the existing visual character of the Project site. This substantial evidence supports the Draft EIR's conclusion that potential aesthetic impacts to scenic vistas and visual character associated with the Project were determined to be less than significant. The additions and modifications to the text in the EIR presented here do not change the analysis or conclusions in the Draft EIR related to aesthetics. These merely add detail and clarification about the visual impacts of the Project buildout scenario and do not constitute significant new information added to the EIR such that recirculation of the EIR under CEQA Guidelines Section 15088.5 would be required.

9.1.2 Topical Response 2 – Air Quality

Revisions to the EIR Air Quality and Health Risk Assessment Analysis

The Draft EIR was published on January 9, 2023. In response to comments on the Draft EIR, the air quality and GHG project design features and mitigation measures were revised and expanded to incorporate additional feasible mitigation. This included converting project design features PDF-AQ-1 (Tier 4 Final Construction Equipment), PDF-AQ-2 (Construction Budget), and PDF-AQ-3 (Future Site Plans) to mitigation measures.

The Project Air Quality Impact Analysis (AQIA) and Project Health Risk Assessment (HRA) were revised to incorporate, and quantify as applicable, the revised and expanded mitigation measures and, also in response to comments, model emergency generators on each of the 19 Industrial, Business Park and Mixed Use parcels. As part of the Recirculated Draft EIR revisions released for public review on December 2, 2023, Recirculated Section 4.2, Air Quality, the Revised Project AQIA and Revised Project HRA disclosed construction and operational air emission and health risk for the unmitigated and mitigated scenarios. In addition to this updated modeling, Recirculated Section 4.2, Air Quality, included additional information and analysis of potential cumulative impacts. As such, where appropriate, response to comments on the Draft EIR refer to the Recirculated EIR sections.

Additional public comments were received on the Recirculated Draft EIR sections and appendices. In response to these comments, the Project AQIA and Project HRA were updated to clarify the modeled distances of sensitive receptors and Project construction. With regard to operations, the Project HRA modeling was updated to analyze seven business park parcels at the northern end of the Specific Plan Area, for a total of 10 business park buildings. This update resulted in a reduction in health risk in the unmitigated operational scenario and no change in the mitigated operational scenario. The Project HRA is attached to this Final EIR as Appendix C-2. Comments on the Recirculated Draft EIR sections related to air quality impacts are responded to in this Final EIR.

The remainder of this topical response addresses comments raised about the Project’s efforts to reduce air quality impacts in relation to the following California Attorney General advice, regional plans, and mitigation incorporated into other projects:

- Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act – Office of the California Attorney General, September 2022
- South Coast Air Quality Management District (SCAQMD) 2022 Air Quality Management Plan
- U.S. EPA – Mobile Source Pollution: Environmental Justice and Transportation
- World Logistics Center Settlement Agreement Air Quality Measures
- Centerpoint Properties Air Quality Conditions of Approval
- Stockton Mariposa Industrial Complex Air Quality Mitigation Measures
- City of Fontana Ordinance 1891 Air Quality Measures

Project Consistency Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act – Office of the California Attorney General, September 2022

Several comments questioned the Project’s consistency with the Office of the California Attorney General guidance entitled “Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act” (September 2022). The following table identifies the best practices and mitigation measures identified in the guidance and a consistency analysis to determine whether or not, and how, the Project would be consistent with each of the best practices and mitigation measures.

AG's Warehouse Best Practices	Proposed Project
Air Quality and Greenhouse Gas Emissions Mitigation - Construction	
Requiring off-road construction equipment to be hybrid electric-diesel or zero-emission, where available, and all diesel-fueled off-road construction equipment to be equipped with CARB Tier IV-compliant engines or better, and including this requirement in applicable bid documents, purchase orders, and contracts, with successful contractors demonstrating the ability to supply the compliant construction equipment for use prior to any ground-disturbing and construction activities.	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. MM-AQ-3 requires the construction contractor to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible.
Prohibiting off-road diesel-powered equipment from being in the “on” position for more than 10 hours per day.	Consistent. MM-AQ-2 prohibits the operating hours of construction equipment to exceed 8 hours and requires the construction contractor to submit a biweekly log to March JPA to ensure compliance.
Using electric-powered hand tools, forklifts, and pressure washers, and providing electrical hook ups to the power grid rather than use of diesel-fueled generators to supply their power.	Consistent. MM-AQ-3 requires the construction contractor to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible, and to designate an area where such equipment can be charged. MM-AQ-3 further prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.
Designating an area in the construction site where electric-powered construction vehicles and equipment can charge.	Consistent. MM-AQ-3 requires the designation of an area where electric-powered construction vehicles and equipment can be charged.
Limiting the amount of daily grading disturbance area.	Consistent. MM-AQ-2 limits amount of daily grading as follows: During Phase 1, areas of active ground disturbance shall not exceed a maximum of 20 acres per day for Mass Grading and 20 acres per day for Blasting & Rock Handling. During Phase 2, the area of active ground disturbance shall not exceed a maximum of 20 acres per day for Remedial Grading. The construction contractor shall submit a grading log to the March JPA every two weeks documenting acreage graded or equivalent cubic yardage to ensure compliance.
Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.	Not Applicable. The Project would have a less than significant air quality construction impact with the implementation of MM-AQ-1 through MM-AQ-4 . However, to further reduce the Project’s air quality construction impacts, MM-AQ-3 prohibits grading on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 23).
Forbidding idling of heavy equipment for more than three minutes.	Consistent. MM-AQ-3 prohibits construction equipment idling longer than 3 minutes.
Keeping on site and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.	Consistent. MM-AQ-2 requires the construction contractor to submit biweekly construction equipment hours log to the March JPA. In the event alternate equipment is required, the applicant shall provide documentation demonstrating equivalent or reduced

AG's Warehouse Best Practices	Proposed Project
	emissions based on horsepower and hours of operation. MM-AQ-3 requires all construction equipment to be tuned and maintained in accordance with the manufacturer's specifications, with maintenance records on site and available to regulatory authorities upon request.
Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.	Consistent. In addition to the biweekly construction equipment hours log and grading log required by MM-AQ-2 , March JPA's general practice is to conduct regular on-site inspections during construction.
Using paints, architectural coatings, and industrial maintenance coatings that have volatile organic compound levels of less than 10 g/L.	Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the developer's construction plans shall ensure the Project will utilize "Super-Compliant" low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD's Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.
Providing information on transit and ridesharing programs and services to construction employees.	Consistent. MM-AQ-3 requires the construction contractor to provide transit and ridesharing information to on-site construction workers.
Providing meal options on site or shuttles between the facility and nearby meal destinations for construction employees.	Consistent. MM-AQ-3 requires the construction contractor to establish one or more locations for food or catering truck service to construction workers and to cooperate with food service providers to provide consistent food service.
Air Quality and Greenhouse Gas Emissions Mitigation - Operation	
Requiring all heavy-duty vehicles engaged in drayage to or from the project site to be zero-emission beginning in 2030.	Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.
Requiring all on-site motorized operational equipment, such as forklifts and yard trucks, to be zero-emission with the necessary charging or fueling stations provided.	Consistent. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.
Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.	Consistent. MM-AQ-20 requires industrial tenants utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31,

AG's Warehouse Best Practices	Proposed Project
	2030 or when feasible for the intended application, whichever date is later.
Forbidding trucks from idling for more than three minutes and requiring operators to turn off engines when not in use.	Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged and for truck drivers to shut off engines when not in use.
Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the local air district, and the building manager.	Consistent. MM-AQ-17 requires legible, durable, weather-proof signs placed at truck access gates, loading docks, and truck parking areas that identify: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes once the vehicle is stopped, the transmission is set to "neutral" or "park," and the parking brake is engaged; and 3) telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations. One six square foot sign providing this information shall be located on the building between every two dock-high doors and the sign shall be posted in highly visible locations at the entrance gates, semi parking areas, and trailer parking locations.
Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers.	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
Designing all project building roofs to accommodate the maximum future coverage of solar panels and installing the maximum solar power generation capacity feasible.	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
Constructing zero-emission truck charging/fueling stations proportional to the number of dock doors at the project.	Consistent. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support 'clean fleet' charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.
Running conduit to designated locations for future electric truck charging stations.	Consistent. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.
Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the	Consistent. MM-AQ-8 requires that all TRU loading docks provide electrical hookups.

AG's Warehouse Best Practices	Proposed Project
<p>property cannot be used to provide refrigerated warehouse space, constructing electric plugs for electric transport refrigeration units at every dock door and requiring truck operators with transport refrigeration units to use the electric plugs when at loading docks.</p>	
<p>Oversizing electrical rooms by 25% or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability.</p>	<p>Consistent. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support 'clean fleet' charging facilities, including heavy-duty and delivery trucks when these trucks become available.</p>
<p>Constructing and maintaining electric light-duty vehicle charging stations proportional to the number of employee parking spaces (for example, requiring at least 10% of all employee parking spaces to be equipped with electric vehicle charging stations of at least Level 2 charging performance)</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code, which provides charging stations in excess of 10% of employee parking spaces.</p>
<p>Running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations.</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code, which provides additional EV capable parking sites.</p>
<p>Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.</p>	<p>Not Applicable. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project's health risks and determined the Project would result in less than significant human health and cancer risks.</p>
<p>Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.</p>	<p>Not Applicable. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project's health risks and determined the Project would result in less than significant human health and cancer risks.</p>
<p>Requiring all stand-by emergency generators to be powered by a non-diesel fuel.</p>	<p>Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA's satisfaction, that no other back-up energy source(s) are available and sufficient for the building's needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB's Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB's Tier 4 emission standards or have the least emissions.</p>

AG's Warehouse Best Practices	Proposed Project
<p>Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.</p>	<p>Consistent. MM-AQ-22 requires the facility operator to provide information to all tenants, with instructions that the information shall be provided to employees and truck drivers as appropriate, regarding efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.</p>
<p>Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.</p>	<p>Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include:</p> <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
<p>Meeting CALGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code. The Project will comply with the CALGreen Code green building standards, as applicable.</p>
<p>Designing to LEED green building certification standards.</p>	<p>Consistent. MM-AQ-6 requires all buildings to achieve the 2023 LEED Silver certification standards or equivalent, at a minimum.</p>
<p>Providing meal options on site or shuttles between the facility and nearby meal destinations.</p>	<p>Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement a transportation demand management</p>

AG's Warehouse Best Practices	Proposed Project
	program, which would include offering shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees.
Posting signs at every truck exit driveway providing directional information to the truck route.	Consistent. MM-AQ-15 requires signs clearly identifying the approved truck routes installed along the truck routes to and from the project site and within the project site.
Improving and maintaining vegetation and tree canopy for residents in and around the project area.	Consistent. Section 3.5.2 of the proposed Specific Plan requires a 15-foot landscaped setback, measured from the Landscaping and Lighting Maintenance District (LLMD) or the public right-of-way, will be required for all front and side yards adjacent to public streets. Section 4.5 of the proposed Specific Plan outlines the Landscape Design Guidelines, including streetscape landscaping comprised of a combination of evergreen and deciduous trees, low shrubs, and masses of groundcovers to create a visually pleasing experience for pedestrians and passing motorists.
Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.	<p>Consistent. MM-AQ-21 requires the provision of information to employees and truck drivers as appropriate:</p> <ul style="list-style-type: none"> • Building energy efficiency, solid waste reduction, recycling, and water conservation. • Vehicle GHG emissions, electric vehicle charging availability, and alternate transportation opportunities for commuting. • Participation in the Voluntary Interindustry Commerce Solutions (VICS) "Empty Miles" program to improve goods trucking efficiencies. • Health effects of diesel particulates, state regulations limiting truck idling time, and the benefits of minimized idling. • The importance of minimizing traffic, noise, and air pollutant impacts to any residences in the Project vicinity. • Efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants who own, operate, or hire trucking carriers with more than 100 trucks to use carriers that are SmartWay carriers.	Consistent. MM-AQ-20 encourages tenants to become SmartWay partners, if eligible. MM-AQ-8 requires all loading docks to be compatible with SmartWay trucks.
Providing tenants with information on incentive programs, such as the Carl Moyer Program and Voucher Incentive Program, to upgrade their fleets.	Consistent. MM-AQ-19 requires tenants be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.

Project Consistency with SCAQMD 2022 Air Quality Management Plan

Several comments questioned the Project’s consistency with the SCAQMD 2022 Air Quality Management Plan. The following table identifies the components of the SCAQMD 2022 Air Quality Management Plan and provides a consistency analysis to determine whether or not, and how, the Project would be consistent with each component of the SCAQMD 2022 Air Quality Management Plan.

SCAQMD 2022 AQMP	Proposed Project
Appendix IV-A – Stationary and Mobile Source Control Measures	
C-CMB-01: Emissions Reductions From Replacement With Zero Emission or Low NOx Appliances – Commercial Water Heating	Consistent. MM-GHG-4 requires installation of water heaters with an energy factor of .92 or higher.
C-CMB-02: Emissions Reductions From Replacement With Zero Emission or Low NOx Appliances – Commercial Space Heating	Consistent. MM-GHG-4 requires use of heating, ventilation, and air conditioning (HVAC) equipment with a season energy efficiency ratio (SEER) of 14 or higher and energy efficiency ratio [EER] 14/78% annual fuel utilization efficiency [AFUE] or 8 heating seasonal performance factor [HSPF]
C-CMB-04: Emission Reductions from Small Internal Combustion Engines	Consistent. MM-AQ-14 requires use of electric or battery-operated equipment for landscape maintenance. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.
C-CMB-05: NOx Reductions from Small Miscellaneous Commercial Combustion Equipment (Non-permitted)	Consistent. MM-AQ-14 requires use of electric or battery-operated equipment for landscape maintenance. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.
L-CMB-02: Reductions from Boilers and Process Heaters (Permitted)	Consistent. MM-GHG-4 requires installation of water heaters with an energy factor of .92 or higher.
L-CMB-03: NOx Reductions from Permitted Non-Emergency Internal Combustion Engines	Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.
L-CMB-04: Emission Reductions from Emergency Standby Engines (Permitted)	Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA’s satisfaction, that no other back-up energy source(s) are available and sufficient for the building’s needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions.

SCAQMD 2022 AQMP	Proposed Project
CTS-01: Further Emission Reductions from Coatings, Solvents, Adhesives, and Lubricants (VOCs)	Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the developer’s construction plans shall ensure the Project will utilize “Super-Compliant” low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD’s Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.
MOB-03: Emission Reductions at Warehouse Distribution Centers	Consistent. MM-AQ-1, PDF-GHG-1, MM-AQ-1 through MM-AQ-27, and MM-GHG-1 through MM-GHG-12 will reduce emissions from industrial uses at the Project site.
MOB-05: Accelerated Retirement of Older Light-Duty and Medium Duty Vehicles	Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.
MOB-06: Accelerated Retirement of Older On-Road Heavy-Duty Vehicles	Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.
MOB-08: Small Off-Road Engine Equipment Exchange Program	Consistent. MM-AQ-3 requires the construction contractor to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible, and to designate an area where such equipment can be charged. MM-AQ-3 further prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.
MOB-14: Rule 2202 – On-Road Motor Vehicle Mitigation Options	Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include: <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work.

SCAQMD 2022 AQMP	Proposed Project
	<ul style="list-style-type: none"> • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
<p>MOB-15: Zero Emission Infrastructure for Mobile Sources</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.</p>
<p>Appendix IV-B – CARB’s Strategy for South Coast</p>	
<p>Advanced Clean Fleets Regulation</p>	<p>Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>Zero-Emissions Trucks Measure</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>

SCAQMD 2022 AQMP	Proposed Project
Transportation Refrigeration Unit Regulation	Consistent. MM-AQ-8 requires that all TRU loading docks provide electrical hookups.
Cargo Handling Equipment	Consistent. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.
Zero-Emission Standard for Space and Water Heaters	Consistent. MM-GHG-4 requires installation of water heaters with an energy factor of .92 or higher. MM-GHG-4 requires use of heating, ventilation, and air conditioning (HVAC) equipment with a season energy efficiency ratio (SEER) of 14 or higher and energy efficiency ratio [EER] 14/78% annual fuel utilization efficiency [AFUE] or 8 heating seasonal performance factor [HSPF].
On-Road Heavy-Duty Vehicle Low-NOx Engine Standards	Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.
On-Road Heavy Duty Vehicle Zero-Emissions Requirements	Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.
Off-Road Equipment Zero-Emission Standards Where Feasible	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later and to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible. MM-AQ-3 further requires the construction contractor to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible, and to designate an area where electric-powered construction vehicles and equipment can be charged.
Appendix IV-C – SCAG’s Regional Transportation Strategy and Control Measures	
Measure 3.1 – Commute Solutions: The federal Commuter Choice Program provides for benefits that employers can offer to employees to commute to work by methods other than driving alone.	Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include:

SCAQMD 2022 AQMP	Proposed Project
	<ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
<p>Measure 3.3 – Employer Rideshare Program Incentives: Employer rideshare incentives and introduction of strategies designed to reduce single occupant vehicle trips. Implementation includes information systems and marketing. Examples include: employee awareness campaigns, Transportation Management Associations (TMA) membership, alternative work hours, and financial incentives.</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 3.5 – Preferential parking for carpools and vanpools</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 3.9 – Encourage regulated employers to subsidize the cost of transit for employees</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 8.8: Guaranteed ride home</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 9.5: Encourage bicycle travel</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 10.1: Bike racks at work sites</p>	<p>Consistent. See MM-AQ-21 discussion, above.</p>
<p>Measure 10.8: Bicycle lanes on arterial and frontage roads.</p>	<p>Consistent. Project includes bicycle lanes as part of all Project streets.</p>
<p>Measure 11.2: Encourage limitations on vehicle idling</p>	<p>Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use.</p>

Project Consistency with U.S. EPA – Mobile Source Pollution: Environmental Justice and Transportation

Several comments questioned the Project’s consistency with the EPA’s Mobile Source Pollution: Environmental Justice and Transportation guidance. Additionally, comments were received about the environmental justice

impacts on sensitive communities surrounding the Project site. In response to these comments, the following table identifies programs within EPA’s Mobile Source Pollution: Environmental Justice and Transportation guidance and provides a consistency analysis evaluating if, and how, the Project is consistent with the programs.

EPA Program	Proposed Project
<i>New Standards for Medium- and Heavy-Duty Trucks</i>	
<p>“Clean Trucks Plan”: Setting more stringent nitrogen oxide (NOx) standards for heavy duty trucks beginning in model year (MY) 2027.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>“Clean Trucks Plan”: Setting more stringent emissions standards for medium-duty commercial vehicles for MY 2027 and later. This category of vehicles includes many “last mile” delivery vehicles which deliver products to people’s doorsteps every day across the country, and which are rapidly electrifying. These new standards are being proposed in combination with new multipollutant standards for light-duty vehicles for MY 2027 and beyond.</p>	<p>Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>“Clean Trucks Plan”: Setting “Phase 3” Greenhouse Gas standards for heavy-duty vehicles beginning as soon as MY 2027 that are significantly stronger than the existing Phase 2 Greenhouse Gas standards.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<i>Emissions from Diesel Vehicles</i>	
<p>Diesel Emissions Reduction Act (DERA) Program funds projects that protect human health and improve air quality by reducing harmful emissions from diesel engines. DERA targets older, dirtier diesel vehicles that lack modern emission control systems to be replaced with new diesel, alt-fuel, and zero emissions vehicles, or upgraded with emission control systems and idle reduction technologies.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use. MM-AQ-19 requires tenants be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.</p>
<i>EPA’s Partnerships with State and Local Agencies on Reducing Mobile Source Air Pollution</i>	
<p>EPA provides guidance on control measures that result in emissions reductions that may be applied in Clean Air Act-required state implementation plans (SIPs) and</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall</p>

EPA Program	Proposed Project
<p>in regional emissions analyses for transportation conformity determinations. For example, EPA has provided guidance on quantifying emissions reductions from measures to replace or retrofit diesel powered vehicle and nonroad equipment.</p>	<p>expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-19 requires tenants be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.</p>
<p><i>EPA's Partnerships with Federal Agencies on Truck Electrification</i></p>	
<p>EPA is working closely with the Joint Office of Energy and Transportation on building support for greater application of electric vehicle technologies.</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support 'clean fleet' charging facilities, including heavy-duty and delivery trucks when these trucks become available. MM-AQ-13 requires electrical service in the vicinity of landscaped areas or charging stations in the buildings. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.</p>
<p><i>Emissions from Nonroad Sectors</i></p>	
<p>EPA has adopted emission standards for all types of nonroad engines, equipment, and vehicles.</p>	<p>Consistent. During construction, MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later, to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible and to designate an area where such equipment and electric vehicles can be charged. MM-AQ-3 further prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.</p> <p>During operations, MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable. MM-AQ-14 requires use of electric or battery-operated equipment for landscape maintenance. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA's satisfaction, that no other back-up energy source(s) are available and sufficient for the building's needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB's Tier 4 emission</p>

EPA Program	Proposed Project
	standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.

Project Consistency with the World Logistics Center Settlement Agreement Air Quality Measures

Comments were received requesting that all air quality mitigation measures included in the World Logistics Center Settlement Agreement, dated April 28, 2021, made between Center for Community Action and Environmental Justice, Center for Biological Diversity, Coalition for Clean Air, Sierra Club, and San Bernardino Valley Audubon Society (Petitioner Parties) and Highland Fairview Properties, HF Properties, Sunnymead Properties, Theodore Properties Partners, 13451 Theodore, LLC, and HL Property Partners (collectively, “Highland Fairview”), be incorporated into the proposed Project. In response to these comments, the following table identifies settlement agreement measures from the World Logistics Center Settlement Agreement and identifies what mitigation measures for the proposed Project correlate with those from the World Logistics Center Project.

World Logistics Center	Proposed Project
Operational GHG and Criteria Pollutant Emissions Reduction Measures	
Electric Truck and Car Grant Programs	Consistent. MM-AQ-19 requires tenants be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.
Maximize On-site Solar	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
Solar Advocacy Fund	Not Applicable. This provision applies to a significantly larger development.
Lower Carbon Hydrogen Available On site	Not Applicable. This provision applies to a significantly larger development.
On-site EV Charger	Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
Operational Air Quality (TACs)	
Electrification/No Diesel/Alternative Fuels <ul style="list-style-type: none"> i. At least 90% of all forklifts must be powered by electricity, hydrogen, or non-fossil zero-emission fuels. No forklift may be powered by diesel fuels. ii. 90% of all handheld landscaping equipment (e.g., leaf blowers, hedge trimmers, weed whackers, etc.) shall be electric or meet most current CARB standard within five years of the standard’s 	Consistent. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable. MM-AQ-14 requires use of electric or battery-operated equipment for landscape maintenance. MM-GHG-4 requires installation of water

World Logistics Center	Proposed Project
<p>implementation, to be enforced by including this requirement in all service contracts.</p> <ul style="list-style-type: none"> iii. Hot water heaters for office and bathrooms shall be powered either through solar cells mounted on the roofs of the buildings or solar-generated electricity. iv. Only electric appliances shall be used in building office areas (e.g., electric stoves). v. Diesel powered generators will be prohibited unless necessary due to emergency situations or constrained supply. vi. All “yard goats,” yard trucks, and hostlers will be powered by electricity or a nondiesel alternative. 	<p>heaters with an energy factor of .92 or higher. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA’s satisfaction, that no other back-up energy source(s) are available and sufficient for the building’s needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.</p>
<p>Auxillary Power Unit (APU)</p> <ul style="list-style-type: none"> i. All truck idling shall be limited to no more than 5 minutes. ii. Each warehouse building shall provide an on-site air-conditioned lounge with a vending machine(s), a seating area, restrooms, workstations, shower facilities, and a television. The lounge shall be regularly maintained, cleaned, and stocked. iii. WLC shall provide at least one APU plug-in for every 35 dock doors at multiple locations within the Specific Plan area where trucks park and signage shall be provided in English and Spanish identifying where such APU plug-ins are located. 	<p>Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use. MM-AQ-9 requires any facility totaling more than 400,000 square feet to include a truck operator lounge equipped with clean and accessible amenities such as restrooms, vending machines, television, and air conditioning. MM-AQ-8 requires all TRU loading docks provide electrical hookups and all loading docks are designed to be compatible with SmartWay trucks.</p>
<p>Warehouse construction</p> <ul style="list-style-type: none"> i) WLC shall construct all warehouse buildings to achieve at least LEED Silver Certification for core and shell. If the WLC seeks to advertise a building as having LEED Silver Certification, it shall apply for certification. If certification is granted, notice shall be provided to Petitioners. ii) Warehouse roof areas not covered by solar panels shall be constructed with materials with an initial installation Solar Reflective Index Value of not less than 39. 	<p>Consistent. MM-AQ-6 requires all buildings achieve the 2023 LEED Silver certification standards or equivalent, at a minimum. MM-GHG-4 requires construction of modest cool roof, defined as Cool Roof Rating Council (CRRC) Rated 0.15 aged solar reflectance and 0.75 thermal emittance.</p>
<p>Cold Storage All transport refrigeration units (TRUs) shall have electric plug-ins and electrical hookups shall be provided at all TRU loading docks. WLC shall notify petitioners in writing before filing any applications for cold storage in warehouses.</p>	<p>Consistent. MM-AQ-8 requires all TRU loading docks provide electrical hookups.</p>

World Logistics Center	Proposed Project
Construction Emissions/Dust	
All construction equipment shall meet or be cleaner than Tier 4 standards, except if the construction contractor certifies that it is not feasible to use exclusively Tier 4 equipment due to limited availability. In all events, at least 80% of construction equipment shall meet or be cleaner than Tier 4 standards for the life of the project's construction.	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better.
In the event that diesel-powered construction equipment becomes available (1) with improved emission control devices that reduce particulate matter emissions, including fine particulate matter, and reduces NOx emissions, (2) at commercially reasonable prices, and (3) in sufficient quantities to be reasonably available, then WLC shall use such construction equipment.	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better.
No diesel-powered portable generators shall be used, unless necessary due to emergency situations or constrained supply	Consistent. MM-AQ-3 prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.
No idling longer than five minutes shall be permitted.	Consistent. MM-AQ-3 prohibits construction equipment idling longer than 3 minutes.

Project Consistency with Centerpoint Properties Air Quality Conditions of Approval

Comments were received requesting that all air quality mitigation measures included in the Centerpoint Properties Air Quality Conditions of Approval be incorporated into the proposed Project. In response to these comments, the following table identifies conditions of approval from the Centerpoint Properties Air Quality Conditions of Approval and identifies what mitigation measures for the proposed Project correlate with those from the Centerpoint Properties project.

Centerpoint Properties	Proposed Project
Air Quality	
The project applicant shall ensure, at minimum, the use of equipment that meets the United States Environmental Protection Agency's (EPA) Tier 4 Interim emissions standards for off-road diesel-powered construction equipment with more than 50 horsepower for all site preparation, grading, and building construction activities, unless it can be demonstrated, to the Contra Costa County Department of Conservation and Development's satisfaction, that such equipment is not available.	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better.
The project's construction contractor shall comply with the following Bay Area Air Quality Management District (BAAQMD) Best Management Practices (BMPs) for reducing construction emissions of PM10 and PM2.5: Dust control measures.	Consistent. The Project will comply with SCAQMD Rule 403, Fugitive Dust.

Centerpoint Properties	Proposed Project
<p>Odor Management Plan for</p> <ul style="list-style-type: none"> • Composting, green waste, or recycling facilities • Fiberglass manufacturing facilities • Painting/coating operations • Large-capacity coffee roasters • Laboratory operations • Food-processing facilities 	<p>Not Applicable. The proposed Specific Plan prohibits these odor-causing land uses.</p>
<p>Zero Emission Vehicle Requirements</p>	
<p>The property owner/tenant/lessee shall ensure that all heavy-duty trucks (Class 7 and 8) domiciled on the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2025 or when commercially available for the intended application, whichever date is later.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>The property owner/tenant/lessee shall utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2023, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2025, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2027.</p>	<p>Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>The property owner/tenant/lessee shall ensure all on-site equipment and vehicles (e.g., yard hostlers, yard equipment, forklifts, yard trucks and tractors, and pallet jacks) used within the project site are zero-emission from start of operations.</p>	<p>Consistent. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.</p>
<p>The property owner/tenant/lessee shall use the cleanest technologies available and provide the necessary infrastructure to support zero-emission vehicles and equipment that will be operating on-site.</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. MM-AQ-13 requires electrical service in the vicinity of landscaped areas or charging stations in the buildings. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.</p>

Centerpoint Properties	Proposed Project
<p>Idling is strictly prohibited on the subject property and adjacent streets in the Richmond/San Pablo area. The property owner/tenant/lessee shall inform all truck drivers associated with the business of this prohibition.</p>	<p>Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use.</p>
<p>Applicant/tenant/lessee shall periodically sweep the property to remove road dust, tire wear, brake dust and other contaminants in parking lots.</p>	<p>Consistent. MM-AQ-23 requires the facility operator to sweep the property, including parking lots and truck courts, twice a month to remove road dust, tire wear, brake dust, and other contaminants.</p>
<p>Applicant/tenant/lessee shall not use diesel back-up generators on the property unless absolutely necessary. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Applicant/tenant/lessee shall make every effort to utilize emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.</p>	<p>Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA’s satisfaction, that no other back-up energy source(s) are available and sufficient for the building’s needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.</p>
<p>The property owner/tenant/lessee shall monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation.</p>	<p>Consistent. MM-AQ-25 requires the facility operator to monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable.</p>
Preferred Truck Route	
<p>Preferred truck routes shall be implemented during all on-going business operations and shall be included as part of contractual lease agreement language to ensure the tenants/lessees are made aware of the preferred route for heavy-duty trucks.</p>	<p>Consistent. MM-AQ-15 requires installation of signs clearly identifying the approved truck routes have been installed along the truck routes to and from the project site and within the project site.</p>
Solar Power Generation	
<p>At least 30-days prior to applying for a building permit, the applicant shall submit evidence to the CDD staff for review and approval, demonstrating that the subject building(s) have been designed to be solar ready by meeting or exceeding the current California Building Code (e.g., structurally able to support solar panels on roofs, appropriately sized electrical panels and conduit, etc.).</p>	<p>Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.</p>

Project Consistency with Stockton Mariposa Industrial Complex Air Quality Mitigation Measures

Comments were received requesting that all air quality mitigation measures included in the Stockton Mariposa Industrial Complex Mitigation Monitoring and Reporting Program (MMRP) be incorporated into the proposed Project. In response to these comments, the following table identifies air quality mitigation measures from the Stockton Mariposa Industrial Complex MMRP and identifies what mitigation measures for the proposed Project correlate with those from the Stockton Mariposa Industrial Complex Project.

Stockton Mariposa Industrial Complex	Proposed Project
Construction Emissions Reduction Measures	
AIR-1: Prior to the issuance of the first building permit, the applicant/developer shall demonstrate compliance with the SJVAPCD Rule 9510 (Indirect Source Review) to reduce growth in both NOx and PM10 emissions, as required by SJVAPCD and City requirements.	Consistent. MM-AQ-21 requires any future tenants to comply with all applicable SCAQMD rules, including Rule 2305, the Warehouse Indirect Source Rule.
AIR-2: The project shall comply with SJVAPCD Regulation VIII for the control of dust emissions during project construction. A project Dust Control Plan shall be submitted to the SJVAPCD as required by Regulation VIII. Enforcement of Regulation VIII is the direct responsibility of the SJVAPCD. City Building inspectors shall monitor conformance with approved plans and specifications.	Consistent. The Project will comply with SCAQMD Rule 403, Fugitive Dust.
AIR-3: Architectural Coatings: Construction plans shall require that architectural and industrial maintenance coatings (e.g., paints) applied on the project site shall be consistent with a VOC content of <10 g/L. Developer or tenant is not expected to exercise control over materials painted off site.	Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the developer’s construction plans shall ensure the Project will utilize “Super-Compliant” low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD’s Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.
AIR-4: SJVAPCD Regulation VIII Compliance: Construction plans and specifications shall include a Dust Control Plan incorporating the applicable requirements of Regulation VIII, which shall be submitted to the SJVAPCD for review and approval prior to beginning construction in accordance with the requirements of Regulation VIII.	Consistent. The Project will comply with SCAQMD Rule 403, Fugitive Dust.
AIR-5: Construction Worker Trip Reduction: Project construction plans and specifications will require contractor to provide transit and ridesharing information for construction workers.	Consistent. MM-AQ-3 requires the construction contractor to provide transit and ridesharing information to on-site construction workers.
AIR-6: Construction Meal Destinations: Project construction plans and specifications will require the contractor to establish one or more locations for food or catering truck service to construction workers and to cooperate with food service providers to provide consistent food service.	Consistent. MM-AQ-3 requires the construction contractor to establish one or more locations for food or catering truck service to construction workers and to cooperate with food service providers to provide consistent food service.
AIR-7: To reduce impacts from construction-related diesel exhaust emissions, the Project should utilize the cleanest available off-road	Consistent. MM-AQ-1 requires that off-road equipment used during construction shall

Stockton Mariposa Industrial Complex	Proposed Project
construction equipment, including the latest tier equipment (recommended by SJVAPCD).	meet CARB Tier 4 Final emission standards or better.
Operational Emissions Reduction Measures	
AIR-8: The project shall comply with the emission reduction requirements of SJVAPCD Rule 9510 for project operations.	Consistent. MM-AQ-21 requires any future tenants to comply with all applicable SCAQMD rules, including Rule 2305, the Warehouse Indirect Source Rule.
AIR-9: Prior to building occupancy, employers with 100 or more eligible employees shall submit an Employer Trip Reduction Implementation Plan (ETRIP) to the City for review and approval, as required by SJVAPCD Rule 9410. A copy of the ETRIP shall be provided to the SJVAPCD. Employers shall facilitate participation in the implementation of the ETRIP by providing information to its employees explaining methods for participation in the Plan and the purpose, requirements, and applicability of Rule 9410.	<p>Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include:</p> <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
AIR-10: The project shall comply with SJVAPCD Rule 4101, which prohibits emissions of visible air contaminants to the atmosphere and applies to any source operation that emits or may emit air contaminants.	Consistent. The Project would comply with SCAQMD Rule 401, Visible Emissions, as applicable.
AIR-11: The project shall comply with SJVAPCD Rule 4601, which limits project has agreed to abide by more stringent VOC emissions	Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the

Stockton Mariposa Industrial Complex	Proposed Project
<p>requirements. emissions of volatile organic compounds from architectural coatings by specifying storage, clean up and labeling requirements.</p>	<p>developer’s construction plans shall ensure the Project will utilize “Super-Compliant” low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD’s Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.</p>
<p>AIR-12: The project shall comply with SJVAPCD Rule 4601, which limits emissions of volatile organic compounds from architectural coatings by specifying storage, clean up and labeling requirements. (The project has agreed to abide by more stringent VOC emissions requirements.</p>	<p>Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the developer’s construction plans shall ensure the Project will utilize “Super-Compliant” low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD’s Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.</p>
<p>AIR-12: Solar Power: Owners, operators or tenants shall include with the building permit application, sufficient solar panels to provide power for the operation’s base power use at the start of operations and as base power use demand increases. Project sponsor shall include analysis of (a) projected power requirements at the start of operations and as base power demand increases corresponding to the implementation of the “clean fleet” requirements, and (b) generating capacity of the solar installation.</p>	<p>Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.</p>
<p>AIR-13: Emission Standards for Heavy-Duty Trucks: The following mitigation measures shall be implemented during all on-going business operations and shall be included as part of contractual lease agreement language to ensure the tenants/lessees are informed of all on-going operational responsibilities.</p> <p>The property owner/tenant/lessee shall ensure that all heavy-duty trucks (Class 7 and 8) domiciled on the project site are model year 2014 or later from start of operations and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2025 or when commercially available for the intended application, whichever date is later.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>AIR-14: Zero Emission Vehicles: The property owner/tenant/lessee shall utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2023, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2025, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2027.</p>	<p>Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero</p>

Stockton Mariposa Industrial Complex	Proposed Project
	<p>emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>AIR-17: Zero Emission Forklifts, Yard trucks and Yard Equipment: Owners, operators or tenants shall require all forklifts, yard trucks, and other equipment used for on-site movement of trucks, trailers and warehoused goods, as well as landscaping maintenance equipment used on the site, to be electrically powered or zero-emission. The owner, operator or tenant shall provide on-site electrical charging facilities to adequately service electric vehicles and equipment.</p>	<p>Consistent. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.</p>
<p>AIR-18: Truck Idling Restrictions: Owners, operators or tenants shall be required to make their best effort to restrict truck idling on site to a maximum of three minutes, subject to exceptions defined by CARB in the document: <i>commercial_vehicle_idling_requirements_July_2016</i>. Idling restrictions shall be enforced by highly-visible posting at the site entry, posting at other on-site locations frequented by truck drivers, conspicuous inclusion in employee training and guidance material and owner, operator or tenant direct action as required.</p>	<p>Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use.</p>
<p>AIR-19: Electric Truck Charging: At all times during project operation, owners, operators or tenants shall be required to provide electric charging facilities on the project site sufficient to charge all electric trucks domiciled on the site and such facilities shall be made available for all electric trucks that use the project site.</p>	<p>Consistent. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.</p>
<p>AIR-20: Project Operations, Food Service: Owners, operators or tenants shall establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to operations employees.</p>	<p>Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include offering shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food</p>

Stockton Mariposa Industrial Complex	Proposed Project
	service providers to provide consistent food service to employees.
<p>AIR-21: Project Operations, Employee Trip Reduction: Owners, operators or tenants shall provide employees transit route and schedule information on systems serving the project area and coordinate ridesharing amongst employees.</p>	<p>Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include:</p> <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
<p>AIR-22: Yard Sweeping: Owners, operators or tenants shall provide periodic yard and parking area sweeping to minimize dust generation.</p>	<p>Consistent. MM-AQ-23 requires the facility operator to sweep the property, including parking lots and truck courts, twice a month to remove road dust, tire wear, brake dust, and other contaminants.</p>
<p>AIR-23: Diesel Generators: Owners, operators or tenants shall prohibit the use of diesel generators, except in emergency situations, in which case such generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards.</p>	<p>Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA’s satisfaction, that no other back-up energy source(s) are available and</p>

Stockton Mariposa Industrial Complex	Proposed Project
	sufficient for the building’s needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions.
<p>AIR-24: Truck Emission Control: Owners, operators or tenants shall ensure that trucks or truck fleets domiciled at the project site be model year 2014 or later, and maintained consistent with current CARB emission control regulations.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>AIR-25: SmartWay: Owners, operators or tenants shall enroll and participate the in SmartWay program for eligible businesses.</p>	<p>Consistent. MM-AQ-20 encourages tenants to become SmartWay partners, if eligible. MM-AQ-8 requires all loading docks to be compatible with SmartWay trucks.</p>
<p>AIR-26: Designated Smoking Areas: Owners, operators or tenants shall ensure that any outdoor areas allowing smoking are at least 25 feet from the nearest property line.</p>	<p>Consistent. MM-AQ-26 requires any outdoor areas allowing smoking are at least 25 feet from the nearest property line.</p>
<p>AIR-27: Project construction shall be subject to all adopted City building codes, including the adopted Green Building Standards Code, version July 2022 or later. Prior to the issuance of building permits, the applicant/developer shall demonstrate (e.g., provide building plans) that the proposed buildings are designed and will be built to, at a minimum, meet the Nonresidential Voluntary Measures of the California Green Building Standards code, Divisions A5.1, 5.2 and 5.5, including but not limited to the Tier 2 standards in those Divisions, where applicable, such as the Tier 2 advanced energy efficiency requirements as outlined under Section A5.203.1.2.</p>	<p>Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.</p>
<p>AIR-28: All tenant lease agreements for the project site shall include a provision requiring the tenant/lessee to comply with all applicable requirements of the MMRP, a copy of which shall be attached to each tenant/lease agreement.</p>	<p>Consistent. MM-AQ-27 requires tenants to comply with all applicable requirements of the MMRP, a copy of which shall be attached to each lease agreement.</p>

Project Consistency with City of Fontana Ordinance 1891 Air Quality Measures

Comments were received requesting that all air quality measures included in City of Fontana Ordinance 1891 be incorporated into the proposed Project. In response to these comments, the following table identifies air quality measures from the City of Fontana Ordinance 1891 and identifies what mitigation measures for the proposed Project correlate with those from the City of Fontana Ordinance 1891.

City of Fontana Industrial Warehouse Ordinance	Proposed Project
Sec. 9.72 Signage and Traffic Patterns	
<p>Anti-idling signs indicating a 3-minute diesel truck engine idling restriction shall be posted at industrial commerce facilities along entrances to the site and in the dock areas and shall be strictly enforced by the facility operator.</p>	<p>Consistent. MM-AQ-17 requires legible, durable, weather-proof signs placed at truck access gates, loading docks, and truck parking areas that identify: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged; and 3) telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations. One six square foot sign providing this information shall be located on the building between every two dock-high doors and the sign shall be posted in highly visible locations at the entrance gates, semi parking areas, and trailer parking locations.</p>
<p>Signs and drive aisle pavement markings shall clearly identify the on-site circulation pattern to minimize unnecessary on-site vehicular travel.</p>	<p>Consistent. MM-AQ-12 requires an on-site signage program that clearly identifies the required on-site circulation system. This shall be accomplished through posted signs and painting on driveways and internal roadways.</p>
<p>Signs shall be installed at all truck exit driveways directing truck drivers to the truck route as indicated in the Truck Routing Plan and State Highway System.</p>	<p>Consistent. MM-AQ-15 requires signs clearly identifying the approved truck routes installed along the truck routes to and from the project site and within the project site.</p>
<p>Signs shall be installed in public view with contact information for a local designated representative who works for the facility operator and who is designated to receive complaints about excessive dust, fumes, and odors, and truck and parking complaints for the site, as well as contact information for the SCAQMD’s on-line complaint system and its complaint call-line: 1-900-288-7664. Any complaints made to the facility operator’s designee shall be answered within 72 hours of receipt.</p>	<p>Consistent. MM-AQ-16 requires signage with contact information for the tenant representative, March JPA, County of Riverside, and SCAQMD for complaints about excessive noise, dust, fumes, odors, and perceived Code violations.</p>
<p>All signs under this Section shall be legible, durable, and weather-proof.</p>	<p>Consistent. MM-AQ-17 requires legible, durable, weather-proof signs.</p>
<p>Prior to the issuance of a business license, City shall ensure for any facility with a building or buildings larger than 400,000 total square feet, that the facility shall include a truck operator lounge equipped with clean and accessible amenities such as restrooms, vending machines, television, and air conditioning.</p>	<p>Consistent. MM-AQ-9 requires any facility totaling more than 400,000 square feet to include a truck operator lounge equipped with clean and accessible amenities such as restrooms, vending machines, television, and air conditioning.</p>
Sec. 9-73 – Alternative Energy	
<p>On-site motorized operational equipment shall be ZE (zero emissions).</p>	<p>Consistent. MM-AQ-14 requires use of electric or battery-operated equipment for landscape maintenance. MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical</p>

City of Fontana Industrial Warehouse Ordinance	Proposed Project
	charging stations provided. As an alternative, hydrogen fuel-cell or CNG powered equipment shall also be acceptable.
All building roofs shall be solar-ready, which includes designing and constructing buildings in a manner that facilitates and optimizes the installation of a rooftop solar photovoltaic (PV) system at some point after the buildings has been constructed.	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
The office portion of a building’s rooftop that is not covered with solar panels or other utilities shall be constructed with light colored roofing material with a solar reflective index (“SRI”) of not less than 78. This material shall be the minimum solar reflecting rating of the roof material for the life of the building.	Consistent. MM-GHG-4 requires construction of modest cool roof, defined as Cool Roof Rating Council (CRRC) Rated 0.15 aged solar reflectance and 0.75 thermal emittance.
On buildings over 400,000 square feet, prior to issuance of a business license, the City shall ensure rooftop solar panels are installed and operated in such a manner that they will supply 100% of the power needed to operate all non-refrigerated portions of the facility including the parking areas.	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
At least 10% of all passenger vehicle parking spaces shall be electric vehicle (EV) ready, with all necessary conduit and related appurtenances installed. At least 5% of all passenger vehicle parking spaces shall be equipped with working Level 2 Quick charge EV charging stations installed and operational, prior to building occupancy. Signage shall be installed indicated EV charging stations and specifying that spaces are reserved for clean air/EV vehicles. Unless superior technology is developed that would replace the EV charging units, facility operator and any successors in interest shall be responsible for maintain the EV charging stations in working order for the life of the facility.	Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide chilled, cooled, or freezer warehouse space, a conduit shall be installed during construction of the building shell from the electrical room to 100% of the loading dock doors that have potential to serve the refrigerated space. When tenant improvement building permits are issued for any refrigerated warehouse space, electrical plug-in units shall be installed at every dock door servicing the refrigerated space to allow transport refrigeration units (TRUs) to plug in. Truck operators with TRUs shall be required to utilize electric plug-in units when at loading docks.	Consistent. MM-AQ-8 requires that all TRU loading docks provide electrical hookups.
Bicycle racks required per Section 30-714 and in the amount required for warehouse uses by Table 30-714 of the Zoning and Development Code. The racks shall include locks as well as electric plugs to charge electric	Consistent. The Project would provide bicycle parking facilities in compliance with Table 9.11.060-13 of the March JPA Development Code.

City of Fontana Industrial Warehouse Ordinance	Proposed Project
<p>bikes. The rack shall be located as close as possible to employee entrance(s). Nothing in this section shall preclude the warehouse operator from satisfying this requirement by utilizing bicycle parking amenities considered to be superior such as locating bicycle parking facilities indoors or providing bicycle lockers.</p>	
<p>Sec. 9-74 – Operation and Construction</p>	
<p>Cool surface treatments shall be added to all drive aisles and parking areas or such areas shall be constructed with a solar-reflective cool pavement such as concrete.</p>	<p>Consistent. MM-AQ-10 requires cool surface treatments to be added to all drive aisles and parking areas or such areas shall be constructed with a solar-reflective cool pavement such as concrete.</p>
<p>Use of super-compliant VOC architectural and industrial maintenance coatings (e.g., paints) shall be required.</p>	<p>Consistent. MM-AQ-4 requires that, prior to issuance of building permits, the developer’s construction plans shall ensure the Project will utilize “Super-Compliant” low VOC paints which have been reformulated to exceed the regulatory VOC limits put forth by SCAQMD’s Rule 1113. Super-Compliant low VOC paints shall be no more than 10 grams per liter (g/L) of VOC. Alternatively, the Applicant may utilize tilt-up concrete buildings that do not require the use of architectural coatings.</p>
<p>The following environmentally responsible practices shall be required during construction:</p> <ul style="list-style-type: none"> • The applicant shall use reasonable best efforts to deploy the highest rated CARB Tier technology that is available at the time of construction. Equipment proposed for use that does not meet the highest CARB Tier in effect at the time of construction, shall only be approved for use at the discretion of the Planning Director and shall require proof from the construction contractor that, despite reasonable best efforts to obtain the highest CARB Tier equipment, such equipment was unavailable. • Use of electric-powered hand tools, forklifts, and pressure washers. • Designation of an area in any construction site where electric-powered construction vehicles and equipment can charge. • Identification in site plans of a location for future electric truck charging stations and installation of a conduit to that location. <p>Diesel-powered generators shall be prohibited except in case of emergency or to establish temporary power during construction.</p>	<p>Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. MM-AQ-3 requires the construction contractor to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible, and to designate an area where electric-powered vehicles and equipment can be charged. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-3 further prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.</p>

9.1.3 Topical Response 3 – Hazards

This topical response covers comments raised about the existing environment relative to past uses at the Project site. Specifically, commenters asked about the presence of Per- and Polyfluoroalkyl Substances (PFAS), radioactive materials, and chemical and biological munitions. As such, the following topical response provides more detailed information relative to each of these potential hazards. Several of these topics are addressed in Recirculated Section 4.8, Hazards and Hazardous Materials, but are included here as well for the sake of completeness.

Per- and Polyfluoroalkyl Substances

In response to concerns raised of the possible presence of PFAS on the Project site, Recirculated Section 4.8, Hazards and Hazardous Materials, discusses the potential presence of PFAS and, based on the conclusions of the former investigations and relevant regulatory agencies, determined there is no evidence of potential PFAS concentrations within the Specific Plan Area that pose a public health hazard.

The following background information can also be found in the Supplemental Environmental Assessment Information Report (Leighton 2023 Report), attached as Appendix J-6 of this Final EIR.¹ PFAS are a group of manufactured chemicals that have been used in industry and consumer products since mid-1900s. There are thousands of different PFAS. According to the U.S. Environmental Protection Agency (USEPA), Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) are two of the most widely used and studied chemicals in the PFAS group, but PFOA and PFOS have been replaced in the United States with other PFAS in recent years. Individuals can be exposed to PFAS in a variety of ways, including through drinking water contaminated with PFAS, eating certain foods that may contain PFAS, using products made with PFAS or packaged in materials containing PFAS, swallowing contaminated soil or dust, breathing air contaminated with PFAS, and working in occupations such as firefighting or chemicals manufacturing and processing. PFAS substances are generally considered non-volatile.² USEPA cites the following health effects associated with PFAS exposure as indicated by current peer-reviewed scientific studies:

- Reproductive effects such as decreased fertility or increased high blood pressure in pregnant women.
- Developmental effects or delays in children, including low birth weight, accelerated puberty, bone variations, or behavioral changes.
- Increased risk of some cancers, including prostate, kidney, and testicular cancers.
- Reduced ability of the body's immune system to fight infections, including reduced vaccine response.
- Interference with the body's natural hormones.
- Increased cholesterol levels and/or risk of obesity.

In April 2024, EPA designated 2 PFAS, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS), as hazardous substances under CERCLA.³ On April 10, 2024, EPA released its Final Rule on Drinking Water Standards

¹ A portion of the 2023 Leighton Report was inadvertently not included with the Recirculated EIR. All of the relevant results of the 2023 Leighton Report were summarized in the Recirculated Draft EIR and the underlying source reports were cited. As such, this inadvertent omission does not impact the findings or analysis contained in the Recirculated Draft EIR.

² Fluorotelomer alcohols (FTOH) are the only PFAS substances considered volatile. FTOHs have been identified in consumer products like carpet, commercial carpet-care liquids, household carpet/fabric-care liquids, treated apparel, treated home textiles, treated non-woven medical garments, floor waxes, food-contact paper, membranes for apparel, and thread-sealant tapes. While FTOHs are considered volatile, there are no human toxicological values for FTOH and these compounds are not regulated in the environment by California or by the U.S. EPA.

³ EPA Final Rule: Designation of Perfluorooctanoic Acid (PFOA) and Perfluorooctanesulfonic Acid (PFOS) as CERCLA Hazardous Substances. April 17, 2024.

for PFAS, setting the maximum contaminant levels for 6 types of PFAS (including PFOS and PFOA) in drinking water. The Project does not involve groundwater extraction.

In May 2022, the Air Force prepared a Final Quality Program Plan (QPP) for the Remedial Investigation of PFAS at the Former March Air Force Base (AFB) and March Air Reserve Base (ARB) (the PFAS QPP). The PFAS QPP was conducted to “[d]etermine the nature and extent of PFAS (perfluorooctane sulfonate [PFOS], perfluorooctanoic acid [PFOA], and perfluorobutane sulfonic acid [PFBS]) in soil and groundwater” at the March AFB. The PFAS QPP was reviewed and approved by the USEPA, the Santa Ana Regional Water Quality Control Board, and the California Department of Toxic Substances Control. In connection with the PFAS QPP, a preliminary assessment was conducted to determine the potential release locations of PFAS at the March ARB as a result of Air Force operations. The preliminary assessment determined that the only potential release location within the Specific Plan area was the West March AFFF Area Landfill No. 5, which is also known as and referred to as Area 3.

Attachment A to the Leighton 2023 Report (Appendix J-6) contains a map showing the proposed development in the former ordnance storage area, as well as the proposed extensions of Cactus Avenue and Brown Street to the east of this area. The map also shows the approximate extent of former Landfill No. 5. As shown on the map and reproduced in part below as Figure 1, only a small portion of the Cactus Avenue extension may extend over former Landfill No. 5. This proposed extension of Cactus Avenue is the only Project component that extends into the proximity of Landfill No. 5.

Figure 1

The Air Force collected groundwater, sediment, and surface water samples at Landfill No. 5 to screen for potential residual PFAS compounds. One groundwater sample was reported to contain 91.9 ng/L of one PFAS compound (PFOA), exceeding the reported 40 ng/L screening level for this compound. Groundwater in this area is 15-25 feet deep and will not be impacted by construction of Cactus Avenue.

The sediment and surface water samples of Landfill No. 5 were reported to contain no PFAS compounds exceeding their reported screening levels. (QPP, 2022). Soil samples were collected from three locations within the former Landfill No.5 and there were “[n]o detections of PFOA, PFOS, or PFBS above screening criteria” and, as such, “[n]o additional soil sampling is recommended.” (USAF Final Technical Working Group Meeting Minutes, February 2023).

As seen in the Figure 2 below, sample location MARPSB010 is the closest sample location to the Cactus Avenue extension, and no PFAS was detected above the screening levels. Screening criteria for delineation in the remedial investigation are the May 2022 USEPA RSLs using a hazard quotient of 0.1. The SARWQB concurred on April 3, 2023. (SARWQB, 2023). As detailed in the Leighton 2023 Report (Appendix J-6), there is no significant evidence to indicate the proposed Cactus Avenue extension construction activities would create an unacceptable health risk to surrounding developments or future roadway users.

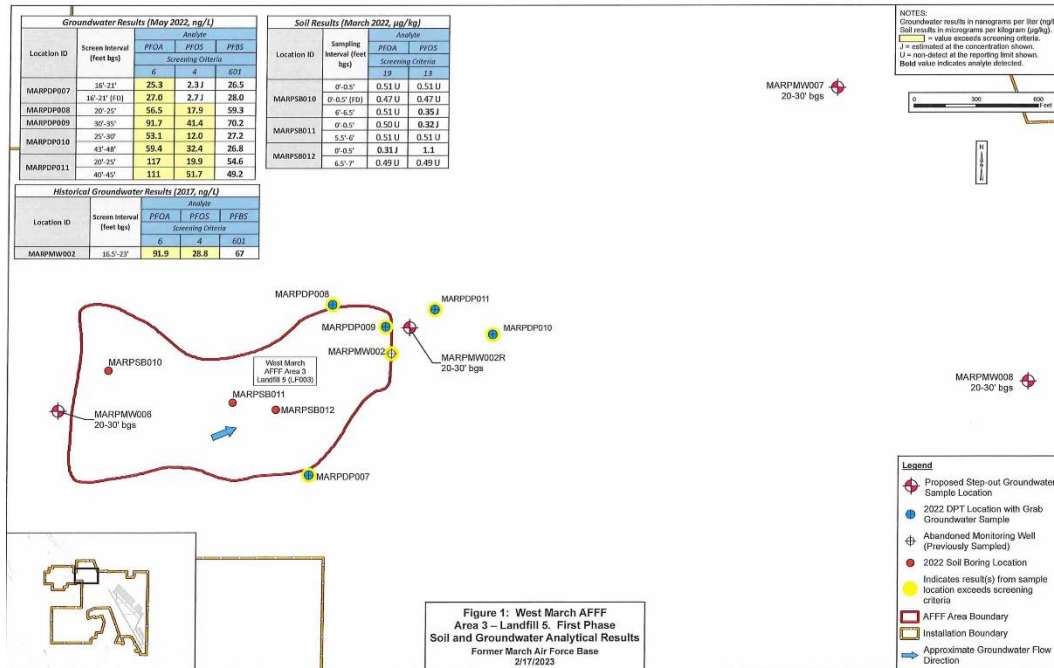

Figure 2

Radioactive Materials

In response to concerns raised of the possible presence of radioactive materials in the former Weapons Storage Area (WSA), Recirculated Section 4.8, Hazards and Hazardous Materials, was revised to include a detailed summary of the Leighton 2023 Report (Appendix J-6), which explains that the Air Force and March JPA thoroughly investigated the potential for radiological contamination in the former WSA. Please see Section 4.8, Hazards and Hazardous Materials, of the Final EIR for a summary of the previous investigations.

In 1992, the Environmental Protection Agency (USEPA) performed an aerial photographic analysis of March Air Force Base (AFB), including the WSA. This analysis indicated that no burial sites within the WSA were identified. (Cabrera, 2006).

In 2000, Earth Tech, Inc. completed a Multi-Agency Radiation Survey and Site Investigation Manual (MARSSIM) Final Status Survey (FSS) of the WSA. The MARSSIM indicated that “[b]ased on a review of the available records and documentation related to the WSA, the United States Air Force only stored weapons, and possibly non-conventional weapons, at the WSA while no non-conventional weapons maintenance activities or maintenance on unsealed sources of radioactive material were performed at the WSA. In addition, existing anecdotal information indicated that non-conventional weapons were stored at the WSA on a temporary or transient basis only, and not as a permanent presence.” (EarthTech, 2000). EarthTech’s investigation included measurements of alpha and gamma radiation inside 16 structures at the WSA that may have stored non-conventional weapons and confirmed the absence of radioactive contamination at the WSA. A confirmation survey completed by health physicists from

the State of California Department of Health Services (DHS) on June 14, 2000 confirmed the absence of radioactive contamination at the WSA. In a letter dated August 24, 2000, DHA stated that it “is in concurrence that the buildings investigated in [the MARSSIM] meet the State’s release criteria for unrestricted release.” (DHS, 2000).

In September 2006, Cabrera Services, Inc. completed a Preliminary Assessment and Site Inspection (PA/SI) of the WSA. The stated objectives of the PA/SI were to:

- Identify subsurface anomalies that could represent potential burial or disposal locations for weapons maintenance waste materials using non-invasive techniques.
- Prioritize identified subsurface anomalies and make recommendations for additional investigations to confirm the presence of potential burial and disposal locations.
- Identify surface areas with elevated levels of residual radioactivity that could represent buried wastes (Cabrera, 2006).

Cabrera did not identify any radiologically-impacted materials or burial pits and concluded that no further action for surface soils or subsurface investigation of burial sites in the WSA is recommended based on historical information and the results of geophysical, radiological, and subsurface investigations (Cabrera, 2006).

The California Regional Water Quality Control Board, Santa Ana Region (SARWQCB) reviewed Cabrera’s PA/SI (2006) and responded as follows via a November 27, 2006 letter:

The investigation reviewed existing information and attempted to confirm any potential buried or disposal locations primarily using noninvasive techniques. Radiological surveys were also conducted to scan for surface contamination. One anomalous area was investigated utilizing test pits. No further action for subsurface investigation of burial sites was recommended, based on historical information and the results of the investigation.

We concur with your finding of no release at the site, and the recommendation for no further action for the Weapons Storage Area.

(SARWQCB, 2006)

This finding is consistent with the USAF’s Final Comprehensive Site Evaluation Phase I Report for its Military Munitions Response Program dated March 2013 (USAF MMRP). That evaluation noted that the WSA was used for “nuclear weapon storage only,” and concluded that further munitions response was not required. Munition response is defined as “Response actions, including investigation, removal actions, and remedial actions to address the explosives safety, human health, or environmental risks presented by unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC), or to support a determination that no removal or remedial action is required.” No other areas of the March ARB were identified as storage, maintenance, or disposal areas for radioactive materials. As such, based on this report, no further evaluation of radioactive materials is required prior to redevelopment of the Project.

As discussed above and in Recirculated Section 4.8, Hazards and Hazardous Materials, based on the conclusions of the former investigations and relevant regulatory agencies, there is no evidence of potential radioactive contamination anywhere within the Specific Plan area that poses an unacceptable public health hazard.

Chemical and Biological Munitions

Regarding concerns raised as to the possible storage of chemical and biological munitions at the WSA, Recirculated Section 4.8, Hazards and Hazardous Materials, was revised to discuss the previous storage of biological or chemical

weapons at the Project site. Articles published in the New York Times on October 12, 1969 as well as July 6, 2023 both indicate that the country's chemical munitions were stockpiled at facilities in eight states, none of which include California.⁴ The 2023 NYT Article details the destruction of the chemical munitions at these bases, calling it "the dangerous job of eliminating the world's only remaining declared stockpile of lethal chemical munitions."

As further detailed in the Leighton 2023 Report (Appendix J-6), CH2MHill completed detailed record searches in connection with its investigation to identify and fully evaluate suspected problems associated with past hazardous materials disposal sites on Department of Defense (DOD) facilities. This detailed record search included a detailed review of pertinent installation records, 18 outside agency contacts for documents relevant to the records search effort, and an on-site base visit. The base visit included interviews with 81 past and present base employees, ground and helicopter tours of the installation and past disposal areas, and a detailed search of the installation records. Prior to the base visit, the Public Affairs Office provided a press release announcing the study and requesting persons knowledgeable of past disposal practices at the installation to contact March AFB. With respect to biological and chemical weapons, the CH2MHill Report indicated the following:

Review of available base records and information obtained during the base personnel interviews produced no evidence of the past or present storage, disposal, or handling of biological or chemical warfare agents at March AFB.

The closure report for Site 25 (also referred to as Area 20, refer to Figure 4.8-1 of Recirculated Section 4.8, Hazards and Hazardous Materials), which is located just southeast of the Specific Plan Area, and within the proposed Conservation Area of the Project site (2009, Air Force Real Property Agency), notes the following:

"A 1996 memorandum from the U.S. Army Corps of Engineers (USACE) indicated the Corps Omaha District Rapid Response Program was requested to perform a removal action at Site 25. Their involvement was as a result of references to chemical warfare agents disposed at Site 25 in the 1993 RI report. Due to the conflicting information obtained to date, the Omaha District requested re-interviews of select personnel be performed to validate the statements made (USACE, 1996)."

"The combined IT/USACE investigation found the following:

Only one individual named in the RI as having knowledge of ordnance disposal at Site 25 had first-hand knowledge of ordnance residue disposal conducted at Site 25. The one individual stated that no chemical warfare munitions were buried at Site 25.

A search of Camp Haan records concluded that all significant live weapons training was conducted at other U.S. Army Installations in California. Only small arms and tear gas training was conducted at former Camp Haan or at March AFB.

Based on these findings, it was concluded that no chemical warfare material was disposed of at Site 25."

These findings are consistent with the Final Comprehensive Site Evaluation Phase I Report which was prepared for the Military Munitions Response Program in March 2013 (USAF MMRP). That report identified Area Number 2 as having Chemical Warfare Materiel (CWM) in the form of magazines and gas chamber. The report explains that the "CWM (Magazines and Gas Chamber) was located in buildings T1260, T1261, and T1262 just off the southeast

⁴ The New York Times, *War Chemicals Kept at 8 Bases*, October 12, 1969 ("1969 NYT Article") and *U.S. Is Destroying the Last of Its Once-Vast Chemical Weapons Arsenal*, July 6, 2023 ("2023 NYT Article").

corner of the runway and south of Iris Avenue.” It further indicates that “[h]istoric records reveal that CWM was stored and training was conducted at March AFB, including a Unit Gas Officers’ School. Based on a letter from 1944, the CWM (magazine and Gas Chamber) buildings were used to store: M1 sample gas ID set, M1 detonating gas ID set, HC smoke pots, 2-chloro-1-phenylethanone (CN) capsules, M1 smoke pots, and titanium tetrachloride and chlorosulfonic acid drums.” That report noted that “[t]he CWM (Magazine and Gas Chamber) buildings are no longer present. The Gas Chamber and Magazines have been demolished and no evidence of their former location was found. The site has been reworked and is now an open field.” Area 2 is located more than 3 miles southeast of the Project site, across Interstate 215, and will not be disturbed or impacted by the Project.

The Leighton 2023 Report (Appendix J-6) concludes that during Leighton’s various reported assessments, they “have found no evidence to indicate biological or chemical munitions were likely stored in these, or other buildings, on the former ordnance storage area, or that the Water Board has expressed concerns with such.”

In addition to the Leighton 2023 Report (Appendix J-6), the Water Board and EPA investigations of the Specific Plan area do not raise biological or chemical munitions as a concern. As noted above, the Water Board issued a no further action letter for the site in November 2006. Further, the 2000 CADHS survey confirmed the results of the final status survey, of which the recommendation was that “the subject property may be transferred without restrictions for public use.”

In light of the available information, there is no evidence or indication that biological or chemical munitions were stored or disposed of on the Project site. CEQA does not require speculation. See, e.g. *Laurel Heights Improvement Assn. v Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1137. Because there is no evidence of storage or disposal of biological or chemical weapons at the Project site, much less a release of such munitions, construction activities in the WSA will not result in an adverse impact on the existing residential uses that are located in the vicinity of the WSA.

9.1.4 Topical Response 4 – Project Consistency

This topical response discusses Project consistency with the following: the Good Neighbor Guidelines for the City of Riverside, the Good Neighbor Guidelines for the Western Riverside Council of Governments (WRCOG), the 2003 Settlement Agreement with Center for Community Action and Environmental Justice and Community Alliance for Riverside’s Economy & Environment, and the 2012 Settlement Agreement with Center for Biological Diversity and San Bernardino Valley Audubon Society.

Good Neighbor Guidelines for the City of Riverside

A number of comments questioned the Project’s consistency with the City of Riverside’s Good Neighbor Guidelines. Chapter 19.435 of the City of Riverside Municipal Code implements the Good Neighbor Guidelines for Siting New and/or Modified Industrial Facilities adopted by the City Council on November 10, 2020. The following table includes an analysis of the Project’s consistency with the City of Riverside’s Good Neighbor Guidelines.

City “Good Neighbor” Policy	Project Consistency
<p>Section 19.435.030 – Site Location, operation and development standards. A. Warehousing and distribution facilities 10,000 square feet or less</p>	
<p>1. Driveways, loading areas, docks, truck wells and internal circulation routes shall be oriented away from residential neighborhoods, schools, parks, playgrounds, day care centers, nursing homes, hospitals or other public places to the maximum extent feasible.</p>	<p>Consistent. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. Industrial buildings must be set back a minimum of 1,000 feet from residential. In addition, any industrial-use building will require a 1,000-foot setback from existing residential to any proposed truck courts or loading docks. Section 3.5.4, Off-Street Loading Facilities, and Section 4.4.2, Truck Courts and Loading Docks, of the Specific Plan require truck courts and loading docks to be oriented away or screened to reduce visibility public roads, publicly accessible locations within the West Campus Upper Plateau Specific Plan, and surrounding residential properties, and prohibits loading and unloading activities within view of public streets or residential land uses.</p>
<p>2. Loading areas, docks, truck wells and outdoor storage areas shall be fully screened from view of residential neighborhoods, schools, parks, playgrounds, day care centers, nursing homes, hospitals or other public places and from public rights-of-way with buildings, freestanding walls and fences, landscaping or other means to the satisfaction of the Approving Authority.</p> <p>Where loading areas, docks, truck wells and outdoor storage areas are located adjacent to a Residential Zone or use, they shall be fully screened from view of the adjacent Residential Zone or use by means of a solid wall with a minimum height of eight feet as</p>	<p>Consistent. Section 3.5.4, Off-Street Loading Facilities, and Section 4.4.2, Truck Courts and Loading Docks, of the Specific Plan require truck courts and loading docks to be oriented away or screened to reduce visibility public roads, publicly accessible locations within the West Campus Upper Plateau Specific Plan, and surrounding residential properties, and prohibits loading and unloading activities within view of public streets or residential land uses. Section 4.4.1 Walls and Fences of the Specific Plan requires minimum 14-foot tall screen walls that surround the entire truck court and loading areas. Figures 4-17 and 4-19 Landscape Buffer Interface requires a minimum 30-foot landscape buffer to any parcel facing a sensitive receptor.</p>

City “Good Neighbor” Policy	Project Consistency
measured from the finished grade of the adjacent Residential Zone or use.	
3. Operations, including loading, unloading, staging and storage of trucks and trailers, shall comply with Title 7 (Noise) of this Code.	Consistent. The Project’s Noise Impact Analysis (Appendix M-1) determined the Project’s on-site operational noise would not exceed March JPA, County of Riverside, or City of Riverside standards. Section 3.5.4 Off-Street Loading Facilities of the Specific Plan includes this restriction: “any loudspeaker, bells, gongs, buzzers, or other noise attention or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property. Sounds emitting from any of the aforementioned devices, including or live or recorded music, shall cease between the hours of 10:00 p.m. and 7:00 a.m. if the sound therefrom creates a noise disturbance across the property line of a residential use.”
Section 19.435.030 – Site Location, operation and development standards.	
B. Warehousing and distribution facilities 10,000 square feet and less than 100,000 square feet	
1, 2, 3. Same as above.	Consistent. Same as above.
4. Idling of trucks queued or operated on site shall not exceed five minutes.	Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use.
5. Where transport by temperature-controlled trucks or trailers is proposed, on-site electrical hookups shall be provided at loading docks. Idling or use of auxiliary truck engine power to power climate-control equipment shall be prohibited.	Consistent. Section 4.4.2 of the Specific Plan requires loading bays that are utilized by refrigerated trailers to have dock seals and be equipped with plug-in electrical outlets. In addition, MM-AQ-8 requires that all TRU loading docks provide electrical hookups and all loading docks are designed to be compatible with SmartWay trucks.
Section 19.435.030 – Site Location, operation and development standards.	
C. Warehousing and distribution facilities 100,000 square feet and larger	
1, 2. Same as above.	Consistent. Same as above.
3. Sufficient aisle space shall be provided on-site to accommodate the on-site queuing of trucks as determined by a Traffic Impact Analysis, if required. Queuing lanes or aisles shall not obstruct regular vehicular or pedestrian circulation or emergency equipment access.	Consistent. Section 3.5.4, Off-Street Loading Facilities, requires loading or unloading facilities to be sized and located so that they do not require trucks to be located in required front or street side yards during loading and unloading activities, ensuring trucks do not spill onto surrounding public streets.
4. Operations, including loading, unloading, staging and storage of trucks and trailers, shall comply with Title 7 (Noise) of this Code.	Consistent. The Project’s Noise Impact Analysis (Appendix M-1) determined the Project’s on-site operational noise would not exceed March JPA, County of Riverside, or City of Riverside standards. Section 3.5.4 Off-Street Loading Facilities of the Specific Plan includes this restriction: “any loudspeaker, bells, gongs, buzzers, or other noise attention or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property. Sounds emitting from any of the aforementioned devices,

City “Good Neighbor” Policy	Project Consistency
	including or live or recorded music, shall cease between the hours of 10:00 p.m. and 7:00 a.m. if the sound therefrom creates a noise disturbance across the property line of a residential use.”
5. Idling of trucks queued or operated on site shall not exceed five minutes.	Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use.
6. Where transport by temperature-controlled trucks or trailers is proposed, on-site electrical hookups shall be provided at loading docks. Idling or use of auxiliary truck engine power to power climate-control equipment shall be prohibited.	Consistent. Section 4.4.2 of the Specific Plan requires loading bays that are utilized by refrigerated trailers to have dock seals and be equipped with plug-in electrical outlets. In addition, MM-AQ-8 requires that all TRU loading docks provide electrical hookups and all loading docks are designed to be compatible with SmartWay trucks.
7. Warehousing and distribution facilities generating 150 or more truck trips per day, as determined by the most recent Institute of Transportation Engineers (ITE) Trip Generation Rate for the specific proposed land use, shall prepare a Health Risk Assessment in accordance with South Coast Air Quality Management District (SCAQMD) Guidelines.	Consistent. A Health Risk Assessment has been prepared in accordance with SCAQMD standards and determined the Project will not cause a significant human health or cancer risk to adjacent land uses as a result of Project construction and operational activity. See Appendix C-2 of the EIR.

WRCOG Good Neighbor Guidelines

A number of comments questioned the Project’s consistency with WRCOG’s Good Neighbor Guidelines for Siting New and/or Modified Industrial Facilities dated September 12, 2005. The following table includes an analysis of the Project’s consistency with WRCOG’s Good Neighbor Guidelines.

WRCOG Goal	Project Consistency
<p>Goal 1: Minimize exposure to diesel emissions to neighbors that are situated in close proximity to the warehouse/distribution center.</p> <ul style="list-style-type: none"> • Create buffer zone of at least 300 meters (roughly 1,000 feet, can be office space, employee parking, greenbelt) between warehouse/distribution center and sensitive receptors (housing, schools, daycare centers, playground, hospitals, youth centers, elderly care facilities, etc.); • Site design shall allow for trucks to check-in within facility area to prevent queuing of trucks outside of facility; • Take into account the configuration of existing distribution centers and avoid locating residences and other new sensitive land uses near entry and exit points; • Design warehouse/distribution center so that interior vehicular circulation shall be located away from residential uses or any other sensitive receptors. 	<p>Consistent. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. Industrial buildings must be set back a minimum of 1,000 feet from residential. In addition, any industrial-use building will require a 1,000-foot setback from existing residential to any proposed truck courts or loading docks. Section 3.5.4, Off-Street Loading Facilities, and Section 4.4.2, Truck Courts and Loading Docks, of the Specific Plan require truck courts and loading docks to be oriented away or screened to reduce visibility public roads, publicly accessible locations within the West Campus Upper Plateau Specific Plan, and surrounding residential properties, and prohibits loading and unloading</p>

WRCOG Goal	Project Consistency
	<p>activities within view of public streets or residential land uses.</p> <p>Section 3.5.4, Off-Street Loading Facilities, requires loading or unloading facilities to be sized and located so that they do not require trucks to be located in required front or street side yards during loading and unloading activities, ensuring trucks do not spill onto surrounding public streets.</p> <p>The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue.</p>
<p>Goal 2: Eliminate diesel trucks from unnecessarily traversing through residential neighborhoods.</p> <ul style="list-style-type: none"> • Require warehouse/distribution centers to clearly specify on the facility site plan primary entrance and exit points; • Require warehouse/distribution centers to establish specific truck routes and post signage between the warehouse/distribution center and the freeway and/or primary access arterial that achieves the objective. The jurisdiction may not have an established truck route, but may take the opportunity to consider the development of one; • Provide food options, fueling, truck repair and or convenience store on-site or within the warehouse/distribution center complex; • Require warehouse/distribution centers to provide signage or flyers identifying where food, lodging, and entertainment can be found, when it is not available on site. 	<p>Consistent. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. MM-AQ-15 requires signage clearly identifying the approved truck routes. PDF-TRA-2 will amend the existing March JPA truck routes. MM-AQ-9 requires industrial facilities 400,000 square feet or larger to include a truck operator lounge equipped with clean and accessible amenities, such as restrooms, vending machines, television, and air conditioning. MM-AQ-21 requires tenants to join or implement a transportation demand management program, including offering shuttle service to and from commercial areas/food establishments or establish onsite locations for food or catering trucks service.</p>
<p>Goal 3: Eliminate trucks from using residential areas and repairing vehicles on the streets.</p> <ul style="list-style-type: none"> • Allow homeowners in the trucking business to acquire permits to park vehicles on property, residential areas or streets; • Establish overnight parking within the warehouse/distribution center; • Allow warehouse/distribution facilities to establish an area within the facility for repairs. 	<p>Consistent. Section 3.5.4, Off-Street Loading Facilities, requires loading or unloading facilities to be sized and located so that they do not require trucks to be located in required front or street side yards during loading and unloading activities, ensuring trucks do not spill onto surrounding public streets.</p>
<p>Goal 4: Reduce and/or eliminate diesel idling within the warehouse/distribution center.</p> <ul style="list-style-type: none"> • Require the installation of electric hook-ups to eliminate idling of main and auxiliary engines during loading and unloading, and when trucks are not in use; 	<p>Consistent. MM-AQ-8 requires that all TRU loading docks provide electrical hookups and all loading docks are designed to be compatible with SmartWay trucks. MM-AQ-22 requires the facility operator to provide information to all tenants, with instructions that the information shall be</p>

WRCOG Goal	Project Consistency
<ul style="list-style-type: none"> • Train warehouse managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks within the facility; • Require signage that informs truck drivers of the California Air Resources Board (CARB) regulations (which include anti-idling regulations); • Post signs requesting that truck drivers turn-off engines when not in use; • Restrict idling within the facility to less than ten (10) minutes. 	<p>provided to employees and truck drivers as appropriate, regarding efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.</p> <p>MM-AQ-17 requires legible, durable, weather-proof signs placed at truck access gates, loading docks, and truck parking areas that identify: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged; and 3) telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations. One six square foot sign providing this information shall be located on the building between every two dock-high doors and the sign shall be posted in highly visible locations at the entrance gates, semi parking areas, and trailer parking locations.</p>
<p>Goal 5: Establish a diesel minimization plan for on- and off-road diesel mobile sources to be implemented with new projects.</p> <ul style="list-style-type: none"> • Encourage warehouse/distribution center fleet owners to replace their existing diesel fleets with new model vehicles and/or cleaner technologies, such as electric or compressed natural gas; • Require all warehouse/distribution centers to operate the cleanest vehicles available; • Provide incentives for warehouses/distribution centers and corporations which partner with trucking companies that operate the cleanest vehicles available; • Encourage the installation of clean fuel fueling stations at facilities. 	<p>Consistent. MM-AQ-19 requires tenants be provided documentation on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p> <p>MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available.</p>

WRCOG Goal	Project Consistency
<p>Goal 6: Establish an education program to inform truck drivers of the health effects of diesel particulate and the importance of reducing their idling time.</p> <ul style="list-style-type: none"> • Provide warehouse/distribution center owners/managers with informational flyers and pamphlets for truck drivers about the health effects of diesel particulates and the importance of being a good neighbor. The following information should include: <ul style="list-style-type: none"> ○ Health effects of diesel particulates; ○ Benefits of minimizing idling time; ○ ARB idling regulations; ○ Importance of not parking in residential areas. 	<p>Consistent. MM-AQ-22 requires tenants provide information to employees and truck drivers on: Building energy efficiency, solid waste reduction, recycling, and water conservation; Vehicle GHG emissions, electric vehicle charging availability, and alternate transportation opportunities for commuting; Participation in the Voluntary Interindustry Commerce Solutions (VICS) “Empty Miles” program to improve goods trucking efficiencies; Health effects of diesel particulates, state regulations limiting truck idling time, and the benefits of minimized idling; The importance of minimizing traffic, noise, and air pollutant impacts to any residences in the Project vicinity; Efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.</p>
<p>Goal 7: Establish a public outreach program and conduct periodic community meetings to address issues from neighbors.</p> <ul style="list-style-type: none"> • Encourage facility owners/management to conduct periodic community meetings inviting neighbors, community groups, and other organizations; • Encourage facility owners/management to have site visits with neighbors and members of the community to view measures that the facility has taken to reduce/and or eliminate diesel particulate emissions; • Encourage facility owners/management to coordinate an outreach program that will educate the public and encourage discussion relating to the potential for cumulative impacts from a new warehouse/distribution center. • Provide facility owners/management with the necessary resources and encourage the utilization of those resources such as, the California Air Resources Board (ARB) and the South Coast Air Quality Management District regarding information about the types and amounts of air pollution emitted in an area, regional air quality concentrations, and health risks estimates for specific sources; • Require the posting of signs outside of the facility providing a phone number where neighbors can call if there is an air quality issue. 	<p>Consistent. MM-AQ-16 requires signage with contact information for the tenant representative, March JPA, County of Riverside, and SCAQMD for complaints about excessive noise, dust, fumes, odors, and perceived Code violations. MM-AQ-17 requires legible, durable, weather-proof signs placed at truck access gates, loading docks, and truck parking areas that identify telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations.</p>

2003 Settlement Agreement with Center for Community Action and Environmental Justice and Community Alliance for Riverside’s Economy & Environment

A number of comments questioned the Project’s consistency with the 2003 Settlement Agreement with CCAEJ and CAREE. Subsequent to the adoption of the 1999 March JPA General Plan, a Settlement Agreement was entered into by, between, and among March JPA, the Center for Community Action and Environmental Justice (CCA EJ),

Community Alliance for Riverside’s Economy & Environment (CAREE), and LNR Riverside, LLC (Developer). In March 2003, CCAEJ and CAREE filed legal action challenging March JPA’s approval of a General Plan Amendment, Specific Plan Amendment, Tentative Tract Map, and March JPA’s certification of the March Business Center Final Focused EIR for the development of 1,290 acres known as the March Business Center (now known as Meridian Business Center). Pursuant to a Memorandum of Understanding entered into by all involved, in August 2003, a Settlement Agreement was established for the dismissal of challenges to the 2003 Project and allowed for the development of the Project consistent with the objectives of March JPA.

The 2003 Settlement Agreement specifically focused on the North Campus and South Campus portions of the March Business Center. The Settlement Agreement established terms for the buildout of these two campuses within the March Business Center and did not apply to the development of the proposed Project on the West Campus Upper Plateau site. The Table below details the Project’s consistency with the 2003 Settlement Agreement’s settlement terms (Section 2).

2003 Settlement Agreement	Project Consistency
2.1 – Reduction in Semi-Truck Emissions	
<p>2.1.1 All semi trucks to use only low sulfur fuel after 2006, reducing particulate emissions by 15%, as required by the State of California.</p> <p>2.1.2 All new semi-trucks registered within the state of California shall have particulate traps for model years 2006 and after, as required by the State of California (85% reduction in particulates).</p> <p>2.1.3 All new semi-trucks sold in the United States to have reduced PM emissions through use of particulate traps starting in 2007 as required by the U.S. EPA (85% reduction in particulates).</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
<p>2.1.4 March JPA to research and prepare an ordinance for limited semi truck idling time to include posting of signs and levying of fines for all semi trucks within March Joint Powers Authority.</p>	<p>Consistent. MM-AQ-17 limits truck idling to 3 minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged and for truck drivers to shut off engines when not in use. MM-AQ-17 requires signage detailing the telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations. MM-AQ-16 requires signage with contact information for the tenant representative, March JPA, County of Riverside, and SCAQMD for complaints about excessive noise, dust, fumes, odors, and perceived Code violations.</p>
2.2 Business Park to facilitate use of Bio Diesel and Alternate Fuels	
<p>2.2.1 March JPA and Developer to cooperate and partner with AQMD to encourage bio diesel, propane and CNG/LNG use within the Project.</p> <p>2.2 .2 March JPA and Developer to pursue Carl Moyer Grants to assist businesses in using new technology for clean burning vehicles.</p>	<p>Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean</p>

2003 Settlement Agreement	Project Consistency
<p>2.2.3 March JPA and Developer will pursue Carl Moyer Grants specifically for '95 and newer semi-trucks within Logistic Warehouse fleets to modify semi-trucks to clean burning vehicles by use of particulate traps, CNG/LNG, bio diesel or other emerging clean air technology.</p> <p>2.2.4 March JPA and Developer to pursue natural gas and bio diesel fueling infrastructure within the Project or within the March Joint Powers Authority within 6 months of the issuance of the certificate of occupancy for the first Logistic Warehouse. To facilitate development of the facility, March JPA and Developer will explore use of public incentive funding available through California Mobile Source Reduction Committee and AQMD Clean Fuels Funding.</p> <p>2.2.5 Developer shall cause to be developed a low-sulfur fueling facility within the Project or within the March Joint Powers Authority within six months of the issuance of the certificate of occupancy for the first Logistic Warehouse. Incentives are to be provided by Developer to bring low sulfur fuel prices to non-clean market levels through voucher and/or validation system for Project Logistic Warehouse facilities. Low-sulfur fuel to be available for all other users, including through-traffic on 1-215, however incentives are not required by Developer to subsidize other users.</p> <p>2.2.6 Developer will use best efforts to encourage the low bidders to utilize clean burning bio-diesel and/or low sulfur diesel fuel for grading and earthmoving equipment during the mass grading process.</p>	<p>fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. PDF-GHG-1 requires conduit to be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available.</p> <p>MM-AQ-18 requires tenants utilize electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. MM-AQ-14 requires tenants utilize electric or battery-operated equipment for landscape maintenance.</p> <p>MM-AQ-19 requires tenants to be provided with information on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.</p> <p>PDF-AQ-1 prohibits the use of natural gas by Specific Plan Area development.</p> <p>MM-AQ-25 requires the facility operator monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable.</p> <p>MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later and to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible. MM-AQ-3 further requires the designation of an area where electric-powered construction vehicles and equipment can be charged.</p>

2003 Settlement Agreement	Project Consistency
2.3 Assure attractive development and views from Orangecrest	
<p>2.3.1 March JPA shall adopt architectural design guidelines for all development within the Project. The draft architectural design guidelines shall be routed to CAREE representatives for review and comment prior to placing the final guidelines on the Joint Powers Commission agenda for consideration and approval.</p> <p>2.3.2 March JPA shall require a 15’ landscape buffer on Project development between the existing Orangecrest residential neighborhood and the Project within the north campus.</p> <p>2.3.3 March JPA shall prepare a resolution for the appointment of Frank Schiavone to the March Business Center Implementation Committee and such resolution to the Joint Powers Commission for consideration and approval.</p>	<p>Consistent. Chapter 4 of the Project Specific Plan sets forth the Design Guidelines and Standards, providing the site planning, landscaping, and architectural theme within the West Campus Upper Plateau Specific Plan and guidelines on architectural design, landscape design, streetscapes, walls and fencing, and signage. The Specific Plan Area includes a 30-foot buffer of open space between the Campus Development and the Conservation Easement. Figure 4-19 of the Project Specific Plan provides details of the landscape interface to the south of the Specific Plan Area. Figure 4-17 provides details of the landscape interface to the north of the Specific Plan Area.</p> <p>Term 2.3.3 is not applicable to the Project.</p>
2.4 Land Use Provisions	
<p>2.4.1 Parties agree that in order to effectuate land use objectives, that Developer will analyze the potential of shifting approximately 16 acres within the north campus from the west side of “Z” Street to the east side of “Z” Street, with the acreage to be shifted primarily from lots 54, 55 and 56.</p> <p>2.4.2 Parties agree that no land use meeting the description of Logistics Warehouse, will be developed on lots 54, 55 and 56 as identified in the Approvals, or within the Industrial area west of “Z” street if these lots are modified to realign “Z” Street.</p> <p>2.4.3 Parties agree that any logistic facilities located in the south campus shall first occur on lots 78, 79, 80, and 81 as identified in the approved Tentative Map.</p> <p>2.4.4 Parties agree that it is assumed that lots 16, 17 and 18 within the south campus will not be developed for Logistic Warehouses. If circumstances do not allow non-Logistic Warehouses to develop on lots 16, 17, and 18, Developer may pursue the use of these lots for Logistic Warehouse uses, subject to these uses being approved at a public hearing of March JPA, and subject to the Logistic Warehouses incorporating clean fuel fleets.</p>	<p>Not Applicable. These provisions apply to specific lots within the North and South Campuses of the Meridian Business Center.</p> <p>Regarding clean fuel fleets, MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later.</p>
2.5 Limit trucks on Van Buren and Alessandro Boulevard (to the extent that it is within the power of these Parties to do so, as to Alessandro Boulevard).	
<p>2.5.1 Developer shall create a truck route plan to require all truck traffic to travel within the development directly east to 1-215.</p>	<p>Consistent. As stated in PDF-TRA-2, the Project will amend the existing March JPA truck routes along Brown Street to Cactus Avenue, and Cactus Avenue west from Meridian Parkway. Internal Project roadways of Linebacker Drive, Arclight Drive, Bunker Hill Drive, and Airman Drive will also be</p>

2003 Settlement Agreement	Project Consistency
	<p>truck routes. Trucks are prohibited from turning left on Brown Street to access Alessandro Boulevard. No truck access is permitted along Barton Street. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. The Project will comply with the March JPA's approved truck route ordinance. MM-AQ-15 requires signs clearly identifying the approved truck routes be installed along the truck routes to and from the project site and within the project site.</p>
<p>2.5.2 Developer and Authority shall post truck route signs along JPA roads to discourage use of Van Buren Boulevard and Alessandro (to the extent that it is within the power of these Parties to do so, as to Alessandro) as a truck route.</p>	<p>Consistent. MM-AQ-15 requires signs clearly identifying the approved truck routes installed along the truck routes to and from the Project site and within the Project site.</p>
<p>2.5.3 Developer shall construct physical constraints within March JPA to prohibit truck movements heading west on Van Buren Boulevard but permitting cars, subject to March JPA approval.</p>	<p>Not Applicable. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway.</p>
<p>2.5.4 March JPA shall require approval of Traffic Demand Management plan for each business to include posting of the approved truck route plan within all businesses and prohibition of through truck traffic west of Barton on Van Buren and Alessandro (to the extent that it is within the power of these Parties to do so, as to Alessandro).</p>	<p>Consistent. MM-AQ-15 requires signs clearly identifying the approved truck routes installed along the truck routes to and from the Project site and within the Project site.</p> <p>Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include:</p> <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees.

2003 Settlement Agreement	Project Consistency
	<ul style="list-style-type: none"> • Create and maintain a “commuter club” to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home. • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
<p>2.5.5 March JPA shall work with Assemblyman Benoit’s office, City of Riverside officials, County of Riverside officials and other appropriate agencies to redesignate Van Buren Boulevard and Alessandro Boulevard (to the extent that it is within the power of these Parties to do so, as to Alessandro) west of the March JPA planning area for no through truck traffic.</p>	<p>Consistent. Truck route enforcement will be implemented through the March JPA Truck Route Ordinance.</p>
<p>2.6 Provide Public Amenities</p>	
<p>2.6.1 March JPA shall provide for active recreation in the form of a community park. The park is to consist of 48-acres initially with potential expansion to 60-acres (“Park”).</p> <p>2.6.2 Specific use of the Park shall be for softball, soccer or football fields for youth or adult recreation or other appropriate uses as determined through a parks feasibility study.</p>	<p>Consistent. The Project includes a 60.28-acre parcel for park purposes. As Recirculated Chapter 3, Project Description, explained, under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with off-site utilities, drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete.</p>
<p>2.6.3 March JPA and Developer to provide site for Riverside County Fire station.</p>	<p>Consistent. The applicant previously dedicated a 2.12-acre parcel at the northeast corner of Meridian Parkway and Opportunity Way to the County of Riverside. As discussed in more detail in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, the</p>

2003 Settlement Agreement	Project Consistency
	proposed Development Agreement includes the construction of the Meridian Fire Station as a Community Benefit.
2.6.4 March JPA and Developer to provide site for City of Riverside Police substation.	Consistent. The applicant dedicated a site to the City of Riverside for a Police Station at Barton Road in Meridian South Campus, which the City of Riverside then relinquished back.

2012 Settlement Agreement with Center for Biological Diversity and San Bernardino Valley Audubon Society

A number of comments questioned the Project’s consistency with the 2012 Settlement Agreement with CBD. Adopted in 1996, designated areas of the March AFB, including the Project site, were designated as the Sycamore Canyon-March Core Reserve by the Stephens’ kangaroo rat (SKR) habitat conservation plan (HCP). The SKR HCP also contemplated the release of some of this land for development. Subsequent to the decision to realign March AFB, a strategy was developed to trade March SKR habitat in exchange for purchasing SKR habitat elsewhere in Western Riverside County in order to take full advantage of the economic redevelopment potential afforded by the March surplus lands. In 2009, the Center for Biological Diversity and San Bernardino Valley Audubon Society brought a lawsuit challenging the trade out of March land, including the Project site, in exchange for land in Potrero Valley. The parties executed a settlement agreement in 2012 (CBD Settlement Agreement). The CBD Settlement Agreement covers development within the Project site.

The Table below details the Project’s consistency with the settlement terms of the CBD Settlement Agreement (Section B – agreement language abridged for ease of review).

2012 CBD Settlement Agreement	Project Consistency
1. Defendant-Intervenors agree to place into conservation those portions of the March SKR Management Area/March Air Force Base west campus depicted as “Conservation Easement” or “Water Quality Open Space Area” on the map attached hereto as Exhibit A (approximately 649 acres) to be managed for their wildlife habitat value for sensitive species.	Consistent. In 2014, March JPA placed the southern 141.237 acres (located north of Van Buren Boulevard) under a conservation easement currently managed by the Rivers and Lands Conservancy. Under this Project, approximately 445.43 acres of undisturbed land surrounding the Specific Plan Area, referred to as the Conservation Easement, would be placed under a conservation easement. For informational purposes, in order to provide the minimum 649 acres of conservation area, the Applicant and March JPA identified an additional 87.7 acres of open space available for the dedication of a Conservation Easement located between the Project site’s southern boundary and Van Buren Boulevard that was not included in the 2014 open space dedication. This is occurring as a separate action and not part of this Project. The Management Entity for the Conservation Easement would meet the criteria outlined in the CBD Settlement Agreement.
a. The Parties acknowledge that there are many existing service roads within the Conservation Areas. The Parties agree that any currently existing service roads within the Conservation Areas, as depicted by the red lines in Exhibit A, can continue to be utilized by the public for	Consistent. The Project includes a 445.43-acre Conservation Easement with existing trails for passive recreational use.

2012 CBD Settlement Agreement	Project Consistency
<p>passive recreation. Passive recreation means recreational uses where very minimum alteration of vegetation, topography or other native features are necessary for the enjoyment of the site amenities, such as hiking, nature observation, picnicking, non-motorized recreation, and archaeological or historic preservation.</p>	
<p>b. Vehicular access on the existing service roads shall not be open to the general public.</p>	<p>Consistent. Vehicular access by the general public is prohibited within the Conservation Easement area.</p>
<p>c. Public Access shall be limited to reduce the impacts to sensitive species and habitat in the Conservation Areas. Mechanisms to reduce the impacts of passive recreation and public access in the Conservation Area include, but are not limited to, fencing, signage to prevent off-road or off-trail use and night access, and leash requirements for any dogs allowed in the Conservation Area.</p>	<p>Consistent. March JPA continues to manage the Conservation Easement area in conformance with the CBD Settlement Agreement.</p>
<p>2. Portions of the March SKR Management Area/March Air Force Base west campus can be developed by the Defendant-Intervenors, as depicted in the Developable Area in Exhibit A. The Developable Area includes the roadways depicted on Exhibit A. Any temporary impact to areas adjacent to the Developable Area shall be restored by Developer to provide habitat for sensitive species.</p>	<p>Consistent. The Specific Plan Area of the Project overlaps the Developable Area set forth in the CBD Settlement Agreement. To prevent inadvertent disturbance to areas outside the limits of work, MM-BIO-1 requires the construction limits to be clearly demarcated and maintained throughout Project construction. MM-BIO-3 requires the restoration of temporary impacts.</p>
<p>3. Portions of the March SKR Management Area/March Air Force Base west campus will be dedicated as parkland or open space for active recreational use, as depicted in Exhibit A (“Proposed Park Area”).</p>	<p>Consistent. The Project includes a 60-acre proposed Park for active recreational use.</p>
<p>4. Defendant-Intervenors shall, at their sole discretion, select an appropriate land management entity or entities to manage the SKR Conservation Area (“Management Entity”), with input from the Plaintiffs.</p>	<p>Consistent. The Project includes placing 445.43 acres under a conservation easement to be managed for its habitat values.</p>
<p>5. The Parties acknowledge there are certain “blanket” easements across the Conservation Areas for items such as utilities that were retained or granted by the United States government which are not affected by this Agreement.</p>	<p>Consistent. The Project does not propose any interference with any blanket easements.</p>
<p>6. March JPA agrees that all mitigation measures attached as Exhibit B shall be required for any development in the Developable Area.</p>	<p>Consistent. The mitigation measures listed in the CBD Settlement Agreement have been incorporated into the Project Specific Plan, Project design features, the EIR mitigation measures, and the conditions of approval.</p>
<p>7. Developer agrees to make an initial contribution by December 31, 2012, of \$500,000 toward a total non-wasting endowment of \$2 million to be used for management and monitoring activities undertaken by the Management Entity in the Conservation Areas (“Endowment”). Developer agrees that the non-wasting Endowment will be fully funded at a level of \$2 million before the last grading permit for the Development Area is issued or April 1, 2027, whichever is earlier.</p>	<p>Consistent. March JPA maintains an endowment fund where payments in conformance with the CBD Settlement Agreement have been deposited.</p>

2012 CBD Settlement Agreement	Project Consistency
8. Defendant-Intervenors agree not to develop, grade, de-vegetate, or destroy a riparian area of approximately 2-3 acres located on the Conservation Areas or Proposed Park Area as depicted in Exhibit A (“Riparian Area”).	Consistent. The Riparian Area is within the proposed Conservation Easement area.
9. Defendant-Intervenors agree to abide by the Urban/Wildland Interface requirements, as set forth in Section 6.1.4 of the Western Riverside County Multiple Species Habitat Conservation Plan (“MSHCP”) and agree that the Conservation Areas referenced in this agreement will be treated as if they are a MSHCP Conservation Area for purposes of application of the Urban/Wildland Interface requirements. In particular the Parties agree to implement the requirements of Section 6.1.4 including, but not limited to, noise, drainage, barriers and lighting.	Consistent. The provisions of Section 6.1.4 of the MSHCP have been incorporated into the Project Specific Plan, Project design features, the EIR mitigation measures, and the conditions of approval.
a. Defendant-Intervenors agree that Brown Street, and in particular the intersection of Brown Street and Alessandro Boulevard, will be designed to minimize impacts to wildlife movement from the neighboring Sycamore Canyon Wilderness Park. Such mitigation measures will include, but are not limited to, the following: reductions in night lighting within and adjacent to the Conservation Areas while still complying with County minimum street light requirements; fencing to reduce public access and allow wildlife movement; and signs to reduce trespass and inform the public of the sensitive nature of the areas.	Consistent. The Project proposes to include a wildlife crossing under Brown Street. Additionally, the lighting, fencing, and signage measures have been incorporated into the Project Specific Plan, Project design features, the EIR mitigation measures, and the conditions of approval.
12. Defendant-Intervenors agree that the existing Cactus Avenue, as depicted on Exhibit A, will be the only road bisecting the Conservation Areas in the March SKR Management Area/March Air Force Base west campus to connect the existing and future Meridian development in the vicinity of Plummer Street with the future Meridian West Campus. Other anticipated infrastructure that has the potential to impact the Conservation Areas described in this Agreement is listed on Exhibit A.	Consistent. Cactus Avenue is the only roadway proposed to bisect the Conservation Easement. Two wildlife crossings will be constructed beneath the Cactus Avenue roadway extension to facilitate wildlife passage from the north and south side of the new roadway extension. Another wildlife crossing will be constructed under the Brown Street extension.
13. Defendant-Intervenors agree that soft-bottomed culverts will be installed beneath any future modifications to Cactus Avenue to allow for animal passage underneath Cactus Avenue. The dimensions of such culverts shall be approximately 6 feet in height by 20 feet in width to allow for adequate passage of animals north-south through the Conservation Areas.	Consistent. The Project proposed three wildlife crossing culverts: 2 under Cactus Avenue and 1 under Brown Street.

9.1.5 Topical Response 5 - Jobs

This topical response addresses various comments received on the EIR related to the number of jobs anticipated to be created by the Project as well as the types of jobs and whether or not there is a need for these jobs, so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable.

Draft EIR Estimate

The Draft EIR utilizes the Project jobs estimate of 2,595 employees used by Western Municipal Water District (WMWD) in its Water Supply Assessment (Appendix O) for the Project. This jobs estimate was developed by the March JPA and represents on-site employees that will impact water demand for the Project.

March JPA Economic Impact Data

To evaluate the regional economic effects of March JPA development projects as of March 2023 and project their impacts in a fully-built-out scenario by 2040, March JPA commissioned Dr. Qisheng Pan to prepare an “Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects“ (March EIA; Final EIR Appendix U). The intent of the March EIA is to provide an update to the JPA Commissioners about the economic conditions for the entire JPA Planning Area. Table 1 of the March EIA presents 2023 employment data for the various existing developments within the March JPA Planning Area. The data includes each business, its location, square footage, total jobs, and business type (NAICS Code). The employment numbers include ancillary jobs, such as truck drivers.¹ A square footage to job ratio similar to the Project uses was developed using this 2023 March JPA economic impact data and removing the following entries:

- Businesses and buildings listed as vacant or without jobs
- Business types that would be prohibited under the West Campus Upper Plateau Specific Plan
- March Inland Port Airport development

A March JPA economic impact ratio was derived based on the above-referenced economic analysis. The March JPA economic ratio is 1,486 square feet per job (see worksheets attached as Final EIR Appendix T). Using this ratio, the Project would be estimated to generate a total of 3,357 jobs. Unlike the March JPA 2023 employment data, the Project on-site employee estimate does not include ancillary jobs. The Project would generate ancillary jobs for truck drivers and Table 4-2 of the West Campus Upper Plateau Traffic Analysis (Appendix N-2) indicates the Project would generate 2,054 truck trips (which is 1,027 trucks coming and going to the site) which equates to approximately 1,027 truck drivers. When the Project’s estimated truck drivers (1,027) are added to the Project’s estimated on-site employees (2,595), the Project has an estimate of 3,622 total jobs generated. The Project’s combined jobs estimate of 3,622 conservatively exceeds the March JPA employment ratio estimate (of 3,357) by only 8%, or 265 jobs. This revised number does not change the conclusions in the EIR.

Thus, the 2023 March JPA economic impact data substantiates the WMWD WSA and EIR’s on-site employment estimate for the Project.

Several comments raised concerns about employment projections and the effects of future automation on the workforce, particularly for warehouses. While existing warehouse automation would be accounted for in the March EIA, at this time, is too speculative to assume future automation and/or incorporate such unknown factors into the EIR. As stated above, the Draft EIR assumed the total on-site employment from the proposed Project based on the on-site employment data estimated by March JPA and used in the Water Supply Assessment (Appendix O in the EIR), as

¹ Email Comm. Dr. Grace Martin, March JPA Executive Director 6/7/23.

well as ancillary jobs derived from truck drivers serving Project operations. The Draft EIR's jobs estimate represents a conservative approach to assess associated environmental impacts if there were a future reduction in jobs.

Unemployment Projections

CEQA Guidelines Section 15125(a) states that an EIR must include a description of the physical environmental conditions in the vicinity of the project and that this environmental setting will normally constitute the baseline physical conditions. CEQA Guidelines Section 15125(a)(1) states that generally, the lead agency should describe the physical environmental conditions as they exist at the time the notice of preparation is published. This section of the CEQA Guidelines further states that "where existing conditions change or fluctuate over time, and where necessary to provide the most accurate picture practically possible of the project's impacts, a lead agency may define existing conditions by referencing historic conditions...".

The Draft EIR analyzed employment impacts utilizing 2019 unemployment data. As explained in Section 4.12, Population and Housing, of the EIR, "Given the fact that unemployment rates during the COVID pandemic may be skewed when compared to previous years, the 2019 rates were also evaluated". As stated in the EIR, "According to the U.S. Census Bureau, 5.8% of Riverside County's working age civilian population (16 years and over) were unemployed in 2019 compared to 5.9% in San Bernardino County, 5.0% in Los Angeles County, 4.1% in Orange County, and 5.6% in San Diego County." The U.S. Census utilized 1-year estimates for employment status (U.S. Census 2019).

Unemployment rates fluctuate on a monthly basis. The NOP for the proposed Project was published on November 19, 2021 According to the California Employment Development Department's Labor Market Information Division, the civilian labor force unemployment rate in November 2021 in Riverside County was 5.4% and the annual average unemployment rate for 2021 was 7.3%. In 2021 and 2022, the unemployment rate in Riverside County has been as low as 3.4% (May 2022) and as high as 8.9% (January 2021). Given this, the estimated unemployment rate of 5.8% (or 111,788 people) utilized in the Draft EIR is nearly identical to the average unemployment rate in 2021 and 2022, which would be 5.75%, and is well within the range of variation experienced during the pre- and post-COVID pandemic era.

Several comments challenged the Draft EIR's determination that the Project's estimated jobs would be filled regionally by existing residents. While the Draft EIR cites past (to account for labor changes during the COVID pandemic) and existing data for employment and unemployment as allowed under CEQA Guidelines Section 15125(a)(1), Project buildout would occur over an approximately 5-year horizon. The employment growth projections (i.e., forecasts) utilized within the EIR are provided by each local jurisdiction (e.g., Riverside County, City of Riverside, City of Moreno Valley, City of Perris) to the Southern California Association of Governments (SCAG) and based on the anticipated growth in population in Riverside County during the near-term (projected increase of 360,000 new County residents by 2030) and long-term (projected increase of 759,000 new County residents by 2045). As such, additional jobs will be needed to continue to provide employment opportunities for future residents of Riverside County. The EIR cites SCAG data in which, "48.6% of residents within unincorporated Riverside County work and live in the County, while 51.4% commute outside of the County (SCAG 2019b)" SCAG identified similar trends for Riverside County as a whole (inclusive of the incorporated and unincorporated areas). Approximately 48.0% work and live in Riverside County, while 52.0% commute to other places (SCAG 2019a). Further, as discussed in the General Plan, March JPA was formed to create jobs within this portion of Riverside County as part of the March Air Reserve Base realignment. Therefore, it is reasonable to assume the jobs generated by the Project could be filled with existing local residents residing within the County, either from the unemployed population or residents looking to reduce their commutes.

Additionally, using CalEnviroScreen 4.0,² the surrounding census tracts have an average unemployment rate of 9%, further supporting the EIR’s determination that the Project’s jobs would be filled locally. See Table TR6-1, below.

Table TR6-1. Unemployment Rates for Area Census Tracts

Census Tract	Area	Unemployment	CalEnviroScreen percentile ¹
6065046700	Project site March JPA March ARB	9%	81
6065042013	Orangecrest	6%	58
6065042014	Orangecrest	3%	23
6065042012	Mission Grove	6%	53
6065042009	Mead Valley	12%	91
6065042010	Mead Valley	6%	61
6065050900	Sycamore Canyon	5%	44
6065042505	Edgemont	17%	98
6065042506	Edgemont	8%	77
6065042512	Moreno Valley	8%	77
6065042511	Moreno Valley	15%	96
6065042510	Moreno Valley	14%	96
6065042508	Moreno Valley	6%	55
6065042507	Moreno Valley	17%	98
6065048800	Moreno Valley	10%	85
6065042620	Perris	3%	16

Source: https://experience.arcgis.com/experience/ed5953d89038431dbf4f22ab9abfe40d/page/Indicators/?data_id=widget_328_output_0%3A0%2CdataSource_45-17c3dd28756-layer-5%3A3952&views=Unemployment

March JPA recognizes the difficulty in identifying existing conditions for population, housing, and employment. As further detailed in Recirculated Chapter 3, Project Description, the Project site is located within an unincorporated area of Riverside County and surrounded by March JPA’s member agencies: the County of Riverside and the cities of Riverside, Moreno Valley, and Perris. Population, housing, and employment patterns are disproportionately located within the western region of the County. Thus, solely utilizing unincorporated data for existing and projected conditions would not adequately capture the nature of the employment within the vicinity of the Project site. Similarly, an assessment of each of March JPA’s member agencies would not adequately capture existing employment estimates and projections within the unincorporated areas adjacent to the Project site, within and outside of the March JPA Planning area. As such, the Draft EIR utilizes regional data sets as a comparison for impacts related to population growth due to the regional nature of the Project. Therefore, this determination represents a conservative approach in assessing the Project’s potential impacts throughout the EIR.

Salary and Housing Information

March JPA received comments raising concerns about potential salaries for Project jobs and local housing costs. According to the California Employment Development Department (EDD), for the third quarter of 2023, the average weekly pay in the Transportation and Warehousing sector in Riverside County was \$1,076, or \$55,952 annually.³

² Produced by the California Office of Environmental Health Hazard Assessment and analyzes various pollution burden data with population characteristics and assigns a score to each census tract relative to other census tracts.

³ https://labormarketinfo.edd.ca.gov/qcew/CEW-Detail_NAICS.asp?MajorIndustryCode=1021&GeoCode=06000065&Year=2023&OwnCode=50&Qtr=03

Using U.S. Census data,⁴ Table TR6-2 provides the median home price and gross rent (not limited to 1-bedroom apartments) for the zip codes adjacent to March ARB.

Table TR6-2 Housing Costs Adjacent to March ARB

Zip Code	Area	Median Home Price	Gross Rent
92553	Moreno Valley – north of March ARB, east of I-215	\$371,600	\$1,759
92551	Moreno Valley – east of March ARB	\$391,200	\$1,867
92570	Perris – south of March ARB, west of I-215	\$376,300	\$1,354
92571	Perris – south of March ARB, east of I-215	\$382,500	\$1,830
92508	Orangecrest, Mission Grove, Riverside	\$633,900	\$2,511

The U.S. Department of Housing and Urban Development considers housing to be affordable when a household spends 30% or less of its income on housing costs. Using the EDD data, 30% of a Riverside County warehouse worker’s salary would be \$1,398.80, which would be in excess of the gross rent for housing in Perris (zip code 92570).

9.1.6 Topical Response 6 – Meridian Fire Station

This topical response is focused specifically on the provision of the planned fire station within the March JPA Planning Area. As detailed in Recirculated Chapter 3, Project Description, the Development Agreement for the proposed Project includes the construction of the Meridian Fire Station as a Community Benefit. As discussed in the Draft EIR, the Meridian Fire Station’s construction and operation is not required to serve the proposed Project, and environmental analysis for the development and operation of the Fire Station was adopted by March JPA in 2010, through the Subsequent EIR (SEIR) the Meridian Specific Plan (SCH#2009071069). This topical response elaborates on the background and previously conducted analysis for this Fire Station.

Previous Environmental Evaluation of the Meridian Fire Station

Following the establishment of March JPA and the adoption of March JPA’s General Plan in 1999, the March Business Center Specific Plan was prepared and adopted in 2003. The March JPA certified a Focused EIR as part of the approval of the March Business Center Specific Plan. The March Business Center Specific Plan identified two campuses: North Campus and South Campus, separated by Van Buren Boulevard. The 2003 Focused EIR identified the need for an additional fire station and included Mitigation Measure P-2. Mitigation Measure P-2 states, “The developer shall dedicate land within the proposed Project for a future fire station. The March JPA will develop a financing plan to fund the station.” On May 21, 2003, March JPA adopted Ordinance #JPA-03-02, approving fire development impact fees to fund the Meridian Fire Station.

In April 2010, the March JPA certified a Subsequent EIR (SEIR) to the 2003 Focused EIR that included, in part, environmental analysis associated with the construction and operation of the fire station, referred to as the Meridian Fire Station. The SEIR also evaluated changes in land use designations, changes in lot layout, site access, and internal circulation, types of development within the March Business Center Specific Plan area, development of Lot 16, and changes in Specific Plan development regulations. The SEIR focused solely on the North Campus area of the March Business Center Specific Plan.

Specifically, beginning on Page III-22, the SEIR noted that the Riverside County Fire Department planned to develop the Meridian Fire Station on a 2.12-acre site located at the northeast corner of Meridian Parkway and Opportunity Way, as shown in the attached Figure TR6-1. The Meridian Fire Station would serve the JPA Planning Area and surrounding development, and the developer’s dedication of land satisfied 2003 Focused EIR Mitigation Measure P-2. The SEIR disclosed that the exact construction date for the Meridian Fire Station was not known at the time of preparing the SEIR; however, the JPA’s stated intent was to ensure that potential impacts from the construction and operation of the Meridian Fire Station were included in the SEIR.

The 2010 SEIR described the Meridian Fire Station as a Heavy Urban Station, which “are typically staffed by a maximum of 16 people and have approximately 10,000 square feet of interior space, which includes living areas, offices, and a lobby. Living space for a Heavy Urban Station typically includes a semi private sleeping area, bathrooms, a dayroom, a dining area, kitchen facilities, and a gym or other area for exercise. Three drive-through apparatus bays are provided to facilitate the movement of vehicles. Heavy Urban Fire Stations generally have one or more Type 1 Engines (a three-person engine company), squads (e.g., Series F-450, F-500 trucks), and in some instances a ladder truck, and/or an ambulance unit assigned. The County Fire Department does have a standard architectural design for their stations; however, the exterior would be designed consistent with the March Business Center Design Guidelines such that it would fit within the aesthetic characteristics of the area.”

As detailed in the 2010 SEIR, the Meridian Fire Station would operate 24-hours per day, seven days per week. Firefighters would work 72- to 96-hour shifts. Training and equipment maintenance would account for most of the firefighters’ time when they are not on a call. Training and equipment maintenance would occur both inside and

outside the Meridian Fire Station. As with all Riverside County fire stations, the Fire Department would employ its good neighbor policy with respect to activities conducted outside the station, and the public would be able to visit during normal business hours, generally between 8:00 AM and 5:00 PM, Monday through Friday. The SEIR assumed an average of 6 to 10 daily visitors. The SEIR stated, “Operation of the proposed station would meet the fire service criteria defined in the 2003 Focused EIR and with the addition of new development associated with the proposed [North Campus development].”

The 2010 SEIR evaluated 4,205,000 square feet of North Campus development, including the 10,000-square foot Meridian Fire Station, and concluded impacts were either less than significant or less than significant with mitigation incorporated, with the exception of significant and unavoidable traffic, air quality, and GHG impacts. Based on projected trips, the Meridian Fire Station would contribute only a de minimus amount¹ to these identified impacts. The March Joint Powers Commission certified the 2010 SEIR and adopted a statement of overriding considerations and a mitigation monitoring and reporting program (MMRP). The construction and operation of the Meridian Fire Station would be subject to the mitigation measures set forth in the MMRP for the 2010 SEIR, including the establishment of a funding plan, included as Appendix T to this Final EIR. Therefore, the Meridian Fire Station has already been fully evaluated under CEQA.

Indeed, as stated in the April 29, 2023, letter from the CAL FIRE – Riverside Unit, Riverside County Fire Department to the March JPA, “the West Campus Upper Plateau Project Development Agreement will include the construction of the *previously planned and analyzed* North Campus fire station. County Fire will use this facility to provide emergency services to our community, and the provision of this facility will address any project impacts and provide the needed level of service for fire protection. This proposed facility will also serve other existing or future development with the March JPA service area, addressing cumulative needs.” (Emphasis added.)

The construction of the Meridian Fire Station as a Community Benefit of the proposed Development Agreement was included in Recirculated Chapter 3, Project Description, and fully analyzed in the 2010 SEIR.

¹ The 2010 SEIR describes the fire station as a 10,000 square foot urban station out of 4,205,000 square feet of development (0.24%). According to the 2010 SEIR Traffic Report, Table 5-2, the fire station contributed 46 of the analyzed 19,678 project trips (0.23%).

9.1.7 Topical Response 7 – Cumulative Projects

In response to various comments received on the Draft EIR, this topical response addresses commonly raised issues regarding the selection of cumulative projects and the cumulative analysis in the Draft EIR, so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable.

In addition to the evaluation of project-specific impacts, Section 15130 of the CEQA Guidelines requires an evaluation of cumulative impacts. CEQA defines cumulative as “two or more individual effects that, when considered together, are considerable or can compound to increase other environmental impacts.” When a significant cumulative impact is identified, Section 15130 of the CEQA Guidelines requires an EIR to evaluate whether the project’s incremental effect is cumulatively considerable. Cumulatively considerable means that the incremental effects of an individual project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects. These impacts can result from a combination of a proposed project together with other projects, thereby causing related impacts. The cumulative impact of several projects is the change in the environment that results from the incremental impact of one project when added to other closely related past, present, and reasonably foreseeable probable future projects.

As set forth in the CEQA Guidelines, the analysis of cumulative impacts need not be as in-depth as what is performed relative to the proposed project, but instead is to “be guided by the standards of practicality and reasonableness” (CEQA Guidelines Section 15130(b)).

Scope of Cumulative Analysis

Section 15130(b)(1) of the CEQA Guidelines states that the information utilized in an analysis of cumulative impacts should come from one of two sources, either:

1. A list of past, present, and probable future projects producing related cumulative impacts, including if necessary, those projects outside the control of the agency, or
2. A summary of projections contained in an adopted local, regional, or Statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect.

Because of the nature of individual environmental factors, the cumulative area for each topical issue is not the same. For instance, topic-specific cumulative study areas have been developed (e.g., South Coast Air Basin for air quality construction/mobile sources). For example, as set forth in Table 4-1 in the Final EIR and provided below, the geographic area for cumulative impacts analysis for air quality (toxic air contaminants and odors) is the immediate vicinity, while the geographic area for cumulative impacts analysis for air quality (construction/mobile sources) and greenhouse gas emissions is the South Coast Air Basin. Please see Recirculated Section 4.2, Air Quality, for additional information on the cumulative air quality analysis.

Cumulative Projects List

Where appropriate to the impact analysis in question, cumulative impacts are assessed with reference to a list of cumulative projects. Table 4-2 in Chapter 4.0, Environmental Analysis, of the Draft EIR provided the cumulative project list, which, as the Draft EIR explained, was developed for purposes of the EIR analysis through consultation with planning and engineering staff from March JPA, County of Riverside, and cities of Riverside and Moreno Valley to include key projects in the March JPA Planning Area and in the City of Riverside, County of Riverside, and City of Moreno Valley.

As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), to develop the cumulative projects list, Urban Crossroads, Inc. prepared a Project traffic analysis scoping package for review by March JPA staff prior to the preparation of the Project Traffic Analysis (Appendix N-2). The December 22, 2021, scoping agreement provided an outline of the Project study area, trip generation, trip distribution, analysis methodology, and cumulative project list and map. The agreement is included in Appendix 1.1 of Project Traffic Analysis (Appendix N-2). The scoping agreement was also shared with the County of Riverside, City of Riverside, and City of Moreno Valley for review and comment, and those comments were taken into consideration as part of the Project Traffic Analysis (Appendix N-2). The scoping agreement expressly requested the agencies provide the latest cumulative projects.

The March JPA Traffic Impact Study Guidelines utilizes a 5-mile radius around the Project site for determination of approved and pending projects for cumulative analysis. This is consistent with traffic study guidelines for WRCOG, County of Riverside, and the cities of Riverside and Moreno Valley. The 5-mile radius is intended to capture all of the regional intersections where the Project would contribute 50 or more peak hour trips. This also captures the areas where the Project would have more concentrated air quality and GHG impacts.

Table 4-2 of the Draft EIR included cumulative development projects within 5 miles of the Project site that were known at the time of the Project Notice of Preparation, dated November 18, 2021. Although raised by comments, both the Stoneridge and World Logistics Center projects are over 8 miles from the Project site. The Table 4-2 cumulative project list was developed in coordination with, and reviewed by, March JPA, City of Riverside, City of Moreno Valley, and County of Riverside.

Smaller projects and projects located a greater distance from the Project, such as Stoneridge and World Logistics Center, are accounted for through the application of the ambient growth factor. The Project Traffic Analysis (Appendix N-2) added an ambient growth factor of 14.87% to existing (2021) traffic volumes for Opening Year (2028) Cumulative conditions in addition to traffic manually added to account for the listed cumulative projects and the proposed Project. Cumulative traffic for Horizon Year (2045) conditions is based on the Riverside County Model (RIVCOM) (a traffic model representing 2045 conditions for the Western Riverside County region), which includes traffic associated with projects such as Stoneridge and World Logistics Center.

Method of Evaluation for Cumulative Impacts

The Draft EIR included analysis of the Project’s potential cumulative environmental effects consistent with the requirements of CEQA. The cumulative effects analysis methodology is explained in Chapter 4.0, Environmental Analysis, of the Draft EIR. The Draft EIR noted that consistent with CEQA, the cumulative impacts discussion is guided by the standards of practicality and reasonableness.

In response to comments that the “Method of Evaluation” column of Table 4-1, Geographic Scope and Method of Evaluation for Cumulative Impacts, of the Draft EIR does not adequately explain how the Draft EIR evaluated cumulative impacts for each impact area, Table 4-1 is revised as follows:

Table 4-1. Geographic Scope and Method of Evaluation for Cumulative Impacts

Environmental Resource	Geographic Area	Method of Evaluation
Aesthetics	Immediate Vicinity	List of Projects
Air Quality (Toxic Air Contaminants; Odors)	Immediate Vicinity	List of Projects
Air Quality (Construction/Mobile Sources)	South Coast Air Basin	List of Projects
Biological Resources	Immediate Vicinity	List of Projects
Cultural Resources	Regional and Local	List of Projects
Energy	State	List of Projects

Table 4-1. Geographic Scope and Method of Evaluation for Cumulative Impacts

Environmental Resource	Geographic Area	Method of Evaluation
Geology and Soils	Regional	List of Projects
Greenhouse Gas Emissions	South Coast Air Basin	List of Projects
Hazards and Hazardous Materials	Immediate Vicinity	List of Projects
Hydrology and Water Quality	Sub-Watershed	List of Projects
	Groundwater Basin	
Land Use and Planning	Regional and Local	List of Projects
Noise (On-Site Construction Noise)	Immediate Vicinity	List of Projects
Noise (Off-Site Truck Noise)	Immediate Vicinity	List of Projects
Population and Housing	Regional	List of Projects
Public Services	Immediate Vicinity	List of Projects
Recreation	Immediate Vicinity	List of Projects
Transportation	Regional	List of Projects
Tribal Cultural Resources	Regional	List of Projects
Utilities and Service Systems	Immediate Vicinity	List of Projects
Wildfire	Immediate Vicinity	List of Projects

The Cumulative Effects subsection of each Impact area of the Draft EIR described the method of evaluation and is summarized below.

Section 4.1, Aesthetics, explained that “the Project would be consistent with the larger visual context of the surrounding area. Similarly, cumulative projects, shown on Table 4-2 and Figure 4-1 of Chapter 4 of this EIR, would introduce a mixture of industrial, business park, and mixed-use land uses.”

Recirculated Section 4.2, Air Quality, explained that “Air pollution by nature is largely a cumulative impact. The cumulative geographic context for air quality impacts is the SCAB” and that “the air quality analysis for this Project assumed that individual projects that do not generate operational or construction emissions that exceed SCAQMD’s recommended daily thresholds for project specific impacts would also not cause a cumulatively considerable increase in emissions for those pollutants for which the SCAB is in nonattainment, and, therefore, would not be considered to have a significant, adverse cumulative air quality impact. Conversely, projects exceeding SCAQMD’s recommended daily thresholds for project specific impacts would also cause a cumulatively considerable increase in emissions for those pollutants for which the SCAB is in nonattainment, and, therefore, would be considered to have a significant, adverse cumulative air quality impact.”

Section 4.3, Biological Resources, explained that “The geographic extent for this cumulative impact analysis includes the jurisdiction of the March JPA Planning Area and the surrounding area,” and “Table 4-12 within Chapter 4, Environmental Analysis, of this EIR includes a list of cumulative development proposals within the vicinity of the Project site. Proposed projects near the Project site include projects in unincorporated Riverside County and the City of Riverside and City of Moreno Valley within Riverside County.”

Section 4.4, Cultural Resources, explained that “Cumulative impacts on cultural resources consider whether impacts of the proposed Project together with other related projects identified within the vicinity of the Project site, when taken as a whole, substantially diminish the number of historic or archeological resources within the same or similar context or property type. Fifty-one cumulative projects have been identified under Table 4-2, Related Projects, of Chapter 4, Environmental Analysis, of this EIR. However, impacts to cultural resources, if any exist, tend to be site-specific.”

Section 4.5, Energy, explained that “Cumulative projects that could exacerbate the proposed Project’s impacts include any projects that could result in wasteful, inefficient, or unnecessary use of energy (see Table 4-2 in Chapter 4, Environmental Analysis).”

Section 4.6, Geology and Soils, the Draft EIR explained that “Potential cumulative impacts on geology and soils would result from projects that combine to create geologic hazards, including unstable geologic conditions. The majority of impacts from geologic hazards, such as liquefaction, landslides, and unstable soils, are site-specific and are therefore generally mitigated on a project-by-project basis.”

Section 4.7, Greenhouse Gas Emissions, explained that “GHG emissions inherently contribute to cumulative impacts, and, thus, any additional GHG emissions would result in a cumulative impact” but consistency with statewide, regional, and local plans adopted for the purpose of reducing GHG emissions demonstrates a project’s effects on climate change would not be cumulatively considerable.

Recirculated Section 4.8, Hazards and Hazardous Materials, explained that “Hazards and hazardous materials impacts are generally localized to specific sites and do not combine with one another in a way to create a greater or more severe hazard.”

Section 4.9, Hydrology and Water Quality, explained that:

For *Water Quality*, “the geographic context for the analysis of cumulative impacts associated with water quality is the encompassing Santa Ana River Watershed. Although one small Project watershed (Number 13) drains toward the San Jacinto River, this area is not considered a part of the geographic context pertaining to cumulative water quality impacts, as watershed Number 13 is part of the proposed Conservation Easement, which would not be disturbed and therefore would not contribute to cumulative water quality impacts in the San Jacinto River watershed.”

For *Groundwater Supply and Groundwater Recharge*, the “Development of nearby related projects, as listed in Table 4-2, would increase land use intensities in the area, resulting in increased water usage.”

For *Stormwater Drainage*, the “The geographic context for the analysis of cumulative impacts related to storm drainage is the Santa Ana River Watershed. As discussed for water quality, although one small Project watershed (Number 13) drains toward the San Jacinto River, this area is not considered a part of the geographic context pertaining to cumulative stormwater runoff impacts, as watershed Number 13 is part of the proposed Conservation Easement, which would not be disturbed and therefore would not contribute to cumulative stormwater runoff volume/rate impacts.”

Recirculated Section 4.10, Land Use and Planning, explained that the cumulative analysis is based on the list of cumulative projects (“Table 4-12, Related Projects, within Chapter 4, Environmental Analysis, of this EIR includes a list of cumulative development proposals within the vicinity of the Project site”).

Section 4.11, Noise, explained that “Construction noise and vibration impacts are highly localized (i.e., construction noise from a given site does not generally affect the community noise level at distances beyond 1,500 feet; construction vibration from a given site does not typically affect background vibration levels at distances greater than 200 feet).” Section 4.11, Noise, further explained that for “Non-transportation noise sources (e.g., Project operation) are typically Project-specific and highly localized (i.e., these do not generally affect the community noise level at distances beyond several hundred feet).” Finally, Section 4.11, Noise, explained that for traffic noise, the cumulative analysis is based on “added to roadway volumes generated by other projects on the assembled cumulative project list.”

Section 4.12, Population and Housing, explained that “Cumulative impacts to population and housing would result from a combination of projects that induce population growth,” and the analysis considered growth in Riverside County as well as the SCAG region in the analysis.

Section 4.13, Public Services, explained that: “a significant adverse cumulative impact to public services would occur if the service demands of the Project were to combine with those of related projects, triggering a need for new or physically altered public services, the development of which could cause significant environmental impacts. A significant adverse cumulative impact could also occur if the Project were to make a considerable contribution to a previously existing deficit in public services.” The related projects are listed in Table 4-2 of the Draft EIR.

Section 4.14, Recreation, explained that the cumulative analysis is based on the “list of cumulative development proposals within the vicinity of the proposed Project” found in Table 4.2.

Section 4.15, Transportation, explained that for Vehicle Miles Traveled (the method that by law, is now required to be used to evaluate transportation impacts under CEQA) “a finding of a less-than-significant project impact would imply a less than significant cumulative impact, and vice versa.” Section 4.15, Transportation, further explains that “when using an absolute VMT metric, i.e., total VMT (as recommended for retail and transportation projects), analyzing the combined impacts for a cumulative impacts analysis may be appropriate. However, metrics such as VMT per capita or VMT per employee, i.e., metrics framed in terms of efficiency (as recommended below for use on residential and office projects), cannot be summed because they employ a denominator. A project that falls below an efficiency-based threshold that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact.”

Section 4.16, Tribal Cultural Resources, explained that the cumulative analysis is based on “related projects identified within the vicinity of the Project site.” These are found in Table 4.2 in the EIR.

Section 4.17, Utilities and Service Systems, explained that:

For *Potable Water*, “Cumulative water demand is based on near-term (30 years) projected land use within the WMWD Riverside Retail Service Area.” The EIR also notes that “The proposed Project and related projects (as shown in Table 4-12 of this EIR) would be served by WMWD.”

For *Wastewater*, the cumulative analysis is based on the proposed Project and related development found in Table 4.2 of the Draft EIR that is adding wastewater into the municipal sewage infrastructure that flows to the Western Water Recycling Facility.

For *Solid Waste*, the cumulative analysis is based on the proposed Project and related development found in Table 4.2 of the Draft EIR that is generating solid waste in the service area for El Sobrante, Lamb Canyon, and Badlands Landfills.

For *Electric Power, Natural Gas, and Telecommunication*, the cumulative analysis is based on the list of projects in Table 4.2.

Section 4.18, Wildfire, explained that the cumulative analysis is based on “construction and operation of the related projects as shown in Table 4-2.”

INTENTIONALLY LEFT BLANK

9.1.8 Topical Response 8 – Alternatives

In response to various comments received on the Draft EIR, this topical response addresses commonly proposed alternatives and introduces and analyzes Alternative 5 – Non-Industrial Alternative, so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable.

Selection of Alternatives under CEQA

Pursuant to CEQA, an EIR is required to “describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project” CEQA Guidelines Section 15126.6(a).

The inclusion of an alternative in an EIR does not constitute definitive evidence that the alternative is in fact “feasible.” The final decision regarding the feasibility of alternatives lies with the decision maker for a given project, who must make the necessary findings addressing the potential feasibility of an alternative, including whether it meets most of the basic project objectives or reduces the severity of significant environmental effects pursuant to CEQA. Public Resources Code Section 21081; see *also* CEQA Guidelines Section 15091.

Project Objectives

In developing the alternatives evaluated in the EIR, consideration was given to the ability to meet the basic objectives of the proposed Project and eliminate or substantially reduce the identified significant environmental impacts. The primary objectives of the Project include the following:

- Provide increased job opportunities for residents through the provision of employment-generating businesses.
- Provide open space amenities to serve the region.
- Provide an active park consistent with the 2009 Safety Study prepared by March JPA.
- Complete the buildout of the roadway infrastructure by extending Cactus Avenue to the Specific Plan Area from its existing terminus, extending Barton Street from Alessandro Boulevard to Grove Community Drive, and extending Brown Street from Alessandro Boulevard to Cactus Avenue.
- Remove and redevelop a majority of the former munitions storage area of the March AFB.
- Encourage the use of alternative modes of transportation through the provision of a pedestrian and bicycle circulation system that is safe, convenient, and comfortable.
- Implement the terms and conditions agreed upon in the September 12, 2012, Settlement Agreement entered into between and among the CBD, the San Bernardino Valley Audubon Society, March JPA, and LNR Riverside LLC, as the complete settlement of the claims and actions raised in *Center for Biological Diversity v. Jim Bartel, et al.* to preserve open space through establishing a Conservation Easement.

Alternatives Eliminated from Consideration

As set forth in CEQA Guidelines Section 15126.6(c), an EIR should identify any alternatives that were considered for analysis but rejected as infeasible and briefly explain the reasons for rejection. According to the CEQA Guidelines, among the factors that may be used to eliminate an alternative from detailed consideration are the alternative’s failure to meet most of the basic project objectives, the alternative’s infeasibility, or the alternative’s inability to avoid significant environmental impacts. The lead agency has the discretion to reject a suggested alternative – even if it has less of an impact. *Ocean Street Extension Neighborhood Association v. City of Santa Cruz* (2021) 73 Cal.App.5th 985,

1016 (decisionmakers may “reject or approve any of the alternatives” and “may reject alternatives that are undesirable from a policy standpoint.” (internal citations omitted)). The following discussion presents information on alternatives to the Project raised through the comments on the Draft EIR that were considered but rejected.

Alternate Site

A number of comments requested the Project be developed in a different location. As discussed in Chapter 6, Alternatives, of the Draft EIR and in accordance with CEQA Guidelines Section 15126.6(f)(2), March JPA attempted to identify a feasible alternative off-site location within the Project area that could be available for the development of the Project. Pursuant to CEQA Guidelines Section 15126.6(f)(2)(A), the key question and first step in analysis of the off-site location is whether any of the significant effects of the Project would be avoided or substantially lessened by moving the Project to another location.

After a review of available contiguous open spaces of approximately 369.60 acres (similar to the Specific Plan Area) within the Project vicinity, no large-scale additional sites that could accommodate the proposed Project exist. Further, the CBD Settlement Agreement specifically identifies the Conservation Easement for placement under the conservation easement (Appendix S).

Additionally, neither March JPA nor the Project applicant have ownership of 369.60 acres elsewhere within the Project vicinity such that the Specific Plan Area could be developed on an alternate site. Therefore, off-site locations capable of accommodating the entire Project are considered infeasible, and no off-site location alternatives were carried forward in the EIR’s analysis.

All Residential Alternative

A number of comments requested consideration of an alternative that provided housing. As detailed in Chapter 6, Alternatives, of the Draft EIR, the Project site is within the boundaries of the March ARB/Inland Port Airport Land Use Compatibility Plan (ALUCP) and the March JPA General Plan areas. An all-residential project would not meet the basic Project objectives to provide increased job opportunities for residents through the provision of employment-generating businesses or to implement the terms and conditions of the CBD Settlement Agreement (Appendix S). Further, the CBD Settlement Agreement specifically identifies the Conservation Easement for placement under the conservation easement.

The March JPA General Plan currently designates the Project site as Business Park (BP) and Park/Recreation/Open Space (P/R/OS). The Project site has not previously been given a zoning designation by March JPA. The General Plan does not include land zoned for new residential uses because the purpose of the jurisdiction is to increase employment opportunities within the region through the construction of employment-based land uses. Describing its Housing Element, the March JPA General Plan states the “land use plan identifies no new housing areas, and creates an employment center within the housing rich environment of western Riverside County.” Additionally, the March JPA General Plan Housing Profile report states: “No housing opportunities are identified within the March JPA Planning Area due to land use compatibility issues related to the continued military activities of the Air Force Reserves and aviation operations.”

Furthermore, as shown in Figure 4.10-2, ALUC Compatibility Map, in Recirculated Section 4.10, Land Use and Planning, the Project site is located in the C1 Primary Approach/Departure Zone and C2 Compatibility Zones, which requires approval from the Riverside County Airport Land Use Commission due to the Project site’s proximity to the March ARB/Inland Port Airport. The C1 Zone is subject to high to moderate noise and moderate accident potential risk. Both C1 and C2 Compatibility Zones include safety requirements and restrictions within the policies of the ALUCP. The ALUCP requires new residential development in these zones to have sound attenuation features incorporated into the structures sufficient to reduce interior noise levels from exterior aviation-related sources to

no more than CNEL 40 dB. This requirement is intended to reduce the disruptiveness of loud individual aircraft noise events upon uses in this zone and represents a higher standard than the CNEL 45 dB standard set by state and local regulations and countywide ALUC policy.

Given the failure to meet basic Project objectives, and conflict with the March JPA General Plan's focus on job creation, this alternative was considered but rejected.

Alternative Plan #1: The Campus Approach

Some commenters requested consideration of an alternative under which "University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's Opportunity to Advance Sustainability Innovation and Social Inclusion (OASIS), California Air Resources Board (CARB), Center for Environmental Research and Technology (CERT), and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 Settlement Agreements, and significant open space with a conservation easement."

As identified within Table 3-2, Land Uses by Land Use Designation, of Recirculated Chapter 3, Project Description, Research and Development uses are permitted within Business Park, Industrial, and Mixed Use areas on the Project site. The Project does not have identified end-users and nothing under the proposed Project would preclude the development of research centers, if there were an interest and need for these facilities within the Project area. However, the use of the land as an educational/higher learning facility is identified as a prohibited use within the Riverside County Airport Land Use Plan for March Air Reserve Base/March Inland Port within the C1 Primary Approach/Departure Zone, because the likelihood of an aviation incident is "moderate", and the development of an educational facility with public assembly (classrooms) could create the potential for a catastrophic event. The potential for an aviation incident in the less intense Flight Departure Zone (C2), is considered "moderate to low", such that there is no specific prohibition on public assembly. However, a general concern is provided for Children's Schools, which are discouraged and further identified that such uses should not be permitted unless no feasible alternative is available. Though the risk is somewhat reduced to "moderate to low" within the C2 compatibility zone, the conservative approach is not to locate a major educational/public assembly facility within the C2 compatibility zone, due to the moderate to low potential for an aviation incident.

The identified park and open space conservation easement within Alternative Plan #1 are provided under the proposed Project. Additionally, similar to Alternative Plan #1, the Project proposes to preserve two of the Weapons Storage Area bunkers within open space, which will be accessible to the public. A plaque describing the WSA will also be erected adjacent to the retained bunkers. Since Alternative Plan #1 could be developed under the proposed Project Specific Plan, this alternative was not evaluated further.

Alternative Plan #2: The Veterans Village Approach

Some commenters requested consideration of a veterans' village alternative that "incorporates open space and a developed park memorializing the local history of the US Air Force, with low-density affordable veteran housing, medical offices and services, a rehabilitation and therapy center, job training and career transition services, and a small business park." Commenters provided Great Park in Irvine as an example. Great Park encompasses 4,806 acres, which is larger than the entire March JPA Planning Area, almost 13 times larger than the Specific Plan Area and 6 times larger than the Project site. With such a larger scope, the amenities provided by the Great Park development greatly benefit from economies of scale.

As discussed above, under All Residential Alternative, the Project site is located within the March ARB/March Inland Port Land Use Compatibility Plan (ALUCP) and is in the C1 Primary Approach/Departure Zone and C2 Compatibility Zones, which requires approval from the Airport Land Use Commission due to the Project site's proximity to the

March ARB/Inland Port Airport. The C1 Zone is subject to high to moderate noise and moderate accident potential risk. Both C1 and C2 Compatibility Zones include safety requirements and restrictions within the policies of the ALUCP. The General Plan does not include land zoned for new residential uses because the purpose of the jurisdiction is to increase employment opportunities within the region through the construction of employment-based land uses. Describing its Housing Element, the March JPA General Plan states the “land use plan identifies no new housing areas, and creates an employment center within the housing rich environment of western Riverside County.” Additionally, the March JPA General Plan Housing Profile report states: “No housing opportunities are identified within the March JPA Planning Area due to land use compatibility issues related to the continued military activities of the Air Force Reserves and aviation operations.”

With the exception of housing, the uses proposed under Alternative Plan #2 would be generally permitted under the Project Specific Plan as specified in Table 3-2, Land Uses by Land Use Designation, in Recirculated Chapter 3, Project Description. Medical clinics and social service institutions are allowed in the business park, industrial and mixed use zoning districts; business and professional offices are allowed in the business park and mixed use zoning districts and conditionally allowed in the industrial zoning district; outpatient medical clinics are permitted in the mixed use zoning district. Additionally, similar to Alternative Plan #2, the Project proposes to preserve two of the Weapons Storage Area bunkers within open space, which will be accessible to the public. A plaque describing the WSA will also be erected adjacent to the retained bunkers. Since, with the exception of housing, Alternative Plan #2 could be developed under the proposed Project Specific Plan, this alternative was not evaluated further.

Alternative Plan #3: The State or County Park Approach

A number of commenters requested consideration of a “minimally invasive alternative plan partnering with the National Park Service’s Federal Lands to Parks program that converts former military bases, closed under the Base Realignment and Closure Act (BRAC), to public parks and recreation areas.” While developing the entire site as a State or County park would achieve Project Objectives related to open space and recreational uses at the Project site, Alternative Plan #3 would not be consistent with the intent of the March JPA General Plan, which in part identifies:

“commercial, business park and industrial development are needed to recapture the economic loss attributed to base realignment. The development and reuse within the March JPA Planning Area will further the economic recovery of the region, and will advance toward an equitable balance between jobs provided within the Western Riverside County subregion and the availability of housing. Land set aside at appropriate locations provide for commercial, industrial development, and job creating commerce. Development of business park and industrial land within the Planning Area should focus on commerce and industrial uses which provide employment opportunities, and capture upon the unique opportunities available at March.”

Because Alternative Plan #3 would generate minimal new employment opportunities, this Alternative was not evaluated further.

Alternative #5 – Non-Industrial Alternative

Numerous comments requested consideration of an alternative that does not include any industrial warehouse uses. In response to these comments, Alternative 5 – Non-Industrial Alternative has now been included in the analysis. The full description and analysis of Alternative 5 is provided below and is added to Chapter 6, Alternatives, of the Final EIR.

6.4.6 Alternative 5 – Non-Industrial Alternative

Under Alternative 5, the Non-Industrial Alternative, the parcels adjacent to Barton Street would be designated Commercial Retail. Unlike the Project, these parcels would have access to Barton Street to provide neighborhood commercial services. With the exception of the Public Facility and Park/Recreation/Open Space parcels, the remaining acreage within the Specific Plan Area would be designated Office Park. The Project’s three Industrial parcels would be divided into 15 Office Park parcels under Alternative 5. Development under Alternative 5 would involve smaller, but more numerous buildings compared to the Project. The maximum height of Alternative 5’s buildings would be 45 feet compared with the Project’s 50 feet. Under Alternative 5, warehousing and other industrial activities would not be permitted under either the Commercial Retail or Office Park designations. Table 6-13 details the development square footages by land use for the Project and Alternative 5. Compared to the Project, Alternative 5 represents an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would generate approximately 7,821 jobs.¹ Alternative 5 would also include the 17 acres of open space surrounding the Specific Plan Area, the 18.08-acre public park, 42.2-acre active park, and the 445-acre Conservation Easement. See Figure 6..2 for the Alternative 5 Site Plan.

Table 6-13 Comparison of Analyzed Development – Project vs. Alternative 5

Use	Proposed Project (square feet)	Alternative 5 (square feet) ^a	Difference
Warehouse	4,296,779	0	-4,296,779
Office	528,951	4,243,244	+3,714,293
Retail	160,921	374,398	+213,477
Total	4,986,651	4,617,642	-369,009

a – Alternative 5’s square footages are based on a 0.25 FAR for Commercial Retail and a 0.45 FAR for Office Park

The following comparative analysis for Alternative 5 is provided for each environmental topic analyzed in the EIR.

6.4.6.1 Environmental Analysis

Aesthetics

As discussed in Section 4.1, Aesthetics, implementation of the proposed Project would not have a substantial adverse effect on a scenic vista or substantially degrade the existing visual character or quality of public views of the site and its surroundings with implementation of **MM-AES-1** (Construction Equipment Staging and Screening). Impacts would be less than significant, and no mitigation is required. With the implementation of **MM-AES-2** (Exterior Lighting Point-by-point Photometric Study Approval) and **MM-AES-3** (Solar Photovoltaic System Approval), the Project’s impacts as a new source of substantial light or glare would be reduced to less than significant with mitigation incorporated.

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Alternative 5’s smaller and shorter buildings would reduce visual impacts vertically and potentially allow for views through the development. Therefore, Alternative 5’s potential impacts to scenic vistas,

¹ Employee estimates for Alternative 5 are based on the Riverside County General Plan Table E-3 - Commercial Employment Factors. The March JPA Employment Data discussed in Topical Response 5 - Jobs, did not contain sufficient data to determine March JPA employment ratio for the land uses proposed under Alternative 5.

existing visual character and quality of public views would be reduced compared to the proposed Project. Alternative 5 would have a less than significant impact on a scenic vista, the existing visual character, and the quality of public views of the site and its surroundings with implementation of **MM-AES-1**. With a greater number of buildings requiring lighting for doorways, parking lots, etc., Alternative 5 would likely introduce more new sources of substantial light or glare than the Project and would still require implementation of **MM-AES-2** and **MM-AES-3** to reduce Alternative 5’s light and glare impacts to less than significant. In summary, notwithstanding Alternative 5’s introduction of more new sources of light and glare, Alternative 5 would result in **reduced aesthetic impacts** compared to the proposed Project.

Air Quality

As discussed in Recirculated Section 4.2, Air Quality, implementation of the proposed Project would result in potentially significant air quality impacts. With implementation of **MM-AQ-1** through **MM-AQ-4**, the Specific Plan Area’s construction air quality impacts would be reduced to less than significant levels. The Specific Plan Area’s daily regional emissions from operations would exceed the SCAQMD thresholds of significance for emissions of VOCs, NO_x, CO, PM₁₀, and PM_{2.5} and would, therefore, per SCAQMD criteria, be cumulatively potentially significant and mitigation is required. **MM-AQ-5** through **MM-AQ-27** are designed to reduce Specific Plan Area operational-source VOCs, NO_x, CO, PM₁₀, and PM_{2.5} emissions. However, even with application of **MM-AQ-5** through **MM-AQ-27**, Specific Plan Area operational-source emissions impacts would be significant and unavoidable. Since Specific Plan Area operations would exceed the SCAQMD thresholds of significance, the Project would also conflict with the AQMP, which also results in a significant and unavoidable impact under Threshold AQ-1. The construction and operation of the Specific Plan Area would not exceed applicable LST, CO hotspot, or HRA thresholds and impacts would be less than significant. The Specific Plan Area’s odor and other emissions impacts would be less than significant.

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development.

Construction Emissions: Given that Alternative 5 represents an approximately 7.4% decrease in total developed square footage compared to the proposed Project, construction impacts under Alternative 5 would likely be reduced. As with the proposed Project, with implementation of **MM-AQ-1** through **MM-AQ-4**, Alternative 5’s construction air quality impacts would be reduced to less than significant levels.

Operational Emissions: Based on the mobile source, area source, and energy source emissions associated with Alternative 5 uses, as shown in Table 6-14 below, Alternative 5 would exceed SCAQMD’s regional thresholds for VOCs, NO_x, CO, PM₁₀, and PM_{2.5}. As with the proposed Project, Alternative 5 would be subject to **MM-AQ-5**, **MM-AQ-6**, **MM-AQ-7**, **MM-AQ-10**, **MM-AQ-13**, **MM-AQ-14**, **MM-AQ-21**, **MM-AQ-26**, and **MM-AQ-27**, which are designed to reduce operational-source emissions. However, there is no way to meaningfully quantify these reductions in CalEEMod, and therefore no numeric emissions credit has been taken in the analysis. As such, even with application of mitigation, Alternative 5 operational-source emissions impacts would be significant and unavoidable.

Table 6-14. Alternative 5 Regional Operational Emissions – with Mitigation

Source	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Summer						
Mobile Source	304.02	361.95	3,596.77	10.07	927	240

Table 6-14. Alternative 5 Regional Operational Emissions – with Mitigation

Source	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Area Source	137.68	1.69	200.84	0.01	0.27	0.36
Energy Source	1.76	32.04	26.91	0.19	2.43	2.43
Total Maximum Daily Emissions	443.46	395.68	3,824.53	10.27	929.7	242.79
SCAQMD Regional Threshold	55	55	550	150	150	55

Total Maximum Daily Emissions	393.82	420.36	2,973.10	9.64	929.43	242.43
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	Yes	Yes	Yes	No	Yes	Yes

Source: Final EIR Appendix R-3.

As shown in Table 6-15, Alternative 5 is anticipated to generate more emissions per day for all criteria air pollutants (VOC, NO_x, CO, SO_x, PM₁₀, and PM_{2.5}) as compared to emissions generated by the proposed Project.

Table 6-15. Alternative 5 Operational Emissions Comparison

Source	Emissions (lbs/day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Summer						
Alternative 5	443.46	395.68	3,824.53	10.27	929.70	242.79
Proposed Project	349.51	351.05	2,218.17	7.01	578.51	152.42
Emissions Comparison (Alternative 5 - Project)	+93.95	+44.63	+1,606.35	+3.26	+351.19	+90.37
Winter						
Alternative 5	393.82	420.36	2,973.10	9.64	929.43	242.43
Proposed Project	341.51	371.05	1,832.17	6.63	578.51	152.42
Emissions Comparison (Alternative 5 - Project)	+52.31	+49.31	+1,140.93	+3.01	+350.92	+90.01

Source: Final EIR Appendix R-3.

As such, and as is the case with the proposed Project, even with application of **MM-AQ-5, MM-AQ-6, MM-AQ-7, MM-AQ-10, MM-AQ-13, MM-AQ-14, MM-AQ-21, MM-AQ-26 and MM-AQ-27**, Alternative 5 operational-source emissions impacts would be significant and unavoidable. Since Alternative 5 operations would exceed the SCAQMD thresholds of significance, Alternative 5 would also conflict with the AQMP, an additional **significant and unavoidable** impact.

Operational Health Risk Assessment: Alternative 5 assumes the development of 374,398 square feet of commercial retail use and 4,243,244 square feet of Office Park use. Warehouse uses would not be permitted under Alternative 5. Based on the West Campus Upper Plateau Alternative 5 Trip Generation Assessment (Appendix R-5), Alternative 5 would be expected to generate 65,482 two-way passenger vehicle trips and 34 two-way truck trips per day (in actual vehicles). As noted in Recirculated Section 4.2, Air Quality, the Project would generate diesel

particulate matter (DPM) emissions during operations by trucks traveling to and from the Project site. During the operations, Alternative 5 would result in significantly fewer truck trips, an approximately 98% reduction, compared to the proposed Project. As such, Alternative 5 would result in **lower DPM emissions** and therefore lower cancer and non-cancer health risks for nearby residents, workers, and school children. As such, like the Project, Alternative 5 would not cause a significant health or cancer risk to nearby residents, workers, or school children. Similar to the proposed Project, Alternative 5's odor and other emissions impacts would be **less than significant**.

In summary, Alternative 5 would result in **more criteria air quality pollutant emissions yet fewer DPM emissions** when compared to the Project. Air quality impacts would still be considered **significant and unavoidable** under Alternative 5.

Biological Resources

As discussed in Section 4.3, Biological Resources, implementation of the proposed Project would result in potentially significant biological impacts. The Specific Plan Area's effect on special status plant and wildlife species, direct impacts on burrowing owl, San Diego black tailed jackrabbit, coast horned lizard, coastal whiptail, orange-throated whiptail, and western yellow bat, Cooper's hawk, Lawrence's goldfinch, northern harrier, sharp-skinned hawk, yellow warbler, and California horned lark and indirect impacts on Least Bell's Vireo and Stephens' Kangaroo Rat, would be reduced to less than significant with the implementation of **MM-BIO-1** (Best Management Practices), **MM-BIO-2** (Least Bell's Vireo), **MM-BIO-3** (Operation-Related Indirect Impacts to Special-Status Wildlife), **MM-BIO-4** (Stephens' Kangaroo Rat Avoidance), **MM-BIO-5A** (Burrowing Owl Avoidance and Mitigation Measures)/**MM-BIO-5B** (Burrowing Owl Relocation and Mitigation Plan), **MM-BIO-6** (San Diego Black-Tailed Jackrabbit), and **MM-BIO-7** (Nesting Bird Avoidance and Minimization Measures). The Specific Plan Area's effect on riparian habitat or other sensitive natural communities would be reduced to less than significant with implementation of **MM-BIO-8** (Upland Vegetation Communities) and **MM-BIO-9** (Aquatic Resources Mitigation). The Specific Plan Area's effect on state or federally protected wetlands would be reduced to less than significant with implementation of **MM-BIO-9**. The Specific Plan would have less than significant impacts to the movement of fish/wildlife, wildlife corridors, or native wildlife nursery sites. The Specific Plan's conflicts with local policies/ordinances protecting biological resources would be reduced to less than significant with the implementation of **MM-BIO-1** through **MM-BIO-9**. The Specific Plan's conflicts with an adopted HCP or other conservation plan would be reduced to less than significant with implementation of **MM-BIO-4**, **MM-BIO-5A/MM-BIO-5B**, **MM-BIO-6**, and **MM-BIO-9**. As such, with implementation of **MM-BIO-1** through **MM-BIO-9**, the Project's impacts to biological resources would be reduced to less than significant levels.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Since Alternative 5 would have the same development footprint as the proposed Project, impacts to biological resources under Alternative 5 would be similar compared to the proposed Project, and would be potentially significant. Similar to the Project, Alternative 5's effect on special status plant and wildlife species, direct impacts on burrowing owl, San Diego black tailed jackrabbit, coast horned lizard, coastal whiptail, orange-throated whiptail, and western yellow bat, Cooper's hawk, Lawrence's goldfinch, northern harrier, sharp-shinned hawk, yellow warbler, and California horned lark and indirect impacts on Least Bell's Vireo and Stephens' Kangaroo Rat, would be reduced to less than significant with the implementation of **MM-BIO-1** through **MM-BIO-7**. Alternative 5's effect on riparian habitat or other sensitive natural communities would be reduced to less than significant with implementation of **MM-BIO-8** and **MM-BIO-9**. Alternative 5's effect on state or federally protected wetlands would be reduced to less than significant with implementation of **MM-BIO-9**. Alternative 5 would have less than significant impacts to the movement of fish/wildlife, wildlife corridors, or native wildlife nursery sites. Alternative 5's conflicts with local policies/ordinances protecting biological resources would be reduced to less than significant with the

implementation of **MM-BIO-1** through **MM-BIO-9**. Alternative 5's conflicts with an adopted HCP or other conservation plan would be reduced to less than significant with implementation of **MM-BIO-4**, **MM-BIO-5A/MM-BIO-5B**, **MM-BIO-6**, and **MM-BIO-9**. In summary, notwithstanding Alternative 5's reduced industrial development, Alternative 5 would have *similar biological resources impacts* compared to the proposed Project.

Cultural Resources

As discussed in Section 4.4, Cultural Resources, implementation of the proposed Project would result in potentially significant impacts to cultural resources. However, even with the incorporation of **MM-CUL-1** through **MM-CUL-11** and **MM-CUL-13**, the Project's impacts associated with historical and archaeological resources would be significant and unavoidable. With implementation of **MM-CUL-12**, impacts to human remains would be less than significant.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Since Alternative 5 has the same development footprint as the proposed Project, impacts to cultural resources under Alternative 5 would be similar compared to the proposed Project, and would be potentially significant. Even with the incorporation of **MM-CUL-1** through **MM-CUL-11** and **MM-CUL-13**, Alternative 5's impacts to historical and archaeological resources would be *significant and unavoidable*. With implementation of **MM-CUL-12**, Alternative 5's impacts to human remains would be *less than significant*. In summary, notwithstanding Alternative 5's reduced industrial development, Alternative 5 would have *similar cultural resources impacts* compared to the proposed Project and would result in *significant and unavoidable* impacts to historical and archaeological resources.

Energy

As discussed in Section 4.5, Energy, construction and operation of the proposed Project would not result in wasteful, inefficient, or unnecessary consumption of energy or conflict with or obstruct a state or local plan for renewable energy or energy efficiency and the Project's energy impacts would be less than significant. Incorporation of **MM-GHG-1** through **MM-GHG-12** and **MM-AQ-1** through **MM-AQ-27** would further reduce the Project's energy use.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Given Alternative 5 represents an approximately 7.4% decrease in total developed square footage, energy impacts during construction would likely be reduced compared to those of the proposed Project. Under operations, the electricity consumption associated with Alternative 5 would be approximately 77,672,577 kilowatt-hours per year compared to the proposed Project's consumption of approximately 45,862,987 kilowatt-hours per year. (Appendix R-3) This approximately 70% increase in electrical consumption, associated with increases related to building lighting, computer use, climate control, etc., is due to the higher electrical demand of Alternative 5's proposed land uses. Alternative 5's fuel consumption would be approximately 13,222,383 gallons per year compared to the proposed Project's consumption of approximately 8,606,089 gallons per year (Appendix R-3). This approximately 54% increase in fuel consumption is due to the higher vehicle trips of Alternative 5's proposed land uses. While Alternative 5 would incorporate **MM-GHG-1** through **MM-GHG-12** and **MM-AQ-1** through **MM-AQ-27**, Alternative 5 would have *increased energy impacts* compared to the proposed Project.

Geology and Soils

As discussed in Section 4.6, Geology and Soils, implementation of the proposed Project would result in potentially significant impacts to geology and soils. The Specific Plan Area would have less than significant impacts with regard

to strong seismic ground shaking, seismic-related ground failure, and expansive soils. With the implementation of **MM-GEO-1** (Slope Stability), the Project's impacts related to landslides and unstable soil would be reduced to less than significant. The Specific Plan Area's impacts to paleontological resources and site or unique geologic features would be reduced to less than significant with incorporation of **MM-GEO-2** (Paleontological Resources).

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Since Alternative 5 has the same development footprint as the proposed Project, Alternative 5's impacts to geology and soils would be similar compared to the proposed Project and would be potentially significant. Alternative 5 would have less than significant impacts with regard to strong seismic ground shaking, seismic-related ground failure, and expansive soils. Similar to the Project, with the implementation of **MM-GEO-1**, Alternative 5's impacts related to landslides and unstable soil would be reduced to less than significant. Alternative 5's impacts to paleontological resources and site or unique geologic features would be reduced to less than significant with incorporation of **MM-GEO-2**. In summary, notwithstanding Alternative 5's reduced industrial development, Alternative 5 would have *similar impacts to geology and soils* compared to the proposed Project.

Greenhouse Gas Emissions

As discussed in Section 4.7, Greenhouse Gas Emissions, implementation of the proposed Project would result in potentially significant GHG impacts because it could conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. However, with implementation of **MM-GHG-1** through **MM-GHG-12**, the Project would be consistent with the applicable plans, including the County CAP, and GHG impacts would be reduced to less than significant levels. Additionally, the Project would not conflict with any of the Senate Bill 32/2017 Scoping Plan elements since any regulations adopted would apply directly or indirectly to the Project. Furthermore, the proposed Project represents 1.24% of the anticipated increase in jobs for the WRCOG region, and therefore, would not result in long-term operational employment growth that exceeds planned growth projections in the RTP/SCS or an Air Quality Management Plan, or result in employment growth that would substantially add to traffic congestion.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Alternative 5 would result in GHG emissions equating to 140,661.92 CO₂e, compared to the proposed Project's GHG emissions of 92,591.99 CO₂e. (Appendix R3) This approximately 52% increase is due to the higher GHG emissions from vehicle trips, use of electricity, etc., associated with Alternative 5's proposed land uses. With implementation of **MM-GHG-1** through **MM-GHG-12**, Alternative 5 would likely not conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. While both Alternative 5 and the proposed Project would be consistent with applicable plans, including the County CAP, with the implementation of **MM-GHG-1** through **MM-GHG-12**, Alternative 5 would still result in *increased GHG impacts* compared to the proposed Project.

Hazards and Hazardous Materials

As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, implementation of the proposed Project would result in potentially significant hazard and hazardous materials impacts. During construction of the Specific Plan Area, implementation of **MM-HAZ-1** would reduce the Project's impacts involving the routine transport, use, or disposal of hazardous materials. During operations, the Project would have a less than significant impact with regards to reasonably foreseeable upset and accident conditions involving the release of hazardous materials. Given the proximity of the neighboring preschool at Community Grove Church, **MM-HAZ-2** is required to reduce

potentially significant impacts associated with Project uses emitting and/or handling hazardous materials within one-quarter mile of an existing or planned school. With implementation of **MM-HAZ-3**, the Project's proximity to March ARB/Inland Port Airport would not result in a safety hazard or excessive noise for people residing or working in the Project area. **MM-FIRE-1** would reduce the Project's impacts involving wildland fires. With implementation of **MM-HAZ-1**, **MM-HAZ-2**, **MM-HAZ-3**, and **MM-FIRE-1**, the Project's hazards and hazardous materials impacts would be reduced to less than significant levels.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. During Alternative 5 construction, implementation of **MM-HAZ-1** would reduce Alternative 5's impacts involving the routine transport, use, or disposal of hazardous materials. As with the proposed Project, these impacts would be less than significant. During operations, Alternative 5 would have a less than significant impact with regards to reasonably foreseeable upset and accident conditions involving the release of hazardous materials. The development footprint under Alternative 5 would still introduce new uses within proximity of the preschool, and as such, **MM-HAZ-2** would still be required under Alternative 5, although land uses proposed under Alternative 5 would be less likely to require toxic or highly toxic gases. With implementation of **MM-HAZ-3**, Alternative 5's proximity to March ARB/Inland Port Airport would not result in a safety hazard or excessive noise for people residing or working in the Project area. **MM-FIRE-1** would reduce Alternative 5's impacts involving wildland fires to less than significant levels. In summary, given Alternative 5 would result in development on the same footprint of the Project site, Alternative 5 would have *similar impacts related to hazards and hazardous materials* to the proposed Project.

Hydrology and Water Quality

As discussed in Section 4.9, Hydrology and Water Quality, implementation of the proposed Project would result in potentially significant impacts to hydrology and water quality. With implementation of **MM-HYD-1** (Interim Soil Stabilization Plan) and **MM-HYD-2** (Water Quality Management Plan), the Project's impacts to surface or groundwater quality would be reduced to less than significant levels. In addition, implementation of the Storm Water Pollution Prevention Plan (SWPPP) in conformance with the Construction General Permit would reduce potential discharge of polluted runoff from construction sites. Further, Project design features would ensure that post-construction runoff velocities would be less than existing conditions and would not substantially alter the existing drainage pattern of the site or area. The Project's impacts to groundwater supplies and recharge would be less than significant. With implementation of **MM-HYD-3** (Hydrology/Drainage Study), the Project's impacts related to on- or off-site erosion or siltation and runoff water would be reduced to less than significant. Further the Project would have a less than significant impact related to risk releasing of pollutants due to inundation, impeding or redirecting flood flows, or conflicting with or obstructing implementation of a water quality control plan or sustainable groundwater management plan.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Since Alternative 5 has the same development footprint as the proposed Project, Alternative 5's impacts to hydrology and water quality would be similar compared to the proposed Project and would be potentially significant. Similar to the Project, with implementation of **MM-HYD-1** and **MM-HYD-2**, Alternative 5's impacts to surface or groundwater quality would be reduced to less than significant levels. In addition, implementation of the SWPPP in conformance with the Construction General Permit would reduce potential discharge of polluted runoff from construction sites. Further, Project design features would ensure that post-construction runoff velocities would be less than existing conditions and would not substantially alter the existing

drainage pattern of the site or area. Alternative 5's impacts to groundwater supplies and recharge would be less than significant. With implementation of **MM-HYD-3**, Alternative 5's impacts related to on- or off-site erosion or siltation and runoff water would be reduced to less than significant. Further, Alternative 5 would have a less than significant impact related to risk releasing of pollutants due to inundation, impeding or redirecting flood flows, or conflicting with or obstructing implementation of a water quality control plan or sustainable groundwater management plan. In summary, notwithstanding Alternative 5's reduced industrial development, Alternative 5 would have **similar impacts to hydrology and water quality** compared to the proposed Project.

Land Use and Planning

As discussed in Recirculated Section 4.10, Land Use and Planning, with implementation of **MM-AQ-1** through **MM-AQ-27**, **MM-BIO-1** through **MM-BIO-9**, **MM-CUL-1** through **MM-CUL-13**, **MM-GEO-1**, **MM-GEO-2**, **MM-GHG-1** through **MM-GHG-12**, **MM-HAZ-1** through **MM-HAZ-3**, **MM-HYD-1** through **MM-HYD-3**, **MM-TRA-1** and **MM-TRA-2**, and **MM-FIRE-1** through **MM-FIRE-3**, the Project would be generally consistent with the March JPA General Plan goals and policies, as well as the Draft Environmental Justice Element. March JPA designates the Project site as Business Park (BP), Industrial (IND), and Park/Recreation/Open Space (P/R/OS) land uses in the March JPA General Plan. The Project site has not previously been given a zoning designation by March JPA; therefore, the Project proposes zoning consistent with the proposed General Plan Amendment and Specific Plan designations of Mixed Use, Business Park (BP), Industrial (IND), Parks/Recreation/Open Space (P/R/OS), and Public Facility for the site. The Project proposes adoption of Specific Plan SP-9 consistent with applicable requirements in California Government Code Sections 65450–65457 and March JPA Development Code Chapter 9.13. The Project would be consistent with the March Development Code and the Riverside County ALUCP. Furthermore, the proposed Project would implement the guiding principles, goals, and policies of SCAG's Connect SoCal and the County Good Neighbor Policy for Logistics and Warehouse/Distribution Uses. As such, with incorporation of mitigation, the Project would result in less than significant land use impacts through conflicts with plans adopted for the purpose of avoiding or mitigating an environmental effect.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. As such, Alternative 5's land use and planning impacts would be similar to the proposed Project. With implementation of **MM-AQ-1** through **MM-AQ-4**, **MM-AQ-5** through **MM-AQ-7**, **MM-AQ-10**, **MM-AQ-13**, **MM-AQ-14**, **MM-AQ-21**, **MM-AQ-24**, **MM-AQ-26**, **MM-AQ-27**, **MM-BIO-1** through **MM-BIO-9**, **MM-CUL-1** through **MM-CUL-13**, **MM-GEO-1**, **MM-GEO-2**, **MM-GHG-1** through **MM-GHG-12**, **MM-HAZ-1** through **MM-HAZ-3**, **MM-HYD-1** through **MM-HYD-3**, **MM-TRA-1** and **MM-TRA-2**, and **MM-FIRE-1** through **MM-FIRE-3**, Alternative 5 would be generally consistent with the March JPA General Plan Goals and policies as well as the Draft Environmental Justice Element. Similar to the proposed Project, Alternative 5 would propose zoning consistent with the proposed General Plan Amendment and Specific Plan designations of Commercial Retail, Office Park (OP), Parks/Recreation/Open Space (P/R/OS), and Public Facility for the site. Alternative 5 would also include adoption of Specific Plan SP-9 consistent with applicable requirements in California Government Code Sections 65450–65457 and March JPA Development Code Chapter 9.13. Alternative 5 would be consistent with the March Development Code and the Riverside County ALUCP. Alternative 5 would be consistent with the guiding principles, goals, and policies of SCAG's Connect SoCal and the County Good Neighbor Policy for Logistics and Warehouse/Distribution Uses. In summary, Alternative 5 would result in less than significant land use and planning impacts and have **similar land use and planning impacts** to the proposed Project.

Noise

As discussed in Section 4.11, Noise, the Project would not generate substantial temporary or permanent increase in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Therefore, the Project would have a significant and unavoidable noise impact and no feasible mitigation measures are available to reduce Project-related significant traffic noise increases along Segment #13. All other noise and vibration impacts associated with construction and operation of the Project would be less than significant.

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. As construction and grading activities would be reduced under Alternative 5, construction noise levels would be reduced compared to those of the proposed Project.

According to the West Campus Upper Plateau Alternative 5 Trip Generation Assessment prepared by Urban Crossroads, Inc. (Appendix R-5), Alternative 5 is anticipated to generate a total of 65,516 daily vehicles trips with 34 truck trips. The proposed Project evaluated in this Final EIR included 33,260 daily vehicle trips with 2,054 truck trips. Therefore, Alternative 5 represents a near doubling of the vehicle trips (+32,222) and a substantial reduction of truck trips (-2,020). The Federal Highway Administration (FHWA) noise prediction model is significantly influenced by the number of heavy trucks in the vehicle mix. Table 6-17, Off-Site Traffic Noise Level Increases, presents a summary of the Project related off-site traffic noise level increases. As shown on therein, the unmitigated off-site traffic noise levels increase evaluated for the proposed Project would range from 0.0 to 4.4 dBA CNEL, while the off-site traffic noise level increases for Alternative 5 would range from 0.0 to 1.8 dBA CNEL. As such, off-site traffic noise level increases would be reduced under Alternative 5 due to the reduction in the number of heavy trucks.

Table 6-18, Off-Site Traffic Noise Threshold Exceedances, shows that Segment #13 (Cactus Avenue east of Meridian Parkway) would experience potentially significant off-site traffic noise level increases due to the proposed Project. Based on the significance criteria for off-site traffic noise presented in the Noise Study prepared for the proposed Project (Appendix M-1), land uses adjacent to all the study area roadway segments would experience **reduced as well as less than significant** noise level increases on receiving land uses due to Alternative 5-related traffic.

As discussed in Section 4.11, Noise, of the EIR, the on-site Project-related noise sources are expected to include: loading dock activity, roof-top air conditioning, trash enclosure activity, and parking lot vehicle movements, truck movements, and park activities. Under Table 4.11-24, Hourly Average Noise Level Measurements for Reference Sound Sources, loading dock activities (65.7 dBA L_{eq}) and truck movements (59.8 dBA L_{eq}) represent the noisiest Project-related operational activities. For Alternative 5, on-site related noise sources are expected to include similar types of noise source activities without the heavy truck movements associated with loading docks or truck movements needed to support the proposed Project industrial/warehouse land uses. In addition, due to the commercial retail/Office Park use associated with Alternative 5, other noise sources activities may be included as part of the Alternative 5 land use. This could include noise source activities such as fast-food restaurant drive-through speakerphones and/or gas stations fueling. Table 6-19, Alternative 5 Reference Noise Level Measurements, presents a summary of the reference noise level measurements needed to assess the on-site Alternative 5 land uses. As shown on Table 6-19, none of the on-site Alternative 5 operational noise sources are as loud as loading dock activity and truck movements.

Alternative 5 would involve a slightly reduced amount of development as the Project but would not include noise from loading dock activity or truck movements. It is anticipated Alternative 5's on-site operational noise would be **reduced** as compared to the Project.

Table 6-19. Alternative 5 Reference Noise Level Measurements

Noise Source	Noise Source Height (feet)	Minutes within Hour		Reference Noise Level (dBA L_{eq} at 50 feet)	Sound Power Level (dBA)
		Day	Night		
Roof-Top Air Conditioning Units	5'	39	28	57.2	88.9
Drive-Thru Activity	3'	60	60	51.5	83.2
Trash Enclosure Activity	5'	10	10	57.3	89.0
Gas Station Activity	5'	60	60	48.2	79.9

Table 6-19. Alternative 5 Reference Noise Level Measurements

Noise Source	Noise Source Height (feet)	Minutes within Hour		Reference Noise Level (dBA) Leq at 50 feet)	Sound Power Level (dBA)
		Day	Night		
Park Activities	5'	60	0	49.4	81.1

Source: Appendix R-4.

In summary, Alternative 5 would have **fewer noise impacts** compared to the proposed Project and would reduce an identified significant and unavoidable operational noise impact to a **less than significant level**.

Population and Housing

As discussed in Section 4.12, Population and Housing, under the buildout scenario, it is anticipated that the Project would create approximately 3,622 full-time jobs. Based on the County’s unemployment rate, this EIR assumes that the Project’s employees will be primarily existing residents of Riverside County (see Topical Response 5 – Jobs). The anticipated number of jobs generated by the Project would be a nominal addition to the County’s existing and projected labor force. Thus, the employment growth that would be attributed to the Project is consistent with SCAG’s overall growth projections and would not result in a substantial increase of unplanned population growth. Therefore, the Project would have a less than significant impact related to population and housing and no mitigation is required.

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Alternative 5 would generate approximately 7,821 jobs compared to the Project’s 3,622 jobs. This 116% increase in jobs would account for a larger percentage of SCAG’s 2030 projections (5.67% of 138,000 jobs) and 2045 projections (2.79% of 280,000 jobs) for Riverside County but a nominal percentage (0.95%) of the County’s estimated 2019 labor force.² The employment growth that would be attributed to Alternative 5 is consistent with SCAG’s overall growth projections and would not result in a substantial increase of unplanned population growth. Therefore, Alternative 5 would have **comparable population and housing impacts** to the proposed Project.

Public Services

As discussed in Section 4.13, Public Services, with the implementation of **MM-FIRE-1**, the Project’s impacts to fire services would be reduced to less than significant. The Project’s impacts to police services, schools, parks and other public facilities would be less than significant and no mitigation is required.

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Alternative 5 would generate approximately 7,821 jobs and as such, there is the potential for Alternative 5 to result in greater impacts to public services but not to the extent that additional facilities would need to be constructed. Alternative 5 would have **increased impacts to public services** compared to the proposed Project due to the increased number of employees at the Project site.

² $\frac{7,821}{823,000} \times 100 = 0.95\%$

Recreation

As discussed in Section 4.14, Recreation, it is likely that the majority of the Campus Development's future employees are already residents of the nearby communities and are already using the local parks and recreational facilities. There could be an increase in demand for recreational facilities but because the Project's employees and surrounding neighborhoods would have access to the proposed 60.28-acre Park, any increased demand would not result in the need to construct additional recreational facilities under the Specific Plan buildout scenario. The recreational amenities analyzed include a playground, multiuse sports fields that could be used for soccer, football, and field hockey, and trails with cardio stops for recreational users. The impacts related to the Park's construction have been included in all of the analyses in this EIR. Additionally, the currently existing service roads within the Conservation Easement, as depicted by the red lines on Figure 3-4, would continue to be utilized by the public for passive recreation as authorized by March JPA, consistent with the terms of the CBD Settlement Agreement (Appendix S). Therefore, the Project would result in less than significant impacts to recreational facilities and no mitigation is required.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. The proposed Public Facility and Park/Recreation/Open Space components of Alternative 5 would be the same as the proposed Project. Alternative 5 would result in the creation of 5,221 more jobs at the Project site than the proposed Project, and as such, there is the potential for Alternative 5 to result in greater impacts to recreation. Alternative 5 has the potential to result in an increased demand on recreational resources compared to the proposed Project. Therefore, Alternative 5 would have **increased recreational impacts** compared to the proposed Project.

Transportation

As discussed in Section 4.15, Transportation, with the incorporation of **MM-TRA-1** (Construction Traffic Management Plan), Project construction impacts on the circulation system would be reduced to less than significant. With implementation of **MM-TRA-2** (Traffic Safety Plan for Barton Street), the Project's operational impacts on the circulation system would be less than significant. The Specific Plan Area's impact on VMT would be less than significant. Although the Specific Plan Area is not anticipated to have a significant VMT impact, **MM-AQ-21** further reduces VMT by requiring all tenants to implement or otherwise participate in a Transportation Demand Management program, including on-site transit pass sales and discounted passes, shuttle service to/from public transit and commercial/food establishments, if warranted, guarantee a ride home, and "commuter club" to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk or take transit to work. Additionally, **MM-GHG-11** requires the Project to provide funding for the installation of a bus shelter on Alessandro Boulevard. The Project's potential to increase hazards due to design features or incompatible uses would be reduced to less than significant with implementation of **MM-TRA-1** and **MM-TRA-2**.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. The trip generation rates used for this analysis are based upon information collected by the ITE as provided in their Trip Generation Manual (11th Edition, 2021) and is included as Appendix R-5.

Table 6-20. Alternative 5 Trip Generation Summary

Land Use	Quantity Units	AM Peak Hour			PM Peak Hour			Weekday Daily	Saturday Peak Hour		
		In	Out	Total	In	Out	Total		In	Out	Total
Office Park	4,243.244 TSF	4,869	859	5,728	1,346	3,831	5,177	52,786	1,407	1,198	2,605

Active Park	42.20 acres	137	137	274	95	95	190	2,110	187	203	390
Public Park	18.08 acres	6	6	12	4	4	8	90	19	20	39
Total Trips	—	5,118	1,025	6,143	1,947	4,470	6,416	65,516	2,336	2,081	4,417

Source: Appendix R-5.

When comparing the trip generation between Alternative 5 and the proposed Project, as shown in Table 6-21, Alternative 5 Trip Generation Comparison, Alternative 5 would result in a net increase in 30,202 trips per day over the proposed Project.

Table 6-21. Alternative 5 Trip Generation Comparison

Project	AM Peak Hour			PM Peak Hour			Weekday Daily	Saturday Peak Hour		
	In	Out	Total	In	Out	Total		In	Out	Total
Project Traffic Study	1,353	408	1,761	902	2,486	3,389	35,314	844	798	1,642
Alternative 5	5,118	1,025	6,143	1,947	4,470	6,416	65,516	2,336	2,081	4,417
Net Change in Trips	+3,765	+617	+4,382	+1,045	+1,984	+3,028	+30,202	+1,492	+1,283	+2,775

Source: Appendix R-5.

As with the proposed Project, with the incorporation of **MM-TRA-1**, Alternative 5 construction impacts on the circulation system would be reduced to less than significant.

Vehicle Miles Traveled (VMT) for Alternative 5 has been evaluated using the methodology and procedures outlined in the Recommended Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment prepared by the Western Riverside Council of Governments. This analysis is included in Appendix R-6. Retail uses are evaluated utilizing the VMT metric of total VMT. A 15-mile service area is a conservatively estimated distance from the Project as the retail component is not anticipated as a regional shopping destination but instead is anticipated to serve the surrounding communities of Riverside, Moreno Valley, Perris, etc. Additionally, large boundaries such as Riverside County or WRCOG tend to be too large of an area to accurately measure an individual project’s effect on VMT without model noise (i.e., convergence criteria) influencing the results.

A significant impact associated with VMT would occur if a project’s retail component would result in a net increase in total VMT for the region. As shown in Table 6-22, Net Change in Regional Total VMT for Retail, the increase in retail square footage proposed by Alternative 5 would result in an increase in total VMT within the region (i.e., 15-mile boundary) and a potentially significant impact.

Table 6-22. Net Change in Regional Total VMT for Retail

	Project	Alternative 5
Total VMT for No Project/Alt 5 Retail	43,167,218	43,167,218
Total VMT for With Project/Alt 5 Retail	43,039,938	43,862,638
+/- to VMT	-127,280	+695,420
Percent Change	-0.29%	+1.61%
Potentially Significant?	No	Yes

Source: Appendix R-6.

Non-retail employment based VMT is calculated as homebased work (HBW) VMT divided by the Project’s non-retail employment, which results in the efficiency metric HBW VMT per employee or VMT per employee. A significant impact to VMT would occur if the addition of a project’s non-retail components would result in project-generated VMT per employee to exceed 15% below the WRCOG’s baseline of 29.97 VMT per employee for a regional average significance threshold of 25.47 VMT per employee. Table 6-23, Non-Retail VMT Per Employee, presents HBW VMT as calculated for both the Project’s and Alternative 5’s non-retail land uses, the number of Project and Alternative 5 non-retail employees and the resulting VMT per employee metric compared to the impact threshold.

Table 6-23. Non-Retail Per Employee

	Project	Alternative 5
Non-Retail Employment	2,340	7,072
HBW VMT	58,874	205,170
VMT Per Employee	24.12	26.24
WRCOG Threshold	25.47	25.47
Potentially Significant?	No	Yes

Source: Appendix R-6.

Project Alternative 5 would shift all Industrial land use and non-Barton Street Mixed Use to Office Park and convert the Mixed Use areas along Barton Street to Commercial Retail. Warehousing would not be a permitted use under Alternative 5. These shifts in land use result in a corresponding increase in overall vehicle trip generation and an

associated increase in VMT over the proposed Project. As such, Alternative 5 would result in **greater VMT impacts**, as well as introduce a **new significant impact** when compared to the proposed Project.

Tribal Cultural Resources

As discussed in Section 4.16, Tribal Cultural Resources, implementation of the proposed Project would result in potentially significant impacts to tribal cultural resources. However, even with implementation of **MM-CUL-1** through **MM-CUL-13**, the Project's impacts to tribal cultural resources would remain *significant and unavoidable*.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Given Alternative 5's similar development footprint, impacts to tribal cultural resources under Alternative 5 would be similar compared to the proposed Project, and would also be potentially significant. Even with the incorporation of **MM-CUL-1** through **MM-CUL-13**, Alternative 5's impacts to tribal cultural resources would be significant and unavoidable. Therefore, implementation of Alternative 5 would result in **similar significant and unavoidable tribal cultural resources impacts** when compared to the proposed Project.

Utilities and Service Systems

As discussed in Section 4.17, Utilities and Service Systems, the Project would have less than significant impacts to facilities providing water, wastewater, storm water, electric power, natural gas, and telecommunications. There are sufficient water supplies available and wastewater treatment capacity to serve the Project, resulting in less than significant impacts. The Project would have a less than significant impact on solid waste infrastructure and capacity and would comply with federal, state, and local management and reduction statutes and regulations related to solid waste. Therefore, the Project impacts to utilities and service systems would be less than significant, and no mitigation is required.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Alternative 5 would result in the creation of approximately 5,221 more jobs at the Project site than the proposed Project, and as such, there is the potential for Alternative 5 to result in greater impacts to utilities and service systems when compared to the proposed Project. As such, Alternative 5 would have **increased impacts to utilities and service systems** compared to the proposed Project due to the different mix of land uses and increased number of employees at the Project site.

Wildfire

As discussed in Section 4.18, Wildfire, the Project site is near lands classified as Very High Fire Hazard Severity Zone (FHSZ) and implementation of the proposed Project would result in potentially significant wildfire impacts. However, with implementation of **MM-FIRE-1** through **MM-FIRE-3**, as well as **MM-HYD-3**, the Project's potential to facilitate wildfire spread, exacerbate wildfire risk, or expose people or structures to significant risks as a result of runoff, post-fire slope instability, or drainage changes would be reduced to less than significant levels.

Alternative 5 would have the same development footprint as the proposed Project, but the Project's three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. Given that Alternative 5 would have the same development footprint, Alternative 5's wildfire impacts would be similar but reduced compared to the proposed Project but would still be potentially significant.

With implementation of **MM-FIRE-1** through **MM-FIRE-3**, as well as **MM-HYD-3**, Alternative 5’s potential to facilitate wildfire spread, exacerbate wildfire risk, or expose people or structures to significant risks as a result of runoff, post-fire slope instability, or drainage changes would be reduced to less than significant levels. Therefore, Alternative 5 would have *similar wildfire impacts* compared to the proposed Project.

6.4.6.2 Project Objectives

Alternative 5 would have the same development footprint as the proposed Project, but the Project’s three Industrial parcels would be divided into 15 Office Park parcels, resulting in smaller, but more numerous buildings and an approximately 7.4% decrease in the total amount of development square footage. Alternative 5 would eliminate all Industrial development. As shown in Table 6-24, Alternative 5 meets each Project objective.

Table 6-24. Summary of Alternative 5 Success at Meeting Project Objectives

Project Objective	Does Alternative 5 Meet Objective?
1. Provide increased job opportunities for residents through the provision of employment-generating businesses.	Yes. Alternative 5 would provide increased job opportunities through the provision of employment-generating businesses. Alternative 5 would achieve this objective to a greater extent than the Project because Alternative 5 would employ approximately 5,221 more employees at the site than the proposed Project.
2. Provide open space amenities to serve the region.	Yes. Alternative 5 would provide open space amenities to serve the region. Alternative 5 would fully achieve this Project objective.
3. Provide an active park consistent with the 2009 Safety Study prepared by March JPA.	Yes. Alternative 5 would provide the same 60.28-acre Park as the proposed Project. Alternative 5 would fully achieve this Project objective.
4. Complete the buildout of the roadway infrastructure by extending Cactus Avenue to the Specific Plan Area from its existing terminus, extending Barton Street from Alessandro Boulevard to Grove Community Drive, and extending Brown Street from Alessandro Boulevard to Cactus Avenue.	Yes. Alternative 5 would provide all the same roadway infrastructure as the proposed Project. As such, Alternative 5 would fully achieve this Project objective.
5. Remove and redevelop a majority of the former munitions storage area of the March AFB.	Yes. Alternative 5 would remove and redevelop a majority of the former munitions storage area. As such, Alternative 5 would fully achieve this Project objective.
6. Encourage the use of alternative modes of transportation through the provision of a pedestrian and bicycle circulation system, which is both safe and comfortable.	Yes. Under Alternative 5, the buildout would include the provision of new roadways that could accommodate all modes of travel, including pedestrian and bicycle movement. As such, Alternative 5 would fully achieve this Project objective.

Table 6-24. Summary of Alternative 5 Success at Meeting Project Objectives

Project Objective	Does Alternative 5 Meet Objective?
7. Implement the terms and conditions agreed upon in the September 12, 2012, Settlement Agreement entered into between and among the CBD, the San Bernardino Valley Audubon Society, March JPA, and LNR Riverside LLC, as the complete settlement of the claims and actions raised in <i>Center for Biological Diversity v. Jim Bartel, et al.</i> to preserve open space through establishing a Conservation Easement.	Yes. Alternative 5 would place the Conservation Easement under a conservation easement. As such, Alternative 5 would fully achieve this Project objective.

Alternative 5 would result in fewer noise impacts, avoiding a significant and unavoidable operational noise impact; however, Alternative 5 would increase the severity of significant and unavoidable air quality impacts as well as result in new significant and unavoidable VMT impacts. Alternative 2 would remain the Environmentally Superior Alternative. With the addition of Alternative 5, Table 6-1, Comparison of Project and Alternatives Impacts, is updated to read as follows:

Table 6-1. Comparison of Project and Alternatives Impacts

Environmental Topic	Project Impact	Alternative 1 No Project	Alternative 2 Reduced Development	Alternative 3 Restricted Industrial Building Size	Alternative 4 Reduced Cultural Resource Impact	Alternative 5 Non-Industrial Alternative
Aesthetics	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	= LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation
Air Quality	Significant and Unavoidable	▼ No Impact	▼ SUI	▼ SUI	▼ SUI	▲ SUI
Biological Resources	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	= LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation
Cultural Resources	Significant and Unavoidable	▼ No Impact	▼ SUI	= SUI	▼ SUI	= SUI
Energy	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	▲ LTS with Mitigation

Table 6-1. Comparison of Project and Alternatives Impacts

Environmental Topic	Project Impact	Alternative 1 No Project	Alternative 2 Reduced Development	Alternative 3 Restricted Industrial Building Size	Alternative 4 Reduced Cultural Resource Impact	Alternative 5 Non-Industrial Alternative
Geology and Soils	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	= LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation
Greenhouse Gas Emissions	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	▲ LTS with Mitigation
Hazards/Hazardous Materials	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation
Hydrology/Water Quality	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	= LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation
Land Use/Planning	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation
Noise	Significant and Unavoidable	▼ No Impact	▼ SUI	▼ SUI	▼ SUI	▼ LTS
Population and Housing	Less than Significant	▼ No Impact	▼ LTS	▼ LTS	▼ LTS	= LTS
Public Services	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	▲ LTS with Mitigation
Recreation	Less than Significant	▼ No Impact	▼ LTS	▼ LTS	▼ LTS	▲ LTS
Transportation	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	▲ SUI
Tribal Cultural Resources	Significant and Unavoidable	▼ No Impact	▼ SUI	= SUI	▼ SUI	= SUI
Utilities/Service Systems	Less than Significant	▼ No Impact	▼ LTS	▼ LTS	▼ LTS	▲ LTS
Wildfire	Less than Significant with Mitigation	▼ No Impact	▼ LTS with Mitigation	▼ LTS with Mitigation	▼ LTS with Mitigation	= LTS with Mitigation

Notes:

Green – No Impact or Less than Significant, Yellow – Less than Significant with Mitigation, Red – Significant and Unavoidable

▲ Impacts would be greater than those of the proposed Project.

= Impacts would be comparable to those of the proposed Project

▼ Impacts would be reduced when compared to those of the proposed Project.

The addition of Alternative 5 to the EIR does not constitute significant new information such that recirculation of the EIR under CEQA Guidelines Section 15088.5 would be required.

9.1.9 Topical Response 9 – Long-Term Project Implementation and Enforcement

In response to various comments received on the Draft EIR, this topical response addresses commonly raised issues regarding the reversion of March JPA’s land use authority in 2025 to the County of Riverside and long-term implementation of the proposed Specific Plan and enforcement of Project conditions of approval and mitigation measures, so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable.

Joint Exercise of Powers Act, Government Code Section 6500, et seq.

Joint powers authorities (JPAs) are mechanisms by which two or more public agencies jointly exercise powers that are common to all. The Joint Exercise of Powers Act, Government Code Section 6500, et seq. (JPA Act), governs the creation, operation, and dissolution of JPAs. There are essentially two types of JPAs. The first type of JPA is formed where two or more public agencies enter into an agreement to jointly exercise common powers. The second type of JPA is created when two or more public agencies form a separate legal entity.¹ The March JPA is this second type of JPA. Both types of JPAs require a JPA agreement that sets out the purpose and powers of the JPA, along with how that purpose will be accomplished and the powers exercised.²

History of the March JPA

In 1993, the federal government, through the Defense Base Closure and Realignment Commission, mandated the realignment of March Air Force Base (AFB), resulting in a substantial reduction in its military use. The County of Riverside (County) and the cities of Moreno Valley, Perris and Riverside (Cities) are all the jurisdictions abutting March AFB. In preparation for the March AFB realignment, the County and Cities entered into the “Joint Powers Agreement for the Formation of a Joint Powers Authority to Formulate and Implement Plans for the Use and Reuse of March Air Force Base” (March JPA Agreement) in September 1993, and thereby created March JPA. The March JPA Agreement has subsequently been amended and restated numerous times.

In April 1996, March AFB was redesignated as an Air Reserve Base (ARB). The decision to realign March AFB resulted in approximately 4,400 acres of property and facilities being declared surplus and available for disposal actions. In March 1997, the County and Cities entered into the 6th Amended March JPA Agreement. Section 1 (Purpose) was amended to add that one of the express purposes of the JPA Agreement is for:

“... Planning and implementing the development of land in the area covered by the March ‘Master Reuse Plan’, including the preparation and adoption of a General Plan and/or a Specific Plan, the preparation and adoption of zoning and other land development standards, the preparation and adoption of health and safety codes related to development activities, and the implementation of these functions through the creation of appropriate Boards and Commissions pursuant to California law.”

Through this 6th Amendment of the March JPA Agreement, March JPA assumed land use control for all surplus property identified. Pursuant to the March JPA Agreement, in the intervening years, March JPA has adopted a General Plan, Development Code, and approved multiple development entitlements within the March JPA planning area.

¹ Government Code Section 6507.

² Government Code Sections 6503 and 6508.

Reversion of March JPA's Land Use Authority

In April 2023, the County and Cities entered into the 14th Amendment to the March JPA Agreement, which removes March JPA's land use authority effective July 1, 2025. When a power is removed from a JPA, that power is "transferred back" or "restored to" the entity that originally held it. In this case, the land use authority the County held over the March JPA planning area as unincorporated County land was given to the March JPA in 1997. In July 2025, when land use powers are removed from the March JPA, the County will again hold and exercise land use authority over the unincorporated County territory,³ including responsibilities related to the implementation of the Project and enforcement of the Project conditions of approval and mitigation measures. Additionally, the County, as March JPA's successor in interest, will enforce the provisions of the Project's Development Agreement.

Ongoing Maintenance

Multiple comments expressed concerns about ongoing maintenance. Under Section 7.9, Maintenance Plan, of the proposed Specific Plan, the public and private improvements constructed within the Specific Plan Area will be maintained through a combination of public and private entities as described in Table 7-1, Maintenance Responsibilities. The Specific Plan Area will be annexed into the Meridian Landscaping and Lighting Maintenance District (LLMD). Table 7-1 provides a list of maintenance entity options that fund and/or maintain facilities within the Specific Plan, including a Community Facilities District (CFD), or other special district pursuant to the Mello-Roos Community Facilities District Act of 1982.

³ County staff report regarding the 14th Amendment to the March JPA Agreement – Board of Supervisors meeting – 4/18/2023; <http://riversidecountyca.iqm2.com/Citizens/FileOpen.aspx?Type=30&ID=134955>.

9.1.10 Topical Response 10 – West March Development and Disposition Agreement

The topical response addresses comments regarding actions taken by the March Joint Powers Commission related to the West March Development and Disposition Agreement (DDA), so as not to be repeated in each individual response, but rather cross-referenced in individual letter responses where applicable.

DDA Background

On December 27, 2001, the March Joint Powers Redevelopment Agency entered into the DDA with LNR Riverside, LLC (LNR) for the redevelopment of properties west of the I-215 freeway known as “West March”. The DDA was established for the purpose of implementing the March Air Force Base Redevelopment Plan by providing a method of disposition and development on real properties west of the I-215 freeway consistent with the 1999 Master Environmental Impact Report for the March JPA General Plan. The DDA sets forth the procedures that must be followed when transferring ownership rights.

On May 1, 2006, the First Amendment to the DDA was adopted to incorporate Parcel D-3 West into the boundaries of the West March Planning Area and to ensure consistency with an Instrument of Release by the Federal Aviation Administration. Following state legislation dissolving redevelopment agencies in 2011, the March Joint Powers Redevelopment Agency assigned all of its interest in the DDA to March JPA as the successor entity to the Agency. On August 7, 2015, LNR’s rights under the DDA were assigned in part to Meridian Park, LLC.

Second Amendment to the DDA

At its October 26, 2022, meeting under Agenda Item 9(1), the March Joint Powers Commission approved the Second Amendment to the DDA, which was an administrative clarification of the DDA and only modified financing terms. As stated in the Notice of Exemption filed by March JPA on October 27, 2022, the Second Amendment was not a project under CEQA as it did not propose or approve any changes in existing or potential future development as analyzed in the 1999 Master Environmental Impact Report for the March JPA General Plan; it did not alter or amend any binding land use plans within the March JPA planning area; and it did not entitle or otherwise commit to any changes in physical development under the jurisdiction of March JPA. Environmental review under CEQA was not required because the Second Amendment was merely the “continuing administration” of the existing DDA; a “government fiscal activity” which did not involve any commitment to any specific project impacting the environment; and an “administrative activity by government” that would not impact the environment. (State CEQA Guidelines § 15378(b)(2), (4), and (5).) It was not a pre-decisional commitment to the development being specifically analyzed in this EIR.

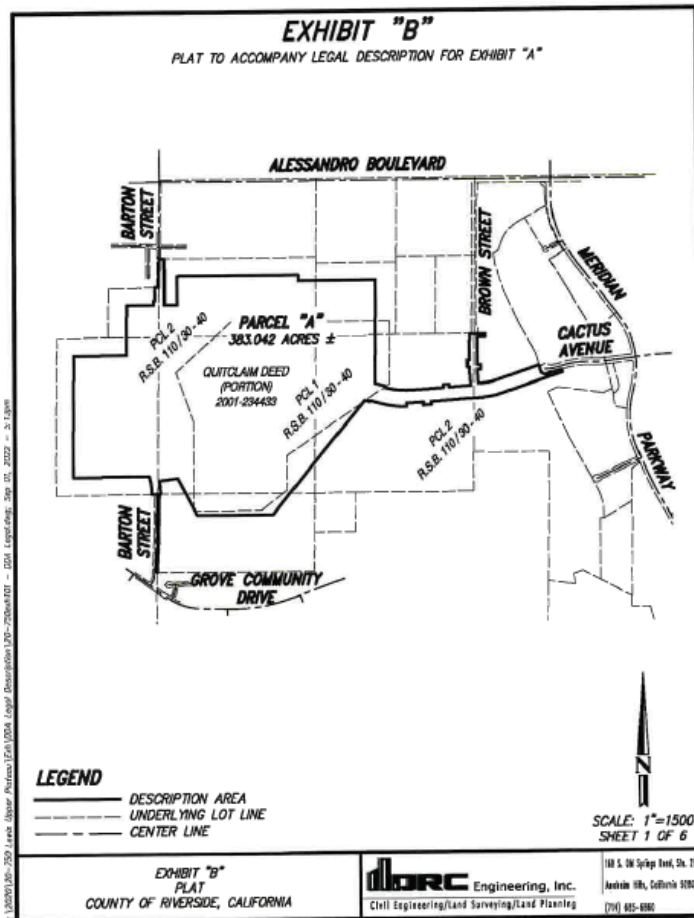

Partial Assignment of DDA

Under Section 12.02, Assignment of Agreement, of the DDA, Meridian Park, LLC may assign all, or any, portion of the property to an assignee through an assignment of agreement with the consent of March JPA. March JPA may refuse to give its consent only if, in light of the proposed assignee’s reputation and financial resources, such assignee would not, in March JPA’s reasonable opinion, be able to perform the obligations proposed to be assumed by such assignee.

At its February 8, 2023, meeting, under Agenda Item 8(11), March JPA staff recommended the March Joint Powers Commission concur with the Partial Assignment of the DDA from Meridian Park, LLC, to Meridian Park Upper Plateau, LLC (Partial Assignment). The Commission continued the agenda item. At its March 22, 2023, meeting,

the Commission again considered the Partial Assignment under Agenda Item 9(3). The Commission approved the concurrence. As stated in the 3/22/2023 Commission minutes, environmental review under CEQA was not required because March JPA's concurrence with the Partial Assignment was merely "a formality as per" the existing DDA and "ministerial." (Public Resources Code § 21080; State CEQA Guidelines § 15369.) It was not a pre-decisional commitment to the development being specifically analyzed in this EIR. As clearly stated in March JPA's Consent to Partial Assignment:

ASSIGNOR AND ASSIGNEE ACKNOWLEDGE AND AGREE THAT AUTHORITY'S CONSENT TO THE PARTIAL ASSIGNMENT DOES NOT CONSTITUTE A PROJECT APPROVAL IN CONNECTION WITH ALL OR ANY PORTION OF THE PROPERTY.

Commenters alleged the Partial Assignment was inconsistent with the March JPA General Plan because Exhibit B of the Partial Assignment shows the extensions of Barton Street and Brown Street, which are not included in the Exhibit 2-1, Transportation Plan (Planned Roadway/Street System), of the General Plan. Exhibit B of the Partial Assignment, shown below, labels the existing sections of Barton Street and Brown Street. The Description Area shown includes the land proposed for the Barton and Brown Street extensions, but the Partial Assignment did not constitute the approval by March JPA of those extensions. The Project proposes to amend Exhibit 2-1 of the March JPA General Plan to include the Barton and Brown Street extensions.

Commenters also alleged the Partial Assignment was inconsistent with the March AFB Master Reuse Plan. As discussed in Recirculated Section 4.10, Land Use and Planning, the Master Reuse Plan and its Environmental Impact

Statement were the final documents regarding former AFB property reuse and disposal. The Preferred Land Use Pattern of the Master Reuse Plan served as the basis for the March JPA General Plan. The Master Reuse Plan remains an important document for historical purposes but does not control land use development decisions within the March JPA Planning Area. As described in the Final Master EIR for the March JPA General Plan (MEIR), the March JPA General Plan and the MEIR are the establishing documents to guide the planning process within the March JPA Planning Area and “can be termed as functioning or ‘living’ documents through their implementation.” As discussed above, the Partial Assignment did not constitute the approval by March JPA of the Brown and Barton Street extensions.

No changes or revisions to the Draft EIR are required with regard to the comments raised about the DDA.

**CONDITIONS OF APPROVAL
DEVELOPMENT PROJECT: MERIDIAN WEST CAMPUS UPPER PLATEAU DRAFT EIR**

These Conditions of Approval for the above referenced Development Project (“project”) are in response to the Specific Plan dated January 11, 2023. The project property is located within the water and sewer service area of the Western Municipal Water District (“Western”). The following are Western’s Conditions of Approval:

1. All applicable Water and Sewer Connection Fees (Capacity Charges) and Meter Installation Fees, must be paid prior to the installation of any water meter.
2. Proposed facilities for water and sewer service must be designed by a Registered Civil Engineer, and reviewed and approved by the Western. Plan Check and Inspection Deposits are required prior to approval of the plans.
3. Developer’s landscape architect is required to meet landscape and irrigation requirements of the agency of jurisdiction.
4. The property is located within the 1837 Pressure Zone. Currently, Western has an existing 24-inch water pipeline located Cactus Avenue. The available fire flow must be determined by fire flow modeling and/or physical flow from a fire hydrant within the vicinity of the project. Developer’s civil engineer can find the pressure zones available water storage for fire flows in Western’s Water Master Plans. Available storage should be compared to fire flow requirements by the fire protection agency of jurisdiction.
5. The January 18, 2023 Final Technical Memorandum for the Meridian Upper Plateau Water, Recycled Water, Sewer Analysis was prepared by Dudek to determine impacts to the water, sewer, and

A-1.1

recycled water systems due to the Project. This memorandum identified improvements that would be required to be able to provide service to the Project while meeting Western’s standards. The improvements required to be in place prior to any service being provided to the Project include:

Potable System

- Upsize 1,300 feet of 12-inch diameter pipe on Deercreek Drive to 16-inch;
- Upsize 700 feet of 12-inch on Barton St to 20-inch diameter pipe;
- Upsize 600 LF of existing 18-inch on Van Buren Blvd to 20-inch diameter pipe;
- Construct the onsite potable water distribution system;

Recycled System

- Construct a new 0.5 Million Gallon tank reservoir at the existing Orange Crest site;
- Construct a new 12-inch diameter pipeline from the new recycled water tank to the on-site recycled water system;
- Upsize the main supply line from the Cactus Avenue tie-in to the temporary tank to 12-inch diameter.
- Construct the onsite potable water distribution system;
- Private Irrigation pumps and local recycled water priming tanks or pneumatic tanks required anywhere pressures are projected to drop below 30 psi at the service lateral.

Sewer Collection System

- Construct the onsite sewer collection system;

These improvements are required to be designed and constructed by the Developer in compliance with all Western rules, regulations, standards and requirements, and accepted by Western with all related costs and execution thereof to be the responsibility of the Developer.

The impacts to common use facilities that will need to be addressed prior to ultimate buildout include:

Potable System

- Accommodate increased deficit of 1.45-MG in storage for Ultimate Buildout demand condition due to the MWUP development demands.

Recycled System

- Accommodate increased deficit of 0.41-MG in storage for Ultimate Buildout demand condition due to the MWUP development demands.

Sewer System

- Accommodate increased deficit of 0.45-MGD in flow for Ultimate Buildout demand condition due to the MWUP development demands.

A-1.1
Cont.

These impacts are required to be addressed by the Project by either contribution of completed facilities to address the deficit as is the case for the proposed 0.5 MG tank for recycled water or by financial contribution in the form of Capacity Charges assessed to the project in proportion to the cost of the improvements required to address the project impacts.

There will be no credits or reimbursements available for infrastructure constructed.

6. Coordinate with the fire protection agency to determine required fire flow for proposed project and advise Western of the fire flow flow-rate and duration. Submit request to Western for fire flow modeling to determine if existing water systems capacity is available to provide the required fire flow. Depending on the results of the fire flow modeling additional conditions of approval such as upsizing of existing pipes, extension of pipes, installation of parallel piping or installation of pumps, and additional water storage at the developer's cost, may be required.
7. Developer to submit a 24" x 36" Preliminary Project Utility Plan of public and private onsite and offsite water, sewer and recycled water facilities (as applicable) to Western for review and approval before submittal of formal construction plan for plan check.
8. Preliminary Project Utility Plan shall show the following items:
 - a. Provide basis of survey including benchmarks and horizontal control monuments with date, surveyor information, datum and basis of bearing.
 - b. Delineate and label all existing utility facilities including potable water, sanitary sewer and recycled/non-potable water (i.e., pipe diameters, pipe material, manholes, water meters, air/vac, blow-off, fire hydrants, valves, gas, communication, electrical, and etc.) within project boundaries, along project boundaries and along areas of offsite improvements. Label any private streets and utilities as private. All other utilities will be considered as public utilities including utilities within easements and/or public right-of-way.
 - c. Delineate all existing and proposed easements and right of ways within and along project boundaries. Label showing typical widths. Label owner of interest and purpose of easements. Proposed Western easements for potable water, sanitary sewer, and recycled/nonpotable water require a minimum of 30 feet in width.
 - d. Delineate and label all proposed and existing lots, streets, and storm drains.
 - e. Delineate all proposed water, sewer, and recycled/non-potable water facilities within project boundaries along frontages and offsite. Include pipeline diameters and type of material. Label any private proposed utilities as private.
 - f. Commercial, Industrial and Residential projects are required to extend Western water and sewer along frontages and rights of ways of all streets abutting or surrounding the project's property boundary unless otherwise approved on this submitted Preliminary Project Utility Plan
 - g. Water pipeline designed to be looped and valved such that no more than twenty parcels would be out of service during repairs to pipeline.

Conditions of Approval

Meridian#West Campus Upper Plateau##
1/27/2023#

- h. The water pipelines shall extend across the full width of the frontage of the parcels where they are adjacent to a public right-of-way.
 - i. All water meters shall be placed within either a public right-of-way or Western easement, in front of the parcel to which it serves, at a distance no greater than 60 feet from the pipeline.
 - j. Sewer extension shall include factory wye's, stub lateral, and cap for existing properties along the extension.
9. Developer shall submit all Tentative Parcel or Tract Maps for the project to Western for review to determine whether additional project conditions are required.
10. Developer shall pay all costs associated with reviews of the Preliminary Master Utility Plan and Tentative Parcel or Tract Map by Western at the time of review.
11. Developer may be required to perform studies and analyses to provide the potable water and recycled/non-potable at maximum day demands and sanitary sewer maximum discharge needs of the development and their impacts on the relevant existing offsite potable water, recycled/non-potable and sanitary sewer systems at developers sole cost, as needed.
12. Provide and/or pay for all applicable cost and fees including connection fees (capacity charges), relocation of facilities, and additional facilities, including offsite pipeline extensions, additional potable water and recycled/non-potable water storage capacity, sanitary sewer treatment capacity and pumping facilities that may be necessary to accommodate applicant's proposed water, sewer and recycled/non-potable water usage (as applicable), while maintaining resiliency of pipelines within Western's distribution system. Western Master Plan Facilities, constructed by the developer may be subject to the application of appropriate capacity fee credits as deemed by Western.
13. Developer to submit a detailed engineer's construction cost estimate for proposed sewer and water facilities to Western for review and approval. Once approved, developer shall make a deposit for plan checking services for Water and/or Sewer Improvement Plans.
14. Water, Sewer, and Recycled Water Improvement Plans (as applicable) shall be designed per Western's Developer Handbook and Standard Specifications and available at: <http://www.wmwd.com/158/Standard-Specifications-Drawings>.
15. Developer to submit grading plans for Western's review and approval before grading permit is issued.
16. Water and/or Sewer Improvement Plans shall not be approved until all items mentioned above are received and approved by Western.
17. All abandoned well casings and septic systems shall be capped and logged in accordance with all applicable requirements of the Riverside County Department of Environmental Services.

A-1.1

Conditions of Approval

Meridian#West Campus Upper Plateau#
1/27/2023#

18. The developer is responsible for installing, paying all costs and obtaining an encroachment permit from the local jurisdiction having authority over installation of a water lateral in the public right-of-way. If the customer chooses to propose to route water or sewer pipelines across private property, then the customer is responsible to obtain easements from adjacent property owners. The easement shall be dedicated to Western.
19. For water, sewer and/or recycled water service by Western, the developer must comply with these standard conditions, and all applicable Rules, Regulations, and General Policies of Western found in Western's Municipal Water District Code at: <https://www.codepublishing.com/CA/WMWD/>
20. Subdivision maps shall be signed by Western and include Western's standard statements for sewer and water (as applicable). These statements acknowledge surety for water and sewer facilities and adequate property rights as required by Western standards.

Western appreciates the opportunity to submit these Conditions of Approval, please contact Western's Development Services at (951) 571-7100 or development@wmwd.com for further information.

FINAL TECHNICAL MEMORANDUM

To: Karl Francis, WMWD; Derek Kawaii, WMWD
From: Elizabeth Caliva, Dudek; Kate Palmer, Dudek; Jenny Li, Dudek
Subject: Meridian Upper Plateau Water, Recycled Water, Sewer Development Analysis
Date: January 18, 2023
cc: Chris McKee, DRC Engineering; Adam Collier & Timothy Reeves, Lewis Retail Centers

1 Background, Goals & Objectives

The Riverside Service Area 2020 Facilities Master Plan (2020 FMP) for Western Municipal Water District (Western) was completed in November 2021. The 2020 FMP considered a large open space parcel in the northern portion of the service area to be developed as soccer fields, requiring recycled water service only. In 2022, a new specific plan was developed, called the Meridian West Upper Plateau (MWUP) Project for development in the near-term planning horizon, which would utilize the potable water, recycled water and sewer collection facilities of Western. No previous master plan or report had considered the impacts of the MWUP development on Western facilities. This report provides an update to the hydraulic models, applying specific water, recycled water and sewer demands and loadings based on the updated land use for the site.

The goal of this analysis is to identify the immediate and long-term project-specific needs of accommodating the MWUP development as well as determine the timing and sizing impact on the stated CIP project recommendations from the 2020 FMP. The objectives of this project include the following:

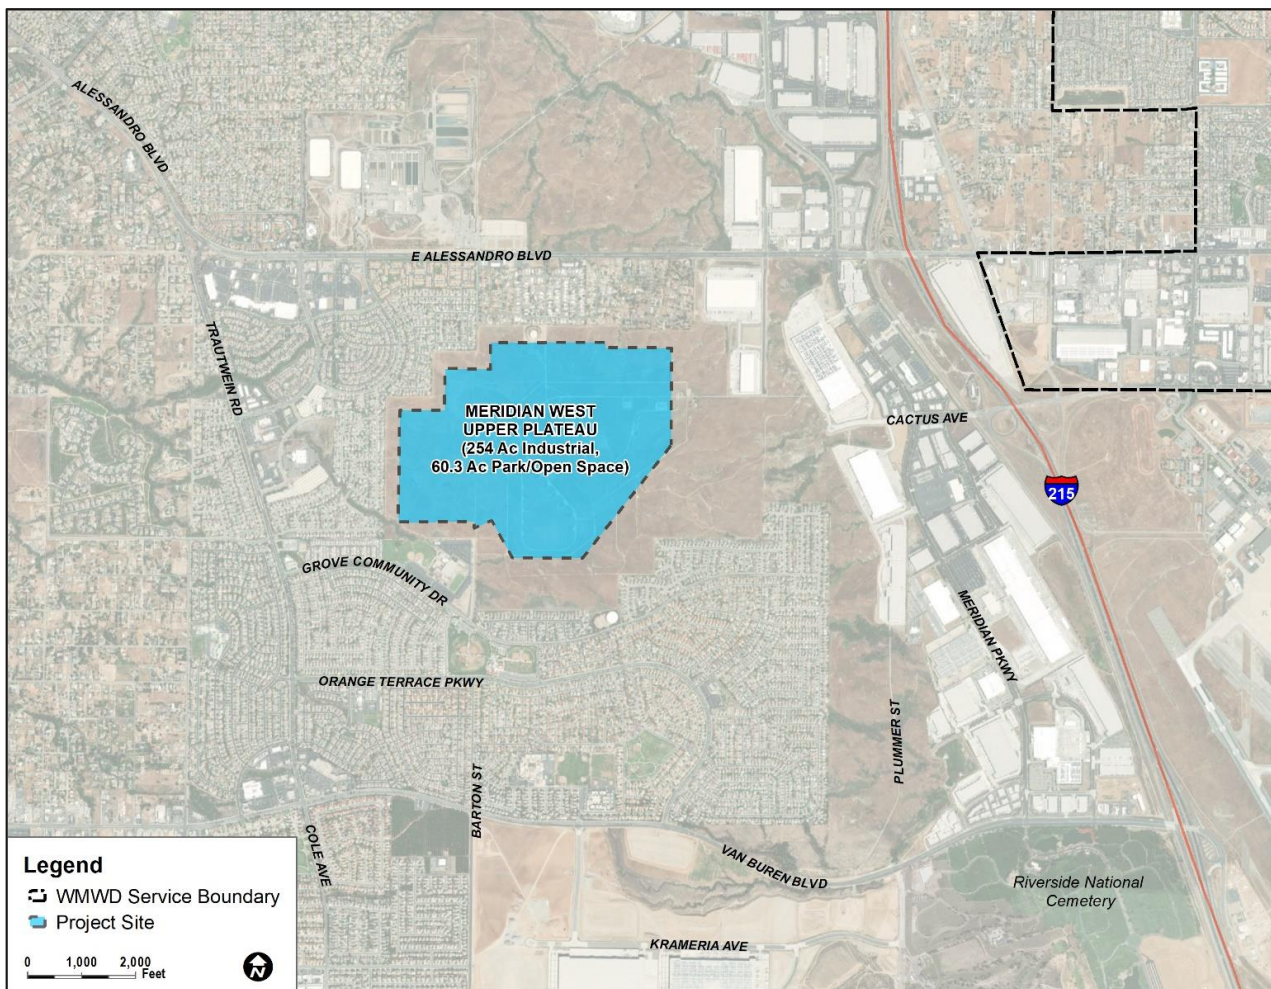

1. Update the three FMP hydraulic models with the most recent available information on the specific development plan for the MWUP development.
2. Determine if any improvements to the Western water, recycled water, and sewer facilities are required for immediate accommodation of the MWUP development.
3. Determine changes to recommended CIP project timing and sizing from the 2020 FMP as a result of accommodating the MWUP development.

A-1.2
Cont.

2 Updated Land Use

The MWUP project is being developed on currently undeveloped land. In the 2020 FMP, the proposed land use type for the property was assumed to be soccer fields, with recycled water demand only. The updated proposed land use for the site includes 254 acres of Industrial and 60.3 acres of Park/Open Space. The location of the site is shown in Figure 1. Details of the site layout are included in Attachment A.

Figure 1. Location Map

A-1.2
Cont.

3 Hydraulic Analyses

The following sections detail the potable water, recycled water and sewer analyses and results

3.1 Potable Water Analysis

The proposed MWUP project would be served by the 1900 pressure zone (PZ). The potable water hydraulic analysis includes consideration of six (6) demand scenarios:

Demand Condition	Maximum Day Demand	Maximum Day Demand + Fire Flow
Existing (2020)	Scenario 1	Scenario 2
Near Term (2030)	Scenario 3	Scenario 4
Buildout	Scenario 5	Scenario 6

Three analyses will be performed to update the potable water system results from the 2020 FMP, including a storage analysis, a distribution system analysis and a pump station analysis. **Table 1** presents the updated net water use projections for the project site used for the analyses.

Table 1. Updated Net Water Use Projections for the Project Site

Proposed Land Use	Acreage	Previous PW Demand (gpm) ¹	Proposed PW Average Day Demand (gpm)	Net ADD (gpm)	Net MDD (gpm) ²
Industrial	254	0	352.8 ³	352.8	529.1
Park/Open Space	60.3	0	25.1 ⁴	25.1	37.7
Total Net Increase in PW Demand:				377.9	566.8

Notes:

- ¹ In the 2020 FMP, the project site was anticipated to be developed into soccer fields in the Ultimate Buildout scenario only with no potable water demand anticipated for the site.
- ² MDD peaking factor is equal to 1.5 x ADD, per Table 3-3 of the 2020 FMP.
- ³ Industrial potable water demand estimated using a water use factor of 2,000 gpd/acre.
- ⁴ Park/Open Space potable water demand estimated using a water use factor of 600 gpd/acre.

3.1.1 Storage Analysis

Using the demand values from Table 1, an updated storage analysis was performed for the 1900 PZ. The results of the storage analysis for Existing, Near-Term and Buildout are presented in **Table 2**.

A-1.2
Cont.

Table 2. Potable Water Storage Analysis for 1900 PZ

Scenario	Pressure Zone	Existing Storage (MGD)	MDD (MGD)	Equalization 25% MDD (MG)	Emergency 100% MDD (MG)	Fire Storage			Total Required (MG)	Surplus/ (Deficit) (MG)
						Fire Flow (gpm)	Duration (hours)	Total (MGD)		
Existing (2020) ¹	1900	13.6	6.75	1.69	6.75	3,000	3	0.54	8.98	4.63
Existing (2020) + MWUP	1900	13.6	7.57	1.89	7.57	4,000	4	0.96	10.42	3.18
Near-Term (2030) ²	1900	13.6	8.75	2.19	8.75	3,000	3	0.54	11.48	2.12
Near-Term (2030) + MWUP	1900	13.6	9.57	2.39	9.57	4,000	4	0.96	12.92	0.68
Ultimate ³	1900	13.6	10.96	2.74	10.96	3,000	3	0.54	14.24	(0.63)
Ultimate + MWUP	1900	13.6	11.78	2.94	11.78	4,000	4	0.96	15.68	(2.08)

Notes:

- ¹ Data from Table 6-1 of the 2020 FMP.
- ² Data from Table 6-4 of the 2020 FMP.
- ³ Data from Table 6-6 of the 2020 FMP.

↑
A-1.2
Cont.
↓

The above results indicate that there is sufficient storage anticipated in the Existing and Near-Term scenarios to accommodate the new MWUP development. However, the Ultimate Buildout scenario was previously anticipating a storage deficit in the 2020 FMP that would be further exacerbated by the MWUP development. The resulting storage deficit anticipated for Ultimate Buildout is increased to 2.08-MG, an increase of 1.45-MG from the 2020 FMP analysis, as a result of the new demands anticipated by the MWUP development.

Potential siting of a new 2.1-MG tank was evaluated as part of this study. **Figure 2** presents a potential location north of the existing Markham Tanks. Constructability would need to be addressed; location shown for potential siting purposes only.

Figure 2. Potential Siting of New 2.1-MG Reservoir for 1900 PZ

A-1.2
Cont.

There are options to reduce storage needs, such as using reservoir management systems (RMSs) to maximize tank levels to minimize equalization volume requirements; however, this would require increased pumping during high

time of use (TOU) hours. Western is exploring purchasing Tesla batteries for energy during high TOU times and this may be an option to consider for this application as well in an effort to use RMS to reduce equalization storage needs while also reserving pumping times for low TOU rate hours (overnight).

3.1.2 Distribution System Analysis

A MDD of 566.8 gpm was point loaded on model junction ID N512 at the intersection of Grove Community Drive and Deercreek Drive, which is the anticipated tie-in of the MWUP development to Western’s potable water system to the 1900PZ. The parallel 12-inch piping considered by the developer for this tie-in location was not added to the model as it is anticipated one of the lines is for backup supply in case of a line break of the primary supply line. A 24-hour extended period simulation (EPS) was run in the model for MDD and MDD plus fire flow for the Existing (2020), Near-Term (2030) and Ultimate Buildout scenarios and results compared to District evaluation criteria, including a minimum service pressure of 40 psi during MDD, minimum residual pressure of 20 psi during fire flow, and a maximum pipeline velocity of 7.5 fps during either condition. The Near-Term and Buildout modeling scenarios included the improvements recommended as part of the 2020 FMP.

The goal of this analysis was to (1) identify what improvements the developer would need to construct as part of the initial MWUP development for potable water service within District criteria and (2) identify if any previously recommended projects from the master plan become triggered for earlier construction due to the additional demand of the development.

The following subsections provide the results of each scenario.

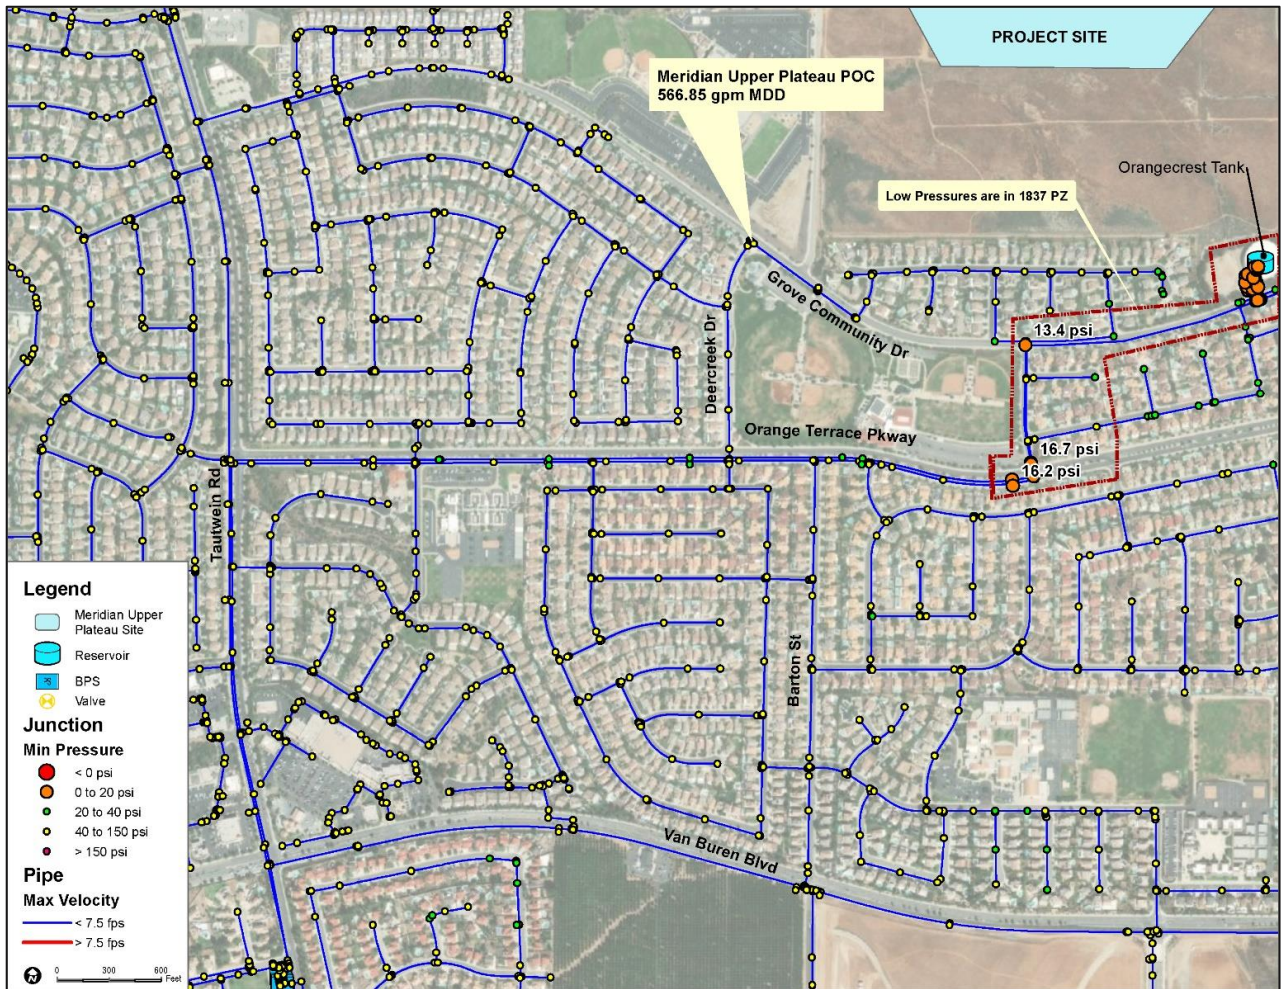

3.1.2.1 Scenario 1: Existing MDD

The existing MDD scenario results indicated that the 1900 PZ could accommodate the additional demand for the MWUP within design criteria. Minimum service pressure and maximum pipeline velocities are shown graphically on **Figure 3**. Note, the low pressures seen in Figure 4 southwest of the existing Orangecrest Tank are within the 1837 pressure zone and are unrelated to the MWUP development project.

A-1.2
Cont.

Figure 3. Potable Water Existing (2020) with MWUP – MDD Minimum Pressures and Maximum Velocities

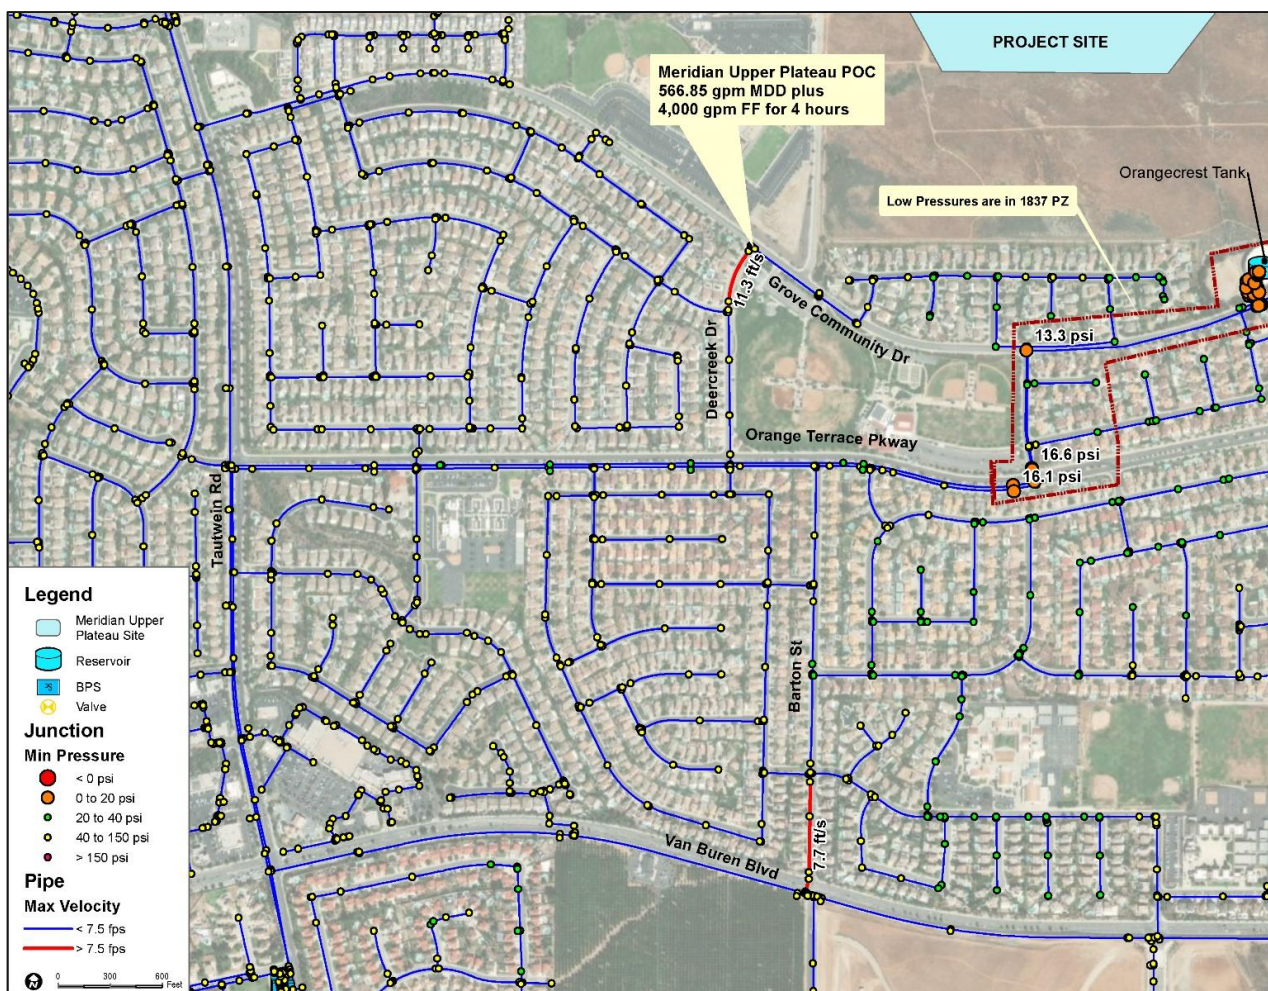

A-1.2
 Cont.

3.1.2.2 Scenario 2: Existing MDD plus Fire Flow

The existing MDD plus fire flow scenario results indicates two pipelines within the 1900 PZ are anticipated to exceed Western maximum pipeline velocity requirements, as shown graphically on **Figure 4**. The model indicated the existing 12-inch pipeline at the tie-in location is anticipated to have maximum pipeline velocities in excess of 11 fps. Additionally, an existing 12-inch pipeline in Barton Street north of Van Buren Blvd is anticipated to have maximum velocities during fire flow at 7.7 fps, which exceeds the district criteria of 7.5 fps.

Figure 4. Existing (2020) with MWUP – MDD plus Fire Flow Minimum Pressures and Maximum Velocities

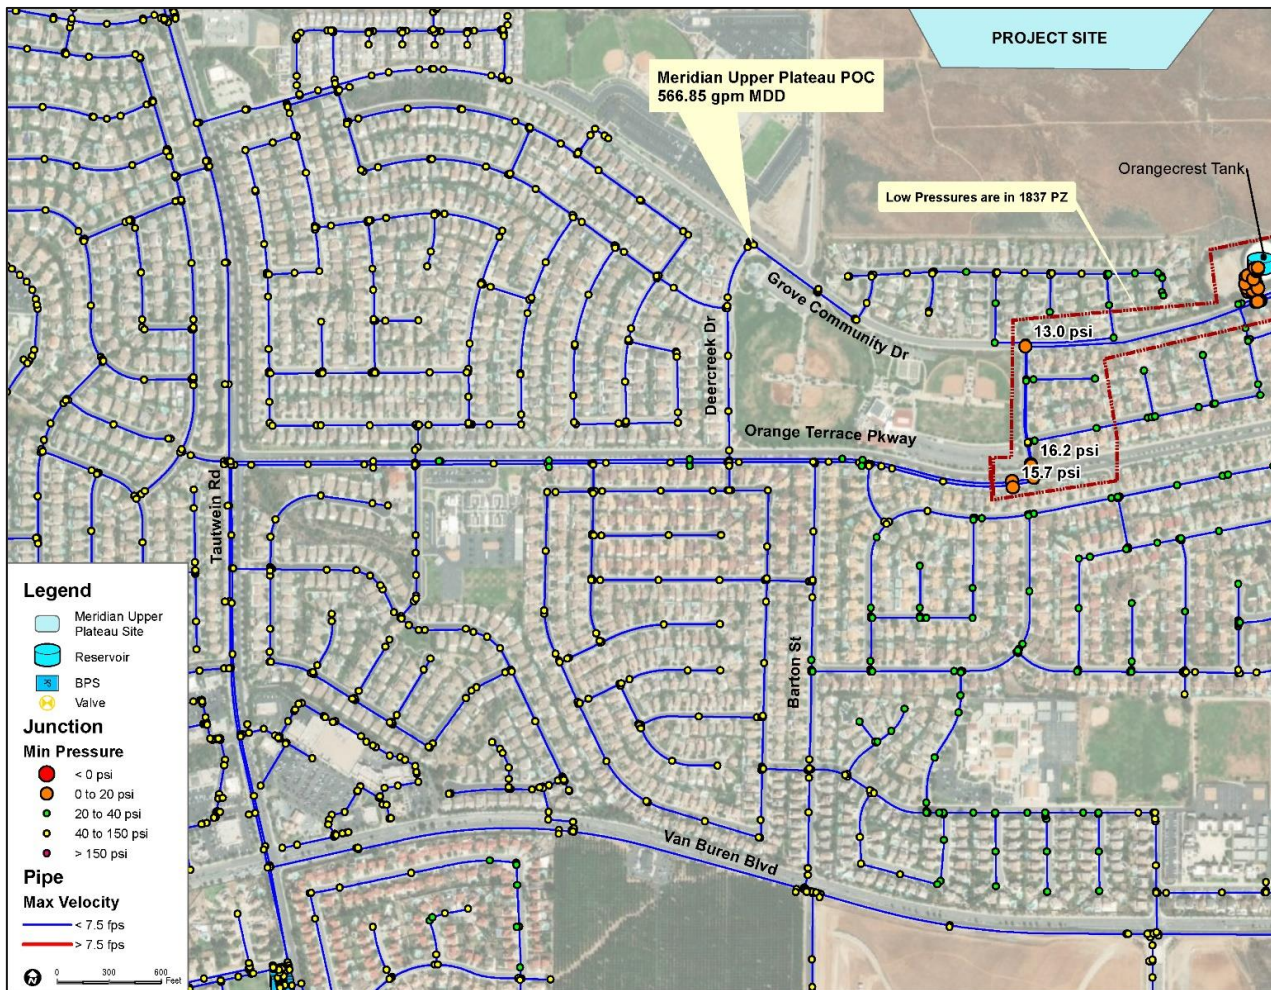

A-1.2
Cont.

3.1.2.3 Scenario 3: Near-Term MDD

Under the Near-term MDD demand scenario, no potable water facilities are anticipated to exceed Western criteria, as shown in **Figure 5**. Note, the low pressures seen in Figure 4 are within the 1837 pressure zone and are unrelated to the MWUP development project.

Figure 5. Potable Water Near-Term (2030) with MWUP – MDD Minimum Pressures and Maximum Velocities

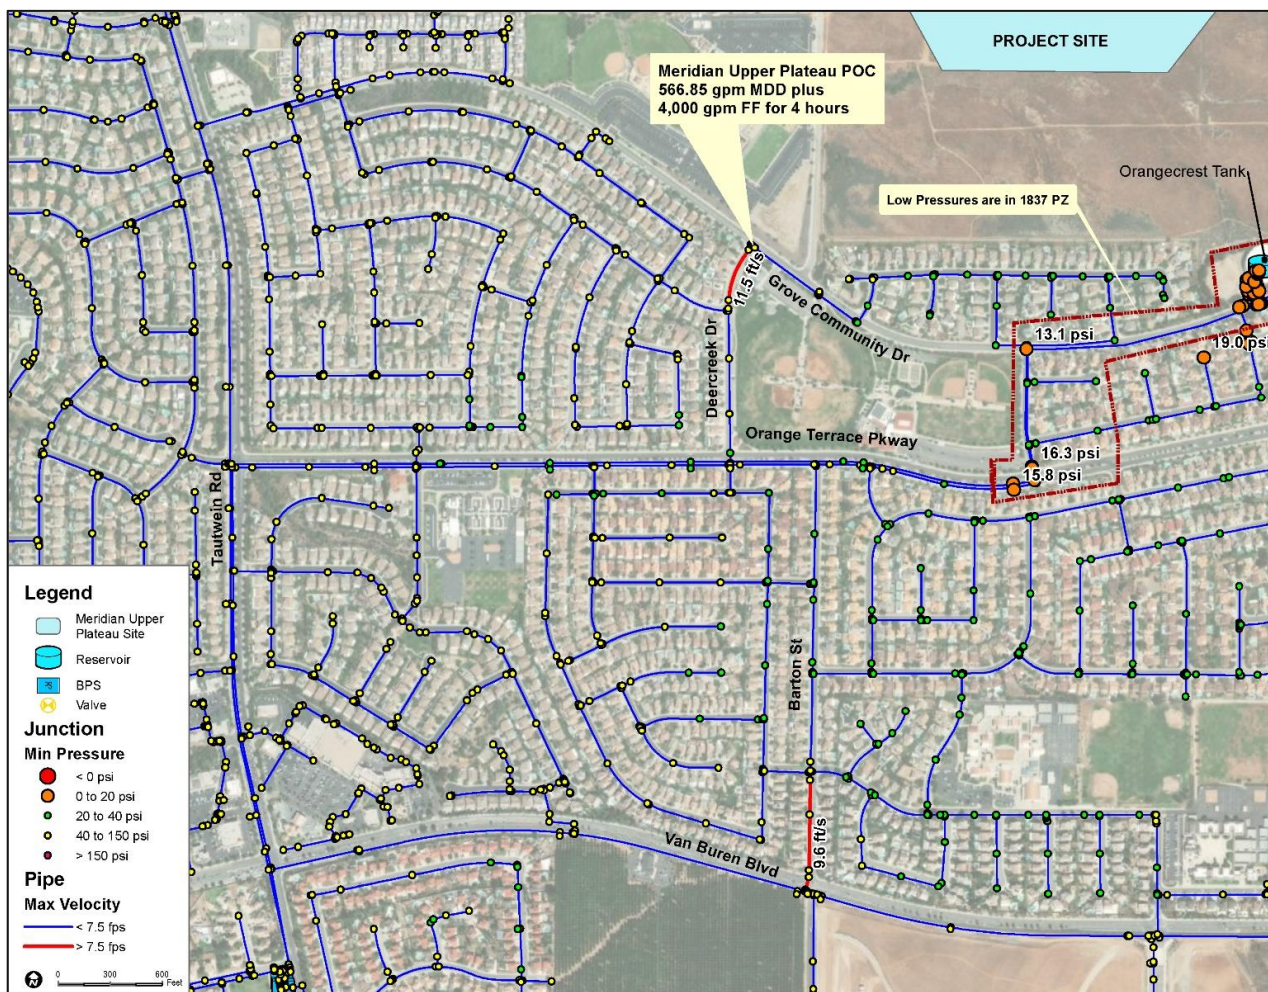

A-1.2
 Cont.

3.1.2.4 Scenario 4: Near-Term MDD plus Fire Flow

The Near-Term MDD plus fire flow scenario results indicates two pipelines within the 1900 PZ are anticipated to exceed Western maximum pipeline velocity requirements, as shown graphically on **Figure 6**. The model indicated the existing 12-inch pipeline at the tie-in location is anticipated to have maximum pipeline velocities in excess of 11 fps. Additionally, an existing 12-inch pipeline in Barton Street north of Van Buren Blvd is anticipated to have maximum velocities during fire flow at approximately 9.6 fps.

Figure 6. Near-Term (2030) with MWUP – MDD plus FF Minimum Pressures and Maximum Velocities

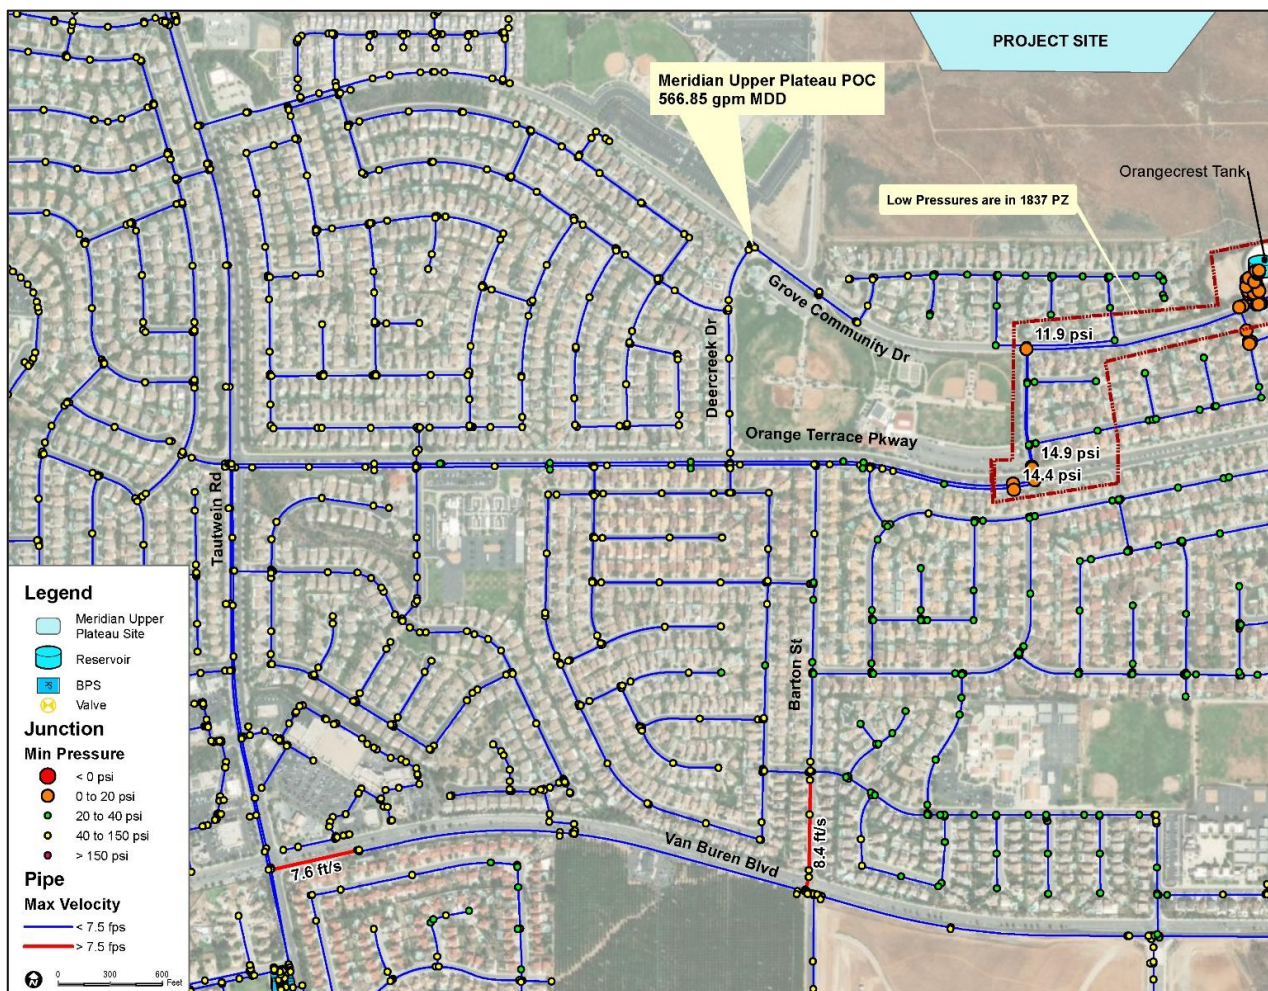

A-1.2
Cont.

3.1.2.5 Scenario 5: Ultimate Buildout MDD

The Ultimate Buildout MDD scenario results indicate two pipelines within the 1900 PZ are anticipated to exceed Western maximum pipeline velocity requirements, as shown graphically on **Figure 7**. The model indicated the existing 12-inch pipeline in Barton Street north of Van Buren Blvd is anticipated to have maximum velocities during fire flow at approximately 8.4 fps. Additionally, an existing 18-inch pipeline in Van Buren Blvd just east of Tautwein Road is anticipated to slightly exceed the maximum velocity requirement of 7.5 fps.

Figure 7. Ultimate Buildout with MWUP – MDD Minimum Pressures and Maximum Velocities

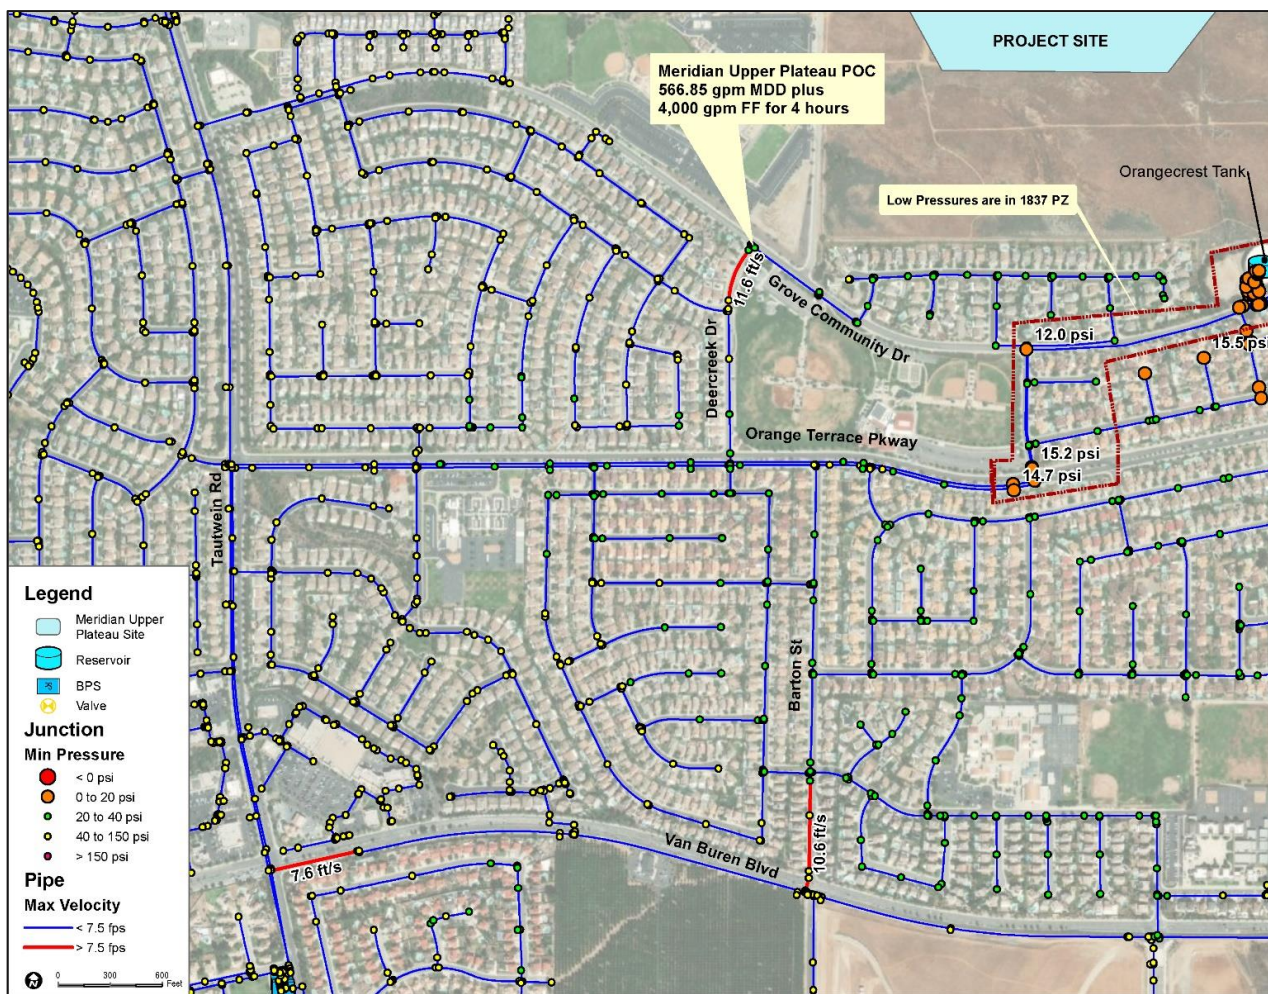

A-1.2
 Cont.

3.1.2.6 Scenario 6: Ultimate Buildout MDD plus Fire Flow

The Ultimate Buildout MDD plus fire flow scenario results indicates three pipelines within the 1900 PZ are anticipated to exceed Western maximum pipeline velocity requirements, as shown graphically on **Figure 8**. The model indicated the existing 12-inch pipeline at the tie-in location is anticipated to have maximum pipeline velocities in excess of 11 fps. An existing 12-inch pipeline in Barton Street north of Van Buren Blvd is anticipated to have maximum velocities in excess of 10 fps. Additionally, the existing 18-inch pipeline in Van Buren east of Tautwein Road is anticipated to slightly exceed the maximum velocity requirement of 7.5 fps.

Figure 8. Ultimate Buildout with MWUP – MDD plus FF Minimum Pressures and Maximum Velocities

A-1.2
Cont.

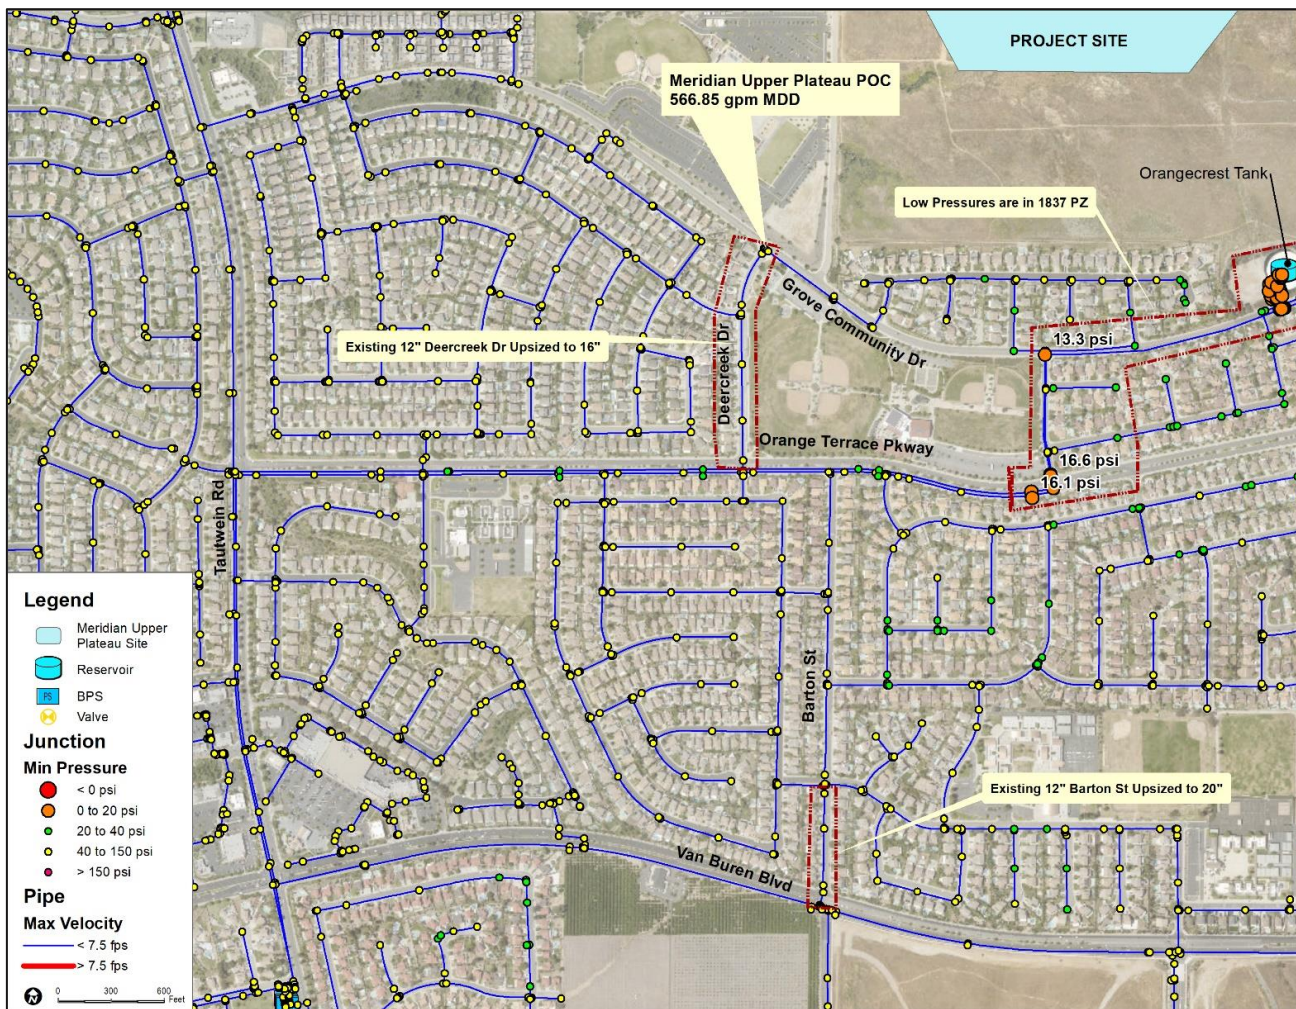

3.1.2.7 Results with Improvements

System improvements were evaluated to maintain facilities within Western design criteria under MDD plus fire flow conditions for the Existing (2020), Near-Term (2030) and Ultimate Buildout demand scenarios. The following improvements are recommended for the potable water system:

- Upsize 1,300 LF of 12-inch on Deercreek Drive to 16-inch
- Upsize 700 LF of 12-inch on Barton St to 20-inch
- Upsize 600 LF of existing 18-inch on Van Buren Blvd to 20-inch (scenarios 2030 and Buildout only)

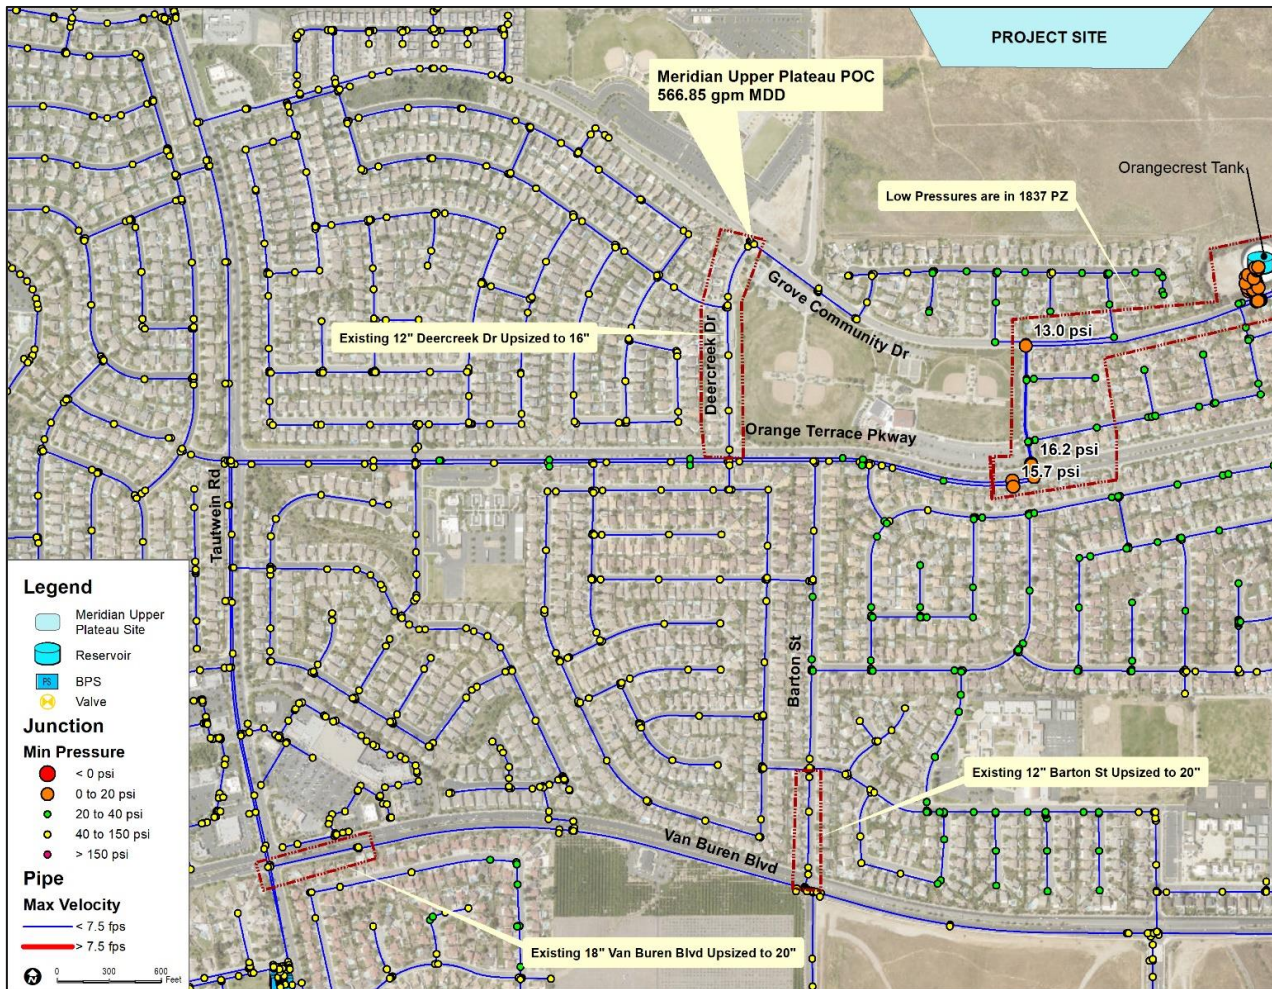

The results of the system analyses with improvements are shown in **Figures 9, 10 and 11.**

A-1.2
Cont.

3.1.3 Potable Water Pump Station Analysis

An updated pump station analysis was performed for the Bergamont Pump Station, which supplies the 1900PZ from the 1837 PZ. The pump station currently has four (4) pumps with a total pumping capacity of 18,900 gpm and a firm capacity (largest pump out of service) of 12,000 gpm. The design criteria for potable water pump stations requires that the firm pumping capacity meet the MDD for each pressure zone. As shown in **Table 3**, the results of the analysis indicate that the Bergamont Pump Station is anticipated to have sufficient capacity to accommodate the MWUP through Buildout with no improvements required.

Table 3. Potable Water Pump Station Analysis for the 1900PZ

Scenario	Pressure Zone	Zone MDD (MGD)	Zone MDD (gpm)	Bergamont Firm Capacity (gpm) ¹	Surplus (gpm)
Existing (2020)	1900	6.75	4,700	12,000	7,300
Existing (2020) + MWUP	1900	7.57	5,300	12,000	6,700
Near-Term (2030)	1900	8.75	6,100	12,000	5,900
Near-Term (2030) + MWUP	1900	9.57	6,600	12,000	5,400
Ultimate	1900	10.96	7,600	12,000	4,400
Ultimate + MWUP	1900	11.78	8,200	12,000	3,800

Notes:
¹ Assumes largest pump out of service. Value from Table 6-3 of the 2020 FMP.

3.1.4 Potable Water Analysis Summary

The results of the potable water analysis indicate that several existing waterlines are anticipated to exceed Western evaluation criteria with the addition of the MWUP demand. The following water system pipeline improvements are recommended to maintain maximum waterline velocities below the design criteria of 7.5 fps.

The following potable water improvements are required to accommodate the immediate construction of the MWUP development:

- Upsize 1,300 LF of 12-inch on Deercreek Drive from Grove Community Drive to Orange Terrace Parkway to 16-inch.
- Upsize 700 LF of 12-inch on Barton St north of Van Buren to 20-inch.

The following are additional future (2030 and Buildout) potable water system recommendations not previously included in the 2020 FMP necessary to accommodate the MWUP development:

- Upsize 600 LF of existing 18-inch on Van Buren Blvd east of Tautwein Rd to 20-inch (for future scenarios 2030 and Buildout only).
- Accommodate increased deficit of 1.45-MG in Ultimate Buildout demand condition due to the MWUP development demands.

3.2 Recycled Water Analysis

The MWUP project is proposed to be served by the 1815 PZ. The recycled water hydraulic analysis includes maximum day demand (MDD) be evaluated for the Existing (2020), Near-Term (2030) and Buildout scenarios. Three analyses will be performed to update the recycled water system results from the 2020 FMP, including a storage analysis, a distribution system analysis, and a pump station analysis. **Table 4** presents the updated net recycled water use projections for the project site used for the analyses.

A-1.2
Cont.

Table 4. Updated Net Recycled Water Use Projections for the Project Site

Proposed Land Use	Acreage	Previous RW Demand (gpm) ¹	Proposed RW Average Day Demand (gpm)	Net ADD Increase (gpm)	Net MDD Increase (gpm) ²
Industrial	254	0	39.7 ⁴	39.7	99.2
Park/Open Space	78.1 ³	45.8	72.9 ⁵	27.1	67.9
Total Net Increase in RW Demand:				66.8	167.1

Notes:

¹ In the 2020 FMP, the project site was anticipated to be developed into 30 acres of soccer fields in the Buildout scenario only.

² MDD peaking factor is equal to 2.5 x ADD, per Table 3-11 of the 2020 FMP.==

³ This acreage value varies from the Park/Open Space acreage values for potable water and sewer because it includes some Landscape and Lighting Maintenance District (LLMD) areas (slope/landscape areas/maintenance roads) that would not have development but would have landscaping requiring a recycled water demand.

⁴ Industrial recycled water demand estimated using a water use factor of 225 gpd/acre. Note: the water use factor provided by the developer used during the West Campus study in 2017/2018, which was 450 gpd/acre for Industrial for maximum month. The maximum month peaking factor in the 2020 FMP for recycled water is 2.0. Therefore, the average day demand water use factor assumed herein is 225 gpd/acre.

⁵ Park/Open Space recycled water demand estimated using a water use factor of 1,345 gpd/acre. Note: the water use factor provided by the developer used during the West Campus study in 2017/2018, which was 2,690 gpd/acre for Park/Open Space for maximum month. The maximum month peaking factor in the 2020 FMP for recycled water is 2.0. Therefore, the average day demand water use factor assumed herein is 1,345 gpd/acre.

A-1.2
Cont.

3.2.1 Storage & Siting Analysis

As discussed in the 2020 FMP, recycled storage in the 1815 PZ is currently in deficit by approximately 2.4MG. As a part of development, the MWUP project will be constructing a temporary bolted steel reservoir to accommodate the storage required for their development. Per the 2020 FMP, required recycled water storage is equal to one MDD. Therefore, the required storage for the MWUP is a minimum of 0.41-MG.

Two sites were proposed for the tank, including one site with a pad elevation of 1734 ft within the development and the existing Orangecrest site, with a pad elevation of 1799 ft. It was assumed a bolted steel tank with a maximum height of 32-ft would be constructed for the temporary storage. The site with the pad elevation of 1734-ft is unable to match the HGL of the existing Lurin Tank of 1815 ft. Therefore, the Orangecrest site is the preferred site for the temporary storage tank. In discussion with Western and the Developer, a tank with a diameter of 53.5 feet and maximum depth of 30 feet (total volume 0.5-MG) was assumed for the hydraulic analysis.

Using the updated recycled water demand values from Table 3, an updated storage analysis was performed for the 1815 PZ. The results of the storage analysis for Existing, Near-Term and Buildout are presented in **Table 5**. Note that the “Existing Storage” column for the Existing + MWUP scenario includes the temporary 0.5-MG tank constructed as part of the MWUP project. The Results indicate that the storage deficit predicted for the Ultimate Buildout demand condition will be exacerbated by the MWUP project.

Table 5. Recycled Water Storage Analysis for the 1815PZ

Scenario	Pressure Zone	Existing Storage (MGD)	MDD (MGD)	Required Storage (MG)	Surplus/ (Deficit) (MG)
Existing (2020)	1815	0.3	2.67	2.67	(2.37)
Existing (2020) + MWUP	1815	0.8 ¹	3.08	3.08	(2.28)
Near-Term (2030)	1815	5.3 ²	4.63	4.63	0.67
Near-Term (2030) + MWUP	1815	5.3 ²	5.04	5.04	0.26
Ultimate	1815	5.3 ²	6.54	6.54	(1.24)
Ultimate + MWUP	1815	5.3 ²	6.95	6.95	(1.65)

Notes:

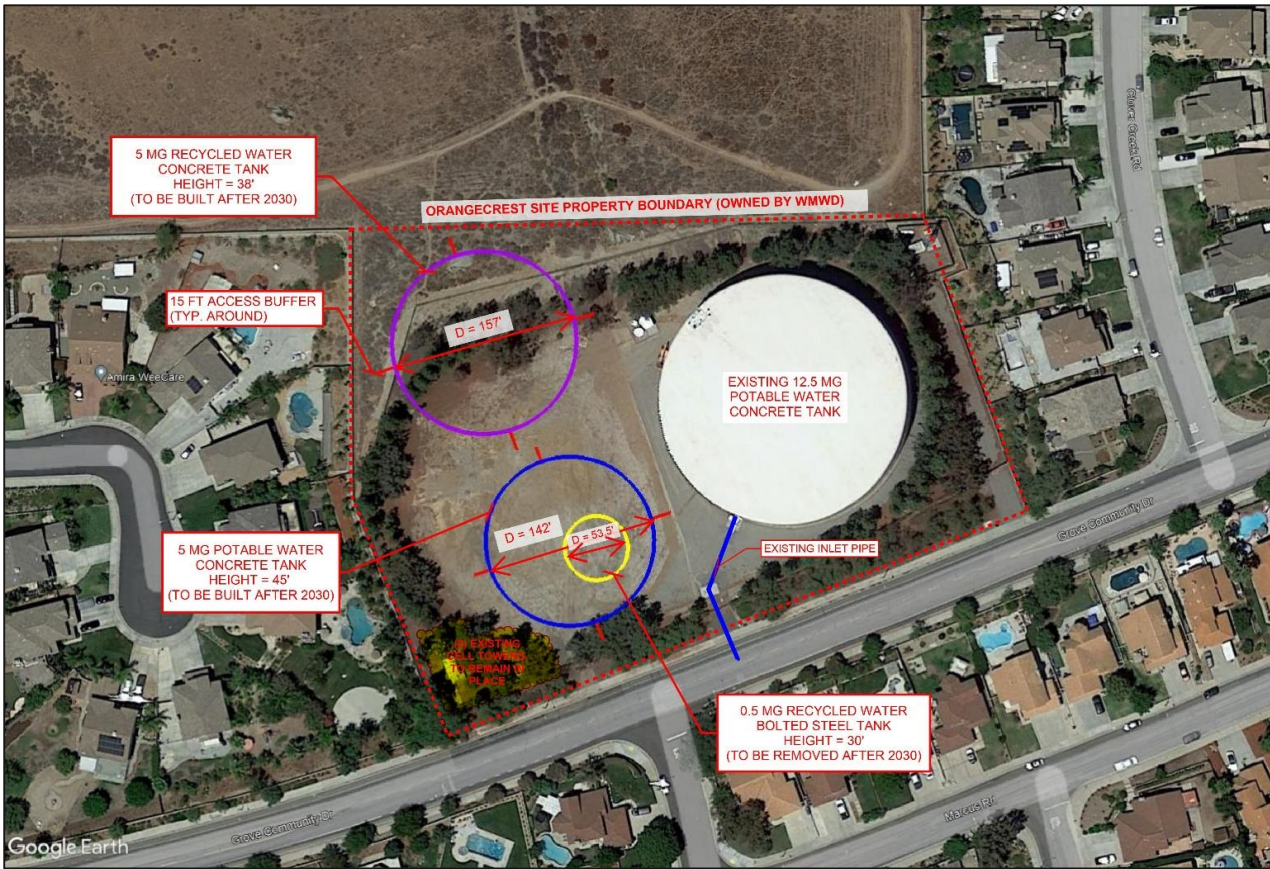

¹ Includes the 0.3-MG existing Lurin Tank and the 0.5-MG planned temporary MWUP tank are both in operation.

² Assumes the new 5.0-MG tank at the Orangecrest site is constructed by 2030 per the 2020 FMP. The temporary 0.5-MG MWUP storage tank would be taken offline and relocated.

Placement of the tanks within the existing Orangecrest site were also evaluated to confirm the temporary 0.5-MG tank could remain during construction of the proposed 5-MG recycled water tank anticipated to be constructed by 2030. **Figure 12** provides a conceptual siting evaluation for the proposed 0.5-MG temporary recycled water tank, the proposed 5-MG permanent recycled water tank as well as the proposed 5-MG potable water tank, which would be constructed after removal of the temporary 0.5-MG recycled water tank in the 2030 timeframe.

Figure 12. Ultimate Buildout with MWUP – MDD plus FF with Improvements

A-1.2
Cont.

3.2.2 Distribution System Analysis

The proposed recycled water lines for the project site were added to Western’s most recent recycled water model. The project site’s MDD of 281.5 gpm was split evenly between the nine (9) nodes in the proposed MWUP system. The previous water demand of 114.5 gpm and proposed pipelines for the soccer fields were removed from the hydraulic model. A 48-hour extended period simulation (EPS) was run in the model for MDD for the Existing (2020), Near-Term (2030) and Ultimate Buildout scenarios and results compared to District evaluation criteria, including a minimum service pressure of 40 psi during MDD, minimum residual pressure of 20 psi during fire flow, and a maximum pipeline velocity of 7.5 fps during any condition.

The following subsections provide the results of each scenario.

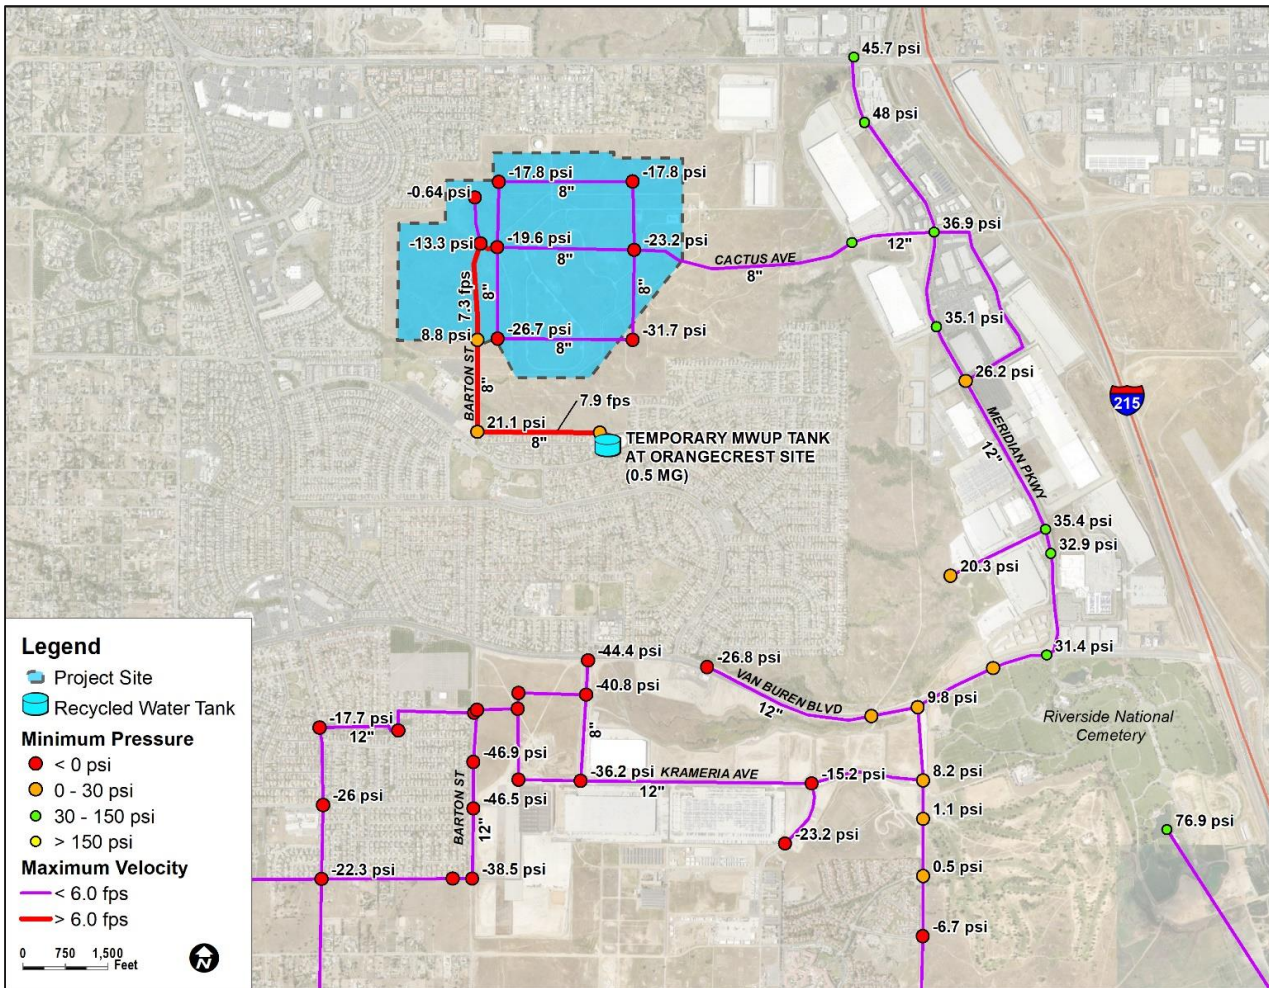

3.2.2.1 Existing MDD

Analysis of the originally-proposed single 8-inch service line in Cactus to the temporary 0.5-MG tank determined that the proposed infrastructure does not provide sufficient capacity for flows from the temporary in the event that the Oleander booster pump station is not pumping when the large RNC demand hits the 1815 zone, as shown in **Figure 13**. Maximum pipeline velocities are anticipated to exceed District criteria and minimum pressures could drop below zero psi. However, analysis indicates that upsizing the main supply line from 8-inch to 12-inch from the tie-in on Cactus Ave to the temporary tank is anticipated to provide sufficient capacity to utilize storage volumes at the temporary tank in the event Oleander PS is not pumping when demands significantly increase in the zone. These results are shown graphically in **Figure 14**. Therefore, it is recommended that the supply line be upsized to 12-inch diameter from Cactus to the temporary 0.5-MG tank.

Figure 13. Recycled Water Existing MDD – 8” Service from Cactus Ave

A-1.2
 Cont.

Figure 14. Recycled Water Existing MDD – 12" Service from Cactus Ave

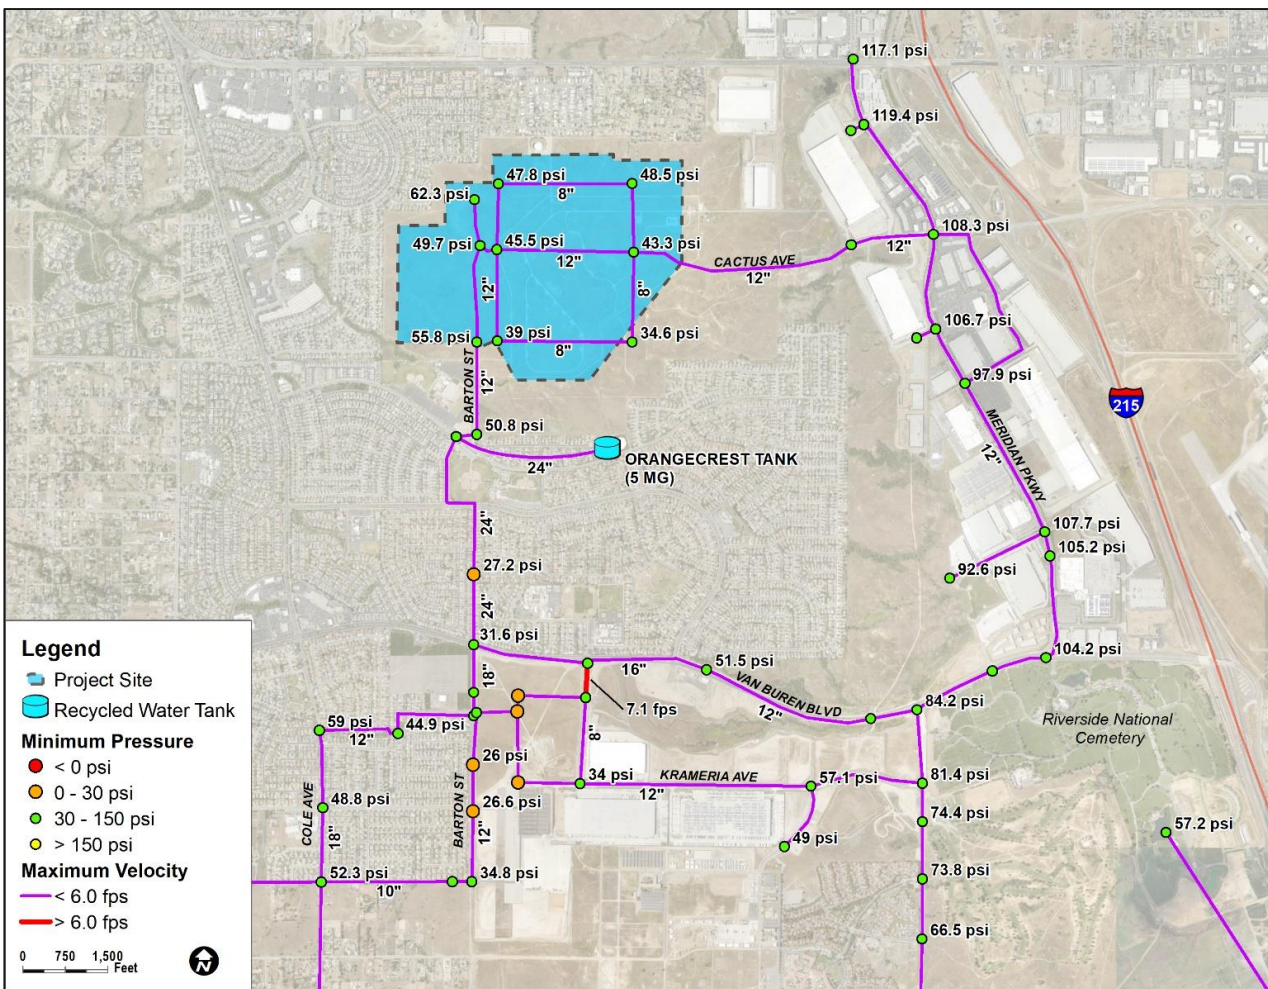

A-1.2
 Cont.

3.2.2.2 Near-Term MDD

For the Near-Term MDD analysis with looped supply to the MWUP development with the 12-inch supply line in Cactus and Barton to the tank from the north, the results indicate minimum pressures in the development being maintained above 30 psi, as shown in **Figure 15**. One short (610 LF) portion of existing 8-inch in Coyote Bush Road just south of Van Buren Blvd reaches a maximum velocity of 7.4 fps, which exceeds the District maximum velocity criteria of 6 fps. No other new low pressure areas or high velocity pipelines were identified.

Figure 15. Recycled Water Near-Term MDD – Looped Service from Cactus Ave & Barton Dr

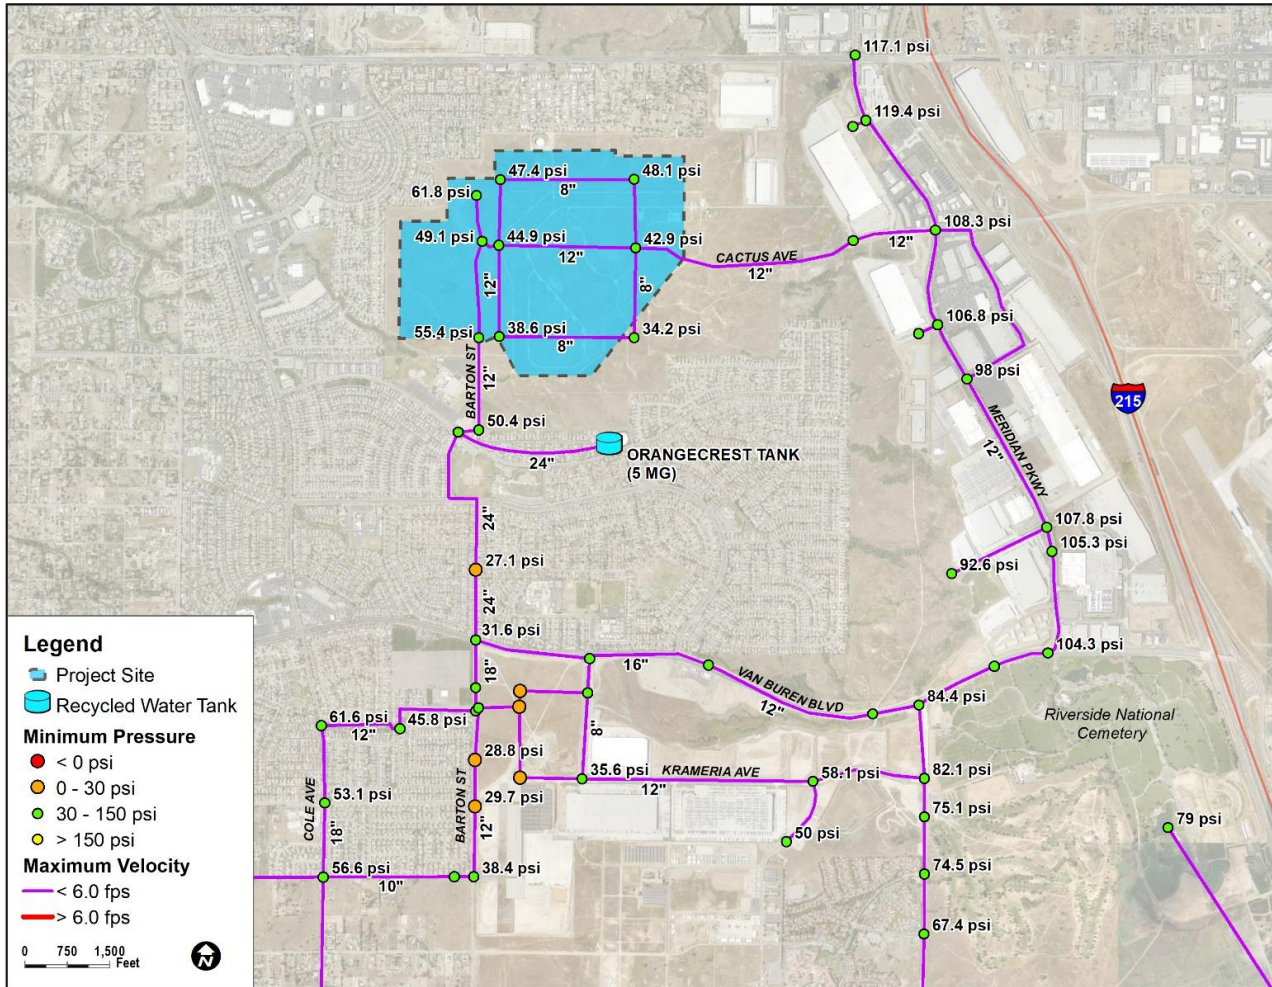

Note that modeling indicates that the infrastructure shown in Figure 15 with service to the new 5-MG Orangeprest tank via a 24-inch supply line in the south is required once demand levels in the zone, predominantly those of the Riverside National Cemetery, reach 2030 anticipated levels as the larger diameter pipeline is required to more efficiently move water in and out of the new 5-MG Orangeprest Reservoir.

3.2.2.3 Ultimate Buildout MDD

For the Ultimate Buildout MDD analysis with looped supply to the MWUP development, the results indicate minimum pressures in the development being maintained, as shown in **Figure 16**. No pipelines were found to exceed the District maximum velocity criteria of 6 fps. System pressures in the remainder of the 1815 zone were consistent with the findings of the 2020 FMP.

Figure 16. Recycled Water Ultimate Buildout MDD – Looped Service from Cactus Ave & Barton Dr

A-1.2
Cont.

3.2.3 Recycled Water Pump Station Analysis

An updated pump station analysis was performed for the 1815 zone, which receives water from both the WWRF and Oleander pump stations. As shown in **Table 6**, the results of the analysis indicate that the 1815 zone is anticipated to have sufficient capacity to accommodate the MWUP through Buildout with no improvements required. Note that in the Ultimate demand scenario, supply from the Colorado River Aqueduct is anticipated to be required to satisfy the MDD of the zone.

Table 6. Recycled Water Pump Station Analysis for the 1815PZ

Scenario	Pressure Zone	Zone MDD (gpm)	Zone Total Pumping Capacity (gpm) ¹	Zone Firm Pumping Capacity (gpm) ²	Surplus (gpm)
Existing (2020) + MWUP	1815	2,140	11,940	7,580	5,440
Near-Term (2030) + MWUP	1815	3,500	11,940	7,580	4,080
Ultimate + MWUP	1815	5,480 ³	11,940	7,580	2,100

Notes:

¹ Total capacity value shown is sum of all pumps at Oleander and WWRF pump stations, per Table 2-9 of the 2020 FMP.

² Firm pumping capacity assumes largest pump in each pump station is out of capacity. Values are some of firm pumping capacities of both Oleander and WWRF pump stations, per Table 2-9 of the 2020 FMP.

³ Supply from the Colorado River Aqueduct (CRA) is anticipated to be required to satisfy the Ultimate demand in the zone. Maximum supply from the Riverside Canal was estimated at 11.1 CFS in the 2020 FMP and it was noted that, even prior to the Upper Plateau development, supply from the CRA would be required to satisfy the zone's demand needs.

A-1.2
Cont.

3.2.4 Recycled Water Analysis Summary

The results of the recycled water analysis indicate that a 0.5-MG temporary bolted steel tank is required for the development at the Orangecrest location to maximize pressures within the development. Due to the distance between the Lurin Tank and a new tank at the Orangecrest site, the initial onsite recycled water system will require a 12-inch supply line from the tie-in on Cactus Ave to the new 0.5-MG temporary tank. In the near-term (~2030) with the construction of the full 5-MG Reservoir and 24-inch supply line from the south, there still may be some portions of the development that have pressures below 30 psi, which will require irrigation pumps.

The following recycled water improvements are required to accommodate the immediate construction of the MWUP development:

- Construct temporary 0.5-MG bolted steel tank at Orangecrest Tank site.
- Increase the size of the main supply line from the Cactus tie-in to the temporary tank to 12-inches

The following are additional future (2030 and Buildout) recycled water system recommendations not previously included in the 2020 FMP necessary to accommodate the MWUP development:

- Irrigation pumps required anywhere pressures drop below 30 psi.
- Recycled water storage deficit for 1815 PZ in Ultimate Buildout scenario of 1.65-MG, an increase of 0.41-MG from 2020 FMP analysis due the MWUP development.

- It is important Western construct the southern supply to the new 5-MG tank prior to the RNC reaching its anticipated 2030 demands in order to efficiently distribute water from the tank into the zone.

3.3 Sewer Analysis

The MWUP project will discharge into the existing Meridian trunk sewer that flows directly into the WWRF from the north. Per the developer, the anticipated average dry weather flow (ADWF) for the project is 448,000 gallons per day (0.45 MGD) using the Industrial sewer generation factor of 2,000 gpd/acre from Table 3-21 of the 2020 FMP and 224 acres tributary to the Western Riverside sewer collection system (the remaining 30 acres being tributary to the City of Riverside system). Note that the sewer generation factor of 2,000 gpd/acre is likely conservative for the MWUP development given light industrial is anticipated to be the typical tenet type, where sewer generation is often significantly lower than the 2,000 gpd/acre value used herein. The updated sewer analysis includes peak wet weather flow (PWWF) scenarios evaluated for the Existing (2020), Near-Term (2030) and Buildout scenarios. Three analyses will be performed to update the sewer system results from the 2020 FMP, including a treatment analysis, a collection system analysis and a lift station analysis.

3.3.1 Treatment Analysis

An updated treatment analysis was developed for this Study. Treatment plant capacity is based on average dry weather flows (ADWF). **Table 7** presents the updated ADWF projections for the WWRF, which has a current treatment capacity of 3.0 MGD. The results indicate that the MWUP development is projected to result in the capacity of the WWRF to be exceeded in the Ultimate Buildout by 1.07 MGD based on current conservative estimates. The totals shown below include a 0.35 MGD diversion flow from City of Riverside. One partial mitigation option would be to end the agreement with City of Riverside as flows at WWRF approach capacity to extend the life of the existing 3.0 MGD WWRF capacity.

Table 7. Average Daily Flows at WWRF

Scenario	WWRF Influent Flow Rate (MGD)	Surplus/(Deficit) Capacity (MGD)
Existing (2020) ¹	1.15	1.85
Existing (2020) + MWUP	1.60	1.40
Near-Term (2030) ¹	2.32	0.68
Near-Term (2030) + MWUP	2.77	0.23
Ultimate ¹	3.62	(0.62)
Ultimate + MWUP	4.07	(1.07)
Ultimate + MWUP without 0.35 MGD Riverside Diversion	3.72	(0.72)

Notes:

¹ Data from Table 3-24 of the 2020 FMP; includes 0.35 MGD scalped flow from City of Riverside.

A-1.2
Cont.

3.3.2 Collection System Analysis

For the 2020 PWWF scenario for the 2020 FMP, a singular wet weather diurnal flow pattern was developed for the unmetered areas tributary to the WWRF for model calibration. As a part of this study, Dudek upgraded the hydraulic model by creating a new wet weather diurnal pattern to improve calibration at WWRF. A revised diurnal pattern with a peak of 2.6 resulted in modeled flows at WWRF being within 2% of measured average flows and within 6% of measured peak flows, an improvement from the calibration results in the 2020 FMP. This refined diurnal pattern was utilized for the unmonitored areas tributary to the Meridian trunk sewer for the PWWF scenarios for Existing (2020), Near-Term (2030) and Ultimate Buildout in the collection system analysis.

The average load of 311.1 gpm (448,000 gpd) provided by the developer was loaded onto the existing sewer model at manhole junction ID T36042100, which discharges into the existing 15-inch pipeline on Cactus Avenue prior to conveyance via the Meridian Trunk sewer for discharge into the WWRF. A 24-hour EPS was run for the Existing (2020), Near-Term (2030) and Ultimate Buildout scenarios in the hydraulic model. Maximum depth over diameter (d/D) ratio results from the model were compared against the Western maximum d/D criteria of 0.75 for pipelines 15-inches in diameter and greater to evaluate if the addition of the MWUP sewer loading is anticipated to result in sewerline capacity deficiencies.

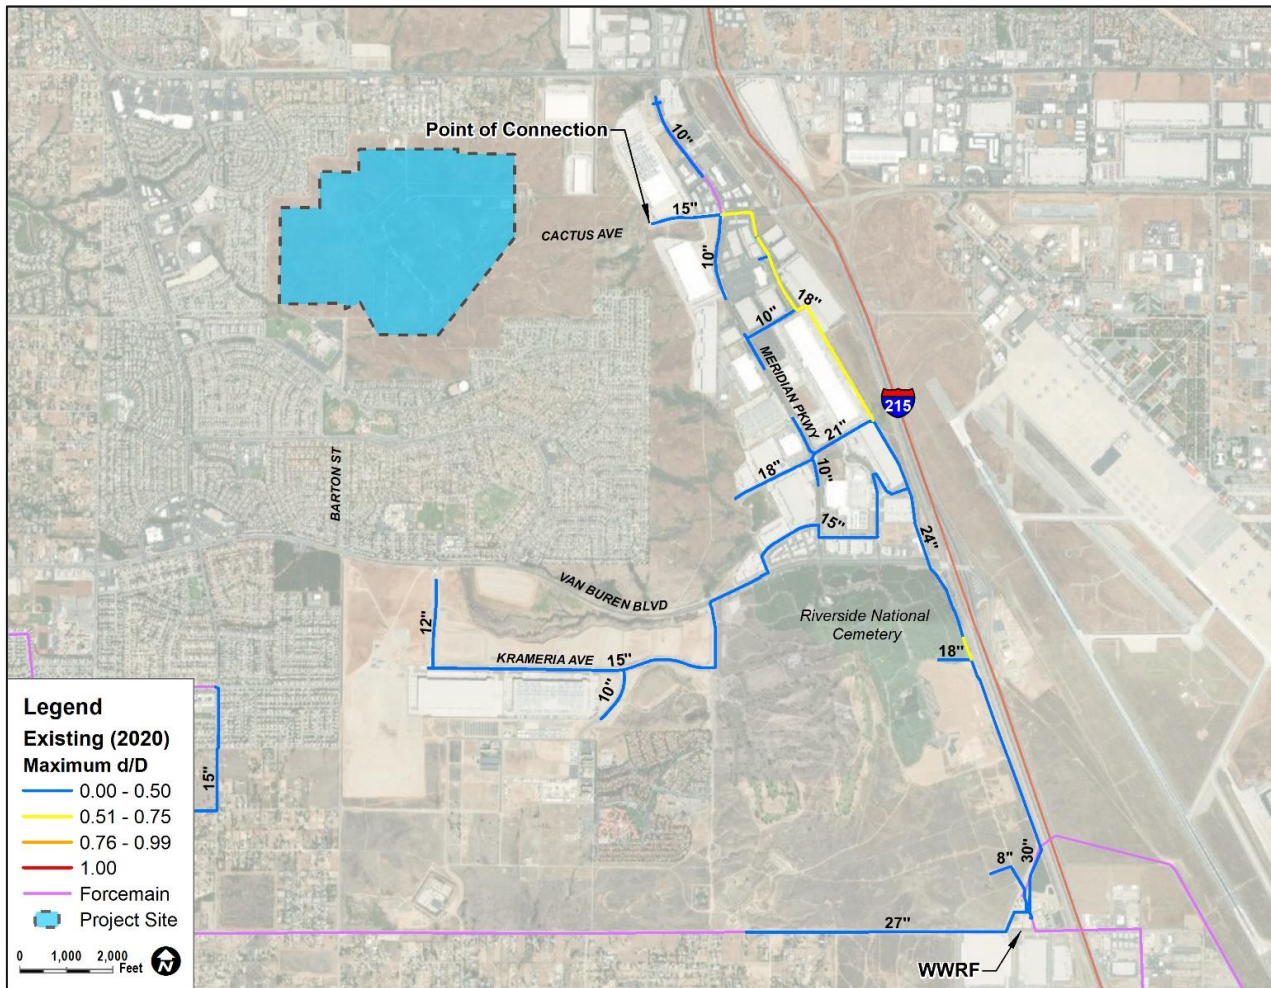

3.3.2.1 Existing (2020) PWWF Analysis

Results of the Existing PWWF scenario with the addition of the MWUP load at the north end of the Meridian trunk sewer results in no new sewerline deficiencies (maximum d/D less than 0.75). The results are shown graphically in **Figure 17**.

A-1.2
Cont.

Figure 17. Sewer Existing (2020) PWWF Results - Maximum d/D

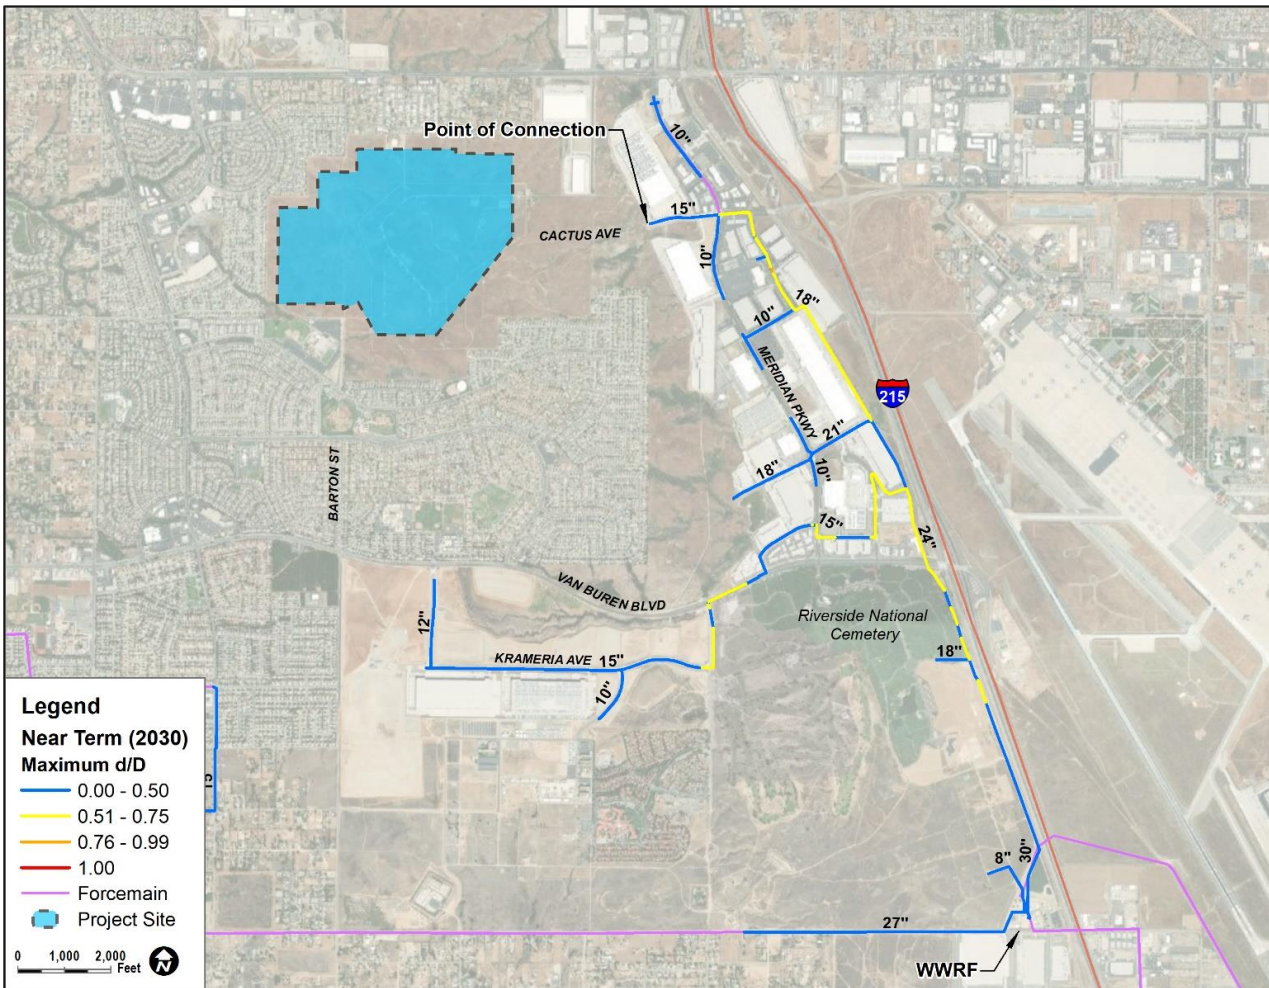

A-1.2
 Cont.

3.3.2.2 Near-Term (2030) PWWF Analysis

Results of the Near-Term PWWF scenario with the addition of the MWUP load at the north end of the Meridian trunk sewer results in no new sewerline deficiencies (maximum d/D less than 0.75). The results are shown graphically in **Figure 18**.

Figure 18. Sewer Near-Term (2030) PWWF Results - Maximum d/D

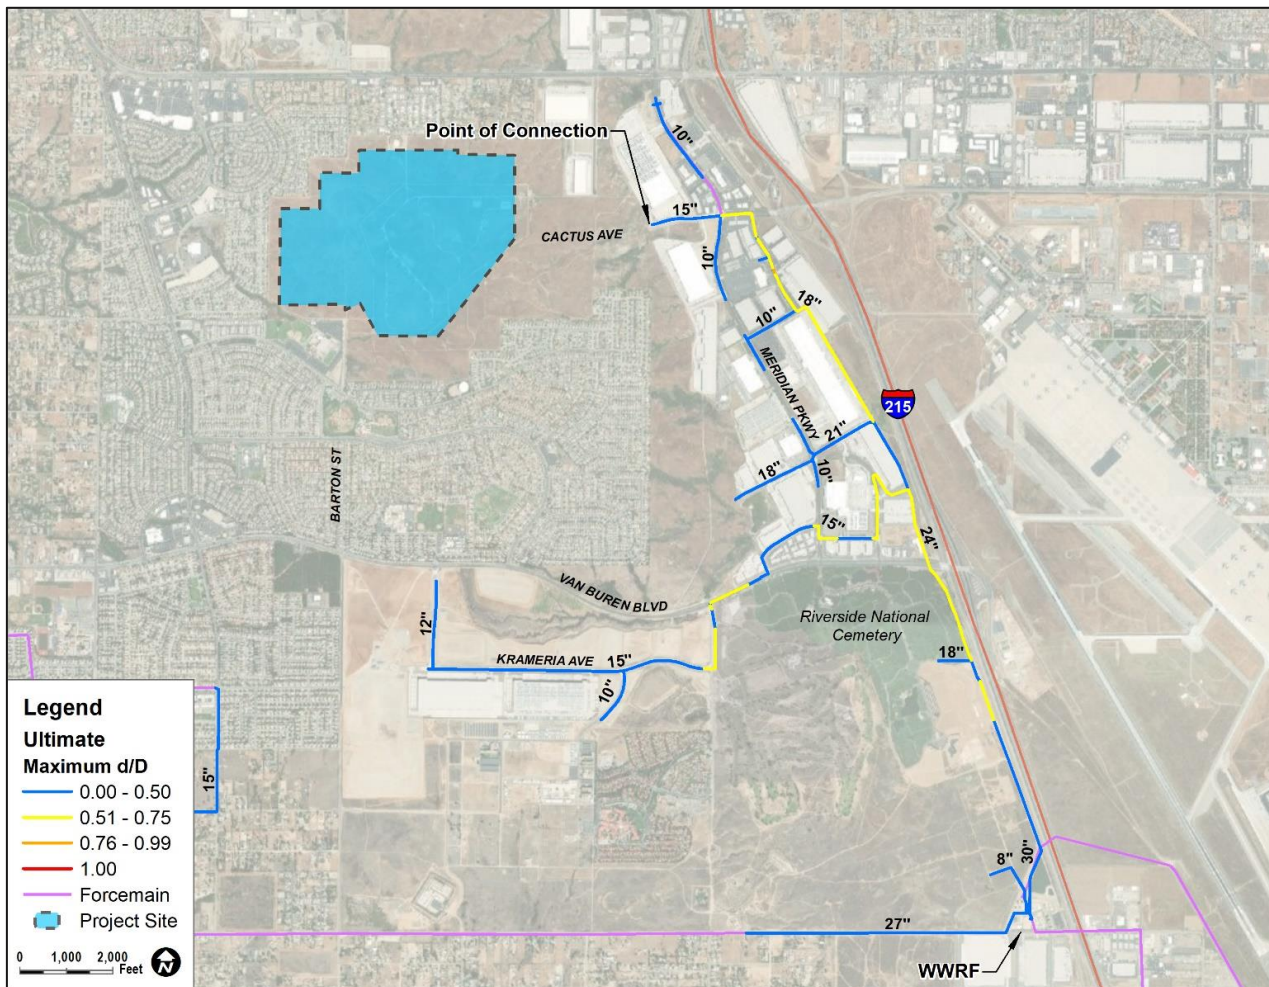

A-1.2
 Cont.

3.3.2.3 Ultimate Buildout PWWF Analysis

Results of the Ultimate Buildout PWWF scenario with the addition of the MWUP load at the north end of the Meridian trunk sewer results in no new sewerline deficiencies (maximum d/D less than 0.75). The results are shown graphically in **Figure 19**.

Figure 19. Sewer Ultimate Buildout PWWF Results – Maximum d/D

A-1.2
Cont.

3.3.3 Lift Station Analysis

The sewer flow from the MWUP will not intercept any lift stations; therefore, a lift station analysis was not performed for this study.

3.3.4 Sewer Analysis Summary

The sewer analysis found that the addition of the MWUP sewer load is anticipated to result in an ultimate treatment capacity deficiency at WWRF of 1.07 MGD with the City of Riverside diversion into the Western system and 0.72 MGD without the City of Riverside diversion. No collection system deficiencies are anticipated with the development of the MWUP project assuming discharge into the existing 15-inch sewerline in Cactus Ave. Per the developer, the first flows from the development are anticipated in the next 3 to 4 years, with buildout anticipated within the next 10 years, depending on market conditions.

4 Findings & Recommendations

The following summarizes the findings and recommendations from this analysis. Note the findings for each system are broken into those improvements required to accommodate the immediate construction of the MWUP development and those required for future (2030 and Build out time frames) accommodation of the development.

Immediate System Improvement Requirements:

- Potable Water System:
 - a. Upsize 1,300 LF of 12-inch on Deercreek Drive from Grove Community Drive to Orange Terrace Parkway to 16-inch (Note: if space is available for the parallel 12-inch pipeline proposed by the developer, the recommendation for this upsizing changes to the following: Upsize 350 LF of 8-inch on Grove Community Drive to Deercreek Drive to 12-inch [assumes sufficient space exists to construct parallel 12-inch on Deercreek and Grove Community Drive]).
 - b. Upsize 700 LF of 12-inch on Barton St north of Van Buren to 20-inch.
- Recycled Water System:
 - a. Construct temporary 0.5-MG bolted steel tank at Orangecrest Tank site.
 - b. Upsize the main supply line from the Cactus Avenue tie-in to the temporary tank to 12-inch diameter.
- Sewer System: None

Future System Improvements and Recommendations:

- Potable Water
 - a. Upsize 600 LF of existing 18-inch on Van Buren Blvd east of Tautwein Rd to 20-inch (scenarios 2030 and Buildout only).

A-1.2
Cont.

- b. Potable water storage deficit in 1900 PZ in Ultimate Buildout of 2.08 MG, an increased deficit of 1.45-MG from 2020 FMP analysis. Recommend either contribution to the construction of 2.1-MG of additional storage (1.45-MG attributable to MWUP) or an alternative method of reducing the equalization storage requirement for the zone, such as a reservoir management system (RMS) with a Tesla battery to accommodate the increased high-TOU pumping required to maintain reservoir levels during peak daytime demand hours.
- Recycled Water System:
 - a. Irrigation pumps are required anywhere pressures drop below 30 psi, potentially in the southeast corner of property.
 - b. Recycled water storage deficit for 1815 PZ in Ultimate Buildout scenario of 1.65-MG, an increase of 0.41-MG from 2020 FMP analysis due to MWUP development. Recommend contribution of 0.41-MG of buildout storage once buildout storage needs are determined and required.
- Sewer System:
 - a. Ultimate Buildout sewage treatment anticipated deficit of 1.07-MGD at WWRF with the City of Riverside diversion into the Western system and 0.72-MGD without, which is an additional 0.1-MGD increased deficit due to the MWUP development. Recommend Western discuss removing 0.35 MGD City of Riverside diversion to WWRF as plant flows approach capacity to extend the life of the existing 3.0-MGD WWRF capacity. The additional ultimate buildout treatment deficit anticipated to result from MWUP and other future contributors is considered a long-term increase in treatment capacity needs that will be included in the future treatment capacity charges that will be equitably collected from all contributors to accommodate the increased treatment capacity needs at WWRF.
 - b. No collection system pipeline improvements anticipated.

Re: West Upper Campus Plateau

Dear Mr. Dan Fairbanks,

The Agua Caliente Band of Cahuilla Indians (ACBCI) appreciates your efforts to include the Tribal Historic Preservation Office (THPO) in the West March Upper Plateau project. We have reviewed the documents and have the following comments:

*At this time ACBCI has no comments, but please continue to provide our office with updates as the project progresses. Also, please inform our office if there are changes to the scope of this project.

A-2.1

Again, the Agua Caliente appreciates your interest in our cultural heritage. If you have questions or require additional information, please call me at (760) 423-3485. You may also email me at ACBCI-THPO@aguacaliente.net.

Cordially,

To: Dan Fairbanks
Subject: West Campus Upper Plateau

Good Morning Dan,

Thank you for including Riverside Transit Agency in the transmittal to review the West Campus Upper Plateau proposed project. After reviewing the draft EIR, there are no comments to submit for this particular project at this time. Per the plans, it looks like there will be sidewalk along the main roads, to include Brown Street and Barton Road. This will provide safe pathways for pedestrians to connect to public transportation on Alessandro Blvd.

A-3.1

Thank you,

Mauricio Alvarez, MBA

Subject: Comments on Notice of Availability of Draft EIR – West Campus Upper Plateau

Dear Mr. Fairbanks:

The City of Moreno Valley appreciates the opportunity to comment on the Notice of Availability of the Draft Environmental Impact Report for the West Campus Upper Plateau project. The proposed project is in close proximity to the City of Moreno Valley, and therefore, the City has a keen interest in them to ensure it is successful without causing adverse impacts to the City of Moreno Valley.

A-4.1

On December 17, 2021, March 25, 2022, May 17, 2022, and July 5, 2022, the City of Moreno Valley has provided comments regarding the proposed project and at the time the forthcoming Environmental Impact Report.

In response to your Notice of Availability, the City would offer the following comments:

- Prior to improvement plan approval, Street Improvement Plans shall include the segment of Cactus Avenue between the northbound freeway I-215 freeway onramp and the southbound I-215 freeway onramp including the ramp intersections for a grind and overlay and forwarded to Caltrans for review and approval. If required by Caltrans, all dry and wet utilities shall be shown on the plans and any crossings shall be potholed to determine actual location and elevation. Any conflicts shall be identified and addressed on the plans. The developer is responsible to coordinate with all affected utility companies and bear all costs of any utility adjustments.
- The developer is required to perform a 2-inch grind and overlay along Cactus Avenue between the I-215 freeway ramps. An encroachment permit from Caltrans will be required for all work within Caltrans right-of-way.

A-4.2

Mr. Fairbanks
March 2, 2023
Page 2

The City of Moreno Valley looks forward to working with the March Joint Powers Authority team as this project proceeds through the public hearing processes. Please include the City on the mailing list for future notification of meetings and public hearings associated with this project.

A-4.3

Thank you again for the opportunity to provide comments on this project. Should you have any questions or concerns, please contact me at (951) 413-3215 or seanke@moval.org.

Sincerely,

Sean P. Kelleher

Subject: Comments on Two Plot Plans within the West Campus Upper Plateau Project

Dear Mr. Fairbanks:

The City of Moreno Valley appreciates the opportunity to comment on the Two Plot Plans at 20133 and 20600 Cactus Avenue within the West Campus Upper Plateau Project. The proposed projects are in close proximity to the City of Moreno Valley, and therefore, the City has a keen interest in them to ensure they are successful without causing adverse impacts to the City of Moreno Valley.

A-4.4

On December 17, 2021, March 25, 2022, and May 17, 2022, the City of Moreno Valley provided the attached letters commenting on the greater West Campus Upper Plateau Project. We would again ask to be involved in the review of the Traffic Study Scoping Agreement and the review of the Traffic Study during the preparation of the document. Furthermore, the Environmental Impact Report needs to address all direct and cumulative impacts that may affect the City of Moreno Valley, including impacts to Police and Fire Protection services.

A-4.5
A-4.6

In addition to the comments previously provided for the greater West Campus Upper Plateau Project, the comments identified in the MJPA West Campus Upper Plateau Traffic and VMT Analysis; Transportation Engineering Division 2nd Review Comments Memorandum, attached herein, need to be addressed.

A-4.7

The City of Moreno Valley looks forward to working with the March Joint Powers Authority team as these projects progress through the environmental review and public hearing processes. Please include the City on the mailing list regarding all EIR documents and for future notification of meetings and public hearings associated with these projects.

A-4.8

Thank you again for the opportunity to provide comments on these projects. We look forward to working with you as these Projects are being finalized and reviewing all

Subject: Comments on West Campus Upper Plateau Project

Dear Mr. Fairbanks:

The City of Moreno Valley again appreciates the opportunity to comment on the West Campus Upper Plateau Project. The proposed project is in close proximity to the City of Moreno Valley and therefore, the City has a keen interest in the project to ensure it is successful without causing adverse impacts to the City of Moreno Valley.

A-4.14

On December 17, 2021, the City of Moreno Valley provided the attached letter commenting on the Notice of Preparation for this project. We would again ask to be involved in the review of the Traffic Study Scoping Agreement as well as the review of the Traffic Study during the preparation of the document. Furthermore, the Environmental Impact Report needs to address all direct and cumulative impacts that may affect the City of Moreno Valley.

A-4.15
A-4.16

In addition to the comments previously provided the project needs to address the following comments.

1. The projects and specific plan identify an extension of Cactus on the west side of the I-215. They proposed Class II bike lanes that lead to the Cactus and I-215 interchange. The City of Moreno Valley's Bicycle Master Plan identifies Class II bike lanes that do not extend to that interchange but instead route to Old 215 Frontage Road. The specific plan should clarify where the bike lanes will connect to.
2. Figure 5-1 and street section for Cactus, east of Linebacker seems to not provide a TWLTL. This is ok; however, revise legend for modified secondary highway (76/98') to state that corridor does not include a TWLTL.
3. A Technical Analysis needs to be prepared identifying the impacts of the proposed project on Police and Fire Protection services.

A-4.17
A-4.18
A-4.19

The City of Moreno Valley looks forward to working with the March Joint Powers Authority team as this project progresses through the environmental review process and prior to

A-4.20

Subject: Comments on Notice of Preparation for a Draft Environmental Impact Report (DEIR) and Initial Study (IS) for the Meridian West Upper Plateau Project

Dear Mr. Fairbanks:

The City of Moreno Valley appreciates the opportunity to comment on the Notice of Preparation for a Draft Environmental Impact Report for the proposed Meridian West Upper Plateau Project. The notice describes the proposal as General Plan, Zoning, and Specific Plan Amendments with Tentative Tract Map and Plot Plan applications to construct an approximately 1,330,000-square-foot industrial building on 59.55 acres, a 550,000-square-foot industrial building on 27.58 acres, and a 10.00-acre park with two small parking lots for recreational users to access the larger open space area. The proposed project is in close proximity to the City of Moreno Valley and therefore, the City has a keen interest in the project to ensure it is successful without causing adverse impacts to the City of Moreno Valley.

The Environmental Impact Report will need to address all direct and cumulative impacts that may affect the City of Moreno Valley. In reviewing the proposal with our Public Works Department, the City would like to be involved in the review of the Traffic Study Scoping Agreement as well as the review of the traffic study during the preparation of the document. There are potential levels of service deficiencies to Moreno Valley streets, including but not limited to Cactus Avenue and Alessandro Boulevard from the project.

The project description notes that a Draft Environmental Impact Report (DEIR) is forthcoming. The City of Moreno Valley looks forward to working with the March Joint Powers Authority team as this project progresses through the environmental review process and prior to the public hearing. Please include the City on the mailing list regarding all EIR documents as well as for future notification of meetings and public hearings associated with the project.

MEMORANDUM

To: Wei Sun, City Traffic Engineer
From: Lillyanna Diaz, Consultant Assistant Engineer
CC: Carolina Fernandez, HRG
Date: March 18, 2022
Subject: **MJPA West Campus Upper Plateau Traffic and VMT Analysis;
Transportation Engineering Division 1st Review Comments**

The following findings and comments are based on the information provided on the West Campus Upper Plateau Traffic Analysis prepared by Urban Crossroads, dated March 9, 2022 and VMT Analysis prepared by Urban Crossroads, dated February 11, 2022.

The report analyzed roadway segments west of the I-215 Freeway analyzed the following scenarios:

- Existing (2021) traffic
- Existing (2021) traffic plus proposed project traffic
- Existing (2021) traffic plus ambient growth plus proposed project traffic
- Opening Year Cumulative (2025) without project
- Opening Year Cumulative (2025) with project
- Horizon Year (2045) without project
- Horizon Year (2045) with project

The following intersections were part of the study area intersections that are within or adjacent the City's boundary:

- Intersection #31: I-215 NB Ramps & Cactus Ave
- Intersection #34: Old 215 Frontage Rd & Alessandro Blvd
- Intersection #35: Day St & Alessandro Blvd
- Intersection #36: Elsworth St. & Cactus Ave
- Intersection #37: Frederick St & Cactus Ave
- Intersection #38: Graham St/Riverside Dr & Cactus Ave

The study identified that 12% of the passenger car trips and 3% of truck trips will travel into the City of Moreno Valley via Cactus and Alessandro Boulevard. Truck trips were included as a percentage of total traffic, not in passenger car equivalent (PCE).

A-4.25

The following summarized my comments related to the above referenced Traffic Impact Analysis (TIA) report and Vehicle Miles travelled (VMT) analysis:

Section 1: Summary of Findings

1. Revise amount and reference table from TUMF nexus study where the total cost of the I-215/Cactus interchange project is provided.
2. Queuing analysis was performed to identify any spill back onto the freeway main line from the off-ramps. No queuing analysis was performed for study area intersections located at Caltrans ramps. Per the approved scoping agreement, queuing analysis should be performed for all legs of ramp intersections.

A-4.26

Section 3: Area Conditions

3. Revise Exhibit 3-1 per the following:
 - a. The speed on Cactus Avenue between Elsworth and the I-215 Ramps is 50 mph.
 - b. Intersection #37 was recently improved as part of MJPA K4 Parcel to provide the following geometrics:
 - Northbound: One left turn lane and one shared through/right turn lane
 - Southbound: Two left turn lanes and one shared through/right turn lane (not RTO)
 - Eastbound: One left turn lane, three through lanes and one shared through/right turn lane
 - Westbound: One left turn lane, three through lanes, and one right turn lane (RTO)
 - c. Counts were taken in November 2021 and improvements for Intersection #37 may have not been completed at that time. However, based on the Meridian K4 project's approved traffic study, trips should have been assigned at the south leg of that intersection and shown on Exhibit 4-5 at Intersection #37. Study can be provided by MJPA.

A-4.27

Section 5: E and E+P (2021) Conditions

4. Under E+P conditions, the project increases AM peak hour delay by 5.6 seconds (LOS F) and decreases the LOS in the PM peak hour from E to F (15 secs delay increase) at Intersection #36. See Table 5-1. The study recommends implementing a protected left turn phasing; however, the intersection cannot have a N/S protected left turns due to the dual left turns and insufficient space. This recommendation is not feasible, and study should recommend other improvements to address deficiency. This is applicable to all scenarios where said improvement is recommended.

A-4.28

Section 7: OYC and OYCP (2025) Conditions

5. See comment #4 for Intersection #36. Recommended improvement is not feasible.
6. Study recommends adding an EB through lane totaling to 4 through lanes at Intersection #36. This exceeds the number of through lanes identified in the City's General Plan and other improvements should be reviewed and recommended before an additional through lane is recommended. See Table

A-4.29

7-4.

Section 8: Horizon Year NP (2045) and Horizon Year WP (2045) Conditions

- 7. Under HYNP and HYWP conditions, Intersections #31, 34, 35, 36, 37, and 38 operate at an unacceptable LOS one or both peak hours. Project has cumulative impacts and increases delay by 5 seconds or more at Intersections #31, 34, 35, 36, and 38.
- 8. See comment #6 regarding adding a 4th EB through lane at Intersection #36. Comment is also applicable to recommended improvement at Intersection #31. Modification to the lane configuration is inconsistent with the City's General Plan.

Section 9: Local and Regional Funding Mechanisms

- 9. Revise Table 9-1 to highlight the highest fair share percentage. Remove or clarify the numbers after the intersection names in the table.

Appendices

- 10. Queuing should be provided in the analysis worksheets. Although it is not specified in the scoping agreement, queuing analysis should be performed at all study area intersections.

VMT Analysis

- 11. The VMT analysis states that the project's retail land uses will decrease total VMT by 0.29% and have less than significant impact. It also states that its no-retail land uses were below the VMT per employee threshold by 5.30%, having a less than significant impact. I concur with this conclusion.

Please let me know if you have any questions or comments regarding the above comments or need any additional information. Thank you.

Attachment 2

MJPA West Campus Upper Plateau Traffic and VMT Analysis; Transportation
Engineering Division 2nd Review Comments Memorandum

MEMORANDUM

To: Wei Sun, City Traffic Engineer
From: Monica Pangco, Consultant Assistant Engineer
CC: Carolina Fernandez, HRG
Date: July 1, 2022
Subject: **MJPA West Campus Upper Plateau Project; Transportation Engineering Division 2nd Review Comments**

The following comments are based on the information provided in the Building B Plot Plan (PP21-03), Building C Plot Plan (PP21-04), Tentative Parcel Map (TPM 38063), and Draft West Campus Upper Plateau Specific Plan (SP-9), dated June 2022.

Building B Plot Plan (PP21-03) and Building C Plot Plan (PP21-04)

1. Provide turning templates for all movements to and from Cactus Avenue, Line Backer Drive, Bunker Hill Drive, and project driveway entrances. Use the largest truck that will be used. Use a STAA design vehicle. Show curb radii.
2. Clarify how Emergency Vehicle Access (EVA) will be used (i.e. gate, access, etc.) and connection to Cactus Avenue.
3. Provide a narrative on truck route throughout proposed Building B and Building C (i.e. access, hours of operation, etc.).
4. Proposed driveways shall be per Riverside County Standards.

A-4.34

Tentative Parcel Map (TPM 38063)

5. Provide City standards for proposed street sections.
6. Proposed street cross sections shall include slopes, dimensions (i.e. right-of-way, curb to curb).
7. Verify that the recommended lane configurations within the Traffic Impact Analysis (TIA) for this project are feasible on proposed street cross sections.
8. Provide a cross section for Emergency Vehicle Access (EVA) from Barton Street to Cactus Avenue.
9. Will there be proposed access provided from Authority Way to proposed adjacent "Open Space" Area?
10. Provide a list of all existing and proposed easements.
11. Clearly identify all existing and proposed right-of-way widths for adjacent streets on plans and cross-sections.
12. Tentative Parcel Map is subject to change due to findings from the Traffic Impact Analysis Report.

A-4.35

Draft West Campus Upper Plateau Specific Plan (SP-9)

1. Comment stands from 1st Review.

A-4.36

- a. The projects and specific plan identify an extension of Cactus on the west side of the I-215. They proposed Class II bike lanes that lead to the Cactus and I-215 interchange. The City of Moreno Valley's Bicycle Master Plan identifies Class II bike lanes that do not extend to that interchange but instead route to Old 215 Frontage Road. The specific plan should clarify where the bike lanes will connect to.
2. Comment stands from 1st Review.
 - a. Figure 5-1 and street section for Cactus, east of Linebacker seems to not provide a TWLTL. This is ok; however, revise legend for modified secondary highway (76'/98') to state that corridor does not include a TWLTL.
3. Section 4.4.1 (Page 4-5)
 - a. Fences and walls shall provide adequate sight distance at intersections per Riverside County Standards.

A-4.36
Cont.

Please let me know if you have any questions or comments regarding the above comments or need any additional information.

Thank you.

Letter A-4

City of Moreno Valley

March 2, 2023

- A-4.1** This comment is introductory in nature and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. The City of Moreno Valley refers to its attached December 17, 2021 letter, which is addressed in Responses A-4.21 through A-4.24, below, March 25, 2022 letter, which is addressed in Responses A-4.14 through A-4.20, below, May 17, 2022 letter, which is addressed in Responses A-4.9 through A-4.13, below, and July 5, 2022 letter, which is addressed in Responses A-4.4 through A-4.8, below.
- A-4.2** This comment requests street improvement plans include the segment of Cactus Avenue between the northbound I-215 onramp and the southbound I-215 onramp and that the Project be conditioned to perform a 2-inch grind overlay along this segment. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. The California Department of Transportation (Caltrans) recently completed (April 2023) the grind and overlay for Cactus Avenue, between the I-215 northbound and southbound ramps, inclusive of restriping the overpass. This work is no longer needed. No changes or revisions to the Draft EIR are required in response to this comment.
- A-4.3** This comment requests notification of future meetings and public hearings associated with the Project. March JPA will include the City on all Project notifications. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.
- A-4.4** This comment from the City of Moreno Valley's July 5, 2022 letter is introductory in nature and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.
- A-4.5** This comment from the City of Moreno Valley's July 5, 2022 letter requested involvement in the Project Traffic Study Scoping Agreement and Traffic Study. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. The City of Moreno Valley Traffic Engineering Department reviewed the Traffic Study and provided a memorandum summarizing their traffic and VMT comments on March 18, 2022. The City of Moreno Valley Traffic Engineering Department was sent an updated Traffic Impact Analysis including the Traffic Study Scoping Agreement, the Traffic Appendices, and the Vehicle Miles Traveled Analysis on 6/21/22, and provided a memorandum dated 7/1/22 identifying supplemental traffic comments. A Final Traffic Impact Analysis with the Traffic Scoping Agreement, the Traffic Appendices and the Vehicle Miles Traveled Analysis was sent to the City of Moreno Valley on 10/31/22 with a requested comment submittal date of 11/17/22. March JPA followed up with the City of Moreno Valley on 11/22/22 requesting that any traffic engineering comments be submitted as soon as possible. No comments were received from the City of Moreno Valley regarding the 10/31/22 Final Traffic Study, and review comments regarding this item were not attached to the 03/02/23 Moreno Valley letter.
- A-4.6** This comment from the City of Moreno Valley's July 5, 2022 letter was submitted prior to the release of the Draft EIR and requested the EIR address all direct and cumulative impacts potentially affecting the City, including impacts to police and fire protection services. The Draft EIR addressed the Project's direct, indirect, and cumulative environmental impacts, including those that would affect the City of Moreno Valley. Section 4.13, Public Services, analyzed the Project's impacts to fire protection services

and concluded the increase in demand for fire protection services due to the Project would result in less than significant impacts as no new or expanded fire protection facilities would be required to service the Project and MM-FIRE-1 (Pre-Construction Requirements) would further reduce potential impacts. Additionally, as discussed in Topical Response 6 – Meridian Fire Station, the Project Development Agreement includes the construction of the Meridian Fire Station at the corner of Meridian Parkway and Opportunity Way. Section 4.13, Public Services, also analyzed the Project’s impacts to police services and concluded the increase in demand for police protection services due to the Project would result in less than significant impacts as no new or expanded police facilities would be required to service the Project; therefore, no mitigation is required. Section 4.13, Public Services, further analyzed cumulative impacts to police and fire protection services and concluded the Project would not result in a cumulatively considerable contribution associated with the construction of new or expanded police or fire facilities, and no mitigation is required.

- A-4.7** This comment from the City of Moreno Valley’s July 5, 2022 letter does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. The comment refers to the City’s attached MJPA West Campus Upper Plateau Traffic and VMT Analysis – Transportation Engineering Division 2nd Review Comments Memorandum, which is addressed in Responses A-4.34 through A-4.36, below.

- A-4.8** This comment from the City of Moreno Valley’s July 5, 2022 letter requested notification of future meetings and public hearings associated with the Project. March JPA will include the City on all Project notifications. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

- A-4.9** This comment from the City of Moreno Valley’s May 17, 2022 letter is introductory in nature and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

- A-4.10** This comment from the City of Moreno Valley’s May 17, 2022 letter requested involvement in the Project Traffic Study Scoping Agreement and Traffic Study. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. See Response A-4.5, above, detailing the City of Moreno Valley’s participation in the Traffic Study for the Project.

- A-4.11** This comment from the City of Moreno Valley’s May 17, 2022 letter was submitted prior to the release of the Draft EIR and requested the EIR address all direct and cumulative impacts potentially affecting the City, including impacts to police and fire protection services. See Response A-4.6, above, explaining the Draft EIR’s analysis of impacts that may affect the City of Moreno Valley, including police and fire protection services.

- A-4.12** This comment from the City of Moreno Valley’s May 17, 2022 letter was submitted prior to the release of the Draft EIR. The comment refers to the City’s attached MJPA West Campus Upper Plateau Traffic and VMT Analysis – Transportation Engineering Division 1st Review Comments Memorandum, which is addressed in Responses A-4.25 through A-4.33, below.

- A-4.13** This comment from the City of Moreno Valley’s May 17, 2022 letter requested notification of future meetings and public hearings associated with the Project. March JPA will include the City on all Project notifications. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

- A-4.14** This comment from the City of Moreno Valley’s March 25, 2022 letter is introductory in nature and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.
- A-4.15** This comment from the City of Moreno Valley’s March 25, 2022 letter requested involvement in the Project Traffic Study Scoping Agreement and Traffic Study. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. See Response A-4.5, above, detailing the City of Moreno Valley’s participation in the Traffic Study for the Project.
- A-4.16** This comment from the City of Moreno Valley’s March 25, 2022 letter was submitted prior to the release of the Draft EIR and requested the EIR address all direct and cumulative impacts potentially affecting the City. The Draft EIR addressed the Project’s direct and cumulative environmental impacts, including those that would affect the City of Moreno Valley.
- A-4.17** This comment from the City of Moreno Valley’s March 25, 2022 letter was submitted prior to the release of the Draft EIR and requested the proposed Specific Plan identify where Cactus Avenue extension bike lanes will connect to existing bike lanes. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. Figure 5.4, Non-Motorized Circulation Plan, of the Specific Plan shows the Project will construct Class II bicycle lanes on Cactus Avenue from Airman Drive to the existing western terminus of Cactus Avenue. These bicycle lanes will connect to existing Class II bicycle lanes on Cactus Avenue that extend from the existing cul-de-sac at the western terminus of Cactus Avenue to the I-215 interchange ramps. The Project does not propose the development of any additional bicycle lanes to the east of the existing terminus of Cactus Avenue.
- A-4.18** This comment from the City of Moreno Valley’s March 25, 2022 letter was submitted prior to the release of the Draft EIR and requested clarification regarding Cactus Avenue east of Linebacker Drive as a Modified Secondary Highway. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. In response to this comment, Figure 5-1 of the Specific Plan was revised to denote Cactus Avenue east of Linebacker Drive as a Modified Industrial Collector Street. The revisions to the Specific Plan in response to this comment do not modify any of the analysis or change any conclusions in the Draft EIR and do not add any new significant impacts.
- A-4.19** This comment from the City of Moreno Valley’s March 25, 2022 letter was submitted prior to the release of the Draft EIR and requested the preparation of a technical analysis for Project impacts to police and fire protection services. See Response A-4.6, above, explaining the Draft EIR’s analysis of impacts on police and fire protection services.
- A-4.20** This comment from the City of Moreno Valley’s March 25, 2022 letter requested notification of future meetings and public hearings associated with the Project. March JPA will include the City on all Project notifications. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.
- A-4.21** This comment from the City of Moreno Valley’s December 17, 2021 letter is introductory in nature and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

A-4.22 This comment from the City of Moreno Valley's December 17, 2021 letter was submitted prior to the release of the Draft EIR and requested the EIR address all direct and cumulative impacts potentially affecting the City. The Draft EIR addressed the Project's direct and cumulative environmental impacts, including those that would affect the City of Moreno Valley.

A-4.23 This comment from the City of Moreno Valley's December 17, 2021 letter requested involvement in the Project Traffic Study Scoping Agreement and Traffic Study. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. See Response A-4.5, above, detailing the City of Moreno Valley's participation in the Traffic Study for the Project. The comment raised concerns about potential levels of services deficiencies to City streets. The Project Traffic Analysis (Appendix N-2) analyzed four intersections within the City of Moreno Valley, as requested by the City:

- Day Street and Alessandro Boulevard (#35)
- Elsworth Street and Cactus Avenue (#36)
- Frederick Street and Cactus Avenue (#37)
- Graham Street/Riverside Drive and Cactus Avenue (#38)

As Section 4.15, Transportation, explains, Table 1-4 of the Traffic Analysis determined a fair share calculation for the Project for any improvement measures for identified operational deficiencies. PDF-TRA-4 requires the Project to contribute \$321,799 as its fair share toward those improvement measures, which includes \$87,196 for the City of Moreno Valley. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

A-4.24 This comment from the City of Moreno Valley's December 17, 2021 letter requested notification of future meetings and public hearings associated with the Project. March JPA will include the City on all Project notifications. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

A-4.25 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and summarized the scenarios and the City as well as City-adjacent intersections analyzed in the Project Traffic Analysis (Appendix N-2). The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR.

A-4.26 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and requested revisions related to the TUMF nexus study and queuing analysis. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

1. The footnote in Table 1-4 has been updated to reflect the 2016 Transportation Uniform Mitigation Fee (TUMF) 2016 Nexus Update. The cost has also been updated per the 2016 total cost assumption for the I-215/Cactus interchange project.

2. Off-ramp queuing is only performed for the off-ramp storage lengths to show if the anticipated queue lengths are anticipated to spill back onto the freeways. Per the approved scoping agreement, a queuing analysis would be provided for off-ramp locations only, not the through movements at the off-ramp intersections. Since the traffic study already provides a queuing analysis for the off-ramps, no further analysis has been included in the traffic study.

Identified revisions were incorporated into the Project Traffic Analysis prior to the public comment period. In addition, as Section 4.15, Transportation, of the Draft EIR explains as part of Threshold TRA-3, a queuing analysis is not warranted for construction related worker or truck trips because the Project construction schedule is not definitive at this stage. MM-TRA-1 requires the applicant to develop and implement a construction traffic management plan to be approved by March JPA and will include measures to limit temporary queuing issues. A queuing analysis was conducted for operational activities associated with buildout of the Project. The queuing analysis was conducted for the I-215 off-ramps at the Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges. The Project's increase in queues as well as the Project's contribution to cumulative queues would not result in traffic spilling back onto I-215 or add two or more car lengths to the ramp queues in the peak hours that would extend into the freeway mainline per Caltrans criteria.

Table 4.15-7 of the Draft EIR states that the 95th percentile queue exceeds capacity, but the evaluation was the queuing that would occur after two cycles. Table 4.15-7 shows that five of the six off-ramps would exceed the storage length but only the queue length after two cycles is reported in the table consistent with Caltrans evaluation criteria.

A-4.27 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and requested revisions to Exhibit 3-1 of the Traffic Analysis. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

- 3a) Exhibit 3-1 has been updated to reflect the correct speed on Cactus Avenue
- 3b) The March Joint Power Authority (JPA) K4 project was recently completed after the time this traffic study was prepared. Traffic counts for the proposed Project were conducted before the completion of the K4 project. As such, the K4 project has not been included for existing conditions. However, the K4 project is included as a cumulative development project (MJPA2 in Table 4-4). Therefore, the traffic volumes of the K4 project have been considered and included for the Opening Year and Horizon Year traffic forecasts. No changes to the traffic study have been made.
- 3c) See Response #3b.

Identified revisions were incorporated into the Project Traffic Analysis prior to the public comment period.

A-4.28 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and raised concerns regarding proposed improvements to Intersection #36. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

4. The identified intersection improvements at Elsworth Street and Cactus Avenue (#36) have been updated to include restriping of the northbound and southbound approaches so there are no shared left-through lanes. The traffic signal modification has been updated to include implementation of lead-lag operations for the northbound and southbound approaches to prevent conflicting left turns. All applicable scenarios have been updated.

Identified revisions were incorporated into the Project Traffic Analysis prior to the public comment period.

A-4.29

This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and raised concerns regarding proposed improvements to Intersection #36. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

5. See Response #4, the intersection improvements have been updated.
6. Other physical improvements to the intersection of Elsworth Street and Cactus Avenue (#36) are not feasible for the following reasons:
 - There is not sufficient room to accommodate a 2nd eastbound left turn lane.
 - The northeast and northwest corners are built out; there is not sufficient right-of-way to accommodate additional lanes.
 - There is not sufficient room to accommodate a 2nd westbound left turn lane and there is not an additional receiving lane.

The recommendation to provide a 4th eastbound and westbound through lane is consistent with other recent traffic studies conducted in the area and there are no other feasible physical intersection improvements.

Although other physical improvements to the intersection are not feasible to improve the level of service, traffic delays that worsen levels of service are no longer considered a significant environmental impact under CEQA. Identified revisions were incorporated into the Project Traffic Analysis prior to the public comment period.

A-4.30

This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and raised concerns regarding proposed improvements to Intersections #31 and #36. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

7. Comment noted. As shown in Table 8-4, intersection improvements have been provided for intersections #31, 34, 35, 36, and 38. As such, no changes are necessary to Table 8-4.
8. See Response #6. There are no other feasible physical roadway improvements to intersection #31.

As shown in Table 8-4 of the Project Traffic Analysis, with the improvements recommended for intersections #31, 34, 35, and 36, these intersections would operate at an acceptable LOS. Even with

feasible improvements, intersection #38 would still operate at LOS F. LOS delay is no longer an environmental impact under CEQA.

A-4.31 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and requested revisions to the fair share percentages. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

9. Table 9-1 has been updated to highlight the highest fair share percentage per intersection. The numbers after the intersection names have been removed.

Identified revisions were incorporated into the Project Traffic Analysis prior to the public comment period.

A-4.32 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and requested queuing be provided in the analysis worksheets. Urban Crossroads, who prepared the Project Traffic Analysis (Appendix N-2), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

10. Per the approved scoping agreement, a queuing analysis is only provided for the off-ramp movements at the study area off-ramp intersections. As such, a queuing analysis for all study area intersections has not been provided.

The City of Moreno Valley did not raise this issue further.

A-4.33 This comment from the City of Moreno Valley Transportation Engineering Division 1st Review Comments dated March 18, 2022 was submitted prior to the release of the Draft EIR and concurred in the VMT conclusion. Urban Crossroads, who prepared the Project VMT Analysis (Appendix N-1), provided responses to the City of Moreno Valley on May 19, 2022, as follows:

11. Comment noted, no changes to the VMT analysis are necessary.

A-4.34 This comment from the City of Moreno Valley Transportation Engineering Division 2nd Review Comments dated July 1, 2022 was submitted prior to the release of the Draft EIR and requested additional information be provided in the plot plans for Buildings B and C. All points have been incorporated into the plot plans.

A-4.35 This comment from the City of Moreno Valley Transportation Engineering Division 2nd Review Comments dated July 1, 2022 was submitted prior to the release of the Draft EIR and requested additional information be provided in the tentative parcel map. All points have been incorporated into the tentative parcel map.

A-4.36 This comment from the City of Moreno Valley Transportation Engineering Division 2nd Review Comments dated July 1, 2022 was submitted prior to the release of the Draft EIR and requested revisions to the proposed Specific Plan regarding Cactus Avenue bike lanes, designation of Cactus Avenue east of Linebacker Drive, and sight distance for fences and walls. The comment does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. See Response A-4.17, above, regarding Cactus Avenue Class II bicycle lanes. See Response A-4.18, above, regarding Figure

5-1 of the Specific Plan. Sight distance specifications are included as part of the March JPA improvement plan design standards and Riverside County Standards.

Good morning Dan,

There is 30" High Pressure Transmission gas line that runs in that area.

NOTICE OF AVAILABILITY OF DRAFT EIR

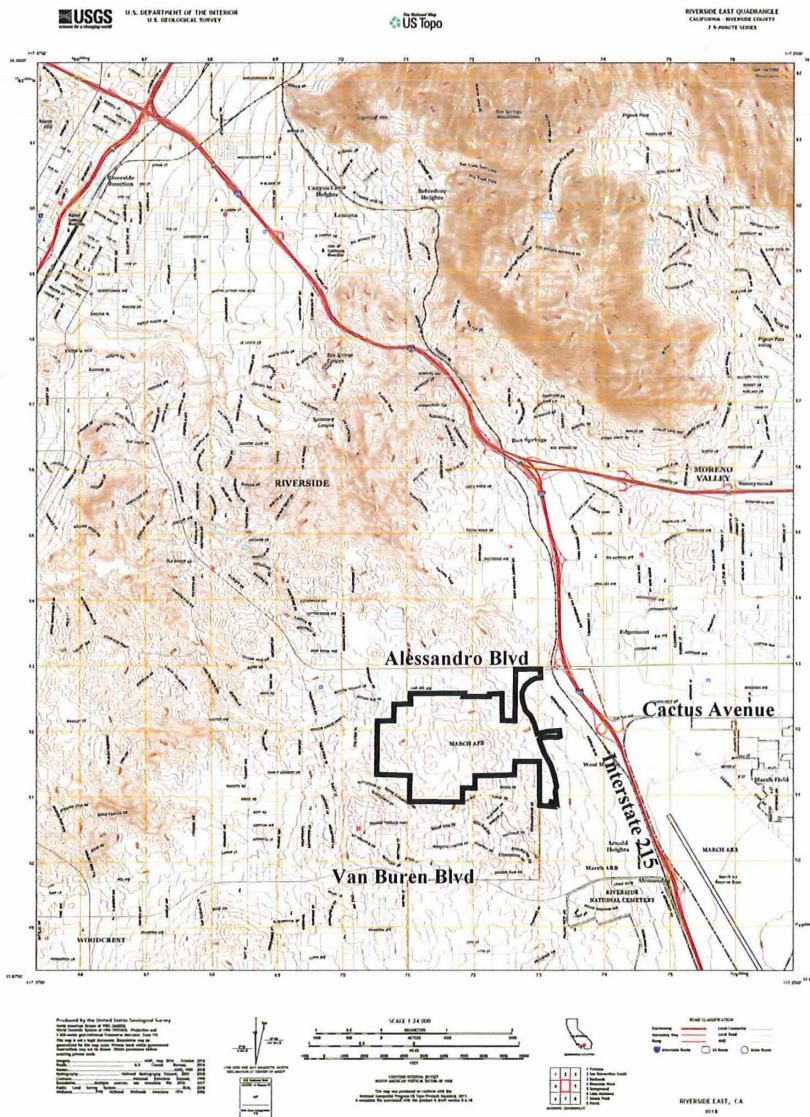

Project Title:	West Campus Upper Plateau
Project Location – Specific; Identify street address and cross streets or attach a map showing project site (preferably a USGS 15’ or 7 1/2’ topographical map identified by quadrangle name):	Located at the extended alignments of Cactus Avenue and Barton Street, identified in the attached USGS map.
Project Location – Agency:	March Joint Powers Authority
Project Location – County:	Riverside
<p>Description of Nature, Purpose, and Beneficiaries of Project:</p> <p>A proposal by Meridian Park, LLC for a General Plan Amendment, Specific Plan, Zone Change, Tentative Parcel Map, two Plot Plans, and a Development Agreement to redevelop the former Air Force munitions bunkers and adjacent land. The Project consists of the following components: The Specific Plan Area is a campus development with a buildout scenario including 10 Business Park parcels totaling 65.32 acres, 6 Mixed Use parcels totaling 42.22 acres, 3 Industrial parcels totaling 143.31 acres, 2 Public Facility parcels totaling 2.84 acres, 3 open space parcels totaling 17.72 acres and public streets totaling 37.91 acres. Plot Plans for Buildings B and C totaling 1,837,000 square feet would be constructed on two of the Industrial Parcels. The remaining parcels would be developed with square footages as allowed under the Specific Plan. A proposed park component of the Project, consisting of 60.28-acres located west of the Barton Street extension, is included under the Specific Plan buildout scenario. Infrastructure improvements would include the installation of utility and roadway networks connecting to and throughout the Specific Plan Area, the construction of a new sewer lift station, the construction of a new electrical substation, and the construction of a new 0.5-million-gallon reclaimed water tank. Vehicular access at the Cactus Avenue and Barton Street location is prohibited, except emergency vehicles through a Knox box gate. Through a recorded Conservation Easement of approximately 445.43 acres, the undisturbed land surrounding the Specific Plan Area would be preserved in perpetuity, consistent with prior determinations made as part of the CBD Settlement Agreement.</p>	
<p>Environmental Impacts Determined to be Significant:</p> <p>Significant environmental impacts are identified with operational air quality, historical and archaeological resources, tribal cultural resources, and operational traffic noise, which are significant and unavoidable. Cumulative impacts associated with operational air quality were also identified as being significant and unavoidable.</p>	
Project Site – Specify if project site is included on any list of hazardous waste facilities:	The Department of Toxic Substances Control’s EnviroStor database and SWRCB’s GeoTracker database identify the Project site is not located on a site with known contamination (SWRCB 2021) or hazardous materials site (DTSC 2021).

Letter A-5

SoCal Gas
March 7, 2023

A-5.1 This comment identifies a 30-inch High Pressure Transmission gas line running through the Project site and does not raise concerns about the adequacy of the environmental analysis in the Draft EIR. Recirculated Chapter 3, Project Description, identifies the Project would require the relocation of SoCal Gas's gas line and states; "As part of grading activities for the Specific Plan Area, the alignment of the gas line would be adjusted to be consistent with the grading activities completed at the Project site. SoCal Gas will be responsible for carrying out the pipeline improvements; however, this EIR will provide the environmental review and clearance for SoCal Gas to proceed with the adjustment of the grade of the gas line to the proposed finished grading surface."

It is March JPA's understanding that the developer has contacted SoCalGas about relocating the existing gas as part of the proposed development. Based on information provided to March JPA by the developer's project surveyor, the project title company has found that SoCalGas has partial easements over the property for the existing gas line. See attached Figure A-5.1 showing locations of the currently known easements.

The Draft EIR analyzed the environmental impacts of the SoCal Gas line relocation as part of the Infrastructure Improvements of the Specific Plan Area. No changes or revisions to the Draft EIR are required in response to this comment.

Subject: Pechanga Tribe Comments on the West Campus Upper Plateau DEIR
Attachments: Pechanga Tribe Cmnts on DEIR West Campus Upper Plateau 3.9.2023.pdf

Dear Mr. Fairbanks,

This letter is written on behalf of the Pechanga Band of Indians (hereinafter, “the Tribe”) a federally recognized Indian tribe and sovereign government in response to DIER notice for the above named project. The Tribe noticed that cultural resources reports for this project been listed in the public Draft EIR documents, and that they are accessible online under the technical appendix section. Public Resources Code §6254(r) strictly prohibits publications of “records of Native American graves, cemeteries, and sacred places and records of Native American places, features, and objects...”. We request that this information, as well as sensitive information provided in Appendix E-1 and E-2 be removed from the Draft EIR documents listed on the March JPA website and included in the confidential Appendix.

A-6.1

Please add the Tribe to your distribution list(s) for public notices and circulation of all documents and we further requests to be directly notified of all public hearings and scheduled approvals concerning this Project, and that these comments be incorporated into the record of approval for this Project. The Tribe looks forward to working together with the March JPA in protecting the invaluable Pechanga cultural resources found in the Project area. Please do not hesitate to contact me if you have any questions.

Thank you

Re: Pechanga Tribe Comments on the Draft Environmental Impact Report for West Campus Upper Plateau

Dear Mr. Fairbanks:

This comment letter is written on behalf of the Pechanga Band of Indians (hereinafter, "the Tribe"), a federally recognized Indian tribe and sovereign government. The Tribe formally requests, pursuant to Public Resources Code §21092.2 and Cal. Govt. C. 65351, 65352 and 65352.3 & .4, to be notified and involved in the entire CEQA environmental review process for the duration of the above referenced project (the "Project"). Please add the Tribe to your distribution list(s) for public notices and circulation of all documents, including environmental review documents, archeological reports, and all documents pertaining to this Project. The Tribe further requests to be directly notified of all public hearings and scheduled approvals concerning this Project. Please also incorporate these comments into the record of approval for this Project.

A-6.2

The Tribe submits these comments concerning the Project's potential impacts to Tribal Cultural Resources (TCR) in conjunction with the environmental review of the Project. The Tribe has been in consultation directly with March Joint Powers Authority (March JPA) on the sensitivity of the Project and its impacts to the cultural resources. After review of the Draft Environmental Impact Report (EIR), the Tribe has several concerns. First and foremost, the Tribe is especially concerned that the Draft Environmental Impact Report (DEIR) has been issued and mitigation measures were included in the cultural and TCR section of the document, while Phase II archeological testing plan and AB 52 consultation is still outstanding. The purpose of a Phase II investigation is to continue needed information gathering work toward the identification/nature, boundaries, and significance of a cultural resources. Careful and detailed documentation need to be included in Phase II reports. If and when the site boundaries are determined and significance assumed, then the project require either further avoidance and preservation, or to include mitigation measures to reduce or avoid any potentially significant impacts. The Tribe is disconcerted that the draft EIR does not assume significance, but rather

A-6.3

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

mitigates the project for an Archeological Testing Plan (ATP) as identified in MM-CUL-1. The Tribe requests the Phase II testing plan to be completed, the development design to be finalized, and additional TCR measures to be incorporated, if needed, prior to the release of the Final EIR.

↑ A-6.3
Cont.

Secondly, the Ethnographic Section clearly identifies that the project area is within 'Atáaxum (Luiseño) territory, however, there is a section on the Gabrielino. The territory description in the Gabrielino section does not even include the project area. In addition, the Gabrielino are not listed in Native American Heritage Commissions list of Native American Contacts under the assembly Bill 52/Senate Bill 18 list for the project. Please see Table 4.16-2 for your reference. The Tribe requests all ethnographic information and references to the Gabrielino to be removed from the Draft EIR.

↑ A-6.4

THE MARCH JPA MUST INCLUDE INVOLVEMENT OF AND CONSULTATION WITH THE PECHANGA TRIBE IN ITS ENVIRONMENTAL REVIEW PROCESS

It has been the intent of the Federal Government¹ and the State of California² that Indian tribes be consulted with regard to issues which impact cultural and spiritual resources, as well as other governmental concerns. The responsibility to consult with Indian tribes stems from the unique government-to-government relationship between the United States and Indian tribes. This arises when tribal interests are affected by the actions of governmental agencies and departments. In this case, it is undisputed that the project lies within the Pechanga Tribe's traditional territory. Therefore, in order to comply with CEQA and other applicable Federal and California law, it is imperative that the March Joint Powers Authority consult with the Tribe in order to guarantee an adequate knowledge base for an appropriate evaluation of the Project effects, as well as generating adequate mitigation measures.

↑ A-6.5

PECHANGA CULTURAL AFFILIATION TO PROJECT AREA

The Pechanga Tribe asserts that the Project area is part of 'Atáaxum (Luiseño), and therefore the Tribe's, aboriginal territory as evidenced by the existence of 'Atáaxum place names, *tóota yixélval* (rock art, pictographs, petroglyphs), and an extensive associated artifact record within and in the vicinity of the Project. This culturally sensitive area is affiliated with the Pechanga Band of Indians because of the Tribe's cultural ties to this area as well as extensive history with both this Project and other projects within the area.

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

The Tribe's knowledge of their ancestral boundaries is based on reliable information passed down to them from their elders; published academic works in the areas of anthropology, history and ethno-history; and through recorded ethnographic and linguistic accounts. Many anthropologists and historians who have presented boundaries of the 'Atáaxum traditional territory have included Moreno Valley, the March Air Reserve Base (MARB) and the March Joint Powers Authority (March JPA) areas in their descriptions (Drucker 1937; Heiser and Whipple 1957; Kroeber 1925; Smith and Freers 1994), and such territory descriptions correspond with what was communicated to the Pechanga people by their elders. While historic accounts, anthropological and linguistic theories are important in determining traditional 'Atáaxum territory; the Tribe asserts that the most critical sources of information used to define their traditional territories are their songs, creation accounts and oral traditions.

'Atáaxum history originates with the creation of all things at 'Éxva Teméeku, in the present-day City of Temecula, and dispersing out to all corners of creation (what is today known as Luiseño territory). It was at Temecula that the 'Atáaxum deity Wuyóot lived and taught the people, and here that he became sick, finally expiring at Lake Elsinore. Many of the "Atáaxum songs relate the tale of the people taking the dying Wuyóot to the many hot springs, and finally to those at Elsinore, where he died (DuBois 1908). He was cremated at 'Éxva Teméeku. It is the 'Atáaxum creation account that connects Elsinore to Temecula, and thus to the Temecula people who were evicted and moved to the Pechanga Reservation. From Temecula, the people spread out, establishing villages and marking their territories. The first people also became the mountains, plants, animals and heavenly bodies.

Many traditions and stories are passed from generation to generation by songs. One of the 'Atáaxum songs recounts the travels of the people to Elsinore after a great flood (DuBois 1908). From here, they again spread out to the north, south, east and west. Three songs, called *Monívol*, are songs of the places and landmarks that were destinations of the 'Atáaxum ancestors, they describe the exact route of the Temecula (Pechanga) people and the landmarks made by each to claim title to places in their migrations (DuBois, Constance. "The Religion of the Luiseño Indians of Southern California." Berkeley: *American Archaeology and Ethnology*, Vol 8. No.3, 1908:110). The Native American Heritage Commission (NAHC) Most Likely Descendent (MLD) files substantiate this habitation and migration record from oral tradition. These examples illustrate a direct correlation between the oral tradition and the physical place; proving the importance of songs and stories as a valid source of information outside of the published anthropological data.

Tóota yixélval (rock art) is also an important element in the determination of 'Atáaxum Luiseño territorial boundaries. *Tóota yixélval* can consist of petroglyphs (incised) elements, or pictographs (painted) elements. The science of archaeology tells us that places can be described through these elements. Riverside and Northern San Diego Counties are home to red-pigmented pictograph panels. Archaeologists have adopted the name for these pictograph-versions, as defined by Ken Hedges of the Museum of Man, as the San Luis Rey style. The San Luis Rey style incorporates elements which include chevrons, zig-zags, dot patterns, sunbursts,

A-6.6
Cont.

handprints, net/chain, anthropomorphic (human-like) and zoomorphic (animal-like) designs. Tribal historians and photographs inform us that some design elements are reminiscent of 'Atáaxum ground paintings. A few of these design elements, particularly the flower motifs, the net/chain and zig-zags, were sometimes depicted in 'Atáaxum basket designs and can be observed in remaining baskets and textiles today.

An additional type of *tóota yixélval*, identified by archaeologists also as rock art or petroglyphs, are cupules. Throughout 'Atáaxum territory, there are certain types of large boulders, taking the shape of mushrooms or waves, which contain numerous small pecked and ground indentations, or cupules. One of these cupule boulders have been identified within the Project. Additionally, according to historian Constance DuBois:

When the people scattered from Ekvo Temeko, Temecula, they were very powerful. When they got to a place, they would sing a song to make water come there, and would call that place theirs; or they would scoop out a hollow in a rock with their hands to have that for their mark as a claim upon the land. The different parties of people had their own marks. For instance, Alpañias's ancestors had theirs, and Lucario's people had theirs, and their own songs of Munival to tell how they traveled from Temecula, of the spots where they stopped and about the different places they claimed (1908:158).

Thus, the 'Atáaxum songs and stories, indigenous place names, as well as academic works, demonstrate that the 'Atáaxum people who occupied what we know today as Riverside, Moreno Valley, Perris and the surrounding landscape are ancestors of the present-day 'Atáaxum/Pechanga people, and as such, Pechanga is culturally affiliated to this geographic area. Further, the Pechanga Tribe was designated as the affiliated Tribe by LSA Associates for the March JPA and the MARB (Schroth 1999).

The Tribe welcomes the opportunity to meet with the March JPA to further explain and provide documentation concerning our specific cultural affiliation to lands within your jurisdiction.

REQUESTED REVISIONS DEIR AND TO THE MITIGATION MEASURES

Pechanga is not opposed to this Project; however, we are opposed to any direct, indirect and cumulative impacts this Project may have to TCR's. The Tribe's primary concerns stem from the Project's proposed impacts on Native American cultural resources, which includes both the protection of unique and irreplaceable cultural resources, such as 'Atáaxum village sites, sacred sites and archaeological items which would be displaced by ground disturbing work on the Project, and on the proper and lawful treatment of cultural items, Native American human remains and sacred items likely to be discovered in the course of the work.

*Pechanga Cultural Resources • Temecula Band of Luiseño Mission Indians
Post Office Box 2183 • Temecula, CA 92592*

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

A-6.6
Cont.

A-6.7

The proposed Project is on land that is within the traditional territory of the Pechanga Band of Indians. The Pechanga Band is not opposed to this Project; however, we are opposed to any direct, indirect and cumulative impacts this Project may have to tribal cultural resources. The Tribe's primary concerns stem from the Project's proposed impacts on Tribal Cultural Resources (TCR's) and Traditional Cultural Landscapes (TCL's). The Tribe is concerned about both the protection of unique and irreplaceable cultural resources, such as landscapes, *Atáaxum* village sites, sacred sites and TCR's which would be displaced by ground disturbing work on the Project, and on the proper and lawful treatment of cultural items, Native American human remains and sacred items likely to be discovered in the course of the work.

A-6.7
Cont.

The Tribe does not agree with the inclusion of the cultural resources reports in the public Draft EIR documents, and that they are accessible online under the technical appendix section. Public Resources Code §6254(r) strictly prohibits publications of "records of Native American graves, cemeteries, and sacred places and records of Native American places, features, and objects...". We request that this information, as well as sensitive information provided in Appendix E-1 and E-2 be removed from the Draft EIR documents listed on the March JPA website and included in the confidential Appendix.

A-6.8

As stated above, the Tribe requests the archeological Phase II testing plan to be completed, in coordination with the Tribe prior to the finalization of the Final EIR. The site boundaries and significance determinations need to be completed in consultation with the Tribes, as well as agreement to avoidance measures and appropriate mitigation measures, if needed. Please note that the Tribe will provide some edits to the mitigation measure in this document as it is proposed; however, there might be additional avoidance and measures requested once the Phase II testing and report has been completed. CEQA environmental documents cannot be completed until the proper assessment is done. The Tribe urges March JPA to be cautious of getting into the realm of deferred mitigation on this subject matter.

A-6.9

In addition, the DEIR should summarize the information conducted during the entitlement process (Phase I & II archaeological reports) and should not include the actual report, especially information regarding site record search data or cultural resources. Therefore, the entirety of section **4.16.1 Existing Conditions** should be removed and summarized **except for the Native American Coordination and Consultation**. If these sections are to be included, the Tribe requests that the Final EIR acknowledge the Tribe's following comments and concerns.

A-6.10

Section **4.16.1 Late Prehistoric Period and Ethnographic Section** makes the statement that, "Many Luiseño hold the world view that as a population they were created in Southern California; however, archaeological and anthropological data proposes a scientific/archaeological perspective. Archaeological and anthropological evidence suggests that at approximately 1,350 YBP, Takic-speaking groups from the Great Basin region moved into Riverside County, marking the transition to the Late Prehistoric Period" and "the Luiseño were Takic-speaking people more closely related linguistically and ethnographically to the Cahuilla,"

A-6.11

*Pechanga Cultural Resources • Temecula Band of Luiseño Mission Indians
Post Office Box 2183 • Temecula, CA 92592*

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

Gabrielino, and Cupeño to the north and east rather than the Kumeyaay who occupied territory to the south”. The above statements are a misclassification of the ‘Atáaxum, language and their territory. The ‘Atáaxum do recognize that the world was created in the area now known as Temecula³, and the ‘Atáaxum People have been in this area since the beginning of time, the ‘Atáaxum never migrated into the area. Linguistic theory and archaeological data now support the view that the ‘Atáaxum were in California before the “Shoshonean Intrusion” occurred. The preconception that Luiseño is a Shoshonean language was a theory introduced in the 1890s and has long since been abandoned. The Tribe further maintains that this supposed theory has *never* been proven, by way of the Scientific Method and it should at best, be considered an abandoned hypothesis being put forth by archaeologists not linguists. Beginning in the 1960s and 70s linguistic researched reclassified the Uto-Aztecan language family into two branches the Northern and Southern. Within those branches the Shoshonean language falls within the Numic branch of the larger U-A family. “Shoshonean” is not a recognized language group, but it falls within the Central Numic sub-branch and is a language spoken by Shoshonean people. Luiseño is recognized as being within the southern Uto-Aztecan language family in the Takic sub-branch. Some current sources on the Uto-Aztecan family are as follows: Victor Golla, 2011, California Indian Languages, University of California Press, Berkeley, Pg. 169- 88; Lyle Campbell, 1997, American Indian Languages: The Historical Linguistics of Native America, Oxford University Press, New York, pgs. 133-138; Marianne Mithun, 1999, The Languages of Native North America, Cambridge University Press, Cambridge, pgs. 539-548. Therefore, the Tribe would like to assert that the “Shoshonean Wedge” theory is no longer supported by current research and all mention of the “Shoshonean Intrusion” be removed throughout the cultural section of the DEIR for this project. Additionally, the statement that the Luiseño had no word for their nationality is wildly incorrect. The Luiseño called themselves ‘Atáaxum, which means “people,” and traditional songs refer to the people as Payómkawichum “people of the west.” (Constance Goddard DuBois, 1908, The Religion of the Luiseño Indians of Southern California, University of California Publications in American Archaeology and Ethnography, pgs. 138, 159.) The people were also associated with their villages, for example, today the Pechanga people refer to themselves as the “Pecháangayam,” the people of Pechanga.

A-6.11
Cont.

At this time, the Tribe has several edits to the proposed mitigation measures; however, more specific measures might need to be included in the Final EIR after the completion of the Phase II archeological testing plan. We request that these mitigation measures be incorporated into the final EIR, with the revisions and editions provided below, and into any other appropriate final environmental documents approved by the March JPA. (Underlines are additions, Strikeouts are deletions.)

A-6.12

MM-CUL-1 Archaeological Testing Plan (ATP)

³ Masiel-Zamora, Myra, 2016, *Éxya Teméeku: Where We Began*. Great Oak Press, Pechanga, California.
Pechanga Cultural Resources • Temecula Band of Luiseño Mission Indians
Post Office Box 2183 • Temecula, CA 92592

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

Prior to the ~~issuance of any grading permits~~ Final EIR, the project applicant shall submit an ATP, approved by the consulting tribes (Pechanga Band of ~~Luiseno~~ Indians and Soboba Band of Luiseno Indians), that details the procedures to fully document the boundaries of resources within or directly adjacent to the APE (CA-RIV-4067, CA-RIV-4068, CA-RIV-5420, CA-RIV-5421, CA-RIV-5811, CA-RIV-5812, CA-RIV-5819, Temp-2, Temp-3, and Temp-9 to Temp-15), determine the resource's potential for inclusion in the CRHR, and ensure adequate mitigation measures are set forth for their respective resources, in consultation with the tribes.

The testing program shall avoid any unnecessary excavation of significant deposits, should they be discovered, to minimize archaeological impacts to the site. This testing would only occur at these specific resources along the periphery of the area of impact. The number of shovel test pits (STPs) will vary, with an anticipated range of four to 15 per site. During all field studies, a representative from Pechanga and Soboba will be ~~requested to participate in and monitor the testing program.~~

Based on the testing results, additional mitigation measures may be incorporated in the Final EIR.

MM-CUL-2 Cultural Resources Monitoring Plan (CRMP)

~~After implementation of the ATP and~~ At least thirty (30) days prior to the issuance of any grading permits, the project applicant shall prepare a Cultural Resource Monitoring Plan (CRMP), in consultation with the Tribes, to explicitly detail the methods and procedures for avoidance and protection measures for cultural resources and the procedures for the inadvertent discovery of unrecorded cultural resources. The treatment of the resource(s) will be consistent with the terms and provisions of the mitigation and CRMP may be amended by the March JPA, applicant, and Tribes as agreed upon. Prior to finalization, the Principal Investigator/Archeologist will circulate the draft CRMP to March JPA and Consulting Tribes for review and comment. The final document will include methods and practices and other appropriate issues that may be relevant to the culturally appropriate treatment of resources. This CRMP shall include but not be limited to the following guidelines:

- The CRMP shall be prepared by an archaeologist meeting the Secretary of the Interior Standards, in consultation with consulting tribe(s) (Pechanga Band of ~~Luiseno~~ Indians and Soboba Band of Luiseno Indians), the developer, and March JPA, and completed prior to any development within the APE.
- All ground disturbing activities within the Project shall be monitored by a qualified archaeologist and Native American monitor(s).
- The report shall include the protocols and stipulations that the contractor, March JPA, Pechanga Band of Indians and Soboba Band of Luiseno Indians, and
Pechanga Cultural Resources • Temecula Band of Luiseno Mission Indians

A-6.12
Cont.

Principal Investigator/Archeologist will follow in the event of inadvertent cultural resources.

- The monitoring frequency and coverage area may be adjusted based on observed sensitivity for encountering cultural resources by the qualified archaeologist in consultation with the tribes and March JPA.
- If any human remains are discovered, the Riverside County Coroner, Tribes and March JPA shall be contacted. In the event that the remains are determined to be of Native American origin, the Most Likely Descendant (MLD), as identified by the Native American Heritage Commission (NAHC), shall be contacted in order to determine proper treatment and disposition of the remains.
- The report shall include details of the relocation and control grading operations. Such as, all ground disturbing activities within 10 to 15 feet, at minimum, of a recorded archaeological feature shall be conducted in a controlled fashion, slowly and deliberately, to ensure any potential subsurface resources will be identified. If and when needed, this area may be extended based on consultation with the Tribes.
- The CRMP shall include the mitigation measures developed in consultation with the tribes after implementation of the ATP.
- Type of recordation needed for inadvertent finds and the stipulations of recordation of sacred items.
- Contact information of relevant individuals for the Project.

MM-CUL-3 Contractor Specifications

Following the completion of the ATP and CRMP and prior to issuance of any grading permit, the Project applicant shall provide evidence, to March JPA's and Consulting tribes satisfaction, that the approved provisions/recommendations as determined in the CRMP are included in Contractor Specifications. The specifications shall include but not be limited to the following:

- "The features outside of the area of direct impact (CA-RIV-4068 Feature A; CA-RIV-5420 Features A, B, C, D, and E; CA-RIV-5421 Feature 1; CA-RIV-5811 Features 1 and 2; CA-RIV-5812 Features 8 and 9; CA-RIV-5819 Features 1, 2, and 3; Temp-9 Feature A; and Temp-14 Feature (A) shall be preserved."
- The Contractor Specifications shall include the mitigation measures developed in consultation with the tribes after implementation of the ATP.
- "Controlled grading within 10 to 15 feet of a recorded archaeological feature shall be implemented and archeologist and/or Tribes may request additional areas to be controlled graded based on the finding."
- "Should any cultural resources be discovered during earth-moving activities, no further grading shall occur in the area of the discovery until the Planning Director

A-6.12
Cont.

and Tribes are is satisfied that adequate provisions are in place to evaluate and protect these resources.” This condition and the approved provisions/recommendations as determined in the CRMP, shall be incorporated on the cover sheet of the grading plan.

MM-CUL-4 Workers Environmental Awareness Program (WEAP) Training

An archaeologist meeting the Secretary of the Interior Standards and Native American monitor(s) shall attend a pre-grading meeting to conduct a WEAP training regarding cultural and archaeological sensitivity for all construction personnel and monitors who are not trained archaeologists. A PowerPoint presentation and handout or pamphlet shall be prepared, in consultation with the Tribes, to ensure proper identification and treatment of inadvertent discoveries. The purpose of the WEAP training is to provide specific details on the kinds of archaeological materials that may be identified during construction of the Project and explain the importance of and legal basis for the protection of significant archaeological resources and tribal cultural resources. Each worker shall also learn the proper procedures to follow in the event that cultural resources, tribal cultural resources, or human remains are uncovered during ground-disturbing activities. These procedures include work curtailment or redirection, and the immediate contact of the site supervisor, archaeological monitor and tribal monitor(s).

MM-CUL-5 Native American and Archeological Monitoring

A Native American Monitor and Secretary of Interior Qualified Archaeologist shall be present during all earth-moving construction activities. At least 30 days prior to issuance of grading permits, separate agreements shall be developed with each monitoring Native American Tribes, addressing the roles of the Developer/Applicant, the Qualified Archaeologist, and the Consulting Tribe(s). The Developer/Applicant shall submit fully executed copies of the following to the March JPA: (1) the contract for the retention of an archaeologist; ~~(2) the contract between the Tribe(s) for Tribal monitoring;~~ ~~(3) the contracts individually between the Tribe(s) and the land owner/Applicant/Developer for the monitoring of the Project construction.~~ Archaeological monitoring shall occur as outlined in the CRMP. The monitoring contracts shall include, but not limited to, outlining provisions and requirements for addressing the treatment of cultural resources; project grading and development scheduling; terms of compensation for the monitors; treatment and final disposition of any cultural resources, sacred sites, and human remains discovered on the site; and establishing on-site monitoring provisions and/or requirements for professional monitoring during ground disturbing activities. The monitors have the authority to temporarily divert and stop earth moving activities in the event that suspected cultural resources area unearthed. The monitors will be responsible for maintaining weekly monitoring logs, the Developer shall identify an individual on site to sign the weekly logs.

MM-CUL-6 Archeological Monitoring

Prior to the issuance of a grading permit, the Developer shall retain a professional archaeologist to conduct monitoring of all mass grading and trenching activities. The Project Archaeologist shall have the authority to temporarily redirect earthmoving activities in the event that suspected archaeological resources are unearthed during Project construction. Archaeological monitoring shall occur as outlined in the CRMP.

MM-CUL-67 Avoid Environmentally Sensitive Areas (ESA).

Prior to the issuance of grading permits, all features recommended to be preserved in place shall be fenced off with construction fencing and identified as ESAs to ensure Project personnel do not disturb the features. The installation of the ESA fencing shall be monitored by the project archeologist and Tribal Monitors. Specific requirements pertaining to the avoidance buffer, style, materials, access, maintenance, and other requirements shall be provided within the CRMP.

MM-CUL-78 Inadvertent Discovery of Archaeological Resources

In the event that archaeological resources or tribal cultural resources are inadvertently unearthed during excavation and grading activities for the Project, that were not assessed by the archeological report(s) and/or environmental assessments conducted prior to Project approval, the following procedures shall be allowed. the contractor shall cease all earth-disturbing activities within a 100-foot radius of the area of discovery. The Project cultural resources professionals, including the consulting Tribe(s)appropriate tribe(s), shall evaluate the significance of the find and determine the appropriate course of action. Unique cultural resources are defined, for this condition only, as being multiple artifacts in close association with each other, but may include fewer artifacts if the area of the find is determined to be of significance due to its sacred or cultural importance as determined in consultation with the Consulting Tribes. Tribal cultural resources are excluded from the definition of unique cultural resources as those resources are defined by the tribal values ascribed to them by their affiliated communities. Treatment of tribal cultural resources inadvertently discovered during the project's ground-disturbing activities shall be subject to the consultation process required by state law and AB 52.

~~If avoidance of the resources is not feasible, salvage operation requirements pursuant to Section 15064.5 of the CEQA Guidelines shall be followed and shall take into account tribal preferences and sensitivity concerns. The contractor shall cease all earth-disturbing activities within a 100-foot radius of the area of discovery. The Project cultural resources professionals, including the consulting Tribe(s)appropriate tribe(s), March JPA and applicant shall meet to evaluate the significance of the find and determine the appropriate course of action. At the meeting, the significance of the discoveries shall~~

A-6.12
Cont.

be discussed and after consultation with the Tribal Representative(s) and the Principal Archeologist, a decision shall be made, with the concurrence of the March JPA, as to the appropriate mitigation (documentation, avoidance, recovery, etc.) for the cultural resource. Further ground disturbance, including but not limited to grading, trenching etc., shall not resume within the area of the discovery until an agreement has been reached by all parties as to the appropriate mitigation. Work shall be allowed to continue outside of the buffer area and will be monitored by additional Tribal Monitors, if needed. After the find has been appropriately avoided or mitigated and cleared by March JPA, the Project cultural resources professional and, if applicable, the Native American monitor(s), work in the area may resume. Treatment and avoidance of the newly discovered resources shall be consistent with the Cultural Resources Management Plan and Monitoring Agreements entered into with the Consulting Tribes. This may include avoidance of the cultural resources through project design, in-place preservation of cultural resources located in native soils and/or re-burial on the Project property so they are not subject to further disturbance in perpetuity as identified in Non-Disclosure of Reburial Condition/Mitigation Measures. Pursuant to California Public Resources Code Section 21083.2(b), avoidance is the preferred method of preservation for archaeological resources. If the Developer, the Project archaeologist and the Native American Monitor(s) cannot agree on the significance or the mitigation for such resources, these issues will be presented to the March JPA Planning Director for decision. The March JPA Planning Director shall make a determination based on the provisions of CEQA with respect to archaeological and tribal cultural resources and shall take into account the religious beliefs, customs, and practices of the appropriate Native American tribes. Notwithstanding any other rights available under the law, the decision of the March JPA Planning Director shall be appealable to the March JPA Commission.

A-6.12
Cont.

If potentially significant features or sites are discovered, an Evaluation Plan shall be developed by the Project archaeologist and the applicable Native American representative and shall contain, at a minimum, a research design and field methodology designed to address the criteria outlined in the CRHR. If a site is determined to be significant, as confirmed by March JPA, and avoidance, preservation and protection in place of the site has not been achieved, a Phase III data recovery excavations plan shall be prepared by the Principal Archeologist, in consultation with the Consulting Tribes, and shall be submitted to the March JPA for review and approval prior to implementation of the said plan. may be necessary unless the resource is avoided and preserved/protected in place. Evaluation and treatment shall be supervised by an individual or individuals that meet the Secretary of the Interior's Professional Qualification Standards. If the Tribe(s) disagree with regard to the determined significance of the discovery and/or the proposed management strategy for a cultural resource of Native American origin or cultural importance, these issues will be presented to the March JPA Planning Director for decision. The March JPA Planning Director shall make the determination based on the provisions of the California Environmental Quality Act with respect to archaeological resources, recommendations of the Project's archaeological Principal Investigator and shall consider the cultural and

Pechanga Cultural Resources • Temecula Band of Luiseno Mission Indians

Post Office Box 2183 • Temecula, CA 92592

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

religious practices of the Tribe(s). Notwithstanding any other rights available under the law, the decision of the March JPA Planning Director shall be appealable to the March JPA Commission.

MM-CUL-9 Final Disposition

In the event that Native American Cultural resources are identified during Project earthwork and ground-disturbing activities, the following procedures shall be carried out for final disposition; One or more of the following treatments, in order of preference, shall be employed in consultation with the Consulting Tribes. Evidence of such shall be provided to the City of Murrieta.

1. Preservation-In-Place of the cultural resources. Preservation in place means avoiding the resources, leaving them in the place where they were found with no development affecting the integrity of the resource(s).

2. Reburial of the cultural resource(s) on the Project property. The Preservation Site(s) will be located within the Project site development envelope of the Project, outside of any known and identified cultural resource sites. The measures for reburial shall include, at least, the following: Measures and provisions to protect the future reburial area from any future impacts in perpetuity. Reburial shall not occur until all legally required cataloging and basic recordation have been completed, with an exception that sacred items, burial goods, and Native American human remains are excluded. Any reburial process shall be culturally appropriate. Listing of contents and location of the reburial shall be included in the confidential Phase IV report. The Phase IV Report shall be filed with the City under a confidential cover and not subject to Public Records Request.

MM-CUL-10 Controlled Grading and Grubbing.

All grading shall be controlled in areas of concern as determined by the Principal Investigator/Archaeologist and with the Consulting Tribes and as reflected in CRMP. The identified area shall be inspected by the Principal Investigator/Archaeologist and Native American monitor prior to initiating grading for those areas. Grading shall be controlled within the Environmentally Sensitive Buffer Area using a slope board or similar equipment to allow soil to be removed in increments of only a few inches at a time. Other areas which may require controlled grading shall be determined by the Principal Investigator/Archaeologist and the Native American monitor(s) based on the results and soil types identified during grading. Should any changes be needed, an updated exhibit will be produced and approved by all parties prior to any ground disturbance in the newly identified area.

A-6.12
Cont.

MM-CUL-811 Archaeological Monitoring Report (Phase IV)

A report, prepared by an archaeologist meeting the Secretary of the Interior Standards, documenting monitoring activities conducted by a qualified archaeologist and Native American monitor(s) shall be submitted to March JPA within 60 days of completion of grading or other Project-related activities with the potential to impact archaeological or tribal cultural resources. This report shall document the known resources on the property, describe how each mitigation measure was fulfilled, and document the type of cultural resources recovered and the disposition of such resources. The report will be submitted to March JPA, the Eastern Information Center, and the appropriate tribe(s).

MM-CUL-12 Human Remains

In the event that human remains are inadvertently encountered during construction activities, all work is to immediately stop and no further disturbance shall occur in the area until the County Coroner has made the necessary findings as to origin. The remains and associated resources shall be treated in accordance with state and local regulations that provide requirements with regard to the accidental discovery of human remains, including California Health and Safety Code Section 7050.5, California Public Resources Code Section 5097.98, and CEQA Guidelines Section 15064.5(e). In accordance with these regulations, if human remains are found, the County Coroner must be immediately notified of the discovery. No further excavation or disturbance of the Project site or any nearby (no less than 100 feet) area reasonably suspected to overlie adjacent remains can occur until the County Coroner has determined if the remains are potentially human in origin. If the County Coroner determines that the remains are, or are believed to be, Native American, he or she is required to immediately notify the Native American Heritage Commission (NAHC). The NAHC must immediately notify those persons it believes to be the most likely descendant (MLD). The most likely descendant shall then make recommendations and engage in consultation concerning the treatment of the remains as provided in Public Resources Code Section 5097.98.

MM-CUL-13 Non-Disclosure

It is understood by all parties that unless otherwise required by law, the site of any reburial of Native American human remains or associated grave goods shall not be disclosed and shall not be governed by public disclosure requirements of the California Public Records Act. The coroner, pursuant to the specific exemption set forth in California Government Code 6254 (r), parties, and Lead Agencies, will be asked to withhold public disclosure information related to such reburial, pursuant to the specific exemption set forth in California Government Code 6254 (r).

Pechanga Comment Letter to the March JPA
Re: Pechanga Tribe Comments on the West Campus Upper Plateau
Page 14

The Pechanga Tribe looks forward to working together with the March JPA in protecting the invaluable Pechanga cultural resources found in the Project area. Please contact me at 951-770-6313 or at eozdil@pechanga-nsn.gov once you have had a chance to review these comments so that we might address any additional outstanding issues concerning the Phase II testing plan and additional avoidance and mitigation language. Thank you for continuing to partner with the Pechanga Band of Indians to preserve and protect our sensitive cultural heritage.

A-6.13

Sincerely,

Tuba Ebru Ozdil
Cultural Analyst

Sacred Is The Duty Trusted Unto Our Care And With Honor We Rise To The Need

Letter A-6

Pechanga
March 9, 2023

- A-6.1** This comment is a transmittal email that also requests the removal of sensitive information provided in Appendix E-1 and E-2 of the Draft EIR as well as requesting that the Tribe be added to the distribution lists for public notices and circulated documents. The sensitive information has been removed from Appendices E-1 and E-2, and the Tribe is on the list to receive all public notices and circulated document for the Project.
- A-6.2** This comment is introductory and asks that the Tribe be added to the distribution lists for public notices and circulated documents. The Tribe is on the list to receive all public notices and circulated document for the Project.
- A-6.3** This comment requests that the Phase II testing plan be completed. The Phase II testing and evaluation program has been completed and was done in consultation with both the Pechanga and Soboba Bands and is included as Appendix E-1 of the Final EIR. Consultation between representatives from March JPA, the Soboba Band of Luiseño Indians, and the Pechanga Band of Indians resulted in an agreement regarding the scope and methods for the Archaeological Test Plan (ATP), which were approved by March JPA in March 2023. Archaeological testing in compliance with the ATP occurred between March 20, 2023 and March 31, 2023. The archaeological testing and evaluation within the Area of Potential Effect (APE) included sites CA-RIV-4067, CA-RIV-5420, Temp-2, Temp-3, and Temp-9 to Temp-15. While Site CA-RIV-5420 contains features both within and outside of the APE, testing at this location primarily focused on those within the APE. Due to their proximity to the APE, the areas of sites CA-RIV-5811, CA-RIV-5812, and CA-RIV-5819 containing milling features were marked and not tested to ensure all milling features would not be impacted by the Project. Testing at these sites was instead conducted within adjacent areas, primarily within the APE, to confirm that the site boundaries do not extend into the APE. At the request of the consulting tribes, seven additional exploratory shovel test pits (STPs) were excavated within the APE at locations of their choosing. In total, 75 STPs were excavated, and no archaeological material was identified.

No testing occurred at CA-RIV-5421 since the site was previously tested and evaluated as not eligible for the National Register of Historic Places (NRHP) by McDonald and Giacomini in 1996. Testing was also not conducted at CA-RIV-4068 since the site is clearly outside of the APE; however, this has been included in the study at the request of March JPA and the consulting tribes.

Based upon the records search, surveys, and testing program, sites CA-RIV-4067, CA-RIV-5420, CA-RIV-5421, Temp-2, Temp-3, and Temp-9 to Temp-15 are not eligible for the California Register of Historical Resources (CRHR) or the NRHP. Sites CA-RIV-4068, CA-RIV-5811, CA-RIV-5812, and CA-RIV-5819 were not evaluated for significance as they were found to have no elements within the APE.

The Phase II archeological technical document, included as Appendix E-1 of the Final EIR, presents revised conditions, which were formulated based upon input by the Pechanga Band and consultation between the tribes, March JPA, and the Applicant. These conditions will be incorporated into a Mitigation Monitoring and Reporting Program (MMRP) as mitigation measures. These mitigation measures primarily consist of efforts to either preserve in place or relocate (move) bedrock milling

features, monitoring of ground-disturbing activities by an archaeologist and Native American observer, and controlled grading within the vicinity of any recorded site to ensure the timely and proper handling of any inadvertent finds. The revised mitigation measures are discussed in Response A-6.12, below.

- A-6.4** This comment requests that all ethnographic information and references to the Gabrielino be removed from the Draft EIR. The detailed discussion of the Gabrielino has been removed from the Phase II archaeological technical study as well as the Final EIR.
- A-6.5** This comment requests consultation, as required by CEQA. March JPA has consulted with the Pechanga Band in accordance with all applicable laws and regulations.
- A-6.6** This comment notes that Pechanga is culturally affiliated to the geographic area in which the Project site is located. This information is noted and as explained by the Pechanga Band, it is recognized that they were designated as the affiliated tribe by LSA Associates, Inc. for March JPA and MARB. March JPA has consulted with the Pechanga Band in accordance with all applicable laws and regulations.
- A-6.7** This comment expresses concern about both the protection of unique and irreplaceable cultural resources and the proper and lawful treatment of cultural items. In response, please see Response A-6.3 above. The Phase II testing and evaluation program has been completed in consultation with both the Pechanga and Soboba Bands. No CRHR-eligible sites are located within the development area. However, to protect against any potential impacts to previously undefined or unanticipated resources, the measures of the MMRP regarding cultural and tribal cultural resources have been developed through consultation with the Pechanga and Soboba Bands. The revised mitigation measures are discussed in Response A-6.12, below.
- A-6.8** This comment requests the removal of sensitive information provided in Appendices E-1 and E-2 of the Draft EIR. The sensitive information has been removed from Appendices E-1 and E-2. This information should not be made available for public review and the March JPA website no longer makes the information publicly available.
- A-6.9** This comment requests the completion of the archaeological Phase II testing plan. Please see Response A-6.3 above; the archaeological Phase II testing plan has been completed and is included as Appendix E-1 of the Final EIR. The revised mitigation measures are discussed in Response A-6.12, below.
- A-6.10** This comment requests that Section 4.16, Tribal Cultural Resources, be modified to replace all of Section 4.16.1, Existing Conditions, with a summary. Section 4.16.1 of the Final EIR has been revised as requested.
- A-6.11** This comment provides clarification information about the people of Pechanga. The Phase II technical study, included as Appendix E-1 of the Final EIR, continues to detail the accepted archaeological data, which includes appropriate citations from accepted scientific literature (see section 3.2.5 “Protohistoric Period [Late Holocene: circa 1542 to circa 1769]” of the Phase II technical study). However, the document has always maintained there is a difference in view between the archaeological perspective and the Native American community regarding origin (see section 3.2 “Cultural Setting – Archaeological Perspectives”).

Although the Phase II technical study does discuss the “Takic expansion,” it does not reference the “Shoshonean Wedge,” nor does it state that the “Luiseño had no word for their nationality.” However, information presented by the tribe above has been incorporated into the technical study.

The information referencing “Atáaxum, which means ‘people,’ and traditional songs refer to the people as Payómkawichum, ‘people of the west’” has been added to the technical report. In addition, the Pechanga Band’s information that “the world was created in this the area now known as Temecula ...” has also been included with the existing, the archaeological data, which discusses the Luiseño’s presence in southern California prior to the Takic expansion. The technical study, included as Appendix E-1 of the Final EIR, has always noted that the Luiseño were likely not a Takic group expanding into the territory, but “rather a northern San Diego County/southern Riverside County Yuman population who adopted the Takic language” (see section 3.2.4 “Late Prehistoric Period [Late Holocene: 1,300 YBP to 1790]” of the Phase II technical study).

A-6.12 This comment outlines requested revisions to mitigation measures included within the Draft EIR. March JPA has since further collaborated with the consulting tribes on the draft mitigation measures, as the Phase II testing was monitored by the consulting tribes and is now complete. With the completion of the Project Phase II technical study (Appendix E-1), original MM-CUL-1, which required the preparation of an archaeological testing plan, has been removed and the remaining mitigation measures have been renumbered. In response to this comment and Response A-6.3, above, the mitigation measures within Section 4.16, Tribal Cultural Resources, of the Final EIR are revised to reflect what was agreed upon by the tribe and March JPA.

A-6.13 This comment is a concluding statement and does not raise any issues or concerns with the adequacy of the environmental analysis included within the Draft EIR. As such, no further response is provided.

INTENTIONALLY LEFT BLANK

To: Dan Fairbanks
Cc: Williams, Russell; Ketcham, Thomas; Hildebrand, John
Subject: March JPA: West Campus Upper Plateau DEIR
Attachments: Pages from Pages from Draft-West-Campus-Upper-Plateau-Project-Environmental-Impact-Report-compressed_Eva Comments - kkt.pdf

Hello Dan,

Thank you for the opportunity to review the Draft EIR for the West Campus Upper Plateau project. The following are comments I have on the DEIR:

Truck Routes

On page 4.15-2, the DEIR reads:

Truck routes are proposed along Cactus Avenue to I-215, as well as along Linebacker Drive, Arclight Drive, Airman Drive, and Bunker Hill Drive (see Figure 3-6, Proposed Truck Routes), all of which would connect to existing truck routes along Alessandro Boulevard, Meridian Parkway, and Cactus Avenue (east of Meridian Parkway). As shown in Figure 3-6, trucks from the Specific Plan Area would be prohibited along the Barton Street extension. Trucks would also be prohibited from turning left on Brown Street to access Alessandro Boulevard.

A-7.1

Will there project provide any physical improvements to restrict trucks from accessing Alessandro Blvd. and travel west? If yes, can you provide a copy of the conditions of approval that will requires its implementation?

Will March JPA be implementing any policies and/or other regulations to ensure trucks utilize established truck routes and obey weight limited roadways?

A-7.2

Brown Street

On page 4.15-19, the DEIR indicates under the Brown Street heading:

Construct Brown Street at its ultimate full-section width as an Industrial Collector (78-foot right-of-way, 56-foot curb-to-curb) between the existing northerly terminus and Cactus Avenue.

A-7.3

The March JPA General Plan designates Brown Street (Plummer Street) as a 4-lane Major Arterial. The text in the DEIR indicates the ultimate section for Brown Street is a 2-lane Industrial Collector? Will the reduction in travel lanes be sufficient to accommodate the traffic at buildout of the March JPA General Plan? Is there a General Plan Amendment associated with the change in roadway classification?

Truck Enforcement Program

On page 4.15-19, under PDF-TRA-3 the DEIR reads:

To address trucks turning left from Cactus Avenue onto Brown Street or otherwise violating the established truck routes, the Project applicant shall provide the March Joint Powers Authority compensation of \$100,000 to fund a truck route enforcement for a period of two years.

A-7.4

How are these funds utilized to conduct enforcement? Is Riverside PD, Sheriff, and CHP involved with he enforcement of truck routes? What will occur after the two-year period?

General Plan Consistency

On page 4.15-26, the DEIR discusses the project’s consistency with the March JPA General Plan. As mentioned above in the comments regarding Brown Street, the ultimate cross-section for Brown Street discussed in the DEIR appears to be inconsistent with the March JPA General Plan. I have attached Figures 4.15-2 and 4.15-3 to illustrate.

A-7.5

Please let me know if you have questions or would like to discuss the comments above.

Thanks,

Kevin Tsang, P.E.

West Campus Upper Plateau EIR

Letter A-7

Riverside County Transportation and Land Management Agency March 9, 2023

- A-7.1** This comment questions whether the Project will include any physical improvements to restrict trucks from accessing Alessandro Blvd. and traveling west. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. The parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway. See Figure A-7.1-1, below.

Figure A-7.1-1 Proposed Project Circulation Plan

Currently, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turning left and traveling west on Alessandro Blvd. See Figure A-7.1-2, below.

Figure A-7.1-2 Brown Street looking north towards Alessandro Blvd.

Section 4.15, Transportation, of the Draft EIR states “Currently, trucks cannot turn left from northbound Brown Street to access Alessandro Boulevard due to existing channelization that has been installed. Similar channelization and/or signage will be installed on Cactus Avenue to prevent trucks from turning left onto Brown Street. Therefore, trucks leaving the Campus Development would travel to Meridian Parkway and would not use Brown Street.” The text of the EIR has been modified to clarify that signage is present indicating that trucks cannot turn left from northbound Brown Street to access Alessandro Boulevard.

PDF-TRA-1 identifies on-site and site adjacent roadway improvements that will be constructed to accommodate site access. In response to this comment regarding the eastbound approach to the intersection of Brown Street and Cactus Avenue, PDF-TRA-1 has been revised to reflect that the roadway would be channelized or otherwise signed to prevent trucks from turning left onto Brown Street.

PDF-TRA-2 describes the proposed revisions to the existing March JPA truck routes. In response to this comment, PDF-TRA-2 was revised to identify that trucks are prohibited from turning left on Brown Street to access Alessandro Boulevard.

Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. There are no anticipated traffic hazards or other traffic impacts due to the implementation of channelization or signage preventing trucks traveling east on Cactus Avenue from turning left onto Brown Street. As has been the practice with all March JPA Truck Route Ordinance amendments, March JPA will consult with the County of Riverside and City of Riverside to assure that the updated truck route ordinance meets the mutual needs of Riverside County, City of Riverside and March JPA. Additionally, Figure 3-6, Proposed Truck Routes, was revised in Recirculated Chapter 3.0, Project Description, to show no left turn from Cactus Avenue onto Brown Street.

The revisions to the EIR in response to this comment do not modify any of the analysis or change any conclusions in the EIR and do not add any new significant impacts.

A-7.2

This comment questions what policies March JPA will implement to enforce truck routes and weight limits. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid for through an existing truck mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval

and included in the MMRP. March JPA will monitor compliance through the MMRP. No changes or revisions to the EIR are required in response to this comment.

A-7.3

This comment questions the General Plan redesignation of Brown Street from a 4-lane Major Arterial to a 2-lane Industrial Collector. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), Exhibit 2-1, Transportation Plan, of the March JPA General Plan currently designates Brown Street as a Major Arterial and shows Brown Street/Plummer Street as a through road between Alessandro Boulevard to the north and Van Buren Boulevard to the south. As explained in Recirculated Chapter 3, Project Description, in 2014, March JPA placed approximately 141 acres located north of Van Buren Boulevard under a conservation easement currently managed by the Rivers and Lands Conservancy. The Project proposes to place 445.43 acres surrounding the Specific Plan Area under a similar conservation easement. As such, Brown Street could not be extended south of Cactus Avenue without impacting, and likely violating, the existing and proposed conservation easements. As explained in Recirculated Chapter 3, Project Description, the Project's requested entitlements include amending Exhibit 2-1, Transportation Plan, of the March JPA General Plan to identify the Project's proposed revisions to the March JPA circulation network, including revisions to the roadway designations.

In the configuration proposed by the Project, Brown Street will serve already existing development to the west and abut the Conservation Easement to the east. Aside from the Specific Plan Area, there is no further undeveloped/unentitled land within March JPA jurisdiction that would impact Brown Street capacity. The Project Traffic Analysis (Appendix N-2) analyzed Project traffic and cumulative traffic. The pass-by volumes have been corrected in the traffic study to include the correct pass-by ADT volumes. As such, the ADT volumes have been updated for the following study area roadway segments for all With Project scenarios:

- Cactus Avenue, from Airman Drive to Linebacker Drive (#6)
- Cactus Avenue, from Linebacker Drive to Brown Street (#7)
- Brown Street, Alessandro Boulevard to Cactus Avenue (#12)

Based on the updated ADT volumes at these segments, the following study area roadway segment was found to operate at an acceptable LOS (LOS D or better) under all analysis scenarios:

- Brown Street, Alessandro Boulevard to Cactus Avenue (#12)

The following roadway segments are still anticipated to operate at an unacceptable LOS for the With Project scenarios:

- Cactus Avenue, from Airman Drive to Linebacker Drive (#6)
- Cactus Avenue, from Linebacker Drive to Brown Street (#7)

However, it should be noted that although at full buildout of the Project, anticipated daily volumes on the Cactus Avenue segment exceed the defined roadway segment capacity (based on the March JPA General Plan), the results of the more detailed peak hour intersection operations analysis show that all intersections on either side of the Cactus Avenue segment would operate at an acceptable LOS of D or better at full Project buildout.

The more detailed peak hour intersection operations analysis explicitly accounts for factors that affect roadway capacity and is utilized to determine if roadway segment widening is actually necessary. If the operations for the intersections on either side of the roadway segment are anticipated to operate at an acceptable level of service during the peak hours, roadway segment widening is typically not recommended. The intersections are considered “choke points” along the roadways, and if the intersection operations analysis is anticipated to operate at acceptable levels, then it is anticipated that the intersections can process the traffic volumes along the roadway segment without the need for additional roadway segment widening. Additionally, roadway segment analysis is considered a planning level analysis whereas the intersection operations analysis is considered more design level analysis.

Based on a review on long-range (Horizon Year) traffic conditions analysis, the intersections on either side of Cactus Avenue, from Airman Drive to Brown Street, are anticipated to operate at acceptable LOS during the peak hours or improve operations with the identified intersection improvements. As such, no additional improvements have been identified to the road segments identified above (#6 and #7).

No changes or revisions to the EIR are required in response to this comment.

- A-7.4** This comment questions how funds collected through PDF-TRA-3 will be used to enforce truck routes and what will happen after two years. See Response A-7.2, above, regarding the truck route enforcement and the funding provided through PDF-TRA-3.
- A-7.5** This comment questions the Project’s consistency with the General Plan with regard to Brown Street. See Response A-7.3, above, regarding the roadway designation for Brown Street.

Subject: South Coast AQMD Staff's Comments on the Draft EIR for the West Campus Upper Plateau Project
Attachments: RVC230111-04 DEIR West Campus Upper Plateau Project.pdf

Dear Mr. Fairbanks,

Attached are South Coast AQMD staff's comments on the Draft Environmental Impact Report (Draft EIR) for the Proposed West Campus Upper Plateau Project (SCH No.: 2021110304) (South Coast AQMD Control Number: RVC230111-04). Please contact me if you have any questions regarding these comments.

**Draft Environmental Impact Report (Draft EIR) for the Proposed
West Campus Upper Plateau Project (Proposed Project)
(SCH Number: 2021110304)**

South Coast Air Quality Management District (South Coast AQMD) staff appreciates the opportunity to comment on the above-mentioned document. The March Joint Power Authority is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. The following comments recommended revision to the health risk assessment, California Emissions Estimator Model (CalEEMod) analysis, greenhouse gas emissions analysis, additional air quality mitigation measures, and South Coast AQMD Permits and Responsible Agency the Lead Agency should include in the Final EIR.

South Coast AQMD Staff’s Summary of Project Information in the Draft EIR

Based on the Draft EIR, the Proposed Project consists of the Specific Plan Area and Conservative Easement that comprise approximately 818 acres within the March Joint Power Authority (JPA) planning area.¹ The project components of the Proposed Project consist of a) Specific Plan Area includes business park, industrial, mixed-use, public facility, parks, recreation and open space, and infrastructure improvements, totaling 369.60 acres;² b) Conservative Easement includes open space, which totals of 445.43 acres.³ There is an existing Eastern Municipal Water District Water Tank within the Proposed Project site comprises 2.87 acres.⁴

Under the Specific Plan Area component of the Proposed Project, the Draft EIR assumes the following buildout for the analysis⁵:

- Building B – 1,250,000 square feet of high-cube fulfillment center warehouse use
- Building C – 587,000 square feet of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 square feet of high-cube fulfillment center warehouse use
- Industrial Area – 500,000 square feet of high-cube cold storage warehouse use
- Business Park Area – 1,280,403 square feet of business park use (assume 75% warehouse use and 25% office and non-warehouse use⁶)

A-8.2

¹ Draft EIR. Page 3-1.

² *Ibid.* Page 1-4.

³ *Ibid.*

⁴ *Ibid.*

⁵ *Ibid.* Page 1-4 and 1-5.

⁶ *Ibid.* Page 3-9.

- Mixed Use Area – 160,921 square feet of retail use (25%)
- Mixed Use Area – 482,765 square feet of business park use (75%)
- 60.28-acre park (with Active and Passive uses)
- 17.72 acres of Open Space use
- Public Facility – 2.84 acres for future sewer lift station and electrical substation (within the Specific Plan Area)

Since the Proposed Project includes 500,000 square feet of cold storage warehouse, trucks associated with the cold storage warehouse are assumed to have transport refrigeration units (TRUs) and are estimated as 188 trucks (376 two-way truck trips per day).⁷ The Proposed Project Trip Generation would have a total of 2,504 trucks trip per day.⁸

The Proposed Project is in the western portion of the March JPA planning area, west of Cactus Avenue’s current terminus, east and south of the Mission Grove neighborhood, and north of the Orangecrest neighborhood in the City of Riverside.⁹ Based on the aerial photographs, South Coast AQMD staff finds that the nearest sensitive receptors (e.g., residences) are adjacent to the north, south, and west of the Proposed Project boundaries. The Proposed Project’s construction is estimated to begin in June 2023 and last approximately 4.5 years.¹⁰ The proposed Project would be fully occupied and operational in Fall 2027.¹¹

South Coast AQMD Staff’s Comments on the Draft EIR

Health Risk Assessment (HRA) Analysis

Averaging Time Utilized in Construction and Operational HRA Analysis

Based on the construction and operational HRA output files, the averaging time for the analysis is ANNUAL.¹² However, according to the South Coast AQMD Risk Assessment Procedures v8.1, the detailed HRA utilizing AERMOD should be run using the averaging time PERIOD and 1-hour.¹³ Since the construction and operational HRAs of the Proposed Project using ANNUAL, South Coast AQMD staff recommend that the Lead Agency re-run the construction and operational HRAs utilizing PERIOD and 1-hour averaging time to determine the health risk impacts to the sensitive receptors and off-site workers and include the revised results in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

A-8.3

Building Downwash Option in Operational HRA

Based on the South Coast AQMD staff review, the HRA modeling file does not include the building downwash option in the operational HRA. The ground-level pollutant concentrations near the building would be underestimated if the downwash effects were absent in the dispersion

A-8.4

⁷ Ibid. Page 4.2-24.

⁸ Ibid. Page 4.15-7.

⁹ Ibid. Page 3-1.

¹⁰ Ibid. Page 3-19.

¹¹ Ibid.

¹² Ibid. Appendix A – Mobile Source Health Risk Assessment. Pages 73 and 245 of PDF.

modeling. Therefore, building downwash should be considered for the Proposed Project operation in order to predict more accurate ground-level concentrations. In addition, the truck idling emissions would need to be estimated separately and included in the dispersion modeling analysis and HRA as point sources. However, the operational HRA modeling file indicates those emissions as line volume source types. Thus, truck idling emissions should be modeled as point sources with a building downwash option selected. In addition, it needs to be clarified in the Draft EIR if the stationary combustion engines (e.g., diesel firewater pump, diesel emergency generator, etc.) will be used on-site during operation. If any of these will be used when implementing the Proposed Project, they will need to be added as additional sources to the HRA and dispersion modeling files. Therefore, South Coast AQMD staff recommend that the Lead Agency revise the operational HRA modeling by incorporating the above recommendations and including the HRA results in the Final EIR. If the HRA modeling is not revised and included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included.

California Emissions Estimator Model (CalEEMod) Analysis

The Lead Agency utilizes California Emissions Estimator Model (CalEEMod) version 2022.1 to calculate the Proposed project’s emissions from construction and operational activities and includes the CalEEMod output files in Appendix C-1: Air Quality Technical Report.¹⁴ South Coast AQMD staff has the following concerns regarding the CalEEMod output files and recommends that the Lead Agency review and revise the CalEEMod analysis and include the revision in the Final EIR.

User-Defined Land Use Subtype and Truck Fleet Mix

In the operational CalEEMod output files, besides the “unrefrigerated warehouse-no rail” and “refrigerated warehouse-no rail” land use types, “user-defined industrial” is added.¹⁵ According to the CalEEMod User Guide, the “user-defined” may be selected to characterize project land use subtypes that are not included in CalEEMod. If selected, all data on the Land Use screen will need to be input manually.¹⁶ However, the size metric, lot acreage, and the floor square area use are all set to zero under the “user-defined industrial” land use subtype.

↑
A-8.5

In addition, the truck fleet mix is input under the “user-defined industrial” but not in the “unrefrigerated warehouse-no rail” and “refrigerated warehouse-no rail” land use. This possibly leads to underestimating the heavy-duty truck emissions for warehouse activities since no data is filled under this “user-defined industrial” land use subtype.

Therefore, South Coast AQMD staff recommends that the Lead Agency explain why the land use is separated in the CalEEMod analysis; why the fleet mix is not under the “unrefrigerated warehouse-no rail” and “refrigerated warehouse-no rail” land use and include the explanation in the Final EIR. If the explanation is not included in the Final EIR, the Lead Agency should provide reasons for not having them supported by substantial evidence in the record.

¹⁵ *Ibid.* Appendix C-1: Air Quality Technical Report. Page 223 of PDF.

¹⁶ California Emissions Estimator Model (CalEEMod) Version 2022.1 User Guide. Access at: https://www.caleemod.com/documents/user-guide/CalEEMod_User_Guide_v2022.1.pdf

Trip Generations

Appendix N – Transportation of the Draft EIR discusses the Proposed Project trip generation and includes the summary in Table 4-2 of the Project Total Trips of 35,314 daily, in which 2,054 trucks trips per day.¹⁷ Although the Project Total Trips from Appendix N match with Appendix C-1 CalEEMod output files,¹⁸ the trip numbers under each land use type are different from Appendix N, an example is shown in Table A to demonstrate the difference.

A-8.6

Table A

Example of the Difference in Trip Numbers between Appendix N and Appendix C-1

Land Use Type	Appendix N – Transportation	Appendix C-1: Air Quality Technical Report – CalEEMod Output Files
Refrigerated Warehouse-No Rail	1,062 trips/weekday	669 trips/weekday

Due to the differences, South Coast AQMD staff recommends that the Lead Agency explain the differences and/or revise Appendix N and Appendix C-1 to present consistent values to avoid discrepancies throughout the documents and include the revision in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included.

Greenhouse Gas Emissions Analysis

Based on the Draft EIR, the Proposed Project's greenhouse gas (GHG) emissions are calculated using CalEEMod latest version (v2022.1).¹⁹ The amortized annual construction emissions and Proposed Project GHG emissions prior to mitigations are shown in Tables 4.7-6 and 4.7-7.²⁰ To reduce GHG emissions, the Lead Agency proposes MM-GHG-1 to MM-GHG-11²¹ and concludes that the Proposed Project's GHG emissions would be less than significant with mitigation incorporated.²² Table 4.7-8 shows the mitigated Proposed Project's total CO₂e emissions of 91,010.58 metric tons per year (MT/yr CO₂e).²³ However, South Coast AQMD staff has concerns about the conclusion of “less than significant with mitigation incorporated” since the Proposed Project's total GHG emissions with mitigation are greater than the GHG CEQA significance thresholds of 10,000 MT/yr CO₂e.²⁴ Thus, South Coast AQMD staff recommends that the Lead Agency provide an explanation of how the “less than significant with mitigation incorporated” conclusion is determined in the Final EIR. In the event that the “less than significant with mitigation incorporated” conclusion is incorrect, it's recommended that the Lead Agency revise the GHG emissions section with the correct determination and include the revision in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included.

²³ *Ibid.*

²⁴ South Coast AQMD CEQA Significance Thresholds. Access at: <http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf>

Additionally, the Draft EIR discusses the cumulative effects conclusion under the GHG section and indicates the result as “less than cumulatively considerable.”²⁵ As mentioned in the above comment, the GHG emissions would be significant and unavoidable after incorporated mitigation due to the exceedance in the CEQA significance thresholds of 10,000 MTCO₂e/year; thus, the conclusion for the cumulative effects should be addressed as cumulatively considerable and not as less than cumulative considerable. Therefore, South Coast AQMD staff recommends that the Lead Agency revise the cumulative effects discussion under the GHG section and include the revision in the Final EIR. If the revision is not included in the Final EIR, the Lead Agency should provide reasons supported by substantial evidence in the record to explain why the revision is not included.

A-8.7
Cont.

Additional Air Quality and Greenhouse Gas Mitigation Measures

According to the Draft EIR, the maximum daily emissions from the Proposed Project are significant (VOC for construction²⁶ and VOC, NOx, CO, and PM10 for operation²⁷) prior to mitigations. To reduce the emissions from construction and operational activities, the Lead Agency proposes mitigation measures from MM AQ-1 to MM AQ-15²⁸ and project design features PDF-AQ-1 to PDF-AQ-11.²⁹ Similarly, the Lead Agency proposes MM-GHG-1 to MM-GHG-11³⁰ and PDF-GHG-1³¹ to reduce the Proposed Project’s GHG emissions in the Draft EIR.

The South Coast AQMD staff strongly encourages the Lead Agency to review the below references and consider including the additional recommended mitigation measures in the Final EIR.

South Coast AQMD Permits and Responsible Agency

If the implementation of the Proposed Project would require the use of new stationary equipment, including but not limited to emergency generators, fire water pumps, boilers, etc., permits from South Coast AQMD are required. The Final EIR should include a discussion on stationary equipment requiring South Coast AQMD permits and identify South Coast AQMD as a Responsible Agency for the Proposed Project. Any assumptions used for the stationary sources in the Final EIR will also be used as the basis for the permit conditions and limits for the Proposed Project. Please contact South Coast AQMD’s Engineering and Permitting staff at (909) 396-3385 for questions on permits. For more general information on permits, please visit South Coast AQMD’s webpage at: <http://www.aqmd.gov/home/permits>.

A-8.9

Conclusion

Pursuant to California Public Resources Code section 21092.5(a) and CEQA Guidelines section 15088(b), South Coast AQMD staff requests that the Lead Agency provide South Coast AQMD staff with written responses to all comments contained herein, at least ten days prior to the certification of the Final EIR.³⁵ In addition, when the Lead Agency’s position is at variance with recommendations raised in the comments, the issues raised in the comments should be addressed in detail, giving reasons why specific comments and suggestions are not accepted. There should be good faith and reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice (CEQA Guidelines §15088(c)). Conclusory statements do not facilitate the purpose and goal of CEQA on public disclosure and are not meaningful, informative, or useful to decision-makers and to the public who are interested in the Proposed Project.

A-8.10

South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Danica Nguyen, Air Quality Specialist, at dnguyen1@aqmd.gov should you have any questions.

Sincerely,

Sam Wang

Letter A-8

South Coast Air Quality Management District March 9, 2023

- A-8.1** This comment is an email transmittal of the comment letter. Specific comments regarding the Draft EIR are provided and responded to below.
- A-8.2** This comment is introductory in nature and summarizes Project information from the Draft EIR. To clarify with respect to what appear to be a couple of typographical errors in the comment, the Project includes a Conservation Easement, and the estimated truck trip generation is 2,054 trucks per day per Table 4.15-1, Project Trip Generation Summary, of the Draft EIR. Specific comments regarding the Draft EIR are provided and responded to below.
- A-8.3** This comment states that the analysis should have been run in AERMOD utilizing the PERIOD and 1-Hour averaging time options as opposed to the ANNUAL averaging time option. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the PERIOD and ANNUAL options return identical results. The PERIOD averaging time option averages pollutant concentrations over the entire period of meteorological data, whereas the ANNUAL averaging time option averages pollutant concentrations over one year. However, per the AERMOD user guide, when multi-year meteorological data sets are used, the ANNUAL option outputs the average of the ANNUAL values across the years of data processed. Since the meteorological data set used for this Project includes five years of data, when the ANNUAL option is selected, the model outputs the average concentration for the entire data set, the same as would be output using the PERIOD option. In response to this comment, the model was re-run for both construction and operational health risks utilizing the PERIOD averaging time option, which resulted in identical pollutant concentrations as the previous output which had utilized the ANNUAL averaging time option. The revised model outputs provided in Appendix C-4 of this Final EIR demonstrate that the PERIOD and ANNUAL averaging time options result in identical pollutant concentrations. (Appendix C-4)
- Additionally, the 1-Hour averaging time option is not required since there are no 1-hour acute standards associated with diesel particulate matter (DPM) and providing a 1-hour concentration would not produce meaningful information that could be compared against any adopted standard or threshold (since none exists for a 1-hour DPM concentration). As such, since the only toxic air contaminant (TAC) emitted by the proposed Project is DPM, which does not have an acute REL (meaning there are no expected acute health impacts), the 1 hour averaging time option is not necessary for acute cancer health risks associated with TAC emissions from diesel particulate matter. (Appendix C-4 of the Final EIR)
- A-8.4** This comment states that the analysis should have been performed utilizing the building downwash option in order to account for any impacts buildings may have on ground level concentrations, and that pollutant concentrations near the building may be underestimated without inclusion of building downwash in the modeling. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4), per the AERMOD Users Guide, the building downwash algorithms do not apply to volume sources (including line volume sources). Furthermore, consistent with the SCAQMD's Risk Assessment Procedures Version 8.1 Appendix X (page X-3), the building downwash algorithm only applies to point sources and does not affect volume sources: "The building downwash algorithms only affect point sources and do not affect volume or area sources." The Project's DPM emissions come from trucks

and as explained below, are properly modeled as line volume sources. Therefore, the building downwash algorithms do not apply and the inclusion of building downwash in the analysis would not impact ground level concentrations, or pollutant concentrations near the buildings.

Additionally, the comment states that truck idling emissions should be modeled using point sources rather than line volume sources. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the use of the volume source algorithm in AERMOD to represent truck idling, instead of the point source algorithm, is justified based on several factors:

1. **Nature of Emissions:** Truck idling emissions are characterized by a diffused and dispersed emission pattern rather than a concentrated point source. Idling emissions occur over a larger area, typically surrounding the truck, rather than originating from a single point. The volume source algorithm is better suited to represent such diffuse emissions as it distributes the emissions over a specified volume, resulting in a more realistic representation.
2. **Dispersion Characteristics:** The dispersion characteristics of idling emissions are different from those of point source emissions. Point sources generally have a well-defined and predictable plume behavior, whereas idling emissions tend to disperse more quickly and unevenly due to factors like wind conditions, vehicle movements, and local topography. The volume source algorithm accounts for the dispersion of emissions in a more accurate and realistic manner, considering the complex interactions with the surrounding environment.
3. **Modeling Accuracy:** The volume source algorithm provides more accurate modeling results for truck idling emissions compared to the point source algorithm. By distributing emissions across a volume, it allows for better representation of the spatial distribution and concentration of pollutants. This increased accuracy is particularly important when assessing the impact of idling emissions on air quality in areas with complex geometries or near sensitive receptors.

It is important to note that the choice between the volume source algorithm and the point source algorithm is based on the specific characteristics of the emission source and the modeling objectives. In some cases, such as for point sources with well-defined plumes (such as smoke stacks), the point source algorithm may be more appropriate. However, for representing truck idling emissions like those associated with this Project, the volume source algorithm is a better option due to its ability to capture the diffuse and dispersed nature of these emissions. (Appendix C-4 of the Final EIR)

The comment also requests clarification as to whether stationary combustion engines will be used on-site during operation. As explained in the Recirculated Section 4.2, Air Quality, no stationary combustion engines such as emergency generators or fire pumps are proposed as part of the Project. Further, MM-AQ-24 was added to prohibit the use of diesel back-up generators. For analysis purposes, however, Recirculated Section 4.2, Air Quality, conservatively assumed the installation of nineteen 300-horsepower diesel-powered generators, operating up to one hour per day, one day per week, for up to 50 hours per year for maintenance and testing purposes. Under mitigated conditions, the Project was assumed to utilize Tier 4 generators.

South Coast AQMD staff reviewed the recirculated Project AQIA and Project HRA and did not provide further comment on this issue in its letter dated February 23, 2024.

A-8.5 This comment questions the user-defined land use subtype and truck fleet mix. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the user-defined industrial land use was modeled in CalEEMod in order to separate passenger car and truck vehicle trips. The land use is separated in the CalEEMod analysis into “user defined industrial” and “user defined commercial” land uses to account for emissions resulting from truck trips only and allows the truck trip lengths associated with industrial and commercial uses to be adjusted consistent with SCAQMD guidance. For example, the truck trip length for trucks associated with the industrial and commercial portion was estimated to be 32.03 miles as explained in the Air Quality Impact Analysis (Appendix C-1) and Recirculated Section 4.2, Air Quality. This truck trip length and truck trips input in CalEEMod were derived based on the weighted average fleet mix of trucks by land use as summarized on Table 5-7 in Appendix C-1. As such, the number of truck trips input into CalEEMod are based on the truck trips and the weighted fleet mix as calculated in the traffic analysis for the Project. Therefore, emissions are appropriately calculated for each truck class by the percentage weight identified in the analysis. An excerpt of Table 5-7 from Appendix C-1 is provided below and shows the weighted average of truck by classification for all land uses:

TABLE 5-7: TRUCK FLEET MIX

Land Use	% Vehicle Type			
	LHDT1	LHDT2	MHDT	HHDT
Building B: High-Cube Fulfillment Center	68.66%	13.32%	3.81%	14.21%
Building C: High-Cube Fulfillment Center				
High-Cube Cold Storage Use				
Remaining Industrial: High-Cube Fulfillment Center				
Business Park				
Business Park (Mixed-Use, 75%)				

Note: Project-specific truck fleet mix is based on the number of trips generated by each truck type (LHDT1, LHDT2, MHDT, and HHDT) relative to the total number of truck trips.

Passenger car trips as well as area, energy, water, and waste emissions were modeled under the unrefrigerated and refrigerated warehouse land use types and are based on the trips calculated in the traffic analysis for the Project. As such, inputting non-zero values for acreage, building square footage, and landscape area in the user defined land uses would result in a double counting of emissions from area, energy, water, waste, and refrigerants. (Appendix C-4)

A-8.6 This comment states that the total Project trips that were modeled in CalEEMod may not match those presented in the transportation section of the Draft EIR. As explained above in Response A-8.5 and the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), passenger car and truck trips were separated based on land use, with passenger car trips being modeled under the unrefrigerated and refrigerated warehouse, Office Park, Regional Shopping Center and City Park land uses; and truck trips being modeled using the user-defined industrial and commercial land uses. As shown on Table 4.15-1 of the Draft EIR, a total of 5,172 passenger car trips are attributed to the industrial warehouse uses of the Project. Accounting for internal capture, this is reduced to 5,042 passenger car trips per day, which matches the number of trips modeled in CalEEMod for the unrefrigerated and refrigerated warehouse uses.

The user-defined industrial land use in CalEEMod was utilized for modeling a total of 1,351 daily truck trips from the industrial land uses and 705 trucks from the commercial (business park) land uses. This value matches the total number of truck trips presented in Appendix N-2 of the EIR for the combined industrial and commercial land uses. (Appendix C-4 of the Final EIR)

As shown in the following excerpt from Table 4-2 of the Project Traffic Analysis (Appendix N-2), the total trips for all land uses are summarized as 35,314 trips – consisting of 2,054 truck trips and 33,260 passenger vehicle trips as shown.

Total Passenger Cars	1,356	462	1,818	911	2,442	3,354	34,116	856	815	1,671
Internal Trip Reduction ³	-86	-86	-172	-42	-42	-84	-856	-21	-21	-42
Total Trucks	83	32	115	33	86	119	2,054	9	4	13
Project Total Trips	1,353	408	1,761	902	2,486	3,389	35,314	844	798	1,642

Similarly, the following excerpt from Appendix C-1, shows that the total trips modeled in CalEEMod are 35,317 trips which is 3 trips higher than the 35,314 trips in Appendix N-2 (due to rounding in CalEEMod). Additionally, as noted above, the “user-defined industrial” and “user defined commercial” land use were utilized to model truck trips and to ensure the appropriate truck trip lengths and consequently emissions from trucks were modeled. If the two “user defined” land use categories are totaled, this equals 2,056 trips which represent truck trips and is actually 2 trips higher (due to rounding) than the 2,054 truck trips as illustrated in Appendix N-2. As shown, the passenger vehicle and truck trips are appropriately modeled in CalEEMod and no further changes are required. (Appendix C-4 of the Final EIR)

5.10.1.1. Unmitigated

5.10.1.2. Mitigated

A-8.7 This comment questions the omission of SCAQMD’s numeric threshold for GHG emissions. The suggested revision has not been included in the EIR for the following reasons.

As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), March JPA recognizes that SCAQMD has a numeric threshold for industrial projects, but March JPA has not adopted this or any other numeric threshold of significance. There is no requirement under CEQA, the CEQA Guidelines, caselaw or SCAQMD’s adopted GHG thresholds to utilize a numeric threshold of significance to determine a Project’s GHG impacts.

Instead, and as described in Section 4.7, Greenhouse Gas Emissions, of the Draft EIR, the proposed Project was evaluated on the basis of whether or not it would conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing GHG emissions. Importantly, March JPA evaluated the Project’s impact on GHG based on consistency with the Riverside County Climate Action Plan (CAP), which is a qualified GHG reduction plan under CEQA Guidelines section 15183.5(b). “Pursuant to sections 15064(h)(3) and 15130(d), a lead agency may determine that a project’s incremental contribution to a cumulative effect is not cumulatively considerable if the project complies with the requirements in a previously adopted plan or mitigation program under specified circumstances.” CEQA Guidelines § 15183.5. The Project site is located in the March JPA jurisdiction within Riverside County. Although the County of Riverside does not currently have direct authority over the Project, in June 2025, Riverside County will assume full land use control over the March JPA Planning Area, due to the planned reversion of March JPA’s land use authority to the County of Riverside. Accordingly, consistency with the County’s CAP provides an additional metric to determine if the Project’s impacts are significant and provides an appropriate set of policies that are intended to guide development within unincorporated Riverside County. (Appendix C-4 of the Final EIR)

March JPA’s approach is consistent with SCAQMD’s Tier 2 threshold, which “consists of determining whether or not the project is consistent with a GHG reduction plan that may be part of a local general plan, for example. The concept embodied in this tier is equivalent to the existing concept of consistency in CEQA Guidelines §§15064(h)(3), 15125(d), or 15152(a). The GHG reduction plan must, at a minimum, comply with AB 32 GHG reduction goals; include emissions estimates agreed upon by either CARB or the AQMD, have been analyzed under CEQA, and have a certified Final CEQA document. Further, the GHG reduction plan must include a GHG emissions inventory tracking mechanism; process to monitor progress in achieving GHG emission reduction targets, and a commitment to remedy the excess emissions if GHG reduction goals are not met (enforcement). If the proposed project is consistent with the qualifying local GHG reduction plan, it is not significant for GHG emissions.”¹ (Appendix C-4 of the Final EIR)

In addition to meeting CEQA Guidelines 15183.5(b), the Riverside County CAP meets SCAQMD’s adopted Tier 2 standard. “The County’s GHG reduction targets are consistent with the AB 32, SB 32, and EO S-3-05, and ensure that the County is providing GHG reductions locally that will complement the State and international efforts of stabilizing climate change.” CAP Screening Tables, page 3. The County analyzed the CAP in an addendum to the Riverside County General Plan Environmental Impact

¹ [https://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-\(ghg\)-ceqa-significance-thresholds/ghgboardsynopsis.pdf?sfvrsn=2](https://www.aqmd.gov/docs/default-source/ceqa/handbook/greenhouse-gases-(ghg)-ceqa-significance-thresholds/ghgboardsynopsis.pdf?sfvrsn=2)

Report No. 521², and filed a Notice of Determination on December 30, 2019.³ The Riverside County CAP includes a GHG emissions inventory monitoring methodology (CAP section 7.6) and a commitment to update the CAP on or before January 1, 2030. The County's "program will ensure that the effectiveness of all implementation measures are reviewed in advance of 2030 and adjustments to assigned point values accounting for actual effectiveness are made in the post-2030 CAP. If measures included in this CAP Update are found to be ineffective, those measures will be removed or revised in the post-2030 CAP." As explained on pages 3-4 of the CAP screening tables, the CAP is a qualified GHG reduction plan under CEQA Guidelines section 15183.5. (Appendix C-4 of the Final EIR)

As explained in the CAP:

"No single project has the ability to generate GHG emissions in sufficient quantities to change the global climate. Rather, it is the incremental contribution of all past, present, and future projects that when combined with all other anthropogenic sources of GHG emissions globally generates climate change impacts. Because GHG emissions are only important in the context of cumulative emissions, the focus of the analysis is on answering the question of whether incremental contributions of GHGs are a cumulatively considerable contribution to climate change impacts. The CAP Update includes a set of mitigation measures designed to substantially lessen cumulative impacts associated with GHG emissions as described in CEQA Guidelines §15130(a)(3), in determining if a project's effects would result in significant impacts." CAP screening tables, page 3.

Under the CAP, projects "that are determined to be above the 3,000 MT CO₂e emissions level shall quantify and disclose the anticipated GHG emissions of the proposed development." The EIR here quantified and disclosed the anticipated GHG emissions and used the latest version of the California Emissions Estimator Model (CalEEMod). Section 4.7, Greenhouse Gas Emissions, and Project GHG Analysis (Appendix I). (Appendix C-4 of the Final EIR)

Under the CAP, development projects can use screening tables that "assign points for each option incorporated into a project as mitigation or a project design feature (collectively referred to as "features"). The point values correspond to the minimum emissions reduction expected from each feature. The menu of features allows maximum flexibility and options for how development projects can implement the GHG reduction measures. Projects that garner at least 100 points will be consistent with the reduction quantities anticipated in the County's CAP Update. Consistent with CEQA Guidelines, such projects would be determined to have a less than significant individual and cumulative impact for GHG emissions." CAP screening table 7-8. See also Project GHG Analysis (Appendix I) and Section 4.7, Greenhouse Gas Emissions. (Appendix C-4 of the Final EIR). As Section 4.7, Greenhouse Gas Emissions, states "GHG emissions inherently contribute to cumulative impacts, and, thus, any additional GHG emissions would result in a cumulative impact" but consistency with statewide, regional, and local plans adopted for the purpose of reducing GHG emissions demonstrates a project's effects on climate change would not be cumulatively considerable.

As explained In Section 4.7, Greenhouse Gas Emissions, and the Project GHG Analysis (Appendix I):

² <https://rctmapplanning.rivcoveb.acsitereactor.com/sites/g/files/aldnop416/files/migrated/Portals-14-CAP-2019-AddendumNo1-EIRNo521.pdf>

³ <https://rctmapplanning.rivcoveb.acsitereactor.com/sites/g/files/aldnop416/files/migrated/Portals-14-CAP-2019-FNOD.pdf>
<https://rctmapplanning.rivcoveb.acsitereactor.com/sites/g/files/aldnop416/files/migrated/Portals-14-CAP-2019-FNOD.pdf>

“The Project shall implement Screening Table Measures providing for a minimum 100 points per the County Screening Tables. With implementation of MM GHG-1 through MM GHG-~~11~~12, the Project would be consistent with the CAP’s requirement to achieve at least 100 points and thus the Project is considered to have a less than significant individual and cumulatively considerable impact on GHG emissions. The March JPA shall verify incorporation of the identified Screening Table Measures within the Project building plans and site designs prior to the issuance of building permit(s) and/or site plans (as applicable). The March JPA shall verify implementation of the identified Screening Table Measures prior to the issuance of Certificate(s) of Occupancy.”

This language has been clarified in the Final EIR to ensure that each Project site plan shall provide documentation demonstrating implementation of Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables. MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables. (Appendix C-4 of the Final EIR)

With implementation of MM-GHG-1 through MM-GHG-12, Section 4.7, Greenhouse Gas Emissions, determined that the proposed Project would be consistent with the Riverside County CAP and would therefore have a less than significant impact. As further explained in Response A-8.8, below, additional mitigation measures have been added to the Project that would further reduce the Project’s GHG emissions. Because March JPA has not adopted a numeric threshold, and there is no requirement to do so, the revisions to the EIR suggested by the commenting agency have not been made. As explained above, the Project’s GHG emissions and potential impacts have been analyzed in the Draft EIR consistent with the requirements of CEQA and mitigation measures have been incorporated to further reduce the Project’s GHG emissions. (Appendix C-4 of the Final EIR)

- A-8.8** This comment requests consideration of additional mitigation measures to address air quality and GHG emissions. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for a detailed discussion and list of the mitigation measures being added to the Project, and Topical Response 2 – Air Quality, for an analysis of how the Project and its mitigation measures are consistent with the mitigation measures suggested for consideration by the commenting agency: (1) Office of the California Attorney General Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act; (2) Appendices IV-A, IV-B, and IV-C of the SCAQMD 2022 AQMP; and (3) U.S. EPA’s Mobile Source Pollution – Environmental Justice and Transportation.
- A-8.9** This comment states that should the proposed Project require the use of new stationary equipment, including emergency generators or fire pumps, permits from SCAQMD would be required, and recommends that this discussion be included in the Final EIR. There are no required or planned stationary equipment that require permits from SCAQMD. Please see the Final EIR and Appendix C-1 for analysis of emissions from potential emergency generators, including the application of MM-AQ-24.
- A-8.10** This concluding comment is conclusory in nature and includes the commenting agency’s request for written responses to comments prior to certification of the Final EIR in accordance with the purpose and goals of CEQA on public disclosure. Consistent with the requirements of CEQA and the commenting agency’s request, responses to the commenting agency’s specific comments on the Draft EIR are provided and responded to above.

March Joint Powers Authority
Planning Department
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

Subject: City of Riverside’s Review of the Draft Environmental Impact Report for the West Campus Upper Plateau Project

Dear Mr. Fairbanks:

Thank you for the opportunity to comment on March Joint Powers Authority’s Draft Environmental Impact Report (DEIR) for the West Campus Upper Plateau Project, provided to the City on January 9, 2023.

The City of Riverside (City) understands that the project consists of the creation of a Specific Plan that will provide development standards, design guidelines, infrastructure master plans, maintenance responsibilities, phasing schedule, and implementation procedures necessary to develop Project Site. The City further understands that the Specific Plan will create 42.22 acres of Mixed Use, 65.32 acres of Business Park, 143.31 acres of Industrial, 37.91 acres of streets and roadways, 78 acres of developed Parks, Recreation, and Open Space, and 2.84 acres of Public Facilities.

A-9.2

The City has reviewed the Draft West Campus Upper Plateau Specific Plan (Version 5) and submits the attached Summary of Comments for consideration.

In addition, the City has reviewed the DEIR and we wish to provide the following comments:

Public Works – Traffic Engineering Division:

- We request an opportunity to review the Construction Management Plan and request that March JPA schedule a meeting to discuss the traffic signal warrant analysis and associated improvements. Additionally, we request that March JPA coordinate with

A-9.3

the Riverside Transit Authority (RTA) on any proposed bus stop amenities for Barton Street. Please provide information on the timeline or phasing program for any improvements.

- For your reference, please see the attached Traffic Analysis with additional comments.

Appendix N – Transportation

- Section 1.10: Traffic Calming – Barton Street
 - The project should be conditioned to construct the speed feedback signs, speed limit signs, advisory speed signs, curb ahead warning signs and associated striping along Barton Street. Locations and quantities to be determined
- Section 1.6.1: Site Adjacent and Site Access Recommendations – *Recommendation #5 Barton Street*
 - We request that adequate on-street parking be provided adjacent to the trail. If on-street parking is prohibited, then is there an off-street parking facility available? Where are trail users supposed to park?
 - Please evaluate adding a parking lane next to the multi-purpose trail segment and adding “No Parking” signs for the rest of the roadway segment.
- Table 1-4: Summary of Improvements and Rough Order of Magnitude Costs
 - If striping plans are not provided prior to acceptance of the traffic study, can a condition of approval be added to the project to provide the striping plan? (Striping plans are to show feasibility of all the improvements)
- Section 3.5: Truck Routes
 - The project should be conditioned to work with the City to finalize appropriate improvements and mitigation measures to ensure that project truck traffic adheres to adopted truck routes.

A-9.4

Community & Economic Development Department – Planning Division:

Chapter 3.5 – Proposed Project

Section 3.5.1: Specific Plan Area

- **P117** – Uses table – This section of the Project Description indicates that “energy generation and distribution” are prohibited throughout all areas of the SPA. This would seem to prohibit rooftop or ground-mounted photovoltaics systems; however, elsewhere in the DEIR, installation of solar photovoltaics is required as a mitigation measure for various environmental impacts; please clarify. Additionally, the City recommends that the uses permitted within the Specific Plan be expanded to allow clean energy production including but not limited to hydrogen, solar and similar non-emitting renewable energy sources. Nonrenewable energy generation facilities (natural gas, etc.) should continue to be prohibited within the SPA.

A-9.5

- **P119 – Mixed Use Parcels** – The Project Description, and the proposed Specific Plan, propose no vehicular access from Barton Street for any of the Mixed Use parcels having frontage on this proposed street. However, given that the proposed Specific Plan allows for community-serving retail uses – and, indeed, assumes that 25% of the buildout of these parcels will be with retail uses – vehicular access from Barton Street would likely be necessary for the viability of retail and similar uses.
If (and only if) Industrial-type uses, including Business Enterprise uses, are eliminated as permitted uses in the Mixed Use Zone as recommended by the City, the proposed Specific Plan should consider allowing vehicular access from Barton Street for neighborhood and visitor-serving retail uses only for the proposed Mixed-Use parcels along Barton Street, provided there is no vehicular access to Airman Drive. Vehicular through-access from Barton Street to Airman Drive and Cactus Avenue across the Mixed Use parcels should continue to be strictly prohibited. See also comments on Section 4.15 – Transportation.
The DEIR and corresponding transportation and VMT analyses should be revised to analyze potential impacts and identify any necessary mitigation measures for this scenario if implemented.

A-9.6

Section 3.5.2: Project Design Features

- **P125 – PDF-NOI-1** – This PDF generally limits construction hours from 6am-10pm on any given day. In order to avoid potential noise impacts to surrounding sensitive receptors (i.e., residential neighborhoods), all outdoor construction activities throughout the project area should conform to City Noise Code (RMC Title 7) hours of operation (7-7, 8-5 Saturday, no construction Sunday or holidays).
- **P126 – PDF-TRA-1 – Barton Street** – This PDF states that the multipurpose trail “will only be accommodated for portions of Barton Street adjacent to the open space/parks.” It is unclear from the project description which segments of the proposed Barton Street extension will and will not be constructed with the multipurpose trail improvements; and, further, it is unclear why this stipulation is proposed. Multipurpose trail connectivity should be accommodated along the entire length of the Barton Street extension in order to ensure connectivity and usability.
- **P127 – PDF-TRA-3 – Truck route enforcement** – This PDF states that truck route enforcement “shall be funded for 2 years.” The project description indicates that construction of the project is anticipated to last at least 4.5 years; as such, it is unclear why 1) funding of the enforcement mechanism is limited to only 2 years; 2) when this 2-year funding period is intended to begin; and 3) how truck route enforcement will be funded and implemented after the conclusion of this 2-year period.
- **Figure 3-7H – Gas Backbone** – PDF-AQ-4 states that no natural gas infrastructure will be accommodated; however, this figure depicts the proposed construction of a full natural gas backbone infrastructure throughout the SPA. Why is this backbone network

A-9.7

A-9.8

A-9.9

A-9.10

necessary if no natural gas connections for future development will be accommodated?

↑ A-9.10
| Cont.

Chapter 4 – Environmental Analysis

- **P172 – Cumulative Effects Analysis Methodology** – This section of the DEIR references a Figure 4-1, Cumulative Development Location Map, but this figure does not appear to be provided. Please clarify or revise the DEIR to incorporate this figure.

| A-9.11

Section 4.2 – Air Quality

- **P242 – Operational Health Risk Assessment** – The DEIR should evaluate the potential health impacts of exposure to DPM and other emissions related to operation of the project on users of the proposed active park, particularly children and similarly vulnerable populations. Measures should be taken to reduce exposure of park users to particulate matter emissions generated by the project should be to the greatest extent feasible.

| A-9.12

Section 4.4.1: Cultural Resources – Existing Conditions

- The integrity analysis for the Weapons Storage Area (WSA) Historic District was incorrectly completed as it analyzed historic integrity before determining eligibility. Eligibility must first be evaluated, then historic integrity is analyzed. The DEIR presents these items in the reverse. Per Chapter VIII of the National Register Bulletin #15, "Integrity is the ability of a property to convey its significance," and "Only after significance is fully established can you proceed to the issue of integrity." The significance of the structure is a key component of the integrity analysis as the weight of each aspect of integrity may vary based on the identified significance. For example, design will play more importance on a structure with architectural significance than a structure with significance for events. See page 45 of National Register Bulletin #15 for the steps in assessing integrity.
- Structures on the project site were not evaluated at the Riverside County level for designation as required by CEQA. Historical resources include only those that are eligible or listed within a local historical resources inventory.
- The evaluation of the WSA Igloos, states that the structures are the only of their kind in California yet asserts that they are not eligible for listing because they are not unique and other examples exists across the nation. The analysis does not consider local level of significance. As discussed in National Register Bulletin #15, "...if a property is of a type found throughout a State, or its boundaries extend over two States, but its importance relates only to a particular county, the property would be considered of local significance." While the WSA Igloos, may not have National significance, they are likely to have State and local significance, serving as the only examples in the State.

| A-9.13
↓

- The integrity analysis incorrectly applies integrity of association. Association is not solely connected to person of significance. Association include organization, agencies, groups, or events. Per National Register Bulletin #15, "Association is the direct link between an important historic event or person and the historic property." The analysis also incorrectly applies integrity of feeling. The analysis implies that feeling is directly connected to setting. Per National Register Bulletin #15, "Feeling is the property's expression of the aesthetic or historic sense of a particular period of time." Even if the setting has been altered, the structures may retain integrity of feeling as WSA Igloo provided there is sufficient presence of physical features that, taken together, convey the property's historic character.

A-9.13
Cont.

Section 4.4.5: Cultural Resources – Impacts Analysis

- The Impacts Analysis for Threshold 1 only discusses California Register and National Register eligibility and should include local register eligibility. This analysis may need to be adjusted based on previous comments.

A-9.14

Section 4.4.5: Cultural Resources – Cumulative Effects

- The analysis may need to be adjusted based on previous comments.

A-9.15

Section 4.5: Energy

- **P381 – Feasible Renewable Energy Features** – This section of the DEIR states that the "Specific Plan Area would install approximately [?] solar PV" – what quantity of solar PV is proposed to be installed?

A-9.16

Section 4.7: Greenhouse Gas Emissions

- **P439 – Table 4.7-3 Scoping Plan Consistency** – Action beginning "Further reduce vehicle miles traveled" – Response does not appear to address the specific action from the Scoping Plan as discusses employment growth projections for the RTP/SCS and AQMP and does not directly address the project's consistency with efforts to reduce VMT. This project will generate a substantial amount of new VMT and may be inconsistent with this Scoping Plan action.
- **P444 – Table 4.7-5 Project Consistency with the SCAG Connect SoCal RTP/SCS** – Measure "Reduce greenhouse gas emissions and improve air quality" – The project may be inconsistent with this measure. The statement "implementation of the Specific Plan would reduce traffic congestion, pollution, and fossil fuel dependence" is unsubstantiated and not supported by evidence. Other sections of this EIR identify significant and unavoidable impacts to criteria air pollutant emissions associated with operation of the project.

A-9.17

A-9.18

Section 4.10 – Land Use and Planning

- **P561 – Table 4.10-1: Project Consistency with March JPA General Plan Goals – Land Use Element Transportation Goal 8** – The project may not be consistent with this General Plan goal. Although public transit access exists within the general vicinity of the project area, and MM-GHG-11 would fund improvements to proximate transit facilities, there is no direct transit service or access to service within the majority of the SPA. Transit users wishing to access the Industrial or Business Park sections of the SPA (intersection of Cactus Avenue and Linebacker Drive) would need to traverse on foot or by bicycle approximately 1.5 miles via future Cactus Avenue and Brown Street to the nearest RTA bus stop (far side Alessandro Boulevard and Meridian Parkway) or 1.4 miles to the Moreno Valley/March Field Metrolink station. Transit users whose destinations are accessed from Bunker Hill, Airman or Arclight Drives would need to walk or cycle even further. Transit users wishing to access the Mixed Use sections of the SPA between Barton Street and Airman Drive would have a more reasonable 0.5-mile walking or cycling trip to the nearest RTA bus stop (far side Alessandro Boulevard and Barton Street), but would have effectively no access to the Moreno Valley/March Field Metrolink station. These conditions conflict with MJPA General Plan Goal 8 which promotes “adequate, affordable, equitably distributed and energy efficient [sic] public and mass transit services which promote mobility to, from, and within the planning area” (emphasis added). This conflict with the MJPA General Plan Land Use Element goals and policies could result in a potentially significant impact under Threshold LU-1. Appropriate mitigation measures should be developed and applied to the project, including but not limited to enhanced pedestrian connectivity to nearby transit facilities, last-mile solutions for equitable access to transit facilities, measures to promote transit use for employees and visitors to the project, and other measures as appropriate.
- **P567 – Table 4.10-1: Project Consistency with March JPA General Plan Goals – Housing** – The statement “housing is incompatible with airfield uses adjacent to the planning area” is unsubstantiated and contradicts the MARB/MIP LUCP, which only identifies residential development over 6.0du/ac (Compatibility Zone C2) or 3.0du/ac (Compatibility Zone C1) as incompatible land uses within these respective Compatibility Zones.
- **P570 – Table 4.10-1: Project Consistency with March JPA General Plan Goals – Resource Management Element – Goal 7:** This consistency assessment may need to be revised depending on revisions needed to Chapter 4.4 (Cultural Resources) - see previous comments on Section 4.4 Cultural Resources.

A-9.19

A-9.20

A-9.21

Section 4.11 – Noise

- **P623 – Onsite Operational Noise – Loading Dock Activity** – Site configurations, including loading dock locations, for all proposed parcels with the exception of the two proposed Plot Plans cannot reasonably be known at this level of analysis, and, as such,

A-9.22

potential noise impacts on surrounding sensitive receptors (i.e., residential uses to the north, west and south of the SPA) cannot be reliably estimated or evaluated. Potentially significant impacts related to onsite operational noise could therefore result if individual site design does not properly address noise impacts. Mitigation measures should be incorporated, or development standards should be written into the proposed Specific Plan, requiring that all loading docks be oriented away and fully screened by buildings or terrain with no direct line-of-sight to any surrounding residential land use for all parcels that would allow uses that involve loading and unloading of trucks.

A-9.22
Cont.

- **P651 – Figure 4.11-9 – Operational Noise Source Locations** – This figure suggests that the noise model did not assume any loading dock activity occurring on any of the Mixed-Use parcels; however, the proposed Specific Plan would allow “Business Enterprise” storage and distribution uses within the Mixed-Use areas, including warehousing uses up to 200,000 square feet, which should reasonably be expected to include potential loading dock areas. The model and outputs should be revised, and the analysis updated, to reflect this potential use within the Mixed-Use areas.

Section 4.12 – Population and Housing

- **P656 – 4.12.1 Existing Conditions – Jobs/Housing Balance** – This paragraph states that the four member jurisdictions of the MJPA are “recognized by the State of California as in compliance with Housing Element Law”; however, unincorporated Riverside County does not have an HCD-certified Housing Element as of March 2023 and is in an “out of compliance” status with Housing Element Law. The City of Riverside Housing Element was certified by HCD on September 25, 2022.

A-9.23

- **P661 – Housing Projections and P 663 – 4.12.7 – Cumulative Effects** – The DEIR concludes that, with the area increase of 2,600 jobs at project buildout, “the potential need to provide housing for approximately 2,600 employees is supported by existing conditions within unincorporated Riverside County or within surrounding cities within the County” and that this impact is less than significant and not cumulatively considerable. However, SCAG’s 6th Cycle RHNA Allocation Methodology, which determines the number of housing units each member jurisdiction must plan to accommodate within the 2021-2029 Housing Element cycle, relies heavily on population, household and employment growth projections from the 2016 Connect SoCal RTP/SCS. The 2016 RTP/SCS did not factor additional employment growth associated with the project into its growth forecast and, by extension, the RHNA allocation methodology does not account for the additional housing need induced by the project. By itself, this could be considered a potentially significant impact under threshold POP-1. Moreover, the 2016 RTP-SCS would not have incorporated other more recently adopted Specific Plans, Specific Plan Amendments and similar land use changes within the JPA and surrounding/member jurisdictions that result in additional employment growth that

A-9.24

would potentially cumulatively exceed the 2016 RTP/SCS growth projections and, by extension, the 6th Cycle RHNA allocation assigned to each jurisdiction that is necessary to accommodate the associated excess employment growth.

A-9.24
Cont.

Section 4.15 – Transportation

- **P696** – The DEIR states that “Additionally, direct access to retail uses would be via internal roadways of Airman Drive, Arclight Drive, Linebacker Drive and Bunker Hill. There would be no direct access to retail uses from Barton Street.” In order to provide opportunities for community-service retail uses to be established within the Mixed Use areas of the SPA, City Staff recommend that vehicular access to Mixed Use-zoned parcels fronting on Barton Street be permitted for non-industrial uses only; should the proposed Specific Plan be revised to permit vehicular access as such, this statement and the corresponding analysis in this Section of the DEIR should be revised accordingly.
- **P714 – 4.15.5 – Thresholds of Significance – VMT Impact Thresholds** – The DEIR states in this section that “The proposed Project would be considered a mix of retail, office, business park, medical, , research and development, and services.” This statement 1) does not identify the land use categorization rubric used to establish the constituent land uses within the project and 2) appears to have omitted significant components of the proposed land use program, i.e., high-cube fulfillment and cold storage warehouse, for example. The DEIR should clarify whether, and, if so, under which category, the multiple millions of square feet of warehousing and logistics-related land uses proposed were categorized for the purpose of determining appropriate significance thresholds for the Project’s VMT impacts.
- **P717 – 4.15.6 – Impacts Analysis – Specific Plan Area, Operations** – The DEIR states in this section describes physical improvements (e.g., “channelization”) that would prevent large vehicles such as trucks from making specified turning movements onto roadways within and surrounding the project area. The DEIR further concludes that “the above-mentioned improvements would enhance public transit, roadway, bicycle, or pedestrian facilities. The Project would not include any improvements that would interfere with the construction of pedestrian or bicycle facilities in the future. Therefore, no impacts to alternative transportation facilities would occur, and no mitigation measures are required.” This conclusion does not address potential future bus or other mass transit service that may be established within the SPA in the future to serve users accessing the proposed SPA. This conclusion should be reevaluated to address the potential for bus service on roadways within the SPA in the future and address whether there are potential impacts to future transit service that are not sufficiently addressed in the DEIR.

A-9.25

A-9.26

A-9.27

Chapter 5.5 – Growth-Inducing Impacts

- **P858** – The DEIR states that the project would stimulate population growth “consistent with employment growth envisioned in local and regional land use plans [...] because the planned growth of the Project and its land use intensity have been factored into the underlying growth projections of the SCAG 2020-2045 RTP/SCS.” This project involves land use changes that have not been adopted by the MJPA, are thus not reflected in the MJPA General Plan, and were therefore not a part of the baseline conditions used to prepare the 2020 RTP/SCS growth projections. For this reason, this conclusion is inaccurate.

A-9.28

Chapter 6.4 – Alternatives Under Consideration

- **P861 – Alternative 3 – Restricted Industrial Building Size Alternative** – There is no clear rationale offered for the reduction of industrial building size conceived under this alternative development scenario (two, 490,225-sf buildings in lieu of one, 1,225,000-sf buildings). This alternative could have just as easily evaluated a larger or smaller reduction in building size or division of this proposed parcel into more than two lots with similar FARs as that which was analyzed in the DEIR. There is further no clear explanation or rationale as to why other alternative scenarios, such as a development plan with a further reduced Industrial land use (in favor of expanded Mixed Use or Business Park land uses), or an alternative development plan with no Industrial land uses at all (opting instead for all Business Park, all Mixed Use, or a combination of both) was not considered. Reductions in developable square footage or potential employment resulting from reduced or eliminated Industrial land uses compared to the project could be offset by changes to the Specific Plan development standards governing maximum development intensity within the Business Park and/or Mixed Use areas. None of these scenarios would fail to meet any of the Project Objectives; all are within the reasonable range of alternatives warranting consideration by the Lead Agency and therefore warrant analysis as alternatives to the Project in addition to those considered in the DEIR.
- **P913 – Figure 6-1 – Reduced Development Area Alternative** – this figure does not appear to depict the Reduced Development Area alternative described in the DEIR and in fact appears to depict the project as proposed.

A-9.29

A-9.30

Appendix C-1 – Air Quality Report

- We request detailed information on how the project will comply with Rule 2305 and how future lease agreements will implement emission reducing strategies.
- Please include public signage which displays the South Coast Air Quality Management District's, or appropriate authority's, phone number to report violations.

A-9.31

Appendix C-2 – Health Risk Assessment

- The modeling and analysis should be revised evaluate the potential health impacts of exposure to DPM and other emissions related to operation of the project on users of the proposed active park, particularly children and similarly vulnerable populations.

A-9.32

Should you have any questions regarding this letter, please contact Scott Watson, Historic Preservation Officer, at (951) 826-5507, or by e-mail at swatson@riversideca.gov.

The City of Riverside appreciates your consideration of the comments provided in this letter. We thank you again for the opportunity to provide comments on this proposal and look forward to working with you in the future.

A-9.33

Sincerely,

Matthew Taylor
Principal Planner

 Phaedra Norton, City Attorney

1. Chapter ES.1 – Project Overview

a. Land Uses

- i. **Business Park (BP):** Includes warehousing up to 200,000sf as a permitted use. Recommend limiting to 100,000sf within 800ft of residential zone or use for consistency with City standards.
- ii. **Mixed Use (MU):** Not consistent with uses that typically comprise mixed-use districts in the City of Riverside. Recommend eliminate Business Enterprises uses from this land use designation.

A-9.34

2. Chapter 1 – Introduction

a. 1.2 – Specific Plan Objectives

- i. Recommend additional objective to be added: "Prioritize compatibility of new development with existing adjoining sensitive land uses, particularly residential neighborhoods, park and recreation areas, schools and places of worship through comprehensive and context-sensitive development and design standards."

A-9.35

b. 1.7 – Discretionary Actions

- i. **Plot Plans:** Why are these specific development applications included in the Specific Plan document? These should be subsequent rather than concurrent approvals.

A-9.36

3. Chapter 2 – Land Use

a. 2.3 – Land Use Compatibility

- i. There is no discussion in this section of land use compatibility with other adjoining sensitive uses including but not limited to residential neighborhoods, park, recreation and open space areas, schools and places of worship. Recommend this section be expanded to address how the Specific Plan preserves, maintains and promotes compatibility with adjoining and nearby land uses.

A-9.37

b. 2.4 – Land Use Plan

- i. **Business Park:** Includes warehousing up to 200,000sf as a permitted use. Recommend limiting to 100,000sf within 800ft of residential for consistency with City standards.
- ii. **Mixed Use:** Not consistent with uses that typically comprise mixed-use districts. Recommend eliminate Business Enterprise uses from this land use designation.

A-9.38

4. Chapter 3 – Development Regulations

a. 3.4 – Permitted, Conditional and Ancillary Uses

- i. **Table 3-1 – West Campus Upper Plateau Specific Plan Land Use Table**

A-9.39

1. Recommend prohibiting Business Enterprise uses in the Mixed Use District.
2. Recommend adding non-emitting, renewable energy generation and distribution facilities (including but not limited to hydrogen, solar photovoltaics, etc.) as a permitted use (nonrenewable generation should remain prohibited).
3. Recommend reinstating deleted Footnote 4 and modifying footnote to limit Business Enterprise uses to a maximum of 100,000sf when located within 800 feet of a residential zone or use.

A-9.39
Cont.

b. 3.5 – Development Standards

i. Table 3-2 – Development Standards

ii. 3.5.3 – Driveway Widths and Locations

1. If Industrial (including Business Enterprise) uses are eliminated as permitted uses in the Mixed Use Zone as recommended above, then recommend vehicular access be permitted from Barton Street provided that there is no vehicular access provided to Airman Drive.

A-9.40

iii. 3.5.4 – Off-Street Loading Facilities

1. These provisions should be expanded to require that off-street loading and unloading facilities shall be fully screened from view of any residential zone or property through building orientation and/or fully opaque screen walls.

5. Chapter 4 – Design Guidelines

a. 4.1 – Purpose and Intent

- i. Recommend additional objective: "To protect surrounding sensitive uses, including residential neighborhoods, parks, open space and recreation areas, schools and places of worship, from the potential negative visual and aesthetic impacts of future development within the Specific Plan Area."

A-9.41

b. 4.3 – Architectural Design Guidelines

i. 4.3.1 – Building Form

1. **b.** - Recommend this be made more specific/objective. "Periodic" is a subjective measure.

ii. 4.3.2 – Building Materials, Colors and Textures

1. **d.** – Recommend building color schemes be "light earth, neutral or gray tones"

A-9.42

c. 4.4 – Site Features

i. 4.4.2 – Truck Courts and Loading Docks

1. **a.** – This provision should be a "shall" instead of a "should"

2. **b.** – This provision should be amended to add “or in any location having a direct line of site from surrounding residential land uses.”
3. **c.** – This provision should be removed from the Design Guidelines (Chapter 4) and made into a Development Standard (Chapter 3), and be revised to delete “should” in favor of “shall.”

ii. 4.4.4 – Rooftop Equipment

1. **a.** - Recommended addition or new provision: "Building parapet walls shall be at least as high at the shortest distance between roof surface and top of parapet as the tallest piece of roof-mounted equipment." This ensures that roof-mounted equipment is fully screened from any vantage point.

iii. 4.4.8 – Conservation Easement Protection

1. **c.** – “All lighting *near* the Conservation Easement shall be in compliance with the Dark Sky parameters [...]” – this provision should be amended to eliminate the term “near” in favor of a specified distance.

A-9.42
Cont.

6. Chapter 6 – Infrastructure and Grading

a. 6.8 – Grading

i. 6.8.1 – Grading Plan Development Standards

1. “Cut and fill slopes shall be constructed at inclinations of no steeper than two horizontal feet to one vertical foot *unless otherwise approved by the MJPA.*” Through what processes and under what circumstances? Are there standard criteria for whether departures from minimum grading standards shall be granted?
2. Recommend reduction of minimum slope height requiring permanent landscaping and irrigation from 10 feet to 6 feet, consistent with City of Riverside requirements for manufactured slopes.

A-9.43

7. Chapter 7 – Implementation

a. 7.4 – Development Review Process

i. 7.4.2 – Development Plan Review

1. Recommend addition of a requirement for public notification of pending development applications by certified US Mail to surrounding property owners within a specified radius for a specified minimum of period of time prior to decision on discretionary actions consistent with Section 9.020.200 of the March JPA Development Code.
2. Further recommend a formalized requirement for notification to surrounding jurisdictions of all pending development applications upon acceptance of completed application.

A-9.44

MEMORANDUM

Engineering

DATE: 02/06/2023

TO: Fairbanks, Dan
FROM: Vital Patel
CC: Philip Nitollama
RE: March JPA – West Campus Upper Plateau Project

We have reviewed the Transportation Section in the Draft Environmental Impact Report (DEIR) and we have the following comments:

1. The Public works Traffic Division would like to request a meeting to discuss the traffic signal warrant analysis and the improvements.
2. The Traffic Division would like to request an opportunity to review the Construction Management Plan.
3. Please provide information on timeline/ phasing program of improvements.
4. Please provide information and co-ordinate with RTA on any proposed bus stop and bus-stop amenities for the Barton Street.
5. Section 1.10 – Traffic calming measure: The project should be conditioned to construct the speed feedback signs, speed limit signs, advisory speed signs, curb ahead warning signs and associated striping along Barton Street. Locations and quantities to be determined.
6. Section 3.5, Truck route: The section includes that “No trucks access is permitted along Barton Street. The Project Applicant and the City should work together on an appropriate mitigation measure to ensure Project traffic adheres to the routes as shown on the Project (Truck) trip distribution.” – The project should be conditioned to work with the City of Riverside to finalize appropriate improvements to ensure that project truck traffic adheres to the adopted truck routes.

A-9.45

7. Section 1.6.1 Site Adjacent and Site Access Recommendations:

Recommendation 5 – Barton Street:

- Please provide on-street parking adjacent to trail. If no parking is permitted on the street, then is there an off-street parking facility available? Where do trail users park?
- Please evaluate adding a parking lane next to the multi-purpose trail segment and adding "No Parking" signs for the rest of the roadway segment.

8. Table 1-4: If striping plans are not provided prior to acceptance of the traffic study, can a condition of approval be added to the project to provide the striping plan? (Striping plans are to show feasibility of all the improvements)

NATIONAL REGISTER BULLETIN

Technical information on the the National Register of Historic Places:
survey, evaluation, registration, and preservation of cultural resources

U.S. Department of the Interior
National Park Service
Cultural Resources
National Register, History and Education

How to Apply the National Register Criteria for Evaluation

The mission of the Department of the Interior is to protect and provide access to our Nation's natural and cultural heritage and honor our trust responsibilities to tribes.

The National Park Service preserves unimpaired the natural and cultural resources and values of the National Park System for the enjoyment, education, and inspiration of this and future generations. The Park Service cooperates with partners to extend the benefits of natural and cultural resource conservation and outdoor recreation throughout this country and the world.

This material is partially based upon work conducted under a cooperative agreement with the National Conference of State Historic Preservation Officers and the U.S. Department of the Interior.

Date of publication: 1990; revised 1991, 1995, 1997. Revised for Internet 1995.

Cover

(Top Left) Criterion B - Frederick Douglass Home, Washington, D.C. From 1877-1899, this was the home of Frederick Douglass, the former slave who rose to become a prominent author, abolitionist, editor, orator, and diplomat. (Walter Smalling, Jr.)

(Top Right) Criterion D - Francis Canyon Ruin, Blanco vicinity, Rio Arriba County, New Mexico. A fortified village site composed of 40 masonry-walled rooms arranged in a cluster of four house blocks. Constructed ca. 1716-1742 for protection against raiding Utes and Comanches, the site has information potential related to Navajo, Pueblo, and Spanish cultures. (Jon Samuelson)

(Bottom Left) Criterion C - Bridge in Cherrytree Township, Venago County, Pennsylvania. Built in 1882, this Pratt through truss bridge is significant for engineering as a well preserved example of a type of bridge frequently used in northwestern Pennsylvania in the late 19th century. (Pennsylvania Department of Transportation)

(Bottom Right) Criterion A - Main Street/Market Square Historic District, Houston, Harris County, Texas. Until well into the 20th century this district marked the bounds of public and business life in Houston. Constructed between the 1870s and 1920s, the district includes Houston's municipal and county buildings, and served as the city's wholesale, retail, and financial center. (Paul Hester)

PREFACE

Preserving historic properties as important reflections of our American heritage became a national policy through passage of the Antiquities Act of 1906, the Historic Sites Act of 1935, and the National Historic Preservation Act of 1966, as amended. The Historic Sites Act authorized the Secretary of the Interior to identify and recognize properties of national significance (National Historic Landmarks) in United States history and archeology. The National Historic Preservation Act of 1966 authorized the Secretary to expand this recognition to properties of local and State significance in American history, architecture, archeology, engineering, and culture, and worthy of preservation. The National Register of Historic Places is the official list of these recognized properties, and is maintained and expanded by the National Park Service on behalf of the Secretary of the Interior.¹

The National Register of Historic Places documents the appearance and importance of districts, sites, buildings, structures, and objects signifi-

cant in our prehistory and history. These properties represent the major patterns of our shared local, State, and national experience. To guide the selection of properties included in the National Register, the National Park Service has developed the National Register Criteria for Evaluation. These criteria are standards by which every property that is nominated to the National Register is judged. In addition, the National Park Service has developed criteria for the recognition of nationally significant properties, which are designated National Historic Landmarks and prehistoric and historic units of the National Park System. Both these sets of criteria were developed to be consistent with the Secretary of the Interior's *Standards and Guidelines for Archeology and Historic Preservation*, which are uniform, national standards for preservation activities.²

This publication explains how the National Park Service applies these criteria in evaluating the wide range of properties that may be significant in local, State, and national history.

It should be used by anyone who must decide if a particular property qualifies for the National Register of Historic Places.

Listing properties in the National Register is an important step in a nationwide preservation process. The responsibility for the identification, initial evaluation, nomination, and treatment of historic resources lies with private individuals, State historic preservation offices, and Federal preservation offices, local governments, and Indian tribes. The final evaluation and listing of properties in the National Register is the responsibility of the Keeper of the National Register.

This bulletin was prepared by staff of the National Register Branch, Interagency Resources Division, National Park Service, with the assistance of the History Division. It was originally issued in draft form in 1982. The draft was revised into final form by Patrick W. Andrus, Historian, National Register, and edited by Rebecca H. Shrimpton, Consulting Historian.

Beth L. Savage, National Register and Sarah Dillard Pope, National Register, NCSHPO coordinated the latest revision of this bulletin. Antionette J. Lee, Tanya Gossett, and Kira Badamo coordinated earlier revisions.

¹Properties listed in the National Register receive limited Federal protection and certain benefits. For more information concerning the effects of listing, and how the National Register may be used by the general public and Certified Local Governments, as well as by local, State, and Federal agencies, and for copies of National Register Bulletins, contact the National Park Service, National Register, 1849 C Street, NW, NC400, Washington, D.C., 20240. Information may also be obtained by visiting the National Register Web site at www.cr.nps.gov/nr or by contacting any of the historic preservation offices in the States and territories.

²The *Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation* are found in the *Federal Register*, Vol. 48, No. 190 (Thursday, September 29, 1983). A copy can be obtained by writing the National Park Service, Heritage Preservation Services (at the address above).

XI. List of National Register Bulletins	54

I. INTRODUCTION

The National Register is the nation's inventory of historic places and the national repository of documentation on the variety of historic property types, significance, abundance, condition, ownership, needs, and other information. It is the beginning of a national census of historic properties. The National Register Criteria for Evaluation define the scope of the National Register of Historic Places; they identify the range of resources and kinds of significance that will qualify properties for listing in the National Register. The Criteria are written broadly to recognize the wide variety of historic properties associated with our prehistory and history.

Decisions concerning the significance, historic integrity, documentation, and treatment of properties can be made reliably only when the resource is evaluated within its historic context. The historic context serves as the framework within which the National Register Criteria are applied to specific properties or property types. (See *Part V* for a brief discussion of

historic contexts. Detailed guidance for developing and applying historic contexts is contained in *National Register Bulletin: How to Complete the National Register Registration Form* and *National Register Bulletin: How to Complete the National Register Multiple Property Documentation Form*.)

The guidelines provided here are intended to help you understand the National Park Service's use of the Criteria for Evaluation, historic contexts, integrity, and Criteria Considerations, and how they apply to properties under consideration for listing in the National Register. Examples are provided throughout, illustrating specific circumstances in which properties are and are not eligible for the National Register. This bulletin should be used by anyone who is:

- Preparing to nominate a property to the National Register,
- Seeking a determination of a property's eligibility,
- Evaluating the comparable significance of a property to those listed in the National Register, or

- Expecting to nominate a property as a National Historic Landmark in addition to nominating it to the National Register.

This bulletin also contains a summary of the National Historic Landmarks Criteria for Evaluation (see *Part IX*). National Historic Landmarks are those districts, sites, buildings, structures, and objects designated by the Secretary of the Interior as possessing national significance in American history, architecture, archeology, engineering, and culture. Although National Register documentation includes a recommendation about whether a property is significant at the local, State, or national level, the only official designation of national significance is as a result of National Historic Landmark designation by the Secretary of the Interior, National Monument designation by the President of the United States, or establishment as a unit of the National Park System by Congress. These properties are automatically listed in the National Register.

II. THE NATIONAL REGISTER CRITERIA FOR EVALUATION

CRITERIA FOR EVALUATION:³

The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association, and:

- A. That are associated with events that have made a significant contribution to the broad patterns of our history; or
- B. That are associated with the lives of persons significant in our past; or
- C. That embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- D. That have yielded, or may be likely to yield, information important in prehistory or history.

CRITERIA CONSIDERATIONS:

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past 50 years shall not be considered eligible for the National Register. However, such properties *will qualify* if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

- a. A religious property deriving primary significance from architectural or artistic distinction or historical importance; or
- b. A building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or

- c. A birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or
- d. A cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events; or
- e. A reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or
- g. A property achieving significance within the past 50 years if it is of exceptional importance.

³The Criteria for Evaluation are found in the *Code of Federal Regulations, Title 36, Part 60*, and are reprinted here in full.

III. HOW TO USE THIS BULLETIN TO EVALUATE A PROPERTY

For a property to qualify for the National Register it must meet one of the National Register Criteria for Evaluation by:

- **Being associated with an important historic context** *and*
- **Retaining historic integrity of those features necessary to convey its significance.**

Information about the property based on physical examination and documentary research is necessary to evaluate a property's eligibility for the National Register. Evaluation of a property is most efficiently made when following this sequence:

1. Categorize the property (Part IV). A property must be classified as

a district, site, building, structure, or object for inclusion in the National Register.

2. **Determine which prehistoric or historic context(s) the property represents** (Part V). A property must possess significance in American history, architecture, archeology, engineering, or culture when evaluated within the historic context of a relevant geographic area.
3. Determine whether the property is significant under the National Register Criteria (Part VI). This is done by identifying the links to important events or persons, design or construction features, or information potential that make the property important.

4. Determine if the property represents a type usually excluded from the National Register (Part VII). If so, determine if it meets any of the Criteria Considerations.
5. Determine whether the property retains integrity (Part VIII). Evaluate the aspects of location, design, setting, workmanship, materials, feeling, and association that the property must retain to convey its historic significance.

If, after completing these steps, the property appears to qualify for the National Register, the next step is to prepare a written nomination. (Refer to *National Register Bulletin: How to Complete the National Register Registration Form.*)

IV. HOW TO DEFINE CATEGORIES OF HISTORIC PROPERTIES

The National Register of Historic Places includes significant properties, classified as buildings, sites, districts, structures, or objects. It is not used to list intangible values, except in so far as they are associated with or reflected by historic properties. The National Register does not list cultural events, or skilled or talented individuals, as is done in some countries. Rather, the National Register is oriented to recognizing physically concrete properties that are relatively fixed in location.

For purposes of National Register nominations, small groups of properties are listed under a single category, using the primary resource. For example, a city hall and fountain would be categorized by the city hall (building), a farmhouse with two outbuildings would be categorized by the farmhouse (building), and a city park with a gazebo would be categorized by the park (site). Properties with large acreage or a number of resources are usually considered districts. Common sense and reason should dictate the selection of categories.

BUILDING

A building, such as a house, barn, church, hotel, or similar construction, is created principally to shelter any form of human activity. "Building" may also be used to refer to a historically and functionally related unit, such as a courthouse and jail or a house and barn.

Buildings eligible for the National Register must include all of their basic structural elements. Parts of buildings, such as interiors, facades, or wings, are not eligible independent of the rest of the existing building. The

whole building must be considered, and its significant features must be identified.

If a building has lost any of its basic structural elements, it is usually considered a "ruin" and is categorized as a site.

Examples of buildings include:

*administration building
carriage house
church
city or town hall
courthouse
detached kitchen, barn, and privy
dormitory
fort
garage
hotel
house
library
mill building
office building
post office
school
social hall
shed
stable
store
theater
train station*

STRUCTURE

The term "structure" is used to distinguish from buildings those functional constructions made usually for purposes other than creating human shelter.

Structures nominated to the National Register must include all of the extant basic structural elements. Parts of structures can not be considered eligible if the whole structure remains. For example, a truss bridge is composed of the metal or wooden truss, the abutments, and supporting

piers, all of which, if extant, must be included when considering the property for eligibility.

If a structure has lost its historic configuration or pattern of organization through deterioration or demolition, it is usually considered a "ruin" and is categorized as a site.

Examples of structures include:

*aircraft
apiary
automobile
bandstand
boats and ships
bridge
cairn
canal
carousel
corncrib
dam
earthwork
fence
gazebo
grain elevator
highway
irrigation system
kiln
lighthouse
railroad grade
silo
trolley car
tunnel
windmill*

OBJECT

The term “object” is used to distinguish from buildings and structures those constructions that are primarily artistic in nature or are relatively small in scale and simply constructed. Although it may be, by nature or design, movable, an object is associated with a specific setting or environment.

Small objects not designed for a specific location are normally not eligible. Such works include transportable sculpture, furniture, and other decorative arts that, unlike a fixed outdoor sculpture, do not possess association with a specific place.

Objects should be in a setting appropriate to their significant historic use, roles, or character. Objects relocated to a museum are inappropriate for listing in the National Register.

Examples of objects include:

*boundary marker
fountain
milepost
monument
sculpture
statuary*

SITE

A site is the location of a significant event, a prehistoric or historic occupation or activity, or a building or structure, whether standing, ruined, or vanished, where the location itself possesses historic, cultural, or archeological value regardless of the value of any existing structure.

A site can possess associative significance or information potential or both, and can be significant under any or all of the four criteria. A site need not be marked by physical remains if it is the location of a prehistoric or historic event or pattern of events and if no buildings, structures, or objects marked it at the time of the events. However, when the location of a prehistoric or historic event cannot be conclusively determined because no other cultural materials were present or survive, documentation must be carefully evaluated to determine whether the traditionally recognized or identified site is accurate.

A site may be a natural landmark strongly associated with significant prehistoric or historic events or patterns of events, if the significance of the natural feature is well documented through scholarly research. Generally, though, the National Register excludes from the definition of “site” natural waterways or bodies of water that served as determinants in the location of communities or were significant in the locality’s subsequent economic development. While they may have been “avenues of exploration,” the features most appropriate to document this significance are the properties built in association with the waterways.

Examples of sites include:

*battlefield
campsite
cemeteries significant for information potential or historic association
ceremonial site
designed landscape
habitation site
natural feature (such as a rock formation) having cultural significance
petroglyph
rock carving
rock shelter
ruins of a building or structure
shipwreck
trail
village site*

DISTRICT

A district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development.

CONCENTRATION, LINKAGE, & CONTINUITY OF FEATURES

A district derives its importance from being a unified entity, even though it is often composed of a wide variety of resources. The identity of a district results from the interrelationship of its resources, which can convey a visual sense of the overall historic environment or be an arrangement of historically or functionally related properties. For example, a district can reflect one principal activity, such as a mill or a ranch, or it can encompass several interrelated activities, such as an area that includes industrial, residential, or

commercial buildings, sites, structures, or objects. A district can also be a grouping of archeological sites related primarily by their common components; these types of districts often will not visually represent a specific historic environment.

SIGNIFICANCE

A district must be significant, as well as being an identifiable entity. It must be important for historical, architectural, archeological, engineering, or cultural values. Therefore, districts that are significant will usually meet the last portion of Criterion C plus Criterion A, Criterion B, other portions of Criterion C, or Criterion D.

TYPES OF FEATURES

A district can comprise both features that lack individual distinction and individually distinctive features that serve as focal points. It may even be considered eligible if all of the components lack individual distinction, provided that the grouping achieves significance as a whole within its historic context. In either case, the majority of the components that add to the district’s historic character, even if they are individually undistinguished, must possess integrity, as must the district as a whole.

A district can contain buildings, structures, sites, objects, or open spaces that do not contribute to the significance of the district. The number of noncontributing properties a district can contain yet still convey its sense of time and place and historical development depends on how these properties affect the district’s integrity. In archeological districts, the primary factor to be considered is the effect of any disturbances on the information potential of the district as a whole.

GEOGRAPHICAL BOUNDARIES

A district must be a definable geographic area that can be distinguished from surrounding properties by changes such as density, scale, type, age, style of sites, buildings, structures, and objects, or by documented differences in patterns of historic development or associations. It is seldom defined, however, by the limits of current parcels of ownership, management, or planning boundaries. The boundaries must be based upon a shared relationship among the properties constituting the district.

DISCONTIGUOUS DISTRICTS

A district is usually a single geographic area of contiguous historic properties; however, a district can also be composed of two or more definable significant areas separated by nonsignificant areas. A discontinuous district is most appropriate where:

- Elements are spatially discrete;
- Space between the elements is not related to the significance of the district; and
- Visual continuity is not a factor in the significance.

In addition, a canal can be treated as a discontinuous district when the system consists of man-made sections of canal interspersed with sections of river navigation. For scattered archeological properties, a discontinuous district is appropriate when the deposits are related to each other through cultural affiliation, period of use, or site type.

It is not appropriate to use the discontinuous district format to include an isolated resource or small group of resources which were once connected to the district, but have since been separated either through demolition or new construction. For example, do not use the discontinuous district format to nominate individual buildings of a downtown commercial district that have become isolated through demolition.

Examples of districts *include*:

business districts
canal systems
groups of habitation sites
college campuses
*estates and farms with large acreage/
numerous properties*
industrial complexes
irrigation systems
residential areas
rural villages
transportation networks
rural historic districts

Ordeman-Shaw Historic District, Montgomery, Montgomery County, Alabama. Historic districts derive their identity from the interrelationship of their resources. Part of the defining characteristics of this 19th century residential district in Montgomery, Alabama, is found in the rhythmic pattern of the rows of decorative porches. (Frank L. Thiernonge, III)

V. HOW TO EVALUATE A PROPERTY WITHIN ITS HISTORIC CONTEXT

UNDERSTANDING HISTORIC CONTEXTS

To qualify for the National Register, a property must be significant; that is, it must represent a significant part of the history, architecture, archeology, engineering, or culture of an area, and it must have the characteristics that make it a good representative of properties associated with that aspect of the past. This section explains how to evaluate a property within its historic context.

The significance of a historic property can be judged and explained only when it is evaluated within its historic context. Historic contexts are those patterns or trends in history by which a specific occurrence, property, or site is understood and its meaning (and ultimately its significance) within history or prehistory is made clear. Historians, architectural historians, folklorists, archeologists, and anthropologists use different words to describe this phenomena such as trend, pattern, theme, or cultural affiliation, but ultimately the concept is the same.

The concept of historic context is not a new one; it has been fundamental to the study of history since the 18th century and, arguably, earlier than that. Its core premise is that resources, properties, or happenings in history do not occur in a vacuum but rather are part of larger trends or patterns.

In order to decide whether a property is significant within its historic context, the following five things must be determined:

- The facet of prehistory or history of the local area, State, or the nation that the property represents;
- Whether that facet of prehistory or history is significant;
- Whether it is a type of property that has relevance and importance in illustrating the historic context;
- How the property illustrates that history; and finally
- Whether the property possesses the physical features necessary to convey the aspect of prehistory or history with which it is associated.

These five steps are discussed in detail below. If the property being evaluated does represent an important aspect of the area's history or prehistory *and* possesses the requisite quality of integrity, then it qualifies for the National Register.

HOW TO EVALUATE A PROPERTY WITHIN ITS HISTORIC CONTEXT

Identify what the property represents: the theme(s), geographical limits, and chronological period that provide a perspective from which to evaluate the property's significance.

Historic contexts are historical patterns that can be identified through consideration of the history of the property and the history of the surrounding area. Historic contexts may have already been defined in your area by the State historic preservation office, Federal agencies, or local governments. In accordance with the National Register Criteria, the historic context may relate to one of the following:

- An event, a series of events or activities, or patterns of an area's development (Criterion A);
- Association with the life of an important person (Criterion B);
- A building form, architectural style, engineering technique, or artistic values, based on a stage of physical development, or the use of a material or method of construction that shaped the historic identity of an area (Criterion C); or
- A research topic (Criterion D).

⁴For a complete discussion of historic contexts, see *National Register Bulletin: Guidelines for Completing National Register of Historic Places Registration Forms*.

Determine how the theme of the context is significant in the history of the local area, the State, or the nation.

A theme is a means of organizing properties into coherent patterns based on elements such as environment, social/ethnic groups, transportation networks, technology, or political developments that have influenced the development of an area during one or more periods of prehistory or history. A theme is considered significant if it can be demonstrated, through scholarly research, to be important in American history. Many significant themes can be found in the following list of Areas of Significance used by the National Register.

AREAS OF SIGNIFICANCE

- Agriculture
- Architecture
- Archeology
 - Prehistoric
 - Historic—Aboriginal
 - Historic—Non-Aboriginal
- Art
- Commerce
- Communications
- Community Planning and Development
- Conservation
- Economics
- Education
- Engineering
- Entertainment/Recreation
- Ethnic Heritage
 - Asian
 - Black
 - European
 - Hispanic
 - Native American
 - Pacific Islander
 - Other
- Exploration/Settlement
- Health/Medicine
- Industry
- Invention
- Landscape Architecture
- Law
- Literature
- Maritime History
- Military
- Performing Arts
- Philosophy
- Politics/Government
- Religion
- Science
- Social History
- Transportation
- Other

Determine what the property type is and whether it is important in illustrating the historic context.

A context may be represented by a variety of important property types. For example, the context of "Civil War Military Activity in Northern Virginia" might be represented by such properties as: a group of mid-19th century fortification structures; an open field where a battle occurred; a knoll from which a general directed troop movements; a sunken transport ship; the residences or public buildings that served as company headquarters; a railroad bridge that served as a focal point for a battle; and earthworks exhibiting particular construction techniques.

Because a historic context for a community can be based on a distinct period of development, it might include numerous property types. For example, the context "Era of Industrialization in Grand Bay, Michigan, 1875 - 1900" could be represented by important property types as diverse as sawmills, paper mill sites, salt refining plants, flour mills, grain elevators, furniture factories, workers housing, commercial buildings, social halls, schools, churches, and transportation facilities.

A historic context can also be based on a single important type of property. The context "Development of County Government in Georgia, 1777 - 1861" might be represented solely by courthouses. Similarly, "Bridge Construction in Pittsburgh, 1870 - 1920" would probably only have one property type.

Determine how the property represents the context through specific historic associations, architectural or engineering values, or information potential (the Criteria for Evaluation).

For example, the context of county government expansion is represented under Criterion A by historic districts or buildings that reflect population growth, development patterns, the role of government in that society, and political events in the history of the State, as well as the impact of county government on the physical development of county seats. Under Criterion C, the context is represented by properties whose architectural treatments reflect their governmental functions, both practically and symbolically. (See *Part VI: How to Identify the Type of Significance of a Property.*)

Determine what physical features the property must possess in order for it to reflect the significance of the historic context.

These physical features can be determined after identifying the following:

- Which types of properties are associated with the historic context,
- The ways in which properties can represent the theme, and
- The applicable aspects of integrity.

Properties that have the defined characteristics are eligible for listing. (See *Part VIII: How to Evaluate the Integrity of a Property.*)

PROPERTIES SIGNIFICANT WITHIN MORE THAN ONE HISTORIC CONTEXT

A specific property can be significant within one or more historic contexts, and, if possible, all of these should be identified. For example, a public building constructed in the 1830s that is related to the historic context of Civil War campaigns in the area might also be related to the theme of political developments in the community during the 1880s. A property is only required, however, to be documented as significant in one context.

COMPARING RELATED PROPERTIES

Properties listed in the National Register must possess significance when evaluated in the perspective of their historic context. Once the historic context is established and the property type is determined, it is not necessary to evaluate the property in question against other properties *if*:

- It is the sole example of a property type that is important in illustrating the historic context or
- It clearly possesses the defined characteristics required to strongly represent the context.

If these two conditions do not apply, then the property will have to be evaluated against other examples of the property type to determine its eligibility. The geographic level (local, State, or national) at which this evaluation is made is the same as the level of the historic context. (See *Part V: How to Evaluate a Property Within Its Historic Context*.)

LOCAL, STATE, AND NATIONAL HISTORIC CONTEXTS

Historic contexts are found at a variety of geographical levels or scales. The geographic scale selected may relate to a pattern of historical development, a political division, or a cultural area. Regardless of the scale, the historic context establishes the framework from which decisions about the significance of related properties can be made.

LOCAL HISTORIC CONTEXTS

A local historic context represents an aspect of the history of a town, city, county, cultural area, or region, or any portions thereof. It is defined by the importance of the property, not necessarily the physical location of the property. For instance, if a property is of a type found throughout a State, or its boundaries extend over two States, but its importance relates only to a particular county, the property would be considered of local significance.

The level of context of archeological sites significant for their information potential depends on the scope of the applicable research design. For example, a Late Mississippian village site may yield information in a research design concerning one settlement system on a regional scale, while in another research design it may reveal information of local importance concerning a single group's stone tool manufacturing techniques or house forms. It is a question of how the available information potential is likely to be used.

STATE HISTORIC CONTEXTS

Properties are evaluated in a State context when they represent an aspect of the history of the State as a whole (or American Samoa, the District of Columbia, the Commonwealth of the Northern Mariana Islands, Guam, Puerto Rico, or the Virgin Islands). These properties do not necessarily have to belong to property types

found throughout the entire State; they can be located in only a portion of the State's present political boundary. It is the property's historic context that must be important statewide. For example, the "cotton belt" extends through only a portion of Georgia, yet its historical development in the antebellum period affected the entire State. These State historic contexts may have associated properties that are statewide or locally significant representations. A cotton gin in a small town might be a locally significant representation of this context, while one of the largest cotton producing plantations might be of State significance.

A property whose historic associations or information potential appears to extend beyond a single local area might be significant at the State level. A property can be significant to more than one community or local area, however, without having achieved State significance.

A property that overlaps several State boundaries can possibly be significant to the State or local history of each of the States. Such a property is not necessarily of national significance, however, nor is it necessarily significant to all of the States in which it is located.

Prehistoric sites are not often considered to have "State" significance, per se, largely because States are relatively recent political entities and usually do not correspond closely to Native American political territories or cultural areas. Numerous sites, however, may be of significance to a large region that might geographically encompass parts of one, or usually several, States. Prehistoric resources that might be of State significance include regional sites that provide a diagnostic assemblage of artifacts for a particular cultural group or time period or that provide chronological control (specific dates or relative order in time) for a series of cultural groups.

NATIONAL HISTORIC CONTEXTS

Properties are evaluated in a national context when they represent an aspect of the history of the United States and its territories as a whole. These national historic contexts may have associated properties that are locally or statewide significant representations, as well as those of national significance.

Properties designated as nationally significant and listed in the National Register are the prehistoric and historic units of the National Park System and those properties that have been designated National Historic Landmarks. The National Historic Landmark criteria are the standards for nationally significant properties; they are found in the *Code of Federal*

Regulations, Title 36, Part 65 and are summarized in this bulletin in *Part IX: Summary of National Historic Landmarks Criteria for Evaluation*.

A property with national significance helps us understand the history of the nation by illustrating the nationwide impact of events or persons associated with the property, its architectural type or style, or information potential. It must be of exceptional value in representing or illustrating an important theme in the history of the nation.

Nationally significant properties do not necessarily have to belong to a property type found throughout the entire country: they can be located in only a portion of the present political boundaries. It is their historic context that must be important nationwide. For example, the American Civil War

was fought in only a portion of the United States, yet its impact was nationwide. The site of a small military skirmish might be a locally significant representation of this national context, while the capture of the State's largest city might be a statewide significant representation of the national context.

When evaluating properties at the national level for designation as a National Historic Landmark, please refer to the National Historic Landmarks outline, *History and Prehistory in the National Park System and the National Historic Landmarks Program 1987*. (For more information about the National Historic Landmarks program, please write to the Department of the Interior, National Park Service, National Historic Landmarks, 1849 C Street, NW, NC400, Washington, DC 20240.)

VI. HOW TO IDENTIFY THE TYPE OF SIGNIFICANCE OF A PROPERTY

INTRODUCTION

When evaluated within its historic context, a property must be shown to be significant for *one or more of the four Criteria for Evaluation - A, B, C, or D* (listed earlier in *Part II*). The Criteria describe how properties are significant for their association with important events or persons, for their importance in design or construction, or for their information potential.

The basis for judging a property's significance and, ultimately, its eligibility under the Criteria is *historic context*. The use of historic context allows a property to be properly evaluated in a nearly infinite number of capacities. For instance, Criterion C: Design/Construction can accommodate properties representing construction types that are unusual or widely practiced, that are innovative or traditional, that are "high style" or vernacular, that are the work of a famous architect or an unknown master craftsman. *The key to determining whether the characteristics or associations of a particular property are significant is to consider the property within its historic context.*

After identifying the relevant historic context(s) with which the property is associated, the four Criteria are applied to the property. Within the scope of the historic context, the National Register Criteria define the kind of significance that the properties represent.

For example, within the context of "19th Century Gunpowder Production in the Brandywine Valley," Criterion A would apply to those properties associated with important events in the founding and development of the industry. Criterion B would apply to those properties associated with persons who are significant in the founding of the industry or associated with important inventions related to gunpowder manufacturing. Criterion C would apply to those buildings, structures, or objects whose architectural form or style reflect important design qualities integral to the industry. And Criterion D would apply to properties that can convey information important in our understanding of this industrial process. If a property qualifies under more than one of the Criteria, its significance under each should be considered, if possible, in order to identify all aspects of its historical value.

NATIONAL REGISTER CRITERIA FOR EVALUATION*

The National Register Criteria recognize different types of values embodied in districts, sites, buildings, structures, and objects. These values fall into the following categories:

Associative value (Criteria A and B): Properties significant for their association or linkage to events (Criterion A) or persons (Criterion B) important in the past.

Design or Construction value (Criterion C): Properties significant as representatives of the manmade expression of culture or technology.

Information value (Criterion D): Properties significant for their ability to yield important information about prehistory or history.

*For a complete listing of the Criteria for Evaluation, refer to Part II of this bulletin.

CRITERION A: EVENT

Properties can be eligible for the National Register if they are associated with events that have made a significant contribution to the broad patterns of our history.

UNDERSTANDING CRITERION A: EVENT

To be considered for listing under Criterion A, a property must be associated with one or more events important in the defined historic context. Criterion A recognizes properties associated with single events, such as the founding of a town, or with a pattern of events, repeated activities, or historic trends, such as the gradual rise of a port city's prominence in trade and commerce. The event or trends, however, must clearly be important within the associated context: settlement, in the case of the town, or development of a maritime economy, in the case of the port city. Moreover, the property must have an important association with the event or historic trends, and it must retain historic integrity. (See *Part V: How to Evaluate a Property Within its Historic Context.*)

Several steps are involved in determining whether a property is significant for its associative values:

- Determine the nature and origin of the property,
- Identify the historic context with which it is associated, and
- Evaluate the property's history to determine whether it is associated with the historic context in any important way.

APPLYING CRITERION A: EVENT

TYPES OF EVENTS

A property can be associated with either (or both) of two types of events:

- A specific event marking an important moment in American prehistory or history and
- A pattern of events or a historic trend that made a significant contribution to the development of a community, a State, or the nation.

Refer to the sidebar on the right for a list of specific examples.

ASSOCIATION OF THE PROPERTY WITH THE EVENTS

The property you are evaluating must be documented, through accepted means of historical or archeological research (including oral history), to have existed at the time of the event or pattern of events and to have been associated with those events. A property is *not* eligible if its associations are speculative. For archeological sites, well reasoned inferences drawn from data recovered at the site can be used to establish the association between the site and the events.

SIGNIFICANCE OF THE ASSOCIATION

Mere association with historic events or trends is not enough, in and of itself, to qualify under Criterion A: the property's specific association must be considered important as well. For example, a building historically in commercial use must be shown to have been significant in commercial history.

EXAMPLES OF PROPERTIES ASSOCIATED WITH EVENTS

Properties associated with specific events:

- *The site of a battle.*
- *The building in which an important invention was developed.*
- *A factory district where a significant strike occurred.*
- *An archeological site at which a major new aspect of prehistory was discovered, such as the first evidence of man and extinct Pleistocene animals being contemporaneous.*
- *A site where an important facet of European exploration occurred.*

Properties associated with a pattern of events:

- *A trail associated with western migration.*
- *A railroad station that served as the focus of a community's transportation system and commerce.*
- *A mill district reflecting the importance of textile manufacturing during a given period.*
- *A building used by an important local social organization.*
- *A site where prehistoric Native Americans annually gathered for seasonally available resources and for social interaction.*
- *A downtown district representing a town's growth as the commercial focus of the surrounding agricultural area.*

TRADITIONAL CULTURAL VALUES

Traditional cultural significance is derived from the role a property plays in a community's historically rooted beliefs, customs, and practices. Properties may have significance under Criterion A if they are associated with events, or series of events, significant to the cultural traditions of a community.⁵

Eligible

- A hilltop associated in oral historical accounts with the founding of an Indian tribe or society is eligible.
- A rural community can be eligible whose organization, buildings, or patterns of land use reflect the cultural traditions valued by its long-term residents.
- An urban neighborhood can be eligible as the traditional home of a particular cultural group and as a reflection of its beliefs and practices.

Not Eligible

- A site viewed as sacred by a recently established utopian or religious community does not have traditional cultural value and is not eligible.

Criterion A - The Old Brulay Plantation, Brownsville vicinity, Cameron county, Texas. Historically significant for its association with the development of agriculture in southeast Texas, this complex of 10 brick buildings was constructed by George N. Brulay, a French immigrant who introduced commercial sugar production and irrigation to the Rio Grande Valley. (Photo by Texas Historical Commission).

⁵For more information, refer to *National Register Bulletin: Guidelines for Evaluating and Documenting Traditional Cultural Properties*.

CRITERION B: PERSON

Properties may be eligible for the National Register if they are associated with the lives of persons significant in our past.

UNDERSTANDING CRITERION B: PERSON⁶

Criterion B applies to properties associated with individuals whose specific contributions to history can be identified and documented. Persons "significant in our past" refers to individuals whose activities are demonstrably important within a local, State, or national historic context. The criterion is generally restricted to those properties that illustrate (rather than commemorate) a person's important achievements. (The policy regarding commemorative properties, birthplaces, and graves is explained further in *Part VIII: How to Apply the Criteria Considerations*.)

Several steps are involved in determining whether a property is significant for its associative values under Criterion B. First, determine the importance of the individual. Second, ascertain the length and nature of his/her association with the property under study and identify the other properties associated with the individual. Third, consider the property under Criterion B, as outlined below.

EXAMPLES OF PROPERTIES ASSOCIATED WITH PERSONS

Properties associated with a Significant Person:

- The home of an important merchant or labor leader.
- The studio of a significant artist.
- The business headquarters of an important industrialist.

Criterion B - The William Whitney House, Hinsdale, DuPage County, Illinois. This building is locally significant for its historical association with William Whitney, the founder of the town of Hinsdale, Illinois. Whitney, a citizen of New York State, moved to Illinois, established the town, and while living here between 1870 and 1879 was a prominent local businessman and politician. (Photo by Frederick C. Cue).

⁶For further information on properties eligible under Criterion B, refer to *National Register Bulletin: Guidelines for Evaluating and Documenting Properties Associated with Significant Persons*.

APPLYING CRITERION B: PERSON

SIGNIFICANCE OF THE INDIVIDUAL

The persons associated with the property must be *individually* significant within a historic context. A property is not eligible if its only justification for significance is that it was owned or used by a person who is a member of an identifiable profession, class, or social or ethnic group. It must be shown that the person gained importance within his or her profession or group.

Eligible

- The residence of a doctor, a mayor, or a merchant is eligible under Criterion B if the person was significant in the field of medicine, politics, or commerce, respectively.

Not Eligible

- A property is not eligible under Criterion B if it is associated with an individual about whom no scholarly judgement can be made because either research has not revealed specific information about the person's activities and their impact, or there is insufficient perspective to determine whether those activities or contributions were historically important.

ASSOCIATION WITH THE PROPERTY

Properties eligible under Criterion B are usually those associated with a person's *productive* life, reflecting the time period when he or she achieved significance. In some instances this may be the person's home; in other cases, a person's business, office, laboratory, or studio may best represent his or her contribution. Properties that pre- or post-date an individual's significant accomplishments are usually not eligible. (See *Comparison to Related Properties*, below, for exceptions to this rule.)

The individual's association with the property must be documented by accepted methods of historical or archeological research, including written or oral history. Speculative associations are not acceptable. For archeological sites, well reasoned inferences drawn from data recovered at the site are acceptable.

COMPARISON TO RELATED PROPERTIES

Each property associated with an important individual should be compared to other associated properties to identify those that best represent the person's historic contributions. The best representatives usually are properties associated with the person's adult or *productive* life. Properties associated with an individual's formative or later years may also qualify if it can be demonstrated that the person's activities during this period were historically significant *or* if no properties from the person's productive years survives. Length of association is an important factor when assessing several properties with similar associations.

A community or State may contain several properties eligible for associations with the same important person, if each represents a different aspect of the person's productive life. A property can also be eligible if it has brief but consequential associations with an important individual. (Such associations are often related to specific events that occurred at the property and, therefore, it may also be eligible under Criterion A.)

ASSOCIATION WITH GROUPS

For properties associated with several community leaders or with a prominent family, it is necessary to identify specific individuals and to explain their significant accomplishments.

Eligible

- A residential district in which a large number of prominent or influential merchants, professionals, civic leaders, politicians, etc., lived will be eligible under Criterion B if the significance of one or more specific individual residents is explicitly justified.
- A building that served as the seat of an important family is eligible under Criterion B if the significant accomplishments of one or more individual family members is explicitly justified.

Not Eligible

- A residential district in which a large number of influential persons lived is not eligible under Criterion B if the accomplishments of a specific individual(s) cannot be documented. If the significance of the district rests in the cumulative importance of prominent residents, however, then the district might still be eligible under Criterion A. Eligibility, in this case, would be based on the broad pattern of community development, through which the neighborhood evolved into the primary residential area for this class of citizens.
- A building that served as the seat of an important family will not be eligible under Criterion B if the significant accomplishments of individual family members cannot be documented. In cases where a succession of family members have lived in a house and collectively have had a demonstrably significant impact on the community, as a family, the house is more likely to be significant under Criterion A for association with a pattern of events.

ASSOCIATION WITH LIVING PERSONS

Properties associated with living persons are usually not eligible for inclusion in the National Register. Sufficient time must have elapsed to assess both the person's field of endeavor and his/her contribution to that field. Generally, the person's active participation in the endeavor must be finished for this historic perspective to emerge. (See Criteria Considerations C and G in *Part VII: How to Apply the Criteria Considerations*.)

ASSOCIATION WITH ARCHITECTS/ARTISANS

Architects, artisans, artists, and engineers are often represented by their works, which are eligible under Criterion C. Their homes and studios, however, can be eligible for consideration under Criterion B, because these usually are the properties with which they are most personally associated.

NATIVE AMERICAN SITES

The known major villages of individual Native Americans who were important during the contact period or later can qualify under Criterion B. As with all Criterion B properties, the individual associated with the property must have made some specific important contribution to history. Examples include sites significantly associated with Chief Joseph and Geronimo.⁷

⁷ For more information, refer to *National Register Bulletin: Guidelines for Evaluating and Documenting Traditional Cultural Properties*.

CRITERION C: DESIGN/CONSTRUCTION

Properties may be eligible for the National Register if they embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

Richland Plantation, East Feliciana Parish, Louisiana. Properties can qualify under Criterion C as examples of high style architecture. Built in the 1830s, Richland is a fine example of a Federal style residence with a Greek Revival style portico. (Photo by Dave Gleason).

UNDERSTANDING CRITERION C: DESIGN/ CONSTRUCTION

This criterion applies to properties significant for their physical design or construction, including such elements as architecture, landscape architecture, engineering, and artwork. To be eligible under Criterion C, a property must meet at least one of the following requirements:

- Embody distinctive characteristics of a type, period, or method of construction.
- Represent the work of a master.
- Possess high artistic value.

- Represent a significant and distinguishable entity whose components may lack individual distinction.

The first requirement, that properties “embody the distinctive characteristics of a type, period, or method of construction,” refers to the way in which a property was conceived, designed, or fabricated by a people or culture in past periods of history. “The work of a master” refers to the technical or aesthetic achievements of an architect or craftsman. “High artistic values” concerns the expression of aesthetic ideals or preferences and applies to aesthetic achievement.

Resources “that represent a significant and distinguishable entity whose components may lack individual distinction” are called “districts.” In the Criteria for Evaluation (as published in the Code of Federal Regulations and reprinted here in Part II), districts are

defined within the context of Criterion C. Districts, however, can be considered for eligibility under all the Criteria, individually or in any combination, as is appropriate. For this reason, the full discussion of districts is contained in Part IV: *How to Define Categories of Historic Properties*.

Throughout the bulletin, however, districts are mentioned within the context of a specific subject, such as an individual Criterion.

Grant Family House, Saco vicinity, York County, Maine. Properties possessing high artistic value meet Criterion C through the expression of aesthetic ideals or preferences. The Grant Family House, a modest Federal style residence, is significant for its remarkably well-preserved stenciled wall decorative treatment in the entry hall and parlor. Painted by an unknown artist ca. 1825, this is a fine example of 19th century New England regional artistic expression. (Photo by Kirk F. Mohney).

EXAMPLES OF PROPERTIES ASSOCIATED WITH DESIGN/ CONSTRUCTION

Properties associated with design and construction:

- A house or commercial building representing a significant style of architecture.
- A designed park or garden associated with a particular landscape design philosophy.
- A movie theater embodying high artistic value in its decorative features.
- A bridge or dam representing technological advances.

APPLYING CRITERION C: DESIGN/ CONSTRUCTION

DISTINCTIVE CHARACTERISTICS OF TYPE, PERIOD, AND METHOD OF CONSTRUCTION

This is the portion of Criterion C under which most properties are eligible, for it encompasses all architectural styles and construction practices. To be eligible under this portion of the Criterion, a property must clearly illustrate, through "distinctive characteristics," the following:

- The pattern of features common to a particular class of resources,
- The individuality or variation of features that occurs within the class,
- The evolution of that class, or
- The transition between classes of resources.

Distinctive Characteristics: "Distinctive characteristics" are the physical features or traits that commonly recur in individual types, periods, or methods of construction. To be eligible, a property must clearly contain enough of those characteristics to be considered a true representative of a particular type, period, or method of construction.

Characteristics can be expressed in terms such as form, proportion, structure, plan, style, or materials. They can be general, referring to ideas of design and construction such as basic plan or form, or they can be specific, referring to precise ways of combining particular kinds of materials.

Eligible

- A building eligible under the theme of Gothic Revival architecture must have the distinctive characteristics that make up the vertical and picturesque qualities of the style, such as pointed gables, steep roof pitch, board and batten siding, and ornamental bargeboard and veranda trim.
- A late Mississippian village that illustrates the important concepts in prehistoric community design and planning will qualify.
- A designed historic landscape will qualify if it reflects a historic trend or school of theory and practice, such as the City Beautiful Movement, evidencing distinguished design, layout, and the work of skilled craftsmanship.

Not Eligible

- A commercial building with some Art Deco detailing is not eligible under Criterion C if the detailing was added merely as an afterthought, rather than fully integrated with overall lines and massing typical of the Art Deco style or the transition between that and another style.
- A designed landscape that has had major changes to its historic design, vegetation, original boundary, topography/grading, architectural features, and circulation system will not qualify.

Type, Period, and Method of Construction: "Type, period, or method of construction" refers to the way certain properties are related to one another by cultural tradition or function, by dates of construction or style, or by choice or availability of materials and technology.

A structure is eligible as a specimen of its type or period of construction if it is an important example (within its context) of building practices of a particular time in history. For properties that represent the variation, evolution, or transition of construction types, it must be demonstrated that the variation, etc., was an important phase of the architectural development of the area or community in that it had an impact as evidenced by later buildings. A property is not eligible, however, simply because it has been identified as the only such property ever fabricated; it must be demonstrated to be significant as well.

Eligible

- A building that has some characteristics of the Romanesque Revival style and some characteristics of the Commercial style can qualify if it illustrates the transition of architectural design and the transition itself is considered an important architectural development.
- A Hopewellian mound, if it is an important example of mound building construction techniques, would qualify as a method or type of construction.
- A building which illustrates the early or the developing technology of particular structural systems, such as skeletal steel framing, is eligible as an example of a particular method of construction.

Swan Falls Dam and Power Plant, Murphy vicinity, Ada County, Idaho. Significant works of engineering can qualify under Criterion C. Built between 1900-1907 the Swan Falls Dam and Power Plant across the Snake River is one of the early hydroelectric plants in the State of Idaho. (Photo by H.L. Hough).

Looney House, Asheville vicinity, St. Clair County, Alabama. Examples of vernacular styles of architecture can qualify under Criterion C. Built ca. 1818, the Looney House is significant as possibly the State's oldest extant two-story dogtrot type of dwelling. The defining open center passage of the dogtrot was a regional building response to the southern climate. (Photo by Carolyn Scott).

HISTORIC ADAPTATION OF THE ORIGINAL PROPERTY

A property can be significant not only for the way it was originally constructed or crafted, but also for the way it was adapted at a later period, or for the way it illustrates changing tastes, attitudes, and uses over a period of time.

A district is eligible under this guideline if it illustrates the evolution of historic character of a place over a particular span of time.

Eligible

- A Native American irrigation system modified for use by Europeans could be eligible if it illustrates the technology of either or both periods of construction.
- An early 19th century farmhouse modified in the 1880s with Queen Anne style ornamentation could be significant for the modification itself, if it represented a local variation or significant trend in building construction or remodeling, was the work of a local master (see *Works of a Master* on page 20), or reflected the tastes of an important person associated with the property at the time of its alteration.
- A district encompassing the commercial development of a town between 1820 and 1910, characterized by buildings of various styles and eras, can be eligible.

WORKS OF A MASTER

A master is a figure of generally recognized greatness in a field, a known craftsman of consummate skill, or an anonymous craftsman whose work is distinguishable from others by its characteristic style and quality. The property must express a particular phase in the development of the master's career, an aspect of his or her work, or a particular idea or theme in his or her craft.

A property is not eligible as the work of a master, however, simply because it was designed by a prominent architect. For example, not every building designed by Frank Lloyd Wright is eligible under this portion of Criterion C, although it might meet other portions of the Criterion, for instance as a representative of the Prairie style.

The work of an unidentified craftsman is eligible if it rises above the level of workmanship of the other properties encompassed by the historic context.

PROPERTIES POSSESSING HIGH ARTISTIC VALUES

High artistic values may be expressed in many ways, including areas as diverse as community design or planning, engineering, and sculpture. A property is eligible for its high artistic values if it so fully articulates a particular concept of design that it expresses an aesthetic ideal. A property is not eligible, however, if it does not express aesthetic ideals or design concepts more fully than other properties of its type.

Eligible

- A sculpture in a town square that epitomizes the design principles of the Art Deco style is eligible.
- A building that is a classic expression of the design theories of the Craftsman Style, such as carefully detailed handwork, is eligible.
- A landscaped park that synthesizes early 20th century principles of landscape architecture and expresses an aesthetic ideal of environment can be eligible.
- Properties that are important representatives of the aesthetic values of a cultural group, such as petroglyphs and ground drawings by Native Americans, are eligible.

Not Eligible

- A sculpture in a town square that is a typical example of sculpture design during its period would not qualify for high artistic value, although it might be eligible if it were significant for other reasons.
- A building that is a modest example (within its historic context) of the Craftsman Style of architecture, or a landscaped park that is characteristic of turn of the century landscape design would not qualify for high artistic value.

A Significant and Distinguishable Entity Whose Components May Lack Individual Distinction. This portion of Criterion C refers to districts. For detailed information on districts, refer to *Part IV* of this bulletin.

CRITERION D: INFORMATION POTENTIAL

Properties may be eligible for the National Register if they have yielded, or may be likely to yield, information important in prehistory or history.

UNDERSTANDING CRITERION D: INFORMATION POTENTIAL

Certain important research questions about human history can only be answered by the actual physical material of cultural resources. Criterion D encompasses the properties that have the potential to answer, in whole or in part, those types of research questions. The most common type of property nominated under this Criterion is the archeological site (or a district comprised of archeological sites). Buildings, objects, and structures (or districts comprised of these property types), however, can also be eligible for their information potential.

Criterion D has two requirements, which must *both* be met for a property to qualify:

- The property must have, or have had, information to contribute to our understanding of human history or prehistory, and
- The information must be considered important.

Under the first of these requirements, a property is eligible if it has been used as a source of data and contains more, as yet unretrieved data. A property is also eligible if it has not yet yielded information but, through testing or research, is determined a likely source of data.

Under the second requirement, the information must be carefully evaluated within an appropriate context to determine its importance. Information is considered "important" when it is shown to have a significant bearing on a research design that addresses such areas as: 1) current

data gaps or alternative theories that challenge existing ones or 2) priority areas identified under a State or Federal agency management plan.

APPLYING CRITERION D: INFORMATION POTENTIAL

ARCHEOLOGICAL SITES

Criterion D most commonly applies to properties that contain or are likely to contain information bearing on an important archeological research question. The property must have characteristics suggesting the likelihood that it possesses configurations of artifacts, soil strata, structural remains, or other natural or cultural features that make it possible to do the following:

- Test a hypothesis or hypotheses about events, groups, or processes in the past that bear on important research questions in the social or natural sciences or the humanities; or
- Corroborate or amplify currently available information suggesting that a hypothesis is either true or false; or
- Reconstruct the sequence of archeological cultures for the purpose of identifying and explaining continuities and discontinuities in the archeological record for a particular area.

BUILDINGS, STRUCTURES, AND OBJECTS

While most often applied to archeological districts and sites, Criterion D can also apply to buildings, structures, and objects that contain important information. In order for these types of properties to be eligible under Criterion D, they themselves must be, or must have been, the principal source of the important information.

Eligible

- A building exhibiting a local variation on a standard design or construction technique can be eligible if study could yield important information, such as how local availability of materials or construction expertise affected the evolution of local building development.

Not Eligible

- The ruins of a hacienda once contained murals that have since been destroyed. Historical documentation, however, indicates that the murals were significant for their highly unusual design. The ruins can not be eligible under Criterion D for the importance of the destroyed murals if the information is contained only in the documentation.

Criterion D - Champe-Fremont 1 Archeological Site, Omaha vicinity, Douglas County, Nebraska. This archeological site, dating from ca. 1100-1450 A.D., consists of pit houses and storage pits which have the potential to yield important information concerning the subsistence patterns, religious and mortuary practices, and social organization of the prehistoric residents of eastern Nebraska. (Nebraska State Historical Society)

ASSOCIATION WITH HUMAN ACTIVITY

A property must be associated with *human activity* and be critical for understanding a site's historic environment in order to be eligible under Criterion D. A property can be linked to human activity through events, processes, institutions, design, construction, settlement, migration, ideals, beliefs, lifeways, and other facets of the development or maintenance of cultural systems.

The natural environment associated with the properties was often very different from that of the present and strongly influenced cultural development. Aspects of the environment that are pertinent to human activities should be considered when evaluating properties under Criterion D.

Natural features and paleontological (floral and faunal) sites are not usually eligible under Criterion D in and of themselves. They can be eligible, however, if they are either directly related to human activity or critical to understanding a site's historic environment. In a few cases, a natural feature or site unmarked by cultural materials, that is primarily eligible under Criterion A, may also be eligible under Criterion D, if study of the feature, or its location, setting, etc. (usually in the context of data gained from other sources), will yield important information about the event or period with which it is associated.

ESTABLISHING A HISTORIC CONTEXT

The information that a property yields, or will yield, must be evaluated within an appropriate historic context. This will entail consulting the body of information already collected from similar properties or other pertinent sources, including modern and historic written records. The researcher must be able to anticipate if and how the potential information will affect the definition of the context. The information likely to be obtained from a particular property must confirm, refute, or supplement in an important way existing information.

A property is *not* eligible if it cannot be related to a particular time period or cultural group and, as a result, lacks any historic context within which to evaluate the importance of the information to be gained.

DEVELOPING RESEARCH QUESTIONS

Having established the importance of the information that may be recovered, it is necessary to be explicit in demonstrating the connection between the important information and a specific property. One approach is to determine if specific important research questions can be answered by the data contained in the

property. Research questions can be related to property-specific issues, to broader questions about a large geographic area, or to theoretical issues independent of any particular geographic location. These questions may be derived from the academic community or from preservation programs at the local, regional, State, or national level. Research questions are usually developed as part of a "research design," which specifies not only the questions to be asked, but also the types of data needed to supply the answers, and often the techniques needed to recover the data.

Eligible

- When a site consisting of a village occupation with midden deposits, hearths, ceramics, and stratified evidence of several occupations is being evaluated, three possible research topics could be: 1) the question of whether the site occupants were indigenous to the area prior to the time of occupation or recent arrivals, 2) the investigation of the settlement-subsistence pattern of the occupants, 3) the question of whether the region was a center for the domestication of plants. Specific questions could include: A) Do the deposits show a sequential development or sudden introduction of Ceramic Type X? B) Do the dates of the occupations fit our expectations based on the current model for the reoccupation behavior of slash-and-burn agriculturalists? C) Can any genetic changes in the food plant remains be detected?

Not Eligible

- A property is not eligible if so little can be understood about it that it is not possible to determine if specific important research questions can be answered by data contained in the property.

ESTABLISHING THE PRESENCE OF ADEQUATE DATA

To support the assertion that a property has the data necessary to provide the important information, the property should be investigated with techniques sufficient to establish the presence of relevant data categories. What constitutes appropriate investigation techniques would depend upon specific circumstances including the property's location, condition, and the research questions being addressed, and could range from surface survey (or photographic survey for buildings), to the application of remote sensing techniques or intensive subsurface testing. Justification of the research potential of a property may be based on analogy to another better known property if sufficient similarities exist to establish the appropriateness of the analogy.

Eligible

- Data requirements depend on the specific research topics and questions to be addressed. To continue the example in "Developing Research Questions" above, we might want to ascertain the following with reference to questions A, B, and C: A) The site contains Ceramic Type X in one or more occupation levels and we expect to be able to document the local evaluation of the type or its intrusive nature. B) The hearths contain datable carbon deposits and are associated with more than one occupation. C) The midden deposits show good floral/faunal preservation, and we know enough about the physical evolution of food plants to interpret signs that suggest domestication.

Not Eligible

- Generally, if the applicable research design requires clearly stratified deposits, then subsurface investigation techniques must be applied. A site composed only of surface materials can not be eligible for its potential to yield information that could only be found in stratified deposits.

INTEGRITY

The assessment of integrity for properties considered for information potential depends on the data requirements of the applicable research design. A property possessing information potential does not need to recall *visually* an event, person, process, or construction technique. It is important that the significant data contained in the property remain sufficiently intact to yield the expected important information, if the appropriate study techniques are employed.

Eligible

- An irrigation system significant for the information it will yield on early engineering practices can still be eligible even though it is now filled in and no longer retains the appearance of an open canal.

Not Eligible

- A plowed archeological site contains several superimposed components that have been mixed to the extent that artifact assemblages cannot be reconstructed. The site cannot be eligible if the data requirements of the research design call for the study of artifacts specific to one component.

PARTLY EXCAVATED OR DISTURBED PROPERTIES

The current existence of appropriate physical remains must be ascertained in considering a property's ability to yield important information. Properties that have been partly excavated or otherwise disturbed and that are being considered for their potential to yield additional important information must be shown to retain that potential in their remaining portions.

Eligible

- A site that has been partially excavated but still retains substantial intact deposits (or a site in which the remaining deposits are small but contain critical information on a topic that is not well known) is eligible.

Not Eligible

- A totally collected surface site or a completely excavated buried site is not eligible since the physical remains capable of yielding important information no longer exist at the site. (See *Completely Excavated Sites*, on page 24, for exception.) Likewise, a site that has been looted or otherwise disturbed to the extent that the remaining cultural materials have lost their important depositional context (horizontal or vertical location of deposits) is not eligible.
- A reconstructed mound or other reconstructed site will generally not be considered eligible, because original cultural materials or context or both have been lost.

COMPLETELY EXCAVATED SITES

Properties that have yielded important information in the past and that no longer retain additional research potential (such as completely excavated archeological sites) must be assessed essentially as historic sites under Criterion A. Such sites must be significant for associative values related to: 1) the importance of the data gained or 2) the impact of the property's role in the history of the development of anthropology/ archeology or other relevant disciplines. Like other historic properties, the site must retain the ability to convey its association as the former repository of important information, the location of historic events, or the representative of important trends.

Eligible

- A property that has been excavated is eligible if the data recovered was of such importance that it influenced the direction of research in the discipline, as in a site that clearly established the antiquity of the human occupation of the New World. (See Criterion A in *Part VI: How to Identify the Type of Significance of a Property* and *Criteria Consideration G* in *Part VII: How to Apply the Criteria Considerations*.)

Not Eligible

- A totally excavated site that at one time yielded important information but that no longer can convey either its historic/ prehistoric utilization or significant modern investigation is not eligible.

VII. HOW TO APPLY THE CRITERIA CONSIDERATIONS

INTRODUCTION

Certain kinds of properties are not usually considered for listing in the National Register: religious properties, moved properties, birthplaces and graves, cemeteries, reconstructed properties, commemorative properties, and properties achieving significance within the past fifty years. These properties *can* be eligible for listing, however, if they meet special requirements, called Criteria Considerations, in addition to meeting the regular requirements (that is, being eligible under one or more of the four Criteria and possessing integrity). *Part VII* provides guidelines for determining which properties must meet these special requirements and for applying each Criteria Consideration.

The Criteria Considerations need to be applied only to *individual* properties. Components of eligible districts do not have to meet the special requirements unless they make up the majority of the district or are the focal point of the district. These are the general steps to follow when applying the Criteria Considerations to your property:

- Before looking at the Criteria Considerations, make sure your property meets one or more of the four Criteria for Evaluation and possesses integrity.
- If it does, check the Criteria Considerations (next column) to see if

the property is of a type that is usually excluded from the National Register. The sections that follow also list specific examples of properties of each type. If your property clearly *does not* fit one of these types, then it does not need to meet any special requirements.

- If your property *does* fit one of these types, then it must meet the special requirements stipulated for that type in the Criteria Considerations.

CRITERIA CONSIDERATIONS*

Ordinarily cemeteries, birthplaces, or graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings, properties primarily commemorative in nature, and properties that have achieved significance within the past fifty years shall not be considered eligible for the National Register. However, such properties will qualify if they are integral parts of districts that do meet the criteria or if they fall within the following categories:

- a. a religious property deriving primary significance from architectural or artistic distinction or historical importance; or

- b. a building or structure removed from its original location but which is significant primarily for architectural value, or which is the surviving structure most importantly associated with a historic person or event; or
- c. a birthplace or grave of a historical figure of outstanding importance if there is no appropriate site or building directly associated with his or her productive life; or
- d. a cemetery which derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, from association with historic events; or
- e. a reconstructed building when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other building or structure with the same association has survived; or
- f. a property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own exceptional significance; or,
- g. a property achieving significance within the past 50 years if it is of exceptional importance.

*The Criteria Considerations are taken from the Criteria for Evaluation, found in the *Code of Federal Regulations, Title 36, Part 60.*

CRITERIA CONSIDERATION A: RELIGIOUS PROPERTIES

A religious property is eligible if it derives its primary significance from architectural or artistic distinction or historical importance.

UNDERSTANDING CRITERIA CONSIDERATION A: RELIGIOUS PROPERTIES

A religious property requires justification on architectural, artistic, or historic grounds to avoid any appearance of judgment by government about the validity of any religion or belief. Historic significance for a religious property cannot be established on the merits of a religious doctrine, but rather, for architectural or artistic values or for important historic or cultural forces that the property represents. A religious property's significance under Criterion A, B, C, or D must be judged in purely secular terms. A religious group may, in some cases, be considered a cultural group whose activities are significant in areas broader than religious history.

Criteria Consideration for Religious Properties applies:

- If the resource was constructed by a religious institution.
- If the resource is presently owned by a religious institution or is used for religious purposes.
- If the resource was owned by a religious institution or used for religious purposes during its Period of Significance.
- If Religion is selected as an Area of Significance.

Examples of Properties that MUST Meet Criteria Consideration A: Religious Properties

- *A historic church where an important non-religious event occurred, such as a speech by Patrick Henry.*
- *A historic synagogue that is significant for architecture.*
- *A private residence is the site of a meeting important to religious history.*
- *A commercial block that is currently owned as an investment property by a religious institution.*
- *A historic district in which religion was either a predominant or significant function during the period of significance.*

Example of Properties that DO NOT Need to Meet Criteria Consideration A: Religious Properties

- *A residential or commercial district that currently contains a small number of churches that are not a predominant feature of the district.*
- *A town meeting hall that serves as the center of community activity and houses a wide variety of public and private meetings, including religious service. The resource is significant for architecture and politics, and the religious function is incidental.*
- *A town hall, significant for politics from 1875 to 1925, that housed religious services during the 1950s. Since the religious function occurred after the Period of Significance, the Criteria Consideration does not apply.*

APPLYING CRITERIA CONSIDERATION A: RELIGIOUS PROPERTIES

ELIGIBILITY FOR HISTORIC EVENTS

A religious property can be eligible under Criterion A for any of three reasons:

- It is significant under a theme in the history of religion having secular scholarly recognition; or
- It is significant under another historical theme, such as exploration, settlement, social philanthropy, or education; or
- It is significantly associated with traditional cultural values.

RELIGIOUS HISTORY

A religious property can be eligible if it is directly associated with either a specific event or a broad pattern in the history of religion.

Eligible

- The site of a convention at which a significant denominational split occurred meets the requirements of Criteria Consideration A. Also eligible is a property that illustrates the broad impact of a religious institution on the history of a local area.

Not Eligible

- A religious property cannot be eligible simply because was the place of religious services for a community, or was the oldest structure used by a religious group in a local area.

OTHER HISTORICAL THEMES

A religious property can be eligible if it is directly associated with either a specific event or a broad pattern that is significant in another historic context. A religious property would also qualify if it were significant for its associations that illustrate the importance of a particular religious group in the social, cultural, economic, or political history of the area. Eligibility depends on the importance of the event or broad pattern and the role of the specific property.

Eligible

- A religious property can qualify for its important role as a temporary hospital during the Revolutionary War, or if its school was significant in the history of education in the community.

Not Eligible

- A religious property is not significant in the history of education in a community simply because it had occasionally served as a school.

TRADITIONAL CULTURAL VALUES

When evaluating properties associated with traditional cultures, it is important to recognize that often these cultures do not make clear distinctions between what is secular and what is sacred. Criteria Consideration A is not intended to exclude traditional cultural resources merely because they have religious uses or are considered sacred. A property or natural feature important to a traditional culture's religion and mythology is eligible if its importance has been ethnohistorically documented and if the site can be clearly defined. It is critical, however, that the activities be documented and that the associations not be so diffuse that the physical resource cannot be adequately defined.⁸

Eligible

- A specific location or natural feature that an Indian tribe believes to be its place of origin and that is adequately documented qualifies under Criteria Consideration A.

ELIGIBILITY FOR HISTORIC PERSONS

A religious property can be eligible for association with a person important in religious history, if that significance has scholarly, secular recognition or is important in other historic contexts. Individuals who would likely be considered significant are those who formed or significantly influenced an important religious institution or movement, or who were important in the social, economic, or political history of the area. Properties associated with individuals important only within the context of a single congregation and lacking importance in any other historic context would not be eligible under Criterion B.

Eligible

- A religious property strongly associated with a religious leader, such as George Whitefield or Joseph Smith, is eligible.

⁸ For more information on applying Criteria Consideration A to traditional cultural properties, refer to *National Register Bulletin: Guidelines for Evaluating and Documenting Traditional Cultural Properties*.

ELIGIBILITY FOR ARCHITECTURAL OR ARTISTIC DISTINCTION

A religious property significant for its architectural design or construction should be evaluated as are other properties under Criterion C; that is, it should be evaluated within an established architectural context and, if necessary, compared to other properties of its type, period, or method of construction. (See "Comparing Related Properties" in *Part V: How to Evaluate a Property Within Its Historic Context*.)

Eligible

- A historic camp meeting district that meets the requirements of Criterion C for its significance as a type of construction is eligible.

ELIGIBILITY FOR INFORMATION POTENTIAL

A religious property, whether a district, site, building, structure, or object, is eligible if it can yield important information about the religious practices of a cultural group or other historic themes. This kind of property should be evaluated as are other properties under Criterion D, in relation to similar properties, other information sources, and existing data gaps.

Eligible

- A 19th century camp meeting site that could provide information about the length and intensity of site use during revivals of the Second Great Awakening is eligible.
- Rock cairns or medicine wheels that had a historic religious mythological function and can provide information about specific cultural beliefs are eligible.

ABILITY TO REFLECT HISTORIC ASSOCIATIONS

As with all eligible properties, religious properties must physically represent the period of time for which they are significant. For instance, a recent building that houses an older congregation cannot qualify based on the historic activities of the group because the current building does not convey the earlier history. Likewise, an older building that housed the historic activities of the congregation is eligible if it still physically represents the period of the congregation's significance. However, if an older building has been remodeled to the extent that its appearance dates from the time of the remodeling, it can only be eligible if the period of significance corresponds with the period of the alterations.

Eligible

- A church built in the 18th century and altered beyond recognition in the 19th century is eligible only if the additions are important in themselves as an example of late 19th century architecture or as a reflection of an important period of the congregation's growth.

Not Eligible

- A synagogue built in the 1920s cannot be eligible for the important activities of its congregation in the 18th and 19th centuries. It can only be eligible for significance obtained after its construction date.
- A rural 19th century frame church recently sheathed in brick is not eligible because it has lost its characteristic appearance and therefore can no longer convey its 19th century significance, either for architectural value or historic association.

Criteria Consideration A - Religious Properties. A religious property can qualify as an exception to the Criteria if it is architecturally significant. **The Church of the Navity** in Rosedale, Iberville Parish, Louisiana, qualified as a rare example in the State of a 19th century small frame Gothic Revival style chapel. (Robert Obier)

CRITERIA CONSIDERATION B: MOVED PROPERTIES

A property removed from its original or historically significant location can be eligible if it is significant primarily for architectural value or it is the surviving property most importantly associated with a historic person or event.

UNDERSTANDING CRITERIA CONSIDERATION B: MOVED PROPERTIES

The National Register criteria limit the consideration of moved properties because significance is embodied in locations and settings as well as in the properties themselves. Moving a property destroys the relationships between the property and its surroundings and destroys associations with historic events and persons. A move may also cause the loss of historic features such as landscaping, foundations, and chimneys, as well as loss of the potential for associated archeological deposits. Properties that were moved *before* their period of significance do not need to meet the special requirements of Criteria Consideration B.

One of the basic purposes of the National Register is to encourage the preservation of historic properties as living parts of their communities. In keeping with this purpose, it is not usual to list artificial groupings of buildings that have been created for purposes of interpretation, protection, or maintenance. Moving buildings to such a grouping destroys the integrity of location and setting, and can create a false sense of historic development.

APPLYING CRITERIA CONSIDERATION B: MOVED PROPERTIES

ELIGIBILITY FOR ARCHITECTURAL VALUE

A moved property significant under Criterion C must retain enough historic features to convey its architectural values and retain integrity of design, materials, workmanship, feeling, and association.

Examples of Properties that MUST Meet Criteria Consideration B: Moved Properties

- A resource moved from one location on its original site to another location on the property, during or after its Period of Significance.
- A district in which a significant number of resources have been moved from their original location.
- A district which has one moved building that makes an especially significant contribution to the district.
- A portable resource, such as a ship or railroad car, that is relocated to a place incompatible with its original function.
- A portable resource, such as a ship or railroad car, whose importance is critically linked to its historic location or route and that is moved.

Examples of Properties that DO NOT Need to Meet Criteria Consideration B: Moved Properties

- A property that is moved prior to its Period of Significance.
- A district in which only a small percentage of typical buildings in a district are moved.
- A moved building that is part of a complex but is of less significance than the remaining (unmoved) buildings.
- A portable resource, such as a ship or railroad car, that is eligible under Criterion C and is moved within its natural setting (water, rails, etc.).
- A property that is raised or lowered on its foundations.

ELIGIBILITY FOR HISTORIC ASSOCIATIONS

A moved property significant under Criteria A or B must be demonstrated to be the surviving property most importantly associated with a particular historic event or an important aspect of a historic person's life. The phrase "most importantly associated" means that it must be the single surviving property that is most closely associated with the event or with the part of the person's life for which he or she is significant.

Eligible

- A moved building occupied by an business woman during the majority of her productive career would be eligible if the other extant properties are a house she briefly inhabited prior to her period of significance and a commercial building she owned after her retirement.

Not Eligible

- A moved building associated with the beginning of rail transportation in a community is not eligible if the original railroad station and warehouse remained intact on their original sites.

SETTING AND ENVIRONMENT

In addition to the requirements above, moved properties must still have an orientation, setting, and general environment that are comparable to those of the historic location and that are compatible with the property's significance.

Eligible

- A property significant as an example of mid-19th century rural house type can be eligible after a move, provided that it is placed on a lot that is sufficient in size and character to recall the basic qualities of the historic environment and setting, and provided that the building is sited appropriately in relation to natural and manmade surroundings.

Not Eligible

- A rural house that is moved into an urban area and a bridge that is no longer situated over a waterway are not eligible.

ASSOCIATION DEPENDENT ON THE SITE

For a property whose design values or historical associations are directly dependent on its location, any move will cause the property to lose its integrity and prevent it from conveying its significance.

Eligible

- A farm structure significant only as an example of a method of construction peculiar to the local area is still eligible if it is moved within that local area and the new setting is similar to that of the original location.

Not Eligible

- A 19th century rural residence that was designed around particular topographic features, reflecting that time period's ideals of environment, is not eligible if moved.

PROPERTIES DESIGNED TO BE MOVED

A property designed to move or a property frequently moved during its historic use must be located in a historically appropriate setting in order to qualify, retaining its integrity of setting, design, feeling, and association. Such properties include automobiles, railroad cars and engines, and ships.

Eligible

- A ship docked in a harbor, a locomotive on tracks or in a railyard, and a bridge relocated from one body of water to another are eligible.

Not Eligible

- A ship on land in a park, a bridge placed in a pasture, or a locomotive displayed in an indoor museum are not eligible.

ARTIFICIALLY CREATED GROUPINGS

An artificially created grouping of buildings, structures, or objects is not eligible unless it has achieved significance since the time of its assemblage. It cannot be considered as a reflection of the time period when the individual buildings were constructed.

Eligible

- A grouping of moved historic buildings whose creation marked the beginning of a major concern with past lifestyles can qualify as an early attempt at historic preservation and as an illustration of that generation's values.

Not Eligible

- A rural district composed of a farmhouse on its original site and a grouping of historic barns recently moved onto the property is not eligible.

PORTIONS OF PROPERTIES

A moved *portion* of a building, structure, or object is not eligible because, as a fragment of a larger resource, it has lost integrity of design, setting, materials, workmanship, and location.

CRITERIA CONSIDERATION C: BIRTHPLACES OR GRAVES

A birthplace or grave of a historical figure is eligible if the person is of outstanding importance and if there is no other appropriate site or building directly associated with his or her productive life.

UNDERSTANDING CRITERIA CONSIDERATION C: BIRTHPLACES AND GRAVES

Birthplaces and graves often attain importance as reflections of the origins of important persons or as lasting memorials to them. The lives of persons significant in our past normally are recognized by the National Register through listing of properties illustrative of or associated with that person's productive life's work. Birthplaces and graves, as properties that represent the beginning and the end of the life of distinguished individuals, may be temporally and geographically far removed from the person's significant activities, and therefore are not usually considered eligible.

Examples of Properties that MUST Meet Criteria Consideration C: Birthplaces and Graves

- *The birthplace of a significant person who lived elsewhere during his or her Period of Significance.*
- *A grave that is nominated for its association with the significant person buried in it.*
- *A grave that is nominated for information potential.*

Examples of Properties that DO NOT Need to Meet Criteria Consideration C: Birthplaces and Graves

- *A house that was inhabited by a significant person for his or her entire lifetime.*
- *A grave located on the grounds of the house where a significant person spent his or her productive years.*

APPLYING CRITERIA CONSIDERATION C: BIRTHPLACES AND GRAVES

PERSONS OF OUTSTANDING IMPORTANCE

The phrase "a historical figure of outstanding importance" means that in order for a birthplace or grave to qualify, it cannot be simply the birthplace or grave of a person significant in our past (Criterion B). It must be the birthplace or grave of an individual who was of outstanding importance in the history of the local area, State, or nation. The birthplace or grave of an individual who was one of several people active in some aspect of the history of a community, a state, or the Nation would not be eligible.

LAST SURVIVING PROPERTY ASSOCIATED WITH A PERSON

When an geographical area strongly associated with a person of outstanding importance has lost all other properties directly associated with his or her formative years or productive life, a birthplace or grave may be eligible.

ELIGIBILITY FOR OTHER ASSOCIATIONS

A birthplace or grave can also be eligible if it is significant for reasons other than association with the productive life of the person in question. It can be eligible for significance under Criterion A for association with important events, under Criterion B for association with the productive lives of *other* important persons, or under Criterion C for architectural significance. A birthplace or grave can also be eligible in rare cases if, after the passage of time, it is significant for its commemorative value. (See Criteria Consideration F for a discussion of commemorative properties.) A birthplace or grave can also be eligible under Criterion D if it contains important information on research, e.g., demography, pathology, mortuary practices, socioeconomic status differentiation.

Criteria Consideration C - Birthplaces. *A birthplace of a historical figure is eligible if the person is of outstanding importance and there is no other appropriate site or building associated with his or her productive life. The **Walter Reed Birthplace**, Gloucester vicinity, Gloucester County, Virginia is the most appropriate remaining building associated with the life of the man who, in 1900, discovered the cause and mode of transmission of the great scourge of the tropics, yellow fever. (Virginia Historic Landmarks Commission)*

CRITERIA CONSIDERATION D: CEMETERIES

A cemetery is eligible if it derives its primary significance from graves of persons of transcendent importance, from age, from distinctive design features, or from association with historic events.

UNDERSTANDING CRITERIA CONSIDERATION D: CEMETERIES

A cemetery is a collection of graves that is marked by stones or other artifacts or that is unmarked but recognizable by features such as fencing or depressions, or through maps, or by means of testing. Cemeteries serve as a primary means of an individual's recognition of family history and as expressions of collective religious and/or ethnic identity. Because cemeteries may embody values beyond personal or family-specific emotions, the National Register criteria allow for listing of cemeteries under certain conditions.

Examples of Properties that MUST Meet Criteria Consideration D: Cemeteries

- A cemetery that is nominated individually for Criterion A, B, or C.

Examples of Properties that DO NOT Need to Meet Criteria Consideration D: Cemeteries

- A cemetery that is nominated along with its associated church, but the church is the main resource nominated.
- A cemetery that is nominated under Criterion D for information potential.
- A cemetery that is nominated as part of a district but is not the focal point of the district.

APPLYING CRITERIA CONSIDERATION D: CEMETERIES

PERSONS OF TRANSCENDENT IMPORTANCE

A cemetery containing the graves of persons of transcendent importance may be eligible. To be of transcendent importance the persons must have been of great eminence in their fields of endeavor or had a great impact upon the history of their community, State, or nation. (A single grave that is the burial place of an important person and is located in a larger cemetery that does not qualify under this Criteria Consideration should be treated under Criteria Consideration C: Birthplaces and Graves.)

Criteria Consideration D - Cemeteries. The Hancock Cemetery, Quincy, Norfolk County, Massachusetts meets the exception to the Criteria because it derives its primary significance from its great age (the earliest burials date from 1640) and from the distinctive design features found in its rich collection of late 17th and early 18th century funerary art. (N. Hobart Holly)

<p>Eligible</p> <ul style="list-style-type: none">• A historic cemetery containing the graves of a number of persons who were exceptionally significant in determining the course of a State's political or economic history during a particular period is eligible. <p>Not Eligible</p> <ul style="list-style-type: none">• A cemetery containing graves of State legislators is not eligible if they simply performed the daily business of State government and did not have an outstanding impact upon the nature and direction of the State's history.

ELIGIBILITY ON THE BASIS OF AGE

Cemeteries can be eligible if they have achieved historic significance for their relative great age in a particular geographic or cultural context.

Eligible

- A cemetery dating from a community's original 1830s settlement can attain significance from its association with that very early period.

ELIGIBILITY FOR DESIGN

Cemeteries can qualify on the basis of distinctive design values. These values refer to the same design values addressed in Criterion C and can include aesthetic or technological achievement in the fields of city planning, architecture, landscape architecture, engineering, mortuary art, and sculpture. As for all other nominated properties, a cemetery must clearly express its design values and be able to convey its historic appearance.

Eligible

- A Victorian cemetery is eligible if it clearly expresses the aesthetic principles related to funerary design for that period, through such features as the overall plan, landscaping, statuary, sculpture, fencing, buildings, and grave markers.

Not Eligible

- A cemetery cannot be eligible for design values if it no longer conveys its historic appearance because of the introduction of new grave markers.

ELIGIBILITY FOR ASSOCIATION WITH EVENTS

Cemeteries may be associated with historic events including specific important events or general events that illustrate broad patterns.

Eligible

- A cemetery associated with an important Civil War battle is eligible.
- A cemetery associated with the settlement of an area by an ethnic or cultural group is eligible if the movement of the group into the area had an important impact, if other properties associated with that group are rare, and if few documentary sources have survived to provide information about the group's history.

Not Eligible

- A cemetery associated with a battle in the Civil War does not qualify if the battle was not important in the history of the war.
- A cemetery associated with an area's settlement by an ethnic or cultural group is not eligible if the impact of the group on the area cannot be established, if other extant historic properties better convey association with the group, or if the information that the cemetery can impart is available in documentary sources.

ELIGIBILITY FOR INFORMATION POTENTIAL

Cemeteries, both historic and prehistoric, can be eligible if they have the potential to yield important information. The information must be important within a specific context and the potential to yield information must be demonstrated.

A cemetery can qualify if it has potential to yield important information provided that the information it contains is not available in extant documentary evidence.

Eligible

- A cemetery associated with the settlement of a particular cultural group will qualify if it has the potential to yield important information about subjects such as demography, variations in mortuary practices, or the study of the cause of death correlated with nutrition or other variables.

INTEGRITY

Assessing the integrity of a historic cemetery entails evaluating principal design features such as plan, grave markers, and any related elements (such as fencing). Only that portion of a historic cemetery that retains its historic integrity can be eligible. If the overall integrity has been lost because of the number and size of recent grave markers, some features such as buildings, structures, or objects that retain integrity may be considered as individual properties if they are of such historic or artistic importance that they individually meet one or more of the requirements listed above.

NATIONAL CEMETERIES

National Cemeteries administered by the Veterans Administration are eligible because they have been designated by Congress as primary memorials to the military history of the United States. Those areas within a designated national cemetery that have been used or prepared for the reception of the remains of veterans and their dependents, as well as any landscaped areas that immediately surround the graves may qualify. Because these cemeteries draw their significance from the presence of the remains of military personnel who have served the country throughout

its history, the age of the cemetery is not a factor in judging eligibility, although integrity must be present.

A national cemetery or a portion of a national cemetery that has only been set aside for use in the future is not eligible.

CRITERIA CONSIDERATION E: RECONSTRUCTED PROPERTIES

A reconstructed property is eligible when it is accurately executed in a suitable environment *and* presented in a dignified manner as part of a restoration master plan *and* when no other building or structure with the same associations has survived. All three of these requirements must be met.

UNDERSTANDING CRITERIA CONSIDERATION E: RECONSTRUCTED PROPERTIES

“Reconstruction” is defined as the reproduction of the exact form and detail of a vanished building, structure, object, or a part thereof, as it appeared at a specific period of time. Reconstructed buildings fall into two categories: buildings wholly constructed of new materials and buildings reassembled from some historic and some new materials. Both categories of properties present problems in meeting the integrity requirements of the National Register criteria.

Examples of Properties that MUST Meet Criteria Consideration E: Reconstructed Properties

- A property in which most or all of the fabric is not original.
- A district in which an important resource or a significant number of resources are reconstructions.

Examples of Properties that DO NOT Need to Meet Criteria Consideration E: Reconstructed Properties

- A property that is remodeled or renovated and still has the majority of its original fabric.

APPLYING CRITERIA CONSIDERATION E: RECONSTRUCTED PROPERTIES

ACCURACY OF THE RECONSTRUCTION

The phrase “accurately executed” means that the reconstruction must be based upon sound archeological, architectural, and historic data concerning the historic construction and appearance of the resource. That documentation should include both analysis of any above or below ground material and research in written and other records.

SUITABLE ENVIRONMENT

The phrase “suitable environment” refers to: 1) the physical context provided by the historic district and 2) any interpretive scheme, if the historic district is used for interpretive purposes. This means that the reconstructed property must be located at the same site as the original. It must also be situated in its original grouping of buildings, structures, and objects (as many as are extant), and that grouping must retain integrity. In addition, the reconstruction must not be misrepresented as an authentic historic property.

Eligible

- A reconstructed plantation manager’s office building is considered eligible because it is located at its historic site, grouped with the remaining historic plantation buildings and structures, and the plantation as a whole retains integrity. Interpretation of the plantation district includes an explanation that the manager’s office is not the original building, but a reconstruction.

Not Eligible

- The same reconstructed plantation manager’s office building would not qualify if it were rebuilt at a location different from that of the original building, or if the district as a whole no longer reflected the period for which it is significant, or if a misleading interpretive scheme were used for the district or for the reconstruction itself.

RESTORATION MASTER PLANS

Being presented "as part of a restoration master plan" means that: 1) a reconstructed property is an essential component in a historic district and 2) the reconstruction is part of an overall restoration plan for an entire district. "Restoration" is defined as accurately recovering the form and details of a property and its setting as it appeared at a particular period by removing later work or by replacing missing earlier work (as opposed to completely rebuilding the property). The master plan for the entire property must emphasize restoration, not reconstruction. In other words, the master plan for the entire resource would not be acceptable under this consideration if it called for reconstruction of a majority of the resource.

LAST SURVIVING PROPERTY OF A TYPE

This consideration also stipulates that a reconstruction can qualify if, in addition to the other requirements, no other building, object, or structure with the same association has survived. A reconstruction that is part of a restoration master plan is appropriate only if: 1) the property is the only one in the district with which a particular important activity or event has been historically associated or 2) no other property with the same associative values has survived.

RECONSTRUCTIONS OLDER THAN FIFTY YEARS

After the passage of fifty years, a reconstruction may attain its own significance for what it reveals about the period in which it was built, rather than the historic period it was intended to depict. On that basis, a reconstruction can possibly qualify under any of the Criteria.

Eligible

- A reconstructed plantation manager's office is eligible if the office were an important component of the plantation *and* if the reconstruction is one element in an overall plan for restoring the plantation *and* if no other building or structure with the same associations has survived.
- The reconstruction of the plantation manager's office building can be eligible only if the majority of buildings, structures, and objects that comprised the plantation are extant and are being restored. For guidance regarding restoration see the *Secretary of the Interior's Standards for Historic Preservation Projects*.

CRITERIA CONSIDERATION F: COMMEMORATIVE PROPERTIES

A property primarily commemorative in intent can be eligible if design, age, tradition, or symbolic value has invested it with its own historical significance.

UNDERSTANDING CRITERIA CONSIDERATION F: COMMEMORATIVE PROPERTIES

Commemorative properties are designed or constructed after the occurrence of an important historic event or after the life of an important person. They are not directly associated with the event or with the person's productive life, but serve as evidence of a later generation's assessment of the past. Their significance comes from their value as cultural expressions at the date of their creation. Therefore, a commemorative property generally must be over fifty years old and must possess significance based on its own value, not on the value of the event or person being memorialized.

Examples of Properties that MUST Meet Criteria Consideration F: Commemorative Properties

- *A property whose sole or primary function is commemorative or in which the commemorative function is of primary significance.*

Examples of Properties that DO NOT Need to Meet Criteria Consideration F: Commemorative Properties

- *A resource that has a non-commemorative primary function or significance.*
- *A single marker that is a component of a district (whether contributing or non-contributing).*

APPLYING CRITERIA CONSIDERATION F: COMMEMORATIVE PROPERTIES

ELIGIBILITY FOR DESIGN

A commemorative property derives its design from the aesthetic values of the period of its creation. A commemorative property, therefore, may be significant for the architectural, artistic, or other design qualities of its own period in prehistory or history.

Eligible

- A commemorative statue situated in a park or square is eligible if it expresses the aesthetics or craftsmanship of the period when it was made, meeting Criterion C.
- A late 19th century statue erected on a courthouse square to commemorate Civil War veterans would qualify if it reflects that era's shared perception of the noble character and valor of the veterans and their cause. This was commonly conveyed by portraying idealized soldiers or allegorical figures of battle, victory, or sacrifice.

ELIGIBILITY FOR AGE, TRADITION, OR SYMBOLIC VALUE

A commemorative property cannot qualify for association with the event or person it memorializes. A commemorative property may, however, acquire significance after the time of its creation through *age*, *tradition*, or *symbolic* value. This significance must be documented by accepted methods of historical research, including written or oral history, and must meet one or more of the Criteria.

Eligible

- A commemorative marker erected by a cultural group that believed the place was the site of its origins is eligible if, for subsequent generations of the group, the marker itself became the focus of traditional association with the group's historic identity.
- A building erected as a monument to an important historical figure will qualify if through the passage of time the property itself has come to symbolize the value placed upon the individual and is widely recognized as a reminder of enduring principles or contributions valued by the generation that erected the monument.
- A commemorative marker erected early in the settlement or development of an area will qualify if it is demonstrated that, because of its relative great age, the property has long been a part of the historic identity of the area.

Not Eligible

- A commemorative marker erected in the past by a cultural group at the site of an event in its history would not be eligible if the marker were significant only for association with the event, and it had not become significant itself through tradition.
- A building erected as a monument to an important historical figure would not be eligible if its only value lay in its association with the individual, and it has not come to symbolize values, ideas, or contributions valued by the generation that erected the monument.
- A commemorative marker erected to memorialize an event in the community's history would not qualify simply for its association with the event it memorialized.

INELIGIBILITY AS THE LAST REPRESENTATIVE OF AN EVENT OR PERSON

The loss of properties directly associated with a significant event or person does not strengthen the case for consideration of a commemorative property. Unlike birthplaces and graves, a commemorative property usually has no direct historic association. The commemorative property can qualify for historic association only if it is clearly significant in its own right, as stipulated above.

CRITERIA CONSIDERATION G: PROPERTIES THAT HAVE ACHIEVED SIGNIFICANCE WITHIN THE LAST FIFTY YEARS⁹

A property achieving significance within the last fifty years is eligible if it is of exceptional importance.

UNDERSTANDING CRITERIA CONSIDERATION G: PROPERTIES THAT HAVE ACHIEVED SIGNIFICANCE WITHIN THE LAST FIFTY YEARS

The National Register Criteria for Evaluation exclude properties that achieved significance within the last fifty years unless they are of exceptional importance. Fifty years is a general estimate of the time needed to develop historical perspective and to evaluate significance. This consideration guards against the listing of properties of passing contemporary interest and ensures that the National Register is a list of truly historic places.

Examples of Properties that MUST Meet Criteria Consideration G: Properties that Have Achieved Significance Within the Last Fifty Years

- A property that is less than fifty years old.
- A property that continues to achieve significance into a period less than fifty years before the nomination.
- A property that has non-contiguous Periods of Significance, one of which is less than fifty years before the nomination.
- A property that is more than fifty years old and had no significance until a period less than fifty years before the nomination.

Examples of Properties that DO NOT Need to Meet Criteria Consideration G: Properties that Have Achieved Significance Within the Last Fifty Years

- A resource whose construction began over fifty years ago, but the completion overlaps the fifty year period by a few years or less.
- A resource that is significant for its plan or design, which is over fifty years old, but the actual completion of the project overlaps the fifty year period by a few years.
- A historic district in which a few properties are newer than fifty years old, but the majority of properties and the most important Period of Significance are greater than fifty years old.

⁹ For more information on Criteria Consideration G, refer to *National Register Bulletin: Guidelines for Evaluating and Nominating Properties that Have Achieved Significance Within the Last Fifty Years*.

APPLYING CRITERIA CONSIDERATION G: PROPERTIES THAT HAVE ACHIEVED SIGNIFICANCE WITHIN THE PAST FIFTY YEARS

ELIGIBILITY FOR EXCEPTIONAL IMPORTANCE

The phrase “exceptional importance” may be applied to the extraordinary importance of an event or to an entire category of resources so fragile that survivors of any age are unusual. Properties listed that had attained significance in less than fifty years include: the launch pad at Cape Canaveral from which men first traveled to the moon, the home of nationally prominent playwright Eugene O’Neill, and the Chrysler Building (New York) significant as the epitome of the “Style Moderne” architecture.

Properties less than fifty years old that qualify as exceptional because the entire category of resources is fragile include a recent example of a traditional sailing canoe in the Trust Territory of the Pacific Islands, where because of rapid deterioration of materials, no working Micronesian canoes exist that are more than twenty years old. Properties that by their nature can last more than fifty years cannot be considered exceptionally important because of the fragility of the class of resources.

The phrase “exceptional importance” does not require that the property be of national significance. It is a measure of a property’s importance within the appropriate historic context, whether the scale of that context is local, State, or national.

Eligible

- The General Laundry Building in New Orleans, one of the few remaining Art Deco Style buildings in that city, was listed in the National Register when it was forty years old because of its exceptional importance as an example of that architectural style.

HISTORICAL PERSPECTIVE

A property that has achieved significance within the past fifty years can be evaluated only when sufficient historical perspective exists to determine that the property is exceptionally important. The necessary perspective can be provided by scholarly research and evaluation, and must consider both the historic context and the specific property’s role in that context.

In many communities, properties such as apartment buildings built in the 1950s cannot be evaluated because there is no scholarly research available to provide an overview of the nature, role, and impact of that building type within the context of historical and architectural developments of the 1950s.

NATIONAL PARK SERVICE RUSTIC ARCHITECTURE

Properties such as structures built in a rustic style by the National Park Service during the 1930s and 1940s can be evaluated because a broad study, *National Park Service Rustic Architecture* (1977), provides the context for evaluating properties of this type and style. Specific examples were listed in the National Register prior to reaching fifty years of age when documentation concerning the individual properties established their significance within the historical and architectural context of the type and style.

VETERANS ADMINISTRATION HOSPITALS

Hospitals less than fifty years old that were constructed by the Veterans Bureau and Veterans Administration can be evaluated because the collection of forty-eight facilities built between 1920 and 1946 has been analyzed in a study prepared by the agency. The study provided a historic and architectural context for development of veteran’s care within which hospitals could be evaluated. The exceptional importance of specific individual facilities constructed within the past fifty years could therefore be determined based on their role and their present integrity.

COMPARISON WITH RELATED PROPERTIES

In justifying exceptional importance, it is necessary to identify other properties within the geographical area that reflect the same significance or historic associations and to determine which properties *best* represent the historic context in question. Several properties in the area could become eligible with the passage of time, but few will qualify now as exceptionally important.

POST-WORLD WAR II PROPERTIES

Properties associated with the post-World War II era must be identified and evaluated to determine which ones in an area could be judged exceptionally important. For example, a public housing complex may be eligible as an outstanding expression of the nation’s post-war urban policy. A military installation could be judged exceptionally important because of its contribution to the Cold War arms race. A church building in a Southern city may have served as the pivotal rallying point for the city’s most famous civil rights protest. A post-war suburban subdivision may be the best reflection of contemporary siting and design tenets in a metropolitan area. In each case, the nomination preparer must justify the *exceptional* importance of the property relative to similar properties in the community, State, or nation.

ELIGIBILITY FOR INFORMATION POTENTIAL

A property that has achieved significance within the past fifty years can qualify under Criterion D only if it can be demonstrated that the information is of exceptional importance within the appropriate context and that the property contains data superior to or different from those obtainable from other sources, including other culturally related sites. An archeological site less than fifty years old may be eligible if the former inhabitants are so poorly documented that information about their lifeways is best obtained from examination of the material remains.

Eligible

- Data such as the rate of adoption of modern technological innovations by rural tenant farmers in the 1950s may not be obtainable through interviews with living persons but could be gained by examination of homesites.

Not Eligible

- A recent archeological site such as the remains of a Navajo sheep corral used in the 1950s would not be considered exceptionally significant for its information potential on animal husbandry if better information on the same topic is available through ethnographic studies or living informants.

HISTORIC DISTRICTS

Properties which have achieved significance within the past fifty years can be eligible for the National Register if they are an integral part of a district which qualifies for National Register listing. This is demonstrated by documenting that the property dates from within the district's defined Period of Significance and that it is associated with one or more of the district's defined Areas of Significance.

Properties less than fifty years old may be an integral part of a district when there is sufficient perspective to consider the properties as historic. This is accomplished by demonstrating that: 1) the district's Period of Significance is justified as a discrete period with a defined beginning and end, 2) the character of the district's historic resources is clearly defined and assessed, 3) specific resources in the district are demonstrated to date from that discrete era, and 4) the majority of district properties are over fifty years old. In these instances, it is not necessary to prove exceptional importance of either the district itself or the less-than-fifty-year-old properties. Exceptional importance still must be demonstrated for district where the majority of properties or the major Period of Significance is less than fifty years old, and for less-than-fifty-year-old properties which are nominated individually.

PROPERTIES MORE THAN FIFTY YEARS IN AGE, LESS THAN FIFTY YEARS IN SIGNIFICANCE

Properties that are more than fifty years old, but whose significant associations or qualities are less than fifty years old, must be treated under the fifty year consideration.

Eligible

- A building constructed early in the twentieth century (and having no architectural importance), but that was associated with an important person during the 1950s, must be evaluated under Criteria Consideration G because the Period of Significance is within the past fifty years. Such a property would qualify if the person was of exceptional importance.

REQUIREMENT TO MEET THE CRITERIA, REGARDLESS OF AGE

Properties that are less than fifty years old and are not exceptionally important will *not* automatically qualify for the National Register once they are fifty years old. In order to be listed in the National Register, all properties, regardless of age, must be demonstrated to meet the Criteria for Evaluation.

VIII. HOW TO EVALUATE THE INTEGRITY OF A PROPERTY

INTRODUCTION

Integrity is the ability of a property to convey its significance. To be listed in the National Register of Historic Places, a property must not only be shown to be significant under the National Register criteria, but it also must have integrity. The evaluation of integrity is sometimes a subjective judgment, but it must always be grounded in an understanding of a property's physical features and how they relate to its significance.

Historic properties either retain integrity (this is, convey their significance) or they do not. Within the concept of integrity, the National Register criteria recognizes seven aspects or qualities that, in various combinations, define integrity.

To retain historic integrity a property will always possess several, and usually most, of the aspects. The retention of specific aspects of integrity is paramount for a property to convey its significance. Determining *which* of these aspects are most important to a particular property requires knowing why, where, and when the property is significant. The following sections define the seven aspects and explain how they combine to produce integrity.

SEVEN ASPECTS OF INTEGRITY

- Location
- Design
- Setting
- Materials
- Workmanship
- Feeling
- Association

UNDERSTANDING THE ASPECTS OF INTEGRITY

LOCATION

Location is the place where the historic property was constructed or the place where the historic event occurred. The relationship between the property and its location is often important to understanding why the property was created or why something happened. The actual location of a historic property, complemented by its setting, is particularly important in recapturing the sense of historic events and persons. Except in rare cases, the relationship between a property and its historic associations is destroyed if the property is moved. (See Criteria Consideration B in *Part VII: How to Apply the Criteria Considerations*, for the conditions under which a moved property can be eligible.)

DESIGN

Design is the combination of elements that create the form, plan, space, structure, and style of a property. It results from conscious decisions made during the original conception and planning of a property (or its significant alteration) and applies to activities as diverse as community planning, engineering, architecture, and landscape architecture. Design includes such elements as organization of space, proportion, scale, technology, ornamentation, and materials.

A property's design reflects historic functions and technologies as well as aesthetics. It includes such considerations as the structural system; massing; arrangement of spaces; pattern of fenestration; textures and colors of surface materials; type, amount, and style of ornamental detailing; and arrangement and type of plantings in a designed landscape.

Design can also apply to districts, whether they are important primarily for historic association, architectural value, information potential, or a combination thereof. For districts significant primarily for historic association or architectural value, design concerns more than just the individual buildings or structures located within the boundaries. It also applies to the way in which buildings, sites, or structures are related: for example, spatial relationships between major features; visual rhythms in a streetscape or landscape plantings; the layout and materials of walkways and roads; and the relationship of other features, such as statues, water fountains, and archeological sites.

SETTING

Setting is the physical environment of a historic property. Whereas location refers to the specific place where a property was built or an event occurred, setting refers to the *character* of the place in which the property played its historical role. It involves *how*, not just where, the property is situated and its relationship to surrounding features and open space.

Setting often reflects the basic physical conditions under which a property was built and the functions it was intended to serve. In addition, the way in which a property is positioned in its environment can reflect the designer's concept of nature and aesthetic preferences.

The physical features that constitute the setting of a historic property can be either natural or manmade, including such elements as:

- Topographic features (a gorge or the crest of a hill);
- Vegetation;
- Simple manmade features (paths or fences); and
- Relationships between buildings and other features or open space.

These features and their relationships should be examined not only within the exact boundaries of the property, but also between the property and its *surroundings*. This is particularly important for districts.

MATERIALS

Materials are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property. The choice and combination of materials reveal the preferences of those who created the property and indicate the availability of particular types of materials and technologies. Indigenous materials are often the focus of regional building traditions and thereby help define an area's sense of time and place.

A property must retain the key exterior materials dating from the period of its historic significance. If the property has been rehabilitated, the historic materials and significant features must have been preserved. The property must also be an actual historic resource, not a recreation; a

recent structure fabricated to look historic is not eligible. Likewise, a property whose historic features and materials have been lost and then reconstructed is usually not eligible. (See Criteria Consideration E in *Part VII: How to Apply the Criteria Considerations* for the conditions under which a reconstructed property can be eligible.)

WORKMANSHIP

Workmanship is the physical evidence of the crafts of a particular culture or people during any given period in history or prehistory. It is the evidence of artisans' labor and skill in constructing or altering a building, structure, object, or site. Workmanship can apply to the property as a whole or to its individual components. It can be expressed in vernacular methods of construction and plain finishes or in highly sophisticated configurations and ornamental detailing. It can be based on common traditions or innovative period techniques.

Workmanship is important because it can furnish evidence of the technology of a craft, illustrate the aesthetic principles of a historic or prehistoric period, and reveal individual, local, regional, or national applications of both technological practices and aesthetic principles. Examples of workmanship in historic buildings include tooling, carving, painting, graining, turning, and joinery. Examples of workmanship in prehistoric contexts include Paleo-Indian clovis projectile points; Archaic period beveled adzes; Hopewellian birdstone pipes; copper earspools and worked bone pendants; and Iroquoian effigy pipes.

FEELING

Feeling is a property's expression of the aesthetic or historic sense of a particular period of time. It results from the presence of physical features that, taken together, convey the property's historic character. For example, a rural historic district retaining original design, materials, workmanship, and setting will relate the feeling of agricultural life in the 19th century. A grouping of prehistoric petroglyphs, unmarred by graffiti and intrusions and located on its original isolated bluff, can evoke a sense of tribal spiritual life.

ASSOCIATION

Association is the direct link between an important historic event or person and a historic property. A property retains association if it is the place where the event or activity occurred and is sufficiently intact to convey that relationship to an observer. Like feeling, association requires the presence of physical features that convey a property's historic character. For example, a Revolutionary War battlefield whose natural and manmade elements have remained intact since the 18th century will retain its quality of association with the battle.

Because feeling and association depend on individual perceptions, their retention *alone* is never sufficient to support eligibility of a property for the National Register.

ASSESSING INTEGRITY IN PROPERTIES

Integrity is based on significance: why, where, and when a property is important. Only after significance is fully established can you proceed to the issue of integrity.

The steps in assessing integrity are:

- Define the **essential physical features** that must be present for a property to represent its significance.
- Determine whether the **essential physical features are visible** enough to convey their significance.
- Determine whether the property needs to be **compared with similar properties**. And,
- Determine, based on the significance and essential physical features, **which aspects of integrity** are particularly vital to the property being nominated and if they are present.

Ultimately, the question of integrity is answered by whether or not the property retains the **identity** for which it is significant.

DEFINING THE ESSENTIAL PHYSICAL FEATURES

All properties change over time. It is not necessary for a property to retain all its historic physical features or characteristics. The property must retain, however, the essential physical features that enable it to convey its historic identity. The essential physical features are those features that define both *why* a property is significant (Applicable Criteria and Areas of Significance) and *when* it was significant (Periods of Significance). They are the features without which a property can no longer be identified as, for instance, a late 19th century dairy barn or an early 20th century commercial district.

CRITERIA A AND B

A property that is significant for its historic association is eligible if it retains the essential physical features that made up its character or appearance during the period of its association with the important event, historical pattern, or person(s). If the property is a site (such as a treaty site) where there are no material cultural remains, the setting must be intact.

Archeological sites eligible under Criteria A and B must be in overall good condition with excellent preservation of features, artifacts, and spatial relationships to the extent that these remains are able to convey important associations with events or persons.

CRITERION C

A property important for illustrating a particular architectural style or construction technique must retain most of the physical features that constitute that style or technique. A property that has lost some historic materials or details can be eligible if it retains the majority of the features that illustrate its style in terms of the massing, spatial relationships, proportion, pattern of windows and doors, texture of materials, and ornamentation. The property is not eligible, however, if it retains some basic features conveying massing but has lost the majority of the features that once characterized its style.

Archeological sites eligible under Criterion C must be in overall good condition with excellent preservation

of features, artifacts, and spatial relationships to the extent that these remains are able to illustrate a site type, time period, method of construction, or work of a master.

CRITERION D

For properties eligible under Criterion D, including archeological sites and standing structures studied for their information potential, less attention is given to their overall condition, than it they were being considered under Criteria A, B, or C. Archeological sites, in particular, do not exist today exactly as they were formed. There are always cultural and natural processes that alter the deposited materials and their spatial relationships.

For properties eligible under Criterion D, integrity is based upon the property's potential to yield specific data that addresses important research questions, such as those identified in the historic context documentation in the Statewide Comprehensive Preservation Plan or in the research design for projects meeting the *Secretary of the Interior's Standards for Archeological Documentation*.

INTERIORS

Some historic buildings are virtually defined by their exteriors, and their contribution to the built environment can be appreciated even if their interiors are not accessible. Examples of this would include early examples of steel-framed skyscraper construction. The great advance in American technology and engineering made by these buildings can be read from the outside. The change in American popular taste during the 19th century, from the symmetry and simplicity of architectural styles based on classical precedents, to the expressions of High Victorian styles, with their combination of textures, colors, and asymmetrical forms, is readily apparent from the exteriors of these buildings.

Other buildings "are" interiors. The Cleveland Arcade, that soaring 19th century glass-covered shopping area, can only be appreciated from the inside. Other buildings in this category would be the great covered train sheds of the 19th century.

In some cases the loss of an interior will disqualify properties from listing

in the National Register—a historic concert hall noted for the beauty of its auditorium and its fine acoustic qualities would be the type of property that if it were to lose its interior, it would lose its value as a historic resource. In other cases, the overarching significance of a property's exterior can overcome the adverse effect of the loss of an interior.

In borderline cases particular attention is paid to the significance of the property and the remaining historic features.

HISTORIC DISTRICTS

For a district to retain integrity as a whole, the majority of the components that make up the district's historic character must possess integrity even if they are individually undistinguished. In addition, the relationships among the district's components must be substantially unchanged since the period of significance.

When evaluating the impact of intrusions upon the district's integrity, take into consideration the relative number, size, scale, design, and location of the components that do not contribute to the significance. A district is not eligible if it contains so many alterations or new intrusions that it no longer conveys the sense of a historic environment.

A component of a district cannot contribute to the significance if:

- it has been substantially altered since the period of the district's significance *or*
- it does not share the historic associations of the district.

VISIBILITY OF PHYSICAL FEATURES

Properties eligible under Criteria A, B, and C must not only retain their essential physical features, but the features must be visible enough to convey their significance. This means that even if a property is physically intact, its integrity is questionable if its significant features are concealed under modern construction. Archeological properties are often the exception to this; by nature they usually do not require visible features to convey their significance.

NON-HISTORIC EXTERIORS

If the historic *exterior* building material is covered by non-historic material (such as modern siding), the property can still be eligible if the significant form, features, and detailing are not obscured. If a property's exterior is covered by a non-historic false-front or curtain wall, the property will not qualify under Criteria A, B, or C, because it does not retain the visual quality necessary to convey historic or architectural significance. Such a property also cannot be considered a contributing element in a historic district, because it does not add to the district's sense of time and place. If the false front, curtain wall, or non-historic siding is removed and the original building materials are intact, then the property's integrity can be re-evaluated.

PROPERTY CONTAINED WITHIN ANOTHER PROPERTY

Some properties contain an earlier structure that formed the nucleus for later construction. The exterior property, if not eligible in its own right, can qualify on the basis of the interior property *only* if the interior property can yield significant information about a specific construction technique or material, such as rammed earth or tabby. The interior property *cannot* be used as the basis for eligibility if it has been so altered that it no longer contains the features that could provide important information, or if the presence of important information cannot be demonstrated.

SUNKEN VESSELS

A sunken vessel can be eligible under Criterion C as embodying the distinctive characteristics of a method of construction if it is structurally intact. A *deteriorated* sunken vessel, no longer structurally intact, can be eligible under Criterion D if the remains of either the vessel or its contents is capable of yielding significant information. For further information, refer to *National Register Bulletin: Nominating Historic Vessels and Shipwrecks to the National Register of Historic Places*.

Natural Features

A natural feature that is associated with a historic event or trend, such as a rock formation that served as a trail marker during westward expansion, must retain its historic appearance, unobscured by modern construction or landfill. Otherwise it is not eligible, even though it remains intact.

COMPARING SIMILAR PROPERTIES

For some properties, comparison with similar properties should be considered during the evaluation of integrity. Such comparison may be important in deciding what physical features are essential to properties of that type. In instances where it has not been determined what physical features a property must possess in order for it to reflect the significance of a historic context, comparison with similar properties should be undertaken during the evaluation of integrity. This situation arises when scholarly work has not been done on a particular property type or when surviving examples of a property type are extremely rare. (See **Comparing Related Properties** in *Part V: How to Evaluate a Property within its Historic Context*.)

RARE EXAMPLES OF A PROPERTY TYPE

Comparative information is particularly important to consider when evaluating the integrity of a property that is a rare surviving example of its type. The property must have the essential physical features that enable it to convey its historic character or information. The rarity and poor condition, however, of other extant examples of the type may justify accepting a greater degree of alteration or fewer features, provided that enough of the property survives for it to be a significant resource.

Eligible

- A one-room schoolhouse that has had all original exterior siding replaced and a replacement roof that does not exactly replicate the original roof profile can be eligible if the other extant rare examples have received an even greater degree of alteration, such as the subdivision of the original one-room plan.

Not Eligible

- A mill site contains information on how site patterning reflects historic functional requirements, but parts of the site have been destroyed. The site is not eligible for its information potential if a comparison of other mill sites reveals more intact properties with complete information.

DETERMINING THE RELEVANT ASPECTS OF INTEGRITY

Each type of property depends on certain aspects of integrity, more than others, to express its historic significance. Determining which of the aspects is most important to a particular property requires an understanding of the property's significance and its essential physical features.

CRITERIA A AND B

A property important for association with an event, historical pattern, or person(s) ideally might retain *some* features of all seven aspects of integrity: location, design, setting, materials, workmanship, feeling, and association. Integrity of design and workmanship, however, might not be as important to the significance, and would not be relevant if the property were a site. A basic integrity test for a property associated with an important event or person is whether a historical contemporary would recognize the property as it exists today.

For archeological sites that are eligible under Criteria A and B, the seven aspects of integrity can be applied in much the same way as they are to buildings, structures, or objects. It is important to note, however, that the site must have *demonstrated* its ability to convey its significance, as opposed to sites eligible under Criterion D where only the potential to yield information is required.

Eligible

A mid-19th century waterpowered mill important for its association with an area's industrial development is eligible if:

- it is still on its original site (**Location**), and
- the important features of its setting are intact (**Setting**), and
- it retains most of its historic materials (**Materials**), and
- it has the basic features expressive of its design and function, such as configuration, proportions, and window pattern (**Design**).

Not Eligible

A mid-19th century water-powered mill important for its association with an area's industrial development is not eligible if:

- it has been moved (**Location, Setting, Feeling, and Association**), or
- substantial amounts of new materials have been incorporated (**Materials, Workmanship, and Feeling**), or
- it no longer retains basic design features that convey its historic appearance or function (**Design, Workmanship, and Feeling**).

CRITERION C

A property significant under Criterion C must retain those physical features that characterize the type, period, or method of construction that the property represents. Retention of design, workmanship, and materials will usually be more important than location, setting, feeling, and association. Location and setting will be important, however, for those properties whose design is a reflection of their immediate environment (such as designed landscapes and bridges).

For archeological sites that are eligible under Criterion C, the seven aspects of integrity can be applied in much the same way as they are to buildings, structures, or objects. It is important to note, however, that the site must have *demonstrated* its ability to convey its significance, as opposed to sites eligible under Criterion D where only the *potential* to yield information is required.

Eligible

A 19th century wooden covered bridge, important for illustrating a construction type, is eligible if:

- the essential features of its design are intact, such as abutments, piers, roof configuration, and trusses (**Design, Workmanship, and Feeling**), and
 - most of the historic materials are present (**Materials, Workmanship, and Feeling**), and
 - evidence of the craft of wooden bridge technology remains, such as the form and assembly technique of the trusses (**Workmanship**).
- Since the design of a bridge relates directly to its function as a transportation crossing, it is also important that the bridge still be situated over a waterway (**Setting, Location, Feeling, and Association**).

Not Eligible

For a 19th century wooden covered bridge, important for its construction type, replacement of some materials of the flooring, siding, and roofing would not necessarily damage its integrity. Integrity would be lost, however, if:

- the abutments, piers, or trusses were substantially altered (**Design, Workmanship, and Feeling**) or
 - considerable amounts of new materials were incorporated (**Materials, Workmanship, and Feeling**).
- Because environment is a strong factor in the design of this property type, the bridge would also be ineligible if it no longer stood in a place that conveyed its function as a crossing (**Setting, Location, Feeling, and Association**).

CRITERION D

For properties eligible under Criterion D, setting and feeling may not have direct bearing on the property's ability to yield important information. Evaluation of integrity probably will focus primarily on the location, design, materials, and perhaps workmanship.

Eligible

A multicomponent prehistoric site important for yielding data on changing subsistence patterns can be eligible if:

- floral or faunal remains are found in clear association with cultural material (**Materials** and **Association**) and
- the site exhibits stratigraphic separation of cultural components (**Location**).

Not Eligible

A multicomponent prehistoric site important for yielding data on changing subsistence patterns would not be eligible if:

- floral or faunal remains were so badly decomposed as to make identification impossible (**Materials**), or
- floral or faunal remains were disturbed in such a manner as to make their association with cultural remains ambiguous (**Association**), or
- the site has lost its stratigraphic context due to subsequent land alterations (**Location**).

Eligible

A lithic scatter site important for yielding data on lithic technology during the Late Archaic period can be eligible if:

- the site contains lithic debitage, finished stone tools, hammerstones, or antler flakers (**Material** and **Design**), and
- the site contains datable material (**Association**).

Not Eligible

A lithic scatter site important for yielding data on lithic technology during the Late Archaic period would not be eligible if:

- the site contains natural deposits of lithic materials that are impossible to distinguish from culturally modified lithic material (**Design**) or
- the site does not contain any temporal diagnostic evidence that could link the site to the Late Archaic period (**Association**).

IX. SUMMARY OF THE NATIONAL HISTORIC LANDMARKS CRITERIA FOR EVALUATION

A property being nominated to the National Register may also merit consideration for potential designation as a National Historic Landmark. Such consideration is dependent upon the stringent application of the following distinct set of criteria (found in the *Code of Federal Regulations, Title 36, Part 65*).

NATIONAL HISTORIC LANDMARKS CRITERIA

The quality of national significance is ascribed to districts, sites, buildings, structures, and objects that possess exceptional value or quality in illustrating or interpreting the heritage of the United States in history, architecture, archeology, engineering, and culture and that possess a high degree of integrity of location, design, setting, materials, workmanship, feeling, and association, and:

1. That are associated with events that have made a significant contribution to, and are identified with, or that outstandingly represent, the broad national patterns of United States history and from which an understanding and appreciation of those patterns may be gained; or
2. That are associated importantly with the lives of persons nationally significant in the history of the United States; or
3. That represent some great idea or ideal of the American people; or
4. That embody the distinguishing characteristics of an architectural type specimen exceptionally valuable for a study of a period, style or method of construction, or that represent a significant, distinctive and exceptional entity whose components may lack individual distinction; or
5. That are composed of integral parts of the environment not sufficiently significant by reason of historical association or artistic merit to warrant individual recognition but collectively compose an entity of exceptional historical or artistic significance, or outstandingly commemorate or illustrate a way of life or culture; or
6. That have yielded or may be likely to yield information of major scientific importance by revealing new cultures, or by shedding light upon periods of occupation over large areas of the United States. Such sites are those which have yielded, or which may reasonably be expected to yield, data affecting theories, concepts and ideas to a major degree.

NATIONAL HISTORIC LANDMARK EXCLUSIONS

Ordinarily, cemeteries, birthplaces, graves of historical figures, properties owned by religious institutions or used for religious purposes, structures that have been moved from their original locations, reconstructed historic buildings and properties that have achieved significance within the past fifty years are not eligible for designation. If such properties fall within the following categories they may, nevertheless, be found to qualify:

1. A religious property deriving its primary national significance from architectural or artistic distinction or historical importance; or
2. A building or structure removed from its original location but which is nationally significant primarily for its architectural merit, or for association with persons or events of transcendent importance in the nation's history and the association consequential; or
3. A site of a building or structure no longer standing but the person or event associated with it is of transcendent importance in the nation's history and the association consequential; or

4. A birthplace, grave or burial if it is of a historical figure of transcendent national significance and no other appropriate site, building, or structure directly associated with the productive life of that person exists; or
5. A cemetery that derives its primary national significance from graves of persons of transcendent importance, or from an exceptionally distinctive design or an exceptionally significant event; or
6. A reconstructed building or ensemble of buildings of extraordinary national significance when accurately executed in a suitable environment and presented in a dignified manner as part of a restoration master plan, and when no other buildings or structures with the same association have survived; or
7. A property primarily commemorative in intent if design, age, tradition, or symbolic value has invested it with its own national historical significance; or
8. A property achieving national significance within the past 50 years if it is of extraordinary national importance.

COMPARING THE NATIONAL HISTORIC LANDMARKS CRITERIA AND THE NATIONAL REGISTER CRITERIA

In general, the instructions for preparing a National Register nomination and the guidelines stated in this bulletin for applying the National Register Criteria also apply to Landmark nominations and the use of the Landmark criteria. While there are specific distinctions discussed below, *Parts IV and V* of this bulletin apply equally to National Register listings and Landmark nominations. That is, the categories of historic properties are defined the same way; historic con-

texts are identified similarly; and comparative evaluation is carried out on the same principles enumerated in *Part V*.

There are some differences between National Register and National Historic Landmarks Criteria. The following is an explanation of how each Landmark Criterion compares with its National Register Criteria counterpart:

CRITERION 1

This Criterion relates to National Register Criterion A. Both cover properties associated with events. The Landmark Criterion, however, requires that the events associated with the property be *outstandingly* represented by that property and that the property be related to the broad national patterns of U.S. history. Thus, the quality of the property to convey and interpret its meaning must be of a higher order and must relate to national themes rather than the narrower context of State or local themes.

CRITERION 2

This Criterion relates to National Register Criterion B. Both cover properties associated with significant people. The Landmark Criterion differs in that it specifies that the association of a person to the property in question be an important one and that the person associated with the property be of *national* significance.

CRITERION 3

This Criterion has no counterpart among the National Register Criteria. It is rarely, if ever, used alone. While not a landmark at present, the Liberty Bell is an object that might be considered under this Criterion. The application of this Criterion obviously requires the most careful scrutiny and would apply only in rare instances involving ideas and ideals of the highest order.

CRITERION 4

This Criterion relates to National Register Criterion C. Its intent is to qualify exceptionally important works of architecture or collective elements of architecture extraordinarily significant as an ensemble, such as a historic

district. Note that the language is more restrictive than that of the National Register Criterion in requiring that a candidate in architecture be "a specimen exceptionally valuable for the study of a period, style, or method of construction" rather than simply embodying distinctive characteristics of a type, period, or method of construction. With regard to historic districts, the Landmarks Criterion requires an entity that is distinctive and exceptional. Unlike National Register Criterion C, this Criterion will not qualify the works of a master, *per se*, but only such works which are exceptional or extraordinary. Artistic value is considered only in the context of history's judgement in order to avoid current conflicts of taste.

CRITERION 5

This Criterion does not have a strict counterpart among the National Register Criteria. It may seem redundant of the latter part of Landmark Criterion 4. It is meant to cover collective entities such as Greenfield Village and historic districts like New Bedford, Massachusetts, which qualify for their collective association with a nationally significant event, movement, or broad pattern of national development.

CRITERION 6

The National Register counterpart of this is Criterion D. Criterion 6 was developed specifically to recognize archeological sites. All such sites must address this Criterion. The following are the qualifications that distinguish this Criterion from its National Register counterpart: the information yielded or likely to be yielded must be of *major* scientific importance by revealing new cultures, or by shedding light upon periods of occupation *over large areas* of the United States. Such sites should be expected to yield data affecting *theories, concepts, and ideas* to a *major degree*.

The data recovered or expected to be recovered must make a major contribution to the existing corpus of information. Potentially recoverable data must be likely to revolutionize or substantially modify a major theme in history or prehistory, resolve a substantial historical or anthropological debate, or close a serious gap in a major theme of U. S. history or prehistory.

EXCLUSIONS AND EXCEPTIONS TO THE EXCLUSIONS

This section of the National Historic Landmarks Criteria has its counterpart in the National Register's "Criteria Considerations." The most abundant difference between them is the addition of the qualifiers "national," "exceptional," or "extraordinary" before the word significance. Other than this, the following are the most notable distinctions:

EXCLUSION 2

Buildings moved from their original location, qualify only if one of two conditions are met: 1) the building is nationally significant for

architecture, or 2) the persons or events with which they are associated are of *transcendent* national significance and the association is consequential.

Transcendent significance means an order of importance higher than that which would ordinarily qualify a person or event to be nationally significant. A consequential association is a relationship to a building that had an evident impact on events, rather than a connection that was incidental and passing.

EXCLUSION 3

This pertains to the site of a structure no longer standing. There is no counterpart to this exclusion in the National Register Criteria. In order for such a property to qualify for Landmark designation it must meet the second condition cited for Exclusion 2.

EXCLUSION 4

This exclusion relates to Criteria Consideration C of the National Register Criteria. The only difference is that a burial place qualifies for Landmark designation only if, in addition to other factors, the person buried is of *transcendent* national importance.

When evaluating properties at the national level for designation as a National Historic Landmark, please refer to the National Historic Landmarks outline, *History and Prehistory in the National Park System and the National Historic Landmarks Program, 1987*. (For more information about the National Historic Landmarks program, please write to Department of the Interior, National Park Service, National Historic Landmarks, 1849 C Street, NW, NC400, Washington, DC 20240.)

X. GLOSSARY

Associative Qualities - An aspect of a property's history that links it with historic events, activities, or persons.

Code of Federal Regulations - Commonly referred to as "CFR." The part containing the National Register Criteria is usually referred to as 36 CFR 60, and is available from the National Park Service.

CLG - Certified Local Government.

Culture - A group of people linked together by shared values, beliefs, and historical associations, together with the group's social institutions and physical objects necessary to the operation of the institution.

Cultural Resource - See Historic Resource.

Evaluation - Process by which the significance and integrity of a historic property are judged and eligibility for National Register listing is determined.

Historic Context - An organizing structure for interpreting history that groups information about historic properties that share a common theme, common geographical area, and a common time period. The development of historic contexts is a foundation for decisions about the planning, identification, evaluation, registration, and treatment of historic properties, based upon comparative historic significance.

Historic Integrity - The unimpaired ability of a property to convey its historical significance.

Historic Property - See Historic Resource.

Historic Resource - Building, site, district, object, or structure evaluated as historically significant.

Identification - Process through which information is gathered about historic properties.

Listing - The formal entry of a property in the National Register of Historic Places. See also, Registration.

Nomination - Official recommendation for listing a property in the National Register of Historic Places.

Property Type - A grouping of properties defined by common physical and associative attributes.

Registration - Process by which a historic property is documented and nominated or determined eligible for listing in the National Register.

Research Design - A statement of proposed identification, documentation, investigation, or other treatment of a historic property that identifies the project's goals, methods and techniques, expected results, and the relationship of the expected results to other proposed activities or treatments.

Letter A-9

City of Riverside
March 10, 2023

A-9.1 This comment is an email transmittal of the comment letter. Specific comments regarding the Draft EIR are provided and responded to below.

A-9.2 This comment is introductory in nature and refers to detailed comments below. Specific comments regarding the Draft EIR are provided and responded to below.

A-9.3 This comment requests that the City's Public Works, Traffic Engineering Division be given an opportunity to review the Construction Management Plan and requests a meeting to discuss the traffic signal warrant analysis and associated improvements. Additionally, the City requests that March JPA coordinate with the Riverside Transit Authority (RTA) for any proposed bus stop amenities for Barton Street. The comment further references comments on the Traffic Analysis attached to the comment letter. March JPA and the Project traffic engineer will work with the City's Public Works department to discuss the traffic signal warrant analysis prepared as part of the Traffic Study, the recommended intersection improvements, and share the Construction Traffic Management Plan once prepared as required by MM-TRA-1. The Project Traffic Analysis (Appendix N-2) identifies improvements for each analysis scenario and identifies when the improvements would be needed to address operational deficiencies. Table 1.4 of the Project Traffic Analysis (Appendix N-2) outlines the Project's fair share costs for operational deficiencies at off-site intersections. PDF-TRA-4 requires the Project to pay said fair share costs. It would be up to the individual jurisdictions to implement any improvements.

March JPA has been in communication and will continue to communicate with RTA for planned improvements, including the installation of bus stop amenities on Alessandro Boulevard near Barton Street. The timing of the financial contribution is to occur prior to grading permit. As outlined in Comment Letter A-3, RTA reviewed the Draft EIR and did not have any comments or concerns at this time. Specific comments regarding the Draft EIR, including the referenced Traffic Analysis comments, are provided and responded to below.

A-9.4 This comment addresses traffic matters associated with the operation of the Project. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3):

- Section 1.10: As noted, the Project Traffic Analysis (Appendix N-2) identified a number of potential traffic calming measures for Barton Street in Section 1.10. As explained in Section 4.15, Transportation, of the Draft EIR, "MM-TRA-2 would require the Project applicant to develop and implement a Barton Street Traffic Safety Plan with appropriate traffic calming measures such as raised crosswalks/sidewalk extensions, raised intersections, chicane, center line and curb adjustment, roundabouts and lane narrowing supplemented with speed activated speed limit signs/warning signs, additional signage, flashing beacons, approved by the March JPA Civil Engineer, in compliance with a three-party memorandum of understanding executed by the City of Riverside, March JPA, and Meridian Park LLC." MM-TRA-2 will be included in the MMRP which will be enforceable and monitored for compliance by March JPA.
- Section 1.6.1: Bike lanes are planned on Barton Street without on-street parking to maximize bike safety. Although no on-street parking will be provided along Barton Street, the Project will

be constructing off-street parking for the park and areas adjacent to the trail heads (see Figures 2-4 and 2-5 of the proposed West Campus Upper Plateau Specific Plan for conceptual designs). This will allow users to drive, park, and access the parks/trails. MM-TRA-2 requires the applicant to install “No Parking” signs to restrict on-street parking along Barton Street.

- Table 1-4: The commenting agency’s request to include a condition for providing striping plans for improvements is noted for the record and has been incorporated into the Final EIR for review and consideration by the decision-makers prior to any action on the Project. Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- Section 3.5: The commenting agency’s request is to include a condition to work with the City of Riverside to finalize improvements and ensure that Project truck traffic adheres to adopted truck routes. March JPA appreciates the collaborative relationship between the City of Riverside, the County of Riverside and March JPA, in implementing the JPA’s truck route ordinances. March JPA will continue to assure that these member agencies will participate in the preparation and adoption of the truck route ordinance. A condition of approval will be incorporated seeking input from the City of Riverside and County of Riverside in drafting an updated truck route ordinance to address changes to the existing truck routes to expand to the new development.

A-9.5 This comment questions whether rooftop and ground-mounted photovoltaics systems would constitute energy generation and distribution, which is prohibited throughout all areas of the Specific Plan. Additionally, the City requests that uses permitted within the Specific Plan area be allowed to include renewable, clean energy production. The prohibition against energy generation and distribution does not apply to rooftop solar used for the purpose of generating on-site power, as an ancillary use, for allowed and conditionally allowed uses, as identified in the Specific Plan’s definition of Energy Generation and Distribution Facilities. Clean energy production as a “primary use” is not included at this time due to safety concerns with aircraft flying at March Air Reserve Base.

A-9.6 This comment requests that the Transportation section of the Draft EIR be updated if industrial uses are eliminated as permitted uses in the Mixed-Use Zone as recommended by the commenting agency and that the proposed Specific Plan consider allowing vehicular access from Barton Street for neighborhood and visitor-serving retail uses only. The restriction of mixed-use access directly onto Barton Street was at the request of local residents in order to limit the potential cut-through traffic into the existing residential neighborhoods to the south on Barton Street. As such, the Project Traffic Analysis (Appendix N-2) reallocated all passenger car traffic (including mixed use traffic) onto Cactus Avenue to the east of Barton Avenue, with no direct connection of Cactus Avenue to Barton Street. If the mixed-use areas consider direct access onto Barton Street as part of future submittals, then changes to the access assumptions and potential operational effects of those changes would be assessed in a future supplemental traffic analysis.

A-9.7 This comment requests that outdoor construction activities comply with the City’s Noise Code hours of operation (Riverside Municipal Code – RMC – Title 7). PDF-NOI-2 is consistent with the City of Riverside provisions for areas within 500 feet of a residential property line, which prohibits construction activity from 7:00 PM to 7:00 AM, Monday through Friday, prohibits from 5:00 PM to 8:00 AM on Saturdays, and

prohibited anytime on Sundays. Outside the 500-foot buffer distance, construction activities are prohibited between 10:00 PM and 6:00 AM, which is more restrictive than March JPA's Noise Ordinance.

- A-9.8** This comment questions the location of the multipurpose trail along portions of Barton Street and suggests that it should be accommodated along the entire length of the Barton Street extension in order to ensure connectivity and usability. Section 4.5.3.b of the Project Specific Plan states: "A 10-foot-wide multipurpose trail is provided along the western side of Barton Street allowing for passive recreational opportunities and connecting neighboring residential areas to the park site and open space area." In response to this comment, PDF-TRA-1 has been revised, within the Final EIR, to conform with the Project Specific Plan.
- A-9.9** This comment questions why truck route enforcement would be funded for two years pursuant to PDF-TRA-3 but construction is anticipated to occur over at least 4.35 years. The two-year enforcement and funding agreement, which would begin upon the issuance of the first Certificate of Occupancy, is to allow for more detailed enforcement of truck routes during the initial phases of the Project as truck drivers become accustomed to the posted truck routes. As the Project builds out, trucks will increasingly be accustomed to the posted truck routes, and the need for enforcement will reduce over time. In addition, as the Project builds out, the additional property taxes generated by the uses within the Project would assist with the on-going operational costs related to enforcement. PDF-TRA-3, within the Final EIR, has been revised to clarify timing.
- A-9.10** This comment questions the installation of a natural gas backbone when the Project will not use natural gas. As a public utility, SoCal Gas has the right to install infrastructure in public rights-of-way. If SoCal Gas elects to install natural gas, the natural gas backbone would be installed by SoCal Gas in the public roadways. SoCal Gas does not have rights to privately held parcels, and Project development will not connect to it (PDF-AQ-1). Use of natural gas by building occupants was not assumed or evaluated within the Draft EIR.
- A-9.11** This comment states that Figure 4-1, Cumulative Development Location Map, did not appear within the Draft EIR. Figure 4-1 was inadvertently omitted and has been included in the Final EIR. Table 4-2 did list all cumulative developments, and the locations of these developments. The addition of this figure into the EIR does not constitute new information that warrants recirculation of the Draft EIR.
- A-9.12** Consistent with the commenting agency's suggestion, the analysis was updated to include the proposed Park as a sensitive receptor during operation of the proposed Project within the Recirculated Section 4.2, Air Quality. As explained therein, as well as in the Revised Health Risk Assessment (Appendix C-2), the results of the analysis indicate that a less than significant impact would occur for users (including children) of the Park as a result of Project operational emissions. The risk to Park users would be 1.18 in one million without mitigation and 0.62 with mitigation, both of which are less than the applicable SCAQMD threshold of 10 in one million. Additionally, at this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

A-9.13 This comment questions the cultural resources analysis as it relates to existing conditions of the Project site and the Weapons Storage Area (WSA). As explained in the BFSAs Response to Comments (Appendix E-3):

- This comment raises concerns that the WSA historic evaluation incorrectly analyzed historic integrity before determining eligibility. In response to this comment, the WSA report has been revised to separate the eligibility analysis from the integrity analysis. (Appendix E-2.) The WSA and its individual buildings were determined not eligible under National Register of Historic Places (NRHP), California Register of Historical Resources (CRHR), or the March JPA CEQA Guidelines criteria for historic resources.
- This comment alleges the WSA was not evaluated at the Riverside County level. March JPA is the lead agency for this Project, and the buildings were evaluated under NRHP, CRHR, and March JPA criteria. Using these criteria, the WSA buildings were evaluated on the national, state, and local levels and determined not historically significant or eligible for listing.

For informational purposes, the 2008 Riverside County Historical Landmarks Criteria states:

A historical resource must be significant under one or more of the following criteria in order to qualify for listing as a Riverside County Historical Landmark:

- Is associated with events that have made a significant contribution to the broad patterns of Riverside County's history and cultural heritage.
- Is associated with the lives of persons important to the history of Riverside County or its communities.
- Embodies the distinctive characteristics of a type, period, Riverside County region, or method of construction, or represents the work of an important creative individual or possesses high artistic values.
- Has yielded or may be likely to yield, information important in Riverside County, state of California, or national prehistory or history.

The analysis in the revised technical study (Appendix E-2), evaluated this potential resource individually and collectively, on a local level using the March JPA criteria. The March JPA criteria is substantially similar to the County's criteria so the analysis would be applicable in evaluating the WSA under County of Riverside criteria. Similarly, under County of Riverside criteria, the WSA buildings, individually and collectively, would not be historically significant or eligible for listing as a Riverside County Historical Landmark(s).

- This comment raises concerns regarding the Draft EIR's statement that the WSA igloo structures are the only one of their kind in California. The description of the WSA within the Draft EIR, as well as within the WSA report included as Appendix E-2 of the Draft EIR, erroneously stated the WSA igloos were the only United States Air Force-associated munitions storage igloos in California. Travis Air Force Base includes munitions storage igloos as part of the Travis AFB ADC Readiness National Register Historic District Area. Munitions bunkers are also found at Beale Air Force Base in Marysville and Edwards Air Force Base in Edwards. Further, the WSA igloos are not unique or distinctive examples of munitions storage igloos in California or the local region and are among the most common military-related weapons storage constructions. For example, similar igloos are regionally found at Fallbrook Ammunition Depot, Naval Weapons Station Seal Beach, and Marine Corps Air Station El Toro. Additionally,

Concord Naval Weapons Station in San Francisco includes a larger weapons storage area that features various underground and overground bunkers constructed in different periods and styles. Sierra Army Depot in Herlong includes over 800 munitions storage igloos and igloos remain from the closed Benicia Arsenal in Benicia. The text within Section 4.4, Cultural Resources, of the Final EIR as well as the WSA report have been revised to accurately describe the state and regional context for the WSA igloos. The WSA and its individual buildings were determined not eligible under NRHP, CRHR, or the March JPA CEQA Guidelines criteria for historic resources at the national, state, or local level.

- This comment raises concerns regarding the Draft EIR's analysis of integrity of association and integrity of feeling. The WSA and its individual buildings were determined not eligible under NRHP, CRHR, or the March JPA CEQA Guidelines criteria for historic resources. Integrity of association was assessed by evaluating if the resources represent the place where the historic event or activity occurred and are sufficiently intact to convey that relationship to an observer. As discussed under CRHR and March JPA Criteria 1 and 2/NRHP Criteria A and B, the WSA buildings, individually and collectively, are not associated with an important historic event or person and, therefore, have never possessed integrity of association. Integrity of feeling was assessed by evaluating whether or not the resources' features, in combination with their setting, conveyed a historic sense of the property during the period of significance. Although the WSA's period of significance was the Cold War, Igloos A1 to A14 were constructed in the same style as World War II igloos and Buildings B to G were constructed in the Utilitarian style with no distinctive features related to their use. The WSA buildings' features do not express a historic sense of the Cold War. Therefore, the WSA buildings, individually or collectively, have never possessed integrity of feeling. The integrity of association and feelings analyses have been updated within Section 4.4, Cultural Resources, of the Final EIR as well as the WSA report (Appendix E-2).

A-9.14 This comment suggests that local register eligibility should be included within the impact analysis of Section 4.4, Cultural Resources, of the Draft EIR. As March JPA is the lead agency for this project, the WSA buildings were evaluated under NRHP, CRHR, and the March JPA criteria. See Response A-9.13, above, for a discussion of the WSA under the County of Riverside criteria for informational purposes.

A-9.15 This comment states that the cumulative impacts analysis for cultural resources may need to be adjusted in light of the comments provided about the WSA above. As discussed in Responses A-9.13 and A-9.14 above, the analysis for the WSA has been updated, and no changes to the cumulative impact analysis are required.

A-9.16 The comment requests details as to the quantity of solar PV that would be installed by the Project. In response to comments, MM-GHG-1 has been revised to require installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.

A-9.17 This comment questions the Draft EIR's analysis in Table 4.7-3, 2017 Scoping Plan Consistency Summary, as it relates to VMT reduction. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-3) and the Project VMT Analysis (Appendix N-1), the Project's retail component will reduce regional VMT and the Project's non-retail component VMT per employee is 5.3% below the WRCOG threshold. Further, MM-AQ-21 requires tenants who employ 250 or more employees on a full-

or part-time basis to comply with South Coast Air Quality Management District (SCAQMD) Rule 2202, On-Road Motor Vehicle Mitigation Options. MM-AQ-21 further requires tenants with less than 250 employees or tenants with 250 or more employees who are exempt from SCAQMD Rule 2202 (as stated in the Rule) to either (a) join with a tenant who is implementing a program in accordance with Rule 2202 or (b) implement an emission reduction program similar to Rule 2202 with annual reporting of actions and results to March JPA. In response to this comment, Table 4.7-3, 2017 Scoping Plan Consistency Summary, of the EIR has been revised accordingly. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.

A-9.18

The comment states that the Project may not be consistent with Goal 5 of the Connect SoCal RTP/SCS to “Reduce greenhouse gas emissions and improve air quality” measure as set forth in Table 4.7-5 of the Draft EIR. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-3), to meet that goal, “Connect SoCal includes a sustainable communities strategy which sets forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportations measures and policies, if implemented, will reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region.” The forecasted development pattern is based on a regional growth forecast that was developed by working with local jurisdictions using the most recent land use plans and policies and planning assumptions.⁴

SCAG explicitly found that “For the purpose of determining consistency with Connect SoCal for California Environmental Quality Act (CEQA), grants or other opportunities, lead agencies such as local jurisdictions have the sole discretion in determining a local project’s consistency.”⁵ March JPA determines consistency with Connect SoCal based on consistency with the long-term employment and growth projections.

The proposed Project would increase regional employment by approximately 3,622 jobs in total. According to SCAG’s 2020-2045 RTP/SCS, employment within Riverside County in 2019 is approximately 812,800 jobs with an anticipated increase to approximately 1,102,700 jobs by 2045, a growth of approximately 289,900 jobs. The proposed Project contributes 1.24% of the anticipated increase in jobs, and therefore, it is consistent with the job growth and would not result in long-term operational employment growth that exceeds planned growth projections in the RTP/SCS or the AQMP or result in employment growth that would substantially add to traffic congestion. Additionally, the Project would comply with the policies set forth in the 2020-2045 RTP/SCS by reducing vehicle trips and VMT, increasing the use of alternative fuel vehicles, and improving energy efficiency. (Appendix C-4 of the Final EIR)

The proposed Project is consistent with the long-term employment and growth projections used by SCAG in the RTP/SCS and is therefore consistent with Connect SoCal. Moreover, the Project does not impede implementation of improvements to the transportation network, and other transportation measures and policies. Therefore, the Project would be consistent with the SCAG’s goal to “reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region.” (Appendix C-4 of the Final EIR)

The commenting agency is correct that the EIR identifies significant and unavoidable impacts related to criteria air pollutant emissions associated with Project operation. However, this is not a factor in

⁴ <https://scag.ca.gov/read-plan-adopted-final-connect-social-2020>

⁵ Connect SoCal p. xiv

determining consistency with the RTP/SCS. In fact, the EIR and subsequent addenda that were prepared for Connect SoCal all found that implementation of the plan would result in significant and unavoidable air quality impacts.

“While the SCAG region may see an increase in PM_{2.5}, PM₁₀ and SO_x emissions, the SCAQMD, AVAPCD, ICAPCD, and MDAQMD have not established regional thresholds to determine significance. The air districts within the SCAG region have only established project-level thresholds (see Table 3.3-9, Table 3.3-10, and Table 3.3-11). Therefore, individual projects must compare anticipated project emissions to the thresholds for the air district within which they are located in order to determine significance on the project-level. Because mobile source emissions of PM₁₀ and PM_{2.5} will increase (PM₁₀ would increase in Imperial, Orange, Riverside, and San Bernardino Counties and PM_{2.5} would increase in Imperial, Riverside, and San Bernardino Counties), largely as a result of increased total VMT, and SO_x would increase in the region at least through 2031, the Plan could contribute to an air quality violation. Further, there is the potential for individual projects to exceed local standards during construction and/or operation for several pollutants. Therefore, this impact is considered to be significant.”⁶

While the Project will implement all of the applicable Connect SoCal mitigation measures and several other mitigation measures to reduce impacts to air quality as outlined in Recirculated Section 4.2, Air Quality, it would not be feasible to reduce emissions to less than significant levels. Further reduction of emissions must come from cars and trucks emissions, which are regulated by the EPA (Federal), CARB (State) and South Coast Air Quality Management District (Regional) and are outside March JPA’s local jurisdiction and control. (Appendix C-4 of the Final EIR)

Additionally, the modeling conservatively does not account for emission reductions achieved by the use of zero emission vehicles, and as electric vehicles and electric trucks comprise larger portions of the vehicle fleet, emissions of the Project would be overrepresented. Similarly, while construction and operation of the proposed Project would generate GHG emissions, the Project will not interfere with or obstruct any GHG reduction plans and the Draft EIR identifies a comprehensive array of project design features and mitigation measures, which will reduce GHG emissions and improve air quality. For clarity, the identified language in Table 4.7-5, Project Consistency with the SCAG Connect SoCal RTP/SCS, of the EIR has been revised to reference these measures in addressing the Project’s consistency with ConnectSoCal Goal 5. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.

A-9.19

This comment states that given the Project site’s distance from existing public transit stops, the Project may be inconsistent with Goal 8 of the Transportation Element of the General Plan. This goal promotes “adequate, affordable, equitably distributed and energy efficient public and mass transit services which promote mobility to, from, and within the planning area.” The commenting agency cites MM-GHG-11, which would fund improvements to proximate transit facilities. As discussed in Table 4.10-1 of Recirculated Section 4.10, Land Use and Planning, the Project site would be served by both local transit service and inter-city passenger rail service. The local transit system of bus stops and bus shelters would be approved by the Riverside Transit Agency. The closest bus stop is located on Alessandro Boulevard to the north of the Project site. The Metrolink passenger rail transit facility is located approximately 1.5 miles from the Campus Development. The 6-foot bike lanes on all Project roadways

⁶ ConnectSoCal PEIR, pg. 3.3-61

and 6-foot sidewalks within the Project would enhance connectivity to the existing Metrolink Station. In addition to MM-GHG-11, the Project would be required to implement MM-AQ-21, which requires tenants who employ 250 or more employees on a full- or part-time basis shall comply with South Coast Air Quality Management District (SCAQMD) Rule 2202, On-Road Motor Vehicle Mitigation Options. MM-AQ-21 further requires tenants with less than 250 employees or tenants with 250 or more employees who are exempt from SCAQMD Rule 2202 (as stated in the Rule) shall either (a) join with a tenant who is implementing a program in accordance with Rule 2202 or (b) implement an emission reduction program similar to Rule 2202 with annual reporting of actions and results to March JPA.

As such, with implementation of MM-GHG-11, as well as MM-AQ-21, the Project would include enhanced pedestrian connectivity to nearby transit facilities, last-mile solutions for equitable access to transit facilities, measures to promote transit use for employees and visitors to the Project, and additional measures consistent with the intent of Goal 8 within the Transportation Element of the March JPA General Plan.

A-9.20

This comment states that housing should not be considered an incompatible use with airfield uses because residential development under 6.0 dwelling units per acre is allowed within Compatibility Zone C2 and 3.0 dwelling units per acre is allowed within Compatibility Zone C1 of the March ARB/MIP Land Use Compatibility Plan. The March JPA General Plan identifies four general land use classifications with a total of 13 distinct land use designations. These include the following:

1. Industry: Business Park (BP), Industrial (I)
2. Commerce: Office (O), Mixed Use (MU) (complementary land uses including commercial, business park, office, medical, medical, educational and vocational, research and development, and services), Commercial (C), and Destination Recreation (DR)
3. Special: Military Operations/Aviation (MARB), Aviation (AV), Historic District (HD), Air Force Village West Expansion (AFWW), Cemetery Expansion (CE)
4. Public: Park/Recreation/Open Space (P/R/OS), Public Facility (PF)
5. Additionally, the March JPA General Plan states, “Buildout also reflects the preservation of the 111 units within the Historic District...”. The Historic District is the only area within March JPA where residential land currently exists, and within the General Plan, buildout of residential was not planned for or envisioned. Further, the Housing Element within the March JPA General Plan states, “The master base reuse plan for March does not create additional housing opportunities within the planning area due to incompatible land uses within the airfield, the need to focus on the reestablishment of the numerous jobs lost due to base realignment, and the housing rich environment of Western Riverside County.”

Finally, though not listed within the General Plan, the site lies under the military primary departure path for March ARB. Development of residential uses within this area would place future residents within areas of occasional evening/night aircraft noise and sleep disruption, which would result in an increase in evening aircraft noise complaints. The noise complaints would be viewed as a negative factor in any future Base Realignment and Closure Commission (BRAC) analysis of the future of March ARB.

For the reasons discussed above, the statement that “housing is incompatible with airfield uses adjacent to the planning area” is accurate, correct, and comes directly from the March JPA General Plan.

- A-9.21** This comment states that the Project consistency analysis with Goal 7 within the Resource Management Element of the General Plan may need to be revisited based on comments the City provided relative to cultural and historic resources. As discussed in Response A-9.13, the conclusions relative to cultural and historic resources are correct, and therefore, no revisions or modifications to the discussion about Project consistency analysis with Goal 7 within the Resource Management Element of the General Plan are required. The commenting agency is also referred to Responses A-9.13 above regarding the cultural resources analysis.
- A-9.22** This comment indicates that the site configurations, including loading dock locations cannot reasonably be known at this level of analysis, and as such, potential noise impacts on surrounding sensitive receptors cannot be reliably estimated or evaluated. However, a review of the operational noise source locations presented on Exhibit 9-A of the Noise Study, included within Appendix M-1 of the Draft EIR, includes over 300 individual noise sources to conservatively describe the potential worst-case noise environment. This includes a combination of noise sources such as loading dock activity, roof-top air conditioning, trash enclosure activity, parking lot vehicle movements, truck movements, and park activities.
- To reduce the noise exposure to the noise sensitive residential areas near the Project site, several design features were considered throughout the site planning process and included in the proposed Specific Plan. These design features include positioning the loading dock areas in the center of the site and maintaining open space and the Conservation Easement to maximize the distance between noise source activities and the adjacent noise sensitive residential areas. In addition, the operational noise analysis included a planned 14-foot-high noise barrier/screen wall surrounding the loading dock areas.
- The comment suggests that the noise analysis did not consider the potential warehousing within the mixed-use areas, which should reasonably be expected to include potential loading dock areas. The Project Noise Study operational analysis (see Exhibit 9-A of Appendix M-1) shows that the Business Park and Mixed-Use land use areas include loading activity as a potential noise source. However, as noted by the comment, Figure 4.11-9 is not accurate. In the Final EIR, Figure 4.11-9 has been revised to reflect Exhibit 9-A of the Project Noise Study (Appendix M-1). This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.
- A-9.23** This comment notes that the County of Riverside does not have an HCD-certified Housing Element as of March 2023. Section 4.12, Population and Housing, has been updated to reflect this comment. This addition and a lack of an HCD-certified Housing Element within the County of Riverside does not affect the analysis or conclusions within the Draft EIR for the proposed Project.
- A-9.24** The comment questions the potential need for additional housing resulting from the increase in jobs associated within the proposed Project. In response, please see Topical Response 5 – Jobs.
- A-9.25** This comment requests that the Transportation section of the Draft EIR be updated in the event that the proposed Specific Plan allows vehicular access from Barton Street for neighborhood and visitor-serving retail uses as suggested by the commenting agency. Please refer to Response A-9.6 above.
- A-9.26** This comment states that the Draft EIR should clarify the category under which warehousing and logistics-related land uses were categorized for the purpose of determining appropriate significance thresholds for the Project's VMT impacts. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3) and the Project VMT Analysis (Appendix N-1), per OPR's

Technical Advisory, VMT per employee is the appropriate VMT metric for analysis for projects that are not residential or retail land use types. Therefore, the Project's industrial, business park, and non-retail mixed land uses are evaluated based on the metric of VMT per employee. As explained in Section 4.15, Transportation, of the Draft EIR and Appendix N-1, a significant impact to VMT would occur if the addition of the Project's industrial/business park/non-retail mixed use components would result in Project-generated VMT per employee to exceed 15% below the WRCOG's baseline of 29.97 VMT per employee for a regional average significance threshold of 25.47 VMT per employee. Table 4.15-3 of the Draft EIR and Table 1 of the VMT Analysis disclosed the number of employees per land use type, industrial (inclusive of warehousing), business park and retail that were input into RIVCOM. The 2,340 non-retail employees include industrial employees who would drive to and from the warehouse buildings. Therefore, the VMT per non-retail employee presented in the VMT Analysis applies to all of the warehouse uses analyzed in the Specific Plan Area. No components of the Project's land use buildout scenario were omitted. This same methodology was used in the Draft EIR and the VMT Analysis. It should be noted, the City of Moreno Valley traffic engineer concurred with the results of the VMT Analysis in a comment letter provided by the City on March 18, 2022 (see Comment A-4.33 and Response A-4.33, above).

A-9.27 This comment states that the conclusion that the Project would not include any improvements that would interfere with the construction of pedestrian or bicycle facilities in the future should be revisited because it does not address potential future bus or other mass transit service that may be established by future uses within the Specific Plan area. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project site is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. Existing transit routes in the vicinity of the study area are illustrated in Figure 4.15-5 of the Draft EIR. As shown, the existing RTA Route 20 provides service from Alessandro Boulevard to the Moreno Valley March Field Metrolink Station. RTA Route 27 also runs along Orange Terrace Parkway and Van Buren Boulevard to the south of the Project. There is an existing bus stop on Alessandro Boulevard near Brown Street. RTA submitted a comment letter on the Project (Comment Letter A-3, above) indicating it does not have comments at this time and noting the inclusion of sidewalks along the Project's main roads, which will provide safe pathways for pedestrians to connect to public transportation. The channelization and/or signage preventing trucks traveling east on Cactus Avenue from turning left onto Brown Street would not interfere with future bus or other mass transit service. Buses or other mass transit service would be able to access the Campus Development via Brown Street and return to existing routes along Alessandro Boulevard via Cactus Avenue and Meridian Parkway.

A-9.28 This comment states that the Project involves land use changes that have not been adopted by March JPA, and thus are not reflected in the March JPA General Plan and were therefore not a part of the baseline conditions used to prepare the 2020 RTP/SCS growth projections. The March JPA General Plan did envision buildout of the West Campus Upper Plateau area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. As such, buildout of this area was envisioned and is part of the baseline conditions used to prepare the 2020 RTP/SCS growth projections.

A-9.29 This comment requests inclusion of a non-industrial alternative. In response, please see Topical Response 8 – Alternatives, for the analysis of Alternative 5 – Non-Industrial Alternative.

A-9.30 This comment states that Figure 6-1 does not appear to depict Alternative 2 - Reduced Development Area, as described in the Draft EIR. This figure has been revised and incorporated into Chapter 6, Alternatives, in the Final EIR in response to this comment. This revision does not constitute new information requiring recirculation of the Draft EIR Chapter 6, Alternatives.

A-9.31 The comment requests detailed information on how the Project would comply with Rule 2305 and how future lease agreements will implement emission reducing strategies. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR) and the Draft EIR, any future tenants would be required to comply with all applicable SCAQMD rules, including Rule 2305. However, as the future tenants are not known at this time, it is unknown which routes would be taken with regards to compliance with Rule 2305. Any future tenants would be required to comply with the mitigation measures and design features identified in the Draft EIR, as well as all applicable SCAQMD rules.

The following project design features and mitigation measures outline how the Project will implement emission reducing strategies, including through future lease agreements:

- PDF-AQ-1 prohibits the use of natural gas by Specific Plan Area development.
- PDF-GHG-1 requires conduit to be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available.
- MM-AQ-6 requires all buildings achieve the 2023 LEED Silver certification standards or equivalent, at a minimum.
- MM-AQ-8 requires all TRU loading docks provide electrical hookups and all loading docks designed to be compatible with SmartWay trucks.
- MM-AQ-9 requires buildings larger than 400,000 total square feet to include a truck operator lounge equipped with clean and accessible amenities such as restrooms, vending machines, television, and air conditioning.
- MM-AQ-11 requires main electrical supply lines and panels have been sized to support 'clean fleet' charging facilities, including heavy-duty and delivery trucks when these trucks become available.
- MM-AQ-14 requires tenants utilize electric or battery-operated equipment for landscape maintenance.
- MM-AQ-17 requires truck drivers to shut off engines when not in use and three-minute truck idling limits.
- MM-AQ-18 requires use of only electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided.
- MM-AQ-19 requires tenants to be provided with information on funding opportunities, such as the Carl Moyer Program, that provide incentives for using cleaner-than-required engines and equipment.
- MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business

operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments on the Recirculated EIR, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed.

- MM-AQ-21 requires tenants who employ 250 or more employees on a full- or part-time basis shall comply with South Coast Air Quality Management District (SCAQMD) Rule 2202, On-Road Motor Vehicle Mitigation Options. MM-AQ-21 further requires tenants with less than 250 employees or tenants with 250 or more employees who are exempt from SCAQMD Rule 2202 (as stated in the Rule) shall either (a) join with a tenant who is implementing a program in accordance with Rule 2202 or (b) implement an emission reduction program similar to Rule 2202 with annual reporting of actions and results to March JPA.
- MM-AQ-22 requires tenants provide information to employees and truck drivers on: Building energy efficiency, solid waste reduction, recycling, and water conservation; Vehicle GHG emissions, electric vehicle charging availability, and alternate transportation opportunities for commuting; Participation in the Voluntary Interindustry Commerce Solutions (VICS) “Empty Miles” program to improve goods trucking efficiencies; Health effects of diesel particulates, state regulations limiting truck idling time, and the benefits of minimized idling; The importance of minimizing traffic, noise, and air pollutant impacts to any residences in the Project vicinity; Efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- MM-AQ-23 requires the facility operator shall periodically sweep the property, including parking lots and truck courts, to remove road dust, tire wear, brake dust, and other contaminants.
- MM-AQ-24 prohibits the use of diesel back-up generators.
- MM-AQ-25 requires the facility operator monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable.
- MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
- MM-GHG-7 requires each Project site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
- MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables.

Additionally, the comment requests that the Project include public signage with SCAQMD’s (or other appropriate agency) phone number to report violations. MM-AQ-16 requires signage with contact information for the tenant representative, March JPA, County of Riverside, and SCAQMD for complaints about excessive noise, dust, fumes, odors, and perceived Code violations. MM-AQ-17 requires signage detailing the idling restrictions to include telephone numbers of the building facilities manager, SCAQMD and CARB to report violations.

- A-9.32** Consistent with the commenting agency’s suggestion, the health risk assessment has been updated to include the proposed Park as a sensitive receptor during operation of the proposed Project. Please see Response A-9.12 above, Recirculated Section 4.2, Air Quality, and Appendix C-2.
- A-9.33** This comment is conclusory in nature and does not raise any specific comments or questions on the Draft EIR.
- A-9.34** This comment recommends limiting Business Park warehousing to 100,000 square feet within 800 feet of a residential zone and recommends eliminating Business Enterprise uses from the Mixed Use zone. This recommendation regarding Business Park warehousing has been incorporated into Table 3-2, Development Standards, of the proposed Specific Plan. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts. The Business Enterprise designation is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale industrial warehouse activity. It is understood that this activity may differ from what the City of Riverside currently allows in a mixed-use environment. However, the allowance of Business Enterprise within the Specific Plan Mixed Use land use is appropriate for this location and the overall development of the site and surrounding uses.
- A-9.35** This comment recommends adding an objective to the proposed Specific Plan that states: “Prioritize compatibility of new development with existing adjoining sensitive land uses, particularly residential neighborhoods, park and recreation areas, schools and places of worship through comprehensive and context-sensitive development and design standards.” Consistent with the commenting agency’s suggestion, an objective has been added to Section 1.2, Specific Plan Objectives, of the proposed Specific Plan that addresses consideration for compatibility of new development with existing adjoining sensitive land uses through comprehensive development and design standards. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.
- A-9.36** This comment questions why specific development applications (plot plans) are included in the Specific Plan document. The list of discretionary actions is provided to represent land development and use entitlement actions after the Specific Plan is approved and in effect. Those listed are representative of entitlement actions necessary under the jurisdiction of March JPA.
- A-9.37** This comment states that there is no discussion of land use compatibility with other adjoining sensitive uses in the land use chapter of the proposed Specific Plan. Consistent with the commenting agency’s suggestion, the Specific Plan has been revised and now refers to Section 4.10, Land Use and Planning, of the West Campus Upper Plateau Project EIR to provide further discussion on land use compatibility with other adjoining sensitive uses. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.
- A-9.38** This comment recommends limiting Business Park warehousing to 100,000 square feet within 800 feet of a residential zone and recommends eliminating Business Enterprise uses from the Mixed Use zone. See Response A-9.34 above.
- A-9.39** This comment includes recommendations for Table 3-1 within the West Campus Upper Plateau Specific Plan.

1. This comment requests prohibiting Business Enterprise uses in the Mixed Use District. The Business Enterprise designation is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale warehouse activity. It is understood that this activity may differ from what the City of Riverside currently allows in a mixed-use environment. However, the allowance of Business Enterprise within the Specific Plan Mixed Use land use is appropriate for this location and the overall development of the site and surrounding uses.
2. This comment requests the Specific Plan permit non-emitting, renewable energy generation and distribution facilities. The Specific Plan will not include non-emitting, renewable energy generation and distribution facilities as a primary use, as the Riverside County Airport Land Use Commission (RCALUC) has already determined Table 3-1, West Campus Upper Plateau Specific Plan Land Use Table, of the proposed Specific Plan is consistent with the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan. Further changes to the permitted uses within the proposed Specific Plan would require additional review by RCALUC.
3. Consistent with the commenting agency's suggestion and as discussed above in Response A-9.34, Table 3-2, Development Standards, of the proposed Specific Plan has been updated to limit Business Enterprise buildings to a maximum of 100,000 square feet within 800 feet of a residential zone.

A-9.40 This comment includes recommendations for Table 3-2 within the West Campus Upper Plateau Specific Plan.

- This comment requests vehicular access be permitted from Barton Street if Business Enterprise is not a permitted use in the Mixed Use District. As discussed above in Response A-9.34, Business Enterprise uses are to remain as permitted uses in the Mixed-Use Zones in the proposed Specific Plan. Therefore, the requested change to vehicular access within Barton Street is not applicable.
- Consistent with the commenting agency's suggestion, Section 3.5.4, Off-Street Loading Facilities, of the proposed Specific Plan has been revised to require off-street loading and unloading facilities to be fully screened from view of any residential zone or property. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.

A-9.41 This comment recommends including an additional objective to the proposed Specific Plan that states: "To protect surrounding sensitive uses, including residential neighborhoods, parks, open space and recreation areas, schools and places of worship, from the potential negative visual and aesthetic impacts of future development within the Specific Plan Area." Section 4.1, Purpose and Intent, of the proposed Specific Plan has been revised as requested. This revision does not modify any of the analysis or change any conclusions in the Draft EIR and does not add any new significant impacts.

A-9.42 This comment offers recommendations for architectural design guidelines within the proposed Specific Plan.

- This comment objects to the use of the word 'periodic'. Section 4.3.1.b, Building Form, will remain as is to provide design flexibility for future development.

- Consistent with the commenting agency’s suggestion, Section 4.3.2.d, Building Materials, Colors and Textures, has been updated to provide that building color schemes be light earth, neutral or grey tones.
- Consistent with the commenting agency’s suggestion, Section 4.4.2.a, Truck Courts and Loading Docks, has been revised to be a “shall” statement instead of a “should” statement.
- Consistent with the commenting agency’s suggestion, Section 4.4.2.b, Truck Courts and Loading Docks, has been revised to include the following statement: “or in any location having a direct line of sight from surrounding residential land uses.”
- Consistent with the commenting agency’s suggestion, Section 4.4.2.c, Truck Courts and Loading Docks, has been revised to provide a “shall” statement instead of “should” and is moved from Chapter 4, Design Guidelines, to Section 3.5, Development Standards.
- This comments requests revisions regarding parapet wall height to ensure roof-mounted equipment is fully screened from any vantage point. Section 4.4.4.a, Rooftop Equipment, of the proposed Specific Plan will remain as currently written. The current language ensures rooftop equipment will not be visible to the public regardless of parapet wall height.
- Consistent with the commenting agency’s suggestion, Section 4.4.8.c, Conservation Easement Protection, of the proposed Specific Plan has been revised to replace “near” with “within 100’ of”.

A-9.43 This comment offers recommendations for Section 6.8.1, Grading Plan Development Standards, of the proposed Specific Plan.

1. This comment asks for criteria March JPA will use to evaluate deviations from maximum 2:1 slope. In association with the entitlement and ministerial permit process, March JPA will review grading plans for the subject project and determine if the slope design is acceptable. Any exceptions to the maximum 2:1 slope identified will require review and approval by March JPA using industry-standard criteria and input from technical professionals.
2. This comment requests a reduction of minimum slope height to be consistent with City of Riverside requirements. Minimum slope height requiring permanent landscaping and irrigation will remain as is as it is consistent with standards provided in the approved March Business Center Specific Plan (SP-1 A8).

A-9.44 This comment requests Section 7.4.2, Development Plan Review, of the Specific Plan utilize the public notice provisions of March JPA Development Code Section 9.02.200(C). Section 7.4.2 of the proposed Specific Plan sets forth the process for ministerial review by the Implementation Committee of development proposals that are consistent with the Specific Plan, Design Guidelines, and Final EIR, a process affirmed by *Health First v. March Joint Powers Authority* (2009) 174 Cal.App.4th 1135. Meetings of the Implementation Committee would be subject to Brown Act public notification requirements, including 72-hour agenda posting and notification to the interested parties list. March JPA Development Code Section 9.02.200(C) outlines the public notification process for discretionary entitlements. Under the proposed Specific Plan, discretionary entitlements, including Conditional Use Permits (Section 7.4.4) and Variances (Section 7.4.5), would be subject to the public notification provisions of March JPA Development Code Section 9.02.200(C). March JPA will follow the processes outlined in the Specific Plan.

A-9.45 The comment addresses the Transportation analysis of the Draft EIR.

1. This comment requests a meeting to discuss the traffic signal warrant analysis and associated improvements. Please refer to Response A-9.3 above.
2. This comment requests that the City's Public Works, Traffic Engineering Division be given an opportunity to review the Construction Management Plan. Please refer to Response A-9.3 above.
3. This comment requests information on timeline/phasing program of improvements. The Project construction as analyzed in the EIR is set forth in Table 3-3 of Recirculated Chapter 3, Project Description. The Project Traffic Analysis (Appendix N-2) identifies improvements for each analysis scenario and identifies when the improvements would be needed to address operational deficiencies. Table 1.4 of the Traffic Analysis outlines the Project's fair share costs for operational deficiencies at off-site intersections. PDF-TRA-4 requires the Project to pay said fair share costs. It would be up to the individual jurisdictions to implement any improvements.
4. This comment requests that March JPA coordinate with the Riverside Transit Authority (RTA) for any proposed bus stop amenities for Barton Street. Please refer to Response A-9.3 above.
5. This comment requests the Project be conditioned to construct the speed feedback signs, speed limit signs, advisory speed signs, curb ahead warning signs and associated striping along Barton Street Refer to Response A-9.4, above, regarding MM-TRA-2, Barton Street Traffic Safety Plan.
6. This comment is acknowledged on the request to include a condition to work with the City of Riverside to ensure that Project truck traffic adheres to adopted truck routes. As has been standard practice, the City of Riverside will be asked to collaborate in the future March JPA Truck Route Ordinance amendment, addressing changes that will be implemented for the West Campus Upper Plateau development. Please refer to Response A-9.9 above.
7. This comment requests adjacent parking for trail users, a parking lane next to the multipurpose trail segment and 'No Parking' signage along the remainder of Barton Street. Please see Response A-9.4 above.
8. This comment requests the Project be conditioned to provide striping plans. Please see Response A-9.4 above regarding striping plans.

A-9.46 This attachment to the comment letter is a copy of the National Register Bulletin "How to Apply the National Register Criteria for Evaluation." The attachment is referenced in specific comments on the Draft EIR provided and responded to above. Please refer to Responses A-9.13 and A-9.14 above.

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As the Ward 2 City Councilmember for the City of Riverside, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. As a representative from an adjacent jurisdiction to this project, I have serious concerns regarding the proposed project's significant and unavoidable impacts on air quality, its effect on local traffic, and the potential harm and quality of life impact this can bring to residents.

In accordance with the City's charter and Resolution No. 23618, Section III.B., I am explicitly stating that my individual opinions and positions do not represent the City Council of the City, and these comments are my own as the Ward 2 Council representative.

The comments and questions will be brief and summarize the inquiries my office has received in meeting with residents who live in close proximity to the proposed "West Campus Upper Plateau" and those across the City of Riverside:

1. Air quality impacts and mitigation: How will the developer mitigate the increased truck traffic and truck trips that are proposed?
2. Project alternatives: What alternative projects can be envisioned and developed here working with the city, county, and JPA as partners?
 - a. What alternatives can be explored vs. large warehouses?
 - b. What land use and zoning do we need for alternative projects to be viable?
 - c. Can the city of Riverside partner with the JPA to find a new project that won't bring trucking and warehouses to residents backyards?
3. Infrastructure:
 - a. Traffic analysis and enforcement: How will the project and developer cover costs for traffic enforcement through the Riverside Police Department to ensure trucks aren't cutting through neighborhoods?
 - b. Will there be community benefit costs for wear and tear to local infrastructure and expansion of roads? And/or added streetlights?
 - c. While we want to believe that drivers will follow the municipal ordinances, residents and I have witnessed large trucks violate the local city ordinances repeatedly, cutting through on our arterial streets,

A-10.2

A-10.3

A-10.4

A-10.5

A-10.6

A-10.7

adding safety concerns and significant wear and tear to our local infrastructure.

↑ A-10.7
Cont.

Considering the significant and unavoidable air quality and quality of life impacts created by the proposed development, I respectfully ask the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. Please encourage the developer to consider non-industrial, alternative uses of the land for the betterment of residents living adjacent to the site.

| A-10.8

I encourage and request that the March Joint Powers Authority representatives explore working with the City and County of Riverside to explore clean air alternatives such as a solar farm, clean air technology, and workforce development that focuses on enhancing technical trades and training for residents in the City and adjacent communities, paired with suitable workforce housing.

| A-10.9

I fully support the residents and constituents of Ward 2, and those living adjacent to the project in Ward 4, who have raised concerns and stand in opposition to this development proposal. I ask you consider the perspectives shared by our residents and join us as we collaboratively plan for the future of our neighborhoods and region. Should you have any further questions regarding my support of our Riverside residents in opposition of this project please contact my office at 951-826-4519 or via email at ccervantes@riversideca.gov.

Sincerely,

Clarissa Cervantes
Council Member, Ward 2
City of Riverside, CA

Letter A-10

City of Riverside Ward 2 Councilmember Cervantes

March 10, 2023

- A-10.1** This comment is introductory in nature and does not raise any specific comments or questions about the Draft EIR.
- A-10.2** This comment is introductory in nature and does not raise any specific comments or questions about the Draft EIR.
- A-10.3** This comment requests information regarding mitigation for increased truck traffic and truck trips. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. See Recirculated Section 4.2, Air Quality, for a detailed evaluation of the revised and additional air quality mitigation measures.
- A-10.4** This comment requests an alternative without warehousing. As explained in Topical Response 8 – Alternatives, in the Final EIR, in response to comments, Alternative 5 – Non-Industrial Alternative has been included in the EIR alternatives analysis. Please see the full description and analysis of Alternative 5, which includes analysis of emissions associated with construction and operations and vehicle trips. As discussed in greater detail in the alternatives analysis, Alternative 5 would result in more criteria air quality pollutant emissions and fewer diesel particulate matter emissions during operations when compared to the Project, and air quality impacts would still be considered significant and unavoidable under Alternative 5. With regard to vehicle trips, Alternative 5 would substantially reduce truck trips but nearly double vehicle trips as compared to the proposed Project. Under Alternative 5, the shifts in land use to non-industrial uses would result in a corresponding increase in overall vehicle trip generation and an associated increase in VMT over the proposed Project. As such, Alternative 5 would result in greater VMT impacts and introduce a new significant impact when compared to the proposed Project.
- A-10.5** This comment questions costs of truck route enforcement to prevent trucks in residential neighborhoods. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. No changes or revisions to the EIR are required in response to this comment.

- A-10.6** This comment questions costs for wear and tear to local infrastructure, expansion of roads, and added streetlights. As Section 4.15, Transportation, explains, Table 1-4 of the Project Traffic Analysis (Appendix N-2 of the EIR) determined a fair share calculation for the Project for any improvement measures for identified operational deficiencies. PDF-TRA-4 requires the Project to contribute \$321,799 as its fair share toward those improvement measures, including \$152,467 to the City of Riverside. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. On a longer-term basis, roadway improvements are funded through gasoline tax. Gasoline tax is collected by State, who then distributes money back to counties based on the number of registered vehicles within that county. Money from the state becomes the “Road Fund” and must be used for road and transportation purposes. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).⁷
- A-10.7** This comment raises concerns regarding compliance with truck routes and wear and tear to local infrastructure See Responses A-10.5 and A-10.6, above.
- A-10.8** This comment acknowledges that the Project would result in significant and unavoidable air quality impacts and asks that March JPA reject the Project and consider a non-industrial alternative. Please see Response A-10.4, above, regarding analysis of Alternative 5 – Non-Industrial Alternative. This comment does not raise any specific comments or questions about the analysis within the Draft EIR.
- A-10.9** This comment requests consideration of clean air alternatives and alternatives for workforce development paired with suitable workforce housing. Clean energy production as a “primary use” is not included at this time due to concerns with the March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan and safety compatibility with overflights by aircraft utilizing the March Inland Port Airport. Under the proposed Project, university uses and research centers are allowed, as specified in Table 3-2, Land Uses by Land Use Designation, in Recirculated Chapter 3, Project Description, of the Draft EIR. As identified within Table 3-2, Research and Development uses are permitted within Business Park, Industrial, and Mixed Use areas on the Project site. The Project does not have identified end-users and nothing under the proposed Project would preclude the development of campus facilities and research centers if there were an interest and need for these facilities within the Project area. Regarding housing, the Housing Element within the March JPA General Plan states, “The master base reuse plan for March does not create additional housing opportunities within the planning area due to incompatible land uses within the airfield, the need to focus on the reestablishment of the numerous jobs lost due to base realignment, and the housing rich environment of Western Riverside County.”
- A-10.10** This comment expresses general opposition to the Project. This comment does not raise any specific comments or questions about the analysis within the Draft EIR.

RE: SP 21-01 (FPEIR2100105) – MJPA: West Campus Upper Plateau – 42.22 acres of mixed use, 65.32 acres of business park, 143.31 acres of Industrial, 78 acres of park, recreation and open space and 2.87 acres of public facilities

Riverside County Fire Department, Strategic Planning has reviewed the West Campus Upper Plateau Specific Plan. We ask that the following be added:

This project will contribute to a cumulative adverse impact on the Fire Department's ability to provide an acceptable level of service. These impacts include an increased number of emergency and public service calls due to the increased presence of structures, traffic, and population.

Cal Fire/Riverside County Fire Department provides Cooperated Integrated Regional fire protection services to the project. The nearest Cal Fire/Riverside County Fire Station is outside an acceptable estimated response distance and response drive time to all or a portion of the project.

Mitigation for these issues would be the construction of a future fire station and the purchase of fire response equipment to ensure that all hazard mitigated, and response needs are met. The developer, MJPA, and the Riverside County Fire department will work jointly to determine the timing and implementation of the station and apparatus.

In regard to other Fire Department required infrastructure, prior to Building Permit issuance, the required water system, including all fire hydrant(s), shall be installed and accepted by the appropriate water agency and the Riverside County Office of the Fire Marshal, prior to any combustible building materials being placed on the project. Additionally, Fire Department emergency vehicle apparatus access road locations and design shall be in accordance with the current California Fire Code and Riverside County Fire Department Standards.

We appreciate the opportunity to work together to ensure fire, rescue, medical and all hazard emergency services are provided to all of our residents. If we can be of any further assistance, please feel free to contact the Riverside County Fire Department, Office of the Fire Marshal, Strategic Planning at (760) 863-8886 or RRUStrategicPlanning@fire.ca.gov

Sincerely,

Sonia Cooley
Deputy Fire Marshal

Dan Fairbanks, Planning Director
March Joint Power Authority
23555 Meyer Drive
Riverside, CA 925018

RE: SP 21-01 (FPEIR2100105) – MJPA: West Campus Upper Plateau – 42.22 acres of mixed use, 65.32 acres of business park, 143.31 acres of Industrial, 78 acres of park, recreation and open space and 2.87 acres of public facilities

The Riverside County Fire Department provides Cooperated Integrated Regional fire protection services to the project and March JPA area. Riverside County Fire Department, Strategic Planning has reviewed the West Campus Upper Plateau Specific Plan, and engaged in discussions with March JPA staff and the developer as to how to best address fire service needs.

The nearest existing Cal Fire/Riverside County Fire Station is outside an acceptable estimated response distance and response drive time to all or a portion of the project.

Based on Riverside County Fire Department’s discussion with the March Joint Power Authority, we understand the West Campus Upper Plateau Project Development Agreement will include the construction of the previously planned and analyzed North Campus fire station. County Fire will use this facility to provide emergency services to our community, and the provision of this facility will address any project impacts and provide the needed level of service for fire protection. This proposed facility will also serve other existing or future development with the March JPA service area, addressing cumulative needs.

In regard to other Fire Department required infrastructure, prior to Building Permit issuance, the required water system, including all fire hydrant(s), shall be installed and accepted by the appropriate water agency and the Riverside County Office of the Fire Marshal, prior to any combustible building materials being placed on the project. Additionally, Fire Department emergency vehicle apparatus access road locations and design shall be in accordance with the current California Fire Code and Riverside County Fire Department Standards.

We appreciate the opportunity to work together to ensure fire, rescue, medical and all hazard emergency services are provided to all of our residents. If we can be of any further assistance, please feel free to contact the Riverside County Fire Department, Office of the Fire Marshal, Strategic Planning at (760) 863-8886 or RRUStrategicPlanning@fire.ca.gov

Sincerely,

Geoffrey Pemberton
Chief Deputy

SUBJECT: Response to the EIR for the West Campus Upper Plateau Project. SCN 2021110304

Dear Mr. Fairbanks:

We are limiting our comments to one section of the EIR: Section 4.9 Hydrology and Water Quality. Our subdivision (Tract 9565) was approved in 1979 by the City of Riverside. The tract map includes 1,000 linear feet of the Tequesquite Arroyo between Sycamore Canyon Wilderness Park and the Canyon Crest Country Club (APN 253-280-069.) As shown in Table 4.9.1 of the EIR, watersheds 3 -12 run through the Tequesquite Arroyo to the Santa Ana River. When the City adopted Tract Map 9565, it transferred responsibility for that portion of the Tequesquite Arroyo to our HOA. Initially, this section of the Arroyo was generally devoid of living plant material with water flowing only during seasonal rain events. Subsequent development on the edges of Sycamore Canyon Wilderness Park with its resulting urban runoff has turned our section of the Arroyo into a vegetated area with trees and plants that stay green all 12 months of the year. The vegetation has impacted the drainage patterns of the water flow during storm events. Significant erosion is already threatening the stability of one of the slopes on which some of the homes in the HOA are built. The cost to obtain environmental permits and to fix the erosion, prevent further erosion, and maintain our 1,000 linear feet of the Tequesquite Arroyo is in the tens of thousands of dollars. We have appealed to the City, the County, the State, and environmental organizations for financial assistance with no success. All parties agree that our HOA should not have been given responsibility for flood control operations but are not willing to fix the error.

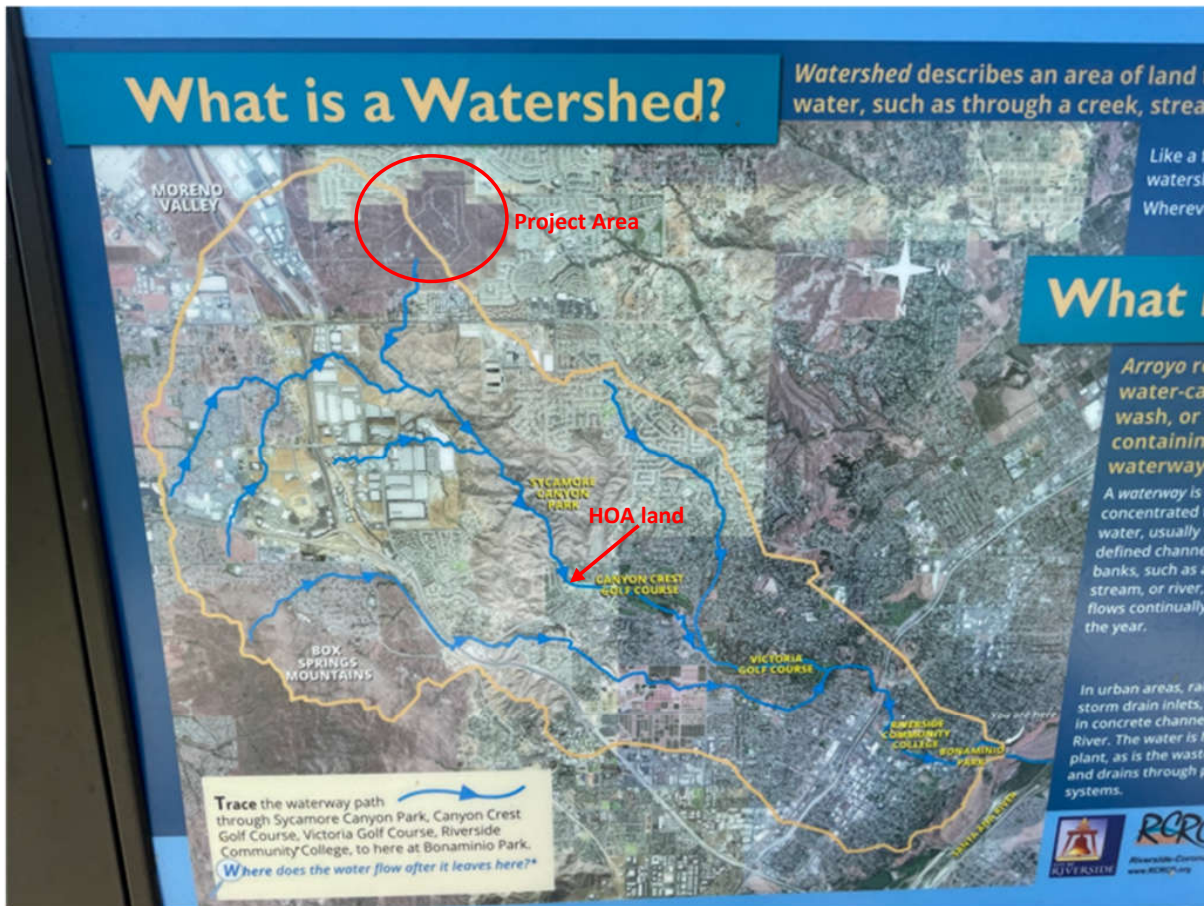

Our concern is that the proposed project will be adding urban runoff to an already impacted system. The EIR states that a Water Quality Management Plan (WQMP) will be prepared to, among other things, reduce downstream erosion. That is the same requirement imposed on other upstream development projects when they were constructed, but the water flow increased significantly anyway. There is no way to stop all urban runoff from the proposed project. Our HOA is struggling under our current situation. We are opposed to any development that contributes to urban runoff and increases erosion and flood hazards through our section of the Tequesquite Arroyo as shown on the attached map.

Sincerely,

*The Board of Directors
Canyon Hills of Riverside Homeowners Association*

Letter O-1

Canyon Hills HOA
February 23, 2023

O-1.1 This comment raises concerns regarding the Project's hydrological impacts to the portion of the Tequesquite Arroyo maintained by the commenting HOA. The comment also includes a map showing the Project site relative to the HOA area. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), a portion of the proposed Project is within or near to a tributary to the existing wash running through Sycamore Canyon Park. The proposed Project is designed to maintain an equivalent amount of land area that is currently draining through this watershed. The area of land tributary to each existing watershed will remain the same in the existing and proposed condition within tolerance.

Industry practice within March JPA and the County of Riverside is to detain stormwater runoff so that the proposed Project does not increase the peak discharge rate as compared to undeveloped condition for the design storm events (100 Year - 24 Hour and 2 Year - 24 Hour design storm events). Prior to development (i.e., the creation of impervious surfaces), the undeveloped portions of the Project will utilize desilting basins as outlined by the California Stormwater Quality Association (CASQA) Best Management Practices (BMP) Handbook for desilting basins. Attached is Figure O-1.1 for reference. The desilting basin is not a runoff reduction device and is instead for erosion/sediment control for undeveloped parcels. (Appendix K-7)

Figure O-1.1. Typical Temporary Desilting Basin Design

**FIGURE 1: TYPICAL TEMPORARY SEDIMENT BASIN
MULTIPLE ORIFICE DESIGN
NOT TO SCALE**

The proposed Project will utilize stormwater storage solutions and outlet controls to detain runoff in the design storm events down to the undeveloped peak flow rates. Examples of stormwater storage solutions include, but are not limited to, underground pipes, underground vaults, shallow surface ponding. Each site plan within the Project will be required to mitigate runoff as each parcel develops. See the Hydrology studies included in Appendices K-1, K-5, and K-6 of the EIR. (Appendix K-7)

As stormwater discharges from the overall Project (typically at the boundaries of the Project as shown in the hydrology studies included in Appendix K-1 of the EIR) the Project will reduce peak discharge velocities to a non-erosive velocity as it crosses the Project property line at existing drainage points. (Appendix K-7)

The portion of the Tequesquite Arroyo identified in the comment is approximately 3 miles north of the Project site. Given intervening terrain, drainage, and percolation, it would be speculative to attempt to determine the amount of the Project site's discharge that would ultimately flow through Tequesquite Arroyo. As explained above, the velocity of water discharge will not increase. (Appendix K-7)

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

The League of Women Voters Riverside writes in support of a letter sent to your office from Vicki Broach, a long-time League Member and former staff attorney for the state Court of Appeal. Ms. Broach has 20 years of experience conducting appellate review of CEQA cases. We strongly support Ms. Broach’s opinion that the EIR in its present draft form will receive an unfavorable review by the Superior Court and the Court of Appeal.

0-2.1

Air quality impacts The negative effects on air quality caused by warehouses and the truck trips they generate are well documented. Strikingly, diesel PM accounts for 70% of cancers attributable to toxic air contaminants. Local residents are legitimately worried about the health effects for themselves, their families, and their community.

0-2.2

Land Use and Planning, Population and Housing Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project. Clearly, community feedback is not being “seriously” and “carefully” considered.

0-2.3

The historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never

considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings.

↑
O-2.3
Cont.

Moreover, all March JPA planning documents indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

The Draft EIR acknowledges the City of Riverside is mandated by state law to provide adequate housing. But it does not recognize that the City is failing to meet its state-mandated goals. The EIR should be corrected to reflect honestly the challenges presented by increasing the number of employees in an area that already lacks sufficient housing for its citizens.

O-2.4

Transportation In its present form, the Draft EIR is deficient in its traffic analysis. The analysis does not account for the 215/60 freeway corridor, which is within one mile of the site and would necessarily be the route the trucks would use.

O-2.5

The Final EIR should include consultation with CalTrans as part of its traffic analysis of the 215/60 corridor to reflect the reality of the impact of the project on the local area. The Final EIR should also include a plan for enforcement and maintenance that does not shift the burden to local jurisdictions and includes mitigation measures requiring the tenants to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police forces.

Job creation claims The claims about job creation are dubious. According to the Southern California Association of Governments Economic Report (SCAG), job growth in the Inland Empire since 2001 has resulted in numerous jobs but they tend to be relatively lower paying compared to other parts of the state and nation.

O-2.6

The report also discusses how the logistics industry “will likely go through a transformation as advances in automation and artificial intelligence displace workers.” It warns: “There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot.”

League of Women Voters Riverside finds the Draft EIR is legally insufficient for multiple reasons. We urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. We also encourage the developer to consider non-industrial, alternative uses of the land for the sake of all Riverside city and county residents, as well those living adjacent to the site.

Sincerely,

Joan Donahue, President
League of Women Voters Riverside
(951) 479-2090

Letter O-2

League of Women Voters Riverside

March 7, 2023

0-2.1 This comment is introductory in nature and does not raise any specific issues or questions on the adequacy of the environmental analysis included in the Draft EIR.

0-2.2 This comment states that local residents are worried about air quality impacts and the associated health effects associated with warehouses and truck trips. Recirculated EIR Section 4.2, Air Quality, and Appendix C-2 assess the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR) located 32 feet from construction activities), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

0-2.3 The comment references Planning Process C1F, which is a specific sentence and planning assumption outlined in the planning process used to create the Final Reuse Plan. The comment also questions public engagement. March JPA used Planning Process C1F to develop the Preferred Land Use Plan outlined in the Final Reuse Plan. The March JPA General Plan was then developed based on that Preferred Land Use Plan. The March JPA General Plan includes warehousing in the definition of

Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices.

This comment further references the Final Reuse Plan and the March JPA General Plan and states “warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.” The comment also references the draft update to the March JPA General Plan but this document was never adopted. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of Recirculated Chapter 3, Project Description. The proposed Project will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

Further, as detailed in the Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside. The Project’s consistency with the City of Riverside Good Neighbor Guidelines is discussed in Topical Response 4 – Project Consistency. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City’s Guidelines, demonstrating consistency provides additional support for the Project’s compatibility with surrounding land uses. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.

O-2.4 This comment states that the Draft EIR does not recognize that the City of Riverside is failing to meet its state mandated goal of providing adequate housing. This comment does not relate to the proposed Project, which is in the jurisdiction of March JPA. March JPA does not have any land use authority over the City of Riverside or its ability to provide adequate housing, as required by State law. However, for additional information about jobs, and unemployment, see Topical Response 5 – Jobs.

O-2.5 This comment states that the Draft EIR is deficient in its traffic analysis as it does not account for the 215/60 freeway corridor. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), March JPA has adopted its own guidelines for traffic analysis: the March

JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, to comply with CEQA, Caltrans does not utilize peak hour intersection operations analysis and instead utilizes VMT in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Guidelines were adopted before the Caltrans VMT Guide and therefore the reference is now-superseded Caltrans guidance. The Project VMT Analysis (Appendix N-1) was prepared in compliance with the Caltrans VMT Guide and meets the current transportation analysis requirement for Caltrans. Caltrans was notified about the Project through the release of the Notice of Preparation on November 18, 2021. Caltrans also received the Notice of Availability for the Draft EIR when the document was circulated for public review beginning on January 9, 2023. No comments were provided by Caltrans during the scoping period or public review for the Project.

Pursuant to Caltrans safety requirements, the Project Traffic Analysis (Appendix N-2) included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. The Project Traffic Analysis (Appendix N-2) performed a queuing analysis for these I-215 Freeway off-ramps for all scenarios (Existing [2021], Existing plus Project, Existing plus Ambient Growth plus Project, Opening Year [2028] Cumulative Without Project, Opening Year [2028] With Project, Horizon Year [2045] Without Project, and Horizon Year [2045] With Project). Based on the results of this queuing analysis, there are no study area off-ramps that are anticipated to experience queuing issues under any scenario. Caltrans is one of the state reviewing agencies for the Project, and had the opportunity to comment on the transportation analysis. <https://ceqanet.opr.ca.gov/2021110304>. Caltrans did not submit any comments on this Project.

Further, to improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission (RCTC), has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging with the SR-60 Freeway. Another regional facility, Mid-County Parkway (MCP), is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway.

The comment also raises concerns about enforcement and maintenance. In response to truck route enforcement concerns, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. As Section 4.13,

Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As has been the case with other areas in the Meridian Business Park, as the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they are also separate conditions of approval and also included in the MMRP. March JPA will monitor compliance through the MMRP. Regarding maintenance concerns, commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹

- 0-2.6** This comment questions the actual number of jobs that would be provided by the proposed Project. In response to this comment, please see Topical Response 5 - Jobs, for a discussion about how the number of jobs for the Project was calculated. The comment raises concerns regarding automation. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The comment further requests consideration of a non-industrial alternative. In response to this comment, please see Topical Response 8-- Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

SUBJECT: COMMENTS ON WEST CAMPUS UPPER PLATEAU EIR (SCH NO. 2021110304)

Dear Mr. Fairbanks:

Thank you for the opportunity to comment on the Environmental Impact Report (EIR) for the proposed West Campus Upper Plateau Project. Please accept and consider these comments on behalf of Golden State Environmental Justice Alliance. Also, Golden State Environmental Justice Alliance formally requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

0-3.1

1.0 Summary

The project proposes to implement a new Specific Plan with a buildout scenario including 10 Business Park parcels totaling 65.32 acres, 6 Mixed Use parcels totaling 42.22 acres, 3 Industrial parcels totaling 143.31 acres, 2 Public Facility parcels totaling 2.84 acres, 3 open space parcels totaling 17.72 acres and public streets totaling 37.91 acres. Plot Plans for Buildings B and C totaling 1,837,000 square feet would be constructed on two of the Industrial Parcels.

0-3.2

The following discretionary actions are required for project approval:

1. General Plan Amendment 21-01: The Project proposes to amend the site's General Plan Land Use designations as follows:
 - Increase Parks, Recreation, and Open Space (P/R/OS) from approximately 122 gross acres to 523.43 gross acres.³
 - Eliminate approximately 622.5 gross acres of Business Park designated property.

- Eliminate approximately 63 gross acres of Industrial designated property.
- Adopt the Meridian West Upper Plateau Specific Plan (SP-9) on approximately 369.60 gross acres, approving a mix of Business Park, Industrial, Mixed Use, Public Facility, Streets, and Open Space land uses.
- Amend the General Plan from Business Park to Public Facility on 2.87 acres to accommodate an existing water storage tank operated by EMWD. In addition, the approximately 445-acre Conservation Easement will be recorded as a permanent Conservation Easement. The amendment would modify the General Plan Land Use Plan, Table 1-1 (March JPA Planning Build Out); Exhibit 2-1, Transportation Plan; and Exhibit 2-3, Transportation Road Systems (March JPA 1999). The amendment to the Transportation Element of the General Plan will incorporate the following changes: Extend Cactus Avenue west to Airman Drive, with a gated emergency vehicle access roadway extending to Barton Street. Extend Barton Street from Alessandro Boulevard to Grove Community Drive. Extend Brown Street from Alessandro Boulevard to Cactus Avenue. Add Arclight Drive, Linebacker Drive, Bunker Hill Drive, and Airman Drive.

2. Specific Plan 21-01 (SP-9): The Project proposes adoption of Specific Plan SP-9 consistent with applicable requirements in California Government Code Sections 65450–65457 and March JPA Development Code Chapter 9.13 containing development standards, design guidelines, infrastructure master plans, maintenance responsibilities, phasing schedule, and implementation procedures necessary to develop the Project site consistent with the requested General Plan Amendment designations. The proposed Specific Plan will address land uses, zoning, and design guidelines. The proposed land uses within Specific Plan SP-9 include the following:

- 42.22 acres of Mixed Use
- 65.32 acres of Business Park
- 143.31 acres of Industrial
- 37.91 acres of streets and roadways
- 78 acres of undeveloped Parks/Recreation/Open Space
- 2.84 acres of Public Facility
- Total gross acreage = 369.60

3. Zoning Designation: The Project site, including both the Specific Plan Area and Conservation Easement, has not previously been given a zoning designation; therefore, the Project proposes zoning consistent with the requested Specific Plan designations of Mixed Use (MU), Business Park (BP), Industrial (IND), Parks/Recreation/Open Space (P/R/OS), and Public Facility (PF) for the Specific Plan Area, Parks/Recreation/Open Space (P/R/OS) for the Conservation Easement, and Public Facility for the existing EMWD water tank.

4. Tentative Parcel Map 38063: Concurrent with the General Plan and Zoning Amendments, the Specific Plan, and the Plot Plans, approval of a Tentative Parcel Map is required for the Specific Plan boundaries. Following the approval of Tentative Parcel Map, a Final Map would

O-3.2
Cont.

become the legal document that identifies developable parcels within the Specific Plan area. See Figure 3-8, Tentative Parcel Map, for more details.

5. Plot Plans 21-03 and 21-04: Concurrent with the General Plan and Zoning Amendments, the Specific Plan, and the Tentative Parcel Map, plot plan approvals are required to construct an approximately 1,250,000-square-foot industrial building on 59.55 acres at 20133 Cactus Avenue and a 587,000-square-foot industrial building on 27.49 acres at 20600 Cactus Avenue. Plot Plans for each of these proposed buildings are included as Figure 3-9, Plot Plan – Building B, and Figure 3-10, Plot Plan – Building C.
6. Development Agreement 21-01: Due to the scale and complexity of the proposed Project, a Development Agreement is proposed to vest the Project entitlements and fees, ensure financing of public improvements required by the conditions of approval, and provide certain Community Benefits including compliance with the terms of the CBD Settlement Agreement (Appendix S), and provision of new public benefits, including, but not limited to, expansion of employment opportunities for area residents. The Development Agreement is proposed between March JPA and Meridian Park LLC with a 15-year term and two potential 5-year extensions.

O-3.2
Cont.

The EIR assumes the following buildout of the Development Area for analysis:

- Building B – 1,250,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 587,000 SF of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 SF of high-cube fulfillment center warehouse use
- Industrial Area – 500,000 SF of high-cube cold storage warehouse use
- Business Park Area – 1, 280,403 SF of business park use
- Mixed Use Area – 160,921 SF of retail use (25%)
- Mixed Use Area – 482,765 SF of business park use (75%)
- 60.28-acre park (with Active and Passive uses)
- 17.72 acres of Open Space use
- Public Facilities – 2.84 acres for future sewer lift station and electrical substation

3.0 Project Description

The EIR does not include the proposed West Campus Upper Plateau Specific Plan document as an attachment for public review. The West Campus Upper Plateau SP would include permitted uses and development standards such as maximum height, floor area ratio, parking requirements, and other items that contribute directly to the analysis of environmental impacts. Incorporation by reference (CEQA § 15150 (f)) is not appropriate as the West Campus Upper Plateau SP contributes directly to analysis of the problem at hand. The EIR must be revised and recirculated to include the Beaumont Pointe SP document for public review in order to comply with CEQA’s

O-3.3

requirements for adequate informational documents and meaningful disclosure (CEQA § 15121 and 21003(b)).

0-3.3
Cont.

4.2 Air Quality, 4.5 Energy, and 4.7 Greenhouse Gas Emissions

0-3.4

Please refer to attachments from SWAPE for a complete technical commentary and analysis.

The EIR does not include for analysis relevant environmental justice issues in reviewing potential impacts, including cumulative impacts from the proposed project. This is especially significant as the surrounding community is highly burdened by pollution. According to CalEnviroScreen 4.0¹, CalEPA’s screening tool that ranks each census tract in the state for pollution and socioeconomic vulnerability, the proposed project’s census tract (6065046700) and surrounding community, including residences immediately adjacent to the north, south, and west of the Specific Plan area, bears the impact of multiple sources of pollution and ranks worse than 95% of the rest of the state overall in overall pollution burden.

0-3.5

For example, the project census tract ranks in the 98th percentile for ozone burden, 60th percentile for particulate matter (PM) 2.5 burden, 40th percentile for diesel PM burden, and 82nd percentile for traffic burdens. All of these environmental factors are typically attributed to heavy truck activity in the area. Ozone can cause lung irritation, inflammation, and worsening of existing chronic health conditions, even at low levels of exposure². The very small particles of diesel PM can reach deep into the lung, where they can contribute to a range of health problems. These include irritation to the eyes, throat and nose, heart and lung disease, and lung cancer³.

0-3.6

The census tract ranks in the 71st percentile for contaminated drinking water and 98th percentile for groundwater threats. Poor communities are exposed to contaminants in their drinking water more often than people in other parts of the state⁴. People who live near contaminated groundwater may be exposed to chemicals moving from the soil into the air inside their homes⁵.

The census tract also bears more impacts from cleanup sites than 83% of the state. Chemicals in the buildings, soil, or water at cleanup sites can move into nearby communities through the air or movement of water⁶.

¹ CalEnviroScreen 4.0 <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

² OEHHA Ozone <https://oehha.ca.gov/calenviroscreen/indicator/air-quality-ozone>

³ OEHHA Diesel Particulate Matter <https://oehha.ca.gov/calenviroscreen/indicator/diesel-particulate-matter>

⁴ OEHHA Contaminated Drinking Water <https://oehha.ca.gov/calenviroscreen/drinking-water>

⁵ OEHHA Groundwater Threats <https://oehha.ca.gov/calenviroscreen/indicator/groundwater-threats>

⁶ OEHHA Cleanup Sites <https://oehha.ca.gov/calenviroscreen/indicator/cleanup-sites>

The census tract also ranks in the 85th percentile for solid waste facility impacts and 88th percentile for hazardous waste facility impacts. Solid waste facilities can expose people to hazardous chemicals, release toxic gases into the air (even after these facilities are closed), and chemicals can leach into soil around the facility and pose a health risk to nearby populations⁷. Hazardous waste generators and facilities contribute to the contamination of air, water and soil near waste generators and facilities can harm the environment as well as people⁸.

Further, the census tract is a diverse community including 72% Hispanic and 8% African-American residents, whom are especially vulnerable to the impacts of pollution. The community has a high rate of low educational attainment, meaning 82% of the census tract over age 25 has not attained a high school diploma. The community also has a high rate of poverty, meaning 89% of the households in the census tract have a total income before taxes that is less than the poverty level. Income can affect health when people cannot afford healthy living and working conditions, nutritious food and necessary medical care⁹. Poor communities are often located in areas with high levels of pollution¹⁰. Poverty can cause stress that weakens the immune system and causes people to become ill from pollution¹¹. Living in poverty is also an indication that residents may lack health insurance or access to medical care. Medical care is vital for this census tract as it ranks in the 87th percentile for incidence of cardiovascular disease and 72nd percentile for incidence of asthma. The community also has a high rate of linguistic isolation, meaning 83% of the census tract speaks little to no English and faces further inequities as a result.

Additionally, the proposed project's census tract (6065046700) and the census tracts adjacent to the project site (6065042010 (south) and 6065042505 (north)) are identified as SB 535 Disadvantaged Communities¹². This indicates that cumulative impacts of development and environmental impacts in the area are disproportionately impacting these communities. The EIR does not discuss that the project site and surrounding area are disadvantaged communities and does not utilize this information in its analysis. The EIR has not considered the environmental impacts in relation to the SB 535 status of the project census tract and surrounding area. The negative environmental, health, and quality of life impacts of the warehousing and logistics industry in the area have become distinctly inequitable. The severity of environmental impacts particularly on these Disadvantaged Communities must be included for analysis as part of an revised EIR.

¹¹ Ibid.

¹² OEHHA SB 535 Census Tracts <https://oehha.ca.gov/calenviroscreen/sb535>

California’s Building Energy Code Compliance Software (CBECC) is the State’s only approved energy compliance modeling software for non-residential buildings in compliance with Title 24¹³. CalEEMod is not listed as an approved software. The CalEEMod-based modeling in the EIR and appendices does not comply with the 2022 Building Energy Efficiency Standards and under-reports the project’s significant Energy impacts and fuel consumption to the public and decision makers. Since the MND did not accurately or adequately model the energy impacts in compliance with Title 24, a finding of significance must be made. A revised EIR with modeling using the approved software (CBECC) must be circulated for public review in order to adequately analyze the project’s significant environmental impacts. This is vital as the EIR utilizes CalEEMod as a source in its methodology and analysis, which is clearly not the approved software.

0-3.8

Further, 4.7-5. Project Consistency with the SCAG Connect SoCal RTP/SCS finds that the project does not conflict with all goals of Connect SoCal, resulting in less than significant impacts. However, the consistency analysis in the EIR is misleading to the public and decision makers. The project results in several significant and unavoidable cumulatively considerable impacts, including Air Quality and Noise. For example, the EIR finds the project is consistent with Goal 5: “Reduce greenhouse gas emissions and improve air quality.” However, as determined in the EIR itself, the project will impede the SCAG region’s ability to reduce greenhouse gas emissions and improve air quality because it will result in significant and unavoidable cumulatively considerable impacts to Air Quality. Additionally, due to errors in modeling and modeling without supporting evidence, as noted throughout this comment letter and attachments, the proposed project is directly inconsistent with Goal 5 to reduce greenhouse gas emissions and improve air quality, Goal 6 to support healthy and equitable communities, and Goal 7 to adapt to a changing climate. This information must be included for analysis with all Connect SoCal Goals and a finding of significance must be made in a revised EIR, including analysis discussing the project’s impacts on the SB 535 Disadvantaged Communities.

0-3.9

4.8 Hazards and Hazardous Materials

The proposed project site is within March Air Reserve Base (MARB)/Inland Port Airport Primary Approach/Departure Zone (Compatibility Zone C1) and C2 Compatibility Zone. The EIR states

0-3.10

¹³ California Energy Commission 2022 Energy Code Compliance Software
<https://www.energy.ca.gov/programs-and-topics/programs/building-energy-efficiency-standards/2022-building-energy-efficiency-1>

that “The Riverside County ALUC has reviewed the Project and found it to be consistent with the ALUCP provided that certain conditions as stipulated in their May 16, 2022 letter are met.” Condition #13 from the RCALUC letter states¹⁴ the following:

“13. In the event the future BASH study, as prepared by a qualified wildlife hazard biologist, raises significant issues, that the study shall come back to the ALUC for review.”

Section 4.8.3 of the EIR states that Appendix J-4 is a “wildlife hazard review prepared for the project, also known as a Bird/Wildlife Aircraft Strike Hazard (BASH) study.” Appendix J-4 is dated June 28, 2022, confirming that it was not reviewed by RCALUC at their May 12, 2022 meeting to review the proposed project. Page 13 of the BASH study states the following regarding the Open Space - Conservation area:

“The proposed project is consistent with many policies associated with aviation guidance related to safety and hazardous wildlife management, but several inconsistencies were identified. Moreover, the majority of the Plan Area will be used for Open Space - Conservation in accordance with the 2012 Settlement Agreement for the purpose of habitat conservation, and a permanent conservation easement will be placed on the property. The proposed Open Space - Conservation Area will require the development of passive trails and periodic maintenance. Such activities will be undertaken in accordance with the Specific Plan. However, a permanent conservation easement may be inconsistent with ongoing aircraft operations unless specific provisions are included to address the presence of hazardous wildlife attractants that may require modification to support the ongoing Military Mission at March ARB, as stated in the March JPA General Plan. At this time, specific plans/designs for the Open Space - Conservation Area are not available.

O-3.10
Cont.

FAA AC 150/5200-33C identifies conservation areas and wildlife management areas as having the potential to attract hazardous wildlife. The implementation of habitat enhancements and the establishment of a permanent conservation easement may attract hazardous wildlife to the aircraft operations area and the AIA for March ARB. The AC states that a QAWB should evaluate proposed mitigation projects before the mitigation is implemented, and “Regardless of the source of the attraction, when hazardous wildlife is noted on a public-use airport, the airport operator should take prompt remedial action(s) to protect aviation safety.”

Recommendations: The following items should be incorporated into the Specific Plan to promote ongoing safety of aircraft operations at March ARB:

¹⁴ RCALUC Agenda Item 3.5 https://www.rcaluc.org/Portals/13/aluc_agenda_05-12-22.pdf?ver=2022-05-02-101625-183

- Design plans for the development of the proposed Open Space - Conservation Area shall be reviewed by a QAWB for their consistency with the 2018 AICUZ, ALUCP, FAA guidance, and the current BASH Plan for March ARB. Inconsistent items should be revised to address the safety of ongoing aircraft operations.
- A proposed permanent conservation easement shall be reviewed by an Aviation Planner and QAWB to identify potential conflicts for ongoing aircraft operations and the Military Mission at March ARB. If potential conflicts are identified, safety concerns shall prevail.
- In the event that the conditions within the Plan Area, including areas within conservation easements, are identified as attracting potentially hazardous wildlife or increasing wildlife risks to aircraft operations, the land use, easement, and conservation practices shall be modified to remove the hazard. In the event that the remedial action conflicts with the conservation goals, safety concerns shall prevail.”

O-3.10
Cont.

The above items are significant issues and the project must go back to RCALUC for review pursuant to RCALUC Condition #13. The BASH study is dated June 28, 2022, so it was not reviewed by RCALUC at their May 12, 2022 meeting to review the project. Most notably, the above recommendations from the BASH study are **NOT** incorporated as mitigation measures/project design features even though others from the study are included as such in the EIR. The EIR cannot conclude that the project will have less than significant impacts until and unless the project and the June 28, 2022 BASH study are reviewed again by the RCALUC in accordance with Condition #13.

4.10 Land Use and Planning

The EIR does not provide an erroneous and misleading consistency analysis with all land use plans, policies, or regulations adopted for the purpose of avoiding or mitigating an environmental effect. The project is directly inconsistent with the following from the General Plan:

1. Noise/Air Quality Element Goal 3: Reduce air pollution through proper land use, transportation, and energy use planning.
2. Noise/Air Quality Element Goal 8: Reduce air pollution emissions and impacts through siting and building design.

O-3.11

The EIR is erroneous in concluding that the project is consistent or partially consistent with these goals. The EIR concludes the project will have a significant and unavoidable impact to Air Quality, and therefore the EIR cannot simultaneously conclude that the project is consistent with General Plan goals related to reducing air pollution. The EIR must be revised to include this information for analysis and a finding of significance due to these inconsistencies.

4.12 Population and Housing

The EIR utilizes uncertain language and does not provide any meaningful analysis or supporting evidence to substantiate the conclusion that there will be no significant impact to population and housing. The EIR states that “the Project is anticipated to generate approximately 2,600 full-time jobs, which *could* be filled by existing residents of the County.” Relying on the workforce population of the entire Riverside County area will increase project related VMT and emissions during all phases of construction and operations and an EIR must be prepared to account for longer worker trip distances. The EIR also does not provide evidence that the Riverside County workforce is qualified for or interested in industrial work to substantiate this claim.

0-3.12

The EIR also does not provide a source methodology or calculation to support the claim that the project will only generate 2,600 operational employees. SCAG’s Employment Density Study¹⁵ provides the following applicable employment generation rates for Riverside County:

0-3.13

Warehouse: 1 employee per 581 square feet

Retail: 1 employee per 629 square feet

Applying these ratios results in the following calculation:

Warehouse: $4,825,729 \text{ sf} / 581 = 8,306$

Retail: $160,921 \text{ sf} / 629 \text{ sf} = 256$

Total: 8,562 employees

Utilizing SCAG’s Employment Density Study ratios, the proposed project will generate 8,562 employees. The MND utilizes uncertain and misleading language which does not provide any meaningful analysis of the project’s population and employment generation. In order to comply with CEQA’s requirements for meaningful disclosure, a revised EIR must be prepared to provide an accurate estimate of employees generated by all uses of the proposed project. It must also provide demographic and geographic information on the location of qualified workers to fill these positions. The revised EIR must also include a quantified construction employee analysis, including their geographic locations.

0-3.14

The EIR must be revised to provide a cumulative analysis discussion of projects approved and projects “in the pipeline” to determine if the project will exceed the General Plan employment and/or population growth forecast. For example, other recent industrial projects such as Veterans

0-3.15

¹⁵ SCAG Employment Density Study

<http://www.mwcog.org/file.aspx?A=QTTITR24POOOUIw5mPNzK8F4d8djdJe4LF9Exj6IXOU%3D>

Industrial Park 215 (3,820 employees) and South Campus Specific Plan (8,142 employees) combined with the proposed project will cumulatively generate 20,524 employees. This total increases exponentially when other development projects are added to the calculation. The EIR must be revised to include this information for analysis and also include a cumulative development analysis of projects approved and projects “in the pipeline” to determine if the proposed project exceeds the General Plan growth estimates and/or SCAG’s growth forecasts for the area.

0-3.15
Cont.

Further, the EIR states that “the State of California’s HCD, in recognition of the unique governance and responsibilities of March JPA and the adequacy of housing sites within the member jurisdictions, has resolved that incorporation by reference of the four housing elements complies with the guidelines and requirements of a Housing Element.” However, the EIR has not included a letter of confirmation from HCD as an attachment for public review to support this claim. In order to comply with CEQA’s requirements for meaningful disclosure and provide an adequate environmental analysis, the EIR must be revised to include documentation from HCD to support this claim.

0-3.16

5.0 Other CEQA Considerations

5.4 Significant Irreversible Changes

The EIR relies upon erroneous Energy modeling to determine that the project will meet sustainability requirements. As noted above, the EIR did not model the project’s energy consumption in compliance with Title 24 modeling software. Further, the EIR states here that “the Project would be a relatively minor energy consumer compared to other local and regional users. Thus, the proposed energy consumption would not be considered a significant irreversible environmental effect,” without providing a definition of “relatively minor” or the other “local and regional users” it compares the project to without quantification. The EIR also does not discuss the project’s significant and unavoidable Air Quality impacts or the project’s required changes in land use designations (General Plan Amendment and Zone Change). The EIR must be revised to include a finding of significance due to the project’s significant and unavoidable Air Quality impacts and direct contribution to climate change.

0-3.17

0-3.18

5.5 Growth Inducing Impacts

The EIR does not meaningfully discuss or analyze the project’s required land use designation changes (General Plan Amendment and Zone Change). A revised EIR must be prepared with information and analysis on the buildout conditions of the General Plan in order to provide an adequate and accurate environmental analysis.

0-3.19

The EIR does not adequately discuss or and analyze the commitment of resources is not consistent with regional and local growth forecasts. As noted throughout this comment letter, the project represents a significant amount of growth in the area and in tandem with only two other recent

0-3.20

industrial projects account for a significant amount of the area’s employment growth over 29 years. The EIR must also include a cumulative analysis discussion here to demonstrate the impact of the proposed project in a cumulative setting. The EIR utilizes the County of Riverside’s employment growth forecast from SCAG 2016-2045 of 280,000 jobs to demonstrate that it will have less than significant impacts. However, it must provide a list of all employment generating projects approved since 2016 in all of Riverside County in order to substantiate this claim and demonstrate that cumulative development in Riverside County (including the proposed project) does not exceed SCAG’s growth forecast.

↑
O-3.20
Cont.

6.0 Alternatives

The EIR is required to evaluate a reasonable range of alternatives to the proposed project which will avoid or substantially lessen any of the significant effects of the project (CEQA § 15126.6.) The alternatives chosen for analysis include the CEQA required “No Project” alternative and only three others - Reduced Development Alternative, Reduced Industrial Building Size Alternative, and Reduced Cultural Resource Impact Alternative. The EIR does not evaluate a reasonable range of alternatives as only three alternatives beyond the required No Project alternative is analyzed. The EIR does not include an alternative that meets the project objectives and also eliminates all of the project’s significant and unavoidable impacts. The EIR must be revised to include analysis of a reasonable range of alternatives and foster informed decision making (CEQA § 15126.6). This could include alternatives such as development of the site with a project that reduces all of the proposed project’s significant and unavoidable impacts to less than significant level, or a mixed-use project that provides affordable housing and local-serving commercial uses that may reduce VMT, GHG emissions, and improve Air Quality.

↑
O-3.21

Conclusion

For the foregoing reasons, GSEJA believes the EIR is flawed and a revised EIR must be prepared for the proposed project and circulated for public review. Golden State Environmental Justice Alliance requests to be added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Send all communications to Golden State Environmental Justice Alliance P.O. Box 79222 Corona, CA 92877.

Subject: Comments on the West Campus Upper Plateau Project (SCH No. 2021110304)

Dear Mr. Ho,

We have reviewed the January 2023 Draft Environmental Impact Report (“DEIR”) for the West Campus Upper Plateau Project (“Project”) located in the City of Encinitas (“City”). The Project proposes to construct 65.32-acres of business park space, 143.31-acres of industrial space, 42.22-acres of mixed-use space, 2.84-acres of public facilities, 78-acres of parks, and 37.91-acres of streets on the 818-acre site.

Our review concludes that the DEIR fails to adequately evaluate the Project’s air quality and health risk impacts. As a result, emissions and health risk impacts associated with construction and operation of the proposed Project are underestimated and inadequately addressed. A revised EIR should be prepared to adequately assess and mitigate the potential air quality and health risk impacts that the Project may have on the environment.

0-3.23

Air Quality

Failure to Implement All Feasible Mitigation to Reduce Emissions

The DEIR concludes that the Project’s operational air quality emissions would be significant-and-unavoidable. Specifically, the DEIR estimates that the Project’s operational VOC, NO_x, CO, and PM₁₀ emissions would exceed the applicable South Coast Air Quality Management District (“SCAQMD”) thresholds of 55-, 55-, 550-, and 150-pounds per day (“lbs/day”), respectively (see excerpt below) (p. 4.2-28, Table 4.2-8).

0-3.24

Table 4.2-8. Summary of Project Operational Emissions

Source	Emissions (pounds per day)					
	VOC	NO _x	CO	SO _x	PM ₁₀	PM _{2.5}
Summer						
Mobile Source	174.00	308.00	2,148.00	6.90	233.00	46.30
Area Source	158.00	1.82	217.00	0.01	0.29	0.39
Energy Source	0.00	0.00	0.00	0.00	0.00	0.00
TRU Source	13.62	14.91	1.62	0.00	0.64	0.58
Total Maximum Daily Emissions	345.62	324.73	2,366.62	6.91	233.93	47.27
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	Yes	Yes	Yes	No	Yes	No
Winter						
Mobile Source	332.00	310.00	2,364.00	6.91	233.00	46.70
Area Source	122.00	0.00	0.00	0.00	0.00	0.00
Energy Source	0.00	0.00	0.00	0.00	0.00	0.00
TRU Source	13.62	14.91	1.62	0.00	0.64	0.58
Total Maximum Daily Emissions	467.62	324.91	2,365.62	6.91	233.64	47.28
SCAQMD Regional Threshold	55	55	550	150	150	55
Threshold Exceeded?	Yes	Yes	Yes	No	Yes	No

Source: Appendix C-1.

Notes: VOC = volatile organic compound; NO_x = oxides of nitrogen; CO = carbon monoxide; SO_x = sulfur oxides; PM₁₀ = particulate matter with an aerodynamic diameter equal to or less than 10 microns; PM_{2.5} = particulate matter with an aerodynamic diameter equal to or less than 2.5 microns; <0.01 = reported emissions are less than 0.01; SCAQMD = South Coast Air Quality Management District. Emissions include application of PDF-AQ-4, all electric cargo handling equipment, and no natural gas would be used on site.

As such, the DEIR concludes that the impacts associated with Project operation would be significant-and-unavoidable, stating:

“As discussed under Thresholds AQ-1 and AQ-2, the Specific Plan would exceed regional thresholds of significance established by the SCAQMD for VOC, NO_x, CO, and PM₁₀ emissions; thus, the Specific Plan’s unmitigated impacts would be potentially significant. The majority of the Specific Plan’s operational VOC, NO_x, CO, and PM₁₀ emissions would be derived from the mobile sources. The Specific Plan would implement MM-AQ-2 through MM-AQ-15 to reduce the Specific Plan’s operational VOC, NO_x, CO, and PM₁₀ emissions; however, there is no meaningful way to quantify these reductions in CalEEMod and therefore no numeric emissions credit was taken in the analysis. Therefore, the Specific Plan’s operational VOC, NO_x, CO, and PM₁₀ emissions would be significant and unavoidable, and would, therefore, per SCAQMD criteria, be cumulatively significant and unavoidable” (p. 4.2-39).

However, while we agree that the Project would result in significant air quality impacts, the DEIR’s assertion that this impact is significant-and-unavoidable is incorrect. According to CEQA Guidelines § 15096(g)(2):

“When an updated EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible

0-3.24
Cont.

0-3.25

mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.”

As such, the DEIR is required under CEQA to implement all feasible mitigation to reduce impacts to a less-than-significant level. While the DEIR implements Mitigation Measure (“MM”) AQ-1 through MM AQ-15, the DEIR fails to implement *all* feasible mitigation (p. 4.2-35 – 4.2-38). Therefore, the DEIR’s conclusion that Project’s air quality emissions would be significant-and-unavoidable is unsubstantiated. To reduce the Project’s air quality impacts to the maximum extent possible, additional feasible mitigation measures should be incorporated, such as those suggested in the section of this letter titled “Feasible Mitigation Measures Available to Reduce Emissions.” Thus, the Project should not be approved until a revised EIR is prepared, incorporating all feasible mitigation to reduce emissions to less-than-significant levels.

O-3.25
Cont.

Failure to Include PDFs as Mitigation Measures

According to the DEIR, the Project intends to include air quality Project Design Features (“PDFs”). Specifically, the DEIR states:

“The following Project Design Features (PDFs) have been incorporated into the Project and the impact analysis in Section 4.2.6 below.

PDF-AQ-1 Offroad equipment used during construction shall meet CARB Tier 4 Final emission standards or better.

PDF-AQ-2 Construction Budget. To ensure construction activities occur within the assumptions utilized in the Air Quality Impact Analysis (AQIA) (Appendix C-1) and disclosed in the EIR, the following shall be implemented:

- During each Phase of Project construction, the operating hours of construction equipment on site shall not exceed the assumptions set forth in Table 5-2 of the AQIA. In the event alternate equipment is required, the applicant shall provide documentation demonstrating equivalent or reduced emissions based on horsepower and hours of operation. The construction contractor shall submit a construction equipment hours log to the March JPA every 2 weeks to ensure compliance.
- During Phase 1, areas of active ground disturbance shall not exceed a maximum of 20 acres per day for Mass Grading and 20 acres per day for Blasting & Rock Handling. During Phase 2, the area of active ground disturbance shall not exceed a maximum of 20 acres per day for Remedial Grading. The construction contractor shall submit a grading log to the March JPA every two weeks documenting acreage graded or equivalent cubic yardage to ensure compliance. “Active disturbance” does not include moving of equipment from staging area(s) to grading areas.

O-3.26

PDF-AQ-3 Future Site Plans. All Specific Plan Area site plans shall include documentation confirming the site plan’s environmental impacts do not exceed the impacts identified and disclosed in this EIR. Absent such documentation, additional environmental review shall be required.

PDF-AQ-4 No Natural Gas Use. Specific Plan Area development shall not utilize natural gas. In the event a future structure requires access to any available natural gas infrastructure, additional environmental review shall be required” (p. 4.2-15).

However, the Project’s air quality analysis is inadequate, as the DEIR should have incorporated the above-mentioned PDFs as formal mitigation measures. According to the Association of Environmental Professionals (“AEP”) *CEQA Portal Topic Paper* on mitigation measures:

“While not “mitigation”, a good practice is to include those project design feature(s) that address environmental impacts in the mitigation monitoring and reporting program (MMRP). Often the MMRP is all that accompanies building and construction plans through the permit process. If the design features are not listed as important to addressing an environmental impact, it is easy for someone not involved in the original environmental process to approve a change to the project that could eliminate one or more of the design features without understanding the resulting environmental impact.”¹

0-3.26
Cont.

As demonstrated above, PDFs that are not formally included as mitigation measures may be eliminated from the Project’s design altogether. Thus, as the PDFs described in the DEIR are not formally included as mitigation measures, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site. This poses a problem, as the DEIR’s air modeling includes the application of PDF-AQ-1, Tier 4 Final off-road equipment (p. 4.2-27). As such, until the DEIR guarantees the use of Tier 4 Final off-road equipment in a formal mitigation measure, the DEIR’s air modeling overestimates the reduction to the Project’s construction emissions and should not be relied upon to determine Project significance. A revised EIR should be prepared to adequately implement the above-mentioned PDFs as formal mitigation measures.

Diesel Particulate Matter Emissions Inadequately Evaluated

The DEIR concludes that the proposed Project would result in a less-than-significant health risk impact based on a quantified construction and mobile-source operational health risk assessment (“HRA”), which is detailed in Health Risk Assessment Technical Report (“HRA Report”) as Appendix C-2 to the DEIR. Specifically, the HRA Report estimates that the maximum cancer risk posed to nearby, existing residential sensitive receptors associated with Project construction and operation would be 1.03 in one million, which would not exceed the SCAQMD significance threshold of 10 in one million (see excerpt below) (p. 5, Table ES-3).

0-3.27

¹ “CEQA Portal Topic Paper Mitigation Measures.” AEP, February 2020, *available at:* <https://ceqaportal.org/tp/CEQA%20Mitigation%202020.pdf>, p. 6.

TABLE ES-3: SUMMARY OF CONSTRUCTION AND OPERATIONAL CANCER AND NON-CANCER RISKS

Time Period	Location	Maximum Lifetime Cancer Risk (Risk per Million)	Significance Threshold (Risk per Million)	Exceeds Significance Threshold
30 Year Exposure	Maximum Exposed Sensitive Receptor	1.03	10	NO
Time Period	Location	Maximum Hazard Index	Significance Threshold	Exceeds Significance Threshold
Annual Average	Maximum Exposed Sensitive Receptor	≤0.01	1.0	NO

However, the DEIR’s evaluation of the Project’s potential health risk impacts, as well as the subsequent less-than-significant impact conclusion, is incorrect for three reasons.

First, the DEIR’s construction HRA incorrectly assumes the application of PDF-AQ-1 and PDF-AQ-2. Specifically, the DEIR states:

“The health risk assessment included application of PDF-AQ-1, Tier 4 Final off-road equipment. Additionally, as required by PDF-AQ-2, throughout construction the applicant will demonstrate compliance with all construction equipment assumptions included in Appendix C-1 of this EIR” (p. 4.2-32).

However, the incorporation of PDFs is unsubstantiated. As previously discussed, AEP guidance indicates that PDFs which are not formally included as mitigation measures may be eliminated from the Project’s design altogether.² As the use of Tier 4 Final off-road equipment and compliance with all construction equipment assumptions are not incorporated as formal mitigation measures, we cannot guarantee that they would be implemented, monitored, and enforced on the Project site. Thus, the DEIR’s construction HRA relies on an underestimated DPM concentration, and the resulting cancer risk should not be relied upon to determine Project significance.

Second, the DEIR’s operational HRA underestimates the Fraction of Time At Home (“FAH”) values. Specifically, the HRA utilizes a FAH value of 0.85 for the third trimester (age -0.25 to 0) and infant (age 0 to 2) receptors, and an FAH value of 0.72 for the child receptors (age 2 to 16) (see excerpts below) (Appendix C-2, p. 22, Table 2-7).

0-3.27
Cont.

0-3.28

² “CEQA Portal Topic Paper Mitigation Measures.” AEP, February 2020, available at: <https://ceqportal.org/tp/CEQA%20Mitigation%202020.pdf>, p. 6.

TABLE 2-7: EXPOSURE ASSUMPTIONS FOR INDIVIDUAL CANCER RISK (30 YEAR RESIDENTIAL)

Age	Daily Breathing Rate (L/kg-day)	Age Specific Factor	Exposure Duration (years)	Fraction of Time at Home	Exposure Frequency (days/year)	Exposure Time (hours/day)
-0.25 to 0	361	10	0.25	0.85	350	24
0 to 2	1,090	10	2	0.85	350	24
2 to 16	572	3	14	0.72	350	24
16 to 30	261	1	14	0.73	350	24

However, the FAH values used for the third trimester, infant, and childhood receptors are incorrect, as SCAQMD guidance clearly states:

0-3.28
Cont.

“For Tiers 1, 2, and 3 screening purposes, the FAH is assumed to be 1 for ages third trimester to 16. As a default, children are assumed to attend a daycare or school in close proximity to their home and no discount should be taken for time spent outside of the area affected by the facility’s emissions. People older than age 16 are assumed to spend only 73 percent of their time at home.”³

Per SCAQMD guidance, the HRA Report should have used an FAH of 1 for the third trimester, infant, and child receptors. By relying on incorrect FAH values, the DEIR underestimates the cancer risk posed to nearby, existing sensitive receptors as a result of Project operation.

Third, further review of the HRA Report demonstrates that the HRAs may fail to include Age Sensitivity Factors (“ASFs”). Regarding ASFs, OEHHA guidance states:

0-3.29

“Studies have shown that young animals are more sensitive than adult animals to exposure to many carcinogens (OEHHA, 2009). Therefore, OEHHA developed age sensitivity factors (ASFs) to take into account the increased sensitivity to carcinogens during early-in-life exposure (Table 8.3). These factors were developed and described in detail in OEHHA (2009). In the absence of chemical-specific data, OEHHA recommends a default ASF of 10 for the third trimester to age 2 years, and an ASF of 3 for ages 2 through 15 years to account for potential increased sensitivity to carcinogens during childhood.”

However, while the HRA Report includes ASFs in their exposure assumption tables, the equation to produce carcinogenic risk estimates, as shown below, is incorrect and underestimated (p. 23-24).

³ “Risk Assessment Procedures.” SCAQMD, August 2017, available at: http://www.aqmd.gov/docs/default-source/rule-book/Proposed-Rules/1401/riskassessmentprocedures_2017_080717.pdf, p. 7.

$$RISK_{air} = DOSE_{air} \times CPF \times ED/AT$$

Where:

- DOSE_{air} = chronic daily intake (mg/kg/day)
- CPF = cancer potency factor
- ED = number of years within particular age group
- AT = averaging time

0-3.29
Cont.

Instead, the HRA Report should have used the following equation that includes ASFs:

$$Cancer\ Risk_{AIR} = Dose_{AIR} \times CPF \times ASF \times FAH \times \frac{ED}{AT}$$

By potentially failing to include ASF values in the carcinogenic risk estimate equation, the DEIR’s HRA underestimates the cancer risk posed to nearby, existing sensitive receptors as a result of Project construction and operation. As such, a revised EIR should be prepared to include an updated analysis correctly accounting for ASF values.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

As previously discussed, the DEIR concludes that Project operation would result in significant-and-unavoidable air quality impacts. However, we have identified several additional mitigation measures that should be incorporated to reduce the Project’s significant air quality impacts. Feasible mitigation measures can be found in the California Department of Justice Warehouse Project Best Practices document.⁴ Therefore, to reduce the Project’s emissions, consideration of the following measures should be made:

0-3.30

- Prohibiting off-road diesel-powered equipment from being in the “on” position for more than 10 hours per day.
- Designating an area in the construction site where electric-powered construction vehicles and equipment can charge.
- Limiting the amount of daily grading disturbance area.
- Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- Forbidding idling of heavy equipment for more than three minutes.

⁴ “Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act.” State of California Department of Justice, September 2022, available at:

<https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf>, p. 8 – 10.

- Keeping onsite and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- Conducting an on-site inspection to verify compliance with construction mitigation and to identify other opportunities to further reduce construction impacts.
- Providing information on transit and ridesharing programs and services to construction employees.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations for construction employees.
- Requiring all heavy-duty vehicles engaged in drayage to or from the project site to be zero-emission beginning in 2030.
- Requiring all on-site motorized operational equipment, such as forklifts and yard trucks, to be zero-emission with the necessary charging or fueling stations provided.
- Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.
- Forbidding trucks from idling for more than three minutes and requiring operators to turn off engines when not in use.
- Installing solar photovoltaic systems on the project site of a specified electrical generation capacity that is equal to or greater than the building's projected energy needs, including all electrical chargers.
- Designing all project building roofs to accommodate the maximum future coverage of solar panels and installing the maximum solar power generation capacity feasible.
- Constructing zero-emission truck charging/fueling stations proportional to the number of dock doors at the project.
- Running conduit to designated locations for future electric truck charging stations.
- Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide refrigerated warehouse space, constructing electric plugs for electric transport refrigeration units at every dock door and requiring truck operators with transport refrigeration units to use the electric plugs when at loading docks.
- Oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability.
- Constructing and maintaining electric light-duty vehicle charging stations proportional to the number of employee parking spaces (for example, requiring at least 10% of all employee parking spaces to be equipped with electric vehicle charging stations of at least Level 2 charging performance)
- Running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of facility for the life of the project.

0-3.30
Cont.

- Installing and maintaining, at the manufacturer’s recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.
- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.
- Designing to LEED green building certification standards.
- Providing meal options onsite or shuttles between the facility and nearby meal destinations.
- Posting signs at every truck exit driveway providing directional information to the truck route.
- Improving and maintaining vegetation and tree canopy for residents in and around the project area.

O-3.30
Cont.

These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into the proposed Project, which subsequently, reduce emissions released during Project operation.

Furthermore, as it is policy of the State that eligible renewable energy resources and zero-carbon resources supply 100% of retail sales of electricity to California end-use customers by December 31, 2045, we emphasize the applicability of incorporating solar power system into the Project design. Until the feasibility of incorporating on-site renewable energy production is considered, the Project should not be approved.

A revised EIR should be prepared to include all feasible mitigation measures, as well as include an updated air quality analysis to ensure that the necessary mitigation measures are implemented to reduce emissions to below thresholds. The revised EIR should also demonstrate a commitment to the implementation of these measures prior to Project approval, to ensure that the Project’s significant emissions are reduced to the maximum extent possible.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to the scope of work, work methodologies and protocols, site conditions, analytical testing

**Geologic and Hydrogeologic Characterization
Investigation and Remediation Strategies
Litigation Support and Testifying Expert
Industrial Stormwater Compliance
CEQA Review**

Education:

M.S. Degree, Geology, California State University Los Angeles, Los Angeles, CA, 1984.

B.A. Degree, Geology, Humboldt State University, Arcata, CA, 1982.

Professional Certifications:

California Professional Geologist

California Certified Hydrogeologist

Qualified SWPPP Developer and Practitioner

Professional Experience:

Matt has 30 years of experience in environmental policy, contaminant assessment and remediation, stormwater compliance, and CEQA review. He spent nine years with the U.S. EPA in the RCRA and Superfund programs and served as EPA's Senior Science Policy Advisor in the Western Regional Office where he identified emerging threats to groundwater from perchlorate and MTBE. While with EPA, Matt also served as a Senior Hydrogeologist in the oversight of the assessment of seven major military facilities undergoing base closure. He led numerous enforcement actions under provisions of the Resource Conservation and Recovery Act (RCRA) and directed efforts to improve hydrogeologic characterization and water quality monitoring. For the past 15 years, as a founding partner with SWAPE, Matt has developed extensive client relationships and has managed complex projects that include consultation as an expert witness and a regulatory specialist, and a manager of projects ranging from industrial stormwater compliance to CEQA review of impacts from hazardous waste, air quality and greenhouse gas emissions.

Positions Matt has held include:

- Founding Partner, Soil/Water/Air Protection Enterprise (SWAPE) (2003 – present);
- Geology Instructor, Golden West College, 2010 – 2104, 2017;
- Senior Environmental Analyst, Komex H2O Science, Inc. (2000 -- 2003);

- Executive Director, Orange Coast Watch (2001 – 2004);
- Senior Science Policy Advisor and Hydrogeologist, U.S. Environmental Protection Agency (1989–1998);
- Hydrogeologist, National Park Service, Water Resources Division (1998 – 2000);
- Adjunct Faculty Member, San Francisco State University, Department of Geosciences (1993 – 1998);
- Instructor, College of Marin, Department of Science (1990 – 1995);
- Geologist, U.S. Forest Service (1986 – 1998); and
- Geologist, Dames & Moore (1984 – 1986).

Senior Regulatory and Litigation Support Analyst:

With SWAPE, Matt’s responsibilities have included:

- Lead analyst and testifying expert in the review of over 300 environmental impact reports and negative declarations since 2003 under CEQA that identify significant issues with regard to hazardous waste, water resources, water quality, air quality, greenhouse gas emissions, and geologic hazards. Make recommendations for additional mitigation measures to lead agencies at the local and county level to include additional characterization of health risks and implementation of protective measures to reduce worker exposure to hazards from toxins and Valley Fever.
- Stormwater analysis, sampling and best management practice evaluation at more than 100 industrial facilities.
- Expert witness on numerous cases including, for example, perfluorooctanoic acid (PFOA) contamination of groundwater, MTBE litigation, air toxins at hazards at a school, CERCLA compliance in assessment and remediation, and industrial stormwater contamination.
- Technical assistance and litigation support for vapor intrusion concerns.
- Lead analyst and testifying expert in the review of environmental issues in license applications for large solar power plants before the California Energy Commission.
- Manager of a project to evaluate numerous formerly used military sites in the western U.S.
- Manager of a comprehensive evaluation of potential sources of perchlorate contamination in Southern California drinking water wells.
- Manager and designated expert for litigation support under provisions of Proposition 65 in the review of releases of gasoline to sources drinking water at major refineries and hundreds of gas stations throughout California.

With Komex H2O Science Inc., Matt’s duties included the following:

- Senior author of a report on the extent of perchlorate contamination that was used in testimony by the former U.S. EPA Administrator and General Counsel.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of MTBE use, research, and regulation.
- Senior researcher in the development of a comprehensive, electronically interactive chronology of perchlorate use, research, and regulation.
- Senior researcher in a study that estimates nationwide costs for MTBE remediation and drinking water treatment, results of which were published in newspapers nationwide and in testimony against provisions of an energy bill that would limit liability for oil companies.
- Research to support litigation to restore drinking water supplies that have been contaminated by MTBE in California and New York.

- Expert witness testimony in a case of oil production-related contamination in Mississippi.
- Lead author for a multi-volume remedial investigation report for an operating school in Los Angeles that met strict regulatory requirements and rigorous deadlines.
- Development of strategic approaches for cleanup of contaminated sites in consultation with clients and regulators.

Executive Director:

As Executive Director with Orange Coast Watch, Matt led efforts to restore water quality at Orange County beaches from multiple sources of contamination including urban runoff and the discharge of wastewater. In reporting to a Board of Directors that included representatives from leading Orange County universities and businesses, Matt prepared issue papers in the areas of treatment and disinfection of wastewater and control of the discharge of grease to sewer systems. Matt actively participated in the development of countywide water quality permits for the control of urban runoff and permits for the discharge of wastewater. Matt worked with other nonprofits to protect and restore water quality, including Surfrider, Natural Resources Defense Council and Orange County CoastKeeper as well as with business institutions including the Orange County Business Council.

Hydrogeology:

As a Senior Hydrogeologist with the U.S. Environmental Protection Agency, Matt led investigations to characterize and cleanup closing military bases, including Mare Island Naval Shipyard, Hunters Point Naval Shipyard, Treasure Island Naval Station, Alameda Naval Station, Moffett Field, Mather Army Airfield, and Sacramento Army Depot. Specific activities were as follows:

- Led efforts to model groundwater flow and contaminant transport, ensured adequacy of monitoring networks, and assessed cleanup alternatives for contaminated sediment, soil, and groundwater.
- Initiated a regional program for evaluation of groundwater sampling practices and laboratory analysis at military bases.
- Identified emerging issues, wrote technical guidance, and assisted in policy and regulation development through work on four national U.S. EPA workgroups, including the Superfund Groundwater Technical Forum and the Federal Facilities Forum.

At the request of the State of Hawaii, Matt developed a methodology to determine the vulnerability of groundwater to contamination on the islands of Maui and Oahu. He used analytical models and a GIS to show zones of vulnerability, and the results were adopted and published by the State of Hawaii and County of Maui.

As a hydrogeologist with the EPA Groundwater Protection Section, Matt worked with provisions of the Safe Drinking Water Act and NEPA to prevent drinking water contamination. Specific activities included the following:

- Received an EPA Bronze Medal for his contribution to the development of national guidance for the protection of drinking water.
- Managed the Sole Source Aquifer Program and protected the drinking water of two communities through designation under the Safe Drinking Water Act. He prepared geologic reports, conducted

public hearings, and responded to public comments from residents who were very concerned about the impact of designation.

- Reviewed a number of Environmental Impact Statements for planned major developments, including large hazardous and solid waste disposal facilities, mine reclamation, and water transfer.

Matt served as a hydrogeologist with the RCRA Hazardous Waste program. Duties were as follows:

- Supervised the hydrogeologic investigation of hazardous waste sites to determine compliance with Subtitle C requirements.
- Reviewed and wrote "part B" permits for the disposal of hazardous waste.
- Conducted RCRA Corrective Action investigations of waste sites and led inspections that formed the basis for significant enforcement actions that were developed in close coordination with U.S. EPA legal counsel.
- Wrote contract specifications and supervised contractor's investigations of waste sites.

With the National Park Service, Matt directed service-wide investigations of contaminant sources to prevent degradation of water quality, including the following tasks:

- Applied pertinent laws and regulations including CERCLA, RCRA, NEPA, NRDA, and the Clean Water Act to control military, mining, and landfill contaminants.
- Conducted watershed-scale investigations of contaminants at parks, including Yellowstone and Olympic National Park.
- Identified high-levels of perchlorate in soil adjacent to a national park in New Mexico and advised park superintendent on appropriate response actions under CERCLA.
- Served as a Park Service representative on the Interagency Perchlorate Steering Committee, a national workgroup.
- Developed a program to conduct environmental compliance audits of all National Parks while serving on a national workgroup.
- Co-authored two papers on the potential for water contamination from the operation of personal watercraft and snowmobiles, these papers serving as the basis for the development of nationwide policy on the use of these vehicles in National Parks.
- Contributed to the Federal Multi-Agency Source Water Agreement under the Clean Water Action Plan.

Policy:

Served senior management as the Senior Science Policy Advisor with the U.S. Environmental Protection Agency, Region 9.

Activities included the following:

- Advised the Regional Administrator and senior management on emerging issues such as the potential for the gasoline additive MTBE and ammonium perchlorate to contaminate drinking water supplies.
- Shaped EPA's national response to these threats by serving on workgroups and by contributing to guidance, including the Office of Research and Development publication, *Oxygenates in Water: Critical Information and Research Needs*.
- Improved the technical training of EPA's scientific and engineering staff.
- Earned an EPA Bronze Medal for representing the region's 300 scientists and engineers in negotiations with the Administrator and senior management to better integrate scientific

principles into the policy-making process.

- Established national protocol for the peer review of scientific documents.

Geology:

With the U.S. Forest Service, Matt led investigations to determine hillslope stability of areas proposed for timber harvest in the central Oregon Coast Range. Specific activities were as follows:

- Mapped geology in the field, and used aerial photographic interpretation and mathematical models to determine slope stability.
- Coordinated his research with community members who were concerned with natural resource protection.
- Characterized the geology of an aquifer that serves as the sole source of drinking water for the city of Medford, Oregon.

As a consultant with Dames and Moore, Matt led geologic investigations of two contaminated sites (later listed on the Superfund NPL) in the Portland, Oregon, area and a large hazardous waste site in eastern Oregon. Duties included the following:

- Supervised year-long effort for soil and groundwater sampling.
- Conducted aquifer tests.
- Investigated active faults beneath sites proposed for hazardous waste disposal.

Teaching:

From 1990 to 1998, Matt taught at least one course per semester at the community college and university levels:

- At San Francisco State University, held an adjunct faculty position and taught courses in environmental geology, oceanography (lab and lecture), hydrogeology, and groundwater contamination.
- Served as a committee member for graduate and undergraduate students.
- Taught courses in environmental geology and oceanography at the College of Marin.

Matt is currently a part time geology instructor at Golden West College in Huntington Beach, California where he taught from 2010 to 2014 and in 2017.

Invited Testimony, Reports, Papers and Presentations:

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Presentation to the Public Environmental Law Conference, Eugene, Oregon.

Hagemann, M.F., 2008. Disclosure of Hazardous Waste Issues under CEQA. Invited presentation to U.S. EPA Region 9, San Francisco, California.

Hagemann, M.F., 2005. Use of Electronic Databases in Environmental Regulation, Policy Making and Public Participation. Brownfields 2005, Denver, Colorado.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Nevada and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Las Vegas, NV (served on conference organizing committee).

Hagemann, M.F., 2004. Invited testimony to a California Senate committee hearing on air toxins at schools in Southern California, Los Angeles.

Brown, A., Farrow, J., Gray, A. and **Hagemann, M.**, 2004. An Estimate of Costs to Address MTBE Releases from Underground Storage Tanks and the Resulting Impact to Drinking Water Wells. Presentation to the Ground Water and Environmental Law Conference, National Groundwater Association.

Hagemann, M.F., 2004. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in Arizona and the Southwestern U.S. Presentation to a meeting of the American Groundwater Trust, Phoenix, AZ (served on conference organizing committee).

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River and Impacts to Drinking Water in the Southwestern U.S. Invited presentation to a special committee meeting of the National Academy of Sciences, Irvine, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a tribal EPA meeting, Pechanga, CA.

Hagemann, M.F., 2003. Perchlorate Contamination of the Colorado River. Invited presentation to a meeting of tribal representatives, Parker, AZ.

Hagemann, M.F., 2003. Impact of Perchlorate on the Colorado River and Associated Drinking Water Supplies. Invited presentation to the Inter-Tribal Meeting, Torres Martinez Tribe.

Hagemann, M.F., 2003. The Emergence of Perchlorate as a Widespread Drinking Water Contaminant. Invited presentation to the U.S. EPA Region 9.

Other Experience:

Selected as subject matter expert for the California Professional Geologist licensing examinations, 2009-2011.

Paul Rosenfeld, Ph.D.**Chemical Fate and Transport & Air Dispersion Modeling***Principal Environmental Chemist***Risk Assessment & Remediation Specialist****Education**

Ph.D. Soil Chemistry, University of Washington, 1999. Dissertation on volatile organic compound filtration.

M.S. Environmental Science, U.C. Berkeley, 1995. Thesis on organic waste economics.

B.A. Environmental Studies, U.C. Santa Barbara, 1991. Focus on wastewater treatment.

Professional Experience

Dr. Rosenfeld has over 25 years of experience conducting environmental investigations and risk assessments for evaluating impacts to human health, property, and ecological receptors. His expertise focuses on the fate and transport of environmental contaminants, human health risk, exposure assessment, and ecological restoration. Dr. Rosenfeld has evaluated and modeled emissions from oil spills, landfills, boilers and incinerators, process stacks, storage tanks, confined animal feeding operations, industrial, military and agricultural sources, unconventional oil drilling operations, and locomotive and construction engines. His project experience ranges from monitoring and modeling of pollution sources to evaluating impacts of pollution on workers at industrial facilities and residents in surrounding communities. Dr. Rosenfeld has also successfully modeled exposure to contaminants distributed by water systems and via vapor intrusion.

Dr. Rosenfeld has investigated and designed remediation programs and risk assessments for contaminated sites containing lead, heavy metals, mold, bacteria, particulate matter, petroleum hydrocarbons, chlorinated solvents, pesticides, radioactive waste, dioxins and furans, semi- and volatile organic compounds, PCBs, PAHs, creosote, perchlorate, asbestos, per- and poly-fluoroalkyl substances (PFOA/PFOS), unusual polymers, fuel oxygenates (MTBE), among other pollutants. Dr. Rosenfeld also has experience evaluating greenhouse gas emissions from various projects and is an expert on the assessment of odors from industrial and agricultural sites, as well as the evaluation of odor nuisance impacts and technologies for abatement of odorous emissions. As a principal scientist at SWAPE, Dr. Rosenfeld directs air dispersion modeling and exposure assessments. He has served as an expert witness and testified about pollution sources causing nuisance and/or personal injury at sites and has testified as an expert witness on numerous cases involving exposure to soil, water and air contaminants from industrial, railroad, agricultural, and military sources.

Professional History:

Soil Water Air Protection Enterprise (SWAPE); 2003 to present; Principal and Founding Partner
UCLA School of Public Health; 2007 to 2011; Lecturer (Assistant Researcher)
UCLA School of Public Health; 2003 to 2006; Adjunct Professor
UCLA Environmental Science and Engineering Program; 2002-2004; Doctoral Intern Coordinator
UCLA Institute of the Environment, 2001-2002; Research Associate
Komex H₂O Science, 2001 to 2003; Senior Remediation Scientist
National Groundwater Association, 2002-2004; Lecturer
San Diego State University, 1999-2001; Adjunct Professor
Anteon Corp., San Diego, 2000-2001; Remediation Project Manager
Ogden (now Amec), San Diego, 2000-2000; Remediation Project Manager
Bechtel, San Diego, California, 1999 – 2000; Risk Assessor
King County, Seattle, 1996 – 1999; Scientist
James River Corp., Washington, 1995-96; Scientist

Presentations:

Rosenfeld, P.E., "The science for Perfluorinated Chemicals (PFAS): What makes remediation so hard?" Law Seminars International, (May 9-10, 2018) 800 Fifth Avenue, Suite 101 Seattle, WA.

Rosenfeld, P.E., Sutherland, A; Hesse, R.; Zapata, A. (October 3-6, 2013). Air dispersion modeling of volatile organic emissions from multiple natural gas wells in Decatur, TX. *44th Western Regional Meeting, American Chemical Society*. Lecture conducted from Santa Clara, CA.

Sok, H.L.; Waller, C.C.; Feng, L.; Gonzalez, J.; Sutherland, A.J.; Wisdom-Stack, T.; Sahai, R.K.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Atrazine: A Persistent Pesticide in Urban Drinking Water. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Feng, L.; Gonzalez, J.; Sok, H.L.; Sutherland, A.J.; Waller, C.C.; Wisdom-Stack, T.; Sahai, R.K.; La, M.; Hesse, R.C.; **Rosenfeld, P.E.** (June 20-23, 2010). Bringing Environmental Justice to East St. Louis, Illinois. *Urban Environmental Pollution*. Lecture conducted from Boston, MA.

Rosenfeld, P.E. (April 19-23, 2009). Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS) Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*, Lecture conducted from Tuscon, AZ.

Rosenfeld, P.E. (April 19-23, 2009). Cost to Filter Atrazine Contamination from Drinking Water in the United States" Contamination in Drinking Water From the Use of Aqueous Film Forming Foams (AFFF) at Airports in the United States. *2009 Ground Water Summit and 2009 Ground Water Protection Council Spring Meeting*. Lecture conducted from Tuscon, AZ.

Wu, C., Tam, L., Clark, J., **Rosenfeld, P.** (20-22 July, 2009). Dioxin and furan blood lipid concentrations in populations living near four wood treatment facilities in the United States. Brebbia, C.A. and Popov, V., eds., *Air Pollution XVII: Proceedings of the Seventeenth International Conference on Modeling, Monitoring and Management of Air Pollution*. Lecture conducted from Tallinn, Estonia.

Rosenfeld, P. E. (October 15-18, 2007). Moss Point Community Exposure To Contaminants From A Releasing Facility. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). The Repeated Trespass of Tritium-Contaminated Water Into A Surrounding Community Form Repeated Waste Spills From A Nuclear Power Plant. *The 23rd Annual International Conferences on Soils Sediment and Water*. Platform lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld, P. E. (October 15-18, 2007). Somerville Community Exposure To Contaminants From Wood Treatment Facility Emissions. *The 23rd Annual International Conferences on Soils Sediment and Water*. Lecture conducted from University of Massachusetts, Amherst MA.

Rosenfeld P. E. (March 2007). Production, Chemical Properties, Toxicology, & Treatment Case Studies of 1,2,3-Trichloropropane (TCP). *The Association for Environmental Health and Sciences (AEHS) Annual Meeting*. Lecture conducted from San Diego, CA.

Rosenfeld P. E. (March 2007). Blood and Attic Sampling for Dioxin/Furan, PAH, and Metal Exposure in Florala, Alabama. *The AEHS Annual Meeting*. Lecture conducted from San Diego, CA.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (August 21 – 25, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *The 26th International Symposium on Halogenated Persistent Organic Pollutants – DIOXIN2006*. Lecture conducted from Radisson SAS Scandinavia Hotel in Oslo Norway.

Hensley A.R., Scott, A., **Rosenfeld P.E.**, Clark, J.J.J. (November 4-8, 2006). Dioxin Containing Attic Dust And Human Blood Samples Collected Near A Former Wood Treatment Facility. *APHA 134 Annual Meeting & Exposition*. Lecture conducted from Boston Massachusetts.

Paul Rosenfeld Ph.D. (October 24-25, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. Mealey's C8/PFOA. *Science, Risk & Litigation Conference*. Lecture conducted from The Rittenhouse Hotel, Philadelphia, PA.

Paul Rosenfeld Ph.D. (September 19, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, *Toxicology and Remediation PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel, Irvine California.

Paul Rosenfeld Ph.D. (September 19, 2005). Fate, Transport, Toxicity, And Persistence of 1,2,3-TCP. *PEMA Emerging Contaminant Conference*. Lecture conducted from Hilton Hotel in Irvine, California.

Paul Rosenfeld Ph.D. (September 26-27, 2005). Fate, Transport and Persistence of PDBEs. *Mealey's Groundwater Conference*. Lecture conducted from Ritz Carlton Hotel, Marina Del Ray, California.

Paul Rosenfeld Ph.D. (June 7-8, 2005). Fate, Transport and Persistence of PFOA and Related Chemicals. *International Society of Environmental Forensics: Focus On Emerging Contaminants*. Lecture conducted from Sheraton Oceanfront Hotel, Virginia Beach, Virginia.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Fate Transport, Persistence and Toxicology of PFOA and Related Perfluorochemicals. *2005 National Groundwater Association Ground Water And Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld Ph.D. (July 21-22, 2005). Brominated Flame Retardants in Groundwater: Pathways to Human Ingestion, Toxicology and Remediation. *2005 National Groundwater Association Ground Water and Environmental Law Conference*. Lecture conducted from Wyndham Baltimore Inner Harbor, Baltimore Maryland.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. and Rob Hesse R.G. (May 5-6, 2004). Tert-butyl Alcohol Liability and Toxicology, A National Problem and Unquantified Liability. *National Groundwater Association. Environmental Law Conference*. Lecture conducted from Congress Plaza Hotel, Chicago Illinois.

Paul Rosenfeld, Ph.D. (March 2004). Perchlorate Toxicology. *Meeting of the American Groundwater Trust*. Lecture conducted from Phoenix Arizona.

Hagemann, M.F., **Paul Rosenfeld, Ph.D.** and Rob Hesse (2004). Perchlorate Contamination of the Colorado River. *Meeting of tribal representatives*. Lecture conducted from Parker, AZ.

Paul Rosenfeld, Ph.D. (April 7, 2004). A National Damage Assessment Model For PCE and Dry Cleaners. *Drycleaner Symposium. California Ground Water Association*. Lecture conducted from Radison Hotel, Sacramento, California.

Rosenfeld, P. E., Grey, M., (June 2003) Two stage biofilter for biosolids composting odor control. *Seventh International In Situ And On Site Bioremediation Symposium Battelle Conference* Orlando, FL.

Paul Rosenfeld, Ph.D. and James Clark Ph.D. (February 20-21, 2003) Understanding Historical Use, Chemical Properties, Toxicity and Regulatory Guidance of 1,4 Dioxane. *National Groundwater Association. Southwest Focus Conference. Water Supply and Emerging Contaminants..* Lecture conducted from Hyatt Regency Phoenix Arizona.

Paul Rosenfeld, Ph.D. (February 6-7, 2003). Underground Storage Tank Litigation and Remediation. *California CUPA Forum*. Lecture conducted from Marriott Hotel, Anaheim California.

Paul Rosenfeld, Ph.D. (October 23, 2002) Underground Storage Tank Litigation and Remediation. *EPA Underground Storage Tank Roundtable*. Lecture conducted from Sacramento California.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Understanding Odor from Compost, *Wastewater and Industrial Processes. Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Suffet, M. (October 7- 10, 2002). Using High Carbon Wood Ash to Control Compost Odor. *Sixth Annual Symposium On Off Flavors in the Aquatic Environment. International Water Association*. Lecture conducted from Barcelona Spain.

Rosenfeld, P.E. and Grey, M. A. (September 22-24, 2002). Biocycle Composting For Coastal Sage Restoration. *Northwest Biosolids Management Association*. Lecture conducted from Vancouver Washington..

Rosenfeld, P.E. and Grey, M. A. (November 11-14, 2002). Using High-Carbon Wood Ash to Control Odor at a Green Materials Composting Facility. *Soil Science Society Annual Conference*. Lecture conducted from Indianapolis, Maryland.

Rosenfeld, P.E. (September 16, 2000). Two stage biofilter for biosolids composting odor control. *Water Environment Federation*. Lecture conducted from Anaheim California.

Rosenfeld, P.E. (October 16, 2000). Wood ash and biofilter control of compost odor. *Biofest*. Lecture conducted from Ocean Shores, California.

Rosenfeld, P.E. (2000). Bioremediation Using Organic Soil Amendments. *California Resource Recovery Association*. Lecture conducted from Sacramento California.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. *Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings*. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., and C.L. Henry. (1999). An evaluation of ash incorporation with biosolids for odor reduction. *Soil Science Society of America*. Lecture conducted from Salt Lake City Utah.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Comparison of Microbial Activity and Odor Emissions from Three Different Biosolids Applied to Forest Soil. *Brown and Caldwell*. Lecture conducted from Seattle Washington.

Rosenfeld, P.E., C.L. Henry. (1998). Characterization, Quantification, and Control of Odor Emissions from Biosolids Application To Forest Soil. *Biofest*. Lecture conducted from Lake Chelan, Washington.

Rosenfeld, P.E., C.L. Henry, R. Harrison. (1998). Oat and Grass Seed Germination and Nitrogen and Sulfur Emissions Following Biosolids Incorporation With High-Carbon Wood-Ash. Water Environment Federation 12th Annual Residuals and Biosolids Management Conference Proceedings. Lecture conducted from Bellevue Washington.

Rosenfeld, P.E., C.L. Henry, R. B. Harrison, and R. Dills. (1997). Comparison of Odor Emissions From Three Different Biosolids Applied to Forest Soil. *Soil Science Society of America*. Lecture conducted from Anaheim California.

Teaching Experience:

UCLA Department of Environmental Health (Summer 2003 through 2010) Taught Environmental Health Science 100 to students, including undergrad, medical doctors, public health professionals and nurses. Course focused on the health effects of environmental contaminants.

National Ground Water Association, Successful Remediation Technologies. Custom Course in Sante Fe, New Mexico. May 21, 2002. Focused on fate and transport of fuel contaminants associated with underground storage tanks.

National Ground Water Association; Successful Remediation Technologies Course in Chicago Illinois. April 1, 2002. Focused on fate and transport of contaminants associated with Superfund and RCRA sites.

California Integrated Waste Management Board, April and May, 2001. Alternative Landfill Caps Seminar in San Diego, Ventura, and San Francisco. Focused on both prescriptive and innovative landfill cover design.

UCLA Department of Environmental Engineering, February 5, 2002. Seminar on Successful Remediation Technologies focusing on Groundwater Remediation.

University Of Washington, Soil Science Program, Teaching Assistant for several courses including: Soil Chemistry, Organic Soil Amendments, and Soil Stability.

U.C. Berkeley, Environmental Science Program Teaching Assistant for Environmental Science 10.

Academic Grants Awarded:

California Integrated Waste Management Board. \$41,000 grant awarded to UCLA Institute of the Environment. Goal: To investigate effect of high carbon wood ash on volatile organic emissions from compost. 2001.

Synagro Technologies, Corona California: \$10,000 grant awarded to San Diego State University. Goal: investigate effect of biosolids for restoration and remediation of degraded coastal sage soils. 2000.

King County, Department of Research and Technology, Washington State. \$100,000 grant awarded to University of Washington: Goal: To investigate odor emissions from biosolids application and the effect of polymers and ash on VOC emissions. 1998.

Northwest Biosolids Management Association, Washington State. \$20,000 grant awarded to investigate effect of polymers and ash on VOC emissions from biosolids. 1997.

James River Corporation, Oregon: \$10,000 grant was awarded to investigate the success of genetically engineered Poplar trees with resistance to round-up. 1996.

United State Forest Service, Tahoe National Forest: \$15,000 grant was awarded to investigating fire ecology of the Tahoe National Forest. 1995.

Kellogg Foundation, Washington D.C. \$500 grant was awarded to construct a large anaerobic digester on St. Kitts in West Indies. 1993

Deposition and/or Trial Testimony:

In the Superior Court of the State of California, County of San Bernardino
Billy Wildrick, Plaintiff vs. BNSF Railway Company
Case No. CIVDS1711810
Rosenfeld Deposition 10-17-2022

In the State Court of Bibb County, State of Georgia
Richard Hutcherson, Plaintiff vs Norfolk Southern Railway Company
Case No. 10-SCCV-092007
Rosenfeld Deposition 10-6-2022

In the Civil District Court of the Parish of Orleans, State of Louisiana
Millard Clark, Plaintiff vs. Dixie Carriers, Inc. et al.
Case No. 2020-03891
Rosenfeld Deposition 9-15-2022

In The Circuit Court of Livingston County, State of Missouri, Circuit Civil Division
Shirley Ralls, Plaintiff vs. Canadian Pacific Railway and Soo Line Railroad
Case No. 18-LV-CC0020
Rosenfeld Deposition 9-7-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jonny C. Daniels, Plaintiff vs. CSX Transportation Inc.
Case No. 20-CA-5502
Rosenfeld Deposition 9-1-2022

In The Circuit Court of St. Louis County, State of Missouri
Kieth Luke et. al. Plaintiff vs. Monsanto Company et. al.
Case No. 19SL-CC03191
Rosenfeld Deposition 8-25-2022

In The Circuit Court of the 13th Judicial Circuit Court, Hillsborough County, Florida Civil Division
Jeffery S. Lamotte, Plaintiff vs. CSX Transportation Inc.
Case No. NO. 20-CA-0049
Rosenfeld Deposition 8-22-2022

In State of Minnesota District Court, County of St. Louis Sixth Judicial District
Greg Bean, Plaintiff vs. Soo Line Railroad Company
Case No. 69-DU-CV-21-760
Rosenfeld Deposition 8-17-2022

In United States District Court Western District of Washington at Tacoma, Washington
John D. Fitzgerald Plaintiff vs. BNSF
Case No. 3:21-cv-05288-RJB
Rosenfeld Deposition 8-11-2022

In Circuit Court of the Sixth Judicial Circuit, Macon Illinois
Rocky Bennyhoff Plaintiff vs. Norfolk Southern
Case No. 20-L-56
Rosenfeld Deposition 8-3-2022

In Court of Common Pleas, Hamilton County Ohio
Joe Briggins Plaintiff vs. CSX
Case No. A2004464
Rosenfeld Deposition 6-17-2022

In the Superior Court of the State of California, County of Kern
George LaFazia vs. BNSF Railway Company.
Case No. BCV-19-103087
Rosenfeld Deposition 5-17-2022

In the Circuit Court of Cook County Illinois
Bobby Earles vs. Penn Central et. al.
Case No. 2020-L-000550
Rosenfeld Deposition 4-16-2022

In United States District Court Easter District of Florida
Albert Hartman Plaintiff vs. Illinois Central
Case No. 2:20-cv-1633
Rosenfeld Deposition 4-4-2022

In the Circuit Court of the 4th Judicial Circuit, in and For Duval County, Florida
Barbara Steele vs. CSX Transportation
Case No.16-219-Ca-008796
Rosenfeld Deposition 3-15-2022

In United States District Court Easter District of New York
Romano et al. vs. Northrup Grumman Corporation
Case No. 16-cv-5760

Rosenfeld Deposition 4-22-2020

In The Superior Court of the State of California, For The County of Los Angeles
Warrn Gilbert and Penny Gilber, Plaintiff vs. BMW of North America LLC
Case No. LC102019 (c/w BC582154)
Rosenfeld Deposition 8-16-2017, Trail 8-28-2018

In the Northern District Court of Mississippi, Greenville Division
Brenda J. Cooper, et al., Plaintiffs, vs. Meritor Inc., et al., Defendants
Case No. 4:16-cv-52-DMB-JVM
Rosenfeld Deposition July 2017

In The Superior Court of the State of Washington, County of Snohomish
Michael Davis and Julie Davis et al., Plaintiff vs. Cedar Grove Composting Inc., Defendants
Case No. 13-2-03987-5
Rosenfeld Deposition, February 2017
Trial March 2017

In The Superior Court of the State of California, County of Alameda
Charles Spain., Plaintiff vs. Thermo Fisher Scientific, et al., Defendants
Case No. RG14711115
Rosenfeld Deposition September 2015

In The Iowa District Court In And For Poweshiek County
Russell D. Winburn, et al., Plaintiffs vs. Doug Hoksbergen, et al., Defendants
Case No. LALA002187
Rosenfeld Deposition August 2015

In The Circuit Court of Ohio County, West Virginia
Robert Andrews, et al. v. Antero, et al.
Civil Action No. 14-C-30000
Rosenfeld Deposition June 2015

In The Iowa District Court for Muscatine County
Laurie Freeman et. al. Plaintiffs vs. Grain Processing Corporation, Defendant
Case No. 4980
Rosenfeld Deposition May 2015

In the Circuit Court of the 17th Judicial Circuit, in and For Broward County, Florida
Walter Hinton, et. al. Plaintiff, vs. City of Fort Lauderdale, Florida, a Municipality, Defendant.
Case No. CACE07030358 (26)
Rosenfeld Deposition December 2014

In the County Court of Dallas County Texas
Lisa Parr et al, Plaintiff, vs. Aruba et al, Defendant.
Case No. cc-11-01650-E
Rosenfeld Deposition: March and September 2013
Rosenfeld Trial April 2014

In the Court of Common Pleas of Tuscarawas County Ohio
John Michael Abicht, et al., Plaintiffs, vs. Republic Services, Inc., et al., Defendants
Case No. 2008 CT 10 0741 (Cons. w/ 2009 CV 10 0987)
Rosenfeld Deposition October 2012

In the United States District Court for the Middle District of Alabama, Northern Division
James K. Benefield, et al., Plaintiffs, vs. International Paper Company, Defendant.
Civil Action No. 2:09-cv-232-WHA-TFM
Rosenfeld Deposition July 2010, June 2011

In the Circuit Court of Jefferson County Alabama
Jaeanette Moss Anthony, et al., Plaintiffs, vs. Drummond Company Inc., et al., Defendants
Civil Action No. CV 2008-2076
Rosenfeld Deposition September 2010

In the United States District Court, Western District Lafayette Division
Ackle et al., Plaintiffs, vs. Citgo Petroleum Corporation, et al., Defendants.
Case No. 2:07CV1052
Rosenfeld Deposition July 2009

Letter O-3

Blum Collins & Ho
March 3, 2023

- 0-3.1** This comment is introductory in nature. Specific comments regarding the Draft EIR are provided and responded to below. In response to this comment, the commenter has been added to the EIR mailing list.
- 0-3.2** This comment summarizes the proposed Project and directly quotes the Draft EIR. The comment does not pose any questions or raise issues about the environmental analysis or the Draft EIR. Specific comments regarding the Draft EIR are provided and responded to below.
- 0-3.3** This comment alleges the Project Specific Plan was not available for public review. The proposed West Campus Upper Plateau Specific Plan was made, and remains, available for public review in the same location online as the Draft EIR <https://marchjpa.com/mjpa-meridian-west-campus/>. As explained in Recirculated Chapter 3, Project Description, and as noted by the commenter in Comment O-3.2, the Project's requested approvals and entitlements include proposed Specific Plan 21-01 (SP-9) that would address land uses, zoning, and design guidelines for approximately 370 acres of the Project site. The analysis in the Draft EIR addresses the proposed buildout of the Specific Plan Area pursuant to the proposed Specific Plan as well as the placement of a Conservation Easement over approximately 445 acres of the Project site. Section 3.5, Proposed Project, of Recirculated Chapter 3, Project Description, summarizes the proposed Specific Plan's land use designations and development standards, including the maximum heights, floor area ratios, and parking requirements, and as such, the Draft EIR adequately described the Project to provide a meaningful analysis of the proposed Project. As explained in Recirculated Section 4.10, Land Use and Planning, the proposed Specific Plan would be adopted by ordinance pursuant to the procedures and requirements set forth in the California Government Code and the March JPA Development Code. As such, the proposed Specific Plan is currently a draft document referenced for the purposes of conducting environmental review of the proposed Project.

The comment states that the Draft EIR must be revised and recirculated to include the Beaumont Pointe Specific Plan. The Beaumont Pointe Specific Plan is unrelated to the Project site as it is located in the City of Beaumont, California, which is approximately 21.5 miles northeast of the Project site and March JPA Planning Area. To the extent the commenter intended to refer to the proposed West Campus Upper Plateau Specific Plan, as discussed in Response O-3.3, above, the proposed Specific Plan is described and summarized for informational purposes and as relevant to the analysis in applicable sections of the Draft EIR and was made available for public review with the Draft EIR. The comment cites Public Resources Code Section 21003(b), which states the legislative intent that "[d]ocuments prepared pursuant to this division be organized and written in a manner that will be meaningful and useful to decisionmakers and to the public." The comment also refers to Section 15121 of the CEQA Guidelines, which describes an EIR's purpose as an informational document. According to Section 15121 of the CEQA Guidelines, "[t]he public agency shall consider the information in the EIR along with other information which may be presented to the agency." Neither of the provisions cited by the comment require the proposed draft Specific Plan to be attached to the Draft EIR. The comment also cites CEQA Guidelines Section 15150(f), which provides that "[i]ncorporation by reference is most appropriate for including long, descriptive, or technical materials that provide general background but do not contribute directly to the analysis of the problem at hand." The comment suggests that the

proposed Specific Plan should be attached to the Draft EIR because it contributes directly to the analysis of the Project. However, as discussed above and consistent with the requirements of CEQA, the proposed Specific Plan is described and summarized for informational purposes and as relevant to the analysis in applicable sections of the Draft EIR and was made available for public review concurrent with the Draft EIR.

- 0-3.4** This comment refers to attachments from SWAPE, which are provided and responded to below. Please see Responses 0-3.23 through 0-3.31, below.
- 0-3.5** This comment alleges the Draft EIR does not include environmental justice analysis. As described in Recirculated Chapter 3, Project Description, March JPA's land use authority will revert back to the County of Riverside on July 1, 2025, in accordance with the 14th Amendment to the March JPA Joint Powers Agreement. As the March JPA Planning Area will be absorbed by Riverside County, with the County fully responsible for future land use reviews and approvals after July 1, 2025, March JPA proposed an Environmental Justice Element based on Riverside County's adopted Environmental Justice Element. The Draft Environmental Justice Element incorporates the environmental justice policies of the County of Riverside Healthy Communities Element pursuant to Government Code Section 65301(a). The County of Riverside Board of Supervisors adopted environmental justice policies by Resolution 2021-182 on September 21, 2021. The County's environmental justice policies apply to the disadvantaged communities within unincorporated territory in the County of Riverside. Environmental evaluation of the Draft Environmental Justice Element was a separate process from the Project EIR. On April 24, 2024, in a public meeting, the March JPA Commission considered and adopted Resolution JPA 24-04, which found the Environmental Justice Element categorically exempt from CEQA pursuant to State CEQA Guidelines Class 7 and Class 8, and adopted the Environmental Justice Element. The adopted Environmental Justice Element is substantially similar to the Draft Environmental Justice Element released in November 2023. The Environmental Justice Element is now part of the March JPA General Plan. The Final EIR includes an analysis of the Project's consistency with the adopted Environmental Justice Element and concludes that the Project is consistent with all applicable policies.
- 0-3.6** The comment provides information from CalEnviroScreen, including rankings for the census tract that includes the Project site. CalEPA's Office of Environmental Health Hazard Assessment (OEHHA) developed the California Communities Environmental Health Screening Tool (CalEnviroScreen), which provides statewide data that can be used to identify communities disproportionately burdened by multiple sources of pollution.² The CalEnviroScreen model includes two components representing pollution burden (exposures and environmental effects) and two components representing population characteristics (sensitive populations and socioeconomic factors).³ An overall pollution burden score is calculated by CalEnviroScreen based on indicators related to exposures (i.e., ozone concentrations, PM_{2.5} concentrations, diesel particulate matter emissions, drinking water contaminants, etc.) and environmental effects (e.g., cleanup sites, groundwater threats, hazardous waste, etc.). As noted in the comment, the census tract that includes the Project site has a high overall pollution burden score. The comment also refers to several of these individual indicator scores from CalEnviroScreen for the census tract that includes the Project site and describes some of the potential health effects associated with various forms of pollution and population characteristics.

² <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

³ <https://oehha.ca.gov/media/downloads/calenviroscreen/report/calenviroscreen40reportf2021.pdf>

The Project's census tract is large and includes all of the March ARB and the March JPA jurisdiction along with three blocks within the City of Moreno Valley, which appear to have been mapped as part of March JPA. The residential uses within the March ARB census tract are located approximately two miles from the Project site; the residents in the retirement community are to the south of Van Buren Boulevard and the residents in Moreno Valley are to the east on the opposite side of the 215 Freeway and north of Alessandro Boulevard. As shown in Figure 4.2-2, of Recirculated Section 4.2, Air Quality, these residents are all outside of the cumulative impact area from the Project's truck routes. As such, the proposed Project is not proximate to these residences.

Moreover, the comment addresses the residences immediately adjacent to the north, south, and west of the Project site, which are in different census tracts that are not identified in CalEnviroScreen as burdened with pollution and the data the comment cites does not apply to these residences. For example, the Orangecrest neighborhood to the south of the Project site is located within two different census tracts, census tracts 6065042013 and 6065042014, with low rates of pollution burden and poverty and high rates of educational attainment. The same is true for the Mission Grove neighborhood, also cited by commenter, which is located to the northwest and west of the Project site within census tract 6065042012. That census tract also includes the residences located in Riverside County to the north of the Project site. As such, the residential areas located near the Project site identified by the comment are not in poor communities overburdened with pollution as identified by CalEnviroScreen and the data cited in the comment is not applicable to these residences. The residential areas that are within the census tract that is cited in the comment are far from the Project site and will not be directly impacted by the development of the Project.

The information provided regarding the CalEnviroScreen rankings does not change the significance conclusions in the Draft EIR.

0-3.7 The comment states that the census tract that includes the Project site is identified as a SB 535 disadvantaged community, along with census tracts to the north and south. The census tracts referenced in the comment as SB 535 disadvantaged communities "adjacent" to the Project site are not actually adjacent to the Project site. As noted above in Response 0.3-6, the Project census tract is large and includes all of the March ARB and March JPA jurisdiction. Census tract 6065042010 is located to the south of the Project census tract and is south of the Riverside National Cemetery and the golf course. Census tract 6065042505 is located to the north of the Project census tract, on the opposite side of I-215 and north of March ARB. The census tracts adjacent to the Project site (6065042012, 6065042014, and 6065042013), which include the Mission Grove neighborhood, the residences located in Riverside County to the north of the Project site, and the Orangecrest neighborhood south of the Project site, are not identified as SB 535 disadvantaged communities.⁴

0-3.8 The comment states that California's Building Energy Code Compliance Software (CBECC) is the appropriate software to be used in the energy analysis rather than CalEEMod.

As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4), the commenter is correct that the CBECC model is the approved compliance method specifically for Title 24 compliance, which would be required for any development project at the time of physical building construction (approximately 12-18 months after entitlement). The CBECC model is used to confirm final

⁴ <https://experience.arcgis.com/experience/1c21c53da8de48f1b946f3402fbae55c/page/SB-535-Disadvantaged-Communities/>

design, with detailed information included in construction drawings, is Title 24 compliant. The final design and construction drawings for the Project are not, nor do they need to be in order to conduct environmental review, available at this time and are not typically prepared until after the Project is approved/entitled. CBECC will be used by the design team to ensure the Project buildings comply with Title 24 prior to construction.

The EIR and underlying technical studies correctly utilized CalEEMod, which estimates energy demand based on average intensity factors for similar land use types based on the site plans provided to March JPA for entitlement. Since the Project's tenants are unknown at this time, and information about the future tenants' energy use is not available at this time, it is appropriate to use the CalEEMod default assumptions which have been derived by the California Air Pollution Control Officers Association (CAPCOA) based on survey data. Additionally, CalEEMod is based on the previous 2019 version of Title 24 and does not account for the latest 2022 Title 24 requirements that became effective on January 1, 2023. The modeling also does not take into account MM-AQ-6, which requires that all buildings constructed to achieve the 2023 LEED Silver certification standards or equivalent, at a minimum.

The MMRP and the requirement to obtain building permits will require compliance with the most current version of Title 24 at the time of approval, including CBECC modeling to show compliance. Therefore, revisions to the Draft EIR are not required.

0-3.9

This comment alleges the Draft EIR's consistency analysis with the Connect SoCal is misleading. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the consistency analysis in the Draft EIR is accurate. Goal 5 of Connect SoCal is to reduce greenhouse gas emissions and improve air quality. To meet that goal, "Connect SoCal includes a sustainable communities strategy which sets forth a forecasted development pattern for the region, which, when integrated with the transportation network, and other transportation measures and policies, if implemented, will reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region." The forecasted development pattern is based on a regional growth forecast that was developed by working with local jurisdictions using the most recent land use plans and policies and planning assumptions.⁵

SCAG explicitly found that "For the purpose of determining consistency with Connect SoCal for California Environmental Quality Act (CEQA), grants or other opportunities, lead agencies such as local jurisdictions have the sole discretion in determining a local project's consistency."⁶ March JPA determines consistency with Connect SoCal based on consistency with the long-term employment and growth projections. The SCS also indicates that this is a jobs poor area so providing more jobs will actually reduce GHG emissions and reduce VMT as it will provide local jobs to achieve a more favorable jobs-housing balance. (Appendix C-4 of the Final EIR)

Goal 6 of Connect SoCal relates to healthy and equitable communities. Please see Recirculated Section 4.10, Land Use and Planning, for analysis of the Project's consistency with March JPA's adopted Environmental Justice Element. On April 24, 2024, in a public meeting, the March JPA Commission considered and adopted Resolution JPA 24-04, which found the Environmental Justice Element categorically exempt from CEQA pursuant to State CEQA Guidelines Class 7 and Class 8, and adopted the Environmental Justice Element. The adopted Environmental Justice Element is substantially similar

⁵ <https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020>

⁶ Connect SoCal p. xiv

to the Draft Environmental Justice Element released in November 2023. The Environmental Justice Element is now part of the March JPA General Plan. The Final EIR includes an analysis of the Project's consistency with the adopted Environmental Justice Element and concludes that the Project is consistent with all applicable policies. As discussed above, in Responses O.3-5 and O.3-7, the purpose of the Draft EIR is to evaluate and disclose the potential environmental consequences of the proposed Project. Consistent with the requirements of CEQA and Goal 6, the Draft EIR analyzes the proposed Project's potential environmental impacts, including impacts related to public health and the community. (Appendix C-4 of the Final EIR)

The proposed Project would increase regional employment by approximately 3,622 jobs. According to SCAG's 2020-2045 RTP/SCS, employment within Riverside County in 2019 is approximately 812,800 jobs with an anticipated increase to approximately 1,102,700 jobs by 2045, a growth of approximately 289,900 jobs. The proposed Project contributes 1.24% of the anticipated increase in jobs, and therefore, it is consistent with the job growth and would not result in long-term operational employment growth that exceeds planned growth projections in the RTP/SCS or the AQMP or result in employment growth that would substantially add to traffic congestion. Additionally, the Project would comply with the policies set forth in the 2020-2045 RTP/SCS by reducing vehicle trips and VMT, increasing the use of alternative fuel vehicles, and improving energy efficiency. (Appendix C-4 of the Final EIR)

The proposed Project is consistent with the long-term employment and growth projections used by SCAG in the RTP/SCS and is therefore consistent with Connect SoCal. Moreover, the Project does not impede implementation of improvements to the transportation network, and other transportation measures and policies. Therefore, the Project will not impede SCAG's efforts to "reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region." (Appendix C-4 of the Final EIR)

The comment is correct that Project would exceed regional significance thresholds for emissions of VOC, NO_x, CO, and PM₁₀ (also PM_{2.5} as disclosed in Recirculated Section 4.2, Air Quality). However, this is not a factor in determining consistency with the RTP/SCS. In fact, the Connect SoCal EIR and subsequent addenda all found that implementation of the plan would result in significant and unavoidable air quality impacts:

"While the SCAG region may see an increase in PM_{2.5}, PM₁₀ and SO_x emissions, the SCAQMD, AVAPCD, ICAPCD, and MDAQMD have not established regional thresholds to determine significance. The air districts within the SCAG region have only established project-level thresholds (see Table 3.3-9, Table 3.3-10, and Table 3.3-11). Therefore, individual projects must compare anticipated project emissions to the thresholds for the air district within which they are located in order to determine significance on the project-level. Because mobile source emissions of PM₁₀ and PM_{2.5} will increase (PM₁₀ would increase in Imperial, Orange, Riverside, and San Bernardino Counties and PM_{2.5} would increase in Imperial, Riverside, and San Bernardino Counties), largely as a result of increased total VMT, and SO_x would increase in the region at least through 2031, the Plan could contribute to an air quality violation. Further, there is the potential for individual projects to exceed local

standards during construction and/or operation for several pollutants. Therefore, this impact is considered to be significant.”⁷

The Connect SoCal EIR included Mitigation Measure PMM-AQ-1 that suggests mitigation measures that local agencies should consider when approving development projects to reduce substantial adverse effects related to violating air quality standards. As explained in the table below, the Project is consistent with, and incorporates all of, the applicable suggested mitigation measures in Connect SoCal regarding air quality. (Appendix C-4 of the Final EIR)

Connect SoCal EIR PMM-AQ-1 – In accordance with provisions of sections 15091(a)(2) and 15126.4(a)(1)(B) of the State CEQA Guidelines, a Lead Agency for a project can and should consider mitigation measures to reduce substantial adverse effects related to violating air quality standards. Such measures may include the following or other comparable measures identified by the Lead Agency:	
a) Minimize land disturbance.	Consistent. MM-AQ-2 limits amount of daily grading as follows: During Phase 1, areas of active ground disturbance shall not exceed a maximum of 20 acres per day for Mass Grading and 20 acres per day for Blasting & Rock Handling. During Phase 2, the area of active ground disturbance shall not exceed a maximum of 20 acres per day for Remedial Grading. The construction contractor shall submit a grading log to March JPA every two weeks documenting acreage graded or equivalent cubic yardage to ensure compliance.
b) Suspend grading and earth moving when wind gusts exceed 25 miles per hour unless the soil is wet enough to prevent dust plumes.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires implementation of Table 3 contingency measures when wind gusts exceed 25 miles per hour.
c) Cover trucks when hauling dirt.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires coverage of haul vehicles.
d) Stabilize the surface of dirt piles if not removed immediately.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires stabilization of open storage piles.
e) Limit vehicular paths on unpaved surfaces and stabilize any temporary roads.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires watering of, or application of a chemical stabilizer to, unpaved roads.
f) Minimize unnecessary vehicular and machinery activities.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires establishing stabilized haul routes, limiting vehicular travel to those routes, and preventing motor vehicle and/or off-road vehicle trespassing, parking and/or access by installing barriers, curbs, fences, gates, posts, signs, shrubs, trees or other effective control measures.
g) Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires all track-out from an active operation be removed at the conclusion of each workday or evening shift.
h) Revegetate disturbed land, including vehicular paths created during construction to avoid future off-road vehicular activities.	Consistent. Project will comply with SCAQMD Rule 403, Fugitive Dust, which requires stabilization of soils, materials, and slopes through hydroseeding and soil binders until vegetation or ground cover growth.

⁷ ConnectSoCal PEIR, pg. 3.3-61

<p>i) On Caltrans projects, Caltrans Standard Specifications 10-Dust Control, 17-Watering, and 18-Dust Palliative shall be incorporated into project specifications.</p>	<p>Not Applicable.</p>
<p>j) Require contractors to assemble a comprehensive inventory list (i.e., make, model, engine year, horsepower, emission rates) of all heavy-duty off-road (portable and mobile) equipment (50 horsepower and greater) that could be used an aggregate of 40 or more hours for the construction project. Prepare a plan for approval by the applicable air district demonstrating achievement of the applicable percent reduction for a CARB-approved fleet.</p>	<p>Consistent. MM-AQ-2 requires the construction contractor to submit biweekly construction equipment hours log to March JPA. In the event alternate equipment is required, the applicant shall provide documentation demonstrating equivalent or reduced emissions based on horsepower and hours of operation.</p>
<p>k) Ensure that all construction equipment is properly tuned and maintained.</p>	<p>Consistent. MM-AQ-3 requires all construction equipment to be tuned and maintained in accordance with the manufacturer's specifications, with maintenance records onsite and available to regulatory authorities upon request.</p>
<p>l) Minimize idling time to 5 minutes—saves fuel and reduces emissions.</p>	<p>Consistent. MM-AQ-3 prohibits construction equipment idling longer than 3 minutes.</p>
<p>m) Provide an operational water truck on-site at all times. Use watering trucks to minimize dust; watering should be sufficient to confine dust plumes to the project work areas. Sweep paved streets at least once per day where there is evidence of dirt that has been carried on to the roadway.</p>	<p>Consistent. As explained in Section 4.9, Hydrology and Water Quality, grading and construction of the Project would include spraying with water trucks for soil compaction and dust suppression.</p>
<p>n) Utilize existing power sources (e.g., power poles) or clean fuel generators rather than temporary power generators.</p>	<p>Consistent. MM-AQ-3 requires the designation of an area where electric-powered construction vehicles and equipment can be charged. MM-AQ-3 further prohibits the use of diesel-powered portable generators, unless necessary due to emergency situations or constrained supply.</p>
<p>o) Develop a traffic plan to minimize traffic flow interference from construction activities. The plan may include advance public notice of routing, use of public transportation, and satellite parking areas with a shuttle service. Schedule operations affecting traffic for off-peak hours. Minimize obstruction of through-traffic lanes. Provide a flag person to guide traffic properly and ensure safety at construction sites.</p>	<p>Consistent. MM-TRA-1 requires the development and implementation of a Construction Traffic Management Plan to address potential construction-related traffic detours and disruptions to ensure that to the extent practical, construction traffic would access the Project site during off-peak hours.</p>
<p>p) As appropriate require that portable engines and portable engine-driven equipment units used at the project work site, with the exception of on-road and off-road motor vehicles, obtain CARB Portable Equipment Registration with the state or a local district permit. Arrange appropriate consultations with the CARB or the District to determine registration and permitting requirements prior to equipment operation at the site.</p>	<p>Not Applicable. This is a voluntary program for owners or operators of portable engines and other types of equipment can register their units under the CARB Statewide Portable Equipment Registration Program (PERP) in order to operate their equipment throughout California without having to obtain individual permits from local air districts. https://ww2.arb.ca.gov/our-work/programs/portable-equipment-registration-program-perp</p>
<p>q) Require projects within 500 feet of residences, hospitals, or schools to use Tier 4 equipment for</p>	<p>Consistent. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission</p>

<p>all engines above 50 horsepower (hp) unless the individual project can demonstrate that Tier 4 engines would not be required to mitigate emissions below significance thresholds.</p>	<p>standards or better. MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later and to use electric-powered hand tools, forklifts and pressure washers, to the extent feasible.</p>
--	--

While the Project will implement all of the applicable Connect SoCal mitigation measures and additional mitigation measures to reduce impacts to air quality, March JPA has determined, as reflected in the EIR, that it would not be feasible to reduce emissions to less than significant levels. Further reduction of emissions must come from car and trucks emissions, which are regulated by the EPA (Federal), CARB (State) and South Coast Air Quality Management District (Regional) and are outside March JPA’s local jurisdiction and control. (Appendix C-4 of the Final EIR)

Additionally, the modeling conservatively does not account for emission reductions achieved by the use of zero emission vehicles, and as electric vehicles and electric trucks comprise larger portions of the vehicle fleet, emissions of the Project would be overrepresented. Similarly, while construction and operation of the proposed Project would generate GHG emissions, the Project will not interfere with or obstruct any GHG reduction plans and will implement several mitigation measures and design features that would reduce overall GHG emissions. (Appendix C-4 of the Final EIR)

The comment alleges inconsistency with Goal 7 of Connect SoCal without any explanation. The full text of Goal 7 is to “Adapt to a changing climate and support an integrated regional development pattern and transportation network.” Connect SoCal defines Climate Change Adaptation as “The Process of adjusting to actual or expected climate change and its effects, in order to moderate or avoid harm. Adaptation addresses the impacts but not the causes of climate change.” The Project supports an integrated regional development pattern that was accounted for in development of Connect SoCal. The Project itself will not impede SCAG’s efforts to adapt to a changing climate, and includes the following project design features and mitigation measures to further reduce GHG emissions:

- PDF-AQ-1 prohibits the use of natural gas by Specific Plan Area development.
- MM-AQ-1 requires all offroad construction equipment to meet CARB Tier 4 Final emissions standards or better.
- MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later and electric-powered hand tools, forklifts and pressure washers, to the extent feasible and further requires the designation of an area where electric-powered construction vehicles and equipment can charge. MM-AQ-3 prohibits construction equipment idling for more than three minutes and the use of diesel-powered generators.
- MM-AQ-6 requires all buildings achieve the 2023 LEED Silver certification standards or equivalent, at a minimum.
- MM-AQ-7 requires that each Project building is designed for passive heating and cooling and is designed to include natural light.
- MM-AQ-8 requires all TRU loading docks provide electrical hookups and all loading docks are designed to be compatible with SmartWay trucks.
- MM-AQ-11 requires main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available.
- MM-AQ-13 requires electrical service or charging stations be provided in convenient locations for electric and battery-powered landscape maintenance equipment.

- MM-AQ-14 requires tenants utilize electric or battery-operated equipment for landscape maintenance.
- MM-AQ-17 requires truck drivers to shut off engines when not in use and three-minute truck idling limits.
- MM-AQ-18 requires use of only electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided.
- MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments on the Recirculated EIR MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed.
- MM-AQ-22 requires tenants provide information to employees and truck drivers on: Building energy efficiency, solid waste reduction, recycling, and water conservation; Vehicle GHG emissions, electric vehicle charging availability, and alternate transportation opportunities for commuting; Participation in the Voluntary Interindustry Commerce Solutions (VICS) “Empty Miles” program to improve goods trucking efficiencies; Health effects of diesel particulates, state regulations limiting truck idling time, and the benefits of minimized idling; The importance of minimizing traffic, noise, and air pollutant impacts to any residences in the Project vicinity; Efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
- MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology that meets CARB’s Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the Project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB’s Tier 4 emission standards or have the least emissions.
- MM-AQ-25 requires the facility operator monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable, by maintaining records on-site demonstrating compliance and making records available for inspection by the local jurisdiction, air district, and state upon request.
- PDF-GHG-1 requires conduit to be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available.
- MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
- MM-GHG-2 through MM-GHG-6 require additional building design features to reduce GHG emissions.

- MM-GHG-7 requires each Project site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
- MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables.

0-3-10 This comment identifies elements of the Bird/Wildlife Aircraft Strike Hazard (BASH) study not incorporated into the Project Specific Plan. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, and as noted in the comment, the Project site is located within the C1 Primary Approach/Departure Zone and C2 Compatibility Zone pursuant to the Land Use Compatibility Plan for the March Air Reserve Base/Inland Port Airport. The March Air Reserve Base/Inland Port Airport Land Use Compatibility Plan (ALUCP) was adopted by the Riverside County Airport Land Use Commission (ALUC) in 2014 and provides noise and safety policies governing development of compatible future land uses in areas within the airport influence area. As noted in the comment and explained in the Draft EIR, the Riverside County ALUC held a public hearing on the Project on May 12, 2022, and found the Project to be conditionally consistent with the ALUCP. One of the ALUC's conditions is that the future BASH study, as prepared by a qualified wildlife hazard biologist, come back to the ALUC for review in the event it raises significant issues. As the comment notes, the BASH study for the Project, dated June 28, 2022, was attached to the Draft EIR as Appendix J-4. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, pursuant to the BASH study, PDF-HAZ-1 through PDF-HAZ-4 are incorporated into the proposed Specific Plan to be consistent with Federal Aviation Administration guidance, the 2018 Air Installation Compatible Use Zone for March ARB (AICUZ), and the Riverside County ALUCP with regard to wildlife attractants and hazards to flight operations. As explained in the BASH study appended to the Draft EIR, the incorporation of the recommended modifications included in the BASH study would make the Specific Plan consistent with these policies and plans. The proposed Specific Plan has been updated to incorporate all of the recommended modifications identified in the BASH study, including the items identified in the comment, and, as such, will be consistent with the adopted ALUCP in accordance with the ALUC's conditions. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. With these modifications to the Specific Plan, the BASH study did not identify any significant issues requiring additional ALUC review. No mitigation measures are required.

0-3.11 This comment states that the EIR does not provide an erroneous and misleading consistency analysis with land use plans but also states that the EIR is incorrect in concluding that the Project is consistent or partially consistent with two goals from the Noise/Air Quality Element of the March JPA General Plan to reduce air pollution (Goals 3 and 8) because the Project would result in significant and unavoidable impacts related to air quality. However, Recirculated Section 4.10, Land Use and Planning, acknowledges the significant and unavoidable impacts related to certain emissions, and explains that the Project would be partially consistent with Goal 3 (Reduce air pollution through proper land use, transportation, and energy use planning) because it would also provide employment opportunities to western Riverside County, maintaining the County's balanced jobs-to-housing ratio, and reducing commutes and VMT, which would reduce air emissions. Thus, although the Project would exceed some specific emission thresholds, it would also reduce air pollution through proper land use, transportation, and energy use planning. With regard to Goal 8 (Reduce air pollution emissions and impacts through siting and building design), as explained in Recirculated Section 4.10, Land Use and Planning, the

Project would be consistent with this goal, as Project development would include separation of sensitive receptors from pollutant emissions. MM-AQ-4 requires the use of “Super-Compliant” low VOC paint. MM-AQ-6 requires all buildings to achieve the 2023 LEED Silver certification standards or equivalent. MM-AQ-7 requires all buildings to be designed for passive heating and cooling with the inclusion of natural light. MM-AQ-8 requires all TRU loading docks provide electrical hookups and all loading docks be designed to be compatible with SmartWay trucks. MM-AQ-9 requires industrial buildings larger than 400,000 SF to include a truck operator lounge, to reduce idling emissions. MM-AQ-11 requires installation of main electrical supply lines and panels that have been sized to support “clean fleet” charging facilities when these trucks and delivery vehicles become available. MM-AQ-13 requires electrical outlets or charging stations be provided near landscaped areas. MM-AQ-14 requires tenants utilize electric or battery-operated landscape maintenance equipment. The Project would also be consistent with the County of Riverside’s Good Neighbor Policy, as outlined in Table 4.10-2 in Recirculated Section 4.10, Land Use and Planning. As such, although the Project would exceed specific emission thresholds, it would also reduce air pollution emissions and impacts through siting and building design.

0-3.12

This comment questions the likelihood of filling the Project’s jobs with the Riverside County worker pool. As discussed in Topical Response 5 – Jobs, Project buildout would occur over an approximately 5-year horizon. The employment growth projections (i.e., forecasts) utilized within the Draft EIR are provided by each local jurisdiction (e.g., Riverside County, City of Riverside, City of Moreno Valley, City of Perris) to the Southern California Association of Governments (SCAG) and based on the anticipated growth in population in Riverside County during the near-term (projected increase of 360,000 new County residents by 2030) and long-term (projected increase of 759,000 new County residents by 2045). As such, additional jobs will be needed to continue to provide employment opportunities for future residents of Riverside County. Section 4.12, Population and Housing, of the Draft EIR cites SCAG data in which, “48.6% of residents within unincorporated Riverside County work and live in the County, while 51.4% commute outside of the County (SCAG 2019b).” SCAG identified similar trends for Riverside County as a whole (inclusive of the incorporated and unincorporated areas). Approximately 48.0% work and live in Riverside County, while 52.0% commute to other places (SCAG 2019a). Further, as discussed in the General Plan, March JPA was formed to create jobs within this portion of Riverside County as part of the March Air Reserve Base realignment. It is reasonable to assume the jobs generated by the Project could be filled with existing local residents residing within the County, either from the unemployed population or residents looking to reduce their commutes. Additionally, using CalEnviroScreen 4.0,⁸ the census tracts in the area surrounding March JPA have an average unemployment of 9%, which is higher than the state or county rate, further supporting the Draft EIR’s determination that the Project’s jobs could be filled locally

0-3.13

This comment questions the Project’s job generation. As discussed in Topical Response 5 – Jobs, the Draft EIR utilizes the Project jobs estimate of 2,595 employees used by Western Municipal Water District (WMWD) in its Water Supply Assessment (Appendix O) for the Project. A March JPA economic impact ratio of 1,486 square feet per job was derived utilizing 2023 March JPA economic impact data, which includes on-site jobs and ancillary jobs such as truck drivers. The Project would generate ancillary jobs for truck drivers and Table 4-2 of the West Campus Upper Plateau Traffic Analysis (Appendix N-2) indicates the Project would generate 2,054 truck trips (which is 1,027 trucks coming and going to the

⁸ Produced by the California Office of Environmental Health Hazard Assessment and analyzes various pollution burden data with population characteristics and assigns a score to each census tract relative to other census tracts.

site) which equates to approximately 1,027 truck drivers. When the Project's estimated truck drivers (1,027) are added to the Project's estimated on-site employees (2,595), the Project has an estimate of 3,622 total jobs generated. The Project's combined jobs estimate of 3,622 conservatively exceeds the March JPA employment ratio estimate (of 3,357) by only 8%, or 265 jobs. The comment proffers SCAG's Employment Density Study (2001), however, March JPA is afforded deference in its "decision to use a particular methodology and reject another" and substantial evidence supports March JPA's decision to use data specific to its location rather than the generic area wide data cited in the comment. *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 514; *South of Market Community Action Network v. City and County of San Francisco* (2019) 33 Cal.App.5th 321, 337.

- O-3.14** This comment requests a quantified construction employee analysis, including their geographic locations. As explained in Section 4.12, Population and Housing, construction activities at the Project site would lead to the temporary need for construction workers, which may come from surrounding communities or elsewhere within the SCAG region. As the Draft EIR explains, the proposed Project involves construction requirements that would not require a highly specialized labor force to permanently relocate from other regions. Different construction activities would require specific skill sets for a shorter duration than the overall Project construction schedule; therefore, construction workers would not be needed continuously and only for varying portions of the Project phases. Therefore, as explained in the Draft EIR, it is reasonable to assume that workers/crews would work at the Project site on a temporary basis only, and thus, are not likely to relocate their households as a consequence of the construction job opportunities presented by the Project. Section 4.15, Transportation, analyzed VMT impacts from Project construction and determined any increase in VMT associated with Project construction jobs would be temporary and cease once construction is completed so impacts would be less than significant.
- O-3.15** This comment questions the Draft EIR's analysis of cumulative employment generation. The cumulative effect of combined population and employment growth associated with the proposed Project and other planned projects in the vicinity is discussed in Section 4.12.7 within Section 4.12, Population and Housing, in the Draft EIR. As discussed therein, the anticipated population and employment growth associated with the cumulative projects, inclusive of the Veterans Industrial Park and the South Campus Specific Plan projects referenced in the comment, falls within the SCAG's projections for Riverside County. Consistent with SCAG growth projections for the region, the Draft EIR states, "The cumulative growth induced by the Project combined with other approved and proposed projects is unlikely to result in substantial employment growth beyond that which is already planned for in the County and region. In combination with the Project, impacts to population growth or housing availability would not be cumulatively considerable." Projects considered to be "in the pipeline" by the comment have been included in the analysis throughout the Draft EIR, including the analysis within Section 4.12, Population and Housing. As discussed in Response O-3.12, there is a need for more jobs in the area.
- O-3.16** This comment questions the March JPA General Plan Housing Element compliance. The statement in the Draft EIR that "The State of California's HCD, in recognition of the unique governance and responsibilities of March JPA and the adequacy of housing sites within the member jurisdictions, has resolved that incorporation by reference of the four housing elements complies with the guidelines and requirements of a Housing Element" comes directly from the March JPA General Plan Section 4, Housing Element, which has been in place since its adoption in 1999, and cites communications with the State of California Department of Housing and Community Development in connection with the preparation of the 1999 March JPA General Plan. Thus, no letter from California's Housing and

Community Development Department is needed in order to validate the statement and no revisions to the Draft EIR are required in response to this comment.

0-3.17 This comment questions the Draft EIR's energy modeling for the Project. Please see Response 0-3.8, above, regarding modeling for Title 24. The energy modeling for the Project is not erroneous. Section 4.5, Energy, of the Draft EIR and the Project Energy Analysis (Appendix F) analyzed the Project's energy impacts and are consistent with CEQA Guidelines Section 15126.4 and Appendix F of the CEQA Guidelines. March JPA used the correct threshold from Appendix G and CEQA Guidelines Section 15126.4: "Would the Project result in wasteful, inefficient, or unnecessary consumption of energy resources, during Project construction or operation?" The Draft EIR includes details on energy usage from construction and operations, including: building energy (electricity and natural gas) use, water consumption, and transportation-related fuel consumption. The methodology is based on Guidelines Appendix F and is entirely consistent with CEQA and the CEQA Guidelines. Energy usage was quantified for purposes of analysis in the EIR using CalEEMod, which provides a high-level estimate of energy usage based on land use types, building size, and vehicle trips. As explained in Section 4.5, Energy, the Project would not consume an unusual or wasteful amount of energy or materials and would comply with California Building Energy Efficiency Standards (24 CCR Part 6). In addition, the Project would implement all feasible mitigation measures which would serve to reduce the Project's use of nonrecoverable materials and energy. As also explained in the Draft EIR, the utilities that service the Project and the design of the proposed Project are all subject to regulations that are working to reduce the amount of nonrenewable resources from development projects, and sustainability measures would reduce the use of materials and energy during construction and operation of the Project and will become more efficient and use less nonrenewable resources over time.

As explained in Section 5.4, Significant Irreversible Changes, of the EIR, pursuant to Section 15126.2(d) of the CEQA Guidelines, a significant irreversible change would occur if a project would involve a large commitment of nonrenewable resources; the primary and secondary impacts of the project would generally commit future generations of people to similar uses; the project involves uses in which irreversible damage could result from any potential environmental incidents associated with the project; and/or the proposed consumption of resources is not justified (e.g., the project results in wasteful use of energy). As the Draft EIR further explains, determining whether the proposed Project may result in significant irreversible effects requires a determination of whether key resources would be degraded or destroyed in such a way that there would be little possibility of restoring them.

This comment further questions the Draft EIR's analysis of the Project's operational energy consumption with regard to irreversible changes. In response to this comment, Section 5.4 of the Draft EIR is revised to remove potentially contradictory statements and acknowledge the additional mitigation measures being added to the Project. This revision does not change the analysis or significance conclusions in the Draft EIR.

As explained in Recirculated Section 4.2, Air Quality, the air quality project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation that will further reduce energy usage and will minimize the irreversible impacts to non-renewable resources.

0-3.18 This comment states that the Draft EIR does not discuss the Project's significant and unavoidable air quality impacts or the Project's required changes in land use designations. Recirculated Section 4.2, Air Quality, discloses that the Project would result in significant and unavoidable impacts for regional

operational emissions, even with mitigation. As discussed in Response O-3.17, above, the focus of the analysis of potential irreversible changes is primarily on the use of nonrenewable resources and energy sources, rather than emissions and land use designation changes. The Draft EIR appropriately analyzes and discloses that the Project would result in significant and unavoidable air quality impacts for regional operational emissions, even with the implementation of mitigation. Additionally, Recirculated Section 4.2, Air Quality, concludes that because the Project exceeds regional operational emission significance thresholds and would require a zoning change for portions of the Project site, the proposed Project has the potential to conflict with the Air Quality Management Plan, which is determined to be a significant and unavoidable impact. The Project's potential impacts in relation to climate change are addressed in Section 4.7, Greenhouse Gas Emissions.

O-3.19 This comment questions the EIR's analysis of growth-inducing impacts. As explained in Section 5.5, Growth-Inducing Impacts, of the EIR, Section 15126.2(e) of the CEQA Guidelines requires a discussion of how the potential growth-inducing impacts of a proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. The growth-inducing impacts analysis in the Draft EIR refers to the detailed discussion in Recirculated Chapter 3, Project Description, which includes the Project's proposed land use designation changes in subsection 3.5.6, Requested Approvals and Entitlements. As explained in Recirculated Chapter 3, Project Description, the Project's requested entitlements include a General Plan Amendment, the proposed Specific Plan, and Zoning Designation. The Project site, including both the Specific Plan Area and Conservation Easement, has not previously been given a zoning designation; therefore, the Project proposes zoning consistent with the requested Specific Plan designations. As explained in Recirculated Chapter 3, Project Description, the Project proposes to amend the Project site's General Plan land use designations to: increase the area designated Parks, Recreation, and Open Space from approximately 122 gross acres to 523.43 gross acres; eliminate approximately 622.5 gross acres of Business Park designated property; eliminate approximately 63 gross acres of Industrial designated property; adopt the proposed Specific Plan on approximately 369.60 gross acres; and change the Business Park designation of approximately 2.87 acres to Public Facility to accommodate an existing water storage tank operated by EMWD.

The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The analysis in the Draft EIR relies upon buildout conditions and assumes full buildout of the Specific Plan Area pursuant to the proposed General Plan Amendment and Zoning Designation described in Recirculated Chapter 3, Project Description.

O-3.20 This comment appears to be related to Section 5.5, Growth-Inducing Impacts, of the Draft EIR. As discussed in Response O-3.15, above, the analysis associated with cumulative growth in Riverside County is accounted for in the Draft EIR. A comprehensive list of cumulative projects is included within Table 4-2 of the Draft EIR. Including a list of all job-generating projects in Riverside County going back to 2016 as the comment requests is not necessary nor required to evaluate whether the proposed Project in combination with other planned, approved, or reasonably foreseeable projects would exceed the regional planning estimates utilized by SCAG. The jobs forecasts disclosed in Table 4.12-1 of the

Draft EIR are from Table 13 of SCAG's "Current Context: Demographics and Growth Forecast" technical report adopted on September 3, 2020.⁹ The 280,000 jobs cited by the comment represents SCAG's projected increase in jobs in Riverside County between 2020 and 2045; during the same timeframe, SCAG projects the population in Riverside County to increase by 759,000. SCAG's technical report (Table 8) also shows that Riverside County's working age resident population (16-64) to employment ratio for 2045 is forecasted to be 1.72, the highest in the SCAG region and suggesting net out-commuting. According to SCAG projections, County of Riverside population increases will substantially outstrip employment generation. As explained in Section 5.5, Growth-Inducing Impacts, of the EIR, the planned growth of the Project and its land use intensity have been factored into the underlying growth projections of the SCAG 2020-RTP/SCS. Consistent with SCAG growth projections for the region, as employment opportunities grow within the service area so does population. The commitment of resources is addressed in Section 5.4, Significant Irreversible Changes, of the Draft EIR.

0-3.21 This comment questions the Draft EIR's selection of alternatives. As explained in Chapter 6, Alternatives, pursuant to Section 15126.6 of the CEQA Guidelines, an EIR is required to describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. As set forth in the CEQA Guidelines, an EIR need not consider every conceivable alternative to a project. An EIR must consider a reasonable range of potentially feasible alternatives that will foster informed decision-making and public participation, and the alternatives discussion is required even if the alternatives would impede to some degree the attainment of the project objectives. A specific number of alternatives is not required as long as the alternatives evaluated represent a reasonable range. As described in Chapter 6, Alternatives, the intent of the alternatives analysis is to reduce the significant impacts of a project. Implementation of the proposed Project would not result in significant and unavoidable impacts related to VMT, as explained in Section 4.15, Transportation. Therefore, evaluation of alternatives to reduce VMT impacts is not required. Alternatives analyzed in Chapter 6, Alternatives, included alternatives that would reduce potential GHG and air quality impacts as compared to the proposed Project. Additionally, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

0-3.22 This comment refers to the commenter's prior comments. Responses to the commenter's specific comments on the Draft EIR are provided and responded to above. As explained in Responses 0-3.1 through 0-3.21 above, the Draft EIR adequately analyzed the proposed Project and evaluated and disclosed the potential environmental impacts associated with the proposed Project, consistent with the requirements of CEQA. The Draft EIR is comprehensive and none of the circumstances requiring recirculation of a draft EIR set forth in CEQA Guidelines Section 15088.5 have been met. Specifically, based on the comments and responses within this Final EIR, no new significant impacts or substantial increases in already identified significant impacts have been identified. As noted in Response 0-3.1, above, the commenter has been added to the interested parties list as requested.

Responses to Attachment, SWAPE Analysis (March 3, 2022)

- 0-3.23** This comment describes the Project but incorrectly identifies its location. The Project is located within the March JPA Planning Area. The comment generally states the EIR's analysis of air quality and health risk impacts are inadequate. Specific comments are addressed below.
- 0-3.24** This comment summarizes the Project's regional operational emissions, and quotes the Draft EIR's conclusion that Project operational emissions would exceed SCAQMD regional significance thresholds for emissions of VOC, NO_x, CO, and PM₁₀. As discussed under Thresholds AQ-1 and AQ-2 of the Final EIR, the Specific Plan would exceed regional thresholds of significance established by the SCAQMD for VOC, NO_x, CO, PM₁₀, and PM_{2.5} emissions; thus, the Specific Plan's unmitigated impacts would be potentially significant. The Project will implement operational MM-AQ-5 through MM-AQ-27, which would reduce Project operational-source emissions. After accounting for MM-AQ-8, MM-AQ-14, MM-AQ-18 and MM-AQ-24, Project operational emissions would still exceed SCAQMD thresholds for emissions of VOC, NO_x, CO, PM₁₀, and PM_{2.5}. The remaining operational mitigation measures would reduce Project operational-source emissions, the resulting emission reductions are not quantifiable in CalEEMod, and as such, reductions were not quantified and are therefore not reflected in the analysis.
- 0-3.25** Contrary to the comment's assertion, CEQA does not require that impacts are reduced to a less than significant impact. CEQA Guidelines §15126.2(c) (requiring an EIR to "Describe any significant impacts, including those which can be mitigated but not reduced to a level of insignificance.") The comment generally asserts additional feasible mitigation measures should be incorporated. As described in the Final EIR, the air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Specific comments on mitigation measures provided elsewhere in the comment letter as referenced in the comment are provided and responded to below. Finally, the comment references CEQA Guidelines Section 15096(g)(2), but this section applies to responsible agencies under CEQA. March JPA is the lead agency for this Project. The EIR complies with CEQA and includes all feasible mitigation measures to reduce the Project's significant and unavoidable air quality impacts.
- 0-3.26** This comment questions the use of air quality project design features. In response to comments, as part of the Recirculated Draft EIR, PDF-AQ-1 became MM-AQ-1, PDF-AQ-2 became MM-AQ-2, and PDF-AQ-3 became MM-AQ-5. The analysis in the Project AQIA and Project HRA was updated to evaluate the Project with and without these mitigation measures. Regarding PDF-AQ-1 (previously PDF-AQ-4), although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP, consistent with good practice identified by the Association of Environmental Professionals referenced in the comment. March JPA will monitor compliance through the MMRP. (Appendix C-4)
- 0-3.27** This comment recommends the EIR analysis evaluate emissions with and without PDF-AQ-1 and PDF-AQ-2. As discussed in Response 0-3.26, above, these project design features were converted to mitigation measures and the Project HRA analyzed Project construction and operational DPM emissions for both without mitigation and with mitigation scenarios. As shown in Table ES-3 of the Project HRA, the unmitigated MEIR (R11) the maximum incremental cancer risk attributable to Project construction and operational-source DPM emissions is estimated at 4.05 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤0.01, which would not exceed the applicable significance threshold of 1.0. At

the mitigated MEIR (R12), the maximum incremental cancer risk attributable to Project construction and operational-source DPM emissions is estimated at 1.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

- 0-3.28** Contrary to the comment's statement that the HRA utilizes incorrect fraction of time at home ("FAH") values for the -0.25 to 0, 0 to 2, and 2 to 16 age bins, the analysis utilized fraction of time at home values consistent with OEHHA's Risk Assessment Guidelines.

Therefore, the HRA appropriately accounted for exposure to children. The analysis considers a conservative scenario in which a child is born at the start of Project construction and exposed to construction-related emissions and is then exposed to Project operational emissions for the remainder of the 30-year exposure duration. The analysis also analyzes a worst-case operational scenario in which a child is exposed to Project operational emissions from the third trimester through the first 30 years of life. These scenarios conservatively assume that emissions will remain static throughout the life of the Project and do not account for future emission reductions that would occur as more stringent emission standards and regulations are implemented.

It should be noted that SCAQMD's guidelines cited by the commenter apply specifically to HRAs performed under Rules 1401, 1401.1, and 212, which are applicable to permitting of stationary sources. The Project is not a stationary source and the guidelines cited in the comment are inapplicable here.

- 0-3.29** The comment states that the HRA may have failed to incorporate ASFs in the risk calculations. It should be noted that the formula presented on pages 23-24 of the analysis erroneously omitted ASFs and has been corrected in the Project HRA of the Final EIR. ASFs were correctly accounted for in the actual risk calculations, as shown in Appendix 2.4 of the Project HRA. As such, the resulting risk remains unchanged.

- 0-3.30** This comment recommends consideration of the mitigation measures suggested in the California Attorney General's guidance entitled "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act" (September 2022). The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Topical Response 2 – Air Quality, in the Final EIR, In response, please see Topical Response 2, Air Quality, for a discussion. for a detailed discussion of the Project's consistency with these mitigation measures. The comment further requests the feasibility of incorporating on-site renewable energy production. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.

The EIR demonstrates a commitment to the implementation of these measures prior to Project approval, to ensure that the Project's significant emissions are reduced to the maximum extent possible. Moreover, although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

0-3.31 This comment is conclusory in nature and does not raise any issues, questions or concerns about the analysis in the EIR.

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As a concerned resident of this great state, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. As a former trainer for a state wide environmental consulting company, I am well aware of the importance of a thorough review of environmental impacts in order to comply with CEQA. In addition, I write as a resident of Sacramento County who is currently part of a community group attempting to dissuade our elected officials from approving distribution warehouses close to homes, parks and an elementary school. I also have studied the EIR completed for our area carefully.

0-4.1

The West Campus Upper Plateau (the "Project") would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

As someone who devotes a good deal of my time working with and for the community, I value giving residents a voice in decisions that directly affect them. In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. If it does not, please explain your rationale for ignoring these policies from your General Plan for this project.

0-4.2

As with many projects of this magnitude it conflicts with the interests of adjoining jurisdictions, specifically the adjacent residents. I have concerns that the development as proposed will do irreparable harm to surrounding communities in the following ways:

- Air quality impacts: The area described already has the worst air quality of any region of the United States. You have identified in your Draft Environmental Impact Report that there will be "significant and unavoidable" impacts to an area of the City and County that already bears an undue burden of pollution. Within a 5 km range of the proposed building site, there is already 45 million square feet of warehouses, generating over 30,000 truck trips, and spewing over 40 lbs of Diesel Particulate matter into the air daily. This does not include the other proposed warehouses in the immediate vicinity, including the one at the Sycamore Canyon site, that have already been approved to be built. Given the effects that Diesel PM accounts for 70% of cancers attributable to

0-4.3

toxic air contaminants, many local residents have expressed concerns for the health affects that this may have on them and their families.

↑ O-4.3
| Cont.

- Traffic: As it reads today, your Draft Environmental Impact Report has several deficiencies in its traffic analysis. Local communities are already negatively impacted by mega-warehouse complexes and truck traffic, and it is important that your DEIR be accurate in how it will add to the congestion on local streets and freeways.

1) Your DEIR does not account for the 215/60 corridor, even though the freeway is within a mile of the site; and ostensibly, this is the route the trucks will use. The 215 is already overburdened with truck traffic, and our local infrastructure is paying the cost to our roads. Please consult with CalTrans and include the 215/60 corridor in your traffic analysis for the final EIR to reflect the reality of how our local area will be impacted.

0-4.4

2) Your DEIR does not account for the reality that truck drivers do not follow agreed-upon routes. Anyone who drives Alessandro or Van Buren have seen six-axle trucks lumbering down the road and tearing up roads in spite of the signs prohibiting them. City police are understaffed for the task of ticketing and enforcing the approved routes daily. What is the plan to enforce and maintain agreed-upon routs? Who will be responsible? Will they be given resources to enforce the rules? At the very least, the project applicant should include mitigation measures that require occupants of the warehouses to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police.

- Job creation claims: I understand that the Inland Empire has one of the lowest unemployment rates in the state and the nation. However, I have concerns about an overinvestment in industrial development for a number of reasons.

According to the Southern California Association of Governments Economic Report (SCAG) for December 2022:

"In 2001, GDP per capita in Riverside County and San Bernardino County were 64 percent and 69 percent of U.S. per capita GDP, respectively. When compared to the rest of California, the ratios are worse: 52 percent and 56 percent....Moreover, by 2022, **Riverside County's position had deteriorated to a per capita GDP of only 59 percent of the U.S. level and 40 percent of California.... These numbers are alarming, especially given the success of the Logistics Industry.** They imply that the impressive job growth in the Inland Empire since 2001 resulted in numerous jobs, but they tend to be relatively lower paying jobs compared to other parts of the state and nation. This explains, in part, why such a large number of workers prefer to commute into the coastal areas, despite the heavy cost involved in terms of time lost on the road. It also explains why the **Inland Empire's per capita GDP has sunk to a rank of 340 out of 386 MSAs**, despite being the twelfth largest by population count." (emphasis added)

0-4.5

In other words, in spite of a low unemployment rate, your economic outlook is worse than it was prior to the explosion of the logistics industry. In that same SCAG report, they discuss how the logistics industry "will likely go through a transformation as advances in automation and artificial intelligence displace workers." It warns: "There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that **there will be less industrial space**

available in the future for industries which are able to add more value to the economy per square foot." (emphasis added)

Furthermore, the vast majority of companies purchasing warehouses are not from the local area and are mostly from Orange County or outside California. 80% of the warehouses in Riverside County are owned by businesses with mailing addresses outside the region. For instance, more warehouse square footage in the Inland Empire is owned by businesses in Dallas, TX and Denver, CO than Riverside. So, we pay the costs of goods moving through Riverside County in terms of air quality and traffic, but the wealth from this industry is not benefitting our local economy.

We need to think long and hard about land use if our goal is long-term economic growth. Considering the significant and unavoidable impacts and the minimal economic benefit created by the proposed development, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. Please encourage the developer to consider non-industrial, alternative uses of the land for the sake of those living adjacent to the site as well as the economic future of this region.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Kate Carroll, Co-chair of Stone Creek Residents for Smart Growth

Letter O-4

Stone Creek Residents for Smart Growth

March 1, 2023

O-4.1 This comment is introductory in nature and does not raise comments on the adequacy of the environmental analysis in the EIR. This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

O-4.2 This comment questions the Draft EIR's consistency determination with regard to March JPA General Plan Policies 2.3 and 2.4 given the Project's significant and unavoidable noise and air quality impacts. Please note that CEQA Guidelines Section 15125(d) requires EIRs to discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. However, an inconsistency does not necessarily mean a potentially significant conflict under CEQA. Threshold LU-1 asks: Would the Project cause a significant environmental impact due to a conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? So, unless (1) the applicable plan, policy or regulation was "adopted for the purpose of avoiding or mitigating an environmental effect" and (2) the conflict would cause a significant environmental impact, any inconsistency would not be a potentially significant conflict under CEQA. Inconsistency with policies that do not avoid or mitigate an environmental effect would not be considered potentially significant under CEQA. General Plan Policies 2.3 (Support land uses that provide a balanced land use pattern of the Planning Area, and discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions) and 2.4 (Protect the interests of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses) do not avoid or mitigate an environmental effect so any inconsistency would not be considered potentially significant under CEQA. Further, as discussed in the Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside. Topical Response 4 – Project Consistency includes a discussion of the Project's consistency with the City of Riverside Good Neighbor Guidelines. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses.

The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

With respect to noise impacts, as disclosed in Section 4.11, Noise, the Project would not generate substantial temporary or permanent increases in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Segment 13, which passes through industrial development and is a non-sensitive receiving land use, meaning that there are no nearby sensitive receptors, including residential uses. As such, this impact, while significant and unavoidable, would not impact any residential or other sensitive uses in the vicinity of the Project. All Project noise impacts to residential uses would be less than significant.

With regard to air quality impacts, the air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for the revised air quality mitigation measures. Please see Topical Response 2 – Air Quality for a discussion of the Project’s consistency with the following:

- Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act – Office of the California Attorney General, September 2022
- SCAQMD 2022 Air Quality Management Plan
- U.S. EPA – Mobile Source Pollution: Environmental Justice and Transportation
- World Logistics Center Settlement Agreement Air Quality Measures
- Centerpoint Properties Air Quality Conditions of Approval
- City of Fontana Ordinance 1891 Air Quality Measures

0-4.3

This comment states that the region has the worst air quality of any region of the United States, and that there are a large number of warehouses located within a 5 km range of the Project site. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR) and shown on Exhibit 2-A of the Revised Project Air Quality Impact Analysis (Appendix C-1), despite a significant increase in vehicle miles traveled, gross state product, and population, the cancer risk associated with diesel particulate matter emissions has decreased since 1990. In addition, SCAQMD has conducted an in-depth periodic analysis of TACs and their resulting health risks throughout the air basin. This study, the *Multiple Air Toxics Exposure Study in the South Coast Air Basin*, shows that cancer risk has decreased by approximately 83% between MATES II (1998) and MATES V (2018) at the nearest monitored location to the Project site. As the region and state continue to implement increasingly stringent emission controls and the electrification of truck fleets continues, it is anticipated that this trend would continue.

This comment questions why the Sycamore Canyon site and other proposed warehouses in the immediate vicinity of the Project site were not included in the analysis. Table 4-2 of the Draft EIR lists the cumulative projects included in the environmental analysis. The Sycamore Hills Distribution Center, north of the Project site and adjacent to Sycamore Canyon, is included.

The comment further raises concerns regarding health impacts due to DPM. Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR) located 32 feet from construction activities, the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location,

non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 , which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

- O-4.4** This comment states that the Draft EIR has deficiencies in the traffic analysis because the Draft EIR does not account for the 215/60 corridor and because truck drivers do not follow agreed upon routes. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), March JPA has adopted its own guidelines for traffic analysis: the March JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, to comply with CEQA, Caltrans does not utilize peak hour intersection operations analysis and instead utilizes VMT in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Guidelines were adopted before the Caltrans VMT Guide and therefore the reference is now-superseded Caltrans guidance. The Project VMT Analysis (Appendix N-1) was prepared in compliance with the Caltrans VMT Guide and meets the current transportation analysis requirement for Caltrans. Caltrans was notified about the Project through the release of the Notice of Preparation on November 18, 2021. Caltrans also received the Notice of Availability for the Draft EIR when the document was circulated for public review beginning on January 9, 2023. No comments were provided by Caltrans during the scoping period or public review for the Project.

Pursuant to Caltrans safety requirements, the Project Traffic Analysis (Appendix N-2) included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. The Project Traffic Analysis (Appendix N-2) performed a queuing analysis for these I-215 Freeway off-ramps for all scenarios (Existing [2021], Existing plus Project, Existing plus Ambient Growth plus Project, Opening Year [2028] Cumulative Without Project, Opening Year [2028] With Project, Horizon Year [2045] Without Project, and Horizon Year [2045] With Project). Based on the results of this queuing analysis, there are no study area off-ramps that are anticipated to experience queuing issues under any scenario. Caltrans is one of the state reviewing agencies for the Project, and had the opportunity to comment on the transportation analysis. <https://ceqanet.opr.ca.gov/2021110304>. Caltrans did not submit any comments on this Project.

Further, to improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission (RCTC), has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging with the SR-60 Freeway. Another regional facility, Mid-County Parkway (MCP), is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway.

The comment also raises concerns about enforcement and maintenance. In response to truck route enforcement concerns, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. As Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As has been the case with other areas in the Meridian Business Park, as the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they are also separate conditions of approval and also included in the MMRP. March JPA will monitor compliance through the MMRP. Regarding maintenance concerns, commercial trucks

pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹⁰

0-4.5 This comment questions the number of jobs and unemployment rates in the Inland Empire region and questions the economic viability of additional logistics industry development. In response to questions about the employment numbers associated with the proposed Project, please see Topical Response 5-- Jobs. The comment also raises concerns regarding automation. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The comment raises questions about outside companies purchasing warehouse space in Riverside County, which is not an environmental issue under CEQA.

0-4.6 This comment expresses general opposition to the proposed Project. The comment further requests a non-industrial alternative. In response to this comment, please see Topical Response 8-- Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

Subject: ??? West Campus Upper Plateau (WCUP) warehouse Draft EIR + "World Logistics Center to break ground in Moreno Valley this year "- Press Enterprise

<https://www.pressenterprise.com/2023/03/08/world-logistics-center-to-break-ground-in-moreno-valley-this-year/>
World Logistic Center will build 26 warehouse with 6 million sq ft of warehousing each year until 2030 (March 8, 2023 P-E article)

Good morning Mr Fairbanks,

March 9, 2023

Re: Sierra Club's additional comments on the West Campus Upper Plateau (WCUP) warehouse Draft EIR

When you try to justify the West Campus Upper Plateau (WCUP) warehouse project with "Overriding Considerations" you must not only include the four Moreno Valley Warehouse projects mentioned in the previous Sierra Club email, but also the following three warehouses that Moreno Valley is currently processing through planning: the Moreno Valley Trade Center, Heacock Commerce Center and the Edgemont Commerce Center. All of these Moreno Valley warehouses will provide many jobs and economic benefits to the immediate region in addition to the all their negative cumulative impacts.

0-5.1

The Press-Enterprise article found below reads that Moreno Valley's 40.2 million sq ft World Logistic Center (WLC) will break ground this year. The WLC will add 26 warehouses which they reports means adding 6 million sq ft of warehousing each year through 2030. Based on all the warehousing Moreno Valley has approved and processing the WCUP is not needed for local jobs. There is no economic justification for needing another warehouse like the WCUP when you factor in all the current and foreseeable warehouse building that will take place in the next seven years within all the cities as well as the county that are members of March JPA.

The fact that the WLC states they will be "carbon neutral" doesn't mean they will not be significantly polluting our non-attainment area with its almost 13,000 Daily Diesel Truck Trips as well as at least 50,000 Daily Trips from other vehicles impacting our already clogged freeways and local roads. It means they will probably need to buy credits elsewhere — probably in other countries.

0-5.2

The WCUP Final EIR must include all the Moreno Valley warehouses mentioned in both of Sierra Club's comment letters in all cumulative impacts as well as all other current and foreseeable projects from those agencies who are members of the March JPA or the document will be inadequate.

0-5.3

As mentioned in Sierra Club's previous comments on this project the Sierra Club strongly believes there are other very good uses for the land on which the WCUP is being proposed that doesn't impact the nearby residents and our region's non-attainment area.

Please keep me informed of all future documents, notices, meetings and notice of determination for this project.

Sincerely,

George Hague
Sierra Club
Moreno Valley Group

[World Logistics Center to break ground in Moreno Valley this year](#)

The 40.6-million-square-foot complex will be as big as 700 football fields

[Montserrat Solis](#) March 8, 2023 at 4:17 p.m.

0-5.4

An artist's rendering shows the planned World Logistics Center in eastern Moreno Valley. Now that lawsuits have been settled, the project is set to break ground later this year in eastern Moreno Valley. (Courtesy of Highland Fairview)

After more than a decade of debate and lawsuits that tried to stop it, a 40.6-million-square-foot warehouse project is set to break ground this year in Moreno Valley.

[First proposed in 2012](#) and [approved by the Moreno Valley City Council in 2015](#), the World Logistics Center — which would be one of the world's largest logistics centers — is scheduled to start construction at the end of 2023, said Eric Rose, spokesperson for the center's developer, Highland Fairview.

In the years since city approval, the developer has dealt with lawsuits, which have now all been settled to pave the way for construction of the center. Planned for the area between Redlands Boulevard and Gilman Springs Road, south of the 60 Freeway, the warehouse project will cover 10% of the city's land, roughly the size of 700 football fields.

The project has been controversial among residents and environmental and conservation groups, who alleged that the warehouse complex would bring traffic, air pollution and negatively affect local wildlife. Supporters said the center would bring much-needed jobs and stability to the city.

1 of 6

An artist’s rendering shows the World Logistics Center, which is set to break ground in Moreno Valley later this year. (Courtesy of Highland Fairview)

Highland Fairview, a Moreno Valley-based developer, has hired Santec, a design and engineering company, for the project. The firm will bring “future-ready” and sustainable practices to the center, a [Santec news release](#) states.

The warehouse project plans to be a carbon-neutral facility by adding solar power to its rooftops, reducing water usage by 70% and including 1,080 charging stations for freight and logistics vehicles, employees and visitors, the release states.

More than 33,000 construction and operations jobs will be created, the release states.

The center will have 27 buildings with the option of connecting them via a skybridge, according to the [World Logistics Center website](#).

Skechers already has committed to expanding in Moreno Valley with its second and third warehouses in the city at the logistics center. Its first building — [a 1.8 million square-foot center](#) — would be connected with a skybridge to the World Logistics Center, the center’s [website](#) states.

Though construction is set to begin in late 2023, the project will add 6 million square feet per year until it’s completed in 2030. Buildings will be leased throughout the construction phases, Rose said.

The community will benefit from about \$22 million in property and sales taxes going to schools and colleges annually, the release states. An estimated \$3 billion will be pumped into the economy, the release states.

It’s been a bumpy road for the project.

In 2018, Riverside County Superior Court Judge Sharon J. Waters [threw out a previous environmental impact report](#). It wasn’t until 2020 that the Moreno Valley City Council [approved the revised report](#).

In 2020, current Moreno Valley Mayor Ulises Cabrera was the only councilmember to vote no on the revised report.

Today, Cabrera is hopeful for the logistics center’s future.

“Overall, I’m glad that litigation was resolved, and both sides came to an agreement resulting in additional environmental mitigation measures for the project ...” Cabrera said.

A [slew of environmental and conservation groups](#) filed lawsuits over the council’s approval in 2015, including the California Clean Energy Committee, Center for Biological Diversity, the Sierra Club, the San Bernardino Valley Audubon Society and the Coalition for Clean Air.

O-5.4
Cont.

In 2021, multiple lawsuits were settled between Highland Fairview and environmental groups.

Earthjustice attorney Adrian Martinez, who represented a coalition of environmental groups that settled with Highland Fairview, said he hopes the settlement agreement is implemented.

Martinez and the coalition settled for [\\$47 million](#). The agreement required the developer to reduce the logistics center’s impact on air quality, local wildlife and residents, invest up to \$12.1 million in electric vehicles and electric vehicle charging and install rooftop solar panels.

“There is still a lot of work to do to implement the agreement,” Martinez said by phone. “I think we hope the settlement will provide some relief ... to provide healthy air in the region,” he said.

[Another settlement](#) required the developer to set aside 2,737 acres for wildlife in western Riverside County, including areas within the logistics center’s footprint. Though Susan Nash, attorney for the [Friends of the Northern San Jacinto Valley](#) said the Western Riverside County Regional Conservation Authority and the California Department of Fish and Wildlife rejected the land.

Nash said she was “blown away” after county and state agencies refused the land, which allowed the settlement agreement to expire in August 2022.

The conservation authority’s board had concerns, including the fact that some of the land was outside the logistics center’s footprint, a report to the board states.

Deputy Executive Director Aaron Hake, of the Riverside County Transportation Commission, which manages the conservation agency, said that because the commission was not part of the lawsuit, it was not bound to follow terms of the agreement.

Though the land wasn’t accepted, the lawsuit remains dead and will have no effect on coming construction plans

Letter O-5

Sierra Club
March 9, 2023

0-5.1 This comment references an email provided by the Sierra Club (included as Letter O-6 below), and states that additional warehouse projects should be considered in the cumulative impacts analysis. In response, please see Topical Response 7 – Cumulative Projects.

Additionally, this comment references an article about warehouse development, and specifically the World Logistics Center, in Moreno Valley. The comment further questions the need for the Project. Please see Topical Response 5 – Jobs, for details regarding job generation, population, and area unemployment. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR. No additional response is required.

0-5.2 This comment addresses the claim that the World Logistics Center would be carbon neutral. This comment is focused on the World Logistic Center project and not on the proposed Project. However, it should be noted that the air analysis included in Recirculated Section 4.2, Air Quality, took regional air emissions, both current and projected future conditions, into account in evaluating the Project's individual and cumulative contribution to air quality impacts. For additional discussion on the topic of air quality, as well as additional mitigation measures incorporated into the Project to address air quality impacts, please see Recirculated Section 4.2, Air Quality.

0-5.3 This comment states that the Draft EIR must consider cumulative projects. Please see Topical Response 7 – Cumulative Projects. This comment generally states that there are uses that could result in fewer impacts than those of the proposed Project. As discussed in Chapter 6, Alternatives, as well as within Topical Response 8 – Alternatives, the Draft EIR adequately considered alternatives to the proposed Project, including those that could achieve most of the basic Project Objectives and could have the potential to result in fewer environmental impacts.

0-5.4 This comment is an article attached to the Sierra Club comment letter and is not specific to the proposed Project.

Good morning again,

It is if your response is acknowledging you have received Sierra Club's comments on the WCUP's DEIR and were able to open the attachment.

O-6.1

Have a good day,

George Hague

George,

Thank you for contacting March JPA. The draft EIR and technical appendices are publicly available on the March JPA website at: https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fmarchjpa.com%2fmjpa-meridian-west-campus%2f&c=E.1.uz6Pp9Ucrl-gacRtg-hFKXmeBHkBrnOzj-2ieXlqQ4YxjnCH_AyUwqVWlF6Nz6h9ZCGRPRoQnJgE4pct9vRdXhIP7gDJXqMCRO_Yjzv4YWmdWanTLdVt0o.&typo=1

Additionally, hard copies of the Draft EIR and technical appendices are available during business hours at the offices of the March JPA at 14205 Meridian Parkway, Suite 140, Riverside, CA 92518.

Unfortunately, the file is too large to send by email through my server, so I request that you use one of the other two other methods to view the draft EIR. Comments are due Friday, March 10, 2023.

Please call me if you would like further assistance in reviewing the document.

Dan Fairbanks
March JPA Planning Director

Good afternoon Mr Fairbanks,

Please email me a copy of the Draft EIR for the West Campus Upper Plateau warehouse project and let me know when comments are due.

Are the documents also somewhere online?

Thank you,

George Hague

Sierra Club comments

SAN GORGONIO CHAPTER

Moreno Valley Group

Good morning Mr Faribanks

March 6, 2023

Re: Comments on West Campus Upper Plateau (WCUP) Draft Environmental Impact Report (DEIR)

The Sierra Club appreciates this opportunity to add a few comments to those of many others who do not believe the current West Campus Upper Plateau (WCUP) warehouse project proposal is a good fit in the current location. We live in a non-attainment area and have no control in what we breath as we go about our lives. The WCUP would degrade our air quality to such an extent that 5.3 of the DEIR considers it an "**unavoidable environmental effect**". This is unacceptable in its current proximity to families along with the path its diesel trucks will take. The DEIR reads as follows:

1. As the Specific Plan buildout would result in VOC, NOX, CO, and PM₁₀ emission exceedances, the Specific Plan would result in significant and unavoidable impacts and is therefore determined to be inconsistent with the second criterion. (4.2-26)

"As such, even with application of MM-AQ-2 through MM-AQ-15, Specific Plan operational-source emissions impacts would be significant and unavoidable." (4.2-28)

"Air pollution by nature is largely a cumulative impact. The nonattainment status of regional pollutants is a result of past and present development, and the SCAQMD develops and implements plans for future attainment of ambient air quality standards. Based on these considerations, project-level thresholds of significance for criteria pollutants are used by the SCAQMD to determine whether a project's individual emissions would have a cumulatively significant impact on air quality. The potential for the Project to result in a cumulatively considerable impact, specifically a cumulatively considerable new increase of any criteria pollutant for which the Project region is nonattainment under an applicable NAAQS and/or CAAQS, is addressed in Section 4.2.5, Impacts Analysis. As set forth therein, because the Project would exceed the project-level thresholds for regional VOC, NO_x, CO, and PM₁₀ emissions during operation, the Project's cumulative impacts with respect to such emissions would be considerable and significant." (4.2-39)

These different quotes from the DEIR show how this project will impact the nearby residents the most, but also many in the surrounding communities like Riverside/Moreno Valley — especially cumulative. **The DEIR shows that conservation areas do not add to our air quality pollution.**

Another "**unavoidable environmental effect**" according to 5.3 of the DEIR is Noise. This is also an area the public has little control over and will also suffer its impacts as they try to enjoy life. There are devices you can put on equipment to make the back-up warning devices only slightly above ambient noise level. There are applications you can put on interior walls around warehouses that help dampen the noise within. The Sierra Club did not see either of these or

0-6.2

0-6.3

other additional measures being taken to reduce physical and mental damage noise can cause to humans. The following is from the DEIR:

"There are no feasible mitigation measures available to reduce the Project's contribution to cumulatively significant traffic noise impacts. Therefore, cumulative traffic noise impacts would remain significant and unavoidable, as well as cumulatively considerable." (4.11-52)

It appears they considered rubberized asphalt, but are to not using it to reduce impacts to people — which is unacceptable.

Again the DEIR reads that the Conservation areas do not cause unacceptable noise levels.

The Sierra Club and the public needs to know how many acres and how many jobs was the original goal/mandate of the March Joint Powers Authority. The original documents which show these totals need to be made part of the Final EIR or it will be inadequate. The public needs to have proof that WCUP is needed and required to meet your responsibilities of developing a certain number of acres and providing a certain number of jobs.

A third "**unavoidable environmental effect**" according to 5.3 of the DEIR is Cultural Resources. The DEIR reads as follows:

"Because all significant cultural resources are unique and nonrenewable, all adverse effects or negative impacts contribute to a dwindling resource base. In the unlikely event that unanticipated archaeological resources are encountered during ground-disturbing activities, mitigation measures MM-CUL-1 through MM-CUL-8 would be implemented. However, given that the Project would result in significant and unavoidable impacts to archaeological resources, the Project's cumulative impacts related to archaeological resources would be cumulatively considerable." (4.4-40)

Again the DEIR reads Conservation of lands do not produce these unavoidable impacts to Cultural Resources.

The Sierra Club strongly believes making all of the lands available for Conservation/passive park is the preferred alternative — perhaps with some public uses like a fire and/or police station. It would eliminate the three "**unavoidable environmental effects**" listed at 5.3 of the DEIR. With all the existing warehouses/development on lands under the control of the March Joint Powers Authority it appears they have already met their original obligation for jobs and developed acreage. The Final EIR must prove this is not true and how much more is needed to meet their original obligations goals.

Moreno Valley's 40.6 million sq ft World Logistic Center (WLC) will begin construction in a few months. According to the article in the following link and under my name the WLC will create 33,000 jobs through construction and ongoing operations:

<https://csengineermag.com/highland-fairview-names-stantec-as-prime-consultant-on-us25-billion-net-zero-world-logistics-center/>

The number of jobs generated by the WLC undercuts the need for the jobs that might be produced by the WCUP. Moreno Valley has also approved three other warehouses which are not built. They include the Moreno Valley Business Park, Compass Danbe Centerpointe and the Moreno Valley Business Center. This Thursday, March 9th, they are poised to approve the Cottonwood & Edgemont warehouse for a fourth. All these soon to be built warehouses in addition to the WLC's 33,000 jobs undercuts the need for the WCUP to provide jobs as a main reason to approve another warehouse project with all its toxic/negative impacts.

0-6.3
Cont.

0-6.4

0-6.5

0-6.6

0-6.7

The WLC article also explains some of their measures to achieve Net Zero operations and significant water savings as well as other measures which should have already been incorporated into the WCUP. The Sierra Club expects to see them in the Final EIR for the WCUP.

0-6.8

The Sierra Club would appreciate being added to the public interest list regarding any subsequent environmental documents, public notices, public hearings, and notices of determination for this project. Please email that information to me and in addition mail information to the address under my name.

Highland Fairview names Stantec as prime consultant on US\$25 billion net zero World Logistics Center

0-6.10

The 4-square-mile site will house the largest net zero logistics development in North America

February 14, 2023

O-6.10
Cont.

Stantec, a global leader in sustainable design and engineering, has been selected as the prime consultant for private real estate developer Highland Fairview's World Logistics Center project in Moreno Valley, California. The estimated US\$25 billion investment will be constructed over seven years and will be the largest planned logistics and business park in North America, serving as a distribution center for destinations across North America. More than a freight hub, the net zero development will contain 40-plus million square feet of facilities over 2,600 acres, including walkable streets, cafés, restaurants, spaces for arts and culture, breweries, and public space.

Stantec's work will focus on future-ready and highly sustainable infrastructure. The work includes civil engineering, industrial buildings architecture, geomatics, water and wastewater design, landscape architecture, urban planning, smart mobility and AV consulting, funding consulting, as well as energy and innovation design.

"The World Logistics Center is a major commitment in the next generation of sustainability and logistics operations," said Iddo Benzeevi, president and CEO of Highland Fairview. "Our engineering partnership with Stantec will be important in our success, bringing all our combined engineering and design pieces together in a fully integrated operation to execute our vision and bring it to reality."

Supply chain solutions

The World Logistics Center is in the center of Southern California’s Golden Triangle, a region that encompasses Los Angeles, Orange, and San Diego Counties and the Inland Empire—the nation’s largest manufacturing and logistics hub with a direct connection to the busiest seaport and three of the busiest airports in the US. More than 40% of goods coming to the US pass through the Golden Triangle. Housing multiple national brands and logistics providers, the center will be capable of overnight delivery to the 11 western states and within-three-day goods delivery from port to facility to any destination in the continental United States.

The World Logistics Center will maximize supply chain efficiency by using SCADA systems to integrate logistics providers for coordination. This strategy ensures the maximum number of trucks depart full by carrying shipments from multiple providers, as needed. The end result will be increased shipping efficiency, better use of transportation resources, and reduction of carbon emissions.

Net zero and sustainability

The World Logistics Center is committed to and is planned to provide a carbon neutral facility, making it the largest sustainable logistics cluster in the US.

“Highland Fairview’s vision for a net zero and sustainable economic center has not yet been tackled on this scale in the US,” said [Brianna Daniels](#), principal-in-charge for Stantec. “We are proud to be a part of this inspirational project that will have such positive community outcomes in Moreno Valley and around North America.”

With 40-plus million square feet of rooftops, the center will have a vast capacity for solar power integration. Stantec will examine the use of battery storage and microgrids on site to increase energy resilience, with the expectation that the facility will not have to rely on the external power grid.

The center will also prioritize water conservation, a critical issue in California. Facility design is expected to result in a 70% reduction in water usage compared to the current general plan for the City of Moreno Valley. This will lead to a savings of 653 million gallons of water every year—enough water for 27,000 households. Drainage through the site will be treated before it is discharged, while paying careful attention to maintaining historic drainage patterns and protecting the downstream environment.

“The scale of this iconic project and its focus on sustainability creates a unique opportunity to advance the development of sustainable construction and

O-6.10
Cont.

operational practices in industrial buildings,” said [Dave Calder](#), global industrial sector leader for Stantec.

Mobility innovation

The World Logistics Center site will be future-ready for budding technologies, while tapping into the latest mobility solutions. That applies to freight and passenger travel to and from the site as well as within the site. The facility will be fully EV-ready, with 1,080 charging stations committed as part of the design. Chargers will be available for freight and logistics vehicles, employees, and visitors.

Autonomous vehicle (AV) technology is also being explored for the site through Stantec’s autonomous vehicle consulting arm, [Stantec GenerationAV®](#). Trucking is set to be one of the first industries to break through on AV technology, and the World Logistics Center will be ready to take a lead role in their integration. Highland Fairview is currently in discussion for the acquisition of zero-emission semi-trucks, and AV shuttles are being explored as a means of local travel within the development.

Community and economic impact

Stantec-led project visioning and innovative placemaking will offer restaurants, cafés, and recreation facilities to give the center the feel of a miniature city and a desirable new employment destination in Moreno Valley.

Over 33,000 jobs will be created through construction and ongoing operations, with an estimated US\$22 million in property and sales taxes generated annually for schools and community colleges. The overall economic benefit of the World Logistics Center is estimated at nearly US\$3 billion in economic benefit to the region.

Stantec’s project team will include 300 professionals in civil and electrical engineering, urban planning, and other disciplines dedicated to meeting the aggressive project schedule. A core team will be co-located with Highland Fairview on the project site, with additional resources supporting from across North America. [Michael Baker International](#) will design the needed interchange for access to the site, [ENGEO Engineering](#) will provide geotechnical engineering, and [Dudek](#) will provide environmental permitting.

Project design is currently underway, with construction slated to start in 2023. The project will add six million square feet per year until projected completion in 2030.

Letter O-6

Sierra Club
March 9, 2023

- O-6.1** This comment is the transmittal email for the comment letter. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR.
- O-6.2** This comment raises concern over the placement of the Project within a non-attainment area, in particular given its significant and unavoidable air quality impacts. Please see Recirculated Section 4.2, Air Quality, for additional discussion regarding cumulative air quality impacts and additional mitigation measures added to the Project.
- O-6.3** This comment raises concerns regarding noise impacts. Based on the findings of the Project Noise Analysis (Appendix M-1), the EIR determined the Project would result in less than significant construction noise impacts. As detailed further in Section 4.11, Noise, the impact analysis is based on quantifiable thresholds and relies on existing regulations and project design features to reduce impacts. The Project would have less than significant impacts due to construction noise and no mitigation is required. However, the Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling activities. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Mitigation is required when there is a potentially significant environmental impact. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project's traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant. Section 4.11, Noise, of the Draft EIR evaluated the mitigation potential of rubberized asphalt but determined such a measure would not lower off-site traffic noise levels below the level of significance for Roadway Segment #13, so the Project's noise impacts for Roadway Segment #13 are significant and unavoidable.
- O-6.4** This comment requests that the EIR include the number of acres and jobs that were included within the original goal/mandate of March JPA. The March JPA General Plan describes the March JPA Planning Area as approximately 6,500 acres, nearly two-thirds of which are undeveloped or under-utilized. Please see Topical Response 5 – Jobs, for details regarding the Project's job generation.
- O-6.5** This comment raises concerns regarding significant and unavoidable impacts associated with archaeological resources, as well as cumulatively considerable impacts associated with cultural resources, as stated in Section 4.4, Cultural Resources. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), the Phase II testing and evaluation program has been completed and was done in consultation with both the Pechanga and Soboba Bands. Consultation between representatives from March JPA, the Soboba Band of Luiseño Indians, and the Pechanga Band of Indians resulted in an agreement regarding the scope and methods for the Archaeological Test Plan (ATP), which were approved by March JPA in March 2023. Archaeological testing in compliance with the ATP occurred between March 20, 2023 and March 31, 2023. As detailed in the Project Phase II Cultural Resources Assessment (Appendix E-1), the archaeological testing and evaluation within the Area of Potential Effect (APE) included sites CA-RIV-4067, CA-RIV-5420, Temp-2, Temp-3, and Temp-9

to Temp-15. While Site CA-RIV-5420 contains features both within and outside of the APE, testing at this location primarily focused on those within the APE. Due to their proximity to the APE, the areas of sites CA-RIV-5811, CA-RIV-5812, and CA-RIV-5819 containing milling features were marked and not tested to ensure all milling features would not be impacted by the Project. Testing at these sites was instead conducted within adjacent areas, primarily within the APE, to confirm that the site boundaries do not extend into the APE. At the request of the consulting tribes, seven additional exploratory shovel test pits (STPs) were excavated within the APE at locations of their choosing. In total, 75 STPs were excavated, and no archaeological material was identified.

No testing occurred at CA-RIV-5421 since the site was previously tested and evaluated as not eligible for the National Register of Historic Places (NRHP) by McDonald and Giacomini in 1996. Testing was also not conducted at CA-RIV-4068 since the site is clearly outside of the APE; however, this has been included in the study at the request of March JPA and the consulting tribes. (Appendix E-3)

Based upon the records search, surveys, and testing program, sites CA-RIV-4067, CA-RIV-5420, CA-RIV-5421, Temp-2, Temp-3, and Temp-9 to Temp-15 are not eligible for the California Register of Historical Resources (CRHR) or the NRHP. Sites CA-RIV-4068, CA-RIV-5811, CA-RIV-5812, and CA-RIV-5819 were not evaluated for significance as they were found to have no elements within the APE. (Appendix E-3)

The Project Phase II Cultural Resources Assessment (Appendix E-1) presents revised conditions, which were formulated based upon input by the Pechanga Band and consultation between the tribes, March JPA, and the Applicant. These conditions will be incorporated into the MMRP. These conditions primarily consist of efforts to either preserve in place or relocate (move) bedrock milling features, monitoring of ground-disturbing activities by an archaeologist and Native American observer, and controlled grading within the vicinity of any recorded site to ensure the timely and proper handling of any inadvertent finds. (Appendix E-3) The revised conditions are detailed in Section 4.4, Cultural Resources, of the Final EIR. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

0-6.6 This comment requests consideration of an alternative making the land available for conservation and passive park uses, as well as public uses including fire and police stations. Please see Topical Response 8 – Alternatives for a discussion of a park alternative. The comment further requests proof of the need for jobs. Economic proof for the need for jobs is outside the scope of CEQA; however, see Topical Response 5 – Jobs, for additional information about jobs, population, and unemployment. As discussed in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, the Project will construct the Meridian Fire Station as a Community Benefit.

0-6.7 This comment identifies additional warehousing projects in Moreno Valley. Please see Topical Response 7 – Cumulative Projects for a discussion of the development of the cumulative projects list. The comment asserts that the development of these projects would undercut the need for the jobs that the Project would provide. See Topical Response 5 – Jobs, for a discussion about the jobs to be provided under the Project.

0-6.8 The comment also requests that the Project incorporate measures to reduce greenhouse gas emissions and water usage, as well as other environmental measures similar to those proposed for the World Logistics Center project (WLC). Please see Recirculated Section 4.2, Air Quality, and Topical Response

2 – Air Quality, for a discussion about additional mitigation measures, that will be incorporated into the proposed Project to address air quality and GHG impacts and a discussion regarding the Project consistency with the WLC air quality measures.

0-6.9 This comment requests that the Sierra Club be added to the public interest list and receive any further public documentation associated with the Project. The Sierra Club has been added to this list.

0-6.10 This comment is an attached article entitled “Highland Fairview names Stantec as prime consultant on US\$25 billion net zero World Logistics Center.” This comment does not raise any specific issues or questions regarding the adequacy of the environmental analysis included in the Draft EIR.

O-7.1

March 10, 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

On behalf of the Robert Redford Conservancy for Southern California Sustainability at Pitzer College, we respectfully urge you not to approve the West Campus Upper Plateau Project DEIR project. This project could transfer more than 800 acres of open space to a private developer without assurances that historic and cultural resources will be protected or made accessible. The resources on site at March JPA are irreplaceable. The grading, construction, paving, roads and other human created disturbances generated by this warehouse development will have devastating consequences on the area’s ecosystem and will severely impact its cultural integrity, as well as creating negative health, traffic, and viewshed impacts for surrounding communities. Most alarmingly, this project’s approval threatens to create significant rifts within the surrounding community—social divisions and potential flight from surrounding neighborhoods in addition to, and as a result of, environmental harms and the destruction of cultural heritage.

0-7.2

The West Campus Upper Plateau Project will create significant adverse impacts on multiple stakeholders, and on the historical and cultural sites that were identified during the archeological survey. A transfer of the nation’s resources that include military history and tribal resources to a single private stakeholder and industrial use sets a dangerous precedent—especially during a time when climate change is looming, and the preservation of open lands is paramount for natural carbon sequestration and the maintenance of bioproductive lands and biodiversity. We urge the Commission to reject this proposal and to consider the alternative plans presented by the community.

0-7.3

Key Concerns:

According to DEIR p 4.4-15 “based upon the records search and literature results, there is a high potential to discover both prehistoric and historic resources within the APE beyond the already recorded sites.” We agree with this assertion, and would like to know how the conflict between

0-7.4

likely discovery of prehistoric and historic resources and the use of blasting at the site will be resolved.

↑ O-7.4
|
| Cont.

We urge you to follow the recommendation in Appendix E that an archaeological significance evaluation of the sites be completed to evaluate if the resources are eligible for listing on the California Register of Historical Resources (CRHR) and NRHP. We find the conclusion that the significance of cultural resources and tribal archaeological resources are ineligible for listing to merit further investigation. In fact, it is feasible not only to consider individual instances of buildings as cultural resources, but to consider such resources collectively, as well as to consider this site’s unique confluence of prehistory and history, between tribal and military history as a whole—cumulatively as opposed to broken into categories. We revisit this notion below.

|
| O-7.5
|

We request access to the documents related to AB 52 consultation, including the draft Testing Plan under review, which are reported to be on file with March JPA. If such materials cannot be made public due to tribal sensitivity, we request that the DEIR approval process be halted until the draft Testing Plan and tribal consultation is complete.

|
| O-7.6
|

Some places in the document indicate that tribal consultation is ongoing, and that tribal representatives will be present for the staking of the site and any associated archaeology. Other places in the DEIR indicate that tribal consultation has been halted. We found this paragraph particularly concerning: "At the direction of March JPA, Brian F. Smith and Associates, Inc. contacted the Pechanga Band of Luiseño Indians and the Soboba Band of Luiseño Indians to solicit their involvement with the proposed Project. A site visit with representatives from both tribes and March JPA was conducted on February 16, 2022. The local tribal governments suggested the presence of a Traditional Cultural Property (TCP) and potentially a Traditional Cultural Landscape (TCL) within the vicinity of or overlapping the APE. However, the recorded boundary of a potential TCP/TCL was not fully identified or formally presented to Brian F. Smith and Associates, Inc. Since the boundary of the potential TCP/TCL is unknown, effects cannot be determined without direct consultation with the local Native American tribes through government-to-government consultation." If you continue to work with tribal representatives, then it follows that further information about potential TCP and TCL can be solicited from those representatives.

|
| O-7.7
|

We request that DEIR approval be postponed until a recorded boundary for the TCP/TCL is identified and considered in collaboration with tribal representatives.

We also request further information regarding the following: “Under Alternative 4, Barton Street would be realigned to the east to avoid a *known cultural resource site* that otherwise would be directly impacted under the proposed Project during construction activities.” Which known cultural resource is this referring to? Please provide information about this known cultural resource site for public consideration.

|
| O-7.8
|

There are several additional contradictory statements within the Cultural Resources section of the DEIR regarding historical resources that need to be rectified:

“While Buildings A1 to A14 are the only United States Air Force associated munitions storage igloos in California, they are not unique, military-related munitions storage structures in California.” Please clarify what this means. If they are the only examples of such buildings associated with the USAF, it follows that they are unique examples of munitions storage igloos.

0-7.9

In one part of the document (4.4-19), the DEIR states that buildings A1-A14 “retain both integrity of design and integrity of materials,” while later the same section indicates that “none of the buildings retain high degree of integrity.” It’s unclear if this statement is referring simply to buildings B-F or also includes A1-A14 which are referenced earlier in the paragraph.

0-7.10

Please provide an explanation for why adaptive reuse of the buildings is not an option. Adaptive reuse is often an excellent option that can minimize the carbon footprint of a project, further qualifying construction for LEEDS certification.

0-7.11

We would also like further clarification about the DEIR’s focus on the “evolution” igloo styles. Repeated several times throughout the DEIR and Appendix E are the criteria for listing on the NRHP and CRHR, which are based on four main areas of significance: architecture, archeology, engineering, and culture. The cultural significance criterion, applicable in this case is defined as “properties that embody **the distinctive characteristics of a type, period, or method of construction**, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.” Excluding the igloo styles from NRHP categories based on their lack of representing a “transitional style,” or “evolution from one style to the next,” is repeated several times in the DEIR. Being in a transitional style or representing the evolution of an architectural style is not a criterion for listing on the NRHP or CRHR. The igloos are properties that “embody the distinctive characteristics of a type, period, or method of construction,” and thus fall within NRHP and CRHR guidelines.

0-7.12

The remains of Camp Haan also present some very important opportunities for historical and archaeological research and appear to be clearly eligible for listing in the NRHP under Criterion A and D (and consequently, for listing in the CRHR under Criteria 1 and 4).

As the only Air Force Igloo style military munitions storage bunkers in California, as the site of Camps Hahn, which housed prisoners of war, as a site with multiple tribal, cultural, and paleological resources below mean that this site has a very rich cultural history that should be learned from, incorporated into site design, and made publicly accessible. Placing warehouses on this site is ill advised when the preservation, enhancement, and integration of the valuable cultural resources have such clearly powerful potential. Job growth is the only criteria used to justify the proposal to build the warehouse project. But warehouse jobs are both low density and low quality, and will be further automated. Industrial zoning will additionally cause more

0-7.13

intensive uses, and thus decreased engagement with, and potentially wholesale destruction of, this incredible cluster of cultural resources.

↑ O-7.13
Cont.

Additionally, moving forward with the project as it stands may constitute a violation of CEQA. If a project "defers mitigation," according to CEQA, it also needs to name a performance standard. We note that in the Cultural Resources section, the project defers mitigation but does not give a performance standard (example of performance standards could be that all cultural impacts will be avoided, or significant artifacts will go into a museum, etc.) Since there is no performance standard, it is not clear to the public what the plan is. This is a violation of CEQA disclosure requirements.

O-7.14

Tribal Cultural Resources

Section 4.4 Cultural Resources

Multiple cultural resource sites (CA-RIV-4067, CA-RIV-4068, CA-RIV-5420, CARIV-5811, CA-RIV-5812, CA-RIV-5819, Temp-2, Temp-3, and Temp-9 to Temp-14) have been identified within the archaeological survey. This project may represent a direct or indirect adverse impact to the cultural resources/historic properties. A great deal of work has been done over the decades in how to approach bedrock milling sites, for example, and what can be learned from them. Blood protein residue analysis has shown that it may be possible to identify seasonal procurement of various small fauna used for food by taking samples from milling surfaces. Other studies have attempted to quantify probabilities for the presence of artifact deposits at the foot of bedrock milling features. In other words, the significance of the milling sites and the research they might produce will likely increase with changes in technology—and indeed already has since these were made.

O-7.15

Historic resources and military history

March is one of the oldest airfields operated by the United States military, being established as Alessandro Flying Training Field in February 1918. It was one of thirty-two Air Service training camps established after the United States entry into World War I. The attack on Pearl Harbor in December of 1941 quickly brought March Field back into the business of training aircrews.

The March Field Historic District is the most significant cultural resource identified within the planning area. The March Field Historic District has been nominated for listing on the National Register of Historic Places (NRHP) upon concurrence by SHPO. Furthermore, under the governance of the U.S. Air Force, a Cultural Resource Management Plan (CRMP) for March AFB was prepared, which includes a maintenance manual for the Historic District.

O-7.16

There is case law in California supporting the historical preservation of multiple buildings as a collective. Please assess how separate military buildings (and tribal resources) can be listed as one collective resource, and therefore, should merit preservation. One key case in California where cultural resources were treated collectively instead of individually is the Native American

Heritage Commission v. County of Santa Clara case in 1997. The court ruled that under CEQA that the EIR for the proposed development project must take into account the cumulative impact on **all tribal cultural resources** in the area, not just those that were individually identified. Please assess the collective impact of tribal archaeological and historic resources, rather than just taking them as individual or separate sites.

0-7.16
Cont.

Please indicate how grinding stone clusters will be avoided in construction, as well as taken as a collective resource that deserves public access and public education information. We argue that the in-situ grinding stones be avoided and incorporated into the proposed alternative plans, that mitigation for construction involve education about tribal communities that utilizes these in-situ resources, as well as maintaining the public’s ability to visit the sites.

0-7.17

Preserving the buildings and cultural resources as a collective can be incorporated into each of the projects proposed in the Community Alternatives letter. The alternative buildings could seamlessly integrate into and enhance projects such as veteran housing, public park space, or UCR campus. We believe site preservation would provide added value to any proposed housing project surrounding this historic site and could act as a site for experiential learning at UCR as well as providing blue-green jobs.

0-7.18

As you may know, the US Fish and Wildlife has been instrumental in protecting some of the most significant natural and cultural resources in the United States. Through its management and preservation efforts, the USFW has helped to protect not only the natural beauty of our parks but also important cultural resources, including military sites. The **Air Force Natural Resource Partnership** have conserved over 10 million acres on Air Force lands that include over 100 military sites. The cultural heritage of this site merits same principles of preservation and management to be applied to the West Campus Upper Plateau Project, ensuring that any development in the area is conducted in a responsible and sustainable manner. A decision to preserve this land instead of developing it into a warehouse will constitute an approach to protecting land and cultural resources that can serve as a model for responsible development and preservation efforts throughout the region.

0-7.19

Paleontological resources

The West Upper Plateau lies above the Elsinore Fault Zone and on the east by the San Jacinto Fault Zone. Public Law 74-292 (the National Natural Landmark Program, implemented by Title 36 CFR 62) cites that paleontological resources with significant value are those with “illustrative character, present condition, diversity, rarity, and value for science and education.” The geology mapped at the Project site is mostly underlain by the Cretaceous-aged Val Verde tonalite, a type of crystalline plutonic rock related to granite. Scattered linear outcrops of Cretaceous granite dikes, Paleozoic biotite. The eastern portion of the development site includes lower Pleistocene fan deposits which have a “high” paleontological sensitivity for the occurrence of terrestrial vertebrate fossils at shallow depths. Disturbance of any potential terrestrial vertebrate fossils within the Pleistocene fan deposits, therefore, could result in

0-7.20

potentially significant impacts to paleontological resources. How will grading be monitored to assure that these paleontological resources will not be impacted?

↑ 0-7.20
Cont.

Additionally, given the presence of quaternary-age fossils and Pleistocene fan deposits in “alluvial deposits near the planning area,” such as in San Timoteo Canyon north of the site, the assessment that the planning area does not contain significant paleontological resources is unclear. It is however stated in the report that the “eastern portion of the development site includes lower Pleistocene fan deposits which have a “high” paleontological sensitivity for the occurrence of terrestrial vertebrate fossils at shallow depths,” exemplifying that the significant disregard of any potential paleontological significance in all areas of the site. Will the paleontological considerations provided to the conservation easement in the eastern portion of the site be matched for other areas of the site? Even more concerning is the admittance that, despite the already severe lack of paleontological precautions and assessments under MM-CUL-1 and MM-CUL-6, the Project will nonetheless result in “significant and unavoidable impacts to historical and archaeological resources,” as well as paleontological ones that will be further disregarded if they are deemed insignificant.

0-7.21

This lack of thorough examination is especially concerning given the assertion in the Executive Summary that the March JPA intends to reduce monitoring of paleontological resources in the case that “potentially fossiliferous units are not present in the subsurface” or if discovered fossils in these areas are determined to have “low potential to contain or yield fossil resources” by a qualified paleontological personnel. It should be emphasized that this qualified personnel should be an independent third-party with no connections to the developers or contractors that may bias their assessment. Furthermore the DEIR states that the report, “when accepted as satisfactory by the March JPA, will signify satisfactory completion of the project program to mitigate impacts to paleontological resources,” highlighting how a concerning lack of third-party or unbiased input on paleontological standards may yield biased assessment and outcome. How will the project ensure its use of unbiased contractors in consultation about paleontological resources? We also note that the County of Riverside may be the enforcement agency during the grading process and thus March JPA should harmonize its standards to the same levels as County requirements.

0-7.22

The EIR mentions the use of Blasting & Rock Handling of up to 20 acres per day. The EIR says “Full time monitoring of grading or excavation activities shall be performed starting at a depth of 4 feet below the surface in undisturbed areas of Pleistocene sedimentary deposits within the project’s boundaries” (Table 1.2 in Executive Summary, page 73). How will full-time monitoring occur if blasting is used as a method at the project site?

0-7.23

An example of a military site as well as tribal cultural resources, referencing CEQA, is the case of Jamul Action Committee v. Chaudhuri in 2017. In this case, the court ruled that the EIR for a proposed casino project should have included an analysis of the cumulative impact on both the Jamul Indian Village's cultural resources and the adjacent Camp Lockett, a former military training site that was also identified as a cultural resource. The court held that the EIR's analysis of the project's impact on cultural resources was deficient because it did not properly evaluate

0-7.24

the cumulative impact on these two distinct but interconnected cultural resources. This project presents an analogous example. We request more information about the cumulative impacts on all the cultural resources listed in Appendix E and in the DEIR.

0-7.24
Cont.

NEPA

The H.R. 1904 requires review under National Environmental Policy Act (NEPA), 42 U.S.C. 9 4332, only *after* the land transfer is complete. Such ex post facto review is clearly contrary to the spirit and intent of NEPA which requires that federal agencies analyze alternatives prior to making decisions that would affect the environment

0-7.25

Conclusion

Because of the preceding, we respectfully urge you to fully address each of these issues and mitigate or provide alternative for the West Campus Upper Plateau Project.

0-7.26

First, March JPA should order a review under NEPA.

0-7.27

Second, a historic resources review process should be included as required by NHPA, with the approach that the cluster of military buildings and tribal resources be a) accessible and 2) taken as a collective historical resource under CEQA. These two changes will ensure that before any exchange commences there has been an adequate assessment of the risks involved in the land transfer and that cultural resources on the land to be transferred can be retained, or at the very least, the effects of their loss mitigated.

0-7.28

Part of the reason that military sites are so important as preservation sites is that land that might otherwise have been developed often lays fallow for decades. This allows biodiversity to flourish. It also allows for the preservation of unique resources through time—in this case providing a confluence of several tribal cultural sites and military structures that make the site absolutely unique. Military sites also provide greenspace, providing water filtration, cooling, and recreational opportunities for residents in an area already heavily impacted by industrial development.

0-7.29

Sincerely,

Susan A. Phillips
Associate Dean
Professor of Environmental Analysis
Director Robert Redford Conservancy

Letter O-7

Redford Conservancy at Pitzer College

March 9, 2023

- O-7.1** This comment is introductory in nature and summarizes what is being transmitted by the commenter.
- O-7.2** This comment expresses general opposition to the Project. Specific comments regarding the Draft EIR are provided and responded to below. The comment incorrectly asserts the Project would transfer 800 acres to a private developer. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- O-7.3** This comment requests the consideration of a non-industrial alternative. In response, please see Topical Response 8 – Alternatives.
- O-7.4** The comment raises concerns regarding the potential for Project construction activities to potentially affect both prehistoric and historic resources. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), Phase II testing of resources within the Area of Potential Effect (APE) has been completed and it has been determined that no significant archaeological resources are present within the APE. Although no archaeologically significant resources would be impacted by the Project, the bedrock milling features are still viewed as culturally important to the Soboba and Pechanga Bands. Consultation between the Tribes, March JPA, and the Applicant has led to the development of revised conditions related to the prehistoric sites, which have been incorporated as mitigation measures in the Final EIR. These conditions primarily consist of efforts to either preserve in place or relocate (move) bedrock milling features, monitoring of ground-disturbing activities by an archaeologist and Native American observer, and controlled grading in the vicinity of any recorded site to ensure the timely and proper handling of any inadvertent finds (see Mitigation Monitoring and Reporting Program [MMRP]). Further, as recommended by the Paleontological Assessment, MM-GEO-2 requires that alternative rock breaking methods, such as expanding chemical agents (epoxy resin), be used in the area of identified resources and therefore there will not be a conflict as suggested by the comment. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.
- O-7.5** This comment requests completion of an archaeological significance evaluation of the Project site to determine eligibility for listing on either the CRHR and/or the NRHP. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), Phase II testing has been completed and the results of the updated technical study will be incorporated into the Final EIR. The Phase II testing and evaluation program was done in consultation with both the Pechanga and Soboba Bands. Consultation between representatives from March JPA, the Soboba Band of Luiseño Indians, and the Pechanga Band of Indians resulted in an agreement regarding the scope and methods for the Archaeological Test Plan (ATP), which were approved by March JPA in March 2023. Archaeological testing in compliance with the ATP occurred between March 20, 2023 and March 31, 2023. Based upon the records search, surveys, and testing program, sites CA-RIV-4067, CA-RIV-5420, CA-RIV-5421, Temp-2, Temp-3, and Temp-9 to Temp-15 are not eligible for the California Register of Historical Resources (CRHR) or the National Register of Historic

Places (NRHP). Sites CA-RIV-4068, CA-RIV-5811, CA-RIV-5812, and CA-RIV-5819 were not evaluated for significance as they were found to have no elements within the APE.

Regarding the Cold War-era March AFB Weapons Storage Area (WSA) found within the Project site, these elements are studied independently from the prehistoric resources as there is no tangible connection between the historic and prehistoric land use. Rather, the historic land use of the property actually diminishes any potential integrity of some of the prehistoric sites. (Appendix E-3) See Response O-7.16, below for additional discussion.

- O-7.6** This comment requests the records of the Assembly Bill 52 (AB 552) government-to-government consultation process. This consultation process is confidential between the lead agency and tribal governments. This information is not for public review. Likewise, any study that shows cultural resources is protected from public review. Government Code Section 6254.10 specifically exempts from disclosure requests for:

[R]ecords that relate to archaeological site information and reports maintained by, or in the possession of, the Department of Parks and Recreation, the State Historical Resources Commission, the State Lands Commission, the [Native American Heritage Commission], another state agency, or a local agency, including the records that the agency obtains through a consultation process between a California Native American tribe and a state or local agency.

Phase II testing has been completed and the results from the updated technical study have been incorporated into the Final EIR. See Response O-7.5, above, for a summary of the archaeological testing results.

- O-7.7** This comment requests that the Traditional Cultural Property and potential Traditional Cultural Landscape boundaries be fully recorded. At this time, consultation is ongoing, and both the Pechanga and Soboba Bands have been active partners with March JPA and the consulting archaeologist on the identification of resources, Phase II testing, and appropriate conditions for development of the property.
- O-7.8** This comment requests more detail about Alternative 4 and the realignment of Barton Street. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), based on additional testing completed, as discussed in Response O-7.5 above, all archaeological resources in proximity to Barton Street were evaluated, determined not to be eligible for the CRHR, and therefore not significant under CEQA criteria. Further, cultural and tribal resources are protected from public review pursuant to Government Code Section 6254.10. Please see Response O-7.6, above.
- O-7.9** This comment asserts that there are contradictions within the EIR with regard to Igloos A1 through A14. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), the Weapons Storage Area (WSA) report included as Appendix E-2 to the Draft EIR, as well as the text within Section 4.4, Cultural Resources, erroneously stated the WSA igloos were the only United States Air Force-associated munitions storage igloos in California. Travis Air Force Base in Fairfield includes munitions storage igloos as part of the Travis AFB ADC Readiness National Register Historic District Area. Munitions bunkers are also found at Beale Air Force Base in Marysville and Edwards Air Force Base in Edwards. Further, as detailed in the revised WSA report included in Appendix E-2 of the Final EIR, the WSA igloos are not unique or distinctive examples of munitions storage igloos in California or

the local region and are among the most common military-related weapons storage constructions. For example, similar igloos are regionally found at the Fallbrook Ammunition Depot, Naval Weapons Station Seal Beach, and Marine Corps Air Station El Toro. Additionally, Concord Naval Weapons Station in San Francisco includes a larger weapons storage area that features various underground and overground bunkers constructed in different periods and styles. Sierra Army Depot in Herlong includes over 800 munitions storage igloos and igloos remain from the closed Benicia Arsenal in Benicia. As detailed in Appendix E-2 of the Final EIR, the WSA and its individual buildings were determined not eligible under NRHP, CRHR, or March JPA CEQA Guidelines criteria for historic resources. The WSA report, as well as the text within Section 4.4, Cultural Resources, of the Final EIR, has been revised to accurately describe the state and regional context for the WSA igloos. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

- 0-7.10** This comment questions whether the conclusions of integrity apply to Buildings B through F or also include Igloos A1 through A14. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3) and detailed in Appendix E-2 of the Final EIR, the WSA and its individual buildings were determined not eligible under NRHP, CRHR, or March JPA CEQA Guidelines criteria for historic resources. The statement was updated to reflect that of the seven aspects of integrity, Igloos A1 to A14, Buildings B, D, E, F, and G, and the WSA buildings, collectively, were determined to retain integrity of location, design, and materials. Building C was determined to only retain integrity of location. None of the buildings, individually or collectively, retain integrity of setting, and they never possessed integrity of workmanship, feeling, or association.
- 0-7.11** This comment questions why adaptive reuse was not considered as an alternative to the Project. Adaptive reuse of the dilapidated buildings and the igloos structures was not considered because these buildings and structures would not physically accommodate the uses proposed by the Project. For additional information regarding project alternatives, see Chapter 6, Alternatives, as well as Topical Response 8 – Alternatives.
- 0-7.12** This comment asserts that the igloos are properties that 'embody the distinctive characteristics of a type, period, or method of construction,' and thus fall within NRHP and CRHR guidelines. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3) and detailed in Appendix E-2 of the Final EIR, most of the ammunition and explosive magazines were constructed during and after World War II. The construction of these storage structures started as a part of the nation's large-scale mobilization during World War II. From 1939 to 1945, the United States government spent hundreds of millions of dollars to construct 77 new military industrial facilities and 16 major ordnance depots. These igloos were commonly covered with earth and featured concrete building material. Although the floor is at or above the ground level, because the magazine is covered with earth on three sides, it is considered underground. The structure underneath the earth-covered portion is barrel-arched and constructed from reinforced concrete. The use of the barrel-arch design directs the force of a potential explosion upward, rather than outward, decreasing the chance of a chain explosion. The design of the munitions storage igloos remained the same until the mid-1950s. The design of the earth-covered magazines also changed in the period following the Korean War. Although the general design and the arched-roof structure of the igloos remained the same, wider openings with double-leaf steel doors began to be featured to facilitate the transportation of larger munitions. Older magazines were modified with the installation of access ramps and wider doors to allow the storage of heavier munitions. The most radical change in the igloo design took place in 1954, when the Chief of Ordnance recommended a new igloo design named "Stradley" after its designer. This design, which was also known as the yurt,

featured vertical side walls, an elliptical arch for the roof, and large sliding doors. The vertical walls of this design created additional storage space and allowed the munitions to be stacked vertically.

According to historic aerial photographs included in Appendix E-2 of the Final EIR, Igloos A1 to A9 were constructed between 1948 and 1953, and Igloos A10 to A14 were constructed between 1953 and 1962. In terms of their construction, all munitions storage igloos exhibit typical characteristics of the explosive magazines constructed during World War II between 1939 and 1945. While the WSA munitions storage igloos feature reinforced concrete constructions and barrel-arched bodies, they were constructed after the period of significance for this World War II weapons storage construction type and technique and, therefore, cannot be considered significant examples of the barrel-shaped igloos. (Appendix E-3)

The barrel-shaped igloo design was extensively used by the United States military in the construction of weapons storage facilities before it was replaced by “Stradley”-style magazines, which were extensively used in the 1950s. However, WSA igloos are not examples of “Stradley”-style magazines. (Appendix E-3)

Ammunitions storage igloos might be significant if they exhibit features reflecting the changes in ammunition storage as a result of the Cold War. Igloos A1 through A14, however, fail to show the stylistic and technical transition between the barrel-shaped igloos and “Stradley”-style igloos and, therefore, cannot be considered significant examples. (Appendix E-3)

Further, as detailed in Response O-7.9, above, the WSA igloos are not unique or distinctive examples of munitions storage igloos in California or the local region and are among the most common military-related weapons storage constructions. (Appendix E-3)

The analysis of the WSA igloos in terms of their style, construction, and type does not solely focus upon the “evolution” of the igloo styles, but rather mentions it as a part of the analysis and the technical study has been revised to reflect this. However, the WSA igloos also do not embody the distinctive characteristics of a type, period, or method of construction, as mentioned in the comment. The technical study included as Appendix E-2 of the Final EIR has been revised for clarification. (Appendix E-3) This revision does not constitute ‘new information’ under CEQA and does not impact the environmental analysis in the Draft EIR.

O-7.13 This comment discusses the importance of Camp Haan. As explained in the BFSA Cultural Resources Responses to Comments (Appendix E-3), the Project site is located outside of and north of the boundaries of Camp Haan. Camp Haan is located both south and southeast of the Project site. The Project will not impact Camp Haan (see attached Figure O-7.13.1, Camp Haan Location). The comment further questions the Project’s job generation. Please see Topical Response 5 – Jobs.

O-7.14 This comment asserts the Draft EIR defers mitigation for cultural resources. All necessary Phase II testing and evaluation have been completed to determine the potential presence of resources, as such no proposed mitigation is being deferred. As no CRHR-eligible or -designated cultural resources are located within the Project, no site-specific mitigation measures are warranted. However, the established conditions in the MMRP do include performance standards and processes to follow in the event that any inadvertent resources are discovered, steps for evaluating any inadvertent discovery, and guidelines regarding final deposition of any artifacts. The revised conditions are detailed in Section

4.4, Cultural Resources, of the Final EIR. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

0-7.15 This comment discusses additional studies that could be undertaken with regard to the bedrock milling features. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3) and detailed in Appendix E-1 of the Final EIR, Phase II testing has been conducted and the mitigation measures have been revised accordingly in the Final EIR. No interpolation of potential artifact quantities is warranted since testing throughout the APE failed to identify any archaeological artifacts or deposits.

Regarding pollen and protein residue analyses at bedrock milling sites, these studies rarely provide any information that is not anticipated. The results tend to reflect the processing of known plants and animals in the region and many studies are inconclusive due to impacts to the milling features, natural weathering and contamination. The studies are outside the accepted scope of any significance testing program and no special circumstances exist here warranting more in-depth analysis. When such studies were conducted at bedrock milling Site CA-RIV-1330/H, located approximately three miles south of the subject property, it did not provide any information that was unusual or not anticipated. These studies reflected plants that were known to have been used prehistorically, as well as plants that are associated with non-native species from agriculture and landscaping. Another similar study conducted at bedrock milling Site RIV-6506 found the sample was dominated by elongate forms with no interpretive data beyond representing the presence of grasses and possibly sedges. Further, cotton fibers were also present, indicating possible contamination. Due to the fact that prehistoric bedrock milling features such as those found within and surrounding the Project site are the most ubiquitous archaeological features found in the Riverside area, the lack of any recovered associated artifacts, and the sites' being not CRHR-eligible, the redundant or inconclusive data that may be obtained from pollen and protein residue analysis would not alter the evaluation of the sites. (Appendix E-3)

Finally, all archaeological work, including the potential for special studies, has been done in consultation with the Pechanga and Soboba Bands which do not seek pollen and protein residue analysis. (Appendix E-3)

0-7.16 This comment discusses historic and military uses at March ARB as well as the March Field Historic District. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3), the March Field Historic District was approved for inclusion in the NRHP in 1994. However, the district, which is also referred to as the "historic triangle," is located approximately three miles southeast of the WSA, and the Project site is not within the March Field Historic District. The buildings located within the historic triangle were constructed in the mid- and late-1920s in the Mission Revival style. The significance of the historic district comes from its importance during World War II, its association with architect Myron Hunt, who established the Mission Revival Style for the base, and City Planner George B. Ford, who designed the base's distinctive triangular plan. No further effort was made to continue Mission Revival-style construction on the base after the 1920s. In fact, the architecture outside the historic triangle looks "strikingly similar" to other United States Air Force facilities constructed or expanded in the post-World War II period, which relied upon standardized architectural designs and diagrammatic floor plans. None of the WSA buildings are constructed in Mission Revival style, have any ties to World War II, or are associated with Myron Hunt or George B. Ford. The construction of the WSA buildings took place much later than the period of significance for the March Field Historic District. Additionally, they are geographically separate from the historic district. The

technical study, included as Appendix E-2 of the Final EIR, evaluated the WSA buildings, individually and collectively, and determined they did not qualify as historic resources.

Regarding tribal and archaeological resources, as detailed in Appendix E-1 of the Final EIR, Phase II testing has been completed to address the archaeological sites impacted by the Project individually and collectively. This information is incorporated into the Final EIR. None of the resources impacted by the Project are individually or collectively significant under CEQA. Prehistoric bedrock milling features such as those found within and surrounding the Project site are the most ubiquitous archaeological features found in the Riverside area due to the flat exposure of granitic bedrock common to the southern California batholiths. Further, the lack of any recovered associated artifacts or habitation debris firmly illustrates the prehistoric bedrock milling sites within the APE represent a location or landscape used only for the most expedient extraction of resources. (Appendix E-3)

While CEQA requires consideration of cumulative impacts of historic resources and prehistoric resources, combining analysis of prehistoric resources with the historic resources as a single site is not appropriate. There is no tangible connection between the two; rather, the historic land use of the property actually diminishes any potential integrity of some of the prehistoric sites. However, as no significant archaeological material was recovered from the Phase II testing, the prehistoric sites do not individually or collectively qualify as significant resources and, therefore, do not qualify for preservation as a site-specific mitigation measure. Regardless, as discussed above, through consultation between March JPA and the Pechanga and Soboba Bands, due to the cultural importance of such milling features, several methods of preservation/relocation of features are conditioned for the Project. Features clearly outside of the APE shall be preserved in place and attempts shall be made to preserve those within the APE but outside of the grading envelope. For features within areas of cut, an attempt shall be made to relocate (move) them to open space and those in areas of fill shall be attempted to be buried in place. Finally, the case referenced by the comment, *Native American Heritage Commission v. County of Santa Clara*, could not be located. (Appendix E-3)

O-7.17 This comment questions how grinding stones will be avoided during construction. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3), Phase II testing of resources within the APE has been completed and no significant archaeological resources are located within the area of proposed Project construction. Although no archaeologically significant resources would be impacted by the Project, consultation between the Tribes, March JPA, and the Applicant has led to the development of revised conditions related to the prehistoric sites. The revised conditions are detailed in Section 4.4, Cultural Resources, of the Final EIR. These conditions primarily consist of efforts to either preserve in place or relocate (move) bedrock milling features, monitoring of ground-disturbing activities by an archaeologist and Native American observer, and controlled grading within the vicinity of any recorded site to ensure the timely and proper handling of any inadvertent finds. Further, the locations of archaeological resources, including bedrock milling features, whether in-situ or relocated, are protected from disclosure to the public. Consultation with both the Pechanga and Soboba Bands on similar projects has led to requests from both groups to make the locations of any features remain confidential, whether significant under CEQA or not. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

O-7.18 This comment asserts the buildings and igloos could potentially be reused in alternatives suggested by the community. In response, please see Topical Response 8 – Alternatives.

0-7.19 This comment requests consideration of protecting the Project site in its undeveloped state. The comment does not raise any specific issues or questions about the adequacy of the environmental analysis included in the Draft EIR.

0-7.20 This comment questions how grading will be monitored to assure that paleontological resources would not be impacted. As explained in the BFSA Cultural Resources Responses to Comments (Appendix E-3), and described in Section 4.6, Geology and Soils, as well as Section VI of the Project Paleontological Assessment (Appendix H of the Final EIR), research has confirmed the existence of potentially fossiliferous Pleistocene very old alluvial fan deposits mapped at the eastern end of the Project. Approximately 1.18 acres of mapped deposits have the potential to be disturbed by the Project (“Qvofa” on the Figure below).

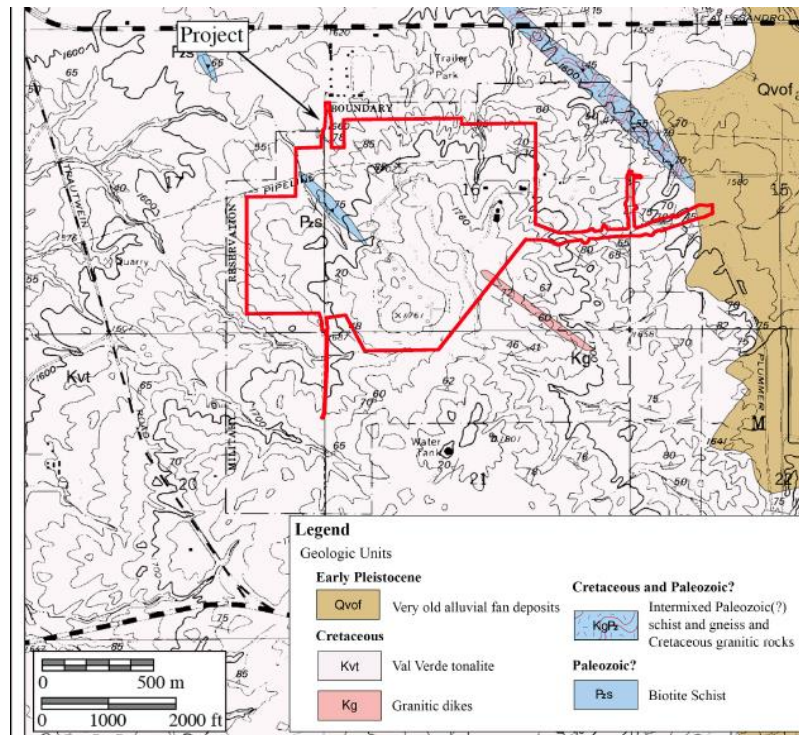

Figure 3
Geologic Map

The West Campus Upper Plateau Project
Geology after Morton and Cox (2001)

As explained in the BFSA Cultural Resources Responses to Comments (Appendix E-3), although the paleontological locality search did not indicate the presence of any known fossil localities within the Project site or surrounding area, the occurrence of terrestrial vertebrate fossils at shallow depths from Pleistocene older alluvial fan sediments across the Inland Empire of western Riverside County is well-documented. These Pleistocene older alluvial fan sediments are typically assigned a “High” paleontological sensitivity rating for yielding paleontological resources. Full-time monitoring of undisturbed Pleistocene old alluvial fan deposits at the Project is recommended starting at the surface. Monitoring is not warranted for outcrops or exposures of tonalite and other crystalline rocks composing the majority of the Project. As detailed in Section 4.6, Geology and Soils, of the Final EIR, MM-GEO-2 has been revised to reflect the recommended Paleontological Resource Impact Mitigation Program

(PRIMP) covering the approximately 1.18 acres of Pleistocene alluvial fan deposits proposed for development for approval by March JPA before the issuance of the grading permit. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

O-7.21 This comment questions how paleontological resources would be handled. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3), three museums with significant paleontological resource holdings from localities throughout southern California were consulted to demonstrate the potential presence of any fossil localities that may lie within or near the Project. Their findings are attached in Appendix B of the Paleontological Resources Assessment (Appendix H to the EIR) and are summarized in Section IV of the revised Paleontological Resources Assessment. As stated in the "Fossil Locality Search" segment of Section IV, the nearest-known fossil locality is eight miles east of the Project site from Pleistocene-aged alluvial deposits. Alluvial fan deposits of a similar age are present within approximately 1.18 acres proposed for development at the eastern end of the Project, which have a high potential to yield significant paleontological resources. (Appendix H) Accordingly, the report, as well as the analysis in Section 4.6, Geology and Soils, of the Final EIR, addresses the potential for adverse impacts to the paleontological resources that these deposits may contain at the Project. The remainder of the Project (i.e., west of the Pleistocene alluvial fan deposits as mapped in the Figure in Response O-7.20, above) is geologically mapped as tonalite, which possesses minor granite and metamorphic rock inclusions. Tonalite, granite, and these metamorphic rocks do not yield fossils. Tonalite and granite are categorized within the granitic suite of plutonic rocks, having crystallized several miles below the earth's surface from a molten state, and were subsequently uplifted to the surface via the action of plate tectonics. As such, fossils do not exist in tonalite and granite. The metamorphic rocks within the Project site were probably previously sedimentary rocks that were subsequently subject to such intensive heat and pressure during subduction and exhumation that they physically altered to an interlocking, crystalline state. As such, fossils do not exist in these metamorphic rocks. Therefore, the potential for adverse impacts to paleontological resources in these rocks does not exist and monitoring for paleontological resources is not recommended in areas mapped as tonalite, granite, or any metamorphic rocks as shown in the Figure in Response O-7.20, above. Finally, San Timoteo Canyon lies several miles to the north within a different geologic setting than that of the project, and contains different, unrelated geologic formations. Therefore, a paleontological comparison between the two sites is not appropriate.

MM-GEO-2 has been revised in Section 4.6, Geology and Soils, of the Final EIR. With implementation of the revised MM-GEO-2, the Project's impacts to paleontological resources would remain less than significant. (Appendix E-3) This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

O-7.22 This comment raises concerns regarding enforcement of the monitoring and mitigation of paleontological resources. As explained in the BfSA Cultural Resources Responses to Comments (Appendix E-3), MM-GEO-2 (see Section 4.6, Geology and Soils, of the Final EIR) has been revised to better clarify the role of the qualified professional paleontologist, the extent of monitoring, and the required measures in the PRIMP. Approximately 1.18 acres of Pleistocene alluvial fan deposits proposed for development, plus a 100-foot buffer, will be demarcated, both on grading plans and in the field, by a qualified geologist. The PRIMP will follow the guidelines and recommendations of March JPA and Society of Vertebrate Paleontology and must be drafted by a qualified professional paleontologist with a master's or doctorate degree in paleontology or geology who is knowledgeable in professional paleontological procedures and

techniques. The qualified paleontologist will attend the preconstruction meeting to consult with the grading and excavation contractors and will direct the paleontological monitoring program. Fieldwork may be conducted by a qualified paleontological monitor, defined as an individual who has experience in the collection and salvage of fossil materials. The paleontological monitor shall always work under the direction of a qualified professional paleontologist.

Full-time monitoring of grading or excavation activities will be performed starting at the surface in undisturbed areas of Pleistocene sedimentary deposits. The paleontological monitor will be present on-site to inspect for paleontological resources during the excavation of previously undisturbed deposits. The monitor will be equipped to salvage fossils as they are unearthed to avoid construction delays and to remove samples of sediments that are likely to contain the remains of small fossil invertebrates and vertebrates. The monitor shall be empowered to temporarily halt or divert equipment to allow for the removal of abundant or large specimens in a timely manner. (Appendix E-3)

The PRIMP will include methods for salvage and recovery, preparation, sorting and cataloging, and donation of paleontological resources. Upon completion, the qualified paleontologist will prepare a final monitoring and mitigation report of findings and significance to March JPA for approval. (Appendix E-3)

With regard to potential bias, the qualified professional paleontologist will be subject to the mandatory and aspirational standards of the Society of Vertebrate Paleontology Ethics Code, which addresses scientific misconduct, fossil collection, collections management, working with specimens, and paleontological research. (Appendix E-3)

- O-7.23** This comment questions how monitoring for paleontological resources would occur with blasting activities during construction. As explained in the BFSAs Cultural Resources Responses to Comments (Appendix E-3), as set forth in the revised MM-GEO-2 (see Section 4.6, Geology and Soils, of the Final EIR), prior to grading, the professional paleontologist shall demarcate, both on the grading plans and in the field, the extent of the Pleistocene very old alluvial fan deposits within the area of ground disturbance in the Project site. Blasting within demarcated areas shall not occur until after the completion of paleontological monitoring, or at the discretion of the professional paleontologist. In the event conditions arise that would require blasting within the demarcated area, the Applicant shall utilize alternative rock breaking methods, such as expanding chemical agents (epoxy resin).
- O-7.24** This comment describes a 2017 case of Jamul Action Committee v. Chaudhuri, and alleges it held a proposed casino project would have a cumulative impact on the Jamul Indian Village and the adjacent Camp Lockett under CEQA. A case as described by the comment could not be located. There was a federal district court case, Jamul Action Committee v. Chaudhuri (2016) 200 F.Supp.3d 1042, but that case held NEPA did not apply; CEQA was not discussed at all. Additionally, Camp Lockett, located in Campo, California, is 30 miles away from the disputed casino project. While CEQA requires consideration of cumulative impacts of historic resources and prehistoric resources, combining analysis of prehistoric resources with the historic resources as a single site is not appropriate as they are not interconnected. Please see Response O-7.16, above.
- O-7.25** This comment discusses NEPA and the requirement that federal agencies analyze alternatives prior to making decisions that would affect the environment. The Project is not being undertaken by a federal agency, and as such, the Project is not subject to NEPA. However, when the United States Air Force was

completing realignment of the base prior to the formation of March Joint Powers Authority, an EIS evaluating alternatives for the disposition of this land, was prepared in compliance with NEPA.

- 0-7.26** This comment is a conclusion statement and does not raise any specific issues or questions about the adequacy of the environmental analysis included in the Draft EIR.
- 0-7.27** This comment states that a review under NEPA should be completed. As discussed in Response 0-7.25 above, NEPA is not applicable to the Project.
- 0-7.28** This comment requests the inclusion of a historic resources review process under NHPA. As discussed in Response 0-7.16 above, a combined analysis of the tribal cultural resources and WSA is not appropriate.
- 0-7.29** This comment expresses support for preserving military sites. The comment does not raise any specific issues or questions about the adequacy of the environmental analysis included in the Draft EIR.

Re: Comments on the West Campus Upper Plateau Project Draft
 Environmental Impact Report; State Clearinghouse Number 2021110304.

Dear Mr. Fairbanks:

On behalf of the Riverside Neighbors Opposing Warehouses (“R-NOW”), we have reviewed the Draft Environmental Impact Report (“DEIR”) prepared in connection with the proposed West Campus Upper Plateau Project (“Project”). R-NOW has serious concerns about the environmental impacts of the Project as currently proposed. As discussed in more detail below, the DEIR fails to provide a stable project description and substantially understates, and fails to fully analyze, the severity and extent of significant project-related effects on air quality, greenhouse gas (“GHG”) emissions, and public health. The DEIR also fails to consider alternatives that could lessen these impacts. The environmental documentation for the Project is thus inadequate as an informational document and violates the minimum standards of adequacy under the California Environmental Quality Act (“CEQA”), Public Resources Code § 21000 et seq., and the CEQA “Guidelines,” California Code of Regulations, title 14, § 15000 et seq.

0-8.2

Referenced throughout these comments is an air quality letter report prepared by Baseline Environmental Consulting (“Baseline Report”), which is attached as Appendix A and is incorporated herein by reference. Please refer to this report for further detail and discussion of the DEIR’s inadequacies regarding impacts on hazardous materials, air pollution and related health risks. We request that the March Joint Powers Authority (“JPA”) respond to both the comments in this letter and to each of the comments in the Baseline Report.

I. Introduction and Background

In 1993, the federal government initiated the process of realigning the March Air Force Base toward civilian use. To facilitate this effort, the Cities of Moreno Valley, Perris, and Riverside, and the County of Riverside formed the March JPA, which serves as the lead agency for the Project’s CEQA review. In 1999, the March JPA approved a General Plan for the March JPA planning area. Under that General Plan, the Project developable area is currently designated as Business Park (“BP”), and Park/Recreation/Open Space (“P/R/OS”); Industrial designations in the site area are all located east of Brown St.

The General Plan and other redevelopment documents contemplate “economic reuse of the former base area, preservation of existing resources, and maximizing orderly growth and development.” March General Plan at 1-4 to 1-5. These planning documents suggest that “economic growth and development” be undertaken in a balanced way that “enhanc[es] the quality of life in the region.” *Id.* Over the last 30 years, redevelopment of the March Air Force Base has generally taken place in a piecemeal fashion, with the planning area roughly divided into the Main Base or Northeast Planning Subarea (part of the former main base), the West March Planning Subarea (property west of Interstate 215), and the Southeast Planning Subarea (adjacent to aviation field cantonment area). Up to this point, the West March Planning Subarea has remained mostly undeveloped and is bound on three sides by residential neighborhoods.

On February 24, 2022, applicant Meridian Park West LLC hosted a community meeting on Zoom to discuss the proposed Project. Many community members had only become aware of the proposed Project after receiving a flier in the mail days before the meeting. Upon hearing the details of the Project and the potential proximity of dangerous warehouse development to sensitive neighborhoods, many residents banded together to form Riverside Neighbors Opposing Warehouses (“R-NOW”) to express their strong opposition to the Project.

Over the next several months, members of R-NOW met with the applicant and March JPA staff to express their concerns about industrial development on the site. Because warehousing would be inappropriate and harmful in light of the surrounding neighborhoods, R-NOW urged the March JPA to consider alternate uses for the property, including educational institution campus, housing and medical services for veterans, office park, and open space/park. R-NOW also submitted a petition with over 2,000 signatures from residents opposed to warehouse development in the West Campus Upper Plateau. Over 100 residents attended the applicant’s August 18, 2022 community engagement meeting to communicate their opposition to the Project as proposed. R-NOW even asked for the formation of a community advisory group that would provide valuable

0-8.3

0-8.4

public input and help the JPA consider non-industrial alternatives for the site. The JPA declined this request, citing its sunseting in July 2025 as an excuse.

Throughout this period, R-NOW and members of the public encountered troubling actions and attitudes from the applicant, their elected representatives, and even the JPA. For instance, in October, the JPA quietly amended its development agreement with the applicant to set up a payment schedule that more strongly incentivizes certain types of development. The JPA also planned to consider a proposal to partially reassign Meridian Park West’s interests in the development agreement to a subsidiary company, but have postponed the vote on that action until after the public comment period.

Despite the lack of responsiveness from the agency and applicant thus far, R-NOW’s concerns are well-founded. As numerous articles have discussed in recent months, California’s Inland Empire—which includes the Project site—is already host to more than 4,000 warehouses and roughly 600,000 daily truck trips that produce 50 million pounds of carbon dioxide.¹ See also, Appendix B, Articles regarding impacts from growth of warehouse industry in California. These existing warehouses already have devastating human health and climate change impacts on the region, and the JPA should avoid any development that would exacerbate the issue—especially in the name of short term warehouse jobs that might be replaced by future automation.

Here, the proposed Project would implement construction and operation of 3,062,561 square feet of industrial warehouse uses, 1,280,403 square feet of business park warehouse uses, and 482,765 square feet mixed-use warehouse uses, for a total of 4,825,729 square feet of warehouse uses. DEIR Table 4.15-1 at 4.15-6 and 4.15-7. The Project has 384,121 square feet of estimated office space for the business park and 144,830 square feet allocated for retail mixed-use. The Project allocates more than a thousand auto parking spaces and truck/trailer parking spaces, and construction of related infrastructure on an approximately 369-acre site. DEIR at 1-4, 1-5, 3-8, and 3-9. This additional warehouse development will only serve to worsen climate change and human

0-8.5

0-8.6

0-8.7

health impacts for the region, and especially for the communities closest to the Project. For the reasons set forth below, it is our opinion that the DEIR does not comply with the requirements of CEQA. The DEIR fails to adequately analyze or effectively mitigate the Project's significant impacts or to consider an adequate range of alternatives that includes a warehouse-free version of the Project. These shortcomings will directly and significantly impact residents immediately adjacent to the project.

0-8.7
Cont.

II. The DEIR's Flawed Description of the Existing Setting and the Project Does Not Permit Meaningful Public Review of the Project.

A. Project Setting

Accurate and complete information pertaining to the setting of the project and surrounding uses is critical to an evaluation of a project's impact on the environment. *San Joaquin Raptor/Wildlife Center v. Stanislaus County*, 27 Cal.App.4th 713, 728 (1994); see also *Friends of the Eel River v. Sonoma County Water Agency*, 108 Cal.App.4th 859, 875 (2003) (incomplete description of the Project's environmental setting fails to set the stage for a discussion of significant effects). Here, the DEIR's deficiencies in describing the Project's setting undermine its adequacy as an informational document.

The environmental setting discussion in the DEIR omits essential information about the existing conditions in the area and thus fails to meet CEQA's requirements. For example, the DEIR fails to present important contextual information related to the number of existing warehouse facilities in the area. As shown in the attached map (Appendix C), other existing warehouses in the area include:

0-8.8

A) City of Riverside Sycamore Canyon – 53 buildings totaling approximately 680 acres or 16,200,000 square feet of warehouse uses.

B) March JPA North Campus – Meridian – 33 buildings totaling approximately 530 acres or 12,600,000 square feet of warehouse uses.

C) March JPA South Campus – Van Buren – 9 buildings totaling approximately 249 acres or 6,000,000 square feet of warehouse uses.

D) Moreno Valley - Alessandro Boulevard & Cactus Avenue - 25 buildings totaling approximately 350 acres or 8,300,000 square feet of warehouse uses.

E) Perris, Moreno Valley - Heacock, and Mead Valley – 148 buildings totaling approximately 2908 acres 70,000,000 square feet of warehouse uses.

Together these existing facilities result in thousands of truck trips, massive quantities of air emissions, and substantial truck traffic noise. Neighborhoods in the area are already overburdened with impacts from these facilities. Moreover, as acknowledged in the DEIR and discussed in more detail below, the region is designated as a nonattainment area for federal and state ozone standards, state particulate matter (PM₁₀) standards and a nonattainment area for state and federal PM_{2.5} standards. In addition the area is a nonattainment area for state Nitrogen Dioxide (NO₂) standards, which the DEIR fails to acknowledge. The DEIR must take these existing conditions into account before evaluating the additional impacts of the proposed project.

0-8.8
Cont.

In order for the public and decision-makers to be able to fully understand the environmental impacts of this Project, more information about the Project setting is needed. Such information includes, but is not limited to, a detailed description of the following:

- Existing transportation infrastructure around the Project site, including the existing accident rates on roadways and availability of public transportation.
- The existing hydrological and hydraulic conditions of drainages in the vicinity of the Project.
- Properly documented noise levels existing at and around the Project site.
- Cumulative projects, including major construction projects, that will be carried out in the area during the period when the Project will be under construction.
- Any other relevant regional and local setting information (e.g., number and type of warehouse facilities and proximity to the site) necessary to evaluate project and cumulative impacts.

0-8.9

Given the inadequacies of the Project setting and description, however, decisionmakers and members of the public would not be made aware of the threat to important environmental, aesthetic, and community values.

B. Project Description

In order for an EIR to adequately evaluate the environmental ramifications of a project, it must first provide a comprehensive description of the project itself. “An accurate, stable and finite project description is the *sine qua non* of an informative and

0-8.10

legally sufficient EIR.” *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (1994) 27 Cal. App. 4th 713, 730 (quoting *County of Inyo v. City of Los Angeles* (1977) 71 Cal. App. 3d 185, 193). As a result, courts have found that even if an EIR is adequate in all other respects, the use of a “truncated project concept” violates CEQA and mandates the conclusion that the lead agency did not proceed in the manner required by law. *San Joaquin Raptor*, 27 Cal. App. 4th at 729–30. Furthermore, “[a]n accurate project description is necessary for an intelligent evaluation of the potential environmental effects of a proposed activity.” *Id.* at 730 (citation omitted). Thus, an inaccurate or incomplete project description renders the analysis of significant environmental impacts inherently unreliable. The court in *Inyo II* explained why a thorough project description is necessary:

“A curtailed or distorted project description may stultify the objectives of the reporting process. Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal’s benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the “no project” alternative) and weigh other alternatives in the balance.”

0-8.10
Cont.

Id. at 192-93.

Here, the DEIR’s Project Description does not come close to meeting these established legal standards. The DEIR’s approach to the Project description makes environmental review difficult, if not impossible. Indeed, the Project is so thinly described that it appears to be essentially unplanned, and certainly is not ready for the approvals that the Applicant is requesting. Any reasonably complete description of the Project would give the public and decision makers a sense of what the planned development would look like, how it would operate, and how it would mesh with the surrounding uses. For example, as discussed below, a revised DEIR should include building design and specifications, construction details including an erosion control plan and a drainage plan, details of planned landscaping and lighting, and information about the location and number of public trails. The DEIR provides no such information. This failure echoes throughout the DEIR; because the Project is incompletely described, none of its impacts can be fully analyzed.

The DEIR fails to describe aspects of the Project critical to its analysis. In perhaps the most glaring example, the public has yet to be informed regarding the contents of the proposed Development Agreement 21-01, but this Agreement will vest certain specific rights and entitlements with the developer, should the JPA approve the Project as proposed. DEIR at 1-15. Regardless of the specifics, once a development agreement is

0-8.11

approved, a public agency “shall not prevent development of the land for the uses and to the density or intensity of development set forth in the agreement,” even if the project requires further discretionary approvals. Gov. Code § 65865.2; see also *Citizens for Responsible Government v. City of Albany* (1997) 56 Cal.App.4th 1199, 1214-15 (development agreement creates vested rights in the form of an “entitlement for use”). If the agency breaches a development agreement, it may be subject to damages. See *Mammoth Lakes Land Acquisition, LLC v. Town of Mammoth Lakes* (2010) 191 Cal.App.4th 435, 443-47, 476 (developer awarded \$30 million for town’s anticipatory breach of development agreement). Given the importance of these documents, the JPA must release this information to the public and provide additional time for review and comment. Pub. Res. Code § 21092(b)(1). Without an opportunity to review the new Development Agreement 21-01 proposed specifically for this Project, the public and decision makers are in the dark about what it may contain. This is especially true given that the DEIR describes Development Agreement 21-01 as “providing certain Community Benefits including compliance with the terms of the CBD Settlement Agreement...and provision of new public benefits, including, but not limited to, expansion of employment opportunities for area residents.” DEIR at 1-15. To fully evaluate the Project, the public and decision makers must understand what this Agreement entails.

0-8.11
Cont.

The Development Agreement would substantially increase the amount of allowed industrial development on the site. DEIR at Figure 3-2. As discussed throughout this letter, and in letters from other community and environmental groups, this substantial increase in industrial uses will result in significant impacts with regional implications. Therefore, the JPA should release a draft of the Development Agreement for public review.

The DEIR further states that Development Agreement 21-01 will be “between March JPA and Meridian Par LL with a 15-year term and two potential 5-year extensions.” *Id.* R-NOW questions the JPA’s ability to enter a new Development Agreement in light of the fact that it will be sunsetting in 2025 and will transfer its land use authority to the County of Riverside. See DEIR at 4.2-15, 4.5-9, and 4.7-27 (all referencing the 2025 sunsetting and transfer of land use authority without further discussion). The DEIR’s failure to explain or analyze how this transfer of land use authority will impact the agreements and entitlements necessary for the Project further demonstrates the inadequacy of the Project description. The public is left in the dark as to how land use supervision of the Project would play out.

In addition, the DEIR defers plans and specifications related to building design. For example, the DEIR states that plans and specifications for features that are relied upon to reduce air emissions will be prepared *after* project approval. See DEIR at 1-20. In

0-8.12

another example, the DEIR defers preparation of a Soil Stabilization Plan. DEIR at 1-61. This plan would include measures to prevent soil erosion during construction. *Id.* Yet, the DEIR includes only a laundry list of potential soil stabilizing measures with no clear commitment to implement any of them. Likewise, the DEIR defers preparation of a Construction Traffic Management Plan addressing construction period traffic detours and other disruptions and fails to include the Barton Street Traffic Safety Plan. DEIR at 1-70. Similarly, the DEIR fails to include either a Hydrology/Drainage Report or a Water Quality Management Plan. DEIR at 1-62 to 1-64. The result is a document that fails to adequately describe the Project or how it will operate during both construction and operational phases.

0-8.12
Cont.

In addition, the EIR also fails to include information on the following additional Project components:

- information on construction phasing and schedule;
- location of the Project construction staging areas;
- location of proposed blasting activities (DEIR at 1-7 and 1-9);
- operating hours of warehouse facilities;
- location and number of public trails;
- location and number of fences;
- landscaping plan;
- lighting plan.

0-8.13

This information is important to disclose because these features will result in visual, noise, air quality, and public safety impacts to area residents. Yet, the DEIR omits details regarding the locations of these activities and project elements.

The proposed Project would undoubtedly result in additional potentially significant environmental impacts that the DEIR ignores. These include, but are not limited to, greenhouse gas emissions, soil erosion, traffic congestion and public safety impacts, and hydrology and water quality impacts. The potential development and related impacts must be disclosed and analyzed now, during this CEQA process. Given the site's location, surrounding by residential neighborhoods on three sides, this gap in the project description is especially unacceptable.

In sum, the DEIR fails to adequately describe the existing setting and presents an unstable and inadequate project description, made further unstable by undisclosed project details that may be contained in the Development Agreement. This approach is not permissible under CEQA. The failure to describe the whole of the Project is a serious and pervasive deficiency, as it renders faulty the EIR's environmental impact analyses as well as the discussion of potential mitigation measures and alternatives to minimize those

0-8.14

impacts. The EIR must provide a sufficient description of the existing conditions, proposed construction activities and schedule, operational activities, and any other Project details. This information is necessary to allow decision makers, the public and responsible agencies to evaluate potential environmental impacts.

III. The DEIR Fails to Adequately Analyze and Mitigate the Project's Air Quality and Climate Change Impacts.

In evaluating the Project's air quality impacts, the regional air quality baseline is key. Air pollution from significant activities in the South Coast Air Basin (Basin) includes a variety of industrial-based sources as well as on- and off-road mobile sources. These sources, coupled with geographical and meteorological conditions unique to the area, stimulate the formation of unhealthy air. The Basin is designated as a nonattainment area for state PM₁₀ standards. In regard to PM_{2.5} attainment status, the Basin is designated as a nonattainment area by both the California Air Resources Board (CARB) and EPA. See DEIR at 4.2-4. Breathing in particulate matter (PM₁₀ and PM_{2.5}) and ground-level ozone can trigger a variety of health problems. The Basin is also designated as nonattainment for ozone by both the CARB and EPA.² Finally, CARB has designated portions of the Inland Empire near State-route 60 as nonattainment for nitrogen dioxide NO₂.³

One of the unique and consequential aspects of warehouse uses is the reliance on heavy-duty trucks for transportation of goods and materials to and from the facilities. Heavy-duty trucks are key sources of diesel pollution and toxic air contaminants (TACs) and are therefore a key contributor to air quality impacts. Diesel trucks emit large volumes of particulate matter (a.k.a. diesel particulate matter, or DPM) and oxides of nitrogen (NO_x), thereby contributing to health problems that include cardiovascular issues, cancer, asthma, decreased lung function and capacity, reproductive health problems, and premature death.⁴ Diesel generators are another source of DPM and NO_x, and as explained below, these are not clearly quantified in the emissions calculations.

Indeed, the DEIR's analysis of Project-related air quality impacts contains deficiencies that must be remedied in order for the public and decision-makers to fully

² https://ww2.arb.ca.gov/sites/default/files/2022-12/Jan_2023_SC_CV_70ppb_Staff_Report.pdf

³ <https://ww2.arb.ca.gov/sites/default/files/2022-12/no2.pdf>

⁴ Storing Harm: the Health and Community Impacts of Goods Movement Warehousing and Logistics, January 2012, available at: <https://envhealthcenters.usc.edu/wp-content/uploads/2016/11/Storing-Harm.pdf>; accessed June 2, 2021.

understand the Project’s impacts. Furthermore, the DEIR fails to identify all feasible mitigation that could be incorporated to minimize the impacts of the Project.

A. The DEIR Does Not Identify All Sources of Toxic Air Contaminants.

While the DEIR assumed the use of diesel generators during construction and accounted for those emissions in the analysis, the DEIR makes no reference to the existence of diesel generators (back-up or otherwise) in the day-to-day operations of the future warehouse facilities. Diesel generators are a fairly typical piece of equipment at warehouse facilities. If diesel generators were intentionally not included in the operations emissions calculations, it should be noted and there should be a requirement prohibiting their use at any facility in the Specific Plan area and the means to ensure compliance should be detailed. If diesel generators are not going to be prohibited, their omission from the emissions calculations is a substantive oversight which renders the emissions calculations inaccurate and the conclusions of the Health Risk Assessment (HRA) incorrect as well.

0-8.15
Cont.

B. The DEIR Does Not Identify the Extent and Severity of Air Quality and Greenhouse Gas Emissions Impacts *Before* Mitigation.

In numerous instances, the DEIR determines that the Project may have significant impacts, but then fails to describe the extent and severity of those impacts *prior* to implementation of measures designed to reduce the impact. For example, the DEIR indicates that the Project could expose sensitive receptors to substantial pollutant concentrations and a HRA was completed. *See* DEIR at 4.2-32. The HRA determined that the residential land use with the greatest potential exposure to Specific Plan Area operational-source DPM emissions is an existing residence at 20620 Iris Canyon Road. The DEIR asserts that with the application of Project Design Feature PDF-AQ-2 (the requirement for all-electric cargo-handling equipment), the maximum incremental cancer risk attributable to the Project at this location would not exceed SCAQMD’s significance threshold and the impact would therefore be less than significant. *Id.* The HRA also assumed the inclusion of PDF-AQ-2 for the analysis of the incremental cancer risk from DPM for preschool students at Grove Community Church, which resulted in a less than significant conclusion. *See* DEIR at 4.2-33.

0-8.16

These conclusions cannot stand for two reasons. First, under CEQA, when evaluating the significance of a project’s impacts, an EIR may not “compress[] the analysis of impacts and mitigation measures into a single issue.” *Lotus v. Department of Transportation* (2014) 223 Cal.App.4th 645, 656. By assuming the implementation of Project design features as part of the Project, the EIR here did just that. The DEIR’s failure to evaluate the health impacts of DPM emissions in the area with greatest potential

exposure prior to mitigation violates CEQA. And in so doing, it failed to recognize the Project’s potential to result in significant air quality impacts to sensitive receptors. Without an accurate significance finding, the DEIR cannot adequately identify mitigation for the impact. As in *Lotus*, the EIR’s failure to evaluate the significance of the Project’s impacts separately from what is effectively its proposed mitigation (implementation of project design features) results in a flawed analysis.

0-8.16
Cont.

More specifically, by conflating impacts and mitigation, the EIR fails to consider whether there may be other, more effective mitigation options, thereby omitting information necessary for the informed decision-making and public participation that CEQA requires. *See id.* at 658; *see also San Franciscans for Reasonable Growth v. City & County of San Francisco* (1984) 151 Cal.App.3d 61, 79 (EIR is inadequate if it fails to identify feasible mitigation measures). Further, a finding of significance is required to trigger the agency’s obligation to include enforceable mitigation, as well as a monitoring program. When an EIR relies on project design features as de facto mitigation, this crucial part of the CEQA process is unlawfully omitted. *See Lotus*, 223 Cal.App.4th at 656-57.

C. The Mitigation Measures Identified to Reduce Air Quality and Greenhouse Gas Emissions Impacts Are Insufficient.

The DEIR’s evaluation of potential mitigation measures is equally flawed. A basic purpose of CEQA is to “[P]revent significant, avoidable damage to the environment by requiring changes in projects through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible.” (State CEQA Guidelines § 15002(a)(3))

Even with the mitigation measures included in this DEIR, significant and unavoidable impacts remain. However, that does not allow the DEIR or the JPA to simply conclude that nothing else can be done. CEQA mandates that an agency adopt the most effective and feasible measures to reduce a project’s impacts, even if they do not reduce the impacts to a less than significant level. *See Pub. Res. Code § 21002* (CEQA mitigation includes measures that would “*substantially lessen* the significant environmental effects” of a project); *Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 524-25 (“Even when a project’s benefits outweigh its unmitigated effects, agencies are still required to implement *all* mitigation measures unless those measures are truly infeasible.”) (emphasis added). The DEIR’s proposed mitigation measures for the Project’s air quality and greenhouse gas impacts fall far short of CEQA’s requirements.

0-8.17

There are examples up and down the State of California of warehouse/fulfillment center projects that have been approved and constructed with feasible, effective, and

robust measures designed to minimize the impacts of greenhouse gas emissions, reduce the effects of particulate matter and air quality degradation, and increase transportation and energy efficiency. Listed below are examples of recent projects that were approved with such measures in place; their approval documents with the measures to be implemented are included as appendices to this letter:

- World Logistics Center: Buildings totaling 40.6MSF on 2,610 acres in the City of Moreno Valley. Approved June 16, 2020. *See* WLC Settlement Agreement attached as Appendix D.
- CenterPoint Properties Warehouse Project: Buildings totaling approximately 555,537 square feet on a 31.48-acre site in the unincorporated North Richmond area of Contra Costa County. Approved May 2022. *See* CenterPoint Properties Warehouse Project Conditions of Approval attached as Appendix E.
- Mariposa Industrial Park: Buildings totaling approximately 3.6MSF on 203 acres in the unincorporated Stockton area of San Joaquin County. Approved December 2022. *See* Mariposa Industrial Park Project Mitigation Monitoring and Reporting Program attached as Appendix F.

In addition to the project-specific measures contained in each of the approval documents cited above, other municipalities such as the City of Fontana have adopted citywide ordinances that mandate the inclusion of many of these measures in every warehouse/fulfillment center project over a certain size. *See* Fontana Ordinance 1891 attached as Appendix G.

With plentiful examples of effective, reasonable, and feasible warehouse project mitigation, the Project DEIR must be revised to include more robust measures with requirements for: (1) context-sensitive site design and facility layout; (2) measures to reduce impacts during facility construction; and (3) measures to reduce impacts during ongoing facility operation. The measures below address issues such as energy efficiency, emissions reduction, particulate matter reduction, and minimizing vehicle miles traveled (which reduces air emissions). In addition to the actions required by Project Design Features PDF-AQ-1 through PDF-AQ-4, Mitigation Measures AQ-1 through AQ-15, and Mitigation Measures GHG-1 through GHG-11, the following additional measures should be incorporated into this DEIR to further reduce air quality impacts:

0-8.17
Cont.

0-8.18

0-8.19

MINIMIZING CONSTRUCTION IMPACTS

- Prohibiting off-road diesel-powered equipment from being in the “on” position for more than 10 hours per day.
- Requiring on-road heavy-duty haul trucks to be model year 2014 or newer if diesel-fueled.
- Providing electrical hook ups rather than use of diesel-fueled generators, for electric construction tools and equipment.
- Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.
- Forbidding idling of heavy equipment for more than two minutes.
- Keeping onsite, and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.
- Providing information on transit and ridesharing programs and services to construction employees.
- Providing meal options onsite for construction employees to minimize travel during meal breaks.

MINIMIZING ONGOING OPERATIONAL IMPACTS

- Requiring that all facility-owned and operated fleet equipment to meet or exceed 2014 model-year emissions equivalent engine standards and requiring documentation of compliance.
- Requiring all heavy-duty vehicles entering or operated on the project site to be zero-emission beginning in 2030.
- Requiring all on-site, service yard equipment, such as forklifts and yard trucks, to be electric with the necessary electrical charging stations provided.
- Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.

O-8.19
Cont.

- Requiring truck operators to turn off engines when not in use.
- Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the air district, and the building manager.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of the facility for the life of the project.
- Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.
- Constructing electric truck charging stations proportional to the number of dock doors at the project.
- Constructing electric plugs for electric transport refrigeration units (TRUs) at every dock door for facilities with cold storage and prohibiting diesel power for TRUs.
- Constructing electric light-duty vehicle charging stations proportional to the number of parking spaces at the project.
- Installing solar photovoltaic systems on the project site equal to the building's projected energy needs plus providing power to all electric vehicle charging stations. Mitigation Measure GHG-1 requiring PV generation to supply 30% of building energy needs is insufficient.
- Requiring all stand-by emergency generators to be powered by a non-diesel fuel.
- Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.

O-8.19
Cont.

- Requiring facility operators to establish and promote a rideshare program for employees that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.
- Meeting CalGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking. Mitigation Measure GHG-7 requiring circuitry for a minimum of 20 electric vehicle parking stations is inadequate.
- Achieving certification of compliance with LEED green building standards.
- Providing employee meal options onsite or shuttles between the facility and nearby meal destinations.
- Improving and maintaining vegetation and tree canopy for residents in and around the project area.
- Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.
- Requiring tenants to enroll in the United States Environmental Protection Agency's SmartWay program, and requiring tenants to use carriers that are SmartWay carriers. Mitigation Measure GHG-10 should be updated.
- Installing signs in residential areas noting that truck and employee parking is prohibited.
- Consulting with the local public transit agency and securing increased public transit service to the project area.
- Designating areas for employee pickup and drop-off.
- Appointing a compliance officer who is responsible for implementing all mitigation measures, and providing contact information for the compliance officer to the lead agency, to be updated annually.

O-8.19
Cont.

The JPA should also consider the possibility of a mitigation fund. For instance, The World Logistics Center project in Moreno Valley was required to create a fund to mitigate project impacts on affected residents, schools, places of worship, and other community institutions by retrofitting buildings on their properties. The fund was used to retain a contractor to retrofit/install HVAC and/or air filtration systems, doors, dual-paned windows, and sound- and vibration-deadening insulation and curtains on properties impacted by the project. Additionally, since the County of Riverside will be enforcing all operational and most construction phase requirements, all project requirements should meet or exceed County of Riverside standards to avoid conflicts.

0-8.20

In sum, the March JPA must identify effective, enforceable measures that will minimize impacts to the community. The March JPA cannot approve the Project unless it analyzes and adopts Project alternatives or mitigation measures that meet this standard. *See* Guidelines § 15002(a); *see also* Pub. Resources Code § 21002; Guidelines §§ 15002(a)(3), 15021(a)(2); *Citizens for Quality Growth v. City of Mount Shasta* (1988) 198 Cal.App.3d 433, 443-45. Appendices D through F contain detailed mitigation measures that should be thoroughly considered and adopted, if feasible, to ensure that all reasonable and feasible measures are implemented to reduce the Project’s significant impacts.

0-8.21

IV. The DEIR Fails to Fully Disclose and Mitigate the Project’s Public Health Impacts to Sensitive Receptors.

A. The DEIR Fails to Fully Disclose Existing Conditions and the Project’s Potential for the Release of Hazardous Materials Into the Environment.

The DEIR fails to evaluate the environmental impacts of the Project in context. Guidelines, § 15064(b). As discussed above, the Project site is located in an area designated as a “Disadvantaged Community.” Disadvantaged communities are defined by the State Office of Environmental Health Hazard Assessment (OEHHA) as being in one of the top 25% scoring areas from CalEnviroScreen. CalEnviroScreen is a screening tool used to help identify communities disproportionately burdened by multiple sources of pollution and with population characteristics that make them more sensitive to pollution.⁵ The CalEnviroScreen mapping tool identifies the Project site and adjacent properties as having a pollution burden in the 95th percentile (out of 100). Other nearby neighborhoods are in the 49th percentile. Therefore, residents living in the vicinity are already subjected

0-8.22

⁵ Information on Disadvantaged Communities and the CalEnviroScreen 4.0 mapping tool can be found at : <https://oehha.ca.gov/calenviroscreen/sb535> and <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

to higher pollution burdens and thus are more sensitive to even seemingly small incremental increases in that burden. *See, e.g., Los Angeles Unified School Dist. v. City of Los Angeles* (1997) 58 Cal.App.4th 1019, 1025; *Kings County Farm Bureau v. City of Hanford, et al* (1990) 221 Cal.App.3d 692, 718. Given the fact that the surrounding community is already disproportionately impacted by the number of industrial projects in the area, one would expect the DEIR to factor this into the analysis. Unfortunately, this is not the case.

0-8.22
Cont.

Failure to recognize that the larger Project area is a disadvantaged community constitutes a substantive oversight, and there are additional deficiencies that further weaken the DEIR's effectiveness as a complete informational document. The Baseline Report documents several failures of disclosure and analysis in the Hazards and Hazardous Materials section, including:

First, the DEIR does not acknowledge the status of area sensitive receptors as being disproportionately burdened, which then leads the DEIR to underestimate the potential impacts of the Project on the community. As discussed, *supra*, the DEIR fails to properly analyze the Project's air quality impacts by not assessing impacts before the application of Project Design Features, which in turn skews the Health Risk Assessment's findings and the DEIR's impact significance conclusion. The DEIR's analysis of health risk does not comply with CEQA.

0-8.23

Second, the DEIR does not discuss the former Landfill No. 5 (Installation Restoration Program Site 3) that is located 1,700 feet east of the Project site along the proposed extension of Cactus Avenue. According to a recent memorandum from AFCEW/CIBW (2022), which is included in the Baseline Report, there may be Per- and Polyfluoroalkyl Substances (PFAS) in the former landfill. The landfill potentially received dried sludge from the wastewater treatment plant digesters and drying beds between 1970 and landfill closure in 1974. *See* Baseline Report at 3. Construction of Cactus Avenue and installation of supporting infrastructure to the Specific Plan area would disturb these former landfill soils. The DEIR should have included the landfill in the existing conditions and assessed disturbance of the landfill in the hazards and hazardous materials section so that mitigation could be identified, if warranted.

0-8.24

Third, the DEIR does not adequately study the potential for unexploded ordnance. Military munitions may potentially cause soil, groundwater and surface water contamination from munitions residues (including explosives and heavy metals) and may also present safety concerns around unexploded ordnances. *See* DEIR at 4.8-4. According to the Phase I report (DEIR Appendix J-1), the Project site was used for the purpose of ordnance and munitions storage and not their disposal. *See* DEIR at 4.8-24. However, given the history of explosive ordnance storage on the Project site as early as 1949, as

0-8.25

well as a former munitions burial area (Installation Restoration Program Site 25) located approximately 750 feet southeast of the Project site, an Unexploded Ordnance Survey should be prepared for the entire Project site prior to redevelopment.

The survey should include the Specific Plan area to ensure that ordnances will not be encountered during construction. More importantly, the survey should include the Conservation Easement property as well. The Conservation Easement property is not going to be developed or disturbed, and will be accessible to the public. *See* DEIR at 4.8-29. Any unexploded ordnances in the easement area will not be found during construction – but could be found inadvertently by the general public, which could present an enormous danger due to risk of detonation. To investigate open areas of ground, a geophysical survey should be performed using magnetic and electromagnetic techniques to detect ferrous objects in the subsurface. The survey should include more intrusive investigations in areas of potential concern identified by the geophysical survey. Mitigation measures should be identified to address the safe removal of any objects found and to reduce any significant impacts resulting from the release of hazardous materials into the environment that could affect sensitive receptors.

0-8.25
Cont.

B. The DEIR Fails to Identify Adequate Measures to Mitigate the Impacts of the Release of Hazardous Materials on Sensitive Receptors.

Mitigation Measure HAZ-1 addresses the abatement of hazardous building materials and requires implementation of the recommendations identified in the Phase 1 ESA (DEIR Appendix J-1). Specifically, the measure addresses the removal of 42 pole-mounted transformers and the hazardous materials associated with the poles (including transformer oil). The measure states “In the event that during removal activities, transformer oil is identified or suspected in underlying soils, an assessment of nearby soils and/or hardscapes for PCBs shall be performed in accordance with the requirements set forth in 40 CFR 761.” *See* DEIR at 4.8-31. As Mr. Sutton notes in the Baseline Report, unlike releases of motor oils that are relatively easy to identify in soils based on visual staining and odors, PCB-containing oils from transformers are typically clear to yellow in color and odorless. In other words, a release of transformer oil cannot always be easily identified through visual inspection of the surrounding soils, particularly if the release occurred years ago. *See* Baseline Report at 3 and 4. Therefore, mandatory testing for PCBs in the soils surrounding all poles with transformers should be conducted now and the DEIR should identify mitigation measures to address any contamination.

0-8.26

In sum, the DEIR must analyze the public health effects on sensitive receptors due to the Project’s air pollution and hazardous materials impacts and devise feasible, effective, enforceable mitigation for those impacts.

0-8.27

V. Cumulative Impacts

CEQA requires a discussion of the environmental impacts, both direct and indirect, of the proposed project in combination with all “closely related past, present and reasonably foreseeable probable future projects.” Guidelines § 15355(b); *see also* Pub. Res. Code § 21083(b); Guidelines §§ 15021(a)(2), 15130(a), 15358. The discussion of cumulative impacts must “reflect the severity of the impacts and the likelihood of their occurrence,” Guidelines § 15130(b), and must document its analysis with references to specific scientific and empirical evidence. *Mountain Lion Coalition v. Cal. Fish & Game Comm’n*, 214 Cal.App.3d 1043, 1047, 1052 (1989). A legally adequate cumulative impacts analysis views a particular project over time and in conjunction with other related past, present, and reasonably foreseeable future projects whose impacts might compound or interrelate with those of the project at hand. “Cumulative impacts can result from individually minor but collectively significant projects taking place over a period of time.” CEQA Guidelines § 15355(b). Cumulative impacts analysis is necessary because “environmental damage often occurs incrementally from a variety of small sources [that] appear insignificant when considered individually, but assume threatening dimensions when considered collectively with other sources with which they interact.” *Communities for a Better Env’t v. Cal. Res. Agency* (2002) 103 Cal.App.4th 98, 114.

Here, the analysis of cumulative impacts in the DEIR is inadequate. First, the list of reasonably foreseeable future projects considered in the DEIR is under-inclusive, especially in light of the potential geographic scope of certain potentially significant impacts. Specifically, the DEIR analysis fails to consider millions of square feet of proposed warehouse facilities, commerce centers, and business parks in the region in addition to the proposed Project. A summary of the proposed projects and estimated square footage of the facilities is provided below:

March JPA Projects

Meridian West Bldg 4	87,400 sq. ft.
Veteran’s Industrial Park	2,830,000 sq. ft.
Meridian D1 Gateway Aviation	1,158,000 sq. ft.

Riverside Projects

Old 215 Business Park	183,500 sq. ft.
-----------------------	-----------------

Moreno Valley Projects

Edgemont Commerce Center 1	170,000 sq. ft.
----------------------------	-----------------

0-8.28

Moreno Valley Business Center	168,000 sq. ft.
Compass Danbe Centerpointe	384,500 sq. ft.
PAMA Business Park	366,500 sq. ft.
World Logistics Center	40,400,00 sq. ft.
Heacock Commerce Center	957,000 sq. ft.

Perris Projects

Duke Warehouse	546,000 sq. ft.
Phelan Warehouse	102,500 sq. ft.
Operon HKI	160,500 sq. ft.
Harley Knox Industrial	156,000 sq. ft.
First Harley Knox Industrial	185,000 sq. ft.
Ramona Gateway	1,022,000 sq. ft.
Ramona and Brennan Warehouse	161,000 sq. ft.
Ramona Indian Warehouse	309,500 sq. ft.
OLC3 Warehouse	907,500 sq. ft.
Perris Valley Commerce Center	324,500 sq. ft.
Perris Morgan Industrial Park	296,500 sq. ft.
Chartwell Warehouse	141,000 sq. ft.
Redlands Avenue West Industrial	367,000 sq. ft.
Redlands Avenue West Industrial	258,000 sq. ft.
Wilson Avenue Project	215,500 sq. ft.

Unincorporated Riverside County Projects

Stoneridge Commerce Center	9,500,500 sq. ft.
Harvill Business Center	366,000 sq. ft.
Placentia Logistics Project	243,000 sq. ft.
Rider/Patterson Business Center	815,500 sq. ft.
Harvill and Rider	375,000 sq. ft.

Seaton and Perry	183,000 sq. ft.
Majestic Freeway Business Park 17	306,000 sq. ft.
Majestic Freeway Business Park 18	296,500 sq. ft.
Knox Business Park Bldg. D	724,000 sq. ft.
Knox Business Park Bldg. E	477,500 sq. ft.
Muranaka Warehouse Project	321,500 sq. ft.
Oleander Business Park	18,520,000 sq. ft.

O-8.28
Cont.

Together, these projects will result in hundreds of acres of ground disturbance, millions of square feet of new warehouse, business park and industrial uses, and thousands of truck trips, all of which will contribute significantly to impacts related to traffic, public safety, air quality, greenhouse gas emissions, public health impacts, and noise. When the impacts from the proposed Project are added to existing impacts and to impacts from all of the cumulative proposed projects, residents living in the surrounding communities are likely to face even greater exposure to traffic congestion, air pollution, and increasing health risks. In underrepresenting the cumulative conditions and proposed warehouse activity in the surrounding area, the DEIR fails to disclose and analyze the severity of the Project’s contributing impact to these cumulative harms.

VI. The DEIR Fails to Consider an Adequate Range of Alternatives.

A proper analysis of alternatives is essential to comply with CEQA’s mandate that, where feasible, significant environmental damage be avoided. Pub. Resources Code § 21102 (projects should not be approved if there are feasible alternatives that would substantially lessen environmental impacts); CEQA Guidelines §§ 15002(a)(3), 15021(a)(2), 15126(f). Every EIR must describe a range of alternatives to the proposed project that would feasibly attain the project’s basic objectives while avoiding or substantially lessening the project’s significant impacts. Pub. Resources Code § 21100(b)(4); Guidelines § 15126(d). Therefore, the discussion of alternatives must focus on project alternatives that can avoid or substantially lessening the significant effects of the project, *even if such alternatives would impede to some degree the attainment of the project objectives* or would be more costly. CEQA Guidelines § 15126.6(b), emphasis added; *see also Watsonville Pilots Assn. v. City of Watsonville* (2010) 183 Cal.App.4th 1059, 1089 (“[T]he key to the selection of the range of alternatives is to identify

O-8.29

alternatives that meet *most* of the project’s objectives but have a reduced level of environmental impacts”); emphasis added.

As a preliminary matter, the DEIR’s failure to disclose the extent and severity of the Project’s broad-ranging impacts necessarily distorts the analysis of Project alternatives. As a result, the alternatives are evaluated against an inaccurate representation of the Project’s impacts. Proper identification and analysis of alternatives is impossible until Project impacts are fully disclosed. Moreover, as discussed above, the document’s analysis is incomplete and/or inaccurate so that it is simply not possible to conduct a comparative evaluation of the Project’s and the alternatives’ impacts.

The DEIR analyzes four alternatives: 1) No Project; 2) Reduced Development Alternative; 3) Restricted Industrial Building Size Alternative; and 4) Reduced Cultural Resource Impact Alternative. The Restricted Industrial Building Size Alternative proposes a 20% reduction in potential industrial development for the Project area, but DEIR fails to contemplate an alternative (beyond the No Project Alternative) that does not include any industrial warehousing. Given a non-warehouse alternative’s ability to reduce the Project’s significant impacts and the extensive public opposition to siting warehouses so close to residential neighborhoods, this omission violates CEQA. For the reasons discussed below, the DEIR fails to provide a “reasonable range” of alternatives.

For an alternative to be considered, it must be able to substantially reduce the Project’s significant environmental impacts or offer substantial environmental advantages over the proposed project. *See Watsonville Pilots Ass’n*, 183 Cal.App.4th at 1089; *Cleveland Nat’l Forest Found. v. San Diego Ass’n of Gov’ts* (2017) Cal.App.5th 413, 436. Here, the DEIR acknowledges that even a mere 20% reduction in industrial warehouse development at the Project site would lessen the Project’s air quality, energy, greenhouse gas emissions, hazards/hazardous materials, land use/planning, noise, population and housing, public services, recreation, transportation, utilities/service systems, and wildfire impacts. *See* DEIR at 6-4 to 6-5, 6-27 to 6-40. This is important given that many of those impacts—including air quality and noise—remain significant and unavoidable under the proposed Project.

Indeed, removal of all industrial warehouse elements from the Project has the potential to further reduce vehicle trips and lessen the air pollutant emissions that would otherwise come from construction and operation of the proposed warehouses. *See* DEIR at 6-27; Baseline Report at 7. For example, on average, a warehouse development with its “relatively high number of both passenger car and heavy-duty truck trips” generates over three times as much NOx emissions as an office development of the same size. Baseline Report at 7-8 (Table 2). A non-warehouse alternative could lessen the impacts of the proposed Project while still offering redevelopment opportunities. Without a warehouse

O-8.29
Cont.

component, the Project's operational noise impacts could also go down. *Id.* at 6-34. The DEIR found that the Restricted Industrial Building Size Alternative would have similar construction and grading noise impacts as the proposed Project, but total elimination of warehouses would reduce that warehouse-based construction and grading noise, thereby potentially further reducing overall noise impacts.

A non-warehouse alternative could also readily meet all of the Project objectives. Here, the DEIR lists seven project objectives:

- Provide increased job opportunities for local residents through the provision of employment-generating businesses.
- Provide open space amenities to serve the region.
- Provide an active park consistent with the 2009 Safety Study prepared by March JPA.
- Complete the buildout of the roadway infrastructure by extending Cactus Avenue to the Development Area from its existing terminus, extending Barton Street from Alessandro Boulevard to Grove Community Drive, and extending Brown Street from Alessandro Boulevard to Cactus Avenue.
- Remove and redevelop a majority of the former munitions storage area of the March AFB.
- Encourage the use of alternative modes of transportation through the provision of a pedestrian and bicycle circulation system that is safe, convenient, and comfortable.
- Implement the terms and conditions agreed upon in the September 12, 2012, Settlement Agreement entered into between and among the CBD, the San Bernardino Valley Audubon Society, March JPA, and LNR Riverside LLC, as the complete settlement of the claims and actions raised in *Center for Biological Diversity v. Jim Bartel, et al.* to preserve open space through establishing a Conservation Easement.

O-8.29
Cont.

DEIR at 1.5. The DEIR rejected consideration of an “All Residential Alternative” because it “would not meet the basic Project objectives to provide increased job opportunities for residents through the provision of employment-generating businesses or to implement the terms and conditions of the CBD Settlement Agreement,” which requires a conservation easement. DEIR at 6-2 and 6-3. But an alternative that eliminates industrial warehouse use while still keeping the other economic components of the Project and maintaining the conservation easement would avoid both of those issues and still satisfy all of the Project objectives. It would still create increased job opportunities, provide open space amenities, allow for an active park, complete the build out of roadway structure, redevelop the former munitions storage area, encourage alternative transit, and satisfy the CBD Settlement Agreement through a conservation easement. While a warehouse-free alternative might achieve the Project’s first objective to a “lesser extent” than the Project, this is not sufficient to eliminate it from consideration. *See* DEIR at 6-27; *Mira Mar Mobile Comm. V. City of Oceanside* (2004) 119 Cal.App.4th 477, 489.

Finally, a non-warehouse alternative must be considered because it offers a fully feasible way to reduce the Project’s significant impacts while still meeting the Project’s objectives. For instance, the JPA could consider replacing warehouses with an alternative, less impactful industrial use. For instance, within the Industrial designation, the March General Plan contemplates research and development centers, maintenance shops, emergency service centers, vocational education and training facilities, and business and trade schools. Alternatively, the JPA could consider an alternative that amends the West Campus land use designations to eliminate the Industrial designation altogether. Though the March General Plan encourages a balance mix of land uses, industrial uses can be and have been sited on other portions of the March Air Force Base and need not necessarily be included in the West Campus subarea.

The DEIR’s failure to consider a non-warehouse alternative is especially egregious in light of the Project’s close proximity to thousands of homes and the repeated requests from R-NOW and other members of the public to consider alternative uses for the site. The DEIR’s Restricted Industrial Building Size Alternative is a strawman response to public concern regarding the Project warehouses. A 20% reduction to the warehouse component would alleviate the Project’s significant environmental impacts only to a limited degree, but the JPA must consider a full range of feasible alternatives that will *substantially* reduce these effects.

In this case, where the proposed Project presents very real dangers for the surrounding communities in a region already suffering from too many warehouse developments, it is especially important that the DEIR analyze alternatives that could avoid or lessen the Project’s impacts. *See* CEQA Guidelines § 15126.6(c). The DEIR’s failure to do so violates CEQA. *See Habitat & Watershed Caretakers v. City of Santa*

O-8.29
Cont.

Cruz (2013) Cal.App.4th 1277, 1304 (failure to consider limited-water alternative violates CEQA); *Save Round Valley Alliance v. County of Inyo* (2007) 157 Cal.App.4th 1437, 1464-6.5. Because the DEIR provides no reasonable explanation as to why a non-warehouse alternative that would reduce the inevitable damage from the proposed Project was not considered, the alternatives analysis must be revised to include a full analysis of such an alternative.

0-8.29
Cont.

VII. The Proposed Project Fails to Comply with the March General Plan Policy Requirements.

State Planning and Zoning Law (Gov't Code § 65000 et seq.) requires that development decisions be consistent with the jurisdiction's general plan. *See, e.g.*, Gov't Code §§ 65860, 66473.5, 66474, 65359, 65454. Thus, "[u]nder state law, the propriety of virtually any local decision affecting land use and development depends upon consistency with the applicable general plan and its elements." *Resource Defense Fund v. County of Santa Cruz* (1982) 133 Cal.App.3d 800, 806. Accordingly, "[t]he consistency doctrine [is] the linchpin of California's land use and development law." *Families Unafraid to Uphold Rural El Dorado County v. Board of Supervisors* (1998) 62 Cal.App.4th 1332, 1336.

It is an abuse of discretion to approve a project that "frustrate[s] the General Plan's goals and policies." *Napa Citizens for Honest Gov't v. Napa County* (2001) 91 Cal.App.4th 342, 379. The project need not present an "outright conflict" with a general plan provision to be considered inconsistent; the determining question is instead whether the project "is compatible with and will not frustrate the General Plan's goals and policies." *Napa Citizens*, 91 Cal.App.4th 379. Here, the proposed Project does more than just frustrate the General Plan's goals. It is directly inconsistent with numerous provisions in the General Plan—a violation of State Planning and Zoning Law.

0-8.30

Moreover, the DEIR pays short shrift to these inconsistencies and fails to analyze the Project's consistency with said policies. This omission violates CEQA, which requires an analysis of potential conflicts with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect. *See* CEQA Guidelines, App. G, § XI(b).

Some of the clear inconsistencies are as follows:

General Plan Policy	Project Inconsistency
Policy 2.4: Protect the interests of, and existing commitments to adjacent	The proposed Project would bring warehouse development into the heart of a

residents, property owners, and local jurisdictions in planning land uses.	site surrounded by residential neighborhoods on three sides in direct conflict with the express wishes and interests of those residents.
Policy 3.2: Manage the development and reuse of the Planning Area to...minimize impacts on natural environmental resources.	The proposed Project would have significant and unavoidable impacts on natural environmental resources, including Air Quality.
Policy 4.1: Develop and maintain a land use land for the Planning Area which proposes compatible land uses to create distinct, identifiable historic, commercial, industrial, public, and aviation areas.	The proposed Project would move Industrial and Business Park designations away from other industrial areas on the east end of the West Campus site and place it closer to residential areas.

0-8.30
Cont.

VIII. Conclusion

As set forth above, the DEIR does not come close to satisfying CEQA's requirements. At a fundamental level, it fails to take into account the Project setting when evaluating impacts to sensitive receptors and fails to provide a complete analysis of Project impacts, feasible mitigation measures, and alternatives. For these reasons, R-NOW respectfully requests that the March JPA not approve the West Campus Upper Plateau Project as proposed. All of these impacts must be more fully addressed, and a less impactful alternative analyzed, before the Project can be considered.

Subject: Review of Hazardous Materials, Air Quality, and Greenhouse Gas Impacts Analyzed in the Draft Environmental Impact Report for the West Campus Upper Plateau Project

Dear Ms. Borg:

Baseline Environmental Consulting (Baseline) has reviewed the Draft Environmental Impact Report (DEIR) for the West Campus Upper Plateau Project (project) in the City of Riverside, California, to determine whether potential environmental impacts related to hazardous materials, air quality, and greenhouse gas (GHG) emissions were properly evaluated. Based on our review, we have identified flaws in the DEIR analysis used to support the significance determinations. The specific concerns identified in our review of the DEIR for potential environmental impacts related to hazardous materials, air quality, and GHG emissions are described in detail below.

0-8.32

HAZARDOUS MATERIALS CONCERNS

Unexploded Ordnance Hazards

Currently, there are 14 earth-covered bunkers located within the Specific Plan Area that were used for storage of various weapons systems (e.g., bombs and missiles) from the mid-1950s until the early 1980s, as well as small arms ammunition until prior to base closure.¹ A former munitions burial area referred to as Installation Restoration Program Site 25 is located southeast of the Specific Plan Area within the Conservation Easement. Given the history of explosive ordnance storage and disposal within the Specific Plan Area and Conservation Easement, an Unexploded Ordnance Survey Report should be performed for the entire project site prior to project redevelopment to ensure the safety of future site users.

0-8.33

The survey should include the entire Specific Plan Area and Conservation Easement that would be accessible to the public. The findings of previous surveys (if any) should be included in the report. To investigate tracts of open land, a geophysical investigation could be performed using magnetic and electromagnetic techniques to detect ferrous objects in the subsurface. The survey should include more intrusive investigations in areas of potential concern identified by the initial

¹ Cabrera Services, Inc., 2006. Final Preliminary Assessment and Site Inspection Report for the Former Weapons Storage Area, March Air Force Base, Riverside, California. September.

Ms. Carmen J. Borg
8 March 2023
Page 2

geophysical survey. Based on the findings of the survey, the report should include recommendations for the safe removal and disposal of potentially unexploded ordnance.

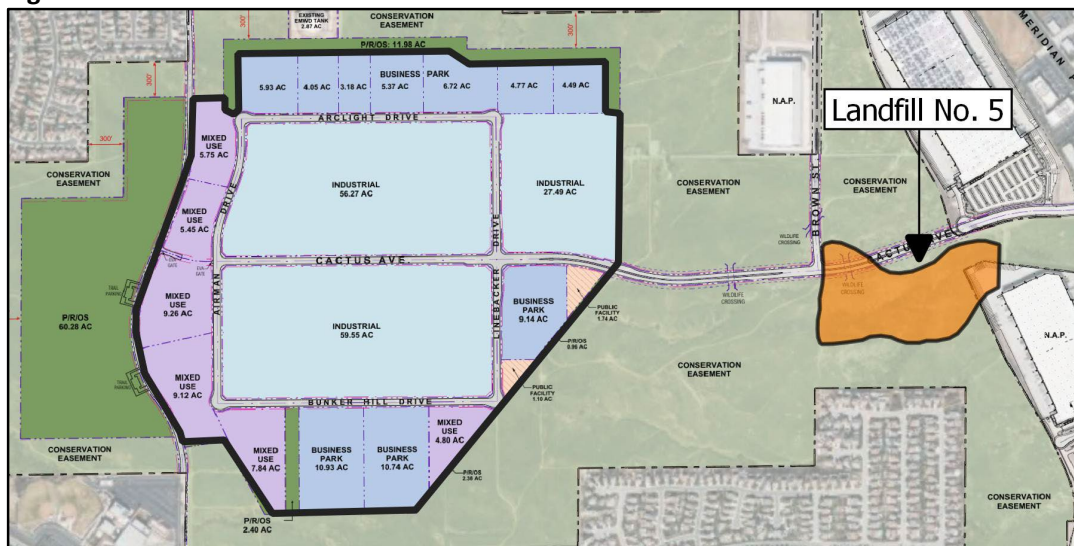

The DEIR should be revised to include a summary of previous unexploded ordnance surveys (if any) in the project vicinity and a mitigation measure that requires the preparation of an Unexploded Ordnance Survey Report and implementation of associated recommendations to safely remove and dispose of potentially unexploded ordnance prior to construction of the project.

0-8.33
Cont.

Residual Contamination from Former Landfill No. 5

The DEIR does not discuss the former Landfill No. 5 associated with the former March Air Force Base (also referred to as Installation Restoration Program Site 3) to the east of the Specific Plan Area within the Conservation Easement. The proposed extension of Cactus Avenue would traverse the former landfill (Figure 1).

Figure 1. Former Landfill No. 5 Location

0-8.34

The landfill was used from 1954 to 1974 and received household and dumpster waste, construction debris, and military waste (e.g., spent munitions, medical waste, fire hoses) from the March Air Force Base. Contaminants found in the wastes included volatile organic compounds, pesticides, polychlorinated biphenyls (PCBs), polynuclear aromatic hydrocarbons (PAHS), and munitions residues. In 1995, approximately 223,220 cubic yards of landfilled materials and soil were excavated and removed from the former landfill site. Confirmation sampling conducted after the excavation activities indicated that residual PCBs and PAHS remained in the former landfill area.²

² United States Department of the Air Force, 2004. Former March Air Force Base, California, Operable Unit 2, Air Force Real Property Agency, Record of Decision. April.

Ms. Carmen J. Borg
8 March 2023
Page 3

According to a recent report prepared for the former March Air Force Base, there may be per- and polyfluoroalkyl Substances (PFAS) in the former landfill because it potentially received dried sludge from the wastewater treatment plant digesters and drying beds between 1970 and landfill closure in 1974.³ The March Air Force Base began purchasing and using multiple aqueous film-forming foam firefighting agents containing PFAS to extinguish petroleum fires and for use in firefighting training activities in 1970. Aqueous film-forming foam was also used in hangars with foam fire suppression systems, at plane crash and emergency response sites, and at firefighting equipment testing areas. The historical use of foam firefighting agents has resulted in the presence of PFAS in groundwater and soil at and near the former March Air Force Base.

PFAS persist in the environment and current scientific research indicates that human exposure can affect reproduction, thyroid function, the immune system, and injure the liver. Two of the most studied PFAS are perfluorooctane sulfonic acid (PFOS) and perfluorooctanoic acid (PFOA). The United States Environmental Protection Agency has published a drinking water health advisory level of 70 nanograms per liter (ng/L) for the sum of PFOS and PFOA. In February 2020, the State Water Board Division of Drinking Water (DDW) issued drinking water response levels (RLs) for PFOS and PFOA at 40 and 10 ng/L, respectively, which are the concentrations at which the DDW recommends removing a public water system from service or providing treatment.

The DEIR should be revised to evaluate the potential impacts that could result from disturbing residual soil contamination in former Landfill No. 5, including potential PFAS. The analysis should address potential impacts from soil disturbance during construction of the Cactus Avenue extension and supporting infrastructure for the proposed project. The analysis should also address potential impacts from changes to drainage patterns and stormwater runoff that could potentially increase leaching of soil contamination to groundwater.

Inadequate Mitigation of Transformer Oil Spills

As discussed on page 4.8-19 of the DEIR, there are 42 pole-mounted transformers on the project site that may contain oils with PCBs, which are highly carcinogenic chemical compounds that persist in the environment. DEIR Mitigation Measure (MM) HAZ-1 (page 4.8-31) requires the removal of the pole-mounted transformers and states “In the event that during removal activities, transformer oil is identified or suspected in underlying soils, an assessment of nearby soils and/or hardscapes for PCBs shall be performed in accordance with the requirements set forth in 40 CFR 761.”

Unlike releases of motor oils that are relatively easy to identify in soils based on visual staining and odors, PCB-containing oils from transformers are typically clear to yellow in color and odorless. In other words, a release of transformer oil cannot always be easily identified based on inspection of the surrounding soils, particularly if the release occurred years ago. Therefore, we recommend that

mandatory testing for PCBs in the soils surrounding all poles with transformers be conducted now and the DEIR should identify mitigation measures to address any contamination.

↑ 0-8.35
Cont.

AIR QUALITY CONCERNS

Inadequate Evaluation of Project Design Features

The DEIR includes Project Design Feature (PDF) AQ-1 that requires all offroad equipment used during construction meet the California Air Resources Board Tier 4 Final emission standards or better (page 1-7). Like a mitigation measure, implementation of Tier 4 Final emissions standards under PDF-AQ-1 would reduce the project's air pollutant emissions and associated air quality impacts. The DEIR included the use of Tier 4 final emission standards under PDF-AQ-1 in the analysis of the project's unmitigated air quality impacts. Based on the *Lotus v. Department of Transportation* (223 Cal. App.4th 645) decision, the DEIR should be revised to first evaluate the project's air quality impacts without implementation of PDF-AQ-1, and then evaluate the effectiveness of PDF-AQ-1 to reduce air quality impacts.

0-8.36

Emergency Generators

The DEIR does not discuss if emergency generators would be required to operate the proposed warehouses in the event of a power loss. In our professional experience, warehouse facilities typically include at least one stand-by emergency generator. Therefore, the DEIR should be revised to discuss the potential need for emergency generators and estimate the associated air pollutant emissions and health risks from annual maintenance and testing of the generators.

0-8.37

Cumulative Health Risks

Based on a study prepared by the Riverside Neighbors Opposing Warehouses, there are about 280 existing and planned warehouses located in the project vicinity along the I-215 highway corridor (**Figure 2**). These warehouses would generate about 90,000 truck trips daily.⁴ Based on review of aerial images, most of the existing warehouses were built in the last 15 years.

In 1996, Caltrans verified that trucks travelling along I-215 at the I-60 junction accounted for about 12.3 percent of the total daily traffic volume. In 2020, Caltrans estimated that the total average annual daily traffic volume along I-215 at the I-60 junction was about 353,000 vehicles per day.⁵ The additional truck traffic volume from the 280 existing and planned warehouses in the project vicinity could account for up to about 25.5 percent of the total daily traffic volume. This is a significant increase in the volume of diesel trucks travelling along I-215 in recent years.

0-8.38

⁴ Riverside Neighbors Opposing Warehouses, 2023. Warehouses on the 215/60 Corridor. <https://radicalresearch.shinyapps.io/MarchJPA/>. Accessed on March 3.

⁵ Caltrans, 2020. Traffic Census Program, Truck Traffic: Annual Average Daily Truck Traffic for Truck Traffic on California State Highways.

Figure 2. Existing and Planned Warehouses in Project Vicinity

Notes: Warehouse shown are color-coded by jurisdiction.
Source: <https://radicalresearch.shinyapps.io/MarchJPA/>.

There are residential neighborhoods adjacent to I-215 that are exposed to the emissions of diesel particulate matter from the exhaust of trucks travelling along the highway corridor. The DEIR provides no analysis of the cumulative health risks to the nearby residential communities along I-215 from truck trips generated by the project and existing and planned warehouses in the project vicinity.

It is the lead agency's responsibility to ensure cumulative health risks are adequately evaluated. The U.S. Environmental Protection Agency's guidance for air toxic analyses at the community-scale level considers a cancer risk of 100 in a million or less to be within the "acceptable" range of cancer risk.⁶ This is a common cumulative threshold that is considered by other lead agencies in California, such as the City of San Francisco. Given the surrounding and the nature of the proposed project, the DEIR should be revised to evaluate the cumulative health risks to nearby residences due to the high volume of diesel truck traffic that would be generated by the project and the heavy density of existing and planned warehouses in the project vicinity.

Page 6

GREENHOUSE GAS EMISSIONS CONCERNS

Consistency with 2022 CALGreen

The DEIR briefly discusses the 2019 California Green Building Standards Code (CALGreen) (page 4.7-23) but does not reference the current 2022 CALGreen code that went into effect on January 1, 2023, and fails to mention any of the mandatory electric vehicle (EV) and photovoltaic (PV) infrastructure requirements that apply to non-residential structures such as business parks and warehouses. The EV and PV infrastructure requirements under 2022 CALGreen are some of the most impactful provisions for proposed developments to reduce GHG emissions.

According to 2022 CALGreen, for non-residential projects with more than 200 parking spaces, at least 20 percent of the spaces must be EV Capable⁷, and 25 percent of those spaces must be equipped with Level 2 Electric Vehicle Supply Equipment. CALGreen also includes voluntary measures organized into two tiers (Tier 1 and Tier 2) that go beyond the minimum EV infrastructure requirements. Under 2022 CALGreen, new office developments must provide a minimum PV system of 2.59 watts per square foot (W/ft²) of floor area, retail 2.62 W/ft² of floor area, and warehouses 0.39 W/ft² of floor area.

The DEIR includes MM-GHG-7 (page 4.7-42), which requires the installation of circuitry and capacity for a minimum of 20 EV charging stations consistent with the County's Climate Action Plan. The DEIR does not identify how many parking spaces will be included in the project design, but assuming there will be at least 200 spaces, then the 20 EV Capable spaces required under MM-GHG-7 are substantially below the minimum 20 percent requirement described under 2022 CALGreen.

The DEIR also includes PDF-GHG-1 (page 1-7), which requires the installation of a conduit in logical locations that would allow for the future installation of charging stations for electric trucks. This design feature is vague and fails to provide adequate performance standards to assure that the project will be designed to comply with 2022 CALGreen.

The DEIR includes MM-GHG-1 (page 4.7-41), which requires the installation of a PV system that will generate at least 30 percent of the building's power requirements. However, the DEIR fails to evaluate if this measure is adequate to meet the PV system requirements described under 2022 CALGreen. As an example, **Table 1** shows that the estimated PV system size for one of the proposed business parks would need to provide about 58 percent of the building's electricity demand to meet the 2022 CALGreen requirements. Therefore, implementation of MM-GHG-1 would be inadequate to satisfy the requirements of 2022 CALGreen.

0-8.39

⁷ "EV capable" means a vehicle space with electrical panel space and load capacity to support a branch circuit and necessary raceways, both underground and/or surface mounted, to support EV charging.

Table 1. CALGreen 2022 PV System Design Requirements for a Project Business Park

Land Use	Size (ft ²) ^A	Electricity Demand (kWh/year) ^B	2022 CALGreen PV System Design Requirements ^C				
			PV Capacity Factor (W/Ft ²)	PV System Size (kW)	Annual Solar Activity Factor for Riverside (kWh/kW) ^D	Annual PV System Generation (kWh)	Percent of Building Energy Use
Business Park	1,280,403	12,272,774	3.13	4,008	1,790	7,173,714	58%

0-8.39
Cont.

Carbon Neutrality

In accordance with Executive Order B-55-18, California is committed to achieving carbon neutrality by 2045. The primary sources of GHG emissions from the project would be from building energy use and transportation; therefore, the DEIR should have evaluated if the project can be designed to ensure it will achieve carbon neutrality by 2045. The DEIR should be revised to evaluate the feasibility and effectiveness of installing EV parking and PV infrastructure beyond the minimum requirements of 2022 CALGreen to reduce the project’s GHG emissions and align the project with California’s long-term climate goal of carbon neutrality by 2045.

0-8.40

ALTERNATIVE ANALYSIS

Page 4.2-28 of the DEIR identified a significant and unavoidable impact related to operational-source emissions of criteria air pollutants. The primary source of operational emissions is from mobile sources (e.g., passenger cars and trucks). The DEIR did not summarize or evaluate the contribution of each proposed land use to the project’s overall mobile emissions.

In general, a warehouse development generates a relatively high number of both passenger car and heavy-duty truck trips that result in substantially higher air pollutant emissions than an office development of a similar size. For example, **Table 2** summarizes the estimated mobile emissions of nitrogen oxides (NOx) from an office versus a warehouse development of the same size (100,000 square feet). As shown in **Table 2**, the warehouse generates over three times as much NOx emissions per day from mobile sources than the office.

0-8.41

The DEIR alternative analysis should be revised to provide a detailed analysis of how proposing more office or other land use types than warehouses would help to substantially reduce the mobile emissions and associated severity of air quality impacts from the proposed project.

Ms. Carmen J. Borg
 8 March 2023
 Page 8

Table 2. Estimated Mobile NOx Emissions for an Office Versus a Warehouse

Land Use	Vehicle Type	Trips/KSF ^A	Size (KSF)	Total Trips	Miles per Trip ^B	Daily VMT	NOx EF (g/mi) ^C	NOx Emissions (g/day)
Office	Passenger	11.06	100	1,106	20	22,120	0	818

0-8.41
Cont.

CONCLUSIONS

Based on our review of the DEIR, there is substantial evidence that the project has not properly evaluated environmental impacts related to hazardous materials, air quality, and GHG emissions. Therefore, Baseline recommends that the DEIR be revised and recirculated to address the environmental concerns described above.

0-8.42

Sincerely,

Patrick Sutton,
 Principal Environmental Engineer

California warehouse boom comes with health, environmental costs for Inland Empire residents

BY JIM NEWTON

Listen to this article

IN SUMMARY

In 1980, the Inland Empire was home to 234 warehouses. There are now more than 4,000, providing significant economic benefits for the region. But this growth also has consequences: more unhealthy air days in predominantly Latino communities. Following the release of a new report, a coalition is asking state leaders to intervene.

3/2/23, 11:21 AM

Inland Empire warehouse boom risks health, climate - CalMatters

Drive east from downtown Los Angeles, and the scenery thins out. The land grows drier, the hills rougher. The desert encroaches. Beverly Hills and Hollywood are replaced by Pomona, Fontana, Rialto, Redlands.

This is the Inland Empire, home to more than 4 million people and perched at the periphery of Los Angeles. Some dismiss it as the [“land of cheap dirt.”](#)

It's not just any cheap dirt, though. It's cheap dirt within a few hours' drive of one of the world's largest port complexes – Los Angeles and Long Beach together represent America's chief point of importation from Asia – and well-positioned to feed the nation's growing obsession with ordering goods online and expecting them to arrive instantly.

The result: California's Inland Empire has become home to a cascade of warehouses.

Today, warehouses occupy about 1 billion square feet of the Inland Empire. Another 170 million square feet has either been approved and is awaiting construction, or is pending approval from a local government.

In 1980, the region was home to 234 warehouses; there are now more than 4,000. And individual warehouses are getting bigger, too. Nearly 40 square miles of the region's land today sit beneath the roof of a warehouse.

With that growth have come jobs and benefits. The Inland Empire has been quick to rebound from COVID and is chugging along at employment levels that resemble a pre-pandemic economy.

But warehouses and the industries they support also carry consequences. Warehouses are not standalone buildings; they take in goods and move them out again – mostly with trucks, which burn fuel and clog up streets and highways. The 4,000 warehouses that line the region's transportation corridors generate some 600,000 truck trips every day, producing a staggering 50 million pounds of carbon dioxide.

The implications for climate change and personal health are daunting. In just one year, from 2019 to 2020, the number of unhealthy air days in San Bernardino County jumped from 15% of the calendar to 20% of all days. And, predictably, the negative effects of that pollution and related traffic congestion are overwhelmingly concentrated in neighborhoods inhabited mostly by Latinos and low-income residents.

Small cities such as Fontana show the effects of this hellbent absorption of warehouses. With a population of just over 200,000 people, Fontana houses distribution centers for Coca-Cola, Target, Smart & Final and FedEx, among others. Since 2010, Fontana has approved more than 70 new warehouses, which cover some 860 acres and produce more than 16,000 truck trips a day.

Those findings are part of a groundbreaking project spearheaded by a group of activists and analysts who have created a database and map to track the growth of warehouses in the region. One of them is [Susan Phillips](#), a professor of environmental analysis at Pitzer College and director of the Robert Redford Conservancy for Southern California Sustainability.

“This is really, really scary,” she said in an interview, adding that some planners seem not to grasp the problem while others willfully ignore its implications. “They’ve made the choice not to care about the health impact.”

The growth in warehouses is in part a reflection of changes in the national and international economy. Indeed, most of the goods that pass through these warehouses are not bound for the Inland Empire at all. It's merely a waystation for everything from pharmaceuticals to toys, arriving from Asia and making their way to points east of Fontana or San Bernardino.

The phenomenon also reveals holes in the region's approach to planning. Warehouses typically are approved by local officials, often with little consideration for their impact on neighbors even though the cumulative effect of the new warehouses is regional rather than localized (pollution and traffic don't stop at a city's edge). But calls for regional planning test the Inland Empire's politics and its structure, leading to [confusing, uncoordinated policy decisions](#).

In response, Phillips and her colleagues produced a breakthrough, interactive map called [Warehouse CITY](#). It cuts through confusing government jargon – some cities label warehouses as “warehouses” whereas others rely on euphemisms such as “light industrial property” – and puts together a searchable, overarching look at the growth in warehouses in recent years. This allows users to chart the development of these buildings across Southern California and visualize the footprint.

<https://calmatters.org/commentary/2023/01/inland-empire-california-warehouse-development/>

2/3

0-8.43
Cont.

It also explains why this is so urgent for the people who are tracking this issue. They have gathered their findings in a report entitled [“A Region in Crisis,”](#) which they forwarded to Gov. Gavin Newsom this week, along with a letter urging him to intervene.

The coalition called on Newsom to declare a “state of emergency and public health crisis in the Inland Empire.” They also asked state leaders to adopt a moratorium on new warehouse construction until the health and environmental consequences of this explosive warehouse growth can be better understood.

That’s a tall order, one that will pit the interests of some of the nation’s largest manufacturers and distributors against local concerns. It will invite the typical decrying of NIMBYism, and it will hit residents where they live – in availability of jobs, the health of their air and the vitality of their communities.

Given the stakes for the region and the political test this issue poses for local and state leaders, CalMatters contributor [Jim Newton](#) will be revisiting this subject again in the coming months.

Inland Empire residents are fighting warehouse sprawl

A coalition is calling for a moratorium of up to two years on new warehouse development in Southern California's Inland Empire, asking Gov. Gavin Newsom to declare the region's warehouse sprawl a "public health emergency." (Robert Gauthier / Los Angeles Times)

BY RYAN FONSECA | STAFF WRITER

FEB. 7, 2023 5:58 AM PT

O-8.43
Cont.

Good morning, and welcome to the Essential California [newsletter](#). It's **Tuesday, Feb. 7.**

E-commerce has created a world where we can order something with a few quick taps on our phones, then find it on the doormat within days (or even hours).

For a growing number of consumers, there's a decent chance the contents of their packages came from a warehouse in the Inland Empire.

The region, which includes large swaths of communities in Riverside and San Bernardino counties, has become the dominion of thousands of massive warehouses, storing millions of consumer goods trucked in from coastal ports and bound for front doors and mailboxes across California and the nation.

ADVERTISEMENT

According to one research group's mapping data, warehouses cover more than 1.5 billion square feet of land there (including parking lots). An additional 170 million square feet of warehouses are planned or under construction, enough to cover the city of West Hollywood about three times over.

The resulting impacts have many residents, farmers and environmental advocates worried.

Rachel Uranga covers transportation and mobility for The Times and [reported on the changing landscape in the Inland Empire](#). She writes:

Residents are questioning whether they want the region's economy, health, traffic and general ambiance tied to a heavily polluting, low-wage industry that might one day pick up and leave as global trade routes shift.

Rachel told me the issue is the "perfect intersection" of business, consumer culture and transportation issues.

O-8.43
Cont.

“E-commerce is really reshaping parts of Southern California,” she told me. “For a lot of people, it’s out of their sight — the only way they see it is the little Amazon truck comes up and delivers your packet and leaves ... but it’s so deeply changed [the IE].”

Moving thousands of warehouses’ worth of product relies on big, diesel-burning trucks, which clog and crack local streets and freeways. They also contribute to the region’s terrible, harmful air quality.

The IE now holds the crown for smoggiest place in the U.S., according to the [American Lung Assn.](#) The constant stream of trucks rolling to and from all those warehouses “spew out a cocktail of pollutants, including particulates that lodge in human lungs,” Rachel reports.

Researchers have linked the truck pollution to serious health hazards such as asthma, decreased lung function in children and cancer.

“We know diesel exhaust is a killer,” William Barrett, national senior director of clean air advocacy for the American Lung Assn., told Rachel. “It’s one of the most damaging things that your lungs can experience.”

A family walks in their Jurupa Valley neighborhood, which is surrounded on two sides by giant warehouses, in 2021. (Gina Ferazzi / Los Angeles Times)

Residents, advocates and environmental researchers want that to change. A coalition of more than 60 environmental, labor, community and academic groups [wrote a letter to Gov. Gavin Newsom](#), asking him to declare the region’s warehouse sprawl a “public health emergency.” The group also called for a moratorium of up to two years on new warehouse development in the region.

The group has accused local politicians of “environmental racism,” Rachel reports, contending they’ve been “ignoring health impacts while collecting donations from

O-8.43
Cont.

Inland Empire has become the realm of warehouses, worrying residents - Los Angeles Times developers and their allies.”

Some cities in and near the Inland Empire have already put a hold on new warehouses. A spokesperson for Newsom did not say whether the governor supported a regional moratorium, but pointed to Newsom’s order that heavy-duty truck manufacturers transition to zero-emission vehicles by 2045.

In the meantime many IE residents continue to live in the shadows of warehouses, breathing harmful pollutants. One resident-turned-activist Rachel spoke with described children waking up “with bloody noses on their pillows.”

“We have the worst air quality. We have gridlock,” the resident said. “We have streets and communities that were never built for global logistics.”

You can read Rachel’s [full reporting on the issue here](#).

Warehouse boom transformed Inland Empire. Are jobs worth the environmental degradation?

A Walmart distribution center in Eastvale along I-15. (Robert Gauthier / Los Angeles Times)

BY RACHEL URANGA
STAFF WRITER | FOLLOW

FEB. 5, 2023 UPDATED 10:42 AM PT

O-8.43
Cont.

For decades, Bosch Dairy in Ontario, where three generations raised cattle, was a bucolic outpost with fields of cows and rows of eucalyptus to cut the driving wind that came down the Cajon Pass.

A few years ago, Bud Bosch noticed semitrailers occasionally rumbling along the two-lane rural road by his property. Soon, dozens were kicking up dust, night and day, plying roads made for tractors.

Bosch thought he had escaped the explosion of warehouse development that has wiped out farmland and open space. But the ecommerce boom of the pandemic accelerated the land grab, and the region became ever more hardscaped into the staging point for trains and trucks carrying goods from the ports of Los Angeles and Long Beach to the rest of the nation.

Bud Bosch, 58, at Bosch Dairy in Ontario. (Irfan Khan / Los Angeles Times)

There are 170 million square feet of warehouses planned or under construction in the Inland Empire, according to a [recent report by environmental groups](#). And despite fears of a recession, demand hasn't ebbed.

ADVERTISEMENT

O-8.43
Cont.

But the rapid transformation of semirural areas into barrens of concrete tilt-up “logistic parks” is encountering a backlash. Residents are questioning whether they want the region’s economy, health, traffic and general ambiance tied to a heavily polluting, low-wage industry that might one day pick up and leave as global trade routes shift.

Several Inland Empire cities, including Colton and Norco, have placed building moratoriums on warehouses, as has Pomona, which borders the region.

Environmental groups are pushing Gov. Gavin Newsom to declare a state of emergency, hoping to keep new warehouses away from homes and schools, where heavy truck traffic can expose children to high levels of toxic diesel emissions that have been linked to respiratory illness.

“Warehouse-induced pollution has created a state of environmental injustice and a public health crisis in San Bernardino and Riverside counties,” dozens of labor, environmental and community groups said in a letter last month urging Newsom to implement a regionwide moratorium on warehouses.

Trucks parked at a Walmart distribution center in Eastvale. (Robert Gauthier / Los Angeles Times)

The group accused local politicians of environmental racism, ignoring health impacts while collecting donations from developers and their allies.

A spokesperson for Newsom said in an email to The Times that “California is taking urgent action to clean the air in communities hardest hit by pollution,” pointing to the governor’s order requiring heavy-duty truck manufacturers to transition to zero-emission vehicles by 2045. She did not say whether the governor supports a moratorium.

Local officials like San Bernardino County Supervisor Curt Hagman argue that a halt to building could have grave consequences.

O-8.43
Cont.

“Lately, critics have called for warehouse moratoriums or outright bans. Their misguided proposals gloss over the real-world and draconian impact their potential bans would have on supply chains in local communities and the entire region,” he wrote in an [opinion piece in the San Bernardino news outlet the Sun](#). “If we fail to keep pace with the growing demand for additional warehouse space, the result will be immediate and far-reaching throughout the Inland Empire — loss of good-paying jobs, less affordable housing, fewer environmental benefits and community infrastructure improvements, not to mention the gains other jurisdictions will make at our expense.”

On a corner of the Bosch farms, cows lie in the shade of eucalyptus trees. The area was once largely an agricultural zone that has given way over the last decade to home tracts and warehouses. Heavy trucks have cracked the asphalt streets.

“We don’t even take the street anymore,” said Bosch, pointing to a road that leads to his family’s ranch home, where his son and grandchildren now live. He said it’s too dangerous.

An Amazon truck negotiates a sharp turn on Schaefer Avenue near Bosch Dairy. (Irfan Khan / Los Angeles Times)

O-8.43
Cont.

“The trucks, they don’t watch out. They think it’s a dead street.”

In Ontario, there are [an estimated 95,000 daily truck trips](#) — nearly two for every household.

More warehouses, more trucks

A sampling of cities where warehouse growth has attracted more trucks, adding more pollution.

Cities	Number of warehouses	Daily truck trips
Los Angeles	808	48,000
Ontario	664	95,000
Fontana	325	53,000
Rancho Cucamonga	2...	32,...
Riverside	2...	35,0...
San Bernardino	2...	34,...
Moreno Valley	85	31,...

Truck trips are estimated based on a rate of 0.67 trips per 1,000 square feet of warehouse floor space. Warehouse City data from Dec. 28, 2022

LOS ANGELES TIMES

At one point, Bosch sought to expand his dairy farm, but the warehouse economy has become so pervasive that it priced him out.

“I asked one guy if I could rent his dairy, and he said, ‘Nah, why put up with the hassle of you renting?’”

Bosch recalled, adding that owners earn more selling parking space. “The income from truck parking is lucrative.”

The logistics industry has moved into a void left as higher-wage jobs in manufacturing, defense and

aerospace disappeared, converting largely agricultural and vacant land into the hub of America’s retail economy. The industry added more jobs in the Inland Empire than in any other part of the state. In 2022, it created 24,400 jobs in the area; in 2021, it created 27,400, according to John Husing, an economic consultant who specializes in logistics in the Inland Empire. Median wage ranges from \$18.57 an hour for warehouse workers to \$24.93 for drivers, he said.

“This is a job generator like mad,” he said. “Amazon has more than a dozen facilities out here. When the pandemic hit and people could not buy services, they converted to buying stuff, and a lot of that was done online. That really increased employment in the logistics out here, and it has held ever since.”

During the height of the pandemic, ecommerce made up 16% of U.S. retail sales, according to government data. Employment in the logistics industry was 51% higher at the end of last year than in February 2020, according to Southern California Assn. of Governments.

O-8.43

Amazon and FedEx big rigs pass a neighborhood en route to warehouses in Jurupa Valley in Riverside County. (Gina Ferazzi / Los Angeles Times)

Truck drivers delivered every type of consumer good imaginable from the seaports and airports, as workers in the warehouses unloaded, sorted and reloaded them onto intermodal containers to be hauled by train and long-haul tractor-trailers across the deserts.

UPS and FedEx have Southern California regional operations in Ontario International Airport, Husing noted, which has become one of the nation’s fastest-growing cargo hubs. Amazon is [the region’s largest private employer](#).

ADVERTISEMENT

But other economists say many of those jobs don’t pay close to a living wage. The median hourly pay in the region is almost \$5 below the California average, and [turnover is high](#) because of the grueling, nonstop work.

“Even with this impressive growth in the Inland Empire, logistics-sector jobs are generally lower-paying jobs, and they’re at very high risk of automation,” said Gigi Moreno, an economist at the Southern California Assn. of Governments. “You have automation and artificial intelligence in the logistics sector displacing workers, which

O-8.43
Cont.

means that the industry may not be able to support as many jobs as we do today. And this is even before considering any of the moratoriums on building warehousing. This is just the nature of what’s going on in the sector.”

The changes have strained communities. Many warehouses are built in low-income areas, where residents must put up with the traffic and pollution.

CALIFORNIA

When your house is surrounded by massive warehouses

Oct. 27, 2019

When the San Bernardino County Board of Supervisors met to vote on a project to rezone [a semirural neighborhood in Bloomington for a massive warehouse complex](#), dozens of residents, activists and union construction workers came to speak passionately for and against it.

Warehouse growth

The growth of warehouses has averaged about 50 million square feet of space a year over the last five years. In the last 10 years, more than 90% of the growth was in Riverside and San Bernardino counties, the Warehouse City tool reveals.

The board unanimously approved it, allowing the developer, Howard Industrial Partners, to build a warehouse and distribution space the size of 56 football fields. To make room, the school district agreed to relocate Zimmerman Elementary.

Environmental justice and conservation groups [sued the county](#) for neglecting to properly analyze the potential environmental damage. When operational, their lawyers argue, the complex would add thousands of diesel truck trips daily — on top of the truck traffic already choking the area. The lawsuit is pending, but families have agreed to

sell their homes to make way for the new buildings.

“Development is creating an employment base and is an economic driver,” said Tim Howard, a founding partner of Howard Industrial Partners. He said warehouse projects have “transformed cities” like Fontana, providing employment opportunities and raising the quality of life.

O-8.43
Cont.

Diesel truck traffic has increased with the addition of warehouses, causing more air pollution in the Southland. (Gina Ferazzi / Los Angeles Times)

But smog in the Inland Empire — largely caused by big-rig exhaust — is the worst in the nation, according to the the American Lung Assn.

Last year, California Assembly Majority Leader Eloise Gómez Reyes (D-Grand Terrace) [introduced legislation](#) that would have required a 1,000-foot buffer zone between new warehouses and homes, schools, day-care centers, playgrounds and other areas where people gather.

“If you’re concerned about the health of the community, you’re not going to build a warehouse with diesel trucks coming in and out, spewing diesel particulate matter right next to the schools or right next to the homes,” she said.

The bill also tacked on labor requirements for new structures.

ADVERTISEMENT

But it faced opposition from a wide array of business groups and local municipalities. Hagman, then the chair of the San Bernardino County Board of Supervisors, opposed

O-8.43
Cont.

the legislation, writing to state Senate committee members that it “erodes local land use authority” and could put the county at a competitive disadvantage.

Reyes pulled the proposal after a state Senate committee sought to replace the setback provision with a one-year ban on warehouse construction, a move she felt went too far and would cause further polarization.

“I’ve never been anti-warehouse,” she said. “If in each of our cities and in each of our counties, if they did the planning of the communities in a responsible way, we wouldn’t be dealing with this, right?”

“You could still have the warehouses,” she added, “but they would be planned in places where they’re not next to the homes. They’re not next to the schools. They’re not next to the day-care centers.”

Critics say that for too long, local governments have been part of the problem, rubber-stamping the projects and ignoring state environmental laws and the progressive damage that warehouses have caused communities.

There is “a very weak and minimal analysis” of the environmental damage distribution centers have wrought, said Susan Phillips, director of the Robert Redford Conservancy for Southern California Sustainability. Working with Radical Research, a consulting group specializing in atmospheric pollution, the conservancy released a mapping tool, “Warehouse City,” that shows the breadth of industry in the region overlaid with estimated truck trips generated and public data on pollution.

The environmental impact reports that are required by the state, she said, “are supposed to account for cumulative impacts, but they’re rarely adequate.”

The tool shows that the region has roughly 4,000 warehouses covering more than 1.5 billion square feet, including parking lots. More than 300 warehouses are 1,000 feet or less from 139 schools.

“The number of warehouses and the square footage of warehouses is mind-boggling,” she said.

ADVERTISEMENT

O-8.43
Cont.

Thirty years ago, there were 1,600 warehouses in the region, creating 140,000 truck trips daily, said Mike McCarthy, who runs Radical Research. The mapping found that the industry now generates more than half a million daily truck trips — nearly four times the diesel traffic as the population has almost doubled. The researchers also found that the average warehouse 30 years ago was about half the size of those built today, which average 500,000 square feet.

“They are running out of space; they are starting to go into the high desert, Imperial Valley and even the Central Valley,” Phillips said. “But they’re not stopping putting warehouses next to homes and schools in the Inland Empire. The amount of space they are using is leaving little space for anything else.”

The diesel trucks that serve warehouses spew out a cocktail of pollutants, including particulates that lodge in human lungs. Studies have linked the pollution to asthma, decreased lung function in children and cancer.

CALIFORNIA

Southern California warehouse boom a huge source of pollution. Regulators are fighting back

May 5, 2021

“We know diesel exhaust is a killer,” said William Barrett, national senior director of clean air advocacy for the American Lung Assn. “It’s one of the most damaging things that your lungs can experience.”

The rise in pollution and fears over climate change have pushed California air regulators to [seek to ban the sale of diesel big rigs by 2040](#). In Southern California, regulators are attempting to [limit emissions from warehouses](#).

Atty. Gen. Rob Bonta said he has been monitoring warehouse development across California for compliance with environmental rules.

“For too long, warehouses have proliferated throughout California with little consideration for the health and safety impacts on the surrounding communities,” he said in an emailed statement. “As a result of these poor land use decisions, many low-income communities and communities of color continue to be among the most pollution burdened in the state.”

ADVERTISEMENT

O-8.43
Cont.

An Amazon warehouse is visible from Bosch Dairy. (Irfan Khan / Los Angeles Times)

Around the Bosch property in Ontario, much of what was once a capital of America’s dairy farms is now the nation’s capital of warehouses. There are more than 600 in the city, which has a population of 178,000. Dusty pastures disappeared as farmers fled to [Texas, South Dakota and other states](#), and stately ranch homes became makeshift repair shops for big rigs.

“With COVID-19 and Amazon being like a superpower, you know, the warehouse craze just went crazy around here,” Bosch said. “I guess it’s progress, you know. I don’t like it so much.”

The market is so hot for warehouses that they are leased before they are even built, said [Eloy Covarrubias](#), an investment broker at CBRE, specializing in industrial property. He estimates that there are between 38 million and 39 million square feet under construction — and more than half is already leased.

“There has been a significant amount of pent-up demand for that space,” he said, noting that the vacancy rate is about 1%.

O-8.43
Cont.

That has cost the Inland Empire its agricultural roots, said Amparo Muñoz, former policy director at the Center for Community Action and Environmental Justice, a Jurupa Valley group that has been fighting warehouse development and signed the letter to Newsom.

Muñoz didn't start off as an environmentalist. A trained engineer, she spent some of her time in warehouses checking and maintaining equipment.

"I really believed that if you let businesses regulate themselves, they do the right thing," she said.

ADVERTISEMENT

Her ideas changed after she had her second child. She had moved to Fontana a few years before, to a tract of homes surrounded by fields. She loved the pastoral life, the agricultural clubs and bunny farms. But by the time she was pregnant in 2013, an Amazon warehouse had been built less than two blocks from her home.

"At first you are like, hey, it's not too bad," she said.

She walked daily along the perimeter of her neighborhood to stay fit while pregnant, but what she thought were allergies worsened until she couldn't breathe.

"The doctor asked me how long I had had asthma, and I was like 'What? I don't have asthma.'"

She learned that she had developed the condition in her 30s. Her son was born with asthma and had to have a breathing mechanism for the first year of his life.

"They told me it was environmental factors," she said. "I didn't think about all the trucks that were idling at the warehouse when I was walking by them."

The family spent around \$22,000 to install high-grade air filters and a new duct system in their home.

"A lot of time, kids wake up with bloody noses on their pillows," she said. "We have the worst air quality. We have gridlock. We have streets and communities that were

O-8.43
Cont.

never built for global logistics. We're basically building, on top of failed infrastructure, a global network."

SETTLEMENT AGREEMENT

This Settlement Agreement (“Agreement”) is entered into as of the date on which the last signatures have been affixed hereto (“Effective Date”), by and between, Center for Community Action and Environmental Justice, Center for Biological Diversity, Coalition for Clean Air, Sierra Club, and San Bernardino Valley Audubon Society (collectively, “Petitioner Parties”), and Highland Fairview Properties, HF Properties, Sunnymead Properties, Theodore Properties Partners, 13451 Theodore, LLC, and HL Property Partners (collectively, “Highland Fairview”), and each of them, which are referred to cumulatively as the “Parties” or singularly as a “Party.”

RECITALS

WHEREAS, Highland Fairview is the applicant for a master-planned development project encompassing the development of up to 40.6 million square feet of building area and all necessary infrastructure to support large-scale logistics operations (“World Logistics Center Project”) located on approximately 2,610 acres of largely vacant land south of State Route 60 and north of the San Jacinto Wildlife Area in the Rancho Belago area of the City of Moreno Valley (“Property”);

WHEREAS, in August 2015, the City of Moreno Valley (“City”), through its City Council, approved the World Logistics Center Project and certified a final environmental impact report (“FEIR”) pursuant to the California Environmental Quality Act (“CEQA”);

WHEREAS, the City’s August 2015 approval of the World Logistics Center Project consisted of (a) a Specific Plan to govern the World Logistics Center Project’s development (“Specific Plan”); (b) an amendment to the City’s General Plan (“General Plan Amendment”); (c) an amendment to the Property’s zoning (“Zone Change”); (d) a tentative parcel map to subdivide a 1,539-acre portion of the Property; (e) an annexation request; (f) off-site improvements; and (g) a development agreement to vest the underlying approved land use entitlements (“Development Agreement”);

WHEREAS, on September 23, 2015, the Petitioner Parties commenced litigation in the Riverside County Superior Court, captioned *Center for Community Action and Environmental Justice, et al. v. City of Moreno Valley, et al.* (Case No. RIC1511327), challenging the City’s approval of the World Logistics Center Project (“FEIR Litigation”);

WHEREAS, in November 2015, the City Council directly adopted three initiatives for the World Logistics Center Project: (a) the Land Use and Zoning Entitlements Initiative to repeal and replace the City’s approval of the Specific Plan, General Plan Amendment, and Zone Change with a substantially similar set of entitlements; (b) the World Logistics Center Land Benefit Initiative to repeal and replace the City’s annexation request; and (c) the Development Agreement Initiative to approve a Development Agreement substantially similar to that previously adopted by the City (collectively, “Initiatives”);

WHEREAS, on February 22, 2016, the Petitioner Parties commenced litigation in the Riverside County Superior Court, captioned *Center for Community Action and Environmental Justice, et al. v. City of Moreno Valley, et al.* (Case No. RIC1602094), challenging the City’s adoption of the Initiatives (“Initiatives Litigation”);

O-8.45
Cont.

WHEREAS, in February 2018, in the FEIR Litigation, the Riverside County Superior Court ordered the City to set aside its certification of the FEIR and approvals of the World Logistics Center Project to make changes to the FEIR’s analysis of energy, biological, noise, agricultural resources, and cumulative impacts;

WHEREAS, in the FEIR Litigation, Petitioner Parties appealed the Riverside County Superior Court’s decision upholding the FEIR’s GHG analysis and Highland Fairview cross-appealed the Superior Court’s finding that the FEIR violated CEQA in five respects;

WHEREAS, in August 2018, in the Initiatives Litigation, the Court of Appeal directed the Riverside County Superior Court to issue a writ of mandate ordering the City to set aside the Development Agreement Initiative and vacate its approval of the Development Agreement;

WHEREAS, in a revised final EIR, the City addressed the matters that the Riverside County Superior Court ordered be changed in its February 2018 ruling in the FEIR Litigation and also analyzed new information pertaining to potential air quality, greenhouse gas emissions, and energy impacts (“Revised Final EIR”);

WHEREAS, on June 16, 2020, the City Council (a) approved Resolution No. 2020-47, certifying the Revised Final EIR for the World Logistics Center Project and denying the appeal of the City Planning Commission’s certification of the Revised Final EIR; (b) approved Resolution No. 2020-48, approving Tentative Parcel Map No. 36457 for Finance and Conveyance Purposes Only (“Parcel Map”) and denying the appeal of the City Planning Commission’s approval of the Parcel Map, and (c) introduced Ordinance No. 967, approving a new Development Agreement;

WHEREAS, on July 7, 2020, the City Council conducted a second reading of and adopted Ordinance No. 967, approving the new Development Agreement;

WHEREAS, on July 17, 2020, the Petitioner Parties commenced litigation in the Riverside County Superior Court, captioned *Center for Community Action, et al. v. City of Moreno Valley, et al.* (Case No. RIC2002697), challenging the City’s adoption of Resolution Nos. 2020-47 and 2020-48, certification of the Revised Final EIR, and adoption of Ordinance No. 967 (“RFEIR Litigation”);

WHEREAS, on July 16, 2020, related litigation was commenced in the Riverside County Superior Court, captioned *Golden State Environmental Justice Alliance, et al. v. City of Moreno Valley, et al.* (Case No. RIC2002675) (“Golden State Litigation”); and on or about March 8, 2021, petitioner Golden State Environmental Justice Alliance filed a request to dismiss with prejudice the Golden State Litigation;

WHEREAS, on or about July 17, 2020, further related litigation was commenced in the Riverside County Superior Court, captioned *Paulek, et al. v. City of Moreno Valley. Et al.* (Case No. RIC2002672) (“Paulek Litigation”);

WHEREAS, on or about November 9, 2020, the Riverside County Superior Court consolidated the FEIR Litigation with the RFEIR Litigation, Golden State Litigation, and Paulek Litigation;

O-8.45
Cont.

WHEREAS, in November 24, 2020, the Court of Appeal dismissed the appeal and cross-appeal in the FEIR Litigation as moot and issued a remittitur on January 26, 2021; and

WHEREAS, the purpose of this Agreement is to settle all disputes between the Petitioner Parties and Highland Fairview arising out of or related to the World Logistics Center Project, including without limitation, the FEIR Litigation and the RFEIR Litigation.

AGREEMENT

NOW, THEREFORE, in consideration of the mutual covenants, promises and undertakings set forth herein and other consideration, the receipt and adequacy of which the Parties hereby acknowledge, the Parties agree as set forth below.

1. The Parties' Obligations.

a. Highland Fairview's Obligations.

i. Highland Fairview shall take all actions required of it in this Section 1(a) provided that the Petitioner Parties have met the obligations set forth in Section 1(b) below and upon the earlier of:

1. the commencement of grading for the World Logistics Center Project; or

2. (a) the full and final resolution of the Paulek Litigation and the FEIR Litigation in the City's and Highland Fairview's favor or (b) in the event Highland Fairview has not prevailed in the Paulek Litigation and/or FEIR Litigation, the City reapproves the World Logistics Center Project and all applicable statutes of limitation have passed with no litigation filed or, if such future litigation ("Future Litigation") is filed, that such Future Litigation is resolved in the City's and Highland Fairview's favor and is no longer pending in any court.

ii. *Greenhouse Gas Emissions and Air Quality.* Highland Fairview shall ensure that all actions required in Attachment A hereto are carried out.

iii. *Biological Resources.* Highland Fairview shall ensure that all actions required in Attachment B hereto are carried out.

iv. *Community Benefits.* Highland Fairview shall ensure that all actions required in Attachment C hereto are carried out.

v. *Attorneys' Fees.* Within seven (7) days after the conditions set forth in Section 1(b)(i) are satisfied, Highland Fairview shall pay the Petitioner Parties' attorneys' fees and costs from the RFEIR Litigation, including reasonable attorneys' fees accrued in connection with negotiating this Agreement, in the amount of \$595,000 by ACH deposit, wire transfer, or a check. Petitioners will provide deposit information to Highland Fairview.

vi. *Compliance Reporting.* Each year for a period of fifteen (15) years, commencing on the first anniversary of the Effective Date of this Agreement, and every five (5) years thereafter until the World Logistics Center Project is fully constructed or Highland Fairview’s obligations under this Agreement are fully satisfied, whichever condition is satisfied first, Highland Fairview shall provide to the Petitioner Parties a detailed report describing how Highland Fairview has complied with Sections 1(a)(ii)-(iv) above (“Annual Compliance Report”). For a period of thirty (30) days from receipt of the Annual Compliance Report, the Petitioner Parties may request clarification or reasonable additional information from Highland Fairview to verify Highland Fairview’s compliance. Highland Fairview shall provide such additional requested information that is within its possession, custody, or control within thirty (30) days after receipt of such request. Any disputes over compliance with the Sections 1(a)(ii)-(iv) above shall be resolved pursuant to Section 2 below.

vii. *Technological and Methodological Progress.* The Parties recognize that technologies and methodologies are likely to progress over time and, due to that, it may be that the technological and methodological specificity in this Agreement could become obsolete or outdated in the future. In that event, Highland Fairview may implement such newer technologies or methodologies provided that such technologies or methodologies achieve at least as much environmental protection and do not result in new or greater significant environmental impacts than the technologies or methodologies specified in this Agreement. At least 90 days prior to implementing any alternative technology or methodology, Highland Fairview shall meet and confer with Petitioner Parties concerning the implementation of such alternative technology or methodology. Any dispute regarding whether the proposed alternative technology or methodology meets the standards in this Section 1(a)(vii) shall be resolved by arbitration pursuant to the procedures in Section 2 of this Agreement.

viii. Nothing in this Agreement shall prevent Highland Fairview and/or World Logistics Center Project tenants from using the obligations under this Agreement also to satisfy any obligation imposed by laws or regulations, whether they be enacted before or after the Effective Date.

b. Petitioner Parties’ Obligations.

i. *Pending Litigation.* With respect to the RFEIR Litigation and the FEIR Litigation, the Petitioner Parties shall, within seven (7) days after the Effective Date, take all actions necessary to dismiss with prejudice all Petitioner Parties’ claims in the RFEIR Litigation and the FEIR Litigation and through their respective counsel shall take all actions required to ensure compliance with this Section 1(b)(i).

ii. *Non-Opposition.* Provided that Highland Fairview is in compliance with this Agreement, as enforced pursuant to Section 2 below, the Petitioner Parties shall not Oppose the World Logistics Center Project, as detailed below.

1. Previously Issued Approvals. Petitioner Parties shall not Oppose any Approvals issued on or before the Effective Date by any Governmental Authority that are or may be necessary, useful, or convenient for the completion of any portion or aspect of the World Logistics Center Project (“Previously Issued Approvals”). “Approval” or

O-8.45
Cont.

“Approvals” shall mean in this Agreement any permits, approvals, entitlements, voter initiatives, development agreements, legislative actions, and/or allowances of any sort whatsoever, including any and all environmental clearances, together with any mitigation measures or the implementation thereof. “Governmental Authority” shall mean in this Agreement any federal, state, regional, local, or other governmental entity, body, branch, bureau, official, special district, department, court, or other tribunal, or any other governmental or quasi-governmental authority, including the electorate, exercising or entitled to exercise any administrative, executive, judicial, legislative, police, regulatory, or land use authority or power over the World Logistics Center Project.

2. Future Implementation Approvals.

a. Petitioner Parties shall not Oppose any Approvals applied for, sought, or issued after the Effective Date by any Governmental Authority that is or may be necessary, useful, or convenient for the completion of any portion or aspect of the World Logistics Center Project (“Future Implementation Approvals”); provided, however, that such Future Implementation Approvals do not: (a) amend the Specific Plan; (b) amend the Initiatives; or (c) eliminate, reduce, or amend a mitigation measure in the Final Revised EIR in a manner that increases environmental impacts. Notwithstanding the foregoing, Petitioner Parties are free to take any action permitted under Section 1(b)(ii)(4) of this Agreement.

b. The Petitioner Parties also understand and acknowledge that the World Logistics Center Project is being challenged in the Paulek Litigation and the FEIR Litigation. Should the World Logistics Center Project be required to be reconsidered, the Petitioner Parties shall not Oppose approval of the World Logistics Center Project, including without limitation its CEQA document with any provisions or mitigation measures then needed provided they do not contradict, interfere with, or reduce any of Highland Fairview’s commitments in this Agreement.

3. Meaning of “Opposition.” “Opposition,” “Oppose,” or “Opposing” means (a) opposing, challenging, or seeking to hinder, whether by litigation, public opposition at any proceeding before a government agency, public testimony, comments, or petition to government authorities, a Previously Issued Approval or Future Implementation Approval, or (b) providing funding for others to file or maintain litigation opposing, challenging, or seeking to hinder a Previously Issued Approval or Future Implementation Approval. A Petitioner Party shall be deemed to be Opposing a Previously Issued Approval or a Future Implementation Approval if its board of directors, officers, or staff, or as to the Sierra Club, in addition to the above-listed persons, the Sierra Club’s San Gorgonio Chapter’s Board of Directors, officers, staff, group representatives, delegates, and any individual expressly representing or directed to represent the Sierra Club’s interests, Oppose such Previously Issued Approval or Future Implementation Approval. The Sierra Club’s San Gorgonio Chapter shall advise its staff and volunteer leaders that the Sierra Club has resolved its dispute with Highland Fairview and of the Sierra Club’s obligations under this Agreement, particularly non-Opposition set forth above. In the event that a member or members of the Sierra Club Oppose(s) a Previously Issued Approval or Future Implementation Approval, the Sierra Club agrees to disavow publicly said Opposition, via letter or other appropriate means, upon reasonable request by Highland Fairview, in any proceedings involving the Previously Issued Approval or Future

O-8.45
Cont.

Implementation Approval before the City of Moreno Valley or any other agency or court having jurisdiction over the World Logistics Center Project. Such statement shall provide that the member or members do not represent the Sierra Club's position concerning the World Logistics Center Project. Opposition, Oppose, or Opposing does not include any action permitted under Section 1(b)(ii)(4) of this Agreement.

4. Governmental Actions of General Applicability. Petitioner Parties are not prohibited from commenting on, supporting, and/or Opposing proposed actions by any Governmental Authority that is generally applicable and not directly related to the development of the World Logistics Center Project, the Previously Issued Approvals, or Future Implementation Approvals, even though such proposed agency actions may have an impact on the World Logistics Center Project, the Previously Issued Project Approvals, and/or Future Implementation Approvals due to the general applicability of such proposed actions by any Governmental Authority. Examples of governmental actions of general applicability that Petitioner Parties are free to comment on, support and/or Oppose include, but are not limited to rules promulgated by local air district related to emissions; regulations promulgated by California agencies related to emissions; approvals for regional transportation plans; approvals of urban water management plans; listing decisions for threatened and endangered species; and the regulation of industrial equipment.

c. Mutual Releases of Claims.

i. Except as otherwise provided in this Agreement, the Petitioner Parties each release Highland Fairview, its affiliates, subsidiaries, parent entities, and each of their respective employees, officers, members, staff, agents, attorneys, and/or representatives, and each of them (collectively, the "Highland Fairview Released Parties"), from any and all claims, lawsuits, administrative and judicial proceedings, appeals, demands, challenges, liabilities, damages, fees, costs, and causes of action, at law or in equity, known or unknown, in any jurisdiction and before any court, agency, or tribunal (collectively and severally, "Claims") that the Petitioner Parties ever had, have, or may have against the Highland Fairview Released Parties, or any of them, arising in any way from or related in any way to the World Logistics Center Project, including without limitation, the claims brought by, or that could have been brought by Petitioner Parties in the RFEIR Litigation and the FEIR Litigation.

ii. Highland Fairview releases the Petitioner Parties, their affiliates, subsidiaries, parent entities, and each of their respective employees, officers, members, staff, agents, attorneys, and/or representatives, and each of them (collectively, the "Petitioner Released Parties") from any and all Claims that Highland Fairview ever had, have, or may have against the Petitioner Released Parties, or any of them, arising in any way from or related in any way to the World Logistics Center Project, including without limitation, the RFEIR Litigation and the FEIR Litigation.

iii. Nothing in this Section shall be interpreted as releasing any Party's right to enforce this Agreement in full.

O-8.45
Cont.

2. Enforcement.

a. *Meet and Confer.* In the event of any dispute between the Parties related to this Agreement or the World Logistics Center Project, the Parties shall, before taking any other action concerning that dispute, provide written notice of the dispute to the other Party and meet and confer in person in a good-faith effort to resolve the dispute within thirty (30) days of the notice, unless otherwise agreed. Any Party that is alleged to be in breach of this Agreement shall have thirty (30) days from that in-person meeting to cure, unless otherwise agreed. Notwithstanding the foregoing, if the dispute is deemed to be a time-urgent matter by Highland Fairview or at least two of the five Petitioner Parties, these time periods may be disregarded and the Parties may seek immediate review by an arbitrator within twenty-four (24) hours' notice to the allegedly breaching Party pursuant to JAMS's Comprehensive Arbitration Rules and Procedures, including Rule 2(c), as those Rules exist on the Effective Date. If the allegedly breaching Party cures or begins a good faith effort to cure the alleged breach, any such proceeding previously commenced pursuant to the alleged time-urgent matter shall be dismissed.

b. *Nonbinding Mediation.* In the event any such dispute is not resolved pursuant to Section 2(a), then at any Party's request the Parties may participate in non-binding mediation of any dispute related to this Agreement or the World Logistics Center Project. This obligation shall take place in a timeframe that is reasonable under the circumstances. Any such mediation is to be completed in one day and not to exceed a total of eight (8) hours, unless extended by mutual consent. If nonbinding mediation is used pursuant to this section, Highland Fairview shall pay for the costs of mediation. The mediator will be selected by mutual agreement.

c. *Binding Arbitration.* In the event any such dispute is not resolved pursuant to Section 2(a) or Section 2(b), then within fifteen (15) days after the conclusion of the meet and confer or non-binding mediation, at Highland Fairview's request or the request of no fewer than two of Petitioner Parties the Parties shall participate in final, binding, and non-reviewable arbitration of any dispute related to this Agreement or the World Logistics Center Project, pursuant to the provisions below.

i. The dispute brought under Section 2(c) shall be determined by arbitration before three arbitrators, each of whom shall be a retired jurist. The arbitration shall be administered by JAMS pursuant to its Comprehensive Arbitration Rules and Procedures and in accordance with the Expedited Procedures in those Rules as those Rules exist on the Effective Date, including Rules 16.1 and 16.2. The determination may be entered in any court having jurisdiction solely for the purposes of enforcing the determination.

ii. Within ten (10) days after notice under Section 2(c) is provided, Highland Fairview shall select one person to act as arbitrator and the Petitioner Parties shall select another. The two so selected shall select a third arbitrator within fifteen (15) days of the commencement of arbitration. If the arbitrators selected by the Parties are unable or fail to agree upon the third arbitrator within the allotted time, the third arbitrator shall be appointed by JAMS in accordance with its rules. All arbitrators shall serve as neutral, independent, and impartial arbitrators. Highland Fairview and the Petitioner Parties shall communicate their choices of a

O-8.45
Cont.

Party-appointed arbitrator only to the JAMS Case Manager in charge of the filing. Neither is to inform any of the arbitrators as to which of the Parties may have appointed them.

iii. Any relief for an alleged breach of this Agreement shall be limited to any specific performance or injunctive relief necessary to ensure compliance with the provision of this Agreement that the complaining Party alleges another Party has breached. Such relief shall not be broader than necessary to ensure compliance with the provision of this Agreement that has been determined to have been breached.

iv. Highland Fairview shall be responsible for paying any fees and costs JAMS requires for JAMS to perform its arbitration services called for under this Section 2(c) unless the arbitrators determine that Petitioner Parties' commencement of arbitration was frivolous, unreasonable, or without foundation. If and only if the arbitrators determine that Petitioner Parties' commencement of arbitration was frivolous, unreasonable, or without foundation, then the Petitioner Parties who commenced that arbitration shall pay Highland Fairview one-half of JAMS's total fees and costs, such that each side will have paid one-half of JAMS's total fees and costs. Highland Fairview shall also not seek any security in connection with any Interim Measures that may be awarded under Rule 24 of JAMS's Comprehensive Arbitration Rules and Procedures.

v. Unless and only to the extent that an Arbitrator awards an Interim Measure, or other injunctive relief available under Rule 24 of JAMS's Comprehensive Arbitration Rules and Procedures pursuant to Section 2(c)(iii) of this Agreement, under no circumstances shall the pendency of arbitration delay or prevent Highland Fairview from obtaining any Future Implementation Approvals or developing the Property and operating the World Logistics Center Project in accordance with any Previously Issued Approvals and any Future Implementation Approvals.

3. Agreement's Termination. All obligations under this Agreement shall terminate if the Property ceases operations as a logistics facility. In the event that a portion of the Property ceases operations as a logistics facility or is never developed as a logistics facility, then this Agreement shall terminate as to that non-logistics facility portion of the Property but shall remain in full force and effect as to the portion of the Property that is operating as a logistics facility.

4. Attorneys' Fees and Costs. Except as expressly provided elsewhere in this Agreement, the Parties shall bear their own attorneys' fees and costs in connection with the enforcement of this Agreement.

5. Naming and Branding. Highland Fairview shall have the right, in its sole and absolute discretion, to name any of the public benefits or funds created pursuant to Sections 1(a)(ii), (iii), and (iv) of this Agreement. Petitioner Parties shall not be in breach of this Agreement should they choose not to use the names selected by Highland Fairview when referring to the public benefits or funds provided in Sections 1(a)(ii), (iii), and (iv) of this Agreement.

O-8.45
Cont.

6. No Admission of Liability. This Agreement is a compromise of disputed claims and the fact that the Parties hereto have determined to compromise such disputed claims by entering into this Agreement is not to be construed as an admission of liability or otherwise on the part of the Parties hereto.

7. Successors and Assigns. This Agreement is binding upon and inures to the benefit of each of the Parties and their respective representatives, heirs, devisees, successors and assigns.

a. Highland Fairview may, in its sole discretion, assign any or all of its rights, benefits, and obligations under this Settlement Agreement to any successor(s) in interest or to any purchaser, tenant, or end user of the World Logistics Center Project or any portion thereof. In the event of any such assignment(s), Highland Fairview shall ensure by written instrument that the assignee(s) shall be contractually obligated to comply with all of Highland Fairview's obligations under this Agreement for the Agreement's full term unless Highland Fairview expressly retains one or more such obligations itself. Such written instrument shall detail the specific rights, benefits, and obligations Highland Fairview is assigning and the specific rights, benefits, and obligations Highland Fairview is retaining for itself, if any, and that the assignee has accepted such assignment for the Agreement's full term or unless and until such assignee assigns such rights, benefits, and obligations pursuant to the terms of this Agreement to a subsequent assignee. Highland Fairview and any subsequent assignee upon assignment by it shall provide written notice to Petitioner Parties of any such assignment, reasonable evidence of the assignee's financial ability to fulfill the obligations assigned to it, and the assignee's acceptance by providing a copy of the fully executed written assignment instrument. No assignment, by Highland Fairview or by any subsequent assignee, shall be effective until such notice is provided. Upon delivery of such notice, Highland Fairview or the subsequent assignee shall be deemed released by Petitioner Parties from the obligations so assigned. Petitioner Parties may enforce any assigned obligations against the assignee(s) pursuant to Section 2 of this Agreement. Absent Petitioner Parties' written consent, which consent shall not be unreasonably withheld, no more than ten assignees at any given time shall hold any such assigned rights, benefits, and obligations under this Agreement.

b. Upon the sale of the Property or any portion of the Property, Highland Fairview shall provide a complete copy of this Agreement to the purchaser as an attachment or exhibit to any purchase and sale agreement and shall provide proof of having done so to Petitioner Parties. Any purchase and sale agreement conveying the Property, or any portion of the Property also must include the purchaser's express acknowledgment of this Agreement.

c. Petitioner Parties shall not assign any or all of their rights, benefits, and obligations under this Agreement without prior written consent from Highland Fairview, which as to any assignment of rights and benefits only shall not be unreasonably withheld.

8. Entire Agreement. This Agreement: (a) constitutes the entire agreement between the Parties concerning the subject matter hereof, (b) supersedes any previous oral or written agreements concerning the subject matter hereof, and (c) shall not be modified except by a writing executed by the Party(ies) to be bound thereby.

O-8.45
Cont.

9. Attachments. All attachments to this Agreement are incorporated herein by this reference.

10. Notices. All notices shall be in writing and shall be addressed to the affected Parties at the addresses set forth below. Notices shall be: (a) hand delivered to the addresses set forth below, in which case they shall be deemed delivered on the date of delivery, as evidenced by the written report of the courier service; (b) sent by certified mail, return receipt requested, in which case they shall be deemed delivered five (5) business days after deposit in the United States mail; or (c) transmitted by email in which case they shall be deemed delivered on the date of transmission if sent before 5:00 pm or on the first business day after transmission if sent at 5:00 pm or later or if sent on a Saturday, Sunday, or California court holiday, provided the Party transmitting notice by email does not receive a delivery status notification indicating that delivery of the email communication failed. Any Party may change its address, its email, or the name and address of its attorneys by giving notice in compliance with this Agreement. Notice of such a change shall be effective only upon receipt. Notice given on behalf of a Party by any attorney purporting to represent a Party shall constitute notice by such Party if the attorney is, in fact, authorized to represent such Party. The addresses and email addresses of the Parties are:

11. Force Majeure. No Party shall be responsible or liable for any failure or delay in the performance of its obligations pursuant to this Agreement arising out of or caused by, directly or indirectly, forces beyond the Party’s reasonable control, including, without limitation, fire, explosion, floods, acts of war or terrorism, national emergencies, pandemics, strikes, riots, and changes in laws or regulations.

12. Severability. In the event that any provision of the Agreement shall be held invalid or unenforceable, such holding shall not invalidate or render unenforceable any other provisions hereof unless any of the stated purposes of the Agreement would be defeated.

13. Incorporation of Recitals. The recitals contained herein are hereby incorporated by reference and are material and binding upon the Parties hereto.

14. Construction and Choice of Law. The terms of this Agreement are the product of arms-length negotiations between the Parties, through their respective counsel of choice, and no provision shall be construed against the drafter thereof. This Agreement shall be governed by and construed in accordance with the laws of the State of California. Any Party may enforce the terms of this Agreement pursuant to Section 2.

15. Counterparts. This Agreement may be executed in counterparts, by either an original signature or signature transmitted by facsimile or electronic transmission or other similar process, each of which shall be an original, but all of which taken together shall constitute one and the same instrument; provided, however, that such counterparts shall have been delivered to

O-8.45
Cont.

the Parties (in person, by messenger, by overnight courier, by registered or certified mail, or by facsimile or electronic transmission).

16. Authority. Each signatory to this Agreement represents and warrants that he or she is authorized to sign this Agreement on behalf of the Party for which he or she is signing, and thereby to bind that Party fully to the terms of this Agreement.

Attachment A

0-8.45
Cont.

Greenhouse Gas Emissions and Air Quality

1) *Operational GHG and Criteria Pollutant Emissions Reduction Measures*

a) **Electric Truck and Car Grant Programs.**

- i) **Heavy Duty Truck Grants.** WLC will provide funding for 500 grants for the purchase of Class 8 heavy duty electric trucks. The grants shall be provided pursuant to the attached table at Attachment A, Exhibit 1. The program shall prioritize applicants who will use the trucks in Moreno Valley and along the Highway 60 corridor, and will give special priority for drayage trucks that will be used in Moreno Valley and along the Highway 60 corridor. The grants will be phased proportionately with buildout of the first 35 million square feet of the project.

These heavy duty grants will include the following two conditions: (1) a prohibition on the resale of the electric truck to an entity that will operate trucks outside of California; and (2) 85% of the mileage must occur in the SCAQMD region and be enforced using a geo-fencing electronic system on each truck.

- ii) **Medium Duty Truck Grants.** WLC will provide up to 60 grants for the purchase of Class 4 through Class 7 medium duty trucks. The grants shall be provided pursuant to the attached table at Attachment A, Exhibit 2. The program will prioritize (i) applicants who will use the trucks in Moreno Valley and along the Highway 60 corridor and (ii) Class 6 and 7 trucks. Only if there is no demand for the Class 6 and 7 truck classes shall grants be provided to Class 4 and 5 trucks with priority provided to Class 5 trucks over Class 4 trucks. The grants will be phased proportionately with buildout of the first 20 million square feet of the project.

These medium duty grants will include the following two conditions: (1) a prohibition on the resale of the electric truck to an entity that will operate trucks outside of California; and (2) 85% of the mileage must occur in the SCAQMD region and be enforced using a geo-fencing electronic system on each truck.

- iii) **Local Delivery Truck Grants.** WLC will provide up to 120 grants for WLC tenants to purchase light-duty delivery vehicles (generally referred to Class 1, 2, and 3 trucks) for use for deliveries in Moreno Valley and the immediately proximate area. The grants shall be provided pursuant to the attached table at Attachment A, Exhibit 3. The program will prioritize (i) tenant applicants whose buildings are located closest to residential areas and (ii) the highest class of Class 1, 2, and 3 trucks and vehicles for which there is demand. The grants will be phased proportionately with buildout of the first 20 million square feet of the project.

These local delivery grants will include a condition that 50% of the mileage must occur in Moreno Valley and the Highway 60 corridor and be enforced using a geo-fencing electronic system on each truck.

- iv) **Local Community Passenger Vehicle & Zero Emission Transportation Grants.** WLC shall (1) fund a \$1,100,000 community clean vehicle grant program that will

O-8.45
Cont.

provide up to 1,000 \$1,000 electric vehicle car grants to Moreno Valley residents and/or (2) fund other programs to advance zero emission transportation. Car grants for Moreno Valley residents shall be prioritized to households earning not more than 150% of the Area Median Income, as calculated by the U.S. Department of Housing and Urban Development. The grants will be phased proportionately with buildout of the first 20 million square feet of development of the project.

v) **Grant Programs Administration and Education.**

- (1) The electric truck and electric car grant programs shall be administered by one or more mutually agreeable third party(ies).
- (2) WLC shall fund the electric truck and electric car grant programs' reasonable administration costs separately from and in addition to the costs of the grants.
- (3) The electric truck and electric car grant programs shall be phased proportionately with the project buildout terms identified in section 1(a), and funded upon or before the issuance of building construction permits for each warehouse building. If a building triggers a fraction of a grant, the grant number will be rounded up to the higher number.
- (4) For all of the electric truck and electric car grant programs, the Parties shall meet and confer regarding any mutually agreeable opportunity to seek more deployment of zero emission trucks through the augmentation of these grant funds with other funding sources. The Parties may also meet and confer to address conditions of grants that may inhibit applicants from using the programs, including but not limited to resale requirements and geofencing in sections 1(a)(i), 1(a)(ii), and 1(a)(iii) above.
- (5) At five year intervals, parties will meet and confer to assess whether grants are being used within the particular classes identified in sections 1(a)(i), 1(a)(ii), and 1(a)(iii). The Parties may agree to shift grants to other classes of vehicles that may have demand. In the event that the number of qualified applications are insufficient to exhaust the number of truck grants made available within five years of the project's full buildout, then all remaining grant funds earmarked for a particular truck class may be redistributed to truck classes for which demand remains. In the event grant funds remain after this reallocation, then all unused funds shall be paid to a mutually agreeable third party for zero-emissions heavy-duty truck projects to benefit the residents of Moreno Valley and the communities along the Highway 60 corridor.

- vi) **Electric Vehicle Advocacy Fund.** Upon the commencement of grading within the Specific Plan area, WLC shall pay \$300,000 to a mutually agreeable third party entity selected by Petitioners to provide outreach, education, and training on zero-emissions vehicles and maintenance, with a focus on educating and training Moreno Valley residents about the electric truck and car programs provided for under this agreement.

O-8.45
Cont.

b) **Maximize Onsite Solar.**

i) At a minimum, WLC shall do the following.

- (1) WLC shall install the maximum amount of on-site rooftop solar generation permitted under the existing Moreno Valley Utility ordinance and other applicable law.
- (2) If the existing Moreno Valley Utility ordinance is amended to allow additional onsite rooftop solar generation, and if that additional generation is approved by the Moreno Valley Utility and Southern California Edison and is allowed by other applicable law, then WLC shall install additional on-site rooftop solar generation at a cost of at least \$1,650 per 10,000 square feet of warehouse floor area.

c) **Solar Advocacy Fund.** Upon the commencement of grading within the Specific Plan area, WLC shall provide \$300,000 to a third-party, non-profit advocacy group or foundation that Petitioners shall select to advocate for a regional approach to encourage solar power generation and protect desert resources and greenfields.

d) **Lower Carbon Hydrogen Available Onsite.** If available under commercially reasonable terms, WLC will make available to tenants hydrogen fuel with a carbon intensity (CI) score of 50 or less. Hydrogen fuel will be made available upon the issuance of certificates of occupancy for 15 million square feet of logistics warehousing, or earlier, provided there is sufficient demand at that time to allow for a break-even price point or higher after the return of capital costs and ongoing operational expenses for the initial 5 years of operation, with a commercially reasonable income thereafter.

e) **Onsite EV chargers.**

- i) WLC will provide 1,000 Level 1 chargers in WLC parking lots, phased proportionately with project buildout, and will ensure that they function properly for at least 15 years from their dates of installation.
- ii) WLC will provide 80 Level 2 chargers in WLC parking lots with two ports per charger (for a total of at least 160 ports), phased proportionately with project buildout, and will ensure that they function properly for at least 15 years from their dates of installation.
- iii) WLC shall install signage at each EV parking space stating that the parking space is for EVs only and improperly parked vehicles will be towed.

2) **Operational Air Quality (TACs)**

a) **Electrification/No Diesel/Alternative Fuels**

- i) At least 90% of all forklifts must be powered by electricity, hydrogen, or non-fossil zero-emission fuels. No forklift may be powered by diesel fuels.

O-8.45
Cont.

- ii) 90% of all handheld landscaping equipment (e.g., leaf blowers, hedge trimmers, weed whackers, etc.) shall be electric or meet most current CARB standard within five years of the standard’s implementation, to be enforced by including this requirement in all service contracts.
- iii) Hot water heaters for office and bathrooms shall be powered either through solar cells mounted on the roofs of the buildings or solar-generated electricity.
- iv) Only electric appliances shall be used in building office areas (e.g., electric stoves).
- v) Diesel powered generators will be prohibited unless necessary due to emergency situations or constrained supply.
- vi) All “yard goats,” yard trucks, and hostlers will be powered by electricity or a non-diesel alternative.

b) Auxiliary Power Unit (APU).

- i) All truck idling shall be limited to no more than 5 minutes.
- ii) Each warehouse building shall provide an on-site air-conditioned lounge with a vending machine(s), a seating area, restrooms, workstations, shower facilities, and a television. The lounge shall be regularly maintained, cleaned, and stocked.
- iii) WLC shall provide at least one APU plug-in for every 35 dock doors at multiple locations within the Specific Plan area where trucks park and signage shall be provided in English and Spanish identifying where such APU plug-ins are located.

c) Warehouse Construction.

- i) WLC shall construct all warehouse buildings to achieve at least LEED Silver Certification for core and shell. If the WLC seeks to advertise a building as having LEED Silver Certification, it shall apply for certification. If certification is granted, notice shall be provided to Petitioners.
- ii) Warehouse roof areas not covered by solar panels shall be constructed with materials with an initial installation Solar Reflective Index Value of not less than 39.
- d) **Cold Storage.** All transport refrigeration units (TRUs) shall have electric plug-ins and electrical hookups shall be provided at all TRU loading docks. WLC shall notify petitioners in writing before filing any applications for cold storage in warehouses.

3) Construction Emissions/Dust

- a) All construction equipment shall meet or be cleaner than Tier 4 standards, except if the construction contractor certifies that it is not feasible to use exclusively Tier 4 equipment due to limited availability. In all events, at least 80% of construction equipment shall meet or be cleaner than Tier 4 standards for the life of the project’s construction.

O-8.45
Cont.

- b) In the event that diesel-powered construction equipment becomes available (1) with improved emission control devices that reduce particulate matter emissions, including fine particulate matter, and reduces NOx emissions, (2) at commercially reasonable prices, and (3) in sufficient quantities to be reasonably available, then WLC shall use such construction equipment.
- c) No diesel-powered portable generators shall be used, unless necessary due to emergency situations or constrained supply.
- d) No idling longer than five minutes shall be permitted.

4) ***Worker Education / Enforcement of Requirements***

- a) See section 8(i) in Attachment C to this Agreement.

O-8.45

**Attachment A, Exhibit 1
Class 8, Heavy Duty Truck Grant Program**

Truck Model Year	Grant (\$) per Truck
2024	24,391
2025	23,523
2026	22,823
2027	22,228
2028	21,687
2029	21,198
2030 and later	20,709

Notes and Source: All assumptions are based on CARB data developed in the Advanced Clean Trucks rulemaking. Class 8 trucks are defined by Federal Highway Administration as trucks with Gross Vehicle Weight Rating (GVWR) of more than 33,000 lbs. The grants specified in this table equal the down payments projected to be required to purchase a Class 8 heavy duty electric truck for each specified truck model year, using the CARB Total Cost of Ownership Calculator available at: https://ww2.arb.ca.gov/sites/default/files/2019-05/190508tccalc_2.xlsx. Consistent with industry practice, the down payment represents 10% of the amount due at the truck purchase, which includes the truck purchase price, the taxes and the registration (but not the fuel and maintenance).

O-8.45

EV Heavy Duty Truck Grant

Helping Truckers Transition to EV by Eliminating Up-front Cash Needed

Biggest Barrier to EV Truck Conversion?

- Where does the buyer get the money for the down payment

Solution: Zero Cash Down for Zero Emissions Grant Program

- WLC will provide Grant to cover the projected down payment on new HD EV truck based on CARB data
- Grant program will continue throughout the construction period

Class 8 Model Year	Purchase Price ¹ (capital cost, registration, taxes)		Upfront Costs (capital cost, registration, taxes)				Benefits to Purchaser	
	Diesel (CARB)	Electric (CARB)	Diesel Down Payment ²	EV Down Payment (CARB) ²	WLC EV Truck Grant ³	EV Down Payment (net of grant)	Day 1 Cash Savings to Switch to Electric ⁴	Year 1 Fuel & Maintenance Savings vs Diesel ⁵
MY 2024	\$172,220	\$243,913	(\$17,222)	(\$24,391)	\$24,391	\$0	\$17,222	\$5,850

1. Cost data for diesel and electric trucks estimated using the CARB TCO Calculator, available at: https://ww2.arb.ca.gov/sites/default/files/2019-05/190508tccalc_2.xlsx. All assumptions are based on CARB data developed in the Advanced Clean Trucks rulemaking. The (lower) Tesla Semi price projections represent a less conservative scenario and accordingly the Tesla data was not used to set Grant levels.
2. Consistent with industry practice, the down payment represents 10% of the purchase price, tax and registration (but not fuel and maintenance).
3. The CARB price projections represent a conservative scenario and accordingly CARB data has been used to set Grant levels.
4. Incremental cost of EV Truck assumes no additional incentives or subsidies, which is highly conservative given the many existing EV subsidy programs. Note that no incentives are available for diesel trucks.
5. Annual maintenance and fuels costs (and savings) based on CARB data. This does not include revenues from the sale of LCFS credits.

Confidential Settlement Communication – Not for Dissemination

O-8.45
Cont.

**Attachment A, Exhibit 2
Medium Duty Truck Grant Program**

Truck Model Year	Grant (\$) per Truck (Class 4-5)	Grant (\$) per Truck (Class 6-7)
2024	8,466	13,040
2025	8,274	12,728
2026	8,118	12,476
2027	7,983	12,261
2028	7,859	12,065
2029	7,746	11,887
2030 and later	7,632	11,710

Notes and Source: All assumptions are based on CARB data developed in the Advanced Clean Trucks rulemaking. Federal Highway Administration (FHA) defines Class 4, Class 5, Class 6 and Class 7 trucks as trucks with GVWRs as follows: (i) Class 4 between 14,001 lbs and 16,000 lbs; (ii) Class 5 between 16,001 lbs and 19,500 lbs; (iii) Class 6 between 19,501 lbs and 26,000 lbs; (iv) and, Class 7 between 26,001 lbs and 33,000 lbs. FHA classifies Class 4, Class 5 and Class 6 trucks as Medium Duty and classifies Class 7 trucks as Heavy Duty. In terms of emission standards, the U.S. Environmental Protection Agency (EPA) classifies Class 4-5 trucks as Light Heavy Duty and Class 6-7 trucks as Medium Heavy Duty. The grants specified in this table equal the down payments projected to be required to purchase either a Class 4-5 or Class 6-7 electric truck for each specified truck model year, using the CARB Total Cost of Ownership Calculator available at: https://ww2.arb.ca.gov/sites/default/files/2019-05/190508tcocalc_2.xlsx. Consistent with industry practice, the down payment represents 10% of the amount due at the truck purchase, which includes the truck purchase price, the taxes and the registration (but not the fuel and maintenance).

**Attachment A, Exhibit 3
Local Delivery Truck Grant Program**

Truck Model Year	Grant (\$) per Truck (Class 2B-3)
2024	8,949
2025	8,762
2026	8,607
2027	8,467
2028	8,336
2029	8,213
2030 and later	8,090

Notes and Source: All assumptions are based on CARB data developed in the Advanced Clean Trucks rulemaking. The EPA classifies Class 2B trucks as trucks with GVWR between 8,500 lbs and 10,000 lbs and Class 3 trucks as trucks with GVWRs between 10,001 lbs and 14,000 lbs. The grants specified in this table equal the down payments projected to be required to purchase a Class 2B-3 electric truck for each specified truck model year, using the CARB Total Cost of Ownership Calculator available at: https://ww2.arb.ca.gov/sites/default/files/2019-05/190508tcocalc_2.xlsx. Consistent with industry practice, the down payment represents 10% of the amount due at the truck purchase, which includes the truck purchase price, the taxes and the registration (but not the fuel and maintenance).

Biological Resources

- 1) **Lighting Program.** Reduce light and glare to maximum extent practicable. Implement a campus-wide lighting program in compliance with International Dark Sky Association standards with at least the following measures (except where doing so would violate safety requirements or federal, state, City or county governmental regulations; provided, however, that if doing so would violate such requirements or regulations, then WLC shall consult with Petitioner Parties and, should Petitioner Parties so decide, WLC and Petitioner Parties shall cooperate to attempt to persuade the decision maker to allow the lighting program described below).
 - a) Light color of all exterior lighting, including street lights, shall be 2,700 Kelvin.
 - b) Limit the heights of all freestanding and wall-mounted lights to 20 feet within 1,500 feet of the San Jacinto Wildlife Area (“SJWA”).
 - c) Dimmers to 25% output after sundown when no motion detected for ten minutes, subject to City approval, which approval WLC shall request.
 - d) Motion sensors on all interior lighting shall be installed consistent with applicable Title 24 regulations.
 - e) Require darker colored paint (Pantone 7501C) on all exterior building walls within 1,000 feet of the SJWA property line and visible from the SJWA to reduce glare.

- f) Plant trees within setback area to reduce glare to SJWA.
- g) Install full cut-off luminaries on buildings and poles.
- i) Installation of automatic blinds on office windows visible from the SJWA within 1,500 feet of the SJWA edge that automatically close within 20 minutes after sunset and open within 20 minutes of sunrise.
- h) Truck head lights shall be turned off within five minutes of truck parking.

O-8.45
Cont.

- i) All construction lighting shall be shielded and directed away from the project's property lines.

2) SJWA Setback Area & Additional SJWA Protections

- a) Truck yards shall be no closer than 350 feet from the southern boundary with SJWA, as depicted by the yellow line in the attached graphic. No buildings, truck courts, loading areas, parking, truck circulation areas, or truck or trailer storage, shall be permitted within the 350-foot setback area. Only landscaping, drainage facilities, and underground utilities shall be permitted. Emergency access and maintenance access shall also be permitted.
- b) Warehouse buildings shall be no closer than 450 feet from the southern boundary with SJWA, as depicted by the red line in the attached graphic. See Attachment B, Exhibit 1 – Setback.
- c) The SJWA setback area shall be subject to an open space deed restriction that limits uses within the 350-foot setback area to only landscaping, drainage facilities, underground utilities, emergency access, and maintenance access.
- d) No lighting shall be located in the 350-foot setback.
- e) No wall or fence shall be installed along the project's property line with the SJWA, unless required by California Department of Fish and Wildlife or other governmental authority.
- f) All portions of truck yards visible from the SJWA, including those truck yards adjacent to the SDG&E Moreno Compressor Station, shall be shielded by a wall or walls at least 14 feet high, if the City so permits under the Specific Plan, which permission WLC shall in good faith seek. In no event shall such walls be lower than 12 feet high.
- g) WLC shall plant landscaping and design detention basins in the SJWA special edge treatment area so as to soften the southern appearance of truck yard screen walls by planting at least 50% of all trees at 24" box in size. Detention basins within the SJWA special edge treatment shall be designed and built no larger than necessary to handle the Specific Plan area's estimated storm water flow.
- h) Landscaping within the SJWA special edge treatment area shall be substantially consistent with conceptual design set forth in the Specific Plan at pages 4-25 and 4-26.
- i) Plant only low-biogenic and native vegetation in SJWA special edge treatment area.
- j) At least 50% of trees within the 350-foot setback area shall be evergreen trees.
- k) At least 50% of trees within the 350-foot setback area shall be native to Southern California.

O-8.45
Cont.

- l) No ornamental grasses shall be installed in the Specific Plan area. Only grasses, shrubs, or sub-shrubs listed in section 5.4.4 of the Specific Plan, which are all native grasses, shall be planted within the Specific Plan area.
 - m) Invasive, non-native grasses, shrubs, and sub-shrubs shall be removed from the Specific Plan area's developed portions as part of the WLC's regular landscaping services.
 - n) All leases shall inform tenants within 1,000 feet of the SJWA edge that the project is adjacent to the SJWA, which permits hunting.
 - o) Permanent signage in English and Spanish shall be installed within 450 feet of the SJWA stating that such area is within 450 feet of an area that permits hunting.
- 3) ***SJWA Conservation Fund***—Upon the issuance of a building permit for a warehouse building south of Alessandro Blvd., WLC shall fund a \$4 million account for (i) land acquisition efforts to augment the SJWA, (ii) SJWA conservation efforts, (iii) wildlife corridor crossings on Gilman Springs Road, (iv) facilitating native plantings, (v) plant management, (vi) other conservation efforts, or (vii) administration of such funds. The funds shall be managed by a third-party, non-profit entity or foundation chosen by Petitioner Parties.
- 4) ***SDG&E Moreno Compressor Station Shielding.***
- a) ***Landscaping.*** Prior to the issuance of a certificate of occupancy for a warehouse building south of Alessandro Blvd. and north of the SDG&E Moreno Compressor Station, landscaping that substantially blocks vehicle lights shall be installed and maintained around the project's western, northern, and eastern property line abutting the SDG&E Moreno Compressor Station.
 - b) ***Fencing.*** Prior to the issuance of a certificate of occupancy for a warehouse building south of Alessandro Blvd., ten foot tall fencing with metal mesh installed below and above ground level to prevent animals from moving between the SDG&E Compressor Station and SJWA shall be installed and maintained around the western, northern, and eastern property line abutting the SDG&E Moreno Compressor Station.
- 5) ***Davis Road***—WLC shall support efforts to keep Davis Road closed north of the SJWA, as shown on the attached map, including the placement of a gate near Alessandro Blvd. No access from the north via Davis Road for the property located at 16200 Davis Road shall be requested. *See Attachment B, Exhibit 2 – Horse Ranch Exhibit.*
- 6) ***WLC Open Space Area (Planning Area 30).***
- a) WLC shall not build any buildings within Planning Area 30. WLC shall provide notice of any property transfer or proposed activity within Planning Area 30 within 30 days of such transfer or formal proposed activity.
 - b) Prior to the issuance of a certificate of occupancy for any warehouse building adjacent to Planning Area 30, a wall at least 14 feet high, if the City so permits, which approval

O-8.45
Cont.

WLC shall in good faith request, shall be constructed along the warehouse building's southern edge. In no event shall such wall be lower than 12 feet high.

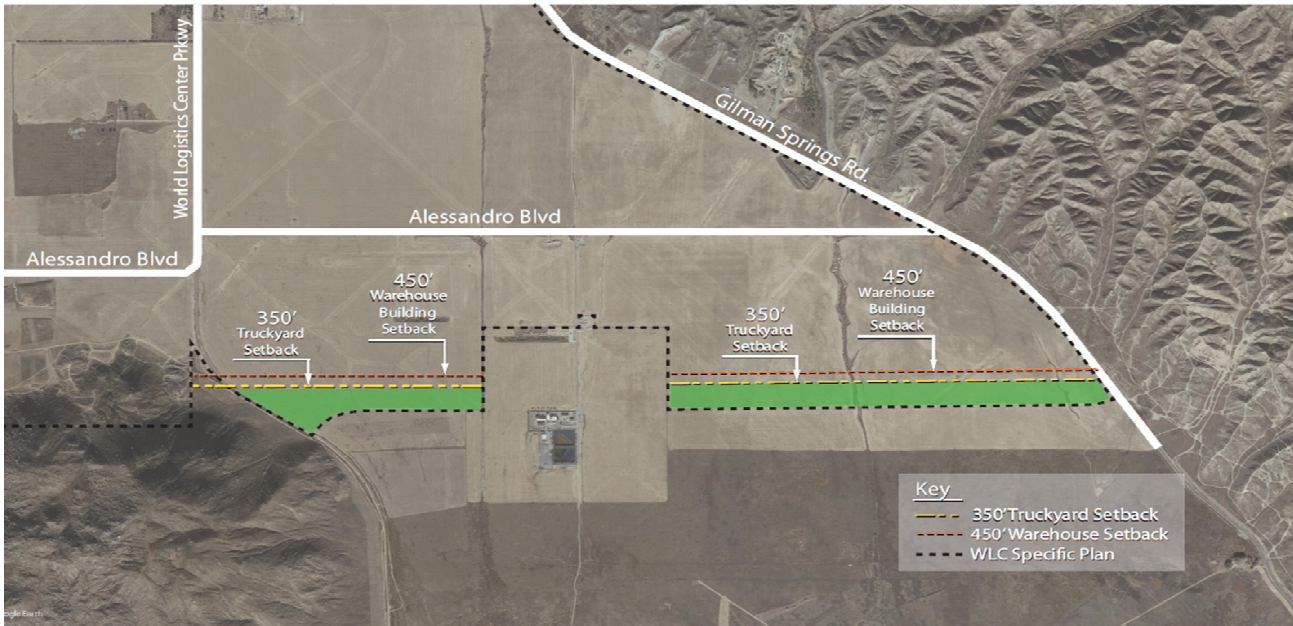

7) SJWA Boundary & Setbacks.

- a) For purposes of this Agreement, SJWA boundary shall mean SJWA's boundaries as they exist as of the Effective Date of the Agreement.
- b) All setback obligations from the SJWA shall be as shown on the following attachment. See Attachment B, Exhibit 1 – Setback.

Community Benefits

1) *Berms/Screening Before Warehouse Construction*

- a) The berms to be installed along Redlands Blvd. and Merwin St. shall be completed before the construction of any warehouses within 1,000 feet of Redlands Blvd. or Merwin St.
- b) Either the berm to be installed along Bay St. or a temporary barrier sufficient to substantially screen warehouse construction activities shall be completed before the construction of any warehouses within 1,000 feet of Bay St.

2) *Setbacks From residentially zoned property.* Buildings shall be setback at least 290 feet measured from the nearest existing City residential zoning boundary (which is currently the centerline of Redlands Blvd., Bay Ave., and Merwin St.). Notwithstanding the foregoing, buildings of no more than 45 feet in height, as measured pursuant to the Specific Plan, shall be setback at least 250 feet from the nearest existing City residential zoning boundary.

3) *Visual Protections/Berms/Landscaping*

a) **Landscaping/Screening**

- i) Merwin St. Berm: WLC will install a berm and landscaped area on the east side of Merwin St. similar to that to be installed on Redlands Blvd. to screen future buildings and development as viewed from Merwin St.
- ii) Enhancements to Berm: The property's Western Edge, as defined by the Specific Plan and as shown in Specific Plan Exhibit 4-1, when viewed from the western side of Redlands Boulevard and Merwin Street and the southern side of Bay Avenue, shall be developed to screen future buildings with walls, berms, and/or landscaping as follows.
 - (1) For a minimum of 25% of the linear length of the berms, the entirety of the buildings and roof mounted equipment behind the berms shall be substantially screened by walls, berms, and/or landscaping at maturity at all times of the year. "Substantially screened" means that while there might be some view of the buildings looking through the foliage, the buildings will be mostly obscured from view.
 - (2) For a minimum of 25% of the linear length of the berms, all but the top five feet of the buildings and roof mounted equipment behind the berms shall be substantially screened by walls, berms, and/or landscaping at maturity at all times of the year.
 - (3) For the remaining 50% or less of the linear length of the berms, all but the top fifteen feet of the buildings and roof mounted equipment behind the berms shall be substantially screened by walls, berms, and/or landscaping at maturity at all times of the year.

O-8.45
Cont.

- (4) In the event the above levels of screening on the Western Edge are not achieved within 15 years of landscaping's installation, WLC shall do supplemental planting to meet the above levels of screening.
- iii) Larger Trees than the Specific Plan Requires: WLC will plant larger trees within the Specific Plan's Western Edge, as follows: 50% of all trees to be 24" box.
- iv) Evergreen Trees:
 - (1) Western Edge. Evergreen trees shall constitute 85% of all 24" box trees planted within the Specific Plan's Western Edge.
 - (2) Specific Plan Campus. Evergreen trees shall constitute 50% of all trees planted within the WLC. For purposes of defining evergreen trees, deciduous trees that behave like evergreen trees in the Southern California climate shall be considered evergreen trees.
- v) Varied Appearance: Landscaping on the Western Edge shall avoid a linear appearance through implementation of the following measures:
 - (1) Trees shall be planted at varied depths from the World Logistic Center's property line so that they do not create a uniform and linear appearance and create a layering effect as viewed from adjacent streets so as to maximize screening of World Logistic Center buildings;
 - (2) Consistent with layering effect, larger evergreen trees shall be concentrated towards the top of the berms to maximize screening;
 - (3) To the extent practicable, berm contours shall vary and accent elements, such as boulders, shall be placed on berm slopes facing adjacent streets to create visual interest; and
 - (4) Trees within the Western Edge shall be maintained in their natural form and shape with minimal pruning.
- vi) Dead trees shall be promptly removed and replaced with similar type trees.
- vii) Use of palm trees shall be limited to accent areas only.
- viii) Plant trees in the parking areas that are capable of achieving 50% shading within ten years.
- ix) Use concrete for parking lots with concrete having a solar reflective index of no less than 30.

O-8.45
Cont.

4) *Architectural Design*

- a) Screen all rooftop equipment: (i) visible from any existing residential homes within 1,000 feet of the property's Western Edge; or (ii) within 1,000 feet of the San Jacinto Wildlife Area ("SJWA"). Rooftop equipment shall be screened using the building's parapet wall or other architectural element that appears to be or is an integral part of the building.
- b) No portion of any building that is closer than 600 feet to the centerline of Redlands Blvd., Bay Ave., or Merwin St. shall exceed 60 feet in height (portions that are farther away may exceed 60 feet in height).
- c) For warehouse buildings abutting the Western Edge that are not substantially screened, the rooflines shall be designed to avoid long linear flat walls through the incorporation of architectural features like breaks, wall offsets, height variations, and/or accent features.

5) *Homeowner or Resident Reimbursements*

- a) Air Filtration System Reimbursement Program.
 - i) WLC shall pay 90% of the costs of purchasing and installing non-portable air filtration systems ("Air Filtration System Reimbursement Program"), including any necessitated HVAC modification, which cost shall not exceed \$25,000 per home, as follows.
 - (1) The home is an eligible home as shown on the attached map. *See* Attachment C, Exhibit 1 – Filter Overview Map.
 - (2) The homeowner or resident requests payment within five years of the commencement of grading or commencement of construction of a warehouse building within 2,000 feet of such homes.
 - (3) In the event a property owner or resident has a household income less than 80% of the Area Median Income as determined by the Department of Housing and Urban Development, WLC shall pay 100% of the cost of the air filtration system up to \$25,000.
 - ii) The project shall mail notice via registered or certified mail of the Air Filtration System Reimbursement Program to Petitioners and to residents and property owners of record of the qualified homes prior to the issuance of the project's first grading or building permit within 2,000 feet of the homes and annually thereafter for four years. The notice shall identify the exact date when the five year period starts and ends. Proof of mailing shall be provided to Petitioners. The project's website shall also include notice of the Air Filtration System Reimbursement Program during the program's five-year term, including identifying which homes have started the five year window and when it ends.

O-8.45
Cont.

- iii) The homeowner or resident may select and contract with a contractor or installer of the homeowner's or resident's choice.
- b) Noise Insulation Reimbursement Program.
- i) WLC shall pay 90% of the costs of purchasing and installing noise insulation measures ("Noise Insulation Reimbursement Program"), which cost shall not exceed \$10,000 per home, as follows.
 - (1) The home is an eligible home as shown on the attached map. *See Attachment C, Exhibit 2 – Sound Proofing Overview Map.*
 - (2) The homeowner or resident requests payment under the Noise Insulation Reimbursement Program within five years of the commencement of grading or commencement of construction of a warehouse building within 2,000 feet of such homes.
 - ii) The project shall mail via registered or certified mail notice of the Noise Insulation Reimbursement Program to Petitioners and to residents and property owners of record of the qualified homes at least 60 days before the issuance of the project's first grading or building permit within 2,000 feet of the homes and annually thereafter for four years. The project's website shall also include notice of the Noise Insulation Reimbursement Program during the program's five-year term, including identifying which homes have started the five year window and when it ends.
 - iii) The homeowner or resident may select and contract with a contractor or installer of the homeowner's or resident's choice.
 - iv) In the event a property owner or resident has a household income less than 80% of the Area Median Income as determined by the Department of Housing and Urban Development, WLC shall pay 100% of the cost of the noise insulation measures up to \$10,000.
- c) Exterior Pressure Washing Reimbursement.
- i) Due to possible dust during grading, WLC shall reimburse each homeowner for exterior pressure washings of the first two rows of homes on the west side of Redlands Blvd., south side of Bay Ave., and west side of Merwin St. up to \$500 per house.
- d) Additional Homeowner Outreach. Petitioners are free to engage in their own homeowner notification, outreach and efforts to maximize awareness and success of the air filtration, noise insulation, and power washing programs, either directly or through a contractor or third party nonprofit. WLC shall provide funds of up to \$120,000 to a designated nonprofit or foundation selected by Petitioners upon the issuance of the Project's first grading or building permit for work within 2,000 feet of any home identified in sections 5(a)(i)(1) and 5(b)(i)(1). WLC will annually notify Petitioners of how many and which homes have used this program. Petitioners may also request this information, and the

O-8.45
Cont.

WLC shall provide it within 30 days. WLC shall also notify Petitioners of any rejected requests under the air filtration, noise mitigation, and/or pressure washing program for any home with a rationale for the rejection within 30 days of such rejection. Any unused funds from this \$120,000 may be directed to other philanthropic activities to benefit the City of Moreno Valley if any funds remain after the expiration of the reimbursement programs.

6) **Noise**

a) **Project Operations**

- i) All portions of truck yards that are visible from Redlands Blvd., Merwin St., Bay Avenue and the SJWA shall be shielded by walls at least 14 feet high, if the City so permits. WLC shall apply for an administrative variance pursuant to Specific Plan section 11.3.3.1, if necessary, and make a good-faith effort to seek permission to install these 14-foot high walls. In no event shall such walls be lower than 12 feet high.
- ii) All portions of truck circulation drive aisles that are visible from any existing home within 1,000 feet of the Specific Plan's Western Edge shall be shielded by walls at least 14 feet high, if the City so permits. WLC shall apply for an administrative variance pursuant to Specific Plan section 11.3.3.1, if necessary, and make a good-faith effort to seek permission to install such 14-foot high walls. In no event shall such walls be lower than 12 feet high.
- iii) No exterior mechanical building equipment generating noise levels above 50 dBA CNEL measured at the property line of each of the homes located West of Redlands Blvd., south of Bay Ave., and west of Merwin St. shall be installed, absent the written consent of such affected homeowner.
- iv) Buildings located between E Street and Redlands Blvd. or 500 feet east of Merwin St. shall not have loading docks or parking areas facing residential home frontage on Redlands Blvd. or Merwin St., as shown on attached map in red. *See Attachment C, Exhibit 3 – Map for No Docks Facing Existing Homes.*
- v) Prohibit outdoor loading activities within 1,000 feet of any existing home between 9:00 p.m. to 6:00 a.m. if noise levels exceed 50 dBA CNEL measured at the property line of each such home located West of Redlands Blvd., south of Bay Ave., and west of Merwin St., absent the written consent of such affected homeowner or resident.
- vi) No outdoor speakers that exceed 45 dBA Leq measured at the property line of any existing home between 7:00 p.m. and 7:00 a.m. within 1,500 feet of any residential property fronting Redlands Blvd., Merwin St., and Bay Ave. except in the event of an emergency, absent the written consent of such affected homeowner.

O-8.45
Cont.

b) Project Construction

- i) No nighttime grading or outside construction between 6:00 p.m. and 7:00 a.m. shall be conducted within 1,000 feet of any existing home west of Redlands Blvd., south of Bay Ave., and west of Merwin St., except if necessary for concrete pours.
- ii) Notice shall be provided to residents within 750 feet of the Western Edge at least one week prior to construction between 6:00 p.m. and 7:00 a.m.

7) Lighting

- a) The heights of all outdoor freestanding and wall-mounted lights shall not exceed 20 feet within 1,000 feet of the centerline of Redlands Blvd., Bay Ave., and Merwin St., except where doing so would violate safety requirements or federal, state, City or county governmental regulations.
- b) All outdoor freestanding and wall-mounted lights within 1,000 feet of the centerline of Redlands Blvd., Bay Ave., and Merwin St. shall dim to 50% output after sundown when no motion detected for ten minutes.

8) Operational Trucking/Employee Trips

a) Provide On-Site Truck Parking (to discourage parking in neighborhoods)

- i) Dedicate 7-10 acres east of Theodore St. and north of Alessandro Blvd. for fueling and trucker personal services, such as food service, showers, resting, truck washes, repair facility, etc. (“Truck Service Area”).
- ii) Auxiliary power unit (“APU”) plug-ins shall be provided at each designated Class 8 truck parking spot in the Truck Service Area.
- iii) Provide conduit and prewiring in the Truck Service Area to accommodate potential heavy duty truck charging facilities.
- iv) Ongoing private security shall be provided within the Truck Service Area.
- v) WLC shall in good faith advocate for the City to permit overnight parking within the WLC for trucks servicing WLC tenants.
- vi) Provide sufficient on-site truck parking within parking lots and/or public rights-of-way to enable all trucks reasonably expected to visit WLC to park on-site (as determined by a qualified transportation engineer).
- vii) Install permanent signs in English and Spanish to inform truck drivers of the on-site amenities, including the Truck Service Area.
- viii) Maps of designated City truck routes shall be made available within truck amenity facilities and the Truck Service Area.

O-8.45
Cont.

ix) All limitations regarding trucking activities shall be provided to tenants upon lease commencement and leases shall require tenants to inform employees and third-party truckers of these limitations through a WLC-maintained website containing these limitations.

b) Off-Street Community Truck Parking Planning & Advocacy Fund

i) WLC shall, upon the commencement of construction of the first warehouse building, pay \$150,000 to a mutually agreeable non-profit entity or foundation to fund efforts (1) to advocate for and support the development of off-street parking for Class 8 trucks in or adjacent to Moreno Valley and not within the WLC, and (2) to advocate for the City's adoption of a \$1,000 street parking fine for illegal truck parking on residential streets and in residential neighborhoods.

(1) In the event the City does not adopt a \$1,000 fine for illegal truck parking on residential streets then, when 5 million square feet of warehouse buildings between WLC Parkway and Redlands Blvd. have received their certificates of occupancy, WLC shall provide nighttime private patrol (10:00 p.m. to 6:00 a.m.) for 7 years to patrol residential streets within one-half mile of the project to report any overnight/illegal truck parking to authorities. If 18 or fewer WLC related infractions are identified after any three-year period, the patrol may be discontinued.

c) Prohibiting Trucks on Cactus Avenue

i) Trucks shall not be permitted to use Cactus Ave. as a truck route between WLC and Perris Blvd. If the City approves the installation of physical measures to prevent trucks from using Cactus Avenue (e.g., signage, speed humps, etc.), WLC shall fund up to \$200,000 to implement such measures.

(1) Unused funds, which are funds not expended within five years of certificates of occupancy having been issued for 5 million square feet of warehouse uses approved under the Specific Plan, shall be provided to a mutually agreeable non-profit entity dedicated to supporting the SJWA and/or the community of Moreno Valley.

ii) Prohibit WLC trucks from using Cactus Ave. in tenant leases.

d) Prohibiting Trucks on Redlands Blvd. South of Eucalyptus

i) Prohibit WLC truck use of Redlands Blvd. south of the roundabout at Eucalyptus Ave. in tenant leases.

ii) If the City approves permanent signage prohibiting trucks from using Redlands Blvd., then WLC shall fund up to \$50,000 to install such signage.

(1) Unused funds, which are funds not expended within five years of certificates of occupancy having been issued for 5 million square feet of warehouse uses

O-8.45
Cont.

approved under the Specific Plan, shall be provided to a mutually agreeable non-profit entity dedicated to supporting the SJWA and/or the community of Moreno Valley.

e) Alessandro Blvd. Closure

- i) Upon the completion of the extension of Cactus Ave., Alessandro Blvd. east of Merwin St. shall be closed to vehicular traffic (other than emergency vehicles).

f) Truck Turning Prohibitions (to avoid turning in prohibited directions)

- i) To discourage trucks from turning the wrong direction when entering or leaving the WLC, design and install physical measures the City and Fire Department approves (e.g., curbs that force turns in only one direction, bumps/textures that rattle vehicles traversing them, etc.).
- ii) Install signage clearly stating which directions trucks must turn at all streets exiting the Specific Plan area.

g) No Truck Parking Signage

- i) If the City approves a “no truck parking” signage program within one mile of the WLC, fund implementation of that program up to \$200,000.

- (1) Unused funds, which are funds not expended within five years of certificates of occupancy having been issued for 5 million square feet of warehouse uses approved under the Specific Plan, shall be provided to a mutually agreeable non-profit entity dedicated to supporting the SJWA and/or the community of Moreno Valley.

h) Prohibit Off-Site Employee Parking

- i) Provide free on-site employee parking.
- ii) To discourage employee parking within neighborhoods, prohibit employee “walk-ins” onto WLC campus at the start and end of shifts, unless the employee lives within walking distance of WLC.
- iii) Prohibit off-site employee parking in tenant leases.

i) Worker Education / Enforcement of Trucking and Parking Requirements

- i) Upon the issuance of the certificate of occupancy for the first warehouse building, WLC shall implement an ongoing program to educate truckers, tenants, and construction workers of all of the rules and requirements expected of them, including the applicable GHG/air quality measures listed in Sections 2 and 3 of Attachment A to the Agreement and the other requirements listed in this Attachment C to the Agreement. The education program shall be in English and Spanish and shall include

O-8.45
Cont.

prominently posted signage throughout the project site, including a requirement in tenant leases obligating tenants to inform employees, temporary workers, contractors, and third-party truckers of the rules by posting the rules in lounges provided at their warehouses. WLC shall also maintain a website with a trucker and construction worker information page specifying the rules. The educational information with the rules developed under this program shall be provided to all tenants in paper form (e.g., a pamphlet) on request and at least annually for inclusion in lounges.

- ii) WLC shall install permanent reflective signage in English and Spanish no less than every 25 feet along the interior of truck yard screening walls facing loading docks stating limits on engine idling, vehicle lights, and APUs.

j) Employee Trip Reduction Measures

- i) WLC shall implement the following measures to reduce Specific Plan employee trips.
 - (1) Provide on-site meal areas.
 - (2) Provide up to 1,000 eBike subsidies in the amount of \$500 to WLC employees who commit to bike to work at least twice per week on average. The subsidies will be phased proportionately with buildout of the first 15 million square feet of the project.
 - (3) Provide on-line transit incentive “virtual kiosk” giving free transit assistance to WLC employees (e.g., ridesharing/carpooling connections, assistance determining best bus routes, sales of bus passes, etc.).
 - (4) Develop and implement program to ensure knowledge of trip reduction measures by project employees.
 - (5) Provide 40% subsidies for bus passes for tenants’ employees who commit to bus to work at least twice per week on average.
 - (6) Require tenants to have trip reduction plans to achieve 1.3 average vehicle ridership as a factor of total number of employees (in tenant leases).
 - (7) Require tenants to have a Transportation Management Association to encourage carpooling (in tenant leases).
 - (8) Provide bike lockers for 5% or more of building users within 50 yards of employee building entrances.
 - (9) Provide short-term bike racks near employee building entrances.
 - (10) Provide preferential parking for carpools and vanpools equal to 5% of total parking spaces.
 - (11) Provide designated parking spaces for motorcycles.

O-8.45
Cont.

(12) Fund a zero emission shuttle that circulates within the Specific Plan area and has pickup and drop-offs at the closest off-site bus stop no later than the issuance of a certificate of occupancy for 15 million square feet of warehouse buildings.

9) ***Multi-Use Trail***

- a) Pursuant to Specific Plan section 3.4.2, WLC shall construct a multiuse trail along the Western Edge that connects to the existing trail segment on the west side of Redlands Blvd. via a crosswalk at Cottonwood Avenue and Redlands Boulevard, the trail segment on Eucalyptus Ave., and the existing trail on Cactus Ave. *See Attachment C, Exhibit 4 – WLC Specific Plan Trail Map.*
- b) Completion of the multiuse trail along the northern portion of Eucalyptus Avenue between Theodore Street and Redlands Boulevard shall be completed no later than the completion of the southern half of Eucalyptus Avenue between Theodore Street and Redlands Boulevard.
- c) Pursuant to Specific Plan section 3.4.3, Class II bikeways shall be provided along all roadways within the project.

10) ***Graffiti & Trash Abatement***

- a) Graffiti shall be removed within one week of identification or notification.
- b) Trash removal within and along all WLC edge areas shall occur at least every other week or within three business day of receipt of notification by community ombudsman.

11) ***Construction Vehicles/Trucking***

- a) Prohibit construction trucks from using Redlands Blvd., other than for infrastructure construction or necessary detours
- b) Provide lunch vendor services on-site for construction workers.

12) ***Community Outreach and Transparency***

- a) WLC shall implement the following community measures.
 - i) Provide a designated ombudsman and 24-hour hotline to address neighbor concerns prior to the commencement of construction and such hotline shall be maintained for 10 years beyond the Specific Plan’s full buildout. A live operator shall staff the hotline 24 hours per day. The hotline number shall be mailed to all properties within 1,500 feet of project site no more than one month prior to the commencement of grading on the property.
 - ii) Permanent signs at the project’s five main entrances, easily read from the street, shall be installed and shall provide the ombudsman hotline number and state that the

O-8.45
Cont.

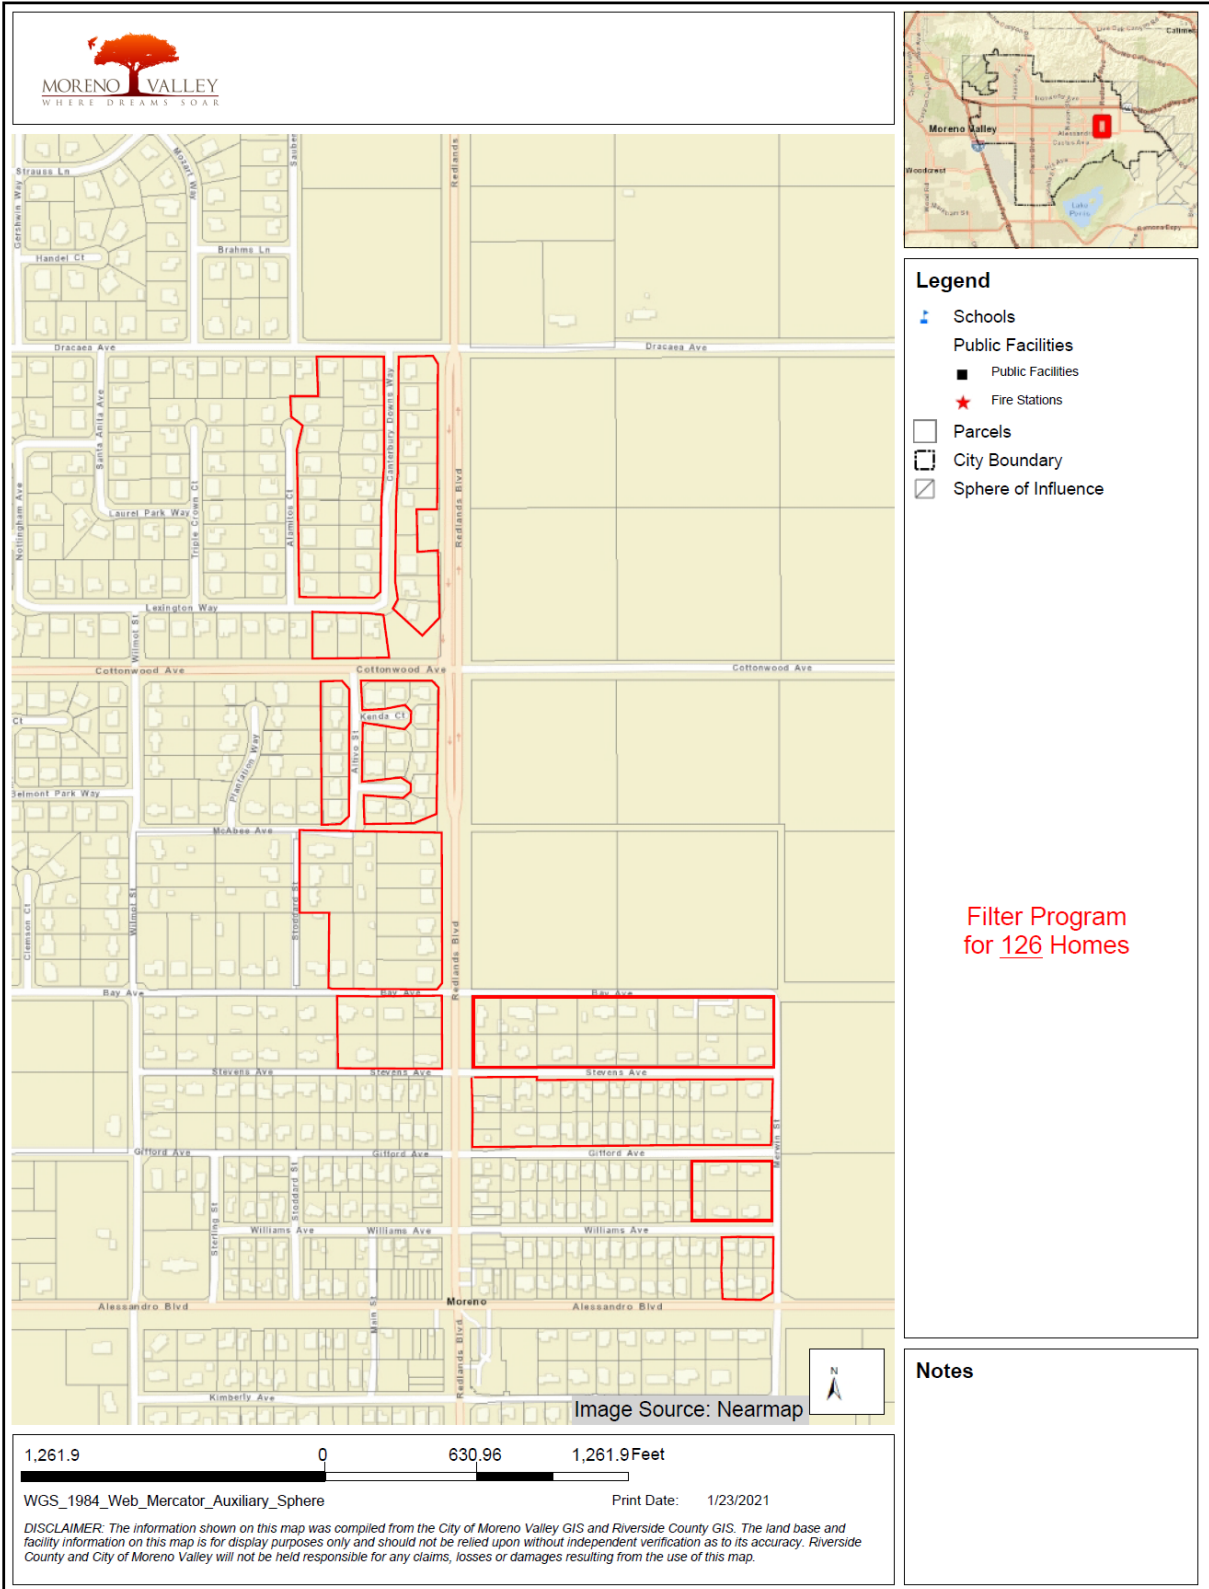

ombudsman may be contacted regarding graffiti, trash, illegal truck parking, or other operational disturbances.

- iii) Give notice of any discretionary permit applications for development to any groups or individuals who so request and to residents and property owners within 1,000 feet of the parcel for which work is proposed. Petitioners shall be notified when any project development application is formally submitted to the City and a copy of the proposal and plans shall be provided digitally.

APPENDIX E

0-8.46

**CONDITIONS OF APPROVAL FOR CENTERPOINT PROPERTIES (Applicant/Owner):
COUNTY FILE #'s CDDP18-03007 and CDMS19-00009.**

Project Approval:

1. Development is APPROVED as generally described in the application materials received by the Department of Conservation and Development/Community Development Division (CDD) on August 28, 2018, (including Tentative Map submitted October 29, 2019), and subject to the conditions below.

Compliance Review:

2. At least 30 days prior to issuance of a building permit, the applicant shall provide a permit compliance report to CDD for review and approval. The report shall identify all conditions of approval that are administered by CDD. The report shall document the measures taken by the applicant to satisfy all relevant conditions. Copies of the permit conditions may be obtained from CDD. Unless otherwise indicated, the applicant will be required to demonstrate compliance with the conditions of this permit prior to requesting County issued permits.

The permit compliance review is subject to staff time and materials charges, with an initial deposit of \$1,000 which shall be paid at the time of submittal of the compliance report.

3. At least 30-days prior to occupancy, any proposed tenant shall submit a Property Use Verification (PUV) application to CDD staff in order to verify consistency with this permit. The PUV will be necessary to obtain any required business licenses from the County Tax Collector's Office.

General Provisions:

4. Any deviation from or expansion beyond the limits of this permit approved under this application may require the filing of a request for modification of the Development Plan Permit.
5. A publicly visible sign shall be posted on the property with the telephone number and person to contact regarding construction-related complaints. This person shall respond and take corrective action within 24 hours. The CDD phone number to call in complaints shall also be visible to ensure compliance with applicable regulations.

0-8.46
Cont.

6. Applicant shall make best efforts to hire employees, workers, and subcontractor components for jobs from the Richmond/North Richmond community.
7. At least 30 days prior to submittal of a building permit for signage, a detailed sign program shall be submitted for the review and approval of CDD.
8. The applicant shall pay the Contra Costa County, Department of Conservation and Development, Current Planning Division, a flat not-to-exceed amount of \$125,000 as its fair share contribution towards the cost of a General Plan/Zoning Ordinance update for the North Richmond area.

Aesthetics:

9. At least 30 days prior to applying for a building permit, the applicant shall submit for review and approval by the Contra Costa County Department of Conservation and Development staff a Final Lighting Plan. Light standards shall be low-lying and exterior lights on the buildings shall be deflected so that lights shine onto the applicant’s property. **(Mitigation Measure (MM) AES – 1)**

Air Quality:

10. The project applicant shall ensure, at minimum, the use of equipment that meets the United States Environmental Protection Agency’s (EPA) Tier 4 Interim emissions standards for off-road diesel-powered construction equipment with more than 50 horsepower for all site preparation, grading, and building construction activities, unless it can be demonstrated, to the Contra Costa County Department of Conservation and Development’s satisfaction, that such equipment is not available. Any emission control device used by the contractor shall achieve emissions reductions that are no less than what could be achieved by Tier 4 Interim emissions standards for a similarly sized engine, as defined by the California Air Resources Board (ARB) regulations.

Prior to the issuance of building or grading permits, the project applicant shall ensure that all construction (e.g., demolition and grading) plans clearly show the requirement for EPA Tier 4 Interim emissions standards for construction equipment over 50 horsepower for the specific activities stated above.

During construction, the project applicant shall ensure that a list of all operating equipment in use on the construction site is maintained on-site for verification by the Contra Costa County Department of Conservation and Development. The construction equipment list shall state the makes, models, Equipment Identification Numbers, and number of construction equipment on-site. Equipment shall be properly serviced and maintained in accordance with the

O-8.46
Cont.

manufacturer's recommendations. Construction contractors shall also ensure that all nonessential idling of construction equipment is restricted to 5 minutes or less in compliance with Section 2449 of the California Code of Regulations, Title 13, Article 4.8, Chapter 9. **(MM AIR-2a)**

11. The project's construction contractor shall comply with the following Bay Area Air Quality Management District (BAAQMD) Best Management Practices (BMPs) for reducing construction emissions of PM₁₀ and PM_{2.5}:

- Water all active construction areas at least twice daily, or as often as needed to control dust emissions. Watering should be sufficient to prevent airborne dust from leaving the site. Increased watering frequency may be necessary whenever wind speeds exceed 15 miles per hour (mph). Reclaimed water should be used whenever possible.
- To control dust, pave, apply water twice daily or as often as necessary, or apply (nontoxic) soil stabilizers on all unpaved access roads, parking areas, and staging areas at construction sites.
- Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least 2 feet of freeboard (i.e., the minimum required space between the top of the load and the top of the trailer).
- Sweep daily with water sweepers (using reclaimed water if possible) or as often as needed, all paved access roads, parking areas, and staging areas at the construction site to control dust.
- Sweep public streets daily (with water sweepers using reclaimed water if possible) or as often as needed in the vicinity of the project site to keep streets free of visible soil material.
- Hydroseed or apply nontoxic soil stabilizers to inactive construction areas.
- Enclose, cover, water twice daily, or apply nontoxic soil binders to exposed stockpiles (e.g., dirt, sand, etc.).
- Limit vehicle traffic speeds on unpaved roads to 15 mph.
- Replant vegetation in disturbed areas as quickly as possible.
- Install sandbags or other erosion control measures to prevent silt runoff from public roadways. **(MM AIR-2b)**

O-8.46
Cont.

12. Prior to issuance of the certificate of occupancy, Contra Costa County shall require future tenants proposing operations that have potential to emit nuisance odors to prepare an odor management plan that identifies project design features, measures, and control technologies to ensure compliance with Bay Area Air Quality Management District (BAAQMD) Regulation 7, Odorous Substances, which requires abatement of any nuisance generating an odor complaint. Facilities that have the potential to generate nuisance odors include, but are not limited to:

- Composting, green waste, or recycling facilities
- Fiberglass manufacturing facilities
- Painting/coating operations
- Large-capacity coffee roasters
- Laboratory operations
- Food-processing facilities

The odor management plan for the proposed facility shall be submitted to the County prior to the issuance of the certificate of occupancy. During operation of the proposed facility, the County shall conduct periodic evaluation of on-site odors per the schedule and reporting requirements outlined in the odor management plan. **(MM AIR-4)**

O-8.46
Cont.

Zero Emission Vehicle Requirements:

13. The following mitigation measures shall be implemented during all on-going business operations and shall be included as part of contractual lease agreement language to ensure the tenants/lessees are informed of all on-going operational responsibilities.

- a. The property owner/tenant/lessee shall ensure that all heavy-duty trucks (Class 7 and 8) domiciled on the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2025 or when commercially available for the intended application, whichever date is later.

“Domiciled at the project site shall mean the vehicle is either (i) parked or kept overnight at the project site more than 70% of the calendar year or (ii) dedicated to the project site (defined as more than 70% of the truck routes (during the calendar year) that start at the project site even if parked or kept elsewhere).

Zero-emission heavy-duty trucks which require service can be temporarily replaced with model year 2014 or later trucks. Replacement trucks shall be used for only the minimum time required for servicing fleet trucks.

- b. The property owner/tenant/lessee shall utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2023, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2025, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2027.

"Domiciled at the project site" shall mean the vehicle is either (i) parked or kept overnight at the project site more than 70% of the calendar year or (ii) dedicated to the project site (defined as more than 70% of the truck routes (during the calendar year) that start at the project site even if parked or kept elsewhere).

Zero-emission vehicles which require service can be temporarily replaced with alternate vehicles. Replacement vehicles shall be used for only the minimum time required for servicing fleet vehicles.

The property owner/tenant/lessee shall not be responsible to meet "clean fleet" requirements for vehicles used by common carriers operating under their own authority that provide delivery services to or from the project site.

- c. The applicant, property owner, tenant, lessee, or other party operating the facility (the "Operator") shall procure the zero emission vehicles/trucks required to meet the "clean fleet" requirements in (a) and (b) above. Within 30-days of occupancy, the Operator shall demonstrate to the satisfaction of CDD staff, that the applicable clean fleet requirements are being met.

In the event that there is a disruption in the manufacturing of zero emission vehicles/trucks or that sufficient vehicles/trucks are not commercially available for the intended application, the "clean fleet requirements" may be adjusted as minimally as possible by the CDD to accommodate the manufacturing disruption or unavailability of commercially available vehicles/trucks. The Operator shall quantify the GHG, criteria and toxic contaminant emissions resulting from any delayed compliance of this condition and submit the findings to CDD for review and approval. The Operator shall propose mitigation measures to reduce additional emissions resulting from any delay in compliance to a less than significant level, as

O-8.46
Cont.

provided for in MM-GHG 1g. The Operator shall prioritize procuring any necessary GHG emissions offsets from the North Richmond area and surrounding community, thereby further reducing criteria air pollution and toxic air contaminants in the immediate area. The Operator shall implement the proposed measures after CDD review and approval. Any extension of time granted to implement this condition shall be limited to the shortest period of time necessary to allow for 100% electrification under the clean fleet requirements. The CDD staff may seek the recommendation of the California Air Resources Board in determining whether there has been a manufacturing disruption or insufficient vehicles/trucks commercially available for the intended application.

The Operator shall submit a condition of approval compliance report within 30 days of, but not later than, the following dates: December 31, 2023, December 31, 2025, and December 31, 2027. The report shall outline clean fleet requirements applicable at each report interval and include documentation demonstrating compliance with each requirement. The County Zoning Administrator shall consider each report at a noticed public hearing and determine whether the Operator has complied with the applicable clean fleet requirements. If the Operator has not met each 100% clean fleet requirement by December 31, 2027, then the Operator shall submit subsequent reports every year until the 100% clean fleet requirement is implemented. The County Zoning Administrator shall consider each subsequent report at a noticed public hearing and determine whether the Operator has complied with the clean fleet requirements, including any minimal adjustments to the requirements by the CDD to accommodate the manufacturing disruption or unavailability of commercially available vehicles/trucks, as described in the previous paragraph.

After the 100% clean fleet requirement has been implemented and confirmed by the CDD, the Operator shall submit to the CDD an on-going compliance report every three years containing all necessary documentation to verify that the Operator is meeting the clean fleet requirements. At the time it confirms that the 100% clean fleet requirement has been implemented, the CDD will establish the due date for the first on-going compliance report. Each subsequent on-going compliance report shall be due within 30 days of, but not later than, the three-year anniversary of the preceding due date. The on-going compliance reports and accompanying documentation shall be made available to the public upon request.

O-8.46
Cont.

- d. The property owner/tenant/lessee shall ensure all on-site equipment and vehicles (e.g., yard hostlers, yard equipment, forklifts, yard trucks and tractors, and pallet jacks) used within the project site are zero-emission from start of operations.
- e. The property owner/tenant/lessee shall use the cleanest technologies available and provide the necessary infrastructure to support zero-emission vehicles and equipment that will be operating on-site.
- f. At least 30 days prior to applying for building permits, the property owner/tenant/lessee shall submit plans for review and approval of CDD staff, which include the necessary infrastructure for future use of zero emission vehicles, including both heavy-duty and delivery trucks (e.g., installation of conduit specifically designated for truck charging equipment in the future).
- g. Idling is strictly prohibited on the subject property and adjacent streets in the Richmond/San Pablo area. The property owner/tenant/lessee shall inform all truck drivers associated with the business of this prohibition.
- h. Applicant/tenant/lessee shall periodically sweep the property to remove road dust, tire wear, brake dust and other contaminants in parking lots.
- i. Applicant/tenant/lessee shall not use diesel back-up generators on the property unless absolutely necessary. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB's Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Applicant/tenant/lessee shall make every effort to utilize emergency back-up generators that meet CARB's Tier 4 emission standards or have the least emissions.
- j. The property owner/tenant/lessee shall monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB's Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation.
- k. The operation of Transportation Refrigeration Units (TRUs) is prohibited on the subject site. Any proposed use of TRUs at the subject location will require submittal of a Development Plan modification application and subject to review under the California Environmental Quality Act.

O-8.46
Cont.

- I. The property owner shall add this Condition of Approval, Air Quality 15, a through I, as part of contractual lease agreement language to ensure the tenant/lessee is informed of all on-going operational responsibilities.

Preferred Truck Route

14. The preferred truck route for all heavy-duty trucks (Class 7 and 8) exiting the site via Brookside Drive is: left turn onto Brookside Drive, left turn at Central Street, right turn on Pittsburg Avenue. The preferred truck route for all heavy-duty trucks exiting the site via Fred Jackson Way is: proceed directly onto Pittsburg Avenue to the Richmond Parkway. Drivers returning to this site shall be instructed to use the same routes outlined above. These preferred truck routes shall be implemented during all on-going business operations and shall be included as part of contractual lease agreement language to ensure the tenants/lessees are made aware of the preferred route for heavy-duty trucks.

Solar Power Generation:

15. At least 30-days prior to applying for a building permit, the applicant shall submit evidence to the CDD staff for review and approval, demonstrating that the subject building(s) have been designed to be solar ready by meeting or exceeding the current California Building Code (e.g., structurally able to support solar panels on roofs, appropriately sized electrical panels and conduit, etc.).
16. The project sponsor shall include with the building permit application, sufficient solar panels to provide power for the operation’s base power use at the start of operations and as power use demand increases. Project sponsor shall include analysis of (a) projected power requirements at the start of operations and as power demand increases corresponding to the implementation of the “clean fleet” requirements, and (b) generating capacity of the solar installation.

CDD shall verify the size and scope of the solar project based upon the analysis of the projected power requirements and generating capacity as well as the available solar panel installation space.

In the event sufficient space is not available on the subject lot to accommodate the needed number of solar panels to produce the operation’s base or anticipated power use, the applicant shall demonstrate how all available space has been maximized (e.g., roof, parking areas, etc.). Areas which provide truck movement may be excluded from these calculations unless otherwise deemed acceptable by the supplied reports.

In the event utility provider review/approval delays do not allow installation/operation of the CDD approved solar panels at the time of final

O-8.46
Cont.

building inspection (occupancy), the project sponsor shall provide documentation to the CDD for review and approval, demonstrating how all reasonable and normal efforts have been made to procure the necessary permits and install the solar panels.

17. Prior to issuance of the initial building permit, the applicant shall pay the Contra Costa County, Department of Conservation and Development, Current Planning Division, a flat not-to-exceed amount of \$500,000 as its fair share contribution towards the cost of planning and/or constructing a Solar Project for the benefit of the North Richmond area. The Solar Project must benefit North Richmond residents as mitigation for the construction of a warehouse project with its associated emissions and truck traffic. The County will work with the District One Supervisor and the North Richmond Community to define and develop the Solar Project.

Biological Resources:

Nesting Bird Surveys

18. Construction work shall take place outside of the February 15 to September 15 bird nesting seasonal window to the maximum extent practicable. If construction is to be conducted during the nesting season, the project applicant is responsible for ensuring that the project does not result in any violation of the Migratory Bird Treaty Act (MBTA) or Fish and Game Code. A qualified Biologist shall conduct focused pre-construction nesting bird surveys throughout the project area no more than 5 days prior to the initiation of on-site project-related activities. Surveys shall be conducted in all potential habitat located at, and adjacent to, project work sites and in staging and storage areas. The minimum survey radii surrounding the work area will be the following: (1) 250 feet for passerines; and (2) 1,000 feet for raptors such as *Buteo spp.* In the event that there is a lapse in construction activities for 7 days or more, a qualified Biologist shall conduct additional focused pre-construction nesting bird surveys in areas of potential habitat again before project activities can be reinitiated. If an active nest is found, the qualified Biologist may consult with the California Department of Fish and Wildlife (CDFW) if needed regarding appropriate action to comply with the Fish and Game Code.

- **Active Nest Buffers.** Active nest sites and protective buffer zones will be designated as “ecologically sensitive areas” where no project-related activities or personnel may enter (while occupied or in use for the season in the case of multi clutch bearing species) during the course of nesting bird season with the establishment of a fence barrier or flagging

O-8.46
Cont.

surrounding the nest site. The qualified Biologist shall determine the necessary buffer, in consultation with CDFW if needed, to protect nesting birds based on existing site conditions, such as construction activity, topography, and line of sight, and shall increase buffers as needed to provide sufficient protection of nesting birds and their natural behaviors.

- **Active Nests.** A qualified Biologist will observe any identified active nests prior to the start of any project-related activities to establish a behavioral baseline of the adults and any nestlings. Once project activities commence, all active nests shall be continuously monitored by a qualified Biologist to detect any signs of disturbance and behavioral changes as a result of the project. In addition to direct impacts, such as nest destruction, nesting birds might be affected by noise, vibration, odors and movement of workers or equipment. If signs of disturbance and behavioral changes are observed, the qualified Biologist shall halt project activities causing that change until the nestlings have fledged, and the nest is determined to be inactive. **(MM BIO-1a)**

19. General Minimization Measures

- **Harassment of Animals.** No project personnel or motorized equipment shall harass, herd, or drive any wildlife. Harass is defined as an intentional act that disrupts an animal's normal behavior patterns, including but is not limited to, breeding, feeding, or sheltering. Project personnel and equipment shall not cause displacement of wildlife into roadways or open areas lacking cover from predators.
- **Allow Wildlife to Leave Unharmmed.** Project staff shall allow any wildlife encountered during the course of project activities to leave the project area unharmmed.
- **Temporary Flagging, Fencing, and Barriers.** The permittee shall remove all temporary flagging, fencing, and/or barriers from the project area upon completion of project activities.
- **Open Pipes Restriction.** All pipes, culverts, signposts, poles, or similar structures that are staged, stored, or installed at the project area for one or more overnight periods shall be thoroughly inspected for wildlife prior to use in project activities.
- **Open Trenches.** Wildlife escape ramps shall be installed, constructed of wood, or installed as an earthen slope in each open trench, hole, or pit

O-8.46
Cont.

that is capable of allowing large (e.g., deer, coyote) and/or small (e.g., frogs, snakes) wildlife to escape on their own volition. Open trenches, pits, or holes shall be inspected for wildlife prior to the initiation of project activities each day. If wildlife is discovered, it shall be allowed to leave on its own volition, or if necessary, moved by biological staff if applicable. Special-status species shall not be handled without prior consultation from CDFW.

- **Signpost Restriction.** Signposts installed permanently throughout the course of the project shall have the top capped and/or the top three post holes covered or filled with screws or bolts to prevent the entrapment of wildlife.
- **Fencing Restriction.** All fencing installed temporarily or permanently throughout the course of the project, shall not be constructed of materials deleterious to wildlife (e.g., sharp edges exposed at the top or bottom of chain-link fencing, braided wire where birds may become entangled, etc.). No barbed wire, or equivalent, shall be allowed where it may result in harm to birds and other wildlife.
- **Restriction of Nighttime Construction and Artificial Lighting.** Except for construction activities that involve the pouring of concrete and require the use of nighttime lighting, all other project activities shall be terminated 30 minutes before sunset and shall not resume until 30 minutes after sunrise. The permittee shall use sunrise and sunset times established by the Federal Aviation Administration (FAA) found at: https://avcams.faa.gov/sunrise_sunset.php.

No permanent or unattended temporary outdoor lighting shall be used during the course of construction.

Cultural Resources and Tribal Cultural Resources:

20. Worker Training, Archaeological Monitoring, and Halt Construction Upon Encountering Historical or Archaeological Materials

Prior to the initiation of construction activities, an Archaeologist who meets the Secretary of the Interior's Professional Qualification Standards for archaeology shall provide Worker Environmental Awareness Program (WEAP) training to construction personnel with an overview of applicable laws, project mitigation measures, and procedures to be followed with regards to historical and/or archaeological resources that may be encountered over the course of the

O-8.46
Cont.

project. An Archaeologist should be present to monitor all ground-disturbance activities. In the event a potentially significant historical and/or archaeological resource is encountered during subsurface earthwork activities, all construction activities within a 100-foot radius of the find shall cease and workers should avoid altering the materials until an Archaeologist has evaluated the situation. The applicant for the proposed project (CenterPoint Properties) shall include a standard inadvertent discovery clause in every construction contract to inform contractors of this requirement. Potentially significant cultural resources consist of but are not limited to stone, bone, glass, ceramics, fossils, wood, or shell artifacts, or features including hearths, structural remains, or historic dumpsites. The Archaeologist shall make recommendations concerning appropriate measures that shall be implemented to protect the resource, including but not limited to excavation and evaluation of the finds in accordance with Section 15064.5 of the CEQA Guidelines. Any previously undiscovered resources found during construction within the project site shall be recorded on appropriate California Department of Parks and Recreation (DPR) 523 forms and shall be submitted to Contra Costa County Department of Conservation and Development, the Northwest Information Center (NWIC), and the California Office of Historic Preservation (OHP), as required. **(MM CUL-1)**

O-8.46
Cont.

21. Stop Construction upon Encountering Human Remains

In the event of the accidental discovery or recognition of any human remains, CEQA Guidelines Section 15064.5, Health and Safety Code Section 7050.5, and Public Resources Code Sections 5097.94 and Section 5097.98 shall be followed. If during the course of project construction, there is accidental discovery or recognition of any human remains, the following steps shall be taken:

1. There shall be no further excavation or disturbance within 100 feet of the remains until the County Coroner is contacted to determine whether the remains are Native American and if an investigation of the cause of death is required. If the Coroner determines the remains to be Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours, and the NAHC shall identify the person or persons it believes to be the Most Likely Descendant (MLD) of the deceased Native American. The MLD may make recommendations to the landowner or the person responsible for the excavation work within 48 hours, for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98.

2. Where the following conditions occur, the landowner or his or her authorized representative shall work with the Coroner to rebury the Native American human remains and associated grave goods with appropriate dignity either in accordance with the recommendations of the MLD if available or on the project site or off-site where the reburial would not be subject to further subsurface disturbance:
- The NAHC is unable to identify an MLD or the MLD failed to make a recommendation within 48 hours after being notified by the NAHC.
 - The descendant identified fails to make a recommendation.
 - The landowner or his authorized representative rejects the recommendation of the descendant, and mediation by the NAHC fails to provide measures acceptable to the landowner. **(MM CUL-3)**

22. Native American Construction Monitoring

To minimize the potential for destruction of or damage to existing or previously undiscovered burials, archaeological and Tribal Cultural Resources (TCRs) and to identify any such resources at the earliest possible time during project-related earthmoving activities, the project applicant and its construction contractor(s) shall implement the following measures:

- Native American Monitors from culturally affiliated Native American Tribes shall be invited to monitor the vegetation grubbing, stripping, grading or other ground-disturbing activities in the project area to determine the presence or absence of any cultural resources. Native American representatives from cultural affiliated Native American Tribes shall act as a representative of their Tribal Government and shall be consulted before any cultural studies or ground-disturbing activities begin.
- Native American representatives and Native American Monitors have the authority to identify sites or objects of significance to Native Americans and to request that work be stopped, diverted, or slowed if such sites or objects are identified within the direct impact area. Only a Native American representative can recommend appropriate treatment of such sites or objects.
- If buried cultural resources, such as chipped or ground stone, historic debris, building foundations, or bone, are discovered during ground-disturbing activities, work shall stop in that area and within 100 feet of the

0-8.46
Cont.

find until an Archaeologist who meets the Secretary of the Interior' s qualification standards can assess the significance of the find and, if necessary, develop appropriate treatment measures in consultation with the County, the California Office of Historic Preservation (OHP), and other appropriate agencies. Appropriate treatment measures may include development of avoidance or protection methods, archaeological excavations to recover important information about the resource, research, or other actions determined during consultation. **(MM CUL-4a)**

23. Avoidance and Preservation in place of Tribal Cultural Resources

Should Tribal Cultural Resources (TCRs) be discovered during project construction, avoidance and preservation in place is the preferred manner of mitigating impacts to TCRs and shall be accomplished by several means, including:

- Planning construction to avoid TCRs, archaeological sites and/ or other resources; incorporating sites within parks, green-space, or other open space; covering archaeological sites; deeding a site to a permanent conservation easement; or other preservation and protection methods agreeable to consulting parties and regulatory authorities with jurisdiction over the activity. As noted in Mitigation Measure CUL-4a, appropriate treatment measures may include archaeological excavations to recover information about the resource. Recommendations for avoidance of cultural resources shall be reviewed by the CEQA Lead Agency representative (Contra Costa County), interested Native American Tribes and the appropriate agencies, in light of factors such as costs, logistics, feasibility, design, technology and social, cultural and environmental considerations, and the extent to which avoidance is consistent with project objectives. If feasible, avoidance and design alternatives may include realignment within the project area to avoid cultural resources, modification of the design to eliminate or reduce impacts to cultural resources or modification or realignment to avoid highly significant features within a cultural resource. Native American representatives from interested Native American Tribes shall be allowed to review and comment on these analyses and shall have the opportunity to meet with the CEQA Lead Agency (Contra Costa County) representative and its representatives who have technical expertise to identify and recommend feasible avoidance and design alternatives, so that appropriate and feasible avoidance and design alternatives can be identified.

- If the resource can be avoided, the construction contractor(s), with Native

O-8.46
Cont.

American Monitors from culturally affiliated Native American Tribes present, shall install protective fencing outside the site boundary, including a buffer area, before construction restarts. The construction contractor(s) shall maintain the protective fencing throughout construction to avoid the site during all remaining phases of construction. The area shall be demarcated as an "Environmentally Sensitive Area." Native American representatives from interested Native American Tribes and the CEQA Lead Agency (Contra Costa County) representative shall also consult to develop measures for long-term management of the resource and routine operation and maintenance within culturally sensitive areas that retain resource integrity, including tribal cultural integrity, and including archaeological material, Traditional cultural properties and cultural landscapes, in accordance with State and federal guidance including National Register Bulletin 30 (Guidelines for Evaluating and Documenting Rural Historic Landscapes), Bulletin 36 (Guidelines for Evaluating and Registering Archaeological Properties), and Bulletin 38 (Guidelines for Evaluating and Documenting Traditional Cultural Properties); National Park Service Preservation Brief 36 (Protecting Cultural Landscapes: Planning, Treatment and Management of Historic Landscapes) and using the Advisory Council on Historic Preservation (ACHP) Native American Traditional Cultural Landscapes Action Plan for further guidance. Use of temporary and permanent form of protective fencing shall be determined in consultation with the Native American representatives from interested Native American Tribes. **(MM CUL-4b)**

O-8.46
Cont.

Geology and Soils:

24. Prepare Grading and Construction Plans that Incorporate Geotechnical Investigation Recommendations

Prior to issuance of the grading permits for the proposed project, development of the final grading, foundation, and construction plans shall incorporate the site-specific earthwork, foundation, floor slab, finished grades, underground utilities, and pavement design recommendations, as detailed in the Geotechnical Investigation prepared by Cornerstone Earth Group dated August 22, 2018. The applicant shall coordinate with the County Department of Conservation and Development and County Geologist to tailor the grading and foundation plans, as needed, to reduce risk related to known soil and geologic hazards. The final grading, foundation, and construction plans for the proposed project shall be reviewed by the County Department of Conservation and Development and County Geologist. Grading operations shall meet the

requirements of the recommendations included in the Preliminary Geotechnical Investigation prepared by Cornerstone Earth Group. During construction, the County Department of Conservation and Development shall monitor construction of the proposed project to ensure the earthwork operations are properly performed. **(MM GEO-1a)**

25. Prepare Final Construction Report

The Project Geotechnical Engineer shall prepare a final report that documents the field observations and testing services provided during construction as well as provide a professional opinion on the compliance of construction with the recommendations in the Geotechnical Investigation. The final report can be segmented into an as-graded report that is issued at the end of rough grading, but prior to the installation of the foundations, and a second letter commenting on the inspections made during installation of foundations/parking lot/drainage facilities. The County Department of Conservation and Development will place a hard hold on the final inspection, to ensure that the Geotechnical Engineer's grading-foundation inspection letter-report is provided prior to requesting the final building inspection for each building. **(MM GEO-1b)**

O-8.46
Cont.

Greenhouse Gas Emissions:

26. Prior to the issuance of building permits, the project applicant/developer shall demonstrate (e.g., provide building plans) to the satisfaction of the Contra Costa County Department of Conservation and Development, that the proposed buildings are designed and will be built to, at minimum, meet the Tier 2 advanced energy efficiency requirements of the Nonresidential Voluntary Measures of the California Green Building Standards Code, Division A5.2, Energy Efficiency, as outlined under Section A5.203.1.2.2. **(MM GHG-1a)**

27. Prior to issuance of occupancy permits, the project applicant/developer shall demonstrate to the satisfaction of the Contra Costa County Department of Conservation and Development, that the proposed parking areas for passenger automobiles are designed and will be built to accommodate electric vehicle (EV) charging stations. At minimum, the parking shall be designed to accommodate a number of EV charging stations equal the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.3.2. **(MM GHG-1b)**

28. Prior to issuance of occupancy permits, the project applicant/developer shall demonstrate to the satisfaction of the Contra Costa County Department of Conservation and Development, that the proposed parking areas for passenger automobiles are designed and will be built to provide parking for low-emitting, fuel-efficient, and carpool/van vehicles. At minimum, the number of preferential parking spaces for passenger automobiles shall equal the Tier 2 Nonresidential Voluntary Measures of the California Green Building Standards Code, Section A5.106.5.1.2. **(MM GHG-1c)**
29. To reduce idling emissions from transport trucks, which places restrictions on idling, the project applicant/developer shall have signage placed at truck access gates, loading docks, and truck parking areas that clearly notes idling is strictly prohibited on the subject property. In coordination with Contra Costa County, the project applicant/developer shall also place similar signs in the adjacent streets in the Richmond/San Pablo area. At minimum, each sign placed outside the interior premises of the subject property shall note the idling prohibition on the adjacent streets and include telephone numbers of the building facilities manager and the California Air Resources Board (ARB) to report violations. All signage shall be made of weather-proof materials. All site and architectural plans submitted to the Contra Costa County Department of Conservation and Development shall note the locations of these signs. Prior to issuance of occupancy permits, the Contra Costa County Department of Conservation and Development shall verify compliance with these requirements herein. **(MM GHG-1d)**
30. All landscaping equipment (e.g., leaf blower) used for property management shall be electric-powered only. The property manager/facility owner shall provide documentation (e.g., purchase, rental, and/or services agreement) to the Contra Costa County Department of Conservation and Development to verify, to the County's satisfaction, that all landscaping equipment utilized will be electric-powered. **(MM GHG-1e)**
31. Prior to the issuance of grading and building permits for the proposed project, the project applicant shall provide Contra Costa County with documentation demonstrating that the rooftop photovoltaic system will satisfy 100 percent of operational electricity consumed by the project, including the electricity demand resulting from the electric vehicle (EV) fleet.

If the rooftop photovoltaic system will not be able to supply the additional electricity demand resulting from the EV fleet charging requirements, the project applicant shall, prior to the issuance of the certificate of occupancy for the proposed project, provide Contra Costa County with documentation

O-8.46
Cont.

demonstrating that the additional electricity demand will be supplied with 100 percent carbon-free electricity sources. These sources may include, but are not limited to, Pacific Gas and Electric Company (PG&E) 100 Percent Solar Choice electricity service option or Marin Clean Energy's (MCE) Deep Green 100 percent renewable electricity service option. This documentation shall also demonstrate that 100 percent carbon-free electricity sources will be utilized for the first 30 years of operation.

To monitor and ensure that 100 percent of electricity demand generated by the proposed project is supplied with 100 percent carbon-free electricity sources, the project applicant shall maintain records of all electricity consumption and supply associated with the proposed project's operation for five years and make these records available to the County upon request. **(MM GHG-f)**

32. Prior to the issuance of the certificate of occupancy for the proposed project, the project applicant shall provide the County with documentation demonstrating the purchase of voluntary carbon credits pursuant to the following performance standards and requirements: the carbon offsets shall achieve real, permanent, quantifiable, verifiable, additional and enforceable reductions as set forth in California Health and Safety Code Section 38562(d)(1) and (d)(2) and 17 California Code of Regulations § 95802(a); and one carbon offset credit shall mean the past reduction or sequestration of one metric ton (MT) of carbon dioxide equivalent (CO₂e) that is "not otherwise required" (CEQA Guidelines § 15126.4(c)(3)). Such credits shall be purchased through a verified greenhouse gas (GHG) emissions credit broker and (i) shall be registered with, and retired by an Offset Project Registry, as defined in 17 California Code of Regulations § 95802(a), approved by ARB, such as, but not limited to the Climate Action Reserve, American Carbon Registry, or Verra, and (ii) shall be subject to protocols that are ARB-approved as required in 17 California Code of Regulations § 95970 (a)(1)-(2). Such credits shall be in an amount sufficient to offset operational GHG emissions of no less than 3,688 MT CO₂e per year starting in 2021, 3,384 MT CO₂e per year starting in 2023, 530 MT CO₂e per year starting in 2025, 371 MT CO₂e per year starting in 2027, and 2,205 MT CO₂e per year starting in 2045 for the first 30 years of project operations, based on current estimates of the project related GHG emissions. Alternatively, the project applicant may purchase the total amount estimated over the lifetime of the proposed project (30 years), which is estimated to be 35,112 MT CO₂e. The purchase shall be verified as occurring prior to approval of occupancy permits. Copies of emission estimates and offset purchase contract(s) shall be provided to the County for review and approval prior to the issuance of the certificate of occupancy for the proposed project.

O-8.46
Cont.

Should the project applicant fail to meet the County's conditions of approval for the proposed project as described in Chapter 2, Project Description, of the Draft EIR, the project applicant shall recalculate the MT CO2e generated by project operation and purchase carbon credits equal to no less than the amount necessary to ensure that project emissions do not exceed 660 MT CO2e per year. If the project applicant fails to meet the County's conditions of approval, as described in Chapter 2, Project Description, of the Draft EIR, for the first year of operation (2021), then the project applicant shall recalculate the proposed project's operational MT CO2e per year and purchase the necessary amount of carbon credits no later than December 31 in the following calendar year to ensure that the proposed project does not exceed 660 MT CO2e per year. If the project applicant fails to meet the County's conditions of approval, as described in Chapter 2, Project Description, of the Draft EIR, for the benchmark year of 2023, then the project applicant shall recalculate the proposed project's operational MT CO2e per year and purchase the necessary amount of carbon credits no later than December 31 in the following calendar year to ensure that the proposed project does not exceed 660 MT CO2e per year. If the project applicant fails to meet the County's conditions of approval, as described in Chapter 2, Project Description, of the Draft EIR, for the benchmark year of 2025, then the project applicant shall recalculate the proposed project's operational MT CO2e per year and purchase the necessary amount of carbon credits no later than December 31 in the following calendar year to ensure that the proposed project does not exceed 660 MT CO2e per year. If the project applicant fails to meet the County's conditions of approval, as described in Chapter 2, Project Description, of the Draft EIR, for the benchmark year of 2027, then the project applicant shall recalculate the proposed project's operational MT CO2e per year and purchase the necessary amount of carbon credits no later than December 31 in the following calendar year to ensure that the proposed project does not exceed 660 MT CO2e per year. All carbon credits purchased to offset project emissions shall meet the standards and requirements stated in this mitigation measure and documentation proving the purchase of carbon credits which meet these standards and requirements shall be provided to the County for review and approval. **(MM GHG-1g)**

33. Prior to issuance of the initial building permit, the applicant shall pay the Contra Costa County, Department of Conservation and Development, Current Planning Division, a flat not-to-exceed amount of \$750,000 as its fair share contribution towards the cost of funding an air quality improvement and/or health related project(s) for the benefit of the North Richmond area. The project(s) must benefit sensitive receptors within the North Richmond area as mitigation for

O-8.46
Cont.

the construction of a warehouse project with its associated emissions and truck traffic. The County will work with the District One Supervisor and the North Richmond Community to fund the project(s).

Hazards and Hazardous Materials:

34. Prepare Soil Management Plan and Health and Safety Plan

Prior to issuance of grading permits, the applicant shall retain a licensed professional to prepare and submit a Soil Management Plan and Health and Safety Plan for review and approval by Contra Costa Environmental Health. These plans shall include the following:

- Site control procedures to control the flow of personnel, vehicles, and materials in and out of the project site.
- Measures to minimize dust generation, stormwater runoff, and tracking soil off-site.
- If excavation de-watering is required, protocols to evaluate water quality and discharge/disposal alternative should be described.
- Protocols for conducting earthwork activities in areas where impacts soil, soil vapor, and/or groundwater are present or suspected. Worker training requirements, health and safety measures, and soil handling procedures shall be described.
- Protocols to be implemented if buried tanks, structures, wells, debris, or unidentified areas of impacted soils are encountered during construction activities.
- Protocols to evaluate the quality of soil suspected of being contaminated so that appropriate mitigation, disposal or reuse alternatives, if necessary, can be determined.
- Procedures to evaluate and document the quality of any soil imported to the project site. Soil containing chemicals exceeding residential (unrestricted use) screening levels or typical background concentrating of metals should not be accepted.
- Methods to monitor excavations for the potential presence of volatile chemical vapors. **(MM HAZ-1)**

O-8.46
Cont.

Hydrology and Water Quality:

35. Prepare Final Drainage Plan Prior to Grading

- In accordance with Division 914 of the Contra Costa County Ordinance Code, the project applicant shall collect and convey all stormwater entering and/or originating on this property, without diversion and within an adequate storm drainage facility, to a natural watercourse having definable bed and banks, or to an existing adequate public storm drainage system that conveys the stormwater to a natural watercourse. Any proposed diversions of the watershed shall be subject to hearing body approval. Prior to issuance of a grading permit, the applicant shall submit improvement plans for proposed drainage improvements, and a drainage report with hydrology and hydraulic calculations to the Engineering Services Division of the Public Works Department for review and approval that demonstrates the adequacy of the on-site drainage system and the downstream drainage system. The applicant shall verify the adequacy at any downstream drainage facility accepting stormwater from this project prior to discharging runoff. If the downstream system(s) is not adequate to handle the Existing Plus Project condition for the required design storm, improvements shall be constructed to make the system adequate. The applicant shall obtain access rights to make any necessary improvements to off-site facilities.
- In accordance with Division 1014 of the Contra Costa County Ordinance Code, the applicant shall comply with all rules, regulations, and procedures of the National Pollutant Discharge Elimination System (NPDES) for municipal, construction and industrial activities as promulgated by the California State Water Resources Control Board, or any of its Regional Water Quality Control Boards (San Francisco Bay—Region 2); and
- Submit a Final Stormwater Control Plan and a Stormwater Control Operation and Maintenance Plan (O&M Plan) to the Public Works Department, which shall be reviewed for compliance with the County's NPDES Permit and shall be deemed consistent with the County's Stormwater Management and Discharge Control Ordinance (Division 1014) prior to issuance of a building permit. Improvement Plans shall be reviewed to verify consistency with the Final Stormwater Control Plan and compliance with the Contra Costa Stormwater C.3 Guidebook of the County's NPDES Permit and the County's Stormwater Management and Discharge Control Ordinance (Division 1014) and be designed to discourage prolonged standing/ponding of water on-site. **(MM HYD-3)**

O-8.46
Cont.

Noise:

36. Implement Noise Reduction Measures During Construction

- The construction contractor shall ensure that grading activities shall be restricted to the hours between 7:30 a.m. and 5:30 p.m., Monday through Friday. **(MM NOI-1)**

Transportation:

37. Prior to issuance of the certificate of occupancy, the applicant shall retain a qualified transportation consultant to prepare a project-specific Transportation Demand Management (TDM) Program that could incorporate the following measures, where feasible. The TDM Program shall be reviewed and approved by the County, and the applicant shall implement all approved TDM measures.

- Commute Trip Reduction Program
- Ride-sharing Program
- End of Trip Facilities
- Last Mile Services
- New Employee Commute Orientation
- Preferential Parking Program
- Employer-Sponsored Vanpool
- Transportation Network Company (TNC) Partnership
- Employer-Sponsored Shuttle to/from BART Station(s) or Other Transit Hub
- Carpool and Vanpool Ride-Matching Services **(MM TRANS-1)**

38. Prior to issuance of the certificate of occupancy for the proposed project, the applicant shall install a median and bulb-outs on Fred Jackson Way along the project frontage, stop signs at the project driveways, and signage prohibiting vehicles from turning left out of the project driveways. **(MM TRANS-2a)**

39. Prior to issuance of the building permit, the applicant shall (1) pay the North Richmond Area of Benefit (AOB) fee and (2) commit to installing one of the following improvements on Fred Jackson Way, Market Avenue, or Chesley Avenue prior to project occupancy:

- Bulb-outs
- Elevated crosswalks
- Speed tables
- Chicanes **(MM TRANS-2b)**

O-8.46
Cont.

40. Prior to the issuance of the certificate of occupancy, the applicant shall install curb ramps where required at all pedestrian walkways and pedestrian connections between the three buildings. The applicant shall install pedestrian crossings on all four approaches of Fred Jackson Way and Brookside Drive (including ADA-compliant pedestrian landing islands). The applicant shall install pedestrian crossings on all four approaches of Fred Jackson Way and Pittsburg Avenue (including ADA-compliant pedestrian landing islands). **(MM TRANS-4a)**
41. Prior to the issuance of the certificate of occupancy, the applicant shall install long-term bicycle parking consistent with County Code Section 82-16.412 and other bicycle amenities (showers, changing rooms, bike repair tools/station, etc.) in a convenient location. **(MM TRANS-4b)**

Landscaping:

42. Final Landscaping Plan: At least 30 days prior to CDD stamp-approval of plans for issuance of a building permit, a final landscape and irrigation plan shall be submitted to the CDD for review and approval. The landscaping plan shall conform to the State's Model Water Efficient Landscape Ordinance or the County's Ordinance, if one is adopted. Prior to requesting a final inspection, the approved landscaping shall be installed and evidence of the installation (e.g., photos) shall be provided for the review and approval of CDD.
43. Restitution for the removal of (7) code-protected tree:
 - a. Planting and Irrigation Plan: Prior to issuance of a grading or building permit, whichever occurs first, the applicant shall submit a tree planting and irrigation plan prepared by a licensed arborist or landscape architect for the review and approval of the Department of Conservation and Development, Community Development Division (CDD). *See the North Richmond Design Guidelines for species and size requirements.*
 - b. Required Security to Assure Completion of Plan Improvements: A security shall be provided to ensure that the approved planting and irrigation plan is implemented. Prior to issuance of a building permit, the applicant shall submit a security that is acceptable to the CDD.
44. The Final Landscaping Plan shall include sufficient plantings along the southern property boundary to establish a vegetative screening aimed at blocking dust and particulate matter from migrating southward unabated. The vegetative screening shall include fast growing, tall species (e.g., Italian and Leyland cypress) with a density that will accomplish the goal of capturing the maximum amount of dust and particulate matter feasible (e.g., two or three rows of trees

O-8.46
Cont.

offset from one another and appropriately spaced).

45. Any proposed tree alteration, removal, or encroachment within a drip line of code-protected trees that are not identified with this permit approval will require submittal of a Tree Permit application for review and consideration by CDD.
46. The applicant shall comply with California Model Water Efficient Landscape Ordinance (Division 2, Title 23, California Code of Regulations, Chapter 2.7, Sections 490 through 495) and/or any applicable State mandated landscape/water related requirements applicable at the time of landscaping installation for the project. To the maximum extent feasible, the project proponent shall use drought tolerant vegetation for the development.

Project sponsors should be aware that Section 31 of the East Bay Municipal Utility District's (EBMUD) Water Service Regulations requires that water service shall not be furnished for new or expanded service unless all the applicable water-efficiency measures described in the regulation are installed at the project sponsor's expense. Any questions regarding these requirements can be directed to EBMUD Water Service Planning at (510) 287-1365.

General Construction:

Construction Period Restrictions and Requirements

47. During construction, the following mitigation measures shall be implemented:
 - All exposed surfaces (e.g., parking areas, staging areas, soil piles, graded areas, and unpaved access roads) shall be watered two times per day.
 - All haul trucks transporting soil, sand, or other loose material off-site shall be covered.
 - All visible mud or dirt track-out onto adjacent public roads shall be removed using wet power vacuum street sweepers at least once per day. The use of dry power sweeping is prohibited.
 - All vehicle speeds on unpaved roads shall be limited to 15 miles per hour (mph).
 - All roadways, driveways, and sidewalks to be paved shall be completed as soon as possible. Building pads shall be laid as soon as possible after grading unless seeding or soil binders are used.

O-8.46
Cont.

- Idling times shall be minimized either by shutting equipment off when not in use or reducing the maximum idling time to 5 minutes (as required by the California Airborne Toxics Control Measure Title 13, Section 2485 of California Code of Regulations [CCR]). Clear signage shall be provided for construction workers at all access points.
- All construction equipment shall be maintained and properly tuned in accordance with manufacturer's specifications. All equipment shall be checked by a certified visible emissions evaluator.
- Post a publicly visible sign with the telephone number and person to contact at the lead agency regarding dust complaints. This person shall respond and take corrective action within 48 hours. The Bay Area Air Quality Management District (BAAQMD) phone number shall also be visible to ensure compliance with applicable regulations.

48. Implement the following Emission Reduction Measures into the final design of the project:

- The project sponsor shall require their contractor and subcontractors to fit all internal combustion engines with mufflers which are in good condition.
- A dust and litter control program shall be submitted for the review and approval of the Community Development Division staff. Any violation of the approved program or applicable ordinances shall require an immediate work stoppage. Construction work shall not be allowed to resume until, if necessary, an appropriate construction bond has been posted.
- The applicant shall make a good-faith effort to avoid interference with existing neighborhood traffic flow.
- Transporting of heavy equipment and trucks shall be limited to weekdays between the hours of 8:30 A.M. and 4:30 P.M. and prohibited on Federal and State Holidays.
- The site shall be maintained in an orderly fashion. Following the cessation of construction activity, all construction debris shall be removed from the site.
- All construction activities shall be limited to the hours of 7:00 A.M. to 6:00

O-8.46
Cont.

P.M., Monday through Friday, and shall be prohibited on state and federal holidays on the calendar dates that these holidays are observed.

- Prohibit unnecessary idling of internal combustion engines.
- Locate stationary noise generating equipment as far from surrounding residential properties as possible.
- Saturday work may be permissible upon review and approval by CDD staff of a written request by the contractor/developer indicating the circumstances warranting such Saturday work and the nature of the work to be performed.

Debris Recovery:

49. At least 15 days prior to the issuance of a building permit the developer shall demonstrate compliance with the debris recovery program, which requires at least 50 percent of the jobsite debris generated by construction projects of 5,000 square feet or greater to be recycled, or otherwise diverted from landfill disposal.
50. Dumpsters or refuse areas shall be screened from view from any roadway.
51. The Development Plan application was subject to an initial deposit of \$116,880.80 that was paid with the application submittal, plus time and material costs if the application review expenses exceed the initial deposit. Any additional fee due must be paid prior to issuance of a building permit, or 60 days of the effective date of this permit, whichever occurs first. The fees include costs through permit issuance and final file preparation. Pursuant to Contra Costa County Board of Supervisors Resolution Number 2013/340, where a fee payment is over 60 days past due, the application shall be charged interest at a rate of ten percent (10%) from the date of approval. The applicant may obtain current costs by contracting the project planner. A bill will be mailed to the applicant shortly after permit issuance in the event that additional fees are due.

O-8.46
Cont.

**PUBLIC WORKS CONDITIONS OF APPROVAL FOR PERMIT CDDP18-03007 and
SUBDIVISION CDMS19-00009**

Applicant shall comply with the requirements of Title 8, Title 9 and Title 10 of the Ordinance Code. Any exception(s) must be stipulated in these Conditions of Approval. Conditions of Approval are based on the site plan submitted to the Department of Conservation and Development on August 28, 2018 and Tentative Map received October 29, 2019.

UNLESS OTHERWISE SPECIFIED, COMPLY WITH THE FOLLOWING CONDITIONS OF APPROVAL PRIOR TO ISSUANCE OF A BUILDING PERMIT.

General Requirements:

- 52. Improvement plans prepared by a registered civil engineer shall be submitted to the Public Works Department, Engineering Services Division, along with review and inspection fees, and security for all improvements required by the Ordinance Code or the conditions of approval of this permit. Any necessary traffic signing and striping shall be included in the improvement plans for review by the Transportation Engineering Division of the Public Works Department.
- 53. The Parcel Map merging the underlying properties into three parcels shall be approved by the County Board of Supervisors and filed at the County Recorder's Office.

Roadway Improvements:

Fred Jackson Way

- 54. Applicant shall construct curb, 8-foot wide concrete sidewalk (exclusive of curb width if constructed monolithically) street lights, longitudinal and transverse drainage infrastructure, stormwater management facilities, signage, striping and pavement conforms to existing improvements. In general, the face of curb for these improvements shall be 32-feet east of the ultimate centerline of Fred Jackson Way.
- 55. The project is limited to a total of three driveways along the Fred Jackson Way frontage: a main driveway opposite the intersection at Pittsburg Avenue, one between Pittsburg Avenue and Brookside Drive, and one between Pittsburg Avenue and Da Villa Road. Driveways designated for truck access shall be 40-50 feet wide. All others shall be 26 feet wide. Exact location of these northern and southern driveways are subject to review and approval of Public Works.
- 56. Install curb bulb-outs at the intersection of Pittsburg Avenue, as well as "pork chop" medians and signage near the driveways left-turnout movements from the project site to direct traffic north along Fred Jackson Way or west along Pittsburg Avenue toward Richmond Parkway. **MM TRANS-2a, MM TRANS-2b**
- 57. Install traffic signals at the intersections of Fred Jackson Way with both Brookside Drive and Pittsburg Avenue. The traffic signal at the Brookside Drive intersection shall allow full turning movements at all approaches. The signal at Pittsburg Avenue will include a separate southbound to west bound right turn

O-8.46
Cont.

lane, permitted left turns on the northbound and southbound approaches and split phases on the eastbound and westbound approaches. The applicant shall install pedestrian crossings on all four approaches of both signalized intersections, including ADA-compliant pedestrian landing islands as applicable. Construction costs for installation of these signals would be credited against the project's North Richmond AOB fee obligation. **MM TRANS-4**

58. The applicant shall submit a preliminary "sketch" plan to the Public Works Department for review showing all required improvements to the Fred Jackson Way frontage, signalized intersections and nearby offsite County roadway conforms. The sketch plan shall be to scale, show horizontal alignments, transitions, curb lines, and lane striping. It shall provide sight distance at the project driveways for a design speed of 40 miles per hour. Truck turning exhibits should also be included to show accessibility to/from project driveways and potential turning movement conflicts. The plan shall extend a minimum of 175 feet beyond the limits of the proposed work. Final alignment and driveway locations will be subject to Public Works approval based on compatibility with existing and proposed right of way dedications and improvements on adjacent and nearby properties.

Brookside Drive

59. Applicant shall construct curb, minimum 5-foot sidewalk (excluding width of curb), necessary longitudinal and transverse drainage, stormwater management facilities, street lighting, signage striping, pavement widening and transitions along the entire project frontage of Brookside Drive. Applicant shall construct face of curb 20 feet from the ultimate road centerline.
60. The project is limited to a total of three driveways along Brookside Drive frontage Driveways designated for truck access shall be 40-50 feet wide. All others shall be 26 feet wide. Exact location of these driveways are subject to review and approval of Public Works. Driveways shall incorporate signage and turn restrictions to discourage cut through traffic in residential neighborhoods.
61. The applicant shall submit a preliminary "sketch" plan to the Public Works Department for review showing all required improvements to the Brookside Drive frontage and nearby offsite conforms. Format of said "Plan" shall be as described above relative to Fred Jackson Way.

Off-Site Traffic Mitigation

62. In 2017, the North Richmond Area of Benefit (AOB) traffic mitigation fee program was updated to require new developments within North Richmond to

O-8.46
Cont.

contribute towards traffic calming strategies to reduce cut-through truck traffic in the neighborhood. Pursuant to Mitigation Measure TRANS-2b, the applicant will be required to develop traffic calming measures for review and approval by the Public Works Department, execute an agreement and post security to construct the identified improvement(s) prior to filing the Parcel Map for the project. The cost of the off-site traffic calming improvements would be counted as work completed and would be provided credit towards the North Richmond AOB fee obligation. As noted above, the two signals required along Fred Jackson Way will be credited to this obligation.

Miscellaneous

- 63. Any cracked and displaced curb, gutter, and sidewalk within the project’s limits of work shall be removed and replaced. Concrete shall be saw cut prior to removal. Existing lines and grade shall be maintained. New curb and gutter shall be doveled into existing improvements.

Access to Adjoining Property:

Proof of Access

- 64. Applicant shall furnish proof to the Public Works Department of the acquisition of all necessary rights of way, rights of entry, permits and/or easements for the construction of off-site, temporary or permanent, public and private road and drainage improvements.
- 65. Applicant shall furnish proof to the Public Works Department that legal access to the property is available from Fred Jackson Way and Brookside Drive.

Encroachment Permit

- 66. Applicant shall obtain an encroachment permit from the Application and Permit Center, if necessary, for construction of improvements within the right of way of Fred Jackson Way, Brookside Drive and Pittsburg Avenue.

Abutter’s Rights:

- 67. Applicant shall restrict access along the Fred Jackson Way and Brookside Drive frontages of this property, with the exception of the access points shown on the applicant’s site plan, as specifically approved under these conditions of approval. Owner shall relinquish abutter’s rights of access along both frontages with the exception of the access points shown.

O-8.46
Cont.

Road Dedications:

- 68. Property Owner shall convey to the County, by Offer of Dedication, a minimum of ten feet of right of way along the entire Brookside Drive frontage for the planned future half-width of 30 feet from the ultimate centerline. Additional right of way may be necessary to accommodate public utilities.
- 69. If the applicant opts to separate public street stormwater runoff from the on-site runoff by constructing dual stormwater management facilities, the infrastructure associated with runoff from the public right of way may necessitate additional right of way along Fred Jackson Way and/or Brookside Drive. Property Owner shall convey to the County, by Offer of Dedication, any additional right-of-way necessary for operation and maintenance of stormwater management facilities associated with treatment of runoff from the public right of way.

Access & Utility Easements:

- 70. Proposed Private Access and Utility Easements between the three subdivision parcels should be delineated on the Parcel Map to provide for internal circulation and access to common driveways and utilities.

Da Villa Road

- 71. Owner shall grant a (generally) 15-foot wide Access and Utility Easement ("PAUE") to the property currently identified as Assessors' Parcel No. 409-300-002 (541 Da Villa Road). Said easement shall lie contiguous to the south property line of the project site (coincident with the north line of the Da Villa Road) and extend from the grantee's property westerly to Fred Jackson Way. To eliminate angle points in the easement, additional easement area may be required to create a centerline alignment for what will effectively be a 40-foot wide Da Villa Road easement that conforms to County collector road standards.
- 72. Coincident with the above PAUE, owner shall dedicate a non-exclusive Access and Drainage Easement to the Contra Costa County Flood Control and Water Conservation District ("District") to supplement the District's existing access along Da Villa Road and encumber any portions of Line A of Drainage Area 19A to be constructed by this project.

Countywide Street Light Financing:

- 73. Applicant shall annex to the Community Facilities District (CFD) 2010-1 formed for Countywide Street Light Financing.

O-8.46
Cont.

Landscaping:

- 74. If applicable, the applicant shall install and guarantee all SWCP landscaping and automatic irrigation facilities within the public-right-of-way, to be maintained by the County. The landscape facilities shall be maintained by the developer: a) for a minimum of 180 days after installation and b) until the plants have become established.
- 75. If applicable, the applicant shall submit four sets of landscape and automatic irrigation plans and cost estimates, prepared by a licensed landscape architect, for all SWCP landscaping and automatic irrigation facilities to be maintained by the County to the Public Works Department for review approval, prior to issuance of building permits. Applicant shall pay appropriate fees in accordance with County Ordinance. Landscaping shall meet the requirements of the Contra Costa County Public Works Department Landscaping Design, Construction and Maintenance standards and Guidelines for County Maintained Facilities.
- 76. All landscaping to be maintained by the property owner shall be submitted to the CDD for review and approval.
- 77. Applicant shall apply to the Public Works Department for annexation to the Community Facilities District (CFD) No. 2006-1 (North Richmond Area Maintenance Services) for the future maintenance of area wide medians and landscaping. The annexation of property into the CFD must be completed prior to occupancy and the applicant should be aware that the annexation process may take approximately 60 days.

O-8.46
Cont.

Pedestrian Access:

- 78. Applicant shall design all public and private pedestrian facilities in accordance with Title 24 (Handicap Access) and the Americans with Disabilities Act. This shall include all sidewalks, paths, driveway depressions, and curb ramps.
- 79. Curb ramps and driveways shall be designed and constructed in accordance with current County standards. A detectable warning surface (e.g. truncated domes) shall be installed on all curb ramps. Adequate right-of-way shall be dedicated at the curb returns to accommodate the returns and curb ramps; accommodate a minimum 4-foot landing on top of any curb ramp proposed.

Parking:

- 80. "No Parking" signs shall be installed along Fred Jackson Way and Brookside Drive subject to the review of the Public Works Department and the review and approval of the Board of Supervisors.

Utilities/Undergrounding:

- 81. Applicant shall underground all new and existing utility distribution facilities, including those along the frontage of Fred Jackson Way and Brookside Drive, including the remnant of the overhead utilities on the north side of Brookside Drive east of Fred Jackson Way. The developer shall provide joint trench composite plans for the underground electrical, gas, telephone, cable television and communication conduits and cables including the size, location and details of all trenches, locations of building utility service stubs and meters and placements or arrangements of junction structures as a part of the Improvement Plan submittals for the project. The composite drawings and/or utility improvement plans shall be signed by a licensed civil engineer.

Drainage Improvements:

Collect and Convey

- 82. The applicant shall collect and convey all stormwater entering and/or originating on this property, without diversion and within an adequate storm drainage system, to *an adequate* natural watercourse having definable bed and banks, or to an existing adequate public storm drainage system which conveys the stormwater to *an adequate* natural watercourse, in accordance with Division 914 of the Ordinance Code.

The nearest public drainage facilities are Lines A and B of Drainage Area 19A located along the west side of Fred Jackson Way that will convey stormwater run-off from the site to the Wildcat Creek and San Pablo Creek respectively. The Drainage Study included in the DEIR and supplemental documentation reviewed by Public Works indicates these lines have sufficient capacity to satisfy the Ordinance Code requirements. Staff concurs with this preliminary analysis, pending final assessment in conjunction with review of the final construction drawings and documents. **MM HYD-3**

Miscellaneous Drainage Requirements:

- 83. Applicant shall prevent storm drainage from draining across the sidewalk(s) and driveway(s) in a concentrated manner.
- 84. Private storm drain easements conforming to the width specified in Section 914-14.004 of the County Ordinance Code, shall be conveyed across any storm drain conveyance or management facilities that serve more than one parcel.
- 85. Applicant shall dedicate Public Storm Drain Easements over any portions of Lines A or B (DA 19A) that traverse the project site that are not otherwise

O-8.46
Cont.

encumbered in the easement dedicated to the District for the widening of Da Villa Road as described above.

National Pollutant Discharge Elimination System (NPDES):

86. The applicant shall be required to comply with all rules, regulations, and procedures of the National Pollutant Discharge Elimination System (NPDES) for municipal, construction, and industrial activities as promulgated by the California State Water Resources Control Board, or any of its Regional Water Quality Control Boards (San Francisco Bay –Region II).

Compliance shall include developing long-term best management practices (BMPs) for the reduction or elimination of storm water pollutants. The project design shall incorporate wherever feasible, the following long-term BMPs in accordance with the Contra Costa Clean Water Program for the site’s storm water drainage:

- Minimize the amount of directly connected impervious surface area.
- Install approved full trash capture devices on all catch basins (excluding catch basins within bioretention basins) as reviewed and approved by Public Works Department. Trash capture devices shall meet the requirements of the County’s NPDES permits.
- Place advisory warnings on all catch basins and storm drains using current storm drain markers.
- Construct concrete driveway weakened plane joints at angles to assist in directing run-off to landscaped/pervious areas prior to entering the street curb and gutter.
- Filtering Inlets.
- The applicant shall sweep the paved portion of the site at least once a year between September 1st and October 15th utilizing a vacuum type sweeper. Verification (invoices, etc.) of the sweeping shall be provided to the County Clean Water Program Administrative Assistant at 255 Glacier Drive, Martinez, CA 94553; (925)313-2238.
- Trash bins shall be sealed to prevent leakage, OR, shall be located within a covered enclosure.
- Other alternatives comparable to the above as approved by the Public Works Department. **MM HYD-1**

O-8.46
Cont.

Stormwater Management and Discharge Control Ordinance:

87. The applicant shall submit a FINAL Storm Water Control Plan (SWCP) and a Stormwater Control Operation and Maintenance Plan (O+M Plan) to the Public Works Department, which shall be reviewed for compliance with the County's National Pollutant Discharge Elimination System (NPDES) Permit and shall be deemed consistent with the County's Stormwater Management and Discharge Control Ordinance (§1014) prior to issuance of certificate of occupancy. To the extent required by the NPDES Permit, the Final Stormwater Control Plan and the O+M Plan will be required to comply with NPDES Permit requirements that have recently become effective that may not be reflected in the preliminary SWCP and O+M Plan. All time and materials costs for review and preparation of the SWCP and the O+M Plan shall be borne by the applicant. **MM HYD-3**

- Improvement Plans shall be reviewed to verify consistency with the final SWCP and compliance with Provision C.3 of the County's NPDES Permit and the County's Stormwater Management and Discharge Control Ordinance (§1014).
- Stormwater management facilities shall be subject to inspection by Public Works Department staff; all time and materials costs for inspection of stormwater management facilities shall be borne by the applicant.
- Prior to filing the Parcel Map the property owner(s) shall enter into a standard Stormwater Management Facility Operation and Maintenance Agreement with Contra Costa County, in which the property owner(s) shall accept responsibility for and related to operation and maintenance of the stormwater facilities, and grant access to relevant public agencies for inspection of stormwater management facilities.
- Prior to filing the Parcel Map the property owner(s) shall annex the subject property into Community Facilities District (CFD) No. 2007-1 (Stormwater Management Facilities), which funds responsibilities of Contra Costa County under its NPDES Permit to oversee the ongoing operation and maintenance of stormwater facilities by property owners.
- Any proposed water quality features that are designed to retain water for longer than 72 hours shall be subject to the review of the Contra Costa Mosquito & Vector Control District.

O-8.46
Cont.

Area of Benefit Fee Ordinance:

- 88. The applicant shall comply with the requirements of the Bridge/Thoroughfare Fee Ordinance for the WCC Transit/Pedestrian, WCCTAC Bridge/Road, and North Richmond Areas of Benefit as adopted by the Board of Supervisors. These fees will be collected prior to issuance of building permits on this site.
- 89. Prior to constructing any public improvements, the applicant, shall contact Public Works Department to determine the extent of any eligible credits or reimbursements against the area of benefit fees.

Drainage Area Fee Ordinance:

- 90. The applicant shall comply with the drainage fee requirements for Drainage Area 19A as adopted by the Board of Supervisors prior to initiation of the use requested with this application.
- 91. Certain improvements required by the Conditions of Approval for this development or the County Subdivision Ordinance may be eligible for credit or reimbursement against the drainage area fee. The developer should contact the Public Works Department to determine the extent of any credit or reimbursement for which the developer may be eligible. Any credit or reimbursements shall be determined prior to issuance of a Building Permit or as approved by the Flood Control District.

O-8.46

ADVISORY NOTES

ADVISORY NOTES ARE NOT CONDITIONS OF APPROVAL; THEY ARE PROVIDED TO ALERT THE APPLICANT TO ADDITIONAL ORDINANCES, STATUTES, AND LEGAL REQUIREMENTS OF THE COUNTY AND OTHER PUBLIC AGENCIES THAT MAY BE APPLICABLE TO THIS PROJECT.

- A. NOTICE OF OPPORTUNITY TO PROTEST FEES, ASSESSMENTS, DEDICATIONS, RESERVATIONS OR OTHER EXACTIONS PERTAINING TO THE APPROVAL OF THIS PERMIT.

Pursuant to California Government Code Section 66000, et seq., the applicant has the opportunity to protest fees, dedications, reservations or exactions required as part of this project approval. To be valid, a protest must be in writing pursuant to Government Code Section 66020 and must be delivered to the Community Development Division within a 90-day period that begins on the date that this project is approved. If the 90th day falls on a day that the Community Development Division is closed, then the protest must be submitted by the end of the next business day.

- B. The applicant may be required to comply with the requirements of the Bridge/Thoroughfare Fee Ordinance for the North Richmond, West Contra Costa

Transportation Advisory Committee (WCCTAC) Bridges/Roads, and WCCTAC Transit/Pedestrian Areas of Benefit Area of Benefit as adopted by the Board of Supervisors.

- C. This project may be subject to the requirements of the Department of Fish and Wildlife. It is the applicant's responsibility to notify the California Department of Fish and Wildlife, Bay Delta Region (Region 3), 825 Cordelia Road, Suite 100, Fairfield, CA 94534 of any proposed construction within this development that may affect any fish and wildlife resources, per the Fish and Wildlife Code.
- D. This project may be subject to the requirements of the Army Corps of Engineers. It is the applicant's responsibility to notify the appropriate district of the Corps of Engineers to determine if a permit is required, and if it can be obtained.
- E. Prior to applying for a building permit, the applicant is strongly encouraged to contact the following agencies to determine if additional requirements and/or additional permits are required as part of the project:
- Contra Costa County Building Inspection Division
 - Contra Costa County Grading Division
 - Contra Costa County Environmental Health Division
 - Contra Costa County Consolidated Fire Protection District
 - East Bay Municipal Utility District
 - West County Wastewater District
 - LAFCO
 - City of Richmond
 - DTSC

(209) 937-8266

1.0 INTRODUCTION

This document is the Mitigation Monitoring/Reporting Program (MMRP) for the Mariposa Industrial Park project, as required by CEQA Guidelines Section 15097. The primary source document for the MMRP is the *Environmental Impact Report for the Mariposa Industrial Park Project* (SCH# 2020120283) (the "EIR"). When referenced as such, the "EIR" for the project includes the Public Review Draft EIR (the DEIR) dated August 24, 2021 and the certified Revised Final EIR (the FEIR) dated November 15, 2022, as well as any documents that have been incorporated into the DEIR and FEIR by reference.

1.1 PURPOSE AND SCOPE OF THIS DOCUMENT

The California Environmental Quality Act (CEQA) requires that a Lead Agency prepare and certify an Environmental Impact Report (EIR) when a proposed project may involve significant environmental effects, as defined by CEQA. Prior to project approval, the Lead Agency must adopt an MMRP that lists all mitigation measures identified in the certified EIR and describes responsibility for their implementation and/or monitoring. The mitigation measures are listed together with implementation and monitoring responsibility in the table following.

CEQA also requires that the Lead Agency make written findings specific to each of the significant environmental effects or potentially significant environmental effects of the project as described in the EIR. The "CEQA Findings" for the Mariposa Industrial Park project, including a Statement of Overriding Considerations, are contained in a separate document to be adopted by the Stockton City Council.

The proposed project, a summary of the project's environmental review process, the environmental documentation prepared for the project, and mitigation measures that must be implemented in conjunction with the project are discussed below.

1.2 PROJECT DESCRIPTION

The proposed project involves annexation and pre-zoning of the project site and approval of plans for industrial development of approximately 203 acres of land located adjacent to and south of Mariposa Road. The project site, consisting of nine parcels, is in the San Joaquin County unincorporated area, adjacent to the southeastern limits of the City of Stockton. The site location is shown on the attached figures.

The project would involve the development of "high-cube" warehousing and storage buildings that are typically 200,000 square feet of floor area or greater. The conceptual site plan for the project site proposes seven buildings with a maximum height of 36 feet and floor area totaling 3.6 million square feet including ancillary office space. Project site

O-8.47
Cont.

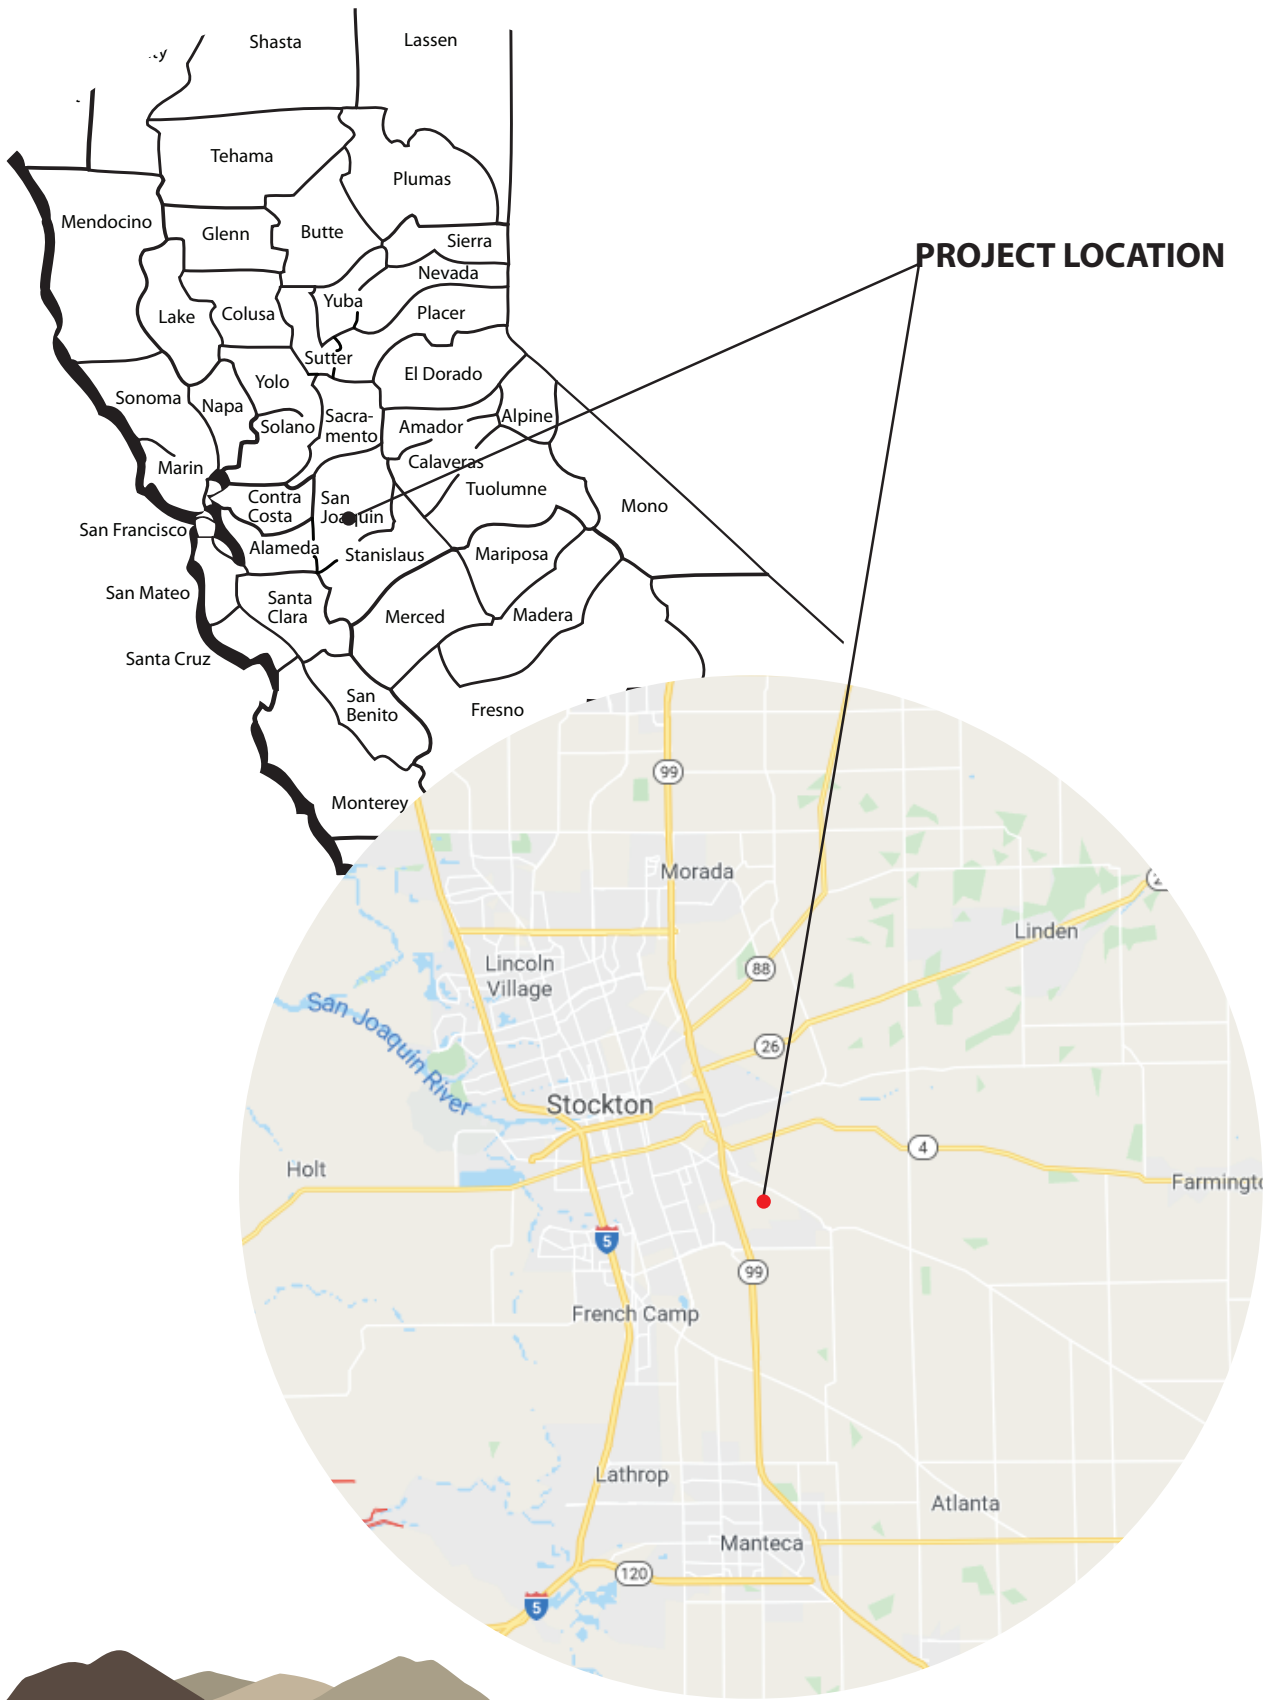

development would also include the construction of circulation and parking for light vehicles and trucks, utilities and landscaping. Access would be developed from Mariposa Road; improvements would include widening of Mariposa Road to accommodate turn pockets and acceleration/deceleration lanes.

1.3 ENVIRONMENTAL REVIEW OF THE PROJECT UNDER CEQA

The project’s environmental effects, mitigation measures needed to address these effects and alternatives to the project are discussed in detail the EIR prepared by the City of Stockton in accordance with the requirements of CEQA. EIR processing steps have included preparation and distribution of a Notice of Preparation, a scoping meeting, publication and distribution of a Draft EIR for public review, preparation of a Final EIR addressing comments received during the public review period for City Council certification, and preparation of a CEQA Findings document and this Mitigation Monitoring/Reporting Plan for adoption by the Stockton City Council. Additional detail regarding the CEQA processing of the project can be found in the Revised Final EIR, which is incorporated by reference below.

Revised Final Environmental Impact Report for the Mariposa Industrial Park Project, Stockton, CA. November 15, 2022. Prepared for City of Stockton Department of Community Development, 345 N. El Dorado Street, Stockton, CA 95202. Prepared by BaseCamp Environmental, Inc., 802 West Lodi Avenue, Lodi, CA 95240. State Clearinghouse Number 2020120283.

2.0 MITIGATION MONITORING/REPORTING PROGRAM

CEQA requires more than just preparing environmental documents; it also requires the Lead Agency to change or place conditions on a project, or to adopt plans or ordinances for a broader class of projects, which would address the potentially significant or significant environmental effects of a project. To ensure that mitigation measures within the Lead Agency's purview are actually implemented, CEQA requires the adoption of a mitigation monitoring and/or reporting program (MMRP). Specifically, CEQA Guidelines Section 15091(d) requires that a public agency, when making findings for the significant impacts of a project,

“shall also adopt a program for reporting on or monitoring the changes which it has either required in the project or made a condition of approval to avoid or substantially lessen significant environmental effects. These measures must be fully enforceable through permit conditions, agreements, or other measures.”

Mitigation measures that are not feasible, or are within the jurisdiction of other agencies, are addressed through the findings required by CEQA Guidelines Section 15091 and shown in the CEQA Findings document for the project.

The Revised FEIR for the Mariposa Industrial Park project sets forth a series of mitigation measures that are applicable to the project and will address the potentially significant effects of the project. The following table summarizes the potentially significant environmental effects that could result from approval of the Mariposa Industrial Park project as described in the EIR. The table identifies 1) each effect, 2) how each significant effect would be mitigated, 3) the responsibility for implementation of each mitigation measure, and 4) the responsibility for monitoring of each of the mitigation measures. The table follows the same sequence as the impact analysis in the EIR.

The mitigation measures shown in the table include those arising from the analysis and conclusions of the Draft EIR as well as additional mitigation measures resulting from public and agency comments on the Draft EIR, an initial version of the Final EIR dated February 28, 2022 and further discussion with the comment authors in the months leading up to this publication. The comments received on the EIR and the City's responses to those comments are discussed in Chapter 22.0 of the Revised Final EIR.

Impact/Mitigation Measures	Implementation Responsibility	Monitoring/Reporting Responsibility
----------------------------	-------------------------------	-------------------------------------

<p>AIR-15: Demonstrate Compliance with Clean Fleet Requirements: The applicant, property owner, tenant, lessee, or other party operating the facility (the "Operator") shall utilize the zero emission vehicles/trucks required to meet the "clean fleet" requirements in AIR-13 (for Class 7 and 8 vehicles) and AIR-14 (for Class 2 through 6 vehicles) above. Within 30-days of occupancy, the Operator shall demonstrate to the satisfaction of CDD staff, that the applicable clean fleet requirements are being met.</p> <p>AIR-15 (continued): In the event that vehicles/trucks are not commercially available for the intended application, the "clean fleet requirements" may be adjusted as minimally as possible by the CDD to accommodate the unavailability of commercially available vehicles/trucks.</p> <p>AIR-15 (continued): The City shall quantify the air pollution and GHG emissions resulting from any modification of this condition. Within 12 months of failing to meet a "clean fleet" requirement the property owner/tenant/lessee shall implement a Voluntary Emissions Reduction Agreement (VERA) providing pound for pound mitigation of the criteria pollutant, toxic air contaminants, and GHG emissions quantified by the City through a process that develops, funds, and implements emission reduction projects, with the Air District serving a role of administrator of the emission reduction projects and verifier of the successful mitigation effort. The VERA shall prioritize projects in the South Stockton and surrounding area. Property owner/tenant/lessee shall continue to fund the VERA each year in an amount necessary to achieve pound for pound mitigation of emissions resulting from not meeting the clean fleet requirements until the owner/tenant/lessee fully complies.</p> <p>AIR-15 (continued): The Operator shall implement the proposed measures after CDD review and approval. Any extension of time granted to implement this condition shall be limited to the shortest period of time necessary to allow for 100% electrification under the clean fleet requirements. The CDD staff may seek the recommendation of the California Air Resources Board in determining whether there has been a manufacturing disruption or insufficient vehicles/trucks</p>	<p>Applicant or tenant is responsible for compliance and submittal of documentation</p>	<p>CDD Planning is responsible for review and acceptance of documentation</p>

commercially available for the intended application.

AIR-16: Condition of Approved Compliance Report: The Operator shall submit a condition of approval compliance report within 30 days of, but not later than, the following dates: December 31, 2023, December 31, 2025, and December 31, 2027. The report shall outline clean fleet requirements applicable at each report interval and include documentation demonstrating compliance with each requirement. The City shall consider each report at a noticed public hearing and determine whether the Operator has complied with the applicable clean fleet requirements. If the Operator has not met each 100% clean fleet requirement by December 31, 2027, then the Operator shall submit subsequent reports every year until the 100% clean fleet requirement is implemented. The City shall consider each subsequent report at a noticed public hearing and determine whether the Operator has complied with the clean fleet requirements, including any minimal adjustments to the requirements by the CDD to accommodate the manufacturing disruption or unavailability of commercially available vehicles/trucks, as described in the previous paragraph. Notice of the above hearings shall be provided to all properties located within 1,000 feet of the project site and through the ASK Stockton list serve.

Applicant or tenant is responsible for preparation of compliance reports

CDD Planning is responsible for review and acceptance of compliance reports

AIR-16 (continued): After the 100% clean fleet requirement has been implemented and confirmed by the CDD, the Operator shall submit to the CDD an on-going compliance report every three years containing all necessary documentation to verify that the Operator is meeting the clean fleet requirements. At the time it confirms that the 100% clean fleet requirement has been implemented, the CDD will establish the due date for the first on-going compliance report. Each subsequent on-going compliance report shall be due within 30 days of, but not later than, the three-year anniversary of the preceding due date. The on-going compliance reports and accompanying documentation shall be made available to the public upon request.

AIR-17: Zero Emission Forklifts, Yard trucks and Yard Equipment: Owners, operators or tenants shall require all forklifts, yard trucks, and other equipment used

Archaeological and Tribal Cultural Resources. This is a potentially significant issue.

<p>CULT-1: As noted, the field surveys conducted by Solano Archaeological Services on the project site led to the recording of two potential historical resources: three transmission lines and the remains of a well. Both resources were evaluated on the criteria for listing on the California Register of Historical Resources (see Regulatory Framework above). Neither were determined to meet any of the criteria for such listing. Since these criteria are very similar to those for listing on the National Register of Historic Places, the resources also would not meet criteria for listing on the National Register of Historic Places. As such, the two resources are not considered to have historical value. The project would have no impact on historical resources. It should be noted that the project is unlikely to affect the three transmission lines in any case.</p>	<p>The applicant will be responsible for incorporating these requirements in the project plans and specifications. The Contractor will be responsible for reporting discoveries to the City, for hiring a qualified archaeologist to analyze the discovery and coordinate with Native American tribes as necessary, and for implementing the archaeologist's treatment recommendations.</p>	<p>CDD Planning will be responsible for ensuring that cultural resource requirements have been incorporated into project plans and specifications and that discovery reports are properly documented.</p>

AIR-22:	Yard Sweeping: Operators to provide periodic yard and parking area sweeping to minimize dust generation.	
AIR-23:	Diesel Generators: Operators shall prohibit the use of diesel generators.	
AIR-24:	Emission controls for trucks or truck fleets domiciled at the project site.	
AIR-25:	Operators participate in EPA SmartWay.	
AIR-26:	Operators shall designate smoking areas at least 25 feet from the nearest property line.	
AIR-27:	Project construction is subject to adopted City building codes, including adopted Green Building Standards Code, Tier 2 advanced energy efficiency requirements for specified divisions.	
AIR-28:	All tenant lease agreements for the project site shall include a provision requiring the tenant/lessee to comply with all applicable requirements of the MMRP, a copy of which shall be attached to each tenant/lease agreement.

Impact/Mitigation Measures	Implementation Responsibility	Monitoring/Reporting Responsibility
----------------------------	-------------------------------	-------------------------------------

11.0 HAZARDS

Impact HAZ-1: Hazardous Material Transportation and Storage. This is a potentially significant issue.

<p>HAZ-1: New business on the project site that may handle quantities of hazardous materials equal to or greater than 55 gallons of a liquid, 500 pounds of a solid, or 200 cubic feet of a compressed gas at any given time shall submit a Hazardous Materials Business Plan to the Certified Unified Program Agency (CUPA) of San Joaquin County. The Hazardous Materials Business Plan shall include an inventory of hazardous materials and hazardous wastes and an emergency response plan for incidents involving hazardous materials and wastes.</p> <p>HAZ-2: Proposed business uses that involve the manufacture, storage, handling, or processing of hazardous materials in sufficient quantities that would require a Hazardous Materials Business Plan and the use is within 1,000 feet of a residential zoning district, the project shall comply with Stockton Municipal Code Section 16.36.080, which governs use, handling, storage, and transportation of hazardous materials.</p>	<p>Applicant will be responsible for compliance with hazardous material regulations.</p>	<p>The San Joaquin County CUPA will be responsible for monitoring compliance.</p>
---	--	---

Impact HAZ-2: Hazardous Materials Release. This is a potentially significant issue.

<p>GEO-1: The project shall obtain a Notice of Intent issued by the SWRCB for compliance with the Construction General Permit. The project shall prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) including a site map, description of construction activities and identification of Best Management Practices (BMPs) that will prevent soil erosion and discharge of other construction-related pollutants.</p>	<p>Applicant will be responsible for all activities related to the Construction General Permit.</p>	<p>CDD Building and Public Works will be responsible for ensuring that project has complied with Construction General Permit</p>
<p>GEO-2: The project applicant shall comply with Stockton Municipal Code Section 15.48.050, which requires construction activities to be designed and conducted to minimize discharge of sediment and all other pollutants and Section 15.48.070,</p>	<p>Applicant will be responsible for incorporation of these</p>	<p>CDD Building and Public Works will be responsible for ensuring that project has</p>

which contains standards for implementation of Best Management Practices.	standards in project plans and specifications.	complied with Construction General Permit
---	--	---

Impact HAZ-4: Airport Hazards. This is a potentially significant issue.		
---	--	--

HAZ-3: The project shall be submitted to the San Joaquin County Airport Land Use Commission for review of project-associated objects that exceed 100 feet in height	CDD Planning staff is responsible for submitting project information to ALUC.	CDD Planning will be responsible for ensuring that ALUC review is completed, and requirements incorporated into conditions of approval
---	---	--

12.0 HYDROLOGY AND WATER QUALITY		
---	--	--

Impact: HYDRO -1: Surface Water Resources and Quality. This is a potentially significant issue.		
---	--	--

Implement storm water quality protections described in GEO-HYDRO-1: Industrial uses on the project shall obtain coverage under the Central Valley RWQCB Industrial General Permit program and implement pollution control measures using the best available technology economically achievable and best conventional pollutant control technology. All facility operators shall prepare, retain on site, and implement a SWPPP implementing applicable Industrial General Permit requirements, including a monitoring program.	As described in GEO-1 Applicant will be responsible for obtaining coverage under the Industrial General Permit.	As described in GEO-1 Municipal Utilities will be responsible for ensuring that Industrial Permit coverage is obtained.

Impact/Mitigation Measures	Implementation Responsibility	Monitoring/Reporting Responsibility
----------------------------	-------------------------------	-------------------------------------

There are no potentially significant or significant impacts in this issue area.

14.0 NOISE

Increase in Noise Levels in Excess of Standards-Traffic. This is a significant issue.

NOISE-1: The applicant, the City of Stockton and other project developers impacting Mariposa Road traffic shall consider the use of noise-reducing pavement and utilize it where feasible in planned widening projects for Mariposa Road.

Increase in Noise Levels in Excess of Standards-Other Project Noise. This is a potentially significant issue

NOISE-2: Sound walls and/or berms 10 feet in height shall be required where existing residential uses or residentially zoned areas are located adjacent to the project site. Figure 3 of the project noise study (Figure 14-2 of ~~this EIR~~ the DEIR) shows the locations of the recommended sound walls based on the proposed conceptual plan. Where openings in sound walls occur for access or emergency access, solid gates shall be installed. 10-foot sound walls are expected to provide a 10 dB reduction in noise levels. Site plan modifications, and/or additional noise analysis by a qualified acoustical consultant may warrant changes to these requirements, assuming that compliance with City noise standards is maintained.

NOISE-3: Project operation shall at all times comply with the provisions of Stockton Municipal Code Chapter 16.60, including:

Section 16.60.040, which states that new or expanded commercial, industrial, and

The applicant will be responsible for incorporating noise wall requirements in the project plans and specifications. The ODS will be responsible for retaining a noise consultant to review and recommend alternative noise wall requirements as appropriate.

The CDD Planning will be responsible for ensuring that noise wall requirements are met in project plans and specifications and for review and approval of any proposed noise wall modifications,

other land use-related noise sources shall mitigate their noise levels such that they do not adversely impact noise-sensitive land uses (e.g., residences) and do not exceed City noise standards.

Increase in Noise Levels in Excess of Standards-Construction. This is a potentially significant issue.

<p>NOISE-4: Construction activities associated with the project shall adhere to the requirements of the City of Stockton Municipal Code with respect to hours of operation. The applicant shall ordinarily limit construction activities to the hours of 7:00 a.m. to 7:00 p.m., Monday through Saturday. No construction shall occur on Sundays or national holidays without a written permit from the City. All construction equipment shall be in good working order and shall be fitted with factory-equipped mufflers.</p> <p>NOISE-5: Project construction comply with the provisions of Stockton Municipal Code Chapter 16.60, including:</p> <p>Section 16.60.030, which contains restrictions on construction noise, including operating or causing the operation of tools or equipment on private property used in alteration, construction, demolition, drilling, or repair work between the hours of 10:00 p.m. and 7:00 a.m. so that the sound creates a noise disturbance across a residential property line, except for emergency work of public service utilities. [Proposed EIR mitigation measure NOISE-2 more restrictive on construction days and hours.</p>	<p>The applicant will be responsible for incorporating these requirements in the project plans and specifications. The Contractor will be responsible for conformance with noise requirements.</p>	<p>The CDD Planning will be responsible for monitoring compliance with these requirements.</p>

15.0 PUBLIC SERVICES AND RECREATION

Impact PSR-1: Fire Protection Services. This is a potentially significant issue.

PSR-1: Project buildings shall include an Early Suppression, Fast Response (ESFR) fire sprinkler system.	Applicant will be responsible for design and installation of the ESFR system	CDD Building will be responsible for checking plans for and inspection of the required system
--	--	---

PSR-2: City departments, including Fire, Community Development, and Finance, together with industrial project proponents, shall develop and implement a plan for financing, construction and staffing of a new fire station in the vicinity of the project site. Development and implementation of the plan will involve a multi-year process helping the Department meet increasing service demands and to reduce response times. The project applicant shall contribute to the costs of constructing and staffing the new fire station in accordance with the adopted plan.	Stockton Fire will be responsible overseeing new fire station and CFD process	
---	---	--

16.0 TRANSPORTATION

TRANS-1: Motor Vehicle Transportation Plans – Intersections. Level of significance is not applicable under LOS analysis.

TRANS-1: The project applicant should contribute fair-share costs to an improvement on the Mariposa Road and 8 th Street/Farmington Road intersection that would split the northeast-bound combined through/right-turn lane into an exclusive northeast-bound through lane and a “free” northeast-bound-to-southeast-bound right-turn lane. Existing pavement width is considered adequate to accommodate this improvement.	The applicant will be responsible for design and install of “end of trip” facilities.	CDD Planning will be responsible for ensuring plans and specs include required facilities

APPENDIX G

0-8.48

ORDINANCE NO. 1891

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF FONTANA, CALIFORNIA AMENDING CHAPTER 9 OF THE FONTANA MUNICIPAL CODE TO REVISE ARTICLE V FOR MODIFICATIONS AND CLARIFICATION TO BUFFERING AND SCREENING REQUIREMENTS, METHODS TO IMPROVE TRAFFIC CIRCULATION, REQUIREMENTS FOR ALTERNATIVE ENERGY, AND IMPROVEMENTS TO CONSTRUCTION REQUIREMENTS AS IT RELATES TO INDUSTRIAL COMMERCE CENTERS THROUGHOUT THE CITY.

WHEREAS, the City of Fontana (the “City”) is a municipal corporation, duly organized under the constitution and laws of the State of California; and

WHEREAS, on or about May 7, 2021, the governing board of the South Coast Air Quality Management District (“SCAQMD”) adopted Rule 2305, the Warehouse Indirect Source Rule (“Rule 2305”); and

WHEREAS, Rule 2305 requires warehouses greater than 100,000 square feet to directly reduce nitrogen oxide and diesel particulate matter emissions, or to otherwise facilitate emission and exposure reductions of these pollutants in nearby communities; and

WHEREAS, SCAQMD has also adopted Rule 402 prohibiting emissions that cause injury and/or annoyance to a substantial number of people, including odors; Rule 403 requiring dust control measures during construction; Rule 1113 requiring the use of low Volatile organic compounds (“VOC”) paints and coatings; Rule 1186 requiring use of SCAQMD certified street sweepers; and Rule 2202 requiring establishment of rideshare programs for facilities employing more than 250 employees; and

WHEREAS, the California Air Resources Board (“CARB”) adopted Rule 2485 restricting diesel engine idling to five minutes or less; and

WHEREAS, California Building Standards Commission adopted Part 11, Title 24 of the California Code of Regulations, known as CALGreen, which generally requires low energy use features, low water use features, all-electric vehicle (“EV”) parking spaces and charging facility accommodation, carpool/vanpool parking spaces, and short-term and long-term bicycle parking facilities; and

WHEREAS, the City of Fontana currently regulates industrial commerce centers in Specific Plans, Chapter 30 of the Zoning and Development Code, and in Chapter 9, and Article V (Industrial Commerce Centers Sustainability Standards) of the Municipal Code. Furthermore, Ordinance No. 1879 that established Article V in Chapter 9 of the Municipal Code was adopted by City Council on February 8, 2022; and

O-8.48
Cont.

Ordinance No. 1891

WHEREAS, the City initiated Municipal Code Amendment (AMD) No. 21-001R1 amend Chapter 9 (Environmental Protection and Resource Extraction) of the Municipal Code to modify Article V to revise Industrial Commerce Centers Sustainability Standards, which includes modifications and clarification to buffering and screening requirements, methods to improve traffic circulation, requirements for alternative energy, and improvements to construction as it relates to industrial commerce centers throughout the city; and

WHEREAS, December 21, 2021, the City Council held the second reading and adopted Ordinance No. 1879 for Municipal Code Amendment (AMD) No. 21-001 to add Article V to establish sustainability standards for industrial commerce centers throughout the city; and

WHEREAS, On March 22, 2022, the City Council held a duly noticed public hearing on Municipal Code Amendment (AMD) No. 21-001R1, and the supporting documents in evidence, the City Council found that the Municipal Code Amendment is in conformance with General Plan and does not change any of the Land Use Designation of any properties and it is consistent with the General Plan and furthers Action B of Goal 3 in Chapter 12 to promote renewable energy programs for government, Fontana businesses, and Fontana residences; and

WHEREAS, a notice of the public hearing was published in the local *San Bernardino County Sun* newspaper on Saturday, March 12, 2022 and posted at City.

O-8.48
Cont.

THE CITY COUNCIL OF THE CITY OF FONTANA DOES ORDAIN AS FOLLOWS:

Section 1. The above recitals are true and correct and are fully incorporated herein.

Section 2. Article V of Chapter 9 of the Fontana Municipal Code is hereby amended and renumbered follows:

ARTICLE V. – Industrial Commerce Centers Sustainability Standards

Sec. 9-70. – Applicability.

This Article is applicable to all Warehouse uses throughout the city, as defined in Section 30-12 of Chapter 30, Article 1, Division 4; and as listed as a type of “Warehousing Use” in Table No. 30-530 and includes all warehouse uses in Specific Plans. The following sections shall supersede any existing requirements in the Municipal Code and Specific Plans.

Sec. 9-71. – Buffering and Screening / Adjacent uses.

- (1) For any Warehouse building larger than 50,000 square feet in size, a ten-foot-wide landscaping buffer shall be required, measured from the property line of all adjacent sensitive receptors. For any Warehouse

Ordinance No. 1891

building larger than 400,000 square feet in size, a twenty-foot-wide landscaping buffer shall be required, measured from the property line of all adjacent sensitive receptors. The buffer area(s) shall include, at a minimum, a solid decorative wall(s) of at least ten feet in height, natural ground landscaping, and solid screen buffering trees, as described below, unless there is an existing solid block wall. For any Warehouse building equal to or less than 50,000 square feet in size, a solid decorative wall(s) of at least ten feet in height shall be required when adjacent to any sensitive receptors. Sensitive receptor shall be defined as any residence including private homes, condominiums, apartments, and living quarters, schools, preschools, daycare centers, in-home daycares, health facilities such as hospitals, long term care facilities, retirement and nursing homes, community centers, places of worship, parks (excluding trails), prisons, and dormitories.

- (2) Trees shall be used as part of the solid screen buffering treatment. Trees used for this purpose shall be evergreen, drought tolerant, minimum 36-inch box, and shall be spaced at no greater than 40-feet on center. The property owner and any successors in interest shall maintain these trees for the duration of ownership, ensuring any unhealthy or dead trees are replaced timely as needed.
- (3) All landscaping shall be drought tolerant, and to the extent feasible, species with low biogenic emissions. Palm trees shall not be utilized.
- (4) All landscaping areas shall be properly irrigated for the life of the facility to allow for plants and trees to maintain growth.
- (5) Trees shall be installed in automobile parking areas to provide at least 35% shade cover of parking areas within fifteen years. Trees shall be planted that are capable of meeting this requirement.
- (6) Unless physically impossible, loading docks and truck entries shall be oriented away from abutting sensitive receptors. To the greatest extent feasible, loading docks, truck entries, and truck drive aisles shall be located away from nearby sensitive receptors. In making feasibility decisions, the City must comply with existing laws and regulations and balance public safety and the site development's potential impacts to nearby sensitive receptors. Therefore, loading docks, truck entries, and drive aisles may be located nearby sensitive receptors at the discretion of the Planning Director, but any such site design shall include measures designed to minimize overall impacts to nearby sensitive receptors."
- (7) For any Warehouse building larger than 400,000 square feet in size, the building's loading docks shall be located a minimum of 300 feet away, measured from the property line of the sensitive receptor to the nearest

O-8.48
Cont.

Ordinance No. 1891

dock door which does not exclusively serve electric trucks using a direct straight-line method.

Sec. 9-72. – Signage and Traffic Patterns.

- (1) Entry gates into the loading dock/truck court area shall be positioned after a minimum of 140 feet of total available stacking depth inside the property line. The stacking distance shall be increased by 70 feet for every 20 loading docks beyond 50 docks. Queuing, or circling of vehicles, on public streets immediately pre- or post-entry to an industrial commerce facility is strictly prohibited unless queuing occurs in a deceleration lane or right turn lane exclusively serving the facility.
- (2) Applicants shall submit to the Engineering Department, and obtain approval of, all turning templates to verify truck turning movements at entrance and exit driveways and street intersection adjacent to industrial buildings prior to entitlement approval. Unless not physically possible, truck entries shall be located on Collector Streets (or streets of a higher commercial classification), and vehicle entries shall be designed to prevent truck access on streets that are not Collector Streets (or streets of a higher commercial classification), including, but not limited to, by limiting the width of vehicle entries.
- (3) Anti-idling signs indicating a 3-minute diesel truck engine idling restriction shall be posted at industrial commerce facilities along entrances to the site and in the dock areas and shall be strictly enforced by the facility operator.
- (4) Prior to issuance of certificate of occupancy facility operators shall establish and submit for approval to the Planning Director a Truck Routing Plan to and from the State Highway System based on the City's latest Truck Route Map. The plan shall describe the operational characteristics of the use of the facility operator, including, but not limited to, hours of operations, types of items to be stored within the building, and proposed truck routing to and from the facility to designated truck routes that avoids passing sensitive receptors, to the greatest extent possible. The plan shall include measures, such as signage and pavement markings, queuing analysis and enforcement, for preventing truck queuing, circling, stopping, and parking on public streets. Facility operator shall be responsible for enforcement of the plan. A revised plan shall be submitted to by the Planning Director prior to a business license being issued by the City for any new tenant of the property. The Planning Director shall have discretion to determine if changes to the plan are necessary including any additional measures to alleviate truck routing and parking issues that may arise during the life of the facility.

O-8.48
Cont.

Ordinance No. 1891

- (5) Signs and drive aisle pavement markings shall clearly identify the on-site circulation pattern to minimize unnecessary on-site vehicular travel.
- (6) Facility operators shall post signs in prominent locations inside and outside of the building indicating that off-site parking for any employee, truck, or other operation related vehicle is strictly prohibited. City may require facility operator to post signs on surface or residential streets indicating that off-site truck parking is prohibited by City ordinance and/or the Truck Routing Plan.
- (7) Signs shall be installed at all truck exit driveways directing truck drivers to the truck route as indicated in the Truck Routing Plan and State Highway System.
- (8) Signs shall be installed in public view with contact information for a local designated representative who works for the facility operator and who is designated to receive complaints about excessive dust, fumes, or odors, and truck and parking complaints for the site, as well as contact information for the SCAQMD's on-line complaint system and its complaint call-line: 1-800-288-7664. Any complaints made to the facility operator's designee shall be answered within 72 hours of receipt.
- (9) All signs under this Section shall be legible, durable, and weather-proof.
- (10) Prior to issuance of a business license, City shall ensure for any facility with a building or buildings larger than 400,000 total square feet, that the facility shall include a truck operator lounge equipped with clean and accessible amenities such as restrooms, vending machines, television, and air conditioning."

O-8.48
Cont.

Sec. 9-73. – Alternative Energy.

- (1) On-site motorized operational equipment shall be ZE (zero emission).
- (2) All building roofs shall be solar-ready, which includes designing and constructing buildings in a manner that facilitates and optimizes the installation of a rooftop solar photovoltaic (PV) system at some point after the building has been constructed.
- (3) The office portion of a building's rooftop that is not covered with solar panels or other utilities shall be constructed with light colored roofing material with a solar reflective index ("SRI") of not less than 78. This material shall be the minimum solar reflective rating of the roof material for the life of the building."

Ordinance No. 1891

- (4) On buildings over 400,000 square feet, prior to issuance of a business license, the City shall ensure rooftop solar panels are installed and operated in such a manner that they will supply 100% of the power needed to operate all non-refrigerated portions of the facility including the parking areas.
- (5) At least 10% of all passenger vehicle parking spaces shall be electric vehicle (EV) ready, with all necessary conduit and related appurtenances installed. At least 5% of all passenger vehicle parking spaces shall be equipped with working Level 2 Quick charge EV charging stations installed and operational, prior to building occupancy. Signage shall be installed indicating EV charging stations and specifying that spaces are reserved for clean air/EV vehicles. Unless superior technology is developed that would replace the EV charging units, facility operator and any successors in interest shall be responsible for maintaining the EV charging stations in working order for the life of the facility.
- (6) Unless the owner of the facility records a covenant on the title of the underlying property ensuring that the property cannot be used to provide chilled, cooled, or freezer warehouse space, a conduit shall be installed during construction of the building shell from the electrical room to 100% of the loading dock doors that have potential to serve the refrigerated space. When tenant improvement building permits are issued for any refrigerated warehouse space, electric plug-in units shall be installed at every dock door servicing the refrigerated space to allow transport refrigeration units (TRUs) to plug in. Truck operators with TRUs shall be required to utilize electric plug-in units when at loading docks.
- (7) Bicycle racks are required per Section 30-714 and in the amount required for warehouse uses by Table 30-714 of the Zoning and Development Code. The racks shall include locks as well as electric plugs to charge electric bikes. The racks shall be located as close as possible to employee entrance(s). Nothing in this section shall preclude the warehouse operator from satisfying this requirement by utilizing bicycle parking amenities considered to be superior such as locating bicycle parking facilities indoors or providing bicycle lockers.

O-8.48
Cont.

Sec. 9-74. – Operation and Construction.

- (1) Cool surface treatments shall be added to all drive aisles and parking areas or such areas shall be constructed with a solar-reflective cool pavement such as concrete.

Ordinance No. 1891

- (2) To ensure that warehouse electrical rooms are sufficiently sized to accommodate the potential need for additional electrical panels, either a secondary electrical room shall be provided in the building, or the primary electrical room shall be sized 25% larger than is required to satisfy the service requirements of the building or the electrical gear shall be installed with the initial construction with 25% excess demand capacity.
- (3) Use of super-compliant VOC architectural and industrial maintenance coatings (e.g., paints) shall be required.
- (4) The facility operator shall incorporate a recycling program.
- (5) The following environmentally responsible practices shall be required during construction:
 - a. The applicant shall use reasonable best efforts to deploy the highest rated CARB Tier technology that is available at the time of construction. Prior to permit issuance, the construction contractor shall submit an equipment list confirming equipment used is compliant with the highest CARB Tier at the time of construction. Equipment proposed for use that does not meet the highest CARB Tier in effect at the time of construction, shall only be approved for use at the discretion of the Planning Director and shall require proof from the construction contractor that, despite reasonable best efforts to obtain the highest CARB Tier equipment, such equipment was unavailable.
 - b. Use of electric-powered hand tools, forklifts, and pressure washers.
 - c. Designation of an area in any construction site where electric-powered construction vehicles and equipment can charge.
 - d. Identification in site plans of a location for future electric truck charging stations and installation of a conduit to that location.
 - e. Diesel-powered generators shall be prohibited except in case of emergency or to establish temporary power during construction.
- (6) A Property Maintenance Program shall be submitted for review and approval by the Planning Director or his/her designee prior to the issuance of building permits. The program shall provide for the regular maintenance of building structures, landscaping, and paved surfaces in good physical condition, and appearance. The methods and maximum intervals for maintenance of each component shall be specified in the program.

O-8.48
Cont.

Ordinance No. 1891

- (7) Property owner shall provide facility operator with information on incentive programs such as the Carl Moyer Program and Voucher Incentive Program and shall require all facility operators to enroll in the United States Environmental Protection Agency's SmartWay Program.

Section 3. Based on the foregoing, the City Council determines that the project is categorically exempt from further review under the California Environmental Quality Act (CEQA) pursuant to CEQA Guidelines Section 15061(B)(3) (the common-sense exemption) and, alternatively, pursuant to CEQA Guidelines Section 15307 (Actions by Regulatory Agencies for Protection of Natural Resources) and 15308 (Actions by Regulatory Agencies for Protection of the Environment), and Section No. 3.22 of the 2019 Local Guidelines for Implementing CEQA, as implementation of this Ordinance is to improve the environment. The Council hereby directs staff to prepare, execute and file with the San Bernardino County Clerk a notice of exemption within five working days after the adoption of this Ordinance.

Section 4. If any section, sentence, clause or phrase of this Ordinance or the application thereof to any entity, person or circumstance is held for any reason to be invalid or unconstitutional, such invalidity or unconstitutionality shall not affect other provisions or applications of this Ordinance which can be given effect without the invalid provision or application, and to this end the provisions of this Ordinance are severable. The people of the City of Fontana hereby declare that they would have adopted this Ordinance and each section, sentence, clause or phrase thereof, irrespective of the fact that any one or more section, subsections, sentences, clauses or phrases be declared invalid or unconstitutional.

O-8.48
Cont.

Section 5. This Ordinance shall take effect thirty (30) days after the date of its adoption.

Section 6. The City Clerk shall certify to the adoption of this Ordinance. Not later than fifteen (15) days following the passage of this Ordinance, the Ordinance, or a summary thereof, along with the names of the City Council members voting for and against the Ordinance, shall be published in a newspaper of general circulation in the City of Fontana. The City Clerk is the custodian of records for this Ordinance and the records are available at 8353 Sierra Avenue, Fontana CA 92335.

APPROVED AND ADOPTED 12th day of April, 2022.

READ AND APPROVED AS TO LEGAL FORM:

DocuSigned by:

 822D5F9CCD6240C

 City Attorney

I, Germaine McClellan Key, City Clerk of the City of Fontana, and Ex-Officio Clerk of the City Council, do hereby certify that the foregoing Ordinance is the actual Ordinance

Ordinance No. 1891

adopted by the City Council and was introduced at a regular meeting on the 22nd day of March, 2022, and was finally passed and adopted not less than five days thereafter on the 12th day of April, 2022, by the following vote to wit:

NOTICE OF EXEMPTION

PTO: Clerk of the Board of Supervisors
County of San Bernardino
385 N. Arrowhead Avenue, 2nd Floor
San Bernardino, CA 92415-0130

FROM: City of Fontana
Planning Department
8353 Sierra Avenue
Fontana, CA 92335

1. Project Title: **Municipal Code Amendment (MCA) No. 21-001R1 for an Amendment to Chapter 9 of the Municipal Code to Modify Article V to Revise Sustainability Standards for Industrial Commercial Centers throughout the City.**

2. Project Location - Specific: **Citywide**

3. (a) Project Location - City: **Fontana**
(b) Project Location - County: **San Bernardino**

4. Description of nature, purpose, and beneficiaries of Project: **The proposed Municipal Code Amendment (MCA) No. 21-001R1 is for the amendment of Chapter 9 of the Municipal Code to modify Article V to revise industrial commerce centers sustainability standards. That includes modifications and clarification to buffering and screening requirements, clarification on building orientation, requirements for alternative energy, and improvements to construction as it relates to industrial commercial centers throughout the city.**

5. Name of Public Agency approving project: **City of Fontana**

6. Name of Person or Agency carrying out project: **City of Fontana**

7. Exempt status: (Check one)

- (a) Ministerial project.
- (b) Not a project.
- (c) Emergency Project.
- (d) Categorical Exemption. State type and class number Sections 15307 (Actions by Regulatory Agencies for Protection of Natural Resources) and 15308 (Actions by Regulatory Agencies for Protection of the Environment) and Section No. 3.22 of the Local 2019 Guidelines for Implementing the CEQA.
- (e) Declared Emergency.
- (f) Statutory Exemption. State Code section number: _____
- (g) Other. Explanation: **15061(B)(3) (the common-sense exemption)**

Reason why project was exempt: The Ordinance includes additional more restrictive standards and clarification of existing standards for industrial commerce centers to improve environmental quality and does not include the construction of any structures. All new projects involving construction of industrial commerce centers will continue to be subject to an Administrative Site Plan/Design Review, where a project-specific analysis based on location and project details will be conducted, subject to CEQA review/documentation. Therefore, all industrial commerce center projects will be subject to CEQA, standard Conditions of Approval, and all other State/Federal/Local requirements.

NOTICE OF PUBLIC HEARING

SI DESEA INFORMACION EN ESPAÑOL REFERENTE A ESTA NOTIFICACION O PROYECTO, FAVOR DE COMUNICARSE AL (909) 350-6728.

In compliance with Section 202 of the Americans with Disabilities Act of 1990 (42 U.S.C. Sec. 12132) and the federal rules and regulations adopted in implementation thereof, the Agenda will be made available in appropriate alternative formats to persons with a disability. Should you need special assistance to participate in this meeting, please contact the City Clerk’s Department by calling (909) 350-7602 or email at clerks@fontana.org. Notification 48 hours prior to the meeting will enable the City to make reasonable arrangements to ensure accessibility to this meeting.

A PUBLIC HEARING HAS BEEN SCHEDULED BEFORE THE CITY COUNCIL OF THE CITY OF FONTANA FOR THE FOLLOWING:

Municipal Code Amendment (MCA) No. 21-001R1 for an Amendment to Chapter 9 of the Municipal Code to Modify Article V to Revise Sustainability Standards for Industrial Commerce Centers throughout the City

Municipal Code Amendment (MCA) No. 21-001R1 to amend Chapter 9 of the Municipal Code to modify Article V revise sustainability standards that includes modifications and clarification to buffering and screening requirements, methods to improve traffic circulation, requirements for alternative energy, and improvements to construction as it relates to industrial commerce centers throughout the city.

Environmental Determination:

This project qualifies for a categorical exemption pursuant to the California Environmental Quality Act (CEQA) Guidelines Section 15061(B)(3) (the common-sense exemption) and, alternatively, pursuant to CEQA Guidelines Section 15307 (Actions by Regulatory Agencies for Protection of Natural Resources) and 15308 (Actions by Regulatory Agencies for Protection of the Environment), and Section No. 3.22 of the 2019 Local Guidelines for Implementing CEQA, as implementation of this Ordinance is to improve the environment.

Location of Property:

Citywide

Date of Hearing:

March 22, 2022

Place of Hearing:

City Hall Council Chambers
8353 Sierra Avenue
Fontana, CA 92335

City of Fontana
Action Report
City Council Meeting

8353 Sierra Avenue
Fontana, CA 92335

File #: 21-1256
Agenda #: B.

Agenda Date: 3/22/2022
Category: Public Hearing

FROM:
Planning Department

SUBJECT:
Municipal Code Amendment (MCA) No. 21-001R1 for an Amendment to Chapter 9 of the Municipal Code to Modify Article V to Revise Sustainability Standards for Industrial Commerce Centers throughout the City

RECOMMENDATION:
Read by title only and waive further reading of and introduce **Ordinance No.____**, an Ordinance of the City Council of the City of Fontana, approving Municipal Code Amendment (MCA) No. 21-001R1 for an amendment to Chapter 9 of the Municipal Code to modify Article V to revise sustainability standards for industrial commerce centers throughout the city, and the reading of the title constitutes the first thereof.

- COUNCIL GOALS:**
- To promote economic development by pursuing business retention, expansion and attraction.
 - To promote economic development by establishing a quick, consistent development process.

DISCUSSION:
The City of Fontana currently regulates industrial commerce centers in Specific Plans, Chapter 30 of the Zoning and Development Code, and in Chapter 9, and Article V (Industrial Commerce Centers Sustainability Standards) of the Municipal Code. Ordinance No. 1879 that established Article V in Chapter 9 of the Municipal Code was adopted by City Council on February 8, 2022.

The proposed Municipal Code Amendment (MCA) No. 21-001R1 is for the amendment of Chapter 9 of the Municipal Code to modify Article V to revise industrial commerce centers sustainability standards. That includes modifications and clarification to buffering and screening requirements, methods to improve traffic circulation, requirements for alternative energy, and improvements to construction as it relates to industrial commerce centers throughout the city.

The following is a brief summary of the revised standards that shall apply to all industrial commerce centers in the City of Fontana (a detailed comprehensive list of all the requirements is located in the Ordinance, Attachment No. 1):

1. Additional requirements for larger buildings over 400,000 square feet:
 - a. A 20-foot wide landscaping buffer adjacent to sensitive receptors;
 - b. A minimum of 300 feet separation of the building's loading dock from a sensitive receptor; and
 - c. A requirement to include a truck operator lounge.

O-8.48
Cont.

File #: 21-1256
Agenda #: B.

Agenda Date: 3/22/2022
Category: Public Hearing

2. An additional requirement for parking lot trees to provide at least 35% shade cover of parking areas within fifteen years.
3. Clarification on orientation of loading docks and truck entries.
4. Additional alternative energy improvements to require the office portion that is not covered with solar panels or utilities to include light colored roofing with a solar reflective index of not less than 78.
5. Revision of VOC paints to be super-compliant instead of low.
6. Clarification of documentation requirements in utilizing the available highest rated CARB Tier technology during construction.

ENVIRONMENTAL FINDING:

This project is exempt per the California Environmental Quality Act (CEQA) pursuant to Guidelines Section 15061(B)(3) (the common-sense exemption) and, alternatively, pursuant to CEQA Guidelines Section 15307 (Actions by Regulatory Agencies for Protection of Natural Resources) and 15308 (Actions by Regulatory Agencies for Protection of the Environment), and Section No. 3.22 of the 2019 Local Guidelines for Implementing CEQA, as implementation of this Ordinance is to reduce potential impacts to air and environmental quality.

ELECTRONIC RECORD AND SIGNATURE DISCLOSURE

From time to time, City of Fontana (we, us or Company) may be required by law to provide to you certain written notices or disclosures. Described below are the terms and conditions for providing to you such notices and disclosures electronically through your DocuSign, Inc. (DocuSign) Express user account. Please read the information below carefully and thoroughly, and if you can access this information electronically to your satisfaction and agree to these terms and conditions, please confirm your agreement by clicking the 'I agree' button at the bottom of this document.

Getting paper copies

At any time, you may request from us a paper copy of any record provided or made available electronically to you by us. For such copies, as long as you are an authorized user of the DocuSign system you will have the ability to download and print any documents we send to you through your DocuSign user account for a limited period of time (usually 30 days) after such documents are first sent to you. After such time, if you wish for us to send you paper copies of any such documents from our office to you, you will be charged a \$0.00 per-page fee. You may request delivery of such paper copies from us by following the procedure described below.

Withdrawing your consent

If you decide to receive notices and disclosures from us electronically, you may at any time change your mind and tell us that thereafter you want to receive required notices and disclosures only in paper format. How you must inform us of your decision to receive future notices and disclosure in paper format and withdraw your consent to receive notices and disclosures electronically is described below.

Consequences of changing your mind

If you elect to receive required notices and disclosures only in paper format, it will slow the speed at which we can complete certain steps in transactions with you and delivering services to you because we will need first to send the required notices or disclosures to you in paper format, and then wait until we receive back from you your acknowledgment of your receipt of such paper notices or disclosures. To indicate to us that you are changing your mind, you must withdraw your consent using the DocuSign 'Withdraw Consent' form on the signing page of your DocuSign account. This will indicate to us that you have withdrawn your consent to receive required notices and disclosures electronically from us and you will no longer be able to use your DocuSign Express user account to receive required notices and consents electronically from us or to sign electronically documents from us.

All notices and disclosures will be sent to you electronically

Unless you tell us otherwise in accordance with the procedures described herein, we will provide electronically to you through your DocuSign user account all required notices, disclosures, authorizations, acknowledgements, and other documents that are required to be provided or made available to you during the course of our relationship with you. To reduce the chance of you inadvertently not receiving any notice or disclosure, we prefer to provide all of the required notices and disclosures to you by the same method and to the same address that you have given us. Thus, you can receive all the disclosures and notices electronically or in paper format through the paper mail delivery system. If you do not agree with this process, please let us know as described below. Please also see the paragraph immediately above that describes the consequences of your electing not to receive delivery of the notices and disclosures electronically from us.

O-8.48
Cont.

How to contact City of Fontana:

You may contact us to let us know of your changes as to how we may contact you electronically, to request paper copies of certain information from us, and to withdraw your prior consent to receive notices and disclosures electronically as follows:

To contact us by email send messages to: ctejeda@fontana.org

To advise City of Fontana of your new e-mail address

To let us know of a change in your e-mail address where we should send notices and disclosures electronically to you, you must send an email message to us at ctejeda@fontana.org and in the body of such request you must state: your previous e-mail address, your new e-mail address. We do not require any other information from you to change your email address..

In addition, you must notify DocuSign, Inc to arrange for your new email address to be reflected in your DocuSign account by following the process for changing e-mail in DocuSign.

To request paper copies from City of Fontana

To request delivery from us of paper copies of the notices and disclosures previously provided by us to you electronically, you must send us an e-mail to ctejeda@fontana.org and in the body of such request you must state your e-mail address, full name, US Postal address, and telephone number. We will bill you for any fees at that time, if any.

To withdraw your consent with City of Fontana

To inform us that you no longer want to receive future notices and disclosures in electronic format you may:

- i. decline to sign a document from within your DocuSign account, and on the subsequent page, select the check-box indicating you wish to withdraw your consent, or you may;
- ii. send us an e-mail to ctejeda@fontana.org and in the body of such request you must state your e-mail, full name, IS Postal Address, telephone number, and account number. We do not need any other information from you to withdraw consent.. The consequences of your withdrawing consent for online documents will be that transactions may take a longer time to process..

Required hardware and software

Operating Systems:	Windows2000? or WindowsXP?
Browsers (for SENDERS):	Internet Explorer 6.0? or above
Browsers (for SIGNERS):	Internet Explorer 6.0?, Mozilla FireFox 1.0, NetScape 7.2 (or above)
Email:	Access to a valid email account
Screen Resolution:	800 x 600 minimum
Enabled Security Settings:	<ul style="list-style-type: none"> •Allow per session cookies •Users accessing the internet behind a Proxy Server must enable HTTP 1.1 settings via proxy connection

** These minimum requirements are subject to change. If these requirements change, we will provide you with an email message at the email address we have on file for you at that time providing you with the revised hardware and software requirements, at which time you will have the right to withdraw your consent.

Acknowledging your access and consent to receive materials electronically

To confirm to us that you can access this information electronically, which will be similar to other electronic notices and disclosures that we will provide to you, please verify that you were able to read this electronic disclosure and that you also were able to print on paper or electronically save this page for your future reference and access or that you were able to e-mail this disclosure and consent to an address where you will be able to print on paper or save it for your future reference and access. Further, if you consent to receiving notices and disclosures exclusively in electronic format on the terms and conditions described above, please let us know by clicking the 'I agree' button below.

By checking the 'I Agree' box, I confirm that:

- I can access and read this Electronic CONSENT TO ELECTRONIC RECEIPT OF ELECTRONIC RECORD AND SIGNATURE DISCLOSURES document; and
- I can print on paper the disclosure or save or send the disclosure to a place where I can print it, for future reference and access; and
- Until or unless I notify City of Fontana as described above, I consent to receive from exclusively through electronic means all notices, disclosures, authorizations, acknowledgements, and other documents that are required to be provided or made available to me by City of Fontana during the course of my relationship with you.

Letter O-8

Shute, Mihaly, and Weinberg (R-NOW)

March 10, 2023

- 0-8.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- 0-8.2** This comment is introductory in nature. Specific comments regarding the Draft EIR, including the air quality letter report attached to the comment letter, are provided and responded to below.
- 0-8.3** This comment discusses the historical formation of March JPA, the current land use designations of the Project site, and redevelopment of the former base area. The comment does not raise an issue specific to the Draft EIR and the environmental impacts addressed therein
- 0-8.4** This comment discusses the formation of the Riverside Neighbors Opposing Warehouses (R-NOW) and its opposition to the Project. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. The comment further discusses the amendment and partial assignment of the West March Development and Disposition Agreement. Contrary to the comment's interpretation, the 2nd Amendment to the West March Development and Disposition Agreement does not incentive certain types of development. In response, please see Topical Response 10 - West March Development and Disposition Agreement. The comment does not raise an issue specific to the Draft EIR and the environmental impacts addressed therein.
- 0-8.5** This comment refers to existing warehouse development and articles that discuss warehouse development in the Inland Empire. Specific comments regarding the Draft EIR, including the referenced Appendix B attached to the comment letter, are provided and responded to below. This comment does not raise an issue specific to the Draft EIR and the environmental impacts addressed therein.
- 0-8.6** This comment references the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages and overstates the amount of development. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment states the Project "allocates more than a thousand auto parking spaces and truck/trailer parking spaces" across the Specific Plan Area, but the cited Draft EIR pages do not address parking. The plot plans for Buildings B and C (Figures 3-9 and 3-10) include proposed parking. Table 3-3 of the proposed Specific Plan sets forth the minimum passenger vehicle parking space requirements applicable to the Specific Plan Area.
- 0-8.7** This comment refers generally to potential impacts related to climate change and human health associated with warehouse development and states the commenter's opinion that the Draft EIR fails to adequately analyze or effectively mitigate the Project's significant impacts or to consider an adequate range of alternatives, including one without warehouse use. The Draft EIR presents a comprehensive assessment of the Project's potential significant environmental impacts, identifies project design features and feasible mitigation measures that avoid and reduce the Project's adverse

environmental impacts, addresses a reasonable range of alternatives to the proposed Project, and, on an overall basis, informs the governmental decision-makers and the public regarding the Project's potential short-term and long-term significant environmental impacts. In these ways, the Draft EIR achieves the basic objectives for CEQA review, as set forth in CEQA Guidelines Sections 15121(a) and 15362. Regarding alternatives, please see Topical Response 8 – Alternatives, which includes analysis of a non-industrial alternative. Specific comments regarding the Draft EIR are provided and responded to below.

0-8.8 This comment alleges that the Draft EIR's discussion of existing conditions omits information regarding existing warehouse facilities in the area. CEQA and CEQA caselaw require a complete explanation of the environmental setting. The Draft EIR provides this information for each issue area, see Section 4.0, Environmental Analysis, of the Draft EIR for the discussion of analysis format. As explained in the Draft EIR, each EIR section includes an existing setting discussion that describes the physical environmental conditions within the Project area as they existed at the time the NOP was prepared in November 2021; these conditions are considered the baseline physical conditions from which March JPA determines whether an impact is considered to be significant (CEQA Guidelines Section 15125(a)). The comment refers to a map of existing warehouses in the area included as Appendix C to the comment letter. Appendix C referenced in the comment is an aerial photograph with parcels outlined in blue, green, red, and orange that appears to depict warehouse buildings at various locations described in the comment as City of Riverside Sycamore Canyon; March JPA North Campus – Meridian; March JPA South Campus – Van Buren; Moreno Valley – Alessandro Boulevard and Cactus Avenue; and Perris, Moreno Valley – Heacock and Mead Valley. These developments are already existing and therefore are included in the Project's baseline conditions as appropriate for each impact area analyzed in the Draft EIR.

The Draft EIR describes and discloses the environmental setting which includes existing facilities (as well as others) that currently generate truck trips, air emissions, and noise. The fact that these are existing facilities means that the ambient environmental conditions, including existing air quality, existing traffic and truck traffic, and existing noise, take into account these uses and projects in the analysis. For example, as explained in Section 4.11, Noise, 24-hour noise level measurements were taken at eight locations within the Project study area to assess the existing noise level environment. As such, the Draft EIR and the analysis therein did take these existing conditions into account when evaluating the potential additional impacts that would result from implementation of the Project. As explained in Chapter 4, Environmental Analysis, existing conditions are addressed in connection with each environmental issue area analyzed in the Draft EIR. As referenced in the comment, the local attainment status of criteria air pollutants is discussed in Recirculated Section 4.2, Air Quality.

0-8.9 The comment states that the analysis fails to disclose that the area is in nonattainment for NO₂. Although the Project site is not located in this area of nonattainment and is in attainment for NO₂, Table 4.2-2, South Coast Air Basin Attainment Classifications, of Recirculated Section 4.2, Air Quality was updated to identify that SR-60 between San Bernardino and Riverside Counties is a nonattainment area for NO₂. This comment states that in order for decision-makers and the public to be able to fully understand the environmental impacts of the Project, detailed descriptions of five things must be included. Consistent with the comment's suggestion, each of these items is addressed in the Draft EIR, as explained in greater detail below.

- Existing transportation infrastructure around the Project site, including the existing accident rates on roadways and availability of public transportation.

Section 4.15, Transportation, of the Draft EIR discusses existing transportation infrastructure around the Project site, including a summary of the existing circulation network, the March JPA General Plan Circulation Network, adjacent jurisdictions' General Plan Circulation Elements, bicycle and pedestrian facilities, truck routes and transit service. The Draft EIR adequately describes the existing transportation infrastructure around the Project site, including the availability of public transportation. The inclusion of existing accident rates on roadways is not an environmental topic or threshold evaluated under CEQA, and as such, the EIR need not include accident rate information. However, consistent with the CEQA Guidelines, the Draft EIR analyzes whether or not implementation of the Project would have the potential to substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses. As discussed in Section 4.15, Transportation, with the inclusion of PDF-TRA-1, which requires on-site and site-adjacent roadway improvements in the Project vicinity, as well as implementation MM-TRA-1 (Construction Traffic Management Plan) and MM-TRA-2 (Barton Street Traffic Safety Plan), the Project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

- The existing hydrological and hydraulic conditions of drainages in the vicinity of the Project.
- Section 4.9, Hydrology and Water Quality, of the Draft EIR includes a detailed discussion of the existing regional watershed topography, storm drainage, hydrologic conditions of concern, surface water quality, State and Federal requirements, County of Riverside and March JPA requirements, water supply, ground water, and flood hazards.
- Properly documented noise levels existing at and around the Project site.
- As discussed in Section 4.11, Noise, noise measurements were properly taken at and surrounding the Project site, characterizing the existing noise environment in detail.
- Cumulative projects, including major construction projects, that will be carried out in the area during the period when the Project will be under construction.

With regard to cumulative projects, the cumulative effects analysis methodology is discussed in detail in Topical Response 7 – Cumulative Projects and Chapter 4, Environmental Analysis, and includes a list and description of all related projects, as well as a map showing where the projects are located (see Table 4-2, Cumulative Projects, and Figure 4-1, Cumulative Development Location Map). As explained in the Draft EIR, the list of projects is based on the information provided in the Project Traffic Analysis (Appendix N-2). The cumulative project list was developed for the purposes of the EIR analysis through consultation with planning and engineering staff from March JPA, County of Riverside, and the cities of Riverside and Moreno Valley to include key projects in these jurisdictions.

- Any other relevant regional and local setting information (the comment identifies number and type of warehouse facilities and proximity to the site as an example) necessary to evaluate project and cumulative impacts.

With regard to regional and local setting information, each environmental topic section of the Draft EIR includes a subsection documenting the environmental setting and existing conditions. Inclusion of the environmental setting and existing conditions allows readers to understand how implementation of the proposed Project could alter the existing, or baseline, conditions.

As such, given that the existing conditions and environmental setting are described in Recirculated Chapter 3, Project Description, as well as for each environmental topic included throughout Chapter 4, of the EIR, the EIR provides sufficient information for decision makers and the public. The comment does not specifically identify any inadequacies. Specific comments regarding the Draft EIR are provided and responded to below.

O-8.10 This comment discusses the importance of a project description for CEQA purposes and claims that the Project description in the EIR is incomplete. The comment cites *San Joaquin Raptor/Wildlife Rescue Center v. County of Stanislaus* (27 Cal.App.4th 713) regarding the importance of a comprehensive project description for purposes of CEQA analysis. Unlike the EIR at issue in *San Joaquin Raptor*, which failed to address whether wetlands were located on the site and a nearby wetland wildlife preserve, and also omitted discussion of a necessary sewer expansion component of the project, the Project site is properly and fully described, and all associated infrastructure is included, in the EIR. Consistent with the requirements described in *San Joaquin Raptor*, the Draft EIR adequately apprises all interested parties of the true scope of the Project for intelligent weighing of the environmental consequences of the Project and satisfies the purpose of an EIR, which is to provide enough information about a project so that the decision-makers can make an informed decision. (*San Joaquin Raptor*, 27 Cal.App.4th at 734, 718.) Similarly, the other case cited by the comment, *County of Inyo v. City of Los Angeles* (71 Cal.App.3d 185), emphasizes the importance of an accurate, stable and finite project description – a defined project that is the subject of the EIR, in contrast to the EIR at issue in that case, which the court found that what was proposed as the project expanded and contracted from place to place within the EIR. (*County of Inyo*, 71 Cal.App.3d at 199, 190.) Here, as required by CEQA and consistent with the caselaw, the proposed Project is clearly defined and consistently described and studied in the EIR.

The comment suggests that a revised EIR should include building design and specifications, construction details including an erosion control plan and a drainage plan, details of planned landscaping and lighting, and information about the location and number of public trails. Contrary to the comment's suggestion, the EIR includes details about construction in the assessment of construction impacts throughout the document; Section 4.6, Geology and Soils discusses erosion control and Section 4.1, Aesthetics, addresses landscaping and lighting as does the proposed Specific Plan's Development Regulations that set forth the requirements for landscaping and lighting. As such, the Draft EIR includes the information needed for evaluation and review of the Project's potential environmental effects, consistent with the requirements of CEQA. As required by CEQA, a detailed description of the Project is provided in Recirculated Chapter 3, Project Description. As explained therein, the proposed Project consists of two components for analysis purposes in the EIR: the Specific Plan Area and the Conservation Easement. The proposed Specific Plan would regulate future development within the Project site, and the EIR analyzed a full buildout scenario of the Specific Plan Area. The EIR evaluates implementation of the Specific Plan at a project level while development specifics for certain parcels, specifically Building B and Building C, are more certain at this time. The remainder of the proposed Project is evaluated with an assumed buildout scenario to represent a conservative maximum buildout to fully characterize environmental impacts associated with Specific Plan implementation. The proposed Specific Plan sets forth the criteria for what the buildings will look like when each building is designed and approved, including design specifications, erosion, drainage, landscaping, and lighting. Simultaneous with the release of the Draft EIR for public review, the proposed West Campus Upper Plateau Specific Plan was also (and still is) available for public review in the following location online: <https://marchjpa.com/mjpa-meridian-west-campus/>. With regard to public

trails, trails with cardio stops would be included within the new Park developed as part of the Project as explained in Recirculated Chapter 3, Project Description, and depicted on Figure 2-4, Conceptual 60-Acre Park Design, of the proposed Specific Plan. The Project does not include additional trails within the Conservation Easement.

0-8.11 This comment questions the contents of the proposed Development Agreement. As indicated in Section 3.5.6, Requested Approvals and Entitlements, in Recirculated Chapter 3, Project Description, a Development Agreement is one of the approvals that will be considered by March JPA as part of the proposed Project. A Development Agreement provides assurances to both the local agency and the property owner regarding the regulations applicable to the property and the specified public benefits to be provided by the property owner. Development agreements are authorized per the Government Code, which contemplates that parties to a development agreement may have successors in interest. Further, as provided by the Government Code, a development agreement is a legislative act that must be approved by ordinance. March JPA will make the Development Agreement available at a public hearing prior to adoption. As outlined in the Recirculated Chapter 3, Project Description, the Community Benefits provided in the proposed Development Agreement include funding and construction of the proposed Park and construction of the Meridian Fire Station. Regarding the Park development, under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with offsite utilities, drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete. The construction of the proposed Park is evaluated throughout the Draft EIR. The construction of the Meridian Fire Station was previously evaluated under CEQA. Please see Topical Response 6 - Meridian Fire Station, for additional details. The sunset provision of March JPA does not impede its authority to enter into the Development Agreement, which is discussed further in Topical Response 9 - Long Term Project Implementation and Enforcement.

0-8.12 This comment alleges the Draft EIR defers plans and specifications related to building design. To the contrary, the EIR includes the information needed for evaluation and review of the Project's potential environmental effects, consistent with the requirements of CEQA, and each example the comment cites is addressed below. A detailed description of the Project is provided in Recirculated Chapter 3, Project Description, and, as required by CEQA, the EIR examines all phases of the Project, including planning, construction, and operation. (See Section 15161 of the CEQA Guidelines). As explained in Recirculated Chapter 3, Project Description, the proposed Specific Plan would regulate future development within the Project site, and the Draft EIR analyzes a full buildout scenario of the Specific Plan Area. As such, as explained in the EIR, the EIR evaluates implementation of the Specific Plan at a project level while development specifics for Building B and Building C are more certain at this time.

The comment refers to "plans and specifications for features that are relied upon to reduce air emissions" on page 1-20 of the Draft EIR. The comment appears to be referencing MM-AQ-7, which requires plans and specifications to be submitted to March JPA prior to building permit issuance to demonstrate that each project building is designed for passive heating and cooling and designed to include natural light, and MM-AQ-13, which requires plans and specifications to be submitted to March JPA prior to building permit issuance to demonstrate that electrical service is provided to each of the areas in the vicinity of

the building that are to be landscaped in order that electrical equipment may be used for landscape maintenance. As is typical, detailed plans and specifications would be prepared for each specific building within the Project prior to development, and the mitigation measures would ensure that each specific building includes the required features specified in the measures (passive heating and cooling, natural light, and electrical service to landscaped areas for the use of electrical equipment for landscape maintenance). The Draft EIR includes the information needed for evaluation and review of the Project's potential air quality impacts and identifies mitigation measures. The required Project mitigation measures, including the mitigation measures added to the Project in Recirculated Section 4.2, Air Quality, will be included in the Mitigation Monitoring and Reporting Program, which will provide for monitoring, implementation, and enforcement of all mitigation measures.

The comment suggests that the Draft EIR also defers preparation of a Soil Stabilization Plan and does not include a commitment to implement any of the potential soil stabilizing measures. The comment appears to refer to MM-HYD-1, which requires the preparation of an Interim Soil Stabilization Plan. This plan would be required to be prepared prior to issuance of a grading permit and approved by March JPA. MM-HYD-1 provides examples of soil stabilization measures and requires the plan to include detailed measures that will be taken to prevent soil erosion, to the satisfaction of March JPA. As allowed under CEQA Guidelines Section 15126.4(a)(1)(B), the specific details of a mitigation measure may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will be considered, analyzed, and potentially incorporated in the mitigation measure. The Draft EIR includes the information needed for evaluation and review of the Project's potential impacts, and the required Project mitigation measures will be included in the Mitigation Monitoring and Reporting Program, which will provide for monitoring, implementation, and enforcement of all mitigation measures. Similarly, the comment refers to preparation of a Construction Traffic Management Plan, which is required by mitigation measure MM-TRA-1 prior to the issuance of building permits. MM-TRA-1 specifies measures that must be included in the plan, which would be reviewed and approved by March JPA. MM-TRA-1 has been revised to require the preparation of the Construction Traffic Management Plan prior to the issuance of grading permits. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR. The comment states that the Construction Traffic Management Plan fails to include the Barton Street Traffic Safety Plan. The Barton Street Traffic Safety Plan is required by MM-TRA-2, prior to the issuance of grading permits. The Draft EIR includes the information needed for evaluation and review of the Project's potential impacts, and the required Project mitigation measures will be included in the Mitigation Monitoring and Reporting Program, which will provide for monitoring, implementation, and enforcement of all mitigation measures.

The comment also states that the Draft EIR fails to include a Hydrology/Drainage Report or a Water Quality Management Plan and refers to pages 1-62 to 1-64 of the Draft EIR. These pages of the Draft EIR include MM-HYD-2, which requires a Water Quality Management Plan to be prepared to the satisfaction of March JPA prior to the issuance of each building permit, and MM-HYD-3, which requires a Hydrology/Drainage Report to be prepared to the satisfaction of March JPA prior to issuance of each building permit. As is typical, detailed plans and specifications would be prepared for each specific building within the Project prior to development, and the mitigation measures would ensure that each specific building includes the required features specified in the measures. As set forth in MM-HYD-2,

the Water Quality Management Plan required by the mitigation measure would be consistent with the Master Project Specific Water Quality Management Plan, Master Meridian West Campus Upper Plateau, which is provided as Appendix K-2 of the EIR, and must meet the requirements of the Riverside County Municipal Separate Storm Sewer System (MS4) Permit, as well as the National Pollutant Discharge Elimination System (NPDES) New Development & Redevelopment Guidelines for Projects Under the March Joint Powers Authority, also known as the March JPA WQMP Guidance Document. Project-specific Water Quality Management Plans for Buildings B and C are provided in Appendices K-3 and K-4, respectively, of the Draft EIR. Pursuant to MM-HYD-3, the required Hydrology/Drainage Study would be consistent with the Preliminary Hydrology Study for Meridian Park Upper Plateau, provided as Appendix K-1 in the Draft EIR, and comply with the 1978 Riverside County Flood Control and Water Conservation District Hydrology Manual for storm drain planning and design calculations. Project-specific Preliminary Hydrology Studies for Buildings B and C are provided in Appendices K-5 and K-6, respectively, of the Draft EIR. The Draft EIR includes the information needed for evaluation and review of the Project's potential impacts and identifies mitigation measures. The required Project mitigation measures will be included in the Mitigation Monitoring and Reporting Program, which will provide for monitoring, implementation, and enforcement of all mitigation measures.

Therefore, the Draft EIR adequately describes the Project and how it will operate during both construction and operation, and the inclusion of mitigation where detailed plans will be prepared and approved by March JPA prior to the issuance of grading and building permits does not constitute deferral, consistent with CEQA Guidelines Section 15126.4(a)(1)(B).

0-8.13 This comment states that the Draft EIR does not include specified information. Each of these points are addressed in detail below.

- Information on construction phasing and schedule;

Contrary to the comment's suggestion, the Draft EIR includes information regarding Project construction phasing and schedule. As detailed in Section 3.5.3, Project Construction, in Recirculated Chapter 3, Project Description, for purposes of the technical analyses throughout this EIR, construction was assumed to begin in June 2023 through October 2027. For construction assumptions throughout the EIR, a 4.35-year construction period and a 2028 opening year is assumed. The construction schedule utilized in the analysis, shown in Table 3-3, represents a "worst-case" analysis scenario; as construction would occur after the respective dates, emission factors for construction would decrease as time passes and the analysis year increases due to emission regulations becoming more stringent. The duration of construction activity, as shown in Table 3-3, and associated construction equipment for the Project's phases of construction, listed in Table 3-4, represent a reasonable approximation of the expected construction fleet as required under CEQA. The duration of construction activity is based on an opening year of 2028. Additionally, as set forth in Tables 3-3 and 3-4 in Recirculated Chapter 3, Project Description, and described elsewhere in the Draft EIR as well, Phase 1 construction would include all rough grading and is expected to last nine months. Phase 2 would begin after completion of Phase 1 and would include site preparation, construction of the new park, and construction of the buildings throughout the Specific Plan Area. Phase 2 would last approximately 3.5 years.

- Location of the Project construction staging areas;

As detailed in Recirculated Chapter 3, Project Description, construction staging would be entirely within the construction limits shown in Figure 3-11, Construction Limits. The Specific Plan Area is 370.30 acres, and construction staging would occur on an additional area of 8.91 acres proposed to be used for construction ingress/egress and staging for construction equipment along the roadway extensions of Barton, Brown, and Cactus (Staging Area footprint) and was also evaluated for direct impacts. See, e.g., Section 4.3, Biological Resources, Figure 4.3-4, Proposed Project Impacts. As such, the Draft EIR does identify where construction staging would occur and evaluate the impacts associated with potential construction staging. In addition, the Draft EIR explains that staging of construction equipment and construction activities would be implemented according to March JPA Development Code Section 9.08.180, which addresses storage of construction equipment and building materials (Section 4.14, Recreation, of the Draft EIR). Furthermore, mitigation measure MM-AES-1 addresses construction equipment staging and screening.

- Location of proposed blasting activities;

As discussed in Section 4.11, Noise, while not specifically proposed, rock blasting may be required during grading operations to support Project construction, if bedrock material that cannot be ripped is encountered. As discussed in Section 4.6, Geology and Soils, granite bedrock is present near the surface across the majority of the Project site. This bedrock material varies in integrity from completely disintegrated rock, which has become a dense soil-like deposit, to moderately weathered rock. As explained in the Draft EIR, the bedrock is expected to range from readily rippable (easily excavated) to non-rippable (cannot be excavated), depending on the degree of weathering. Given that exact underground soil conditions are not entirely known at this point in time and whether or not bedrock material can be ripped, the Draft EIR included a worst-case analysis that assumed blasting occurring in the outside perimeter of the Development Area to disclose what potential noise and vibration impacts would be at the closest sensitive receptors to the nearest potential blasting location(s). Thus, for purposes of analysis in the Draft EIR, and as explained in the Draft EIR, the assessment of noise and vibration from potential blasting is evaluated at residences located closest to the construction zone boundary, to account for a worst-case scenario in which blasting is determined to be necessary and must be carried out at the edge of the construction zone boundary. Impacts were determined to be less than significant. In addition, as set forth in the Draft EIR, the Project includes PDF-NOI-2, which prohibits blasting within 1,000 feet of any residence or other sensitive receptor. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

- Operating hours of warehouse facilities;

As discussed in Section 4.11, Noise, the “operational noise analysis is intended to describe noise level impacts associated with the expected typical of daytime and nighttime activities within the Specific Plan Area. To present the potential worst-case noise conditions, this analysis assumes the Specific Plan would be operational 24 hours per day, seven days per week.” Therefore, the analysis within the Draft EIR assumes that Specific Plan uses, including warehouses, would be operational 24 hours per day, seven days per week. Note that actual operating hours may vary once the Project is constructed and buildings are operational; however, hours of operation would not exceed the operational hours assumed in the EIR because the EIR analyzed the worst case, most impactful, scenario.

- Location and number of public trails;

As discussed in Recirculated Chapter 3, Project Description, throughout the Draft EIR, and in detail in Section 4.14, Recreation, existing trails are located within the Conservation Easement, consistent with the terms of the CBD Settlement Agreement (Appendix S). These existing trails would remain, and the proposed Park would include new trails with cardio stops. Simultaneous with the release of the Draft EIR for public review, the proposed West Campus Upper Plateau Specific Plan was also (and still is) available for public review in the following location online: <https://marchjpa.com/mjpa-meridian-west-campus/>, Figure 5-4, Non-Motorized Circulation Plan, of the Specific Plan depicts the existing trail network and the Project's proposed new trailhead locations.

- Location and number of fences;

As explained in Recirculated Chapter 3, Project Description, the proposed Specific Plan would regulate future development within the Project site. The EIR evaluates implementation of the Specific Plan at a project level while development specifics for certain parcels, specifically Building B and Building C, are more certain at this time. The proposed Specific Plan includes design guidelines and standards for walls and fences and indicates that fences and walls are anticipated to be proposed in conjunction with development of the individual project sites. The final locations and details of these fences and walls will be determined when buildings are designed and oriented during implementation of the Specific Plan. The proposed Specific Plan, which is available online as noted above, includes Figure 4-1, Landscape Fence and Wall Plan, which depicts fence and wall locations and details on the proposed height and type of fences and walls. Proposed walls and fences for Buildings B and C are depicted on the Plot Plans for Buildings B and C included in Recirculated Chapter 3, Project Description, (see Figures 3-9 and 3-10).

- Landscaping plan;

As explained in Recirculated Chapter 3, Project Description, buildout of the proposed Specific Plan Area would include perimeter landscaping consisting of a minimum 30-foot-wide landscape buffer along the northern, western, and southern Specific Plan Area boundaries maintained by a Landscape Lighting and Maintenance District. The Landscape Lighting and Maintenance District would also maintain perimeter slopes and street parkways. The proposed Specific Plan, which as noted above is available online, includes Landscape Design Guidelines that establish landscape principles and standards that apply to all planning areas within the Specific Plan Area. As further explained in the Draft EIR, all landscape planting would be drought tolerant and irrigated by recycled water. Streetscape landscaping is proposed for all streets within the Specific Plan Area, presenting a combination of evergreen and deciduous trees, low shrubs, and masses of groundcovers. The plant palette for the proposed Project would include colorful shrubs and groundcovers, ornamental grasses and succulents, and evergreen and deciduous trees that are commonly used throughout Southern California and the Inland Empire region. As explained in the Draft EIR, a list of plant materials approved for use in the Specific Plan Area is provided for in Appendix C, Landscape Plant Palette, of the proposed Specific Plan.

- Lighting plan.

As discussed in Section 4.1, Aesthetics, Campus Development lighting would be subject to the outdoor lighting standards and requirements contained within the proposed Specific Plan's Design Guidelines, and development within the Specific Plan Area would be required to adhere to PDF-AES-2 through PDF-AES-16, which are set forth in the Draft EIR and specifically address lighting. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. In addition, as explained in the Draft EIR, an exterior point-by-point photometric study has not yet been prepared for the Campus Development; however, implementation of MM-AES-2 requires the Project applicant to submit a photometric study as part of the building permit application that is subject to March JPA review and approval. The study must demonstrate compliance with the March JPA Development Code, Specific Plan, and lighting PDFs as applicable, and document the location, quantity, type, and luminance of all fixtures proposed on the Project site. Additionally, included with Appendix B of the Draft EIR is a Photometric Lighting Plan, prepared by Musco Lighting, for the Park playing fields with the proposed light poles at their proposed locations. The photometric plan shows how the lighting of the playing fields within the Park, which is the land use more likely to introduce new sources of light and glare adjacent to light-sensitive receptors, would remain on the Project site such that light spillover into adjacent residential uses would not occur while adequately illuminating the playing surface.

For the reasons discussed above, the Draft EIR, as well as the proposed Specific Plan, which was (and remains) available for public review, and was released simultaneously with the Draft EIR, includes specific details related to the construction phasing and schedule; location of construction staging areas; location of potential blasting activities; assumptions for operating hours of warehouse facilities; the location and number of public trails; the location and number of fences; the landscaping plan; and lighting plans.

Contrary to the comment's suggestion, the Draft EIR includes the information needed for evaluation and review of the Project's potential environmental effects, consistent with the requirements of CEQA. A detailed description of the Project is provided in Recirculated Chapter 3, Project Description, and, as required by CEQA, the EIR examines all phases of the Project, including planning, construction, and operation. (See Section 15161 of the CEQA Guidelines). Pursuant to Section 15124 of the CEQA Guidelines, the description of the project should not supply extensive detail beyond that needed for evaluation and review of the environmental impact.

O-8.14

This comment summarizes questions about the Draft EIR's description of the existing setting and Project description. As required by CEQA, a detailed description of the Project is provided in Recirculated Chapter 3, Project Description. Contrary to the comment's suggestion, the EIR includes the information needed for evaluation and review of the Project's potential environmental effects, consistent with the requirements of CEQA. It is not clear from the comment what "undisclosed project details" the commenter believes may be contained in the Development Agreement. The proposed Development Agreement is discussed in Section 3.5.6, Requested Approvals and Entitlements, in Recirculated Chapter 3, Project Description, which explains that a Development Agreement is proposed to vest the Project entitlements and fees, ensure financing of public improvements required by the conditions of approval, and provide certain Community Benefits including compliance with the terms of the CBD Settlement Agreement and provision of new public benefits to be provided by the property owner, including, but not limited to, expansion of employment opportunities for area residents. As identified in the Recirculated Chapter 3,

Project Description, the Community Benefits in the proposed Development Agreement include funding and construction of the proposed Park and construction of the Meridian Fire Station. Regarding the Park development, under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with offsite utilities, drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete. The construction of the proposed Park is evaluated in the Draft EIR. The construction of the Meridian Fire Station was previously evaluated under CEQA. Please see Topical Response 6 – Meridian Fire Station, for additional details. See also Response O-8.11, above.

O-8.15 The introductory language in this comment explains the existing regional air quality in the South Coast Basin. This is described in Recirculated Section 4.2, Air Quality, and in the Revised Air Quality Impact Analysis (Appendix C-1). Please see Response O-8.8 above regarding the designation of the area of route SR-60 between San Bernardino and Riverside Counties as a nonattainment area for NO₂.

The comment also notes that heavy duty trucks are a source of diesel particulate matter and toxic air contaminants (TACs) and refers to a 2012 policy paper on goods movement and health impacts. Because the Project includes warehouses that will be served by heavy duty trucks, Recirculated Section 4.2, Air Quality and Appendix C-2 evaluated the health impacts from diesel particulate matter in an operational health risk assessment.

The comment states that the Draft EIR does not identify all sources of toxic air contaminants, including diesel generators. Please see Recirculated Section 4.2, Air Quality, for discussion and analysis of emergency generators.

Specific comments regarding mitigation measures are provided and responded to below.

O-8.16 The comment states that the analysis does not identify the extent or severity of impacts prior to the implementation of mitigation measures and particularly states that the health impacts of DPM emissions are not evaluated. The comment states that the project design feature requiring all electric cargo handling equipment should be classified as a mitigation measure and that the Draft EIR’s HRA analysis should not have included it. In response to this comment the Revised Project Air Quality Impact Analysis and Revised Project HRA include the referenced PDF as MM-AQ-18. Please see Recirculated Section 4.2, Air Quality, and Appendix C-2 for discussion and analysis of diesel-powered cargo equipment and implementation of MM-AQ-18.

O-8.17 This comment refers to CEQA requirements regarding mitigation measures, including the implementation of feasible mitigation measures that avoid and reduce a project’s adverse environmental impacts. As set forth in CEQA and confirmed in caselaw, including the case cited in the comment, “[CEQA] allows a project to continue even if there are significant environmental effects that have not been mitigated, if ‘the public agency finds that specific overriding economic, legal, social, technological, or other benefits of the project outweigh the significant effects on the environment.’”¹¹

¹¹ *Sierra Club v. County of Fresno*, 6 Cal.5th 502, 524 (2018), citing Public Resources Code Section 20181(b).

As the California Supreme Court confirmed in the case cited by the comment, “[a] lead agency may adopt mitigation measures that do not reduce the project’s adverse impacts to less than significant levels, so long as the agency can demonstrate in good faith that the measures will be at least partially effective at mitigating the project’s impacts.”¹² Consistent with the requirements of CEQA and the caselaw cited in the comment, the Draft EIR presents a comprehensive assessment of the Project’s potential significant environmental impacts and identifies project design features and feasible mitigation measures that avoid and reduce the Project’s adverse environmental impacts. This comment does not identify specific measures or deficiencies or how particular measures would reduce the specific impacts of this Project. In addition, Recirculated Section 4.2, Air Quality, identifies numerous additional mitigation measures to reduce air quality impacts. The Project’s consistency with the air quality measures for the identified projects referenced in the comment and attached to the comment letter as Appendix D (World Logistics Center), Appendix E (Centerpoint Properties), and Appendix F (Mariposa Industrial Park) is addressed in Topical Response 2 – Air Quality.

0-8.18 This comment notes that other municipalities such as the City of Fontana have adopted ordinances that mandate the inclusion of mitigation measures for warehouse/fulfillment center projects, and the comment attaches the Fontana ordinance as Appendix G to the comment letter. The comment does not specify or detail the applicability of any particular mitigation measures. As this Project is not located in Fontana, this ordinance is inapplicable. However, additional measures were included in Recirculated Section 4.2, Air Quality and are now included in the Final EIR, and the Project’s consistency with the air quality measures in the City of Fontana’s Ordinance 1891 is provided in Topical Response 2 – Air Quality.

0-8.19 This comment proposes mitigation measures that the commenter believes would further reduce air quality impacts. All of the measures referenced in the comment are either already incorporated into the Project or have been incorporated through new mitigation measures as explained further in Recirculated Section 4.2, Air Quality, and in Topical Response 2 – Air Quality.

Consistency with Measures Proposed in Comment 0-8.19

Proposed Mitigation	Project Consistency
Minimizing Construction Impacts	
Prohibiting off-road diesel-powered equipment from being in the “on” position for more than 10 hours per day.	Consistent. MM-AQ-2 prohibits the operating hours of construction equipment to exceed 8 hours and requires the construction contractor or submit a biweekly log to March JPA to ensure compliance.
Requiring on-road heavy-duty haul trucks to be model year 2014 or newer if diesel-fueled.	Consistent. MM-AQ-3 requires the construction contractor to use heavy-duty hauling trucks that are model year 2014 or later
Providing electrical hook ups rather than use of diesel-fueled generators, for electric construction tools and equipment.	Consistent. MM-AQ-3 requires the construction contractor to designate an area where electric-powered vehicles and equipment can be charged.
Prohibiting grading on days with an Air Quality Index forecast of greater than 100 for particulates or ozone for the project area.	Not Applicable. The Project would have a less than significant air quality construction impact with the implementation of MM-AQ-1 through MM-AQ-4. MM-AQ-3 prohibits grading on days with an Air Quality Index forecast greater than 150 for particulates or ozone as

¹² *Id.* at 511.

Consistency with Measures Proposed in Comment O-8.19

Proposed Mitigation	Project Consistency
	forecasted for the project area (Source Receptor Area 23).
Forbidding idling of heavy equipment for more than two minutes.	Not Applicable. The Project would have a less than significant air quality construction impact with the implementation of MM-AQ-1 through MM-AQ-4 . MM-AQ-3 prohibits construction equipment idling longer than 3 minutes.
Keeping onsite, and furnishing to the lead agency or other regulators upon request, all equipment maintenance records and data sheets, including design specifications and emission control tier classifications.	Consistent. MM-AQ-2 requires the construction contractor to submit biweekly construction equipment hours log to the March JPA. In the event alternate equipment is required, the applicant shall provide documentation demonstrating equivalent or reduced emissions based on horsepower and hours of operation. MM-AQ-3 requires all construction equipment to be tuned and maintained in accordance with the manufacturer’s specifications, with maintenance records onsite and available to regulatory authorities upon request.
Providing information on transit and ridesharing programs and services to construction employees.	Consistent. MM-AQ-3 requires the construction contractor to provide transit and ridesharing information to onsite construction workers.
Providing meal options onsite for construction employees to minimize travel during meal breaks.	Consistent. MM-AQ-3 requires the construction contractor to establish one or more locations for food or catering truck service to construction workers and to cooperate with food service providers to provide consistent food service.
Minimizing Ongoing Operational Impacts	
Requiring that all facility-owned and operated fleet equipment to meet or exceed 2014 model-year emissions equivalent engine standards and requiring documentation of compliance. Requiring all heavy-duty vehicles entering or operated on the project site to be zero-emission beginning in 2030.	Consistent. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later.
Requiring all on-site, service yard equipment, such as forklifts and yard trucks, to be electric with the necessary electrical charging stations provided.	Consistent. MM-AQ-18 requires the use of only electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. As an alternative, hydrogen powered equipment shall also be acceptable.
Requiring tenants to use zero-emission light- and medium-duty vehicles as part of business operations.	Consistent. MM-AQ-20 requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by

Consistency with Measures Proposed in Comment O-8.19

Proposed Mitigation	Project Consistency
	December 31, 2030 or when feasible for the intended application, whichever date is later.
Requiring truck operators to turn off engines when not in use.	Consistent. MM-AQ-17 requires truck drivers to shut off engines when not in use.
Posting both interior- and exterior-facing signs, including signs directed at all dock and delivery areas, identifying idling restrictions and contact information to report violations to CARB, the air district, and the building manager.	Consistent. MM-AQ-17 requires legible, durable, weather-proof signs placed at truck access gates, loading docks, and truck parking areas that identify: 1) instructions for truck drivers to shut off engines when not in use; 2) instructions for drivers of diesel trucks to restrict idling to no more than three (3) minutes once the vehicle is stopped, the transmission is set to “neutral” or “park,” and the parking brake is engaged; and 3) telephone numbers of the building facilities manager, South Coast Air Quality Management District and the California Air Resources Board to report violations. One six square foot sign providing this information shall be located on the building between every two dock-high doors and the sign shall be posted in highly visible locations at the entrance gates, semi parking areas, and trailer parking locations.
Installing and maintaining, at the manufacturer's recommended maintenance intervals, air filtration systems at sensitive receptors within a certain radius of the facility for the life of the project.	Not Applicable. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project’s health risks during construction and operation and determined the Project would result in less than significant human health or cancer risks.
Installing and maintaining, at the manufacturer's recommended maintenance intervals, an air monitoring station proximate to sensitive receptors and the facility for the life of the project, and making the resulting data publicly available in real time. While air monitoring does not mitigate the air quality or greenhouse gas impacts of a facility, it nonetheless benefits the affected community by providing information that can be used to improve air quality or avoid exposure to unhealthy air.	Not Applicable. The Project would result in less than significant human health or cancer risks. See Recirculated Section 4.2, Air Quality and Appendix C-2.
Constructing electric truck charging stations proportional to the number of dock doors at the project.	Consistent. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.
Constructing electric plugs for electric transport refrigeration units (TRUs) at every dock door for facilities with cold storage and prohibiting diesel power for TRUs.	Consistent. MM-AQ-8 requires that all TRU loading docks provide electrical hookups.

Consistency with Measures Proposed in Comment O-8.19

Proposed Mitigation	Project Consistency
Constructing electric light-duty vehicle charging stations proportional to the number of parking spaces at the project.	Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
Installing solar photovoltaic systems on the project site equal to the building's projected energy needs plus providing power to all electric vehicle charging stations.	Consistent. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission.
Requiring all stand-by emergency generators to be powered by a non-diesel fuel.	Consistent. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary. Tenant shall provide documentation demonstrating, to March JPA's satisfaction, that no other back-up energy source(s) are available and sufficient for the building's needs. If absolutely necessary, at the time of initial operation, generators shall have Best Available Control Technology (BACT) that meets CARB's Tier 4 emission standards or meets the most stringent in-use standard, whichever has the least emissions. In the event rental back-up generators are required during an emergency, the units shall be located at the project site for only the minimum time required. Tenants shall make every effort to utilize rental emergency backup generators that meet CARB's Tier 4 emission standards or have the least emissions.
Requiring facility operators to train managers and employees on efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.	Consistent. MM-AQ-22 requires the facility operator to provide information to all tenants, with instructions that the information shall be provided to employees and truck drivers as appropriate, regarding efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks.
Requiring operators to establish and promote a rideshare program that discourages single-occupancy vehicle trips and provides financial incentives for alternate modes of transportation, including carpooling, public transit, and biking.	Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include: <ul style="list-style-type: none"> • Appoint a Transportation Demand Management (TDM) coordinator who would promote the TDM program, activities and features to all employees. • Create and maintain a "commuter club" to manage subsidies or incentives for employees who carpool, vanpool, bicycle, walk, or take transit to work. • Inform employees of public transit and commuting services available to them (e.g., social media, signage). • Provide on-site transit pass sales and discounted transit passes. • Guarantee a ride home.

Consistency with Measures Proposed in Comment O-8.19

Proposed Mitigation	Project Consistency
	<ul style="list-style-type: none"> • Offer shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees. • Designating areas for employee pickup and drop-off. • Coordinate with the Riverside Transit Agency and employers in the surrounding area to maximize the benefits of the TDM program.
Meeting CALGreen Tier 2 green building standards, including all provisions related to designated parking for clean air vehicles, electric vehicle charging, and bicycle parking.	Consistent. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code.
Achieving certification of compliance with LEED green building standards.	Consistent. MM-AQ-6 requires all buildings to achieve the 2023 LEED Silver certification standards or equivalent, at a minimum.
Providing employee meal options onsite or shuttles between the facility and nearby meal destinations.	Consistent. Tenants with 250 or more employees must comply with SCAQMD Rule 2202, On-Road Motor Vehicle Mitigation Options. For tenants employing less than 250 employees, MM-AQ-21 requires each facility to implement or join a transportation demand management program, which would include offering shuttle service to and from public transit and commercial areas/food establishments, if warranted. Alternatively, establish locations for food or catering truck service and cooperate with food service providers to provide consistent food service to employees.
Improving and maintaining vegetation and tree canopy for residents in and around the project area.	Consistent. Section 3.5.2 of the proposed Specific Plan requires a 15-foot landscaped setback, measured from the Landscaping and Lighting Maintenance District (LLMD) or the public right-of-way, will be required for all front and side yards adjacent to public streets. Section 4.5 of the proposed Specific Plan outlines the Landscape Design Guidelines, including streetscape landscaping comprised of a combination of evergreen and deciduous trees, low shrubs, and masses of groundcovers to create a visually pleasing experience for pedestrians and passing motorists.
Requiring that every tenant train its staff in charge of keeping vehicle records in diesel technologies and compliance with CARB regulations, by attending CARB-approved courses. Also require facility operators to maintain records on-site demonstrating compliance and make records available for inspection by the local jurisdiction, air district, and state upon request.	<p>Consistent. MM-AQ-22 requires the provision of information to employees and truck drivers as appropriate:</p> <ul style="list-style-type: none"> • Building energy efficiency, solid waste reduction, recycling, and water conservation. • Vehicle GHG emissions, electric vehicle charging availability, and alternate transportation opportunities for commuting.

Consistency with Measures Proposed in Comment O-8.19

Proposed Mitigation	Project Consistency
	<ul style="list-style-type: none"> • Participation in the Voluntary Interindustry Commerce Solutions (VICS) “Empty Miles” program to improve goods trucking efficiencies. • Health effects of diesel particulates, state regulations limiting truck idling time, and the benefits of minimized idling. • The importance of minimizing traffic, noise, and air pollutant impacts to any residences in the Project vicinity. • Efficient scheduling and load management to eliminate unnecessary queuing and idling of trucks. <p>MM-AQ-25 requires the facility operator to monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable, by maintaining records on-site demonstrating compliance and making records available for inspection by the local jurisdiction, air district, and state upon request.</p>
<p>Requiring that every tenant enroll in the United States Environmental Protection Agency’s SmartWay program, and requiring tenants to use carriers that are SmartWay carriers.</p>	<p>Consistent. MM-AQ-10 encourages tenants to become SmartWay partners, if eligible. MM-AQ-10 also requires all loading docks to be compatible with SmartWay trucks.</p>
<p>Installing signs in residential areas noting that truck and employee parking is prohibited.</p>	<p>Consistent. MM-AQ-15 requires signs clearly identifying the approved truck routes installed along the truck routes to and from the project site and within the project site. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue.</p>
<p>Consulting with the local public transit agency and securing increased public transit service to the project area.</p>	<p>Consistent. MM-GHG-11 requires an in-lieu payment to the March Joint Powers Authority for the installation of a bus shelter on Alessandro Boulevard.</p>
<p>Designating areas for employee pickup and drop-off.</p>	<p>Consistent. See MM-AQ-21 discussion above.</p>
<p>Appointing a compliance officer who is responsible for implementing all mitigation measures, and providing contact information for the compliance officer to the lead agency, to be updated annually.</p>	<p>Consistent. MM-AQ-27 requires each tenant to comply with the Project MMRP. MM-AQ-25 requires the facility operator to monitor and ensure compliance with all current air quality regulations for on-road trucks including CARB’s Heavy-Duty (Tractor-trailer) Greenhouse Gas Regulation, Periodic Smoke Inspection Program, and the Statewide Truck and Bus Regulation, as applicable.</p>

O-8.20 This comment asks that a mitigation fund be considered and cites as an example the World Logistics Center project in Moreno Valley which created a fund to mitigate impacts on affected residents, schools, places of worship and other community institutions by retrofitting buildings on their properties. The

comment does not identify any specific Project impacts on residents, school, places of worship or other institutions to be mitigated by a fund nor does the comment provide substantial evidence of adverse impacts that would be reduced through a mitigation fund. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the EIR for the World Logistics Center project referenced by the comment identified significant and unavoidable health impacts to neighboring residents. Mitigation under that EIR included installation of air filtration systems at two houses. The settlement agreement mitigation fund for the World Logistics Center project expanded the eligible residences to 126 homes.¹³ Here, Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks.

The World Logistics Center Final EIR also identified significant and unavoidable construction and operational noise impacts to neighboring residents. Noise insulation mitigation was not proposed in the Final EIR for that project. The settlement agreement mitigation fund included noise insulation for approximately 74 of the surrounding homes. Here, Section 4.11, Noise, of the Draft EIR and the Project Noise Study (Appendix M-1) analyzed the Project's construction and operational noise impacts. The impact analysis is based on quantifiable thresholds and relies on existing regulations and project design features to reduce impacts. The Project would have less than significant impacts due to

¹³ See Attachment C, Exhibit 1 – Filter Overview Map, of the World Logistics Center Settlement Agreement – Appendix D to Letter O-8.

construction noise, and no mitigation is required. The Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling activities, thereby further reducing the Project's construction noise and vibration impacts.

Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and will be included in the MMRP. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project's traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant. Unlike the World Logistics Center, the Project would have less than significant noise impacts to surrounding residences.

The World Logistics Center Final EIR further identified significant and unavoidable air quality impacts due to construction equipment exhaust and fugitive dust even after the implementation of mitigation. The settlement agreement mitigation fund included exterior pressure washing for the first two rows of surrounding homes. Here, Recirculated Section 4.2, Air Quality, and the Revised Project Air Quality Impact Analysis (Appendix C-1) determined the Project would have less than significant construction air quality impacts with implementation of MM-AQ-1 through MM-AQ-4. Unlike the World Logistics Center, the Project would have less than significant construction air quality impacts, with mitigation incorporated, to surrounding residences.

- 0-8.21** This comment refers to previously-referenced CEQA requirements regarding mitigation measures, including the implementation of feasible mitigation measures that avoid and reduce a project's adverse environmental impacts. Please see Response O-8.17 above. The comment states that March JPA must identify effective enforceable measures to minimize community impacts, and states that attachments to the comment (Appendices D-F) contain detailed mitigation measures that should be considered and adopted if feasible. Please see Recirculated Section 4.2, Air Quality, for discussion and evaluation of expanded air quality mitigation measures and Topical Response 2 - Air Quality, regarding the Project's consistency with the air quality measures for the identified projects provided in Appendix D (World Logistics Center), Appendix E (Centerpoint Properties), and Appendix F (Mariposa Industrial Park) to the comment letter. The comment also cites to *Citizens for Quality Growth v City of Mt. Shasta* (1988) 198 Cal.App.3d 433, 443-45 for support for the comment that March JPA cannot approve the Project unless it analyzes and adopts Project alternatives or mitigation measures that meet the requisite CEQA standards. As explained in the case cited in the comment, CEQA requires a public agency to incorporate the mitigation measures or make other approved findings before approving a project with identified significant environmental impact.¹⁴ In the case cited in the comment, the local agency "failed to make findings adopting or rejecting the proposed mitigation measures for the environmental impacts identified by the EIR. It also failed to evaluate the proposed alternatives before adopting its statement of overriding considerations..."¹⁵ Here, Recirculated Section 4.2, Air Quality, identifies a comprehensive array of feasible measures to mitigate the Project's air quality impacts. If the Project is approved, the mitigation measures will become enforceable as conditions of approval and through the Mitigation Monitoring Reporting Program.

¹⁴ *Citizens for Quality Growth v. City of Mt. Shasta*, 198 Cal.App.3d 433, 442 (1988).

¹⁵ *Id.* at 446.

0-8.22 This comment suggests that the Draft EIR fails to evaluate the Project's environmental impacts in context. The comment cites Section 15064(b) of the CEQA Guidelines, which provides that the determination of whether a project may have a significant effect on the environment calls for careful judgment of the part of the public agency involved, based to the extent possible on scientific and factual data. This CEQA Guidelines section also provides that "[a]n ironclad definition of significant effect is not always possible because the significance of an activity may vary with the setting. For example, an activity which may not be significant in an urban area may be significant in a rural area." Consistent with the requirements of CEQA, the existing conditions and environmental setting are described in Recirculated Chapter 3, Project Description. Also, as explained in Chapter 4, Environmental Analysis, existing conditions are addressed in connection with each environmental issue area analyzed in the Draft EIR. Each environmental topic section of the Draft EIR includes a subsection documenting the environmental setting and existing conditions. As such, the EIR includes the information needed for evaluation and review of the Project's potential environmental effects and provides sufficient information for decision makers and the public.

The comment notes that the Project site is located in an area identified as a disadvantaged community. The comment states that the EIR does not discuss this information or utilize it in the analysis. As described in Recirculated Chapter 3, Project Description, March JPA's land use authority will revert back to the County of Riverside on July 1, 2025, in accordance with the 14th Amendment to the March JPA Joint Powers Agreement. As the March JPA Planning Area will be absorbed by Riverside County, with the County fully responsible for future land use reviews and approvals after July 1, 2025, March JPA proposed an Environmental Justice Element based on Riverside County's adopted Environmental Justice Element. The Draft Environmental Justice Element incorporates the environmental justice policies of the County of Riverside Healthy Communities Element pursuant to Government Code Section 65301(a). The County of Riverside Board of Supervisors adopted environmental justice policies by Resolution 2021-182 on September 21, 2021. The County's environmental justice policies apply to the disadvantaged communities within unincorporated territory in the County of Riverside. Environmental evaluation of the Draft Environmental Justice Element was a separate process from the Project EIR. On April 24, 2024, in a public meeting, the March JPA Commission considered and adopted Resolution JPA 24-04, which found the Environmental Justice Element categorically exempt from CEQA pursuant to State CEQA Guidelines Class 7 and Class 8, and adopted the Environmental Justice Element. The adopted Environmental Justice Element is substantially similar to the Draft Environmental Justice Element released in November 2023. The Environmental Justice Element is now part of the March JPA General Plan. The Final EIR includes an analysis of the Project's consistency with the adopted Environmental Justice Element and concludes that the Project is consistent with all applicable policies.

CalEPA uses CalEnviroScreen data to identify disadvantaged communities pursuant to Senate Bill 535 (SB 535, 2012) for purposes of California's Cap-and-Trade funding program as authorized by the California Global Warming Solutions Act of 2006 (AB 32), based on geographic, socioeconomic, public health, and environmental hazard criteria. SB 535 also established initial requirements for minimum funding levels to disadvantaged communities, which are specifically targeted for investment of proceeds from California's Cap-and-Trade program. <https://oehha.ca.gov/calenviroscreen/sb535>. As the comment notes, disadvantaged communities are defined as the top 25 percent of scoring areas from CalEnviroScreen along with other areas with high amounts of pollution and low populations. The purpose of the EIR is to evaluate and disclose the potential environmental consequences of the proposed Project. Consistent with the requirements of CEQA, the EIR analyzes the proposed Project's

potential environmental impacts, including impacts related to public health and the community (see i.e., Section 4.1, Aesthetics; Recirculated Section 4.2, Air Quality; Section 4.7, Greenhouse Gas Emissions; Recirculated Section 4.8, Hazards and Hazardous Materials; Section 4.9, Hydrology and Water Quality; Recirculated Section 4.10, Land Use and Planning; Section 4.11, Noise; Section 4.13, Public Services; Section 4.17, Utilities and Service Systems; and Chapter 5, Other CEQA Considerations).

As noted in the comment, the census tract that includes the Project site is identified in CalEnviroScreen as a disadvantaged community. The Project's census tract is large and includes all of the March ARB and the March JPA jurisdiction along with three blocks within the City of Moreno Valley, which appear to have been mapped as part of March JPA. Residential uses within the Project's census tract are limited to the Westmont Village retirement community off of Village West Drive, which was originally developed for retired military housing, Green Acres, which consists of 111 homes as part of the March Field Historic District, the US Veterans transitional housing facility, and the residential block surrounding the Cottonwood Golf Center, and a few scattered residences in blocks of Moreno Valley included in the census tract. These residential uses within the March ARB census tract are located approximately two miles from the Project site, the residents in Moreno Valley are to the east on the opposite side of I-215, and the retirement community is to the south of Van Buren Boulevard. For informational purposes, and to clarify the comment's reference to adjacent properties and residents living in the vicinity of the Project site, the census tracts adjacent to the Project site (6065042012, 6065042014, and 6065042013), which include the Mission Grove neighborhood, the residences located in Riverside County to the north of the Project site, and the Orangecrest neighborhood south of the Project site, are not identified by CalEnviroScreen as SB 535 disadvantaged communities or as overburdened with pollution.

0-8.23 This comment refers to a prior comment that the Draft EIR fails to properly analyze the Project's air quality impacts by not assessing impacts before the application of Project Design Features and that the Draft EIR's analysis of health risk does not comply with CEQA. Please see Response 0-8.16 above. With regard to the pollution burden in the area, please see Response 0-8.22 above. Specific comments regarding the Baseline Report referenced in the comment and regarding the Hazards and Hazardous Materials analysis in the EIR are provided and responded to below.

0-8.24 This comment raises concerns regarding potentially hazardous conditions in the Project area associated with Landfill No. 5 located east of the Project site. This area is also referred to as Area 3. The comment asserts that the EIR should include the landfill in the existing conditions and assess disturbance of the landfill in the Hazards and Hazardous Materials section because the landfill location is along the proposed extension of Cactus Avenue. Please see Recirculated Section 4.8, Hazards and Hazardous Materials, for a discussion of Landfill No. 5. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, construction of Cactus Avenue will not disturb the former landfill and no mitigation is warranted.

The former landfill referenced in the comment is described in the Phase I Environmental Assessment included as Appendix J-1 of the Draft EIR as well as the Leighton Supplemental Environmental Assessment included with this Final EIR as Appendix J-6. As discussed therein, Landfill 5 (Area 3) is not a current landfill, but a former landfill that was cleaned up in 1995 and 1996 by removal of 223,200 cubic yards of landfilled materials and soil. The Final Proposed Monitoring Strategy for MAFB Landfill Sites 3, 5, 20/26, 25, 30, and 40, prepared by Tetra Tech, Inc. in February 1998, indicates that confirmation

sampling conducted after the removal action confirmed the former landfill site was cleaned up to levels protective of human health and the environment, and no further action was recommended.

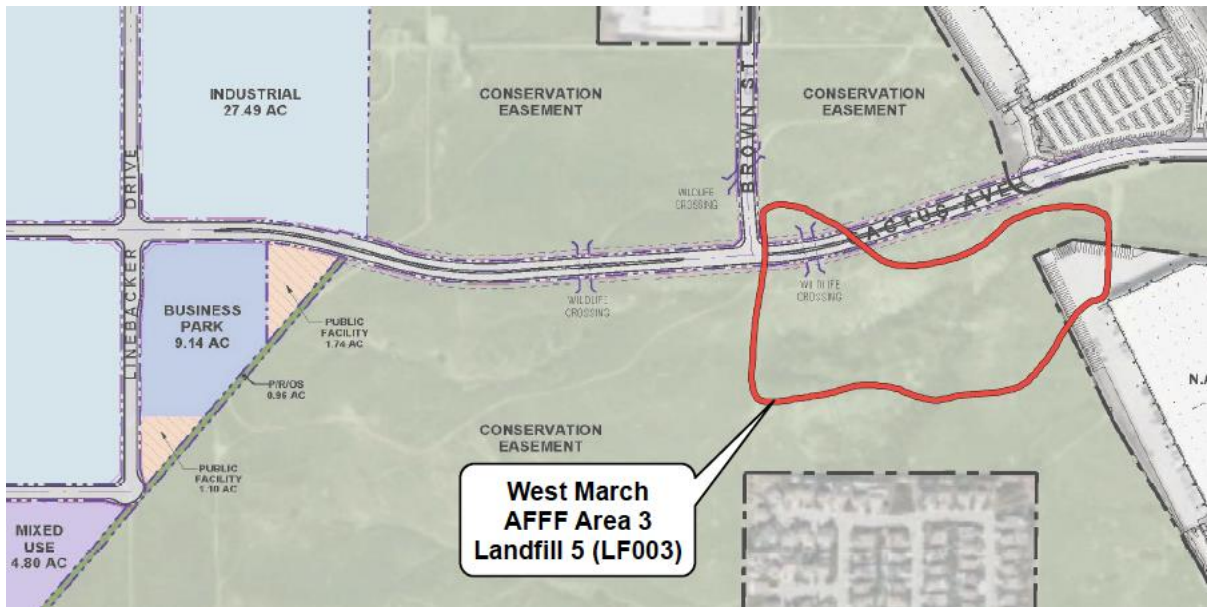

“Confirmation sampling of soils following excavation indicated that remaining polycyclic aromatic hydrocarbons (PAHs) and organochlorine pesticides in the soils were below residential PROs. Arsenic and beryllium concentrations were above residential PROs but were similar to background levels for soils at West March. Site closure for the soil component was recommended based on confirmation sampling and removal of the waste and affected soils. Correspondence from the RWQCB indicates that for soils, site investigation and remedial action are completed and no further action for soils is needed.” (TetraTech, 1998).

The California Regional Water Quality Control Board, Santa Ana Region (SARWQCB) concurred with the recommendation of no further action for soils. (SARWQCB, 1998).¹⁶

In addition, the Former March Air Force Base, California, Operable Unit 2, Air Force Real Property Agency Record of Decision (April 2004) is included as an attachment to the Phase I Environmental Assessment and includes additional detail on the former landfill. As specified therein, the former landfill site was restored by backfilling with clean soil and revegetating the site. “After the interim removal action, the site was restored by backfilling with clean soil and revegetating the site. In general, knolls and higher areas of excavation were covered with approximately 3 feet of soil and slopes adjacent to drainages were covered with 2 feet of soil Low-lying drainages were covered with 6 inches of soil.” (2004 ROD). The ROD also noted that the former landfill “has been covered with clean backfill, interrupting the exposure pathway for any receptor.” (2004 ROD). No restrictions on land use were required. Contrary to the comment’s suggestion, this former landfill cannot be disturbed, as it was removed.

As seen in the figure below, only an approximate 500-footlong section of the proposed extension of Cactus Avenue crosses over the former Landfill No. 5 and is located east of Linebacker Drive. During construction, this area (approximately 72,000 square feet of total area over the former landfill) would be excavated to a depth of approximately five feet to structurally prepare the soils for fill and utilities, with the ultimate roadway surface located above the existing grade.

¹⁶ https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/3976104557/1998-03-02_FinalMonitoringStrategyLandfillSites.pdf.

In that area, fill will be imported and placed above the existing ground surface in order to construct the road (page 10, TA Report).

Given that the former landfill materials were removed, backfilled with clean soil and the area was covered with an additional 3 feet of soil, and that construction of the road in this area will add more soil, the construction of the road over the former Landfill No. 5 will not result in the release of contaminants hazardous to human health.

Comments related to Per- and Polyfluoroalkyl Substances (PFAS) referenced in the Baseline Report are provided and responded to below in Response O-8.34. As explained in that response, the Air Force recently tested soils in the former Landfill 5 and found no detections of PFOA, PFOS, or PFBS above screening criteria. The SARWQCB concurred with the conclusion that no additional soil sampling is recommended in the former Landfill 5 area.

As explained above, construction of Cactus Avenue will not disturb the former landfill and no mitigation is warranted.

0-8.25

This comment suggests that the Draft EIR does not adequately study the potential for unexploded ordnances and states that an unexploded ordnance survey should be prepared for the Project site, including the Conservation Easement, prior to redevelopment. Please see Recirculated Section 4.8, Hazards and Hazardous Materials, for an expanded discussion of prior analyses conducted on the Project site regarding unexploded ordnances. As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, the Project site includes areas that were used as part of the March Air Force Base operations for disposal of hazardous substances in undetermined quantities in areas that were then known as Installation Restoration Program (IRP) Sites 3, 25, and 40. Remediation activities were completed at all of these IRP sites, which were located within the proposed Conservation Easement and outside of the Development Area. As explained in the Recirculated Section 4.8, Hazards and Hazardous Materials, following completion of the remediation, the Air Force determined that all remedial actions to protect human health and the environment were taken and regulatory concurrence was provided by DTSC, Santa Ana Regional Water Quality Control Board (SARWQCB), and the EPA as documented in the Finding of Suitability for Transfer, included as Appendix J-3 of the Draft EIR.

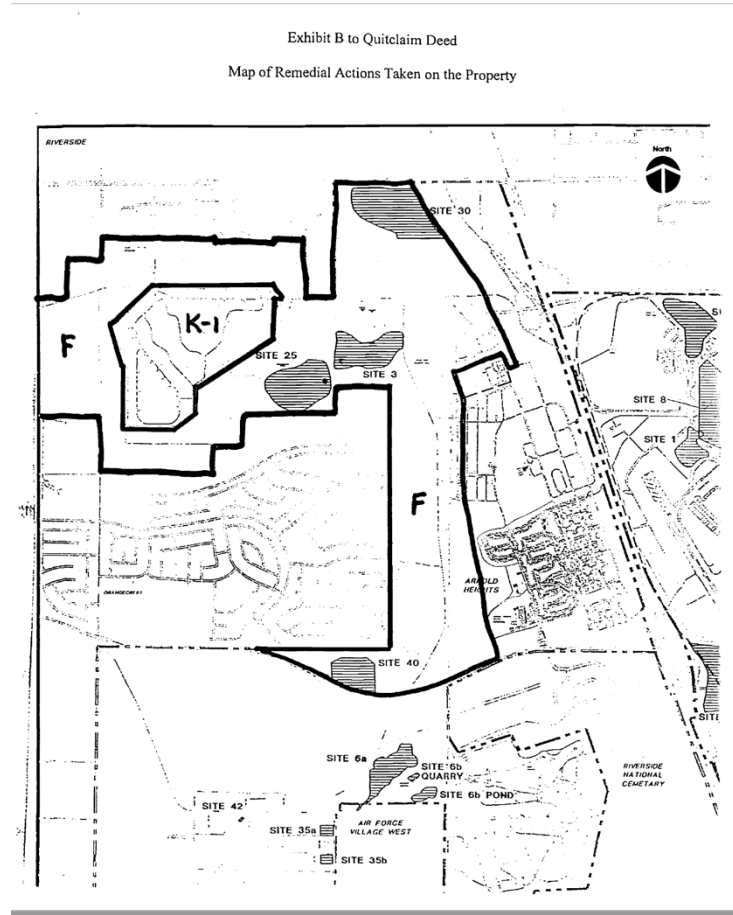

As explained in the Final EIR and the Phase I Environmental Assessment included as Appendix J-1, the proposed Specific Plan Area was formerly used for ordnance and munitions storage (with munitions stored indoors in secured concrete bunkers), and not ordnance and munitions disposal. Site 25, to the south of the Specific Plan Area, was used for munitions disposal and was the subject of a remediation effort in 1997. The Air Force's determination that all remedial actions taken were sufficient to protect human health and the environment was also supported by the March Air Force Base Operable Unit No. 2 Proposed Plan (September 1997), with concurrence letters from the DTSC, SARWQCB, and the EPA.

In addition, as described in Recirculated Section 4.8, Hazards and Hazardous Materials, the USAF MMRP, which addressed issues related to munitions and explosives of concern (including unexploded ordnance) and MCs associated with MRAs, evaluated actual or potential hazardous substances, pollutants, or contaminants on defense sites other than operational ranges. Based on the USAF MMRP, USAF concluded that there were no areas within the Specific Plan Area that require further munitions responses (USAF 2013).

Lastly, prior to release of the Draft EIR, Robert Estrada, the Base Realignment and Closure Environmental Coordinator, Former March AFB, CA researched the need for a unexploded ordnance survey of the Project Site, including all areas that would potentially be disturbed by Project construction activities in Parcels K-1 and F, which includes the Project site as well as the conservation easement areas (see figure below from the Finding of Suitability for Transfer, Appendix J-3 of the EIR). In an email dated May 4, 2022, he concluded that "there is no basis to conduct any response action, including unexploded ordnance survey at Parcels K-1 and F."¹⁷ As such, considering that the only earthwork activities would occur within the Specific Plan Area where munitions were primarily stored in concrete bunkers and the area where munitions were disposed, detonated, and buried has been remediated to the satisfaction of all overseeing regulatory agencies, the potential for adverse effects related to unidentified unexploded ordnance would be less than significant, and no mitigation, including an unexploded ordnance survey, is required. In the extremely unlikely event unidentified unexploded

¹⁷ Email dated May 4, 2022 from R. Estrada (USAF) to D. Fairbanks (March JPA).

ordnance remains within the Specific Plan Area, MM HAZ-1 requires that all ground disturbing activities shall be conducted by workers trained to look for any suspect contamination, including unidentified unexploded ordnance.

Moreover, the Project does not include the development of trails or any parking lots to serve the trails that would change or increase the existing use of trails in the conservation area.

Please see Response O-8.33 below for additional detail.

- O-8.26** This comment references MM-HAZ-1, which addresses the abatement of hazardous building materials. As the comment notes, MM-HAZ-1 addresses the removal of 42 pole-mounted transformers on the Project site and requires an assessment of nearby soils and/or hardscapes for PCBs in accordance with the requirements set forth in 40 CFR 761 in the event that transformer oil is identified or suspected in underlying soils during removal activities. The comment requests that mandatory testing for PCBs in soil surrounding all poles with transformers be conducted now and that mitigation measures be included to address any contamination. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, the identification, removal, and disposal of PCBs are regulated by the EPA under the Toxic Substances Control Act (TSCA) and California regulations.

As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, the site investigations did not rely solely on visual inspections. Five exploratory trenches were completed during the Phase II investigation at two electrical substation areas which had multiple former elevated electrical transformers (adjoining Building 2 and Building 4). Two exploratory trenches were also completed near pad-mounted transformers (adjoining Building 5 and at northeast edge of the Ordnance Storage Bunkers Area). The results of this investigation are as follows:

- Electrical Substation Areas (Building 2 and Building 4): No detected PCBs were reported in any of ten soil samples analyzed from this area, with the exception of one sample (ES1-3-2.5), which was reported to contain 0.009 mg/kg of only one isomer of PCB (i.e PCB1254). This is below the 0.59 to 0.97 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario, and is also below the DTSC and USEPA soil screening level for residential use of 0.24 mg/kg.
- Pad Mounted Electrical Transformers (Bldg. 5 & NE Edge of Ordnance Bunker Area): No detected PCBs were reported in any of six soil samples analyzed from this area.

The Phase II investigation recommended that a subsequent Hazardous Materials Survey be conducted at the Project site to evaluate the potential presence of PCBs and treated wood waste related to 42 pole mounted transformers. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, a Hazardous Material (PCB/Treated Wood Waste) Investigation Report was completed on May 5, 2022 (PCB Report). The PCB Report tested the following materials for PCBs:

- Dielectric fluids within Pole-mounted transformers
- Black Electrical Feed Wrap associated with power poles
- Capacitors found on the ground within and just outside of Building 5

One of three samples collected of pole-mounted transformer dielectric mineral oil was determined to contain 1.5 mg/kg of Aroclor 1260, which is well below the regulatory level of concern of 50 mg/kg set forth in 40 CFR 761. No PCB/Aroclor was identified in either of the other two samples collected. No PCBs were detected in any of the three samples of black electrical feed wrap or the three samples of loose capacitors at Building 5 (all capacitors found were the same make and model). With respect to PCBs in soil, the PCB Report notes that “[i]n the event that transformer oil is found to have leaked into the soil below, the oil-impacted soil should be assessed for PCB content. No such leakage was observed at the various sampling locations visited on 23 February 2022.”

The PCB Report was included with Recirculated Section 4.8, Hazards and Hazardous Materials, as Appendix J-5.

DTSC, the expert agency in California that regulates hazardous wastes and materials “does not recommend sampling of building materials or surrounding media unless there is evidence of a PCB release that may lead to exposure.” (DTSC HERO HHRA Note 8, 2020). As explained above, based on extensive testing, there is no evidence of a PCB release on the Project site that may lead to exposure.

Leighton Consulting, Inc. (Leighton), the environmental expert associated with the Project, provided additional guidance on PCB sampling through Vista Environmental Consulting (Vista). In the Leighton Report on PCB Issues, dated November 3, 2023, Vista notes that, contrary to the comment, dielectric fluids are almost never clear.

“Rather, 95%+ of PCB-containing dielectric fluids are either yellow (Monsanto products) or Amber (Pyranol products). If/when released due to transformer or capacitor failure, the fluids tend to be darker, ranging from brown to black, due to thermal effects of overheating (the most common failure that causes uncontrolled releases.” (Leighton, 2023)

Therefore, it is possible to detect a possible leak of transformer fluid that contains PCBs.

As explained in the Recirculated Section 4.8, Hazards and Hazardous Materials, any testing and abatement of PCBs would be required to be completed in accordance with all federal, state, and local laws and regulations, and the contractor would have to provide written documentation to March JPA confirming such compliance upon completion of abatement measures if applicable. In addition, MM-HAZ-1 requires that all ground disturbing activities be conducted by workers trained to look for any suspect contamination. As explained in the Recirculated Section 4.8, Hazards and Hazardous Materials, with implementation of MM-HAZ-1, impacts related to PCBs would be less than significant. Comments referenced in the Baseline Report are provided and responded to below.

0-8-27 This comment summarizes previous comments regarding public health effects on sensitive receptors. Consistent with the requirements of CEQA, the Draft EIR, Recirculated Section 4.2, Air Quality, and Recirculated Section 4.8, Hazards and Hazardous Materials, presents a comprehensive assessment of the Project’s potential significant environmental impacts, including with regard to air quality and hazards and hazardous materials, identifies project design features and feasible mitigation measures that avoid and reduce the Project’s adverse environmental impacts, addresses a reasonable range of alternatives to the proposed Project, and, on an overall basis, informs the governmental decision-makers and the public regarding the Project’s potential environmental impacts. Specific comments regarding the Draft EIR are provided and responded to above.

0-8-28 The comment discusses CEQA requirements regarding analysis of environmental impacts including cumulative impacts. The comment lists proposed warehouse, commerce center, and business park projects in the March JPA, Riverside, Moreno Valley, Perris, and unincorporated Riverside County jurisdictions that the commenter suggests the Draft EIR should have included, and states that together these projects would contribute significantly to impacts related to traffic, public safety, air quality, greenhouse gas emissions, public health impacts, and noise. As set forth in the CEQA Guidelines, the analysis of cumulative impacts need not be as in-depth as what is performed relative to the proposed project, but instead is to “be guided by the standards of practicality and reasonableness” (CEQA Guidelines Section 15130(b)). Contrary to the comment’s suggestion, the EIR includes analysis of the Project’s potential cumulative environmental effects consistent with the requirements of CEQA. The cumulative effects analysis methodology is explained in Chapter 4.0, Environmental Analysis, of the Draft EIR and Topical Response 7 – Cumulative Projects. The Draft EIR notes that consistent with CEQA, the cumulative impacts discussion is guided by the standards of practicality and reasonableness. As explained in Chapter 4.0, Environmental Analysis, Section 15130(b)(3) of the CEQA Guidelines states that “lead agencies shall define the geographic scope of the area affected by the cumulative effect and provide a reasonable explanation for the geographic limitation used.” The Draft EIR further explains

that unless otherwise indicated in the analysis, the geographic scope used in the cumulative analysis includes the March JPA planning area. However, as noted in the Draft EIR, there are environmental issues whose relevant geographic scope for purposes of cumulative impact analysis may be larger or smaller than this area, and may be defined by local, regional, or state agency jurisdiction or by other environmental factors. For example, as set forth in Table 4-1 in the Final EIR, the geographic area for cumulative impacts analysis for air quality (toxic air contaminants and odors) is the immediate vicinity, while the geographic area for cumulative impacts analysis for air quality (construction/mobile sources) and greenhouse gas emissions is the South Coast Air Basin. Please see Topical Response 7 – Cumulative Projects for additional information. Table 4-2 in Chapter 4.0, Environmental Analysis provides the cumulative project list, which, as the Draft EIR explains, was developed for purposes of the EIR analysis through consultation with planning and engineering staff from March JPA, the County of Riverside, and the cities of Riverside and Moreno Valley to include key projects in the March JPA planning area and in the City of Riverside, County of Riverside, and City of Moreno Valley.

Please see the Final EIR and Appendix C-1 for an expanded discussion and analysis of cumulative conditions and impacts. As explained in the Appendix C-1, the cumulative geographic context for air quality impacts is the South Coast Air Basin (SCAB). Because the “millions of square feet of proposed warehouse facilities, commerce centers, and business parks in the region” mentioned by the commenter are located within the SCAB, they are considered as part of the air quality analysis for the Project, since these projects are subject to CEQA and would all be required to implement mitigation measures as part of the uniform CEQA review process. The emissions presented in the Final EIR represent static worst-case opening year conditions. Because passenger vehicle and truck emissions standards continue to improve, it is expected that emissions would continue to decrease with each year. As a result of implementation of USEPA’s Exhaust Emission Standards for Heavy-Duty Highway Compression Ignition Engines and Urban Buses and CARB’s Truck and Bus Regulation, truck DPM emission factors have been reduced by 96% and NO_x emission factors have been reduced by 87% between 2000 and 2023. Similarly, DPM emissions from TRUs have been reduced by 68% from 2000 to 2023, and with CARB’s amendments to the TRU ATCM are expected to be reduced further by 81% between 2023 and 2040. The EIR did not underrepresent the cumulative conditions and properly disclosed the Project’s cumulative impacts.

- 0-8.29** This comment discusses the alternatives analysis and CEQA Guidelines provisions on alternatives generally and also states that the Draft EIR’s alternatives analysis is flawed and should include an alternative with no warehouse use. Among several citations in the comment related to alternatives, the comment cites Public Resources Code Section 21102 for the proposition that projects should not be approved if feasible alternatives would substantially lessen environmental impacts; however, the referenced CEQA section relates to feasibility and planning studies associated with state agency funding requests and does not address alternatives. The comment refers also to CEQA Guidelines Section 15126(d), which relates to growth-inducing impacts. Growth-inducing impacts are addressed in Section 5.5 of the Draft EIR. With regard to the alternatives analysis, as set forth in the CEQA Guidelines, an EIR need not consider every feasible alternative to a project. (CEQA Guidelines Section 15126.6(a)). The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. Per the CEQA Guidelines, “[t]here is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.” (CEQA Guidelines, Section 15126.6(a)). As further explained in the CEQA guidelines and discussed in Chapter 6, Alternatives, the “rule of reason” requires the EIR to set forth only those

alternatives necessary to permit a reasoned choice. (CEQA Guidelines Section 15126.6(f)). Per the CEQA Guidelines, the alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project, and, of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. (CEQA Guidelines Section 15126.6(f)).

With regard to the comment's suggestion that the alternatives analysis is flawed because the Draft EIR inaccurately represents the Project's impacts, please see Table 6-1, Comparison of Project and Alternatives Impacts, in the Final EIR. Specific comments regarding the impact analysis in the Draft EIR are provided and responded to above and below. Contrary to the comment's suggestion, the Draft EIR does not fail to disclose the Project's environmental impacts.

The comment suggests that the Draft EIR violates CEQA by not including a non-warehouse alternative. As explained in Topical Response 8 – Alternatives, in response to comments, Alternative 5 – Non-Industrial Alternative has been included in the EIR alternatives analysis. Please see the full description and analysis of Alternative 5, which includes analysis of emissions associated with construction and operations and vehicle trips. As discussed in greater detail in the alternatives analysis, Alternative 5 would result in more criteria air quality pollutant emissions and fewer diesel particulate matter emissions during operations when compared to the Project, and air quality impacts would still be considered significant and unavoidable under Alternative 5. With regard to vehicle trips, Alternative 5 would substantially reduce truck trips but nearly double vehicle trips as compared to the proposed Project. Under Alternative 5, the shifts in land use to non-industrial uses would result in a corresponding increase in overall vehicle trip generation and an associated increase in VMT over the proposed Project. As such, Alternative 5 would result in greater VMT impacts and introduce a new significant impact when compared to the proposed Project. Consistent with the comment's suggestion, the analysis of Alternative 5 also evaluates the Alternative's success at meeting Project objectives.

Comments referenced in the Baseline Report are provided and responded to below.

0-8.30

This comment discusses Government Code requirements regarding consistency of a jurisdiction's development decisions with the applicable general plan and suggests that the Project is directly inconsistent with numerous provisions in the March General Plan in violation of state law. The comment cites three examples: General Plan Land Use Element Policies 2.4, 3.2, and 4.1. Table 4.10-1 of Recirculated Section 4.10, Land Use and Planning, determined the Project would be consistent with Land Use Element Policy 3.2 because industrial uses are currently east and northeast of the Project site. The Project would extend Brown Street south and Cactus Avenue west to provide access and utility infrastructure to the Campus Development. Only the Park and open space amenities would be accessible off of the Barton Street extension. With the implementation of the mitigation measures presented in this EIR, impacts on natural environmental resources would be minimized. Regarding Land Use Element Policy 4.1, the Project would be consistent because the Project proposes the adoption of a Specific Plan with development standards and guidelines necessary to develop the Project site consistent with the proposed General Plan Amendment. With approval of the Specific Plan, design guidelines would establish architectural styles, signage, parking, and landscaping standards that would develop a Project identity and foster quality development through the Project's buildout scenario. Regarding Land Use Element Policy 2.4, the Project would be consistent because under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2,

March JPA General Plan Existing and Proposed Land Use Designations. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses. The Conservation Easement will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

Additional goals and policies of the March JPA General Plan were considered in the analysis included in Recirculated Section 4.10, Land Use and Planning. As demonstrated in detail in Table 4.10-1 of Recirculated Section 4.10, Land Use and Planning, the Proposed Project is generally consistent with the relevant goals and applicable policies identified in the General Plan Land Use Element, as well as the other six elements of the March JPA General Plan. In addition, as explained in cases cited by the comment, “[a] given project need not be in perfect conformity with each and every general plan policy. To be consistent, a project must be compatible with the objectives, policies, general land uses and programs specified in the general plan.”¹⁸ Further, “[b]ecause policies in a general plan reflect a range of competing interests, the governmental agency must be allowed to weigh and balance the plan’s policies when applying them, and it has broad discretion to construe its policies in light of the plan’s purposes.”¹⁹ In addition, we note that while CEQA Guidelines Section 15125(d) requires EIRs to discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans, an inconsistency does not necessarily mean a potentially significant conflict under CEQA. Threshold LU-1 asks: Would the Project cause a significant environmental impact due to a conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? So unless (1) the applicable plan, policy or regulation was “adopted for the purpose of avoiding or mitigating an environmental effect” and (2) the conflict would cause a significant environmental impact, any inconsistency would not be a potentially significant conflict under CEQA. Inconsistency with policies that do not avoid or mitigate an environmental effect would not be considered potentially significant under CEQA.

O-8.31 This concluding comment is conclusory in nature and states that based on the comments above, the commenter believes the EIR does not satisfy the requirements of CEQA. Responses to the commenter’s specific comments on the Draft EIR are provided and responded to above. As explained in Responses to Comments O-8.1 through O-8.30 above, the Draft EIR adequately analyzed the proposed Project and evaluated and disclosed the potential environmental impacts associated with the proposed Project, consistent with the requirements of CEQA. The EIR is comprehensive and none of the circumstances requiring recirculation of a draft EIR set forth in CEQA Guidelines Section 15088.5 have been met. Specifically, based on the comments and responses within this Final EIR, no new significant impacts or substantial increases in already identified significant impacts have been identified.

Responses to Appendix A, Baseline Environmental Consulting Report (March 8, 2023)

0-8.32 This introductory comment summarizes the Baseline Report. As explained in the following responses, the Baseline Report has not identified any flaws in the draft EIR that require recirculation.

0-8.33 Please see Response 0-8.25 above. The Baseline Report references a report prepared by Cabrera in 2006. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, as well as the Leighton Supplemental Environmental Assessment (Appendix J-6) this report was reviewed by the SARWQCB, who concluded: “We concur with your finding of no release at the site, and the recommendation for no further action for the Weapons Storage Area.” (SARWQCB, 2006).

In addition, it is noted that a Final Comprehensive Site Evaluation Phase I Report was prepared for the Military Munitions Response Program in March 2013 (USAF MMRP). As identified therein, “[t]he goal of the USAF MMRP is to make munitions response areas (MRAs) safe for reuse and to protect human health and the environment. The USAF MMRP addresses issues related to munitions and explosives of concern (MEC) and munitions constituents (MC) associated with MRAs, as well as evaluates actual or potential hazardous substances, pollutants, or contaminants on defense sites other than operational ranges.”

MEC is defined as “military munitions that possess unique explosive risks including: 1) unexploded ordnance (UXO), 2) discarded military munitions (DMM), or 3) MC present in high enough concentrations to pose an explosive hazard.” MC is further defined as “any materials originating from UXO, DMM, or other military munitions, including explosive and non-explosive materials, and emission, degradation, or breakdown elements of such ordnance or munitions. The primary concerns with MC are human health and ecological hazards.”

Munition Response is defined as “Response actions, including investigation, removal actions, and remedial actions to address the explosives safety, human health, or environmental risks presented by unexploded ordnance (UXO), discarded military munitions (DMM), or munitions constituents (MC), or to support a determination that no removal or remedial action is required.”

As discussed in the Recirculated Section 4.8, Hazards and Hazardous Materials, USAF conducted a conceptual site evaluation (CSE) based on a review of historical information, site visits, and interviews. The purpose of the CSE was “to identify areas where past military munitions activities or potential [munitions response areas] MRAs associated with March ARB may pose a risk to human health or to the environment.” USAF considered an inventory of range-related activities that included all activities associated with the potential use, storage, and disposal of military munition. On the Project site, USAF identified the following areas as having known or suspected range-related activities, as shown in the figure excerpted from the USAF MMRP below:

1. Area 22: the former ordnance storage area (WSA);
2. Area 20: Installation Restoration Programs Site 25;
3. Area 23: suspected TNT rinsate ponds.
4. Portion of Area 21: Demolition Area (ammunition disposal)

Areas 22 and 23 were identified as a munitions storage area (the former Weapons Storage Area), while Areas 20 (Site 25 discussed below) and 21 were identified for possible munitions disposal. Note that Area 21 only overlaps very slightly onto the Project site, but primarily consists of the area containing Grove Community Church and Preschool and nearby residential uses.

These sites were evaluated to determine whether they required a further munitions response (i.e. qualified as a munitions response area). Sites were qualified as a potential for further munition response (potential MRA) for several reasons, including if the site:

- Location can be identified;
- Is owned by the DoD;
- Existence is supported by data; or
- Records of munitions use are identified.

Potential MRAs were identified to be ineligible for USAF MMRP for several reasons, including if the site:

- Is an active or operational munitions area or range;
- Is previously identified as formerly used defense site (FUDS);

- Contained a small arms range that was completely indoors;
- Is more appropriately managed under another program, such as FUDS or Environmental Restoration Program (ERP); or
- Is more appropriately managed under another service MMRP.

As discussed in the Recirculated Section 4.8, Hazards and Hazardous Materials, USAF determined further munitions responses are not required for Areas 20 and 22 because they had been addressed by earlier clean up actions, referred to as “Installation Restoration Programs” or “IRPs” in the report. Further munition response is not required for Area 23 because “[b]ased on review of the historical data, the existence of the Suspected TNT Rinsate Ponds could not be confirmed.” These rinsate ponds were suspected to exist in the same areas as Landfill No. 5 (Area 3), which has been extensively remediated and investigated by the Air Force, with oversight from numerous regulatory agencies. Finally, further munition response is not required in Area 21 (Grove Community Preschool) because it was addressed under the Formally Used Defense Sites (FUDS) program. Project No. J09CA00110 “and is used by children as a play area with a residential area across the street.”

Based on this report, the USAF has not identified any areas within the Specific Plan area that require further munitions responses (see screenshot below from this report).

HRR Identified Sites	CSE Phase I Results	Recommendations
CATM SAR (1,000” Range/CATM Range (Building 6006)/SAR Drainage Ditch)	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required at this time
Poorman Gunnery Range	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required
1944 Rifle Range	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required
Skeet Range – 400, 401, and 402	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required
Munitions Residual Burial Site (IRP 25)	MEC Results: N/A* MRSPP Score: Not scored	No further munitions response is required
Demolition Area (ammunition disposal)	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required
Former March AFB WSA	MEC Results: N/A* MRSPP Score: Not scored	Should not be included in the USAF MMRP inventory and no further munitions response is required
Suspected TNT Rinsate Ponds	MEC Results: N/A* MRSPP Score: Not scored	No further munitions response is required
Active LEFs	MEC Results: N/A* MRSPP Score: Not scored	No further munitions response is required
N/A = Not Applicable * = This area either did not qualify as a potential MRA or was not eligible for USAF MMRP and so was not evaluated for MEC under this CSE Phase I Investigation. See Table 11-1 for additional details.		

As stated above, the Project is not building trails or any parking lots that would change or increase the existing use of trails in the conservation area.

As explained in Response O-8.25, in response to this comment Robert Estrada, the BRAC Environmental Coordinator, Former March AFB, CA researched the need for an unexploded ordnance (UXO) survey of the Project site, including all areas that would potentially be disturbed by Project construction activities. In an email dated May 4, 2023, he concluded that “there is no basis to conduct any response action, including UXO survey at Parcels K-1 and F.”

Moreover, Parcels K-1 and F include the Project site, as well as all of the conservation easement areas. Therefore Mr. Estrada’s conclusion that no UXO survey is required applies to the conservation areas. This conclusion is further supported by the USAF finding that no further munition response is required for any part of the Specific Plan area.

The commenter specifically expresses concern related to Site 25. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, and Phase I ESA (Appendix J-1), “Site 25, was the designated area for disposal and historically used for open air detonations, burning, and burial of munitions and munitions residue. Site 25 was the subject of a remediation effort in 1997 and was determined by the Air Force that all remedial actions taken were sufficient to protect human health and the environment (Appendix J-3).”

More detail regarding UXO is provided in the Site 25 Closure Report (TetraTech, 1997), which is attached to the 2009 Closure Report.²⁰

- “During the period of September 27, 1996, through October 18, 1996, unexploded ordnance (UXO) specialists from IT Corporation excavated the pits, shallow trenches, and anomalies located by geophysical surveys at Site 25. All of the recovered munitions residues and affected soils were transported to Site 6, Cell B, for disposal.”
- Soil sampling was performed as part of the closure, and the Site 25 Closure Report noted that “Industrial reuse is currently planned for Site 25; however, no restrictions are necessary because the soils remaining on-site meet the more stringent PROs for residential soils.”
- As a result, “Site closure is recommended for the following reasons:
 - All ordnance, munitions residue, and underlying affected soils have been removed.
 - Per U.S. Department of Defense requirements, the top 10 feet of soils were verified by geophysical surveys as containing no metallic items.

The Final Operable Unit (OU) 2 Record of Decision (ROD) was issued in April 2004 and documented the selection of No Further Action (NFA) as the final decision for closure of Site 25. No restrictions on the future use of Site 25 are required in the ROD.

As detailed in Recirculated Section 4.8, Hazards and Hazardous Materials, there is no indication that UXO would be present in the conservation areas, or anywhere else within the Specific Plan area. Therefore, the additional surveys and testing recommended by the comment are not required. However, in the extremely unlikely event UXO remains within the Specific Plan Area, MM HAZ-1 requires that all

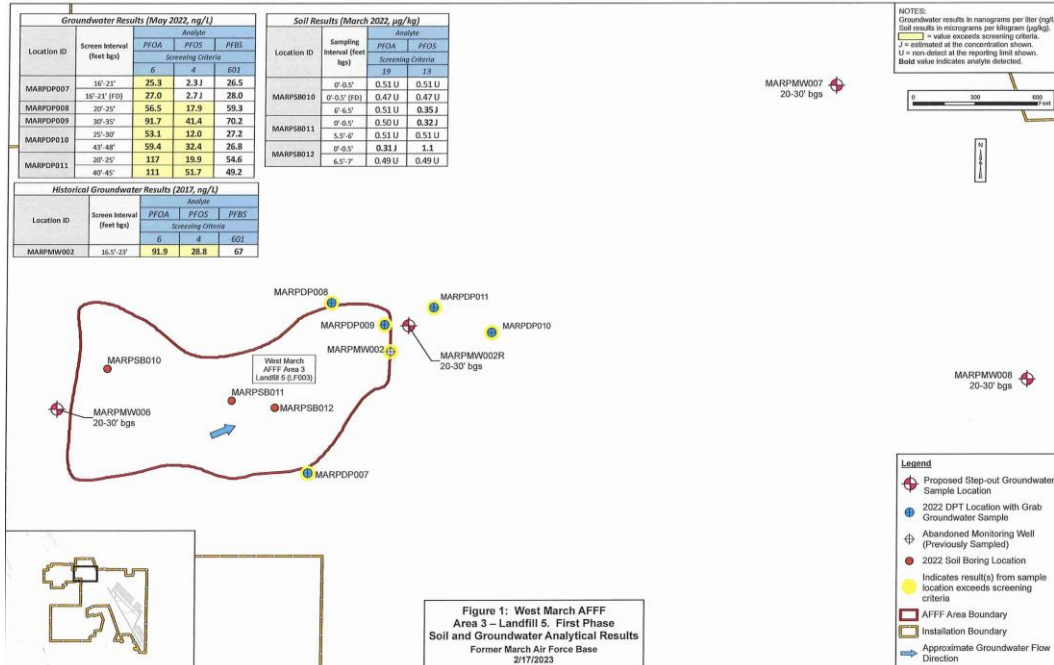

²⁰ USAF, 2009 Closure of Military Munitions Response Program (MMRP) Site WP025, Munitions Residue Burial Site at the Former March Air Force Base, California.

ground disturbing activities shall be conducted by workers trained to look for any suspect contamination, including UXO.

O-8.34 This comment explains that the proposed extension of Cactus Avenue would be constructed over a small portion of a former landfill. Please see Response O-8.24 above. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, the former landfill referenced in the comment is described in the Phase I Environmental Assessment included as Appendix J-1 of the Draft EIR. Please see Recirculated Section 4.8, Hazards and Hazardous Materials, for a discussion of Landfill No. 5. As discussed therein, Landfill 5 (Area 3) is not a current landfill, but a former landfill that was cleaned up in 1995 and 1996 by removal of 223,200 cubic yards of landfilled materials and soil. The 2004 Record Of Decision (ROD) states that “Confirmation sampling conducted after the interim removal action confirmed that the site had been cleaned to levels protective of human health and the environment. No restrictions on land use are required.” As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, construction of Cactus Avenue will not disturb the former landfill and no mitigation is warranted.

The comment also notes that in May 2022, the Air Force prepared a Final Quality Program Plan (QPP) for the Remedial Investigation of PFAS at the Former March Air Force Base (AFB) and March Air Reserve Base (ARB) (the PFAS QPP). The PFAS QPP was conducted to “[d]etermine the nature and extent of PFAS (perfluorooctane sulfonate [PFOS], perfluorooctanoic acid [PFOA], and perfluorobutane sulfonic acid [PFBS]) in soil and groundwater” at the March AFB. The Preliminary assessment determined that the only potential release location within the Specific Plan area was the West March AFFF Area Landfill No. 5, which is also known as and referred to as Area 3.

The comment fails to note that soil samples were collected from three locations within the former Landfill No.5 and there were “[n]o detections of PFOA, PFOS, or PFBS above screening criteria” and, as such, “[n]o additional soil sampling is recommended.” (Meeting Minutes, February 2023). As seen in the Figure below, sample location MARPSB010 is the closest sample location to the Cactus Road extension, and no PFAS was detected above the screening levels. Screening criteria for delineation in the remedial investigation are the May 2022 USEPA RSLs using a hazard quotient of 0.1. The SARWQB concurred with the meeting minutes on April 3, 2023. (SARWQB, 2023)

As such, Recirculated Section 4.8, Hazards and Hazardous Materials, concludes that there is no indication that a roadway constructed over this area will disturb soils containing substantial PFAs or other hazardous compounds and, further, that “The extension of Brown Street and Cactus Avenue are unlikely to disturb soils containing hazardous substances or PFAS in the area of former Landfill 5 (aka Site 3).”

Finally, the comment expresses concern related to potential impacts from changes to drainage patterns and stormwater runoff that could potentially increase leaching of soil contamination to groundwater. As explained above, former Landfill 5 has been remediated. Following the remediation of former Landfill 5 in the late 1990s, no plans were implemented to divert natural stormwater infiltration from this area, and the surface of this area has remained largely unimproved dirt with scattered vegetation. The 2004 ROD states the following:

“potential residual metals in sediments and surface water after the removal action do not pose a risk above the manageable risk range identified in the NCP to residential receptors based on RPRGs and background soil concentrations.”

“The removal action at Site 3 has eliminated the potential for migration of contaminants to groundwater.”

Continued infiltration of stormwater over the past few decades does not appear to have been a concern to the USAF or regulating agencies.

With the exception of a small segment of the proposed Cactus Avenue extension, there are no plans for improved surfaces (concrete, asphalt, or other surfaces which might alter surface water drainage) within 1,500 feet of the former Landfill 5 area.

As detailed in the Project Phase II ESA (Appendix J-2), all concentrations of potential compounds of concern analyzed for in soil samples are below the relevant commercial/industrial screening levels (with the exception of arsenic, which is well below the more relevant applicable background concentration) (Leighton, 2022).

As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, further analysis of these soil data was conducted, comparing it also to USEPA and DTSC soil screening levels for a residential scenario, as well as construction worker environmental screening levels (ESLs) published by the San Francisco Regional Water Quality Control Board (SFRWQCB). The Santa Ana RWQCB does not publish construction worker screening levels. The SFRWQCB ESLs are considered conservative and are used by other water boards and environmental regulatory agencies for guidance. Provided as an attachment to the Leighton Response to Comments (Appendix J-7 of the Final EIR) are the tabulated historical soil data (Table nos. 1 and 2) together with these additional soil screening levels (at bottom of tables), and a copy of the SFRWQB soil ESLs.

Table nos. 1 & 2 in Appendix J-7 indicate all compounds are below all of the indicated soil screening levels (commercial/industrial, residential and construction worker). Given that all concentrations of analyzed compounds in the soil samples are well below the screening levels for hypothetical on-site construction workers or hypothetical on-site residential occupants, there is no indication of a likely unacceptable health risks to the occupants of neighboring properties, related to these compounds and the proposed construction activities.

As explained in Response O-8.24 and above as well as within the Recirculated Section 4.8, Hazards and Hazardous Materials, there is no evidence construction of the Project would result in adverse impacts to human health or the environment as a result of historic uses.

- O-8.35** Please see Response O-8.26 above for a summary of the PCB-related sampling activities at the Project site. While commenter notes that releases of “transformer oil cannot always be easily identified,” the sampling conducted in connection with the PCB Report was conducted by a specially contracted environmental consultant who has expertise in this area and that report indicated that “[n]o such leakage was observed at the various sampling locations visited on 23 February 2022.” Dielectric fluids are almost never clear. Rather, more than 95% of PCB-containing dielectric fluids are either yellow (Monsanto products) to Amber (Pyranol products). If/when released due to transformer or capacitor failure, the fluids tend to be darker, ranging from brown to black, due to thermal effects of overheating (the most common failure that causes uncontrolled releases.) Therefore, it is possible to detect a possible leak of transformer fluid that contains PCBs.
- O-8.36** This comment suggests that the Draft EIR should be revised to first evaluate the project’s air quality impacts without implementation of PDF-AQ-1 (requires all offroad equipment used during construction meet the California Air Resources Board Tier 4 Final emission standards or better), and then evaluate the effectiveness of PDF-AQ-1 to reduce air quality impacts. Recirculated Section 4.2, Air Quality, evaluates Project impacts with and without the inclusion of PDF-AQ-1, which is identified now as MM-AQ-1. The use of Tier 4 Final equipment is now required under MM-AQ-1 of Recirculated Section 4.2, Air Quality.
- O-8.37** Please see Response O-8.15 above regarding emergency generators.

0-8.38 This comment requests cumulative health risk impacts analysis along the Project’s truck routes and use of U.S. EPA’s community-scale cancer risk threshold of 100 in a million. Please see Recirculated Section 4.2, Air Quality, for expanded discussion and analysis of cumulative health risk impacts, including along the Project’s truck routes, and cumulative cancer risk utilizing the U.S. EPA’s threshold of 100 in a million or less requested by the comment.

0-8.39 This comment requests that the Final EIR include a discussion of the Project’s consistency with the 2022 version of CALGreen. The proposed Project would be required to meet or exceed the applicable Title 24 and CALGreen code in place at the time of building permit submittals. As further discussed in Response 0-8.40 below, PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code. MM-GHG-7 has been revised to require each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with the nonresidential voluntary Tier 2 standards of the 2022 CALGreen Code. This revision does not constitute ‘new information’ under CEQA and does not impact the environmental analysis in the Draft EIR.

0-8.40 This comment requests that the Project is designed to ensure it will achieve carbon neutrality by 2045 and requests installation of EV parking and PV infrastructure beyond the minimum requirements of 2022 CALGreen to reduce the project’s GHG emissions and align the project with California’s long-term climate goal of carbon neutrality by 2045.

As discussed in Section 4.7, Greenhouse Gas Emissions, of the Draft EIR and Section 6.1.3 of the Project Greenhouse Gas Analysis (Appendix I), the Project would not impede the State’s progress towards carbon neutrality by 2045 under the 2022 CARB Scoping Plan. In response to this comment, MM-GHG-7 was revised to require compliance with the 2022 CALGreen Nonresidential Voluntary Tier 2 measures for EV chargers and infrastructure. This results in the following changes to the EV chargers and infrastructure for Buildings B and C (both of which have site plans included in the EIR).

Building	Total Parking Spaces	2022 CALGreen Required EV Capable Spaces	2022 CALGreen EVCS (EV Capable Spaces Provided with EVSE)	2022 Tier 2 EV Capable Spaces	2022 Tier 2 EVCS
B	545	109	28	246	82
C	306	62	16	138	46

As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), a majority of the GHG emissions associated with the Project are emitted by passenger cars and trucks visiting the Project, as well as building energy usage. MM-GHG-12 requires each Project site plan demonstrate implementation of measures sufficient to attain a minimum of 100 points under the County of Riverside CAP. Under PDF-AQ-1, no development within the Specific Plan Area will utilize

natural gas. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. MM-AQ-6 requires all buildings to achieve the 2023 LEED Silver certification standards or equivalent, at a minimum. MM-AQ-8 requires all TRU loading docks provide electrical hookups and all other loading docks are designed to be compatible with SmartWay trucks. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support 'clean fleet' charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code. MM-GHG-7 requires each site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with the nonresidential voluntary Tier 2 of the 2022 CALGreen Code. MM-AQ-24 prohibits the use of diesel back-up generators, unless absolutely necessary.

MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments on the Recirculated EIR, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure's feasibility as the Project site is developed. MM-AQ-18 requires the use of only electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided and requires inclusion of this restriction in lease agreements. MM-AQ-20 also encourages tenants to become SmartWay partners, if eligible.

These emissions would continue to be reduced as the passenger car and truck fleets become increasingly electrified in future years, and as sales of GHG-emitting cars and trucks are phased out by 2035 in accordance with CARB's Advanced Clean Cars II regulations. Additionally, GHG emissions from Project buildings will continue to be reduced as California's electrical grid shifts to electrical generation sources that do not emit GHG in future years. (Appendix C-4 of the Final EIR)

March JPA has imposed all feasible mitigation measures on the Project that will reduce GHG impacts and will not impede the State's progress to carbon neutrality by 2045.

- O-8.41** This comment claims that the Draft EIR did not summarize or evaluate the contribution of each proposed land use to the Project's overall mobile emissions and requests an additional alternative analysis that provides a detailed analysis of how proposing more office or other land use types than warehouses would address air quality impacts. As discussed in Recirculated Section 4.2, Air Quality, operational emissions were evaluated based on the land uses identified in the Specific Plan buildout

scenario, including area sources, energy use, mobile sources, TRU sources, on site equipment sources, and stationary sources.

As explained in Topical Response 8 – Alternatives, in response to comments, Alternative 5 – Non-Industrial Alternative has been included in the EIR alternatives analysis. Please see the full description and analysis of Alternative 5, which includes analysis of emissions associated with construction and operations and vehicle trips, including mobile source NOx emissions as referenced in the comment. As discussed in greater detail in the alternatives analysis, Alternative 5 would result in more criteria air quality pollutant emissions and fewer diesel particulate matter emissions during operations when compared to the Project, and air quality impacts would still be considered significant and unavoidable under Alternative 5. With regard to vehicle trips, Alternative 5 would substantially reduce truck trips but nearly double vehicle trips as compared to the proposed Project. Under Alternative 5, the shifts in land use to non-industrial uses would result in a corresponding increase in overall vehicle trip generation and an associated increase in VMT over the proposed Project. As such, Alternative 5 would result in greater VMT impacts and introduce a new significant impact when compared to the proposed Project.

- 0-8.42** As explained above, the EIR properly evaluated environmental impacts related to hazardous material, air quality, and GHG emissions. In response to comments, additional mitigation measures have been added to further reduce the Project’s impacts. Please see Recirculated Section 4.2, Air Quality, for the added and expanded mitigation measures.

Responses to Appendices B-G

- 0-8.43** Appendix B to the comment letter is “Articles regarding impacts from growth of warehouse industry in California.” These articles discuss warehouse development in the Inland Empire and environmental and other concerns that are not specific to the proposed Project. Specific comments regarding the Draft EIR are provided and responded to above and below. It is noted that Ramboll US Consulting, Inc., a leading environmental consulting firm, prepared technical comments on a report regarding the growth of warehouses in the Inland Empire and corresponding public health concerns. As detailed in the objective technical memorandum prepared by Ramboll’s air quality and public health experts: previous and ongoing regulatory developments have achieved substantial reductions in air pollutant emissions from warehouse sources and will continue to improve air quality and public health across the South Coast Air Basin; siting distance issues have already been resolved by current and near-term regulatory programs; and commercial cargo will continue to move on Inland Empire freeways and roads, even if warehouses are located elsewhere, thus, the potential benefits of new warehouse development moratoria or delays may be overstated.²¹ For example, as noted in the Ramboll memorandum, diesel particulate matter emissions from trucks operating in the Inland Empire region have decreased by 77 percent from 2016 to 2023.

- 0-8.44** Appendix C to the comment letter is “Map of Existing Warehouse Uses.” As discussed in Response 0-8.8 above, Appendix C is an aerial photograph with parcels outlined in blue, green, red, and orange that appears to depict warehouse buildings at various locations described in the corresponding comment as City of Riverside Sycamore Canyon; March JPA North Campus – Meridian; March JPA South Campus – Van Buren; Moreno Valley – Alessandro Boulevard and Cactus Avenue; and Perris,

²¹ Ramboll US Consulting, Inc., *Technical Comments in Response to the December 2022 Report Titled A Region in Crisis: The Rationale for a Public Health State of Emergency in the Inland Empire*, February 2023.

Moreno Valley – Heacock and Mead Valley. These developments are already existing and therefore are included in the Project baseline conditions as appropriate for each impact area analyzed in the Draft EIR. Please refer to Response O-8.8.

- O-8.45** Appendix D to the comment letter is “World Logistics Center Settlement Agreement.” The Project’s consistency with the air quality measures referenced in the comment is provided and responded to in Topical Response 2 – Air Quality. Please refer also to Responses O-8.20 and O-8-21 above.
- O-8.46** Appendix E to the comment letter is “CenterPoint Properties Warehouse Project Conditions of Approval, approved May 2022.” The Project’s consistency with the air quality measures referenced in the comment is provided and responded to in Topical Response 2 – Air Quality. Please refer also to Response O.8-21 above.
- O-8.47** Appendix F to the comment letter is “Mariposa Industrial Park Project Mitigation Monitoring and Reporting Program, approved December 2022.” The Project’s consistency with the air quality measures referenced in the comment is provided and responded to in Topical Response 2 – Air Quality. Please refer also to Response O.8-21 above.
- O-8.48** Appendix G to the comment letter is “City of Fontana Ordinance 1891, mandatory measures for warehouse/fulfillment center projects.” The Project’s consistency with the air quality measures referenced in the comment is provided and responded to in Topical Response 2 – Air Quality. Please refer also to Response O-8.18 above.

RE: March Joint Powers Authority, West Campus Upper Plateau, Draft EIR

Dear Mr. Fairbanks:

On behalf of the Southwest Mountain States Regional Council of Carpenters (“**Southwest Carpenters**” or “**SWMSRCC**”), my Office is submitting these comments to the March Joint Powers Authority addressing the Draft EIR (“**DEIR**”) for the West Campus Upper Plateau Project (“**Project**”).

SWMSRCC would like to express its support for this Project. After further reviewing this Project, SWMSRCC believes that the Project will benefit the environment and the local economy by practicing protocols that will protect worker health and safety and will incorporate adequate environmental mitigation.

Should the City have any questions or concerns, it should feel free to contact my office.

Sincerely,

Mary Linares, Esq.

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

On behalf of the *Riverside Neighborhood Partnership*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. Serving as the Chairman of the Riverside Neighborhood Partnership, I have heard from neighbors of all 7 of our City Wards concerned about growing encroachment of warehouse and logistics centers both within our city and just outside of its borders. These large-scale distribution, logistics, and warehouse centers sacrifice long-term economic resiliency and environmental safety for short-term economic gains, without adequately benefiting the communities whose labor sustains them.

0-10.2

The West Campus Upper Plateau (the “Project”) would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

As someone who devotes a good deal of my time working with and for the community, I value giving residents a voice in decisions that directly affect them. In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” I am one of thousands of people who have voiced opposition to the West Campus Upper Plateau as proposed over the past year. How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. If it does not, please explain your rationale for ignoring these policies from your General Plan for this project.

0-10.3

This Project conflicts with the interests of adjoining jurisdictions, specifically the adjacent residents. I have concerns that the development as proposed will do irreparable harm to surrounding communities in the following ways:

- Air quality impacts: We already have the worst air quality of any region of the United States. You have identified in your Draft Environmental Impact Report that there will be “significant and unavoidable” impacts to an area of the City and County that already bears an undue burden of pollution. Within a 5 km range of the proposed building site, there are already 45 million square feet of warehouses, generating over 30,000 truck trips, and spewing over 40 lbs of Diesel Particulate matter into the air daily.¹ This does not include the other proposed warehouses in the immediate vicinity, including the one at the Sycamore Canyon site, that have already been approved to be built. Given the effects that Diesel PM accounts for 70% of cancers attributable to toxic air contaminants², many local residents have expressed concerns for the health effects that this may have on them and their families.
- Traffic: As it reads today, your Draft Environmental Impact Report has several deficiencies in its traffic analysis. Local communities are already negatively impacted by mega-warehouse complexes and truck traffic, and it is important that your DEIR be accurate in how it will add to the congestion on local streets and freeways.

O-10.4

1) Your DEIR does not account for the 215/60 corridor, even though the freeway is within a mile of the site; and ostensibly, this is the route the trucks will use. The 215 is already overburdened with truck traffic, and our local infrastructure is paying the cost to our roads. Please consult with CalTrans and include the 215/60 corridor in your traffic analysis for the final EIR to reflect the reality of how our local area will be impacted.

O-10.5

2) Your DEIR does not account for the reality that truck drivers do not follow agreed-upon routes. Anyone who drives Alessandro or Van Buren have seen six-axle trucks lumbering down the road and tearing up roads in spite of the signs prohibiting them. City police are understaffed for the task of ticketing and enforcing the approved routes daily. What is the plan to enforce and maintain agreed-upon routes? Who will be responsible? Will they be given resources to enforce the rules? At the very least, the project applicant should include mitigation measures that require occupants of the warehouses to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police.

- Job creation claims: I am grateful that the Inland Empire has one of the lowest unemployment rates in the state and the nation. However, I have concerns about an overinvestment in industrial development for a number of reasons.

O-10.6

¹ Numbers generated from Warehouse CITY tool: <https://radicalresearch.shinyapps.io/WarehouseCITY/>

² For more information, see California Air Resources Board website:

https://ww2.arb.ca.gov/resources/summary-diesel-particulate-matter-health-impacts#footnote1_ljltley

According to the Southern California Association of Governments Economic Report (SCAG)³ for December 2022:

"In 2001, GDP per capita in Riverside County and San Bernardino County were 64 percent and 69 percent of U.S. per capita GDP, respectively. When compared to the rest of California, the ratios are worse: 52 percent and 56 percent....Moreover, by 2022, **Riverside County's position had deteriorated to a per capita GDP of only 59 percent of the U.S. level and 40 percent of California.... These numbers are alarming, especially given the success of the Logistics Industry.** They imply that the impressive job growth in the Inland Empire since 2001 resulted in numerous jobs, but they tend to be relatively lower paying jobs compared to other parts of the state and nation. This explains, in part, why such a large number of workers prefer to commute into the coastal areas, despite the heavy cost involved in terms of time lost on the road. It also explains why the **Inland Empire's per capita GDP has sunk to a rank of 340 out of 386 MSAs**, despite being the twelfth largest by population count." (emphasis added)

In other words, in spite of our low unemployment rate, our economic outlook is worse than it was prior to the explosion of the logistics industry. In that same SCAG report, they discuss how the logistics industry "will likely go through a transformation as advances in automation and artificial intelligence displace workers." It warns: "There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that **there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot.**" (emphasis added)

Furthermore, the vast majority of companies purchasing warehouses are not from the local area and are mostly from Orange County or outside California. 80% of the warehouses in Riverside County are owned by businesses with mailing addresses outside the region. For instance, more warehouse square footage in the Inland Empire is owned by businesses in Dallas, TX and Denver, CO than Riverside.⁴ So, we pay the costs of goods moving through Riverside County in terms of air quality and traffic, but the wealth from this industry is not benefitting our local economy.

We need to think long and hard about land use if our goal is long-term economic growth. Considering the significant and unavoidable impacts and the minimal economic benefit created by the proposed development, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. Please encourage the developer to consider non-industrial, alternative uses of the land for the sake of those living adjacent to the site as well as the economic future of our region.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

³ SCAG Report can be found at: https://scag.ca.gov/sites/main/files/file-attachments/briefing_book_2022_final.pdf?1669774904

Letter O-10

Riverside Neighborhood Partnership
March 10, 2023

- O-10.1** This comment references an attached letter and does not raise any specific comments or questions on the Draft EIR. As such, no further response is provided.
- O-10.2** This comment is introductory in nature and does not raise any specific comments or questions on the Draft EIR. This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a maximum buildout of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- O-10.3** This comment questions the Draft EIR's consistency determination with regard to March JPA General Plan Policies 2.3 and 2.4 given the Project's significant and unavoidable noise and air quality impacts. Please note that CEQA Guidelines Section 15125(d) requires EIRs to discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. However, an inconsistency does not necessarily mean a potentially significant conflict under CEQA. Threshold LU-1 asks: Would the Project cause a significant environmental impact due to a conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? So, unless (1) the applicable plan, policy or regulation was "adopted for the purpose of avoiding or mitigating an environmental effect" and (2) the conflict would cause a significant environmental impact, any inconsistency would not be a potentially significant conflict under CEQA. Inconsistency with policies that do not avoid or mitigate an environmental effect would not be considered potentially significant under CEQA. General Plan Policies 2.3 (Support land uses that provide a balanced land use pattern of the Planning Area, and discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions) and 2.4 (Protect the interests of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses) do not avoid or mitigate an environmental effect so any inconsistency would not be considered potentially significant under CEQA. Further, as discussed in the Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside. Topical Response 4 – Project Consistency includes a discussion of the Project's consistency with the City of Riverside Good Neighbor Guidelines. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses.

The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary,

the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

With respect to noise impacts, as disclosed in Section 4.11, Noise, the Project would not generate substantial temporary or permanent increases in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Segment 13, which passes through industrial development and is a non-sensitive receiving land use, meaning that there are no nearby sensitive receptors, including residential uses. As such, this impact, while significant and unavoidable, would not impact any residential or other sensitive uses in the vicinity of the Project. All Project noise impacts to residential uses would be less than significant.

With regard to air quality impacts, the air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for the revised air quality mitigation measures. Please see Topical Response 2 – Air Quality for a discussion of the Project’s consistency with the following:

- Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act – Office of the California Attorney General, September 2022
- SCAQMD 2022 Air Quality Management Plan
- U.S. EPA – Mobile Source Pollution: Environmental Justice and Transportation
- World Logistics Center Settlement Agreement Air Quality Measures
- Centerpoint Properties Air Quality Conditions of Approval
- City of Fontana Ordinance 1891 Air Quality Measures

O-10.4 This comment states that the region has the worst air quality of any region of the United States, and that there are a large number of warehouses located within a 5 km range of the Project site. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR) and shown on Exhibit 2-A of the Revised Project Air Quality Impact Analysis (Appendix C-1), despite a significant increase in vehicle miles traveled, gross state product, and population, the cancer risk associated with diesel particulate matter emissions has decreased since 1990. In addition, SCAQMD has conducted an in-depth periodic analysis of TACs and their resulting health risks throughout the air basin. This study, the *Multiple Air Toxics Exposure Study in the South Coast Air Basin*, shows that cancer risk has decreased by approximately 83% between MATES II (1998) and MATES V (2018) at the nearest monitored location to the Project site. As the region and state continue to implement increasingly stringent emission controls and the electrification of truck fleets continues, it is anticipated that this trend would continue.

This comment questions why the Sycamore Canyon site and other proposed warehouses in the immediate vicinity of the Project site were not included in the analysis. Table 4-2 of the Draft EIR lists the cumulative projects included in the environmental analysis. The Sycamore Hills Distribution Center, north of the Project site and adjacent to Sycamore Canyon, is included.

The comment further raises concerns regarding health impacts due to DPM. Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR) located 32 feet from construction activities, the

maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

- O-10.5** This comment states that the Draft EIR has deficiencies in the traffic analysis because the Draft EIR does not account for the 215/60 corridor and because truck drivers do not follow agreed upon routes. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), March JPA has adopted its own guidelines for traffic analysis: the March JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, to comply with CEQA, Caltrans does not utilize peak hour intersection operations analysis and instead utilizes VMT in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Guidelines were adopted before the Caltrans VMT Guide and therefore the reference is now-superseded Caltrans guidance. The Project VMT Analysis (Appendix N-1) was prepared in compliance with the Caltrans VMT Guide and meets the current transportation analysis requirement for Caltrans. Caltrans was notified about the Project through the release of the Notice of Preparation on November 18, 2021. Caltrans also received the Notice of Availability for the Draft EIR when the

document was circulated for public review beginning on January 9, 2023. No comments were provided by Caltrans during the scoping period or public review for the Project.

Pursuant to Caltrans safety requirements, the Project Traffic Analysis (Appendix N-2) included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. The Project Traffic Analysis (Appendix N-2) performed a queuing analysis for these I-215 Freeway off-ramps for all scenarios (Existing [2021], Existing plus Project, Existing plus Ambient Growth plus Project, Opening Year [2028] Cumulative Without Project, Opening Year [2028] With Project, Horizon Year [2045] Without Project, and Horizon Year [2045] With Project). Based on the results of this queuing analysis, there are no study area off-ramps that are anticipated to experience queuing issues under any scenario. Caltrans is one of the state reviewing agencies for the Project, and had the opportunity to comment on the transportation analysis. <https://ceqanet.opr.ca.gov/2021110304>. Caltrans did not submit any comments on this Project.

Further, to improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission (RCTC), has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging with the SR-60 Freeway. Another regional facility, Mid-County Parkway (MCP), is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway.

The comment also raises concerns about enforcement and maintenance. In response to truck route enforcement concerns, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. As Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As has been the case with other areas in the Meridian Business Park, as the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already

part of the Project, they are also separate conditions of approval and also included in the MMRP. March JPA will monitor compliance through the MMRP. Regarding maintenance concerns, commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).²²

O-10.6 This comment questions the number of jobs and unemployment rates in the Inland Empire region and questions the economic viability of additional logistics industry development. The comment also raises questions about gross domestic product, salary, and out of county ownership, none of which are related to environmental impacts or CEQA. In response to questions about the employment numbers associated with the proposed Project, please see Topical Response 5 - Jobs. The comment also raises concerns regarding automation. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR.

O-10.7 This comment expresses general opposition to the proposed Project. The comment further requests a non-industrial alternative. In response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

INTENTIONALLY LEFT BLANK

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

FL-A.1

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

FL-A.2

FL-A.3

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

FL-A.4

FL-A.5

FL-A.6

FL-A.7

FL-A.8

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

FL-A.9

FL-A.10

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

FL-A.11

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

FL-A.12

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

↑ FL-A.12
| Cont.
|
| FL-A.13
|

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Form Letter A Response

The following response is provided to address comments raised in “Form Letter A,” which primarily focuses on aesthetic impacts of the proposed Project.

FL-A.1 This comment is a brief summary of the proposed Project. No comments, questions or concerns about the environmental analysis included in the Draft EIR are raised. As such, no further response is provided.

FL-A.2 This comment refers to the Project’s various zoning designations and suggests that a majority of the development will be warehouses. The Project proposes the following mix of land uses on corresponding acreages, as indicated in Table 1-1 of the Draft EIR:

- Business Park – 65.32 acres
- Industrial – 143.31 acres
- Mixed Use – 42.22 acres
- Public Facility – 2.84 acres
- Parks/Recreation/Open Space – 78.00 acres
- Streets – 37.91 acres
- Existing Public Facility – 2.87 acres
- Open Space/Conservation Easement – 445.43 acres

For purposes of analysis, the Draft EIR assumed the following buildout scenario:

- Building B – 1,250,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 587,000 SF of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 SF of high-cube fulfillment center warehouse use
- Industrial Area – 500,000 SF of high-cube cold storage warehouse use
- Business Park Area – 1, 280,403 SF of business park use
- Mixed Use Area – 160,921 SF of retail use (25%)
- Mixed Use Area – 482,765 SF of business park use (75%)
- 60.28-acre park (with Active and Passive uses)
- 17.72 acres of Open Space use
- Public Facility – 2.84 acres for future sewer lift station and electrical substation (within the Specific Plan Area)

As detailed in Table 3-2, Land Uses by Land Use Designation, in Recirculated Chapter 3, Project Description, the Industrial, Business Park, and Mixed Use land use designations permit a wide range of uses, including manufacturing, storage and distribution, office, and commercial uses. The only plot plans proposed as part of the Project are for Buildings B and C on industrial-zoned parcels; no specific development is proposed on the remaining parcels within the Campus Development. As such, through the evaluation of the buildout scenario, the Draft EIR discloses the impacts of the Specific Plan at the maximum foreseeable level, which includes warehousing as it is one of the more intensive uses allowed under the Specific Plan.

FL-A.3 This comment questions the relevancy of Appendix B to the Draft EIR and notes that Table 1-2 on page 1-17 of the Draft EIR summarizes the impacts of the Project, including aesthetic impacts. Appendix B of the Draft EIR includes the Project Sight Line Sections, Conceptual Grading Plans and the Photometric Plans for the proposed Park. Section 4.1, Aesthetics, and Meridian Upper Plateau Sight Line Sections

(included within Appendix B of the EIR), describe sight line sections that show existing and proposed grades at five sections through the Project site in order to match the locations of the viewpoints evaluated in this EIR. These sections were prepared to visually demonstrate the finished grade for the Project, to help viewers understand the future elevation of the Specific Plan Area and Conservation Easement when viewed from neighboring off-site residential areas. Accordingly, they show the topography of the Project at these locations under existing and proposed conditions. Appendix B also includes the photometric lighting analysis for field lighting that would be included in the Park component of the Project. Appendix B supports the analysis of the Specific Plan buildout scenario included in Section 4.1, Aesthetics, of the Draft EIR. Regarding Table 1-2, no specific comments, questions, or concerns about the environmental analysis included in the Draft EIR are raised. As such, no further response is provided.

FL-A.4 This comment suggests that the threshold of significance used in the Draft EIR to evaluate the Project's aesthetic impacts is arbitrary. To the contrary, the aesthetics analysis in the EIR is based on established thresholds. Specifically, as explained in Section 4.1.4, Thresholds of Significance, the significance criteria used to evaluate the Project impacts related to aesthetics are based on the thresholds contained in Form J of the 2022 March JPA CEQA Guidelines, which mirror the thresholds in Appendix G of the CEQA Guidelines. The discretion to choose the applicable threshold rests with the lead agency – in this case, March JPA. CEQA Guidelines Section 15064(b) confirms that lead agencies may exercise their discretion on what criteria to use, and it provides that “[t]he determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data.”

FL-A.5 This comment questions the Draft EIR's conclusion that the Project's aesthetic impacts would be less than significant. See Topical Response 1 – Aesthetics for an explanation of the Project's aesthetic impacts and March JPA's application of the thresholds of significance.

The comment also questions whether March JPA will “simply take the developer's word” that impacts to aesthetics are less than significant. The EIR represents March JPA's independent judgment regarding the Project's impacts, as well as the thresholds of significance used. This is consistent with CEQA Guidelines Section 15084(e), which provides that “[t]he draft EIR which is sent out for public review must reflect the independent judgment of the lead agency. The lead agency is responsible for the adequacy and objectivity of the draft EIR.”

FL-A.6 This comment discusses perceptions of visual change from residents who live near the Project site or who frequent Orange Terrace Park or The Grove. As discussed in Topical Response 1 – Aesthetics, and Section 4.1, Aesthetics, of the Draft EIR, five viewpoints were used to evaluate the Project's impacts in relation to scenic vistas and existing visual character and quality of public views of the Project site and its surroundings. As shown in Figure 4.1-2, Key Points Viewpoint Map, the selected viewpoints also provide representative views likely to be experienced by residents. Viewpoint No. 3, as shown in Figure 4.1-5, is located near the intersection of Barton Street and Grove Community Drive, approximately 250 feet south of the Project site and best represents the public views from Orange Terrace Park and The Grove Community Church. The viewpoint provides an elevated northeasterly view towards the Project site. Viewpoint No. 3 is representative of views towards the Project site available to motorists and pedestrians along Grove Community Drive. This viewpoint is taken from elevation 1,722 feet above mean sea level (AMSL). Under existing conditions, this viewpoint offers distant views of the locally prominent foothills of the San Bernardino Mountain Range to the

north in the background. The viewpoint also offers views of the Grove Community Church in the foreground and previously disturbed dirt roads, electrical poles, and the former munitions bunkers in the background. The existing gradient from northernmost point of Barton Drive, adjacent to the Grove Community Church to the Specific Plan Area is shown along Section P on the site section plan (Appendix B). This point, along Section P, is approximately 0.22 miles north of Viewpoint No. 3, in line with the Project site and Viewpoint No. 3. The existing grade is shown to have an approximately 8-foot incline from the northernmost point of Barton Drive, across the 300-foot Conservation Easement, to the edge of the proposed Specific Plan Area.

As discussed in Topical Response 1 – Aesthetics, to provide additional clarification regarding the potential visual impacts of the Project buildout scenario, additional discussion regarding Viewpoint No. 3 has been added to the aesthetics analysis under Threshold AES-2 in Section 4.1, Aesthetics, of the Final EIR. As explained therein, while the existing visual character would change from Viewpoint No. 3, setbacks, the Conservation Easement, compliance with PDF-AES-1, and landscaping would soften the changes in the view by partially screening Campus Development and retaining views of vegetation and the San Bernardino Mountain foothills. This additional discussion does not affect the conclusions in the Draft EIR, and impacts would remain less than significant.

This comment further describes the applied thresholds of significance for aesthetics used in the Draft EIR as “impossibly low.” As explained in Section 4.1.4, Thresholds of Significance, of the Draft EIR, the significance criteria used to evaluate the Project aesthetics impacts are based on the 2022 March JPA CEQA Guidelines. The aesthetics thresholds identified in Form J of the 2022 March JPA CEQA Guidelines are identical to the aesthetics thresholds in Appendix G of the CEQA Guidelines. Section 4.1, Aesthetics, evaluated whether the Project would “have a substantial adverse effect on a scenic vista,” “substantially degrade the existing visual character or quality of public views of the site and its surroundings,” or “create a new source of substantial light or glare which would adversely affect day or nighttime views in the area.” As discussed in Response FL-A.4, above, the discretion to choose the applicable threshold rests with the lead agency – in this case, March JPA. March JPA has determined these thresholds are appropriate for evaluating the Project’s aesthetic impacts.

FL-A.7 This comment requests “an alternate plan that truly considers aesthetics from the point of view of the people who live” in the Project vicinity. As noted in Response FL-A.6 above, the five viewpoints used in the Draft EIR, which were selected based on professional experience in conducting visual analyses, also provide representative views likely to be experienced by residents. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR, have all been evaluated for potential aesthetic impacts. Similar to the analysis included in Section 4.1, Aesthetics, consideration of visual changes to publicly available views of the Project site were considered. Additionally, see Topical Response 8 – Alternatives, within which a new Alternative 5 – Non-Industrial Alternative, is presented and its aesthetic impacts are evaluated.

FL-A.8 This comment requests an alternative that does not include warehouses or industrial development. See Topical Response 8 – Alternatives, within which a new Alternative 5 – Non-Industrial Alternative, is presented and evaluated.

FL-A.9 This comment questions the presentation of the buildings depicted in the visual simulations as different from existing buildings within the March JPA Planning Area. Since development within the Project site would have to comply with the standards of the proposed Specific Plan, the photosimulations, as shown in Figures 4.1-3 through 4.1-7, in the Draft EIR to evaluate the Project’s aesthetic impacts apply the

proposed Specific Plan's standards. The height and sizing of the buildings in the photosimulations conform to the standards in Chapter 3, Development Regulations, of the proposed Specific Plan. The color and plant palettes utilized in the visual simulations prepared for the proposed Project conform with the standards in Chapter 4, Design Guidelines and Standards, of the Specific Plan.

FL-A.10 This comment questions the size, appearance, and number of buildings shown in the photosimulations. Figure 4.1-3, Viewpoint No. 1, depicted buildings with a maximum height of 50 feet instead of 45 feet, and utilized an older version of the site plan with four Business Park parcels on the northern portion of the Specific Plan Area instead of the current proposed configuration of seven Business Park parcels. In response to this comment, Figure 4.1-3, Viewpoint No. 1 Photosimulation, has been revised to reflect the reduced maximum building height and development of seven Business Park parcels instead of four and included in Section 4.1, Aesthetics, of this Final EIR.

The revisions to Figure 4.1-3 do not constitute significant new information. The analysis in the DEIR was based on the current site plan; only Figure 4.1-3 was based on an outdated site plan. As such, the revisions to Figure 4.1-3 in the EIR do not change the analysis or conclusions in the Draft EIR related to aesthetics, and impacts would remain less than significant. This revision merely reflects the reduction in building heights by 5 feet and provides a more accurate spatial relationship between building setbacks due to a change in the site plan. Moreover, the reduction in height and massing would reduce the visual impacts of the buildings. As such, and as noted above, these revisions do not constitute significant new information added to the EIR such that recirculation of the EIR under CEQA Guidelines Section 15088.5 would be required.

This comment further requests the photosimulations use "the actual appearance of warehouses in the area." In response, please see Response to Comment FL-A.9, above.

FL-A.11 This comment states that construction of warehouses, odors from diesel trucks, and the significant and unavoidable noise impacts will negatively impact the daily lives of residents. With respect to odors, Threshold AQ-4 in Recirculated Section 4.2, Air Quality, found that potential odor impacts of the Project would be less than significant. In addition, the Project contains MM-AQ-16, which requires signage with contact information for the tenant representative, March JPA, County of Riverside, and SCAQMD for complaints about excessive noise, dust, fumes, odors, and perceived Code violations.

With respect to noise impacts, as disclosed in Section 4.11, Noise, of the Draft EIR, the Project would not generate substantial temporary or permanent increases in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Segment 13, passes through industrial development and is a non-sensitive receiving land use, meaning that there are no nearby sensitive receptors, including residential uses. As such, this impact, while disclosed as significant and unavoidable, would not impact any residential or other sensitive uses in the vicinity of the Project. All potential Project noise impacts to residential uses were determined in the Draft EIR to be less than significant.

Lastly, this comment raises concerns regarding construction of warehouses within "a beautiful passive recreation area." The Project consists of two components: the Specific Plan Area and the Conservation Easement. The approximately 370-acre Specific Plan Area includes the remnants of the March AFB Weapons Storage Area, March JPA property which has consistently been fenced off to prevent public access. The remainder of the Project site will be preserved in the approximately 445-acre

Conservation Easement, which includes the trails the public has accessed for passive recreation purposes. The public's utilization of this area for passive recreation is subject to the discretion and authorization of March JPA, as noted in Chapter 4.0, Environmental Analysis, of the Draft EIR. As detailed throughout the Draft EIR, there is no development proposed within the Conservation Easement and no physical alteration is anticipated.

FL-A.12 This comment expresses concerns that the Project is inconsistent with the March JPA General Plan as it relates to public benefit. Please see Recirculated Section 4.10, Land Use and Planning, for a consistency analysis of the Project with the relevant March JPA General Plan goals and policies. Public benefits provided by the Project would include increased job opportunities for local residents, preservation of open space, extension of the roadway infrastructure and the pedestrian and bicycle circulation system, a new approximately 60-acre public park, and construction of the Meridian Fire Station, at the intersection of Opportunity Way and Meridian Parkway (see Topical Response 6 - Fire Station, for additional details). The Project is consistent with the March JPA General Plan and provides public benefits.

FL-A.13 This comment summarizes the concerns regarding aesthetics, jobs creation, and impacts to recreational areas. As examined in Section 4.1, Aesthetics, of the Draft EIR, Topical Response 1 – Aesthetics, and Responses FL-A.2 through FL-A-15, the EIR disclosed the Project's aesthetic impacts, applied an appropriate threshold of significance based on the 2022 March JPA CEQA Guidelines, and determined the Project's impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. See Response FL-A.12, above, for an overview of the Project's public benefits. See Response FL-A.11, above, regarding the continuation of the Conservation Easement for passive recreation.

FL-A.14 This This comment states that March JPA and the Applicant have a duty to adhere to the March ARB General Plan and engage the local communities and municipalities. First, the March Air Reserve Base does not have an adopted General Plan. Second, the Project's consistency with the March JPA General Plan is discussed, as it pertains to policies that were adopted for the purpose of avoiding or mitigating an environmental impact in Recirculated Section 4.10, Land Use and Planning. March JPA and the Applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation. Using a radius of 1,200 feet around the perimeter of the Project site, March JPA distributed 2,172 public notices. March JPA engaged with local jurisdictions and service providers (see, e.g., the traffic scoping agreement in Appendix N-2).

FL-A.15 This comment summarizes previously stated concerns regarding aesthetics impacts and alternatives. CEQA Guidelines Section 15126.6(f) provides that "[t]he range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project." As examined in Section 4.1, Aesthetics, of the Draft EIR, Topical Response 1 – Aesthetics, and Responses FL-A.2 through FL-A-15, the EIR has disclosed the Project's aesthetic impacts, applied an appropriate threshold of significance based on 2022 March JPA CEQA Guidelines, and determined the Project's impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. As such, the reduction of

aesthetic impacts would not be required to be considered in the selection of a reasonable range of alternatives to the Project. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR, have all been evaluated for potential aesthetic impacts. Similar to the analysis included in Section 4.1, Aesthetics, consideration of visual changes to publicly available views of the Project site were considered. Alternative 2 (Reduced Development) and Alternative 4 (Reduced Cultural Resource Impact) were determined to have reduced aesthetics impacts compared to the Project. Topical Response 8 – Alternatives, presents and analyzes a new Alternative 5 – Non-Industrial Alternative, determining its aesthetic impacts would be reduced compared to the Project's.

INTENTIONALLY LEFT BLANK

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

FL-B.1

FL-B.2

FL-B.3

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

FL-B.4

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

FL-B.5

FL-B.6

FL-B.7

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

FL-B.8

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)

FL-B.9

2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

FL-B.10

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

FL-B.11

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

↑
FL-B.11
Cont.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

↑
FL-B.12

Form Letter B Response – Air Quality

- FL-B.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-B.2** This comment raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- FL-B.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- FL-B.4** This comment acknowledges the Draft EIR’s determination of significant and unavoidable air quality impacts and generally claims there are deficiencies in the analysis. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR. More specific issues are addressed in responses below.
- FL-B.5** This comment raises concerns regarding cumulative impacts of adjacent industrial developments. In response, please see Recirculated Section 4.2, Air Quality, for an expanded discussion of cumulative health risks. The World Logistics Center and Stoneridge Commerce Center are both located more than 10 miles away from the Project site. As explained in Recirculated Section 4.2, Air Quality, in terms of regional air quality emissions, the South Coast Air Quality Management District (SCAQMD) daily operational thresholds for project-specific impacts used by March JPA represent the level above which emissions would be considered cumulatively significant and were developed based on regional air quality in the SCAB. Because of this, all development, including the warehouses mentioned in the comment, were accounted for in the analysis. While SCAQMD does not provide specific guidance for evaluating cumulative health risk impacts beyond the use of the incremental cancer risk threshold of 10 in one million on an individual project basis, the Bay Area Air Quality Management District utilizes a 1,000-foot zone of influence approach for evaluating cumulative health risk impacts and a threshold of 100 in one million that is supported by the EPA.¹ March JPA therefore used this methodology that was approved by an expert air district to respond to comments related to cumulative health impacts. The analysis in the EIR demonstrates that Project emissions would not result in a significant cumulative health impact.
- FL-B.6** This comment questions the analysis regarding Transport Refrigeration Units (TRUs). As explained in Recirculated Section 4.2, Air Quality and Appendices C-1 and C-2, the analysis conservatively accounted for TRU emissions that would occur during on- and off-site travel, as well as at loading docks. Under unmitigated conditions, the analysis conservatively assumed that each TRU would idle on- site

¹ https://www.baaqmd.gov/~/_media/files/planning-and-research/ceqa/ceqa-guidelines-2022/ceqa-guidelines-chapter-5-project-air-quality-impacts_final.pdf?rev=de582fe349e545989239cbbc0d62c37a&sc_lang=en.

for approximately 2.1 hours and, under mitigated conditions, each TRU would idle for 30 minutes while on-site but not at the loading dock. However, the emissions and risk presented in the analysis represents a worst-case scenario in which improvements in technology and emissions standards are not realized, which identifies a static Year 2028 emission factor year being utilized. Under the 2022 amendments to the TRU Airborne Toxic Control Measures, CARB requires that fleets steadily turn over their TRUs to zero-emission units, with the turnover to zero-emission TRUs required by 2029. Given that the analysis assumed that emission factors would remain constant based on a 2028 opening year, incorporation of the 2022 amendments would result in long-term risk lower than what is reported in the analysis. However, these emissions are accounted for in the air quality, GHG, and health risk assessment studies, which consider emissions from TRUs that would occur while operating at loading docks, traveling on the site, as well as on surrounding roadways docks. Emissions were calculated using the latest emission factors obtained from EMFAC 2021 and are consistent with SCAQMD methodology. (Appendix C-4)

FL-B.7 This comment requests the EIR apply the SCAQMD Rule 2305 weighted average truck trip rates rather than the ITE rates. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), The Institute of Transportation Engineers (ITE) trip generation rates are the industry-accepted forecast for trip generation of development projects and is currently the best data available for forecasting trip generation. As described by SCAQMD:

“[The] 2014 SCAQMD High Cube Warehouse Truck Trip Study was a multi-year effort that concluded with the Institute of Transportation Engineers (ITE) – the preeminent national organization for transportation engineers – completing the analysis and incorporating it into their industry standard Trip Generation Manual. This manual is the basis for the vast majority of transportation engineering studies conducted for development projects in South Coast AQMD and throughout the nation, and continues to be used today. The trip rates are also incorporated into CalEEMod, the primary model used throughout the state to estimate air quality impacts from new development, including for warehousing.

While different types of warehousing will have different trip characteristics, the use of the ITE trip rates provide the most reasonable average to consider a large population of warehouses”.²

On May 7, 2021, SCAQMD adopted Rule 2305 - Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program. Owners and operators associated with warehouses 100,000 square feet or larger are required to directly reduce nitrogen oxides (NO_x) and particulate matter emissions, or to otherwise facilitate emission and exposure reductions of these pollutants in nearby communities. The rule imposes a “Warehouse Points Compliance Obligation” (WPCO) on warehouse operators. Operators satisfy the WPCO by accumulating “Warehouse Actions and Investments to Reduce Emissions Points” (WAIRE Points) in a given 12-month period. WAIRE Points are awarded by implementing measures to reduce emissions listed on the WAIRE Menu, or by implementing a custom WAIRE Plan approved by the SCAQMD in its WAIRE Implementation Guidelines, dated June 2021.

² <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>

To calculate WAIRE Points, warehouse operators collect actual truck trip data using methods that provide a verifiable and representative record. The weighted truck trip rates listed in Rule 2305(d)(1)(C) and cited by the commenter only applies if a warehouse operator does not have information about the number of truck trips due to a force majeure event such as destruction of records due to a fire. As stated in footnote 3 of the WAIRE Implementation Guidelines, this alternative calculation can *only* be used in cases of force majeure. As shown in Table 4 of the May 7, 2021, SCAQMD staff report,³ these trip rates are not actual trip rates but weighted.

Table 4: Truck Trip Generation Rates Used for Default WTTR in Case of Loss of Records due to Force Majeure

Warehouse Type	Class 8 / Tractor-Trailer / 4+ Axle (Average daily trips per 1,000 sq. ft. of warehouse building area)^	Class 2B-7 / 'Straight' Trucks / 2- and 3-Axle (Average daily trips per 1,000 sq. ft. of warehouse building area)^	Weighted Truck Trip Rate (WTTR) (2.5 × Class 8 + Class 4-7)
High Cube Transload & Short Term Storage (≥200k sf)	0.33	0.12	0.95
Warehouse (100k – 200k sf)	0.21	0.14	0.67
Cold Storage (>100k sf)	0.75	0.29	2.17

In developing Rule 2305 unweighted truck trip generation rates, SCAQMD utilized the 2016 ITE High-Cube Warehouse Vehicle Trip Generation Analysis and supplemented with data from the City of Fontana’s 2003 Truck Trip Generation Study.⁴ To estimate the Project’s truck trip generation, the 2022 Traffic Analysis used trip-generation statistics published in the ITE Trip Generation Manual (11th Edition, 2021) and the WRCOG High Cube Warehouse Trip Generation Study (WSP, January 2019), as these were the best available sources of data at the time of preparation.

Table FL-B.7-1 compares the truck trip generation rates used in the 2022 Traffic Analysis to the unweighted truck trip generation rates used in Rule 2305 and demonstrates the estimated truck trips are substantially the same.

Table FL-B.7-1

	Project TSF	ITE Truck Rate	ITE Truck Trips	Rule 2305 Unweighted Truck Rate	Rule 2305 Truck Trips
High-Cube	2,562.561	0.379	972	0.45	1,154
Warehouse	1,234.218	0.57	706	0.35	432

³ <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-May7-027.pdf?sfvrsn=10>

⁴ May 2021 SCAQMD Final Staff Report – Rule 2305, pg. 47; <https://www.ite.org/pub/?id=a3e6679a%2De3a8%2Dbf38%2D7f29%2D2961becdd498>; <https://tampabayfreight.com/pdfs/Freight%20Library/Fontana%20Truck%20Generation%20Study.pdf>.

Table FL-B.7-1

	Project TSF	ITE Truck Rate	ITE Truck Trips	Rule 2305 Unweighted Truck Rate	Rule 2305 Truck Trips
Cold Storage	500	0.75	376	1.04	520
TOTAL	4,296.779	—	2,054	—	2,106

The ITE Trip Generation Manual remains the best estimation of trips for a proposed development and is the industry standard for trip generation. The trip rates within the Trip Generation Manual are based on studies of existing similar use developments and the generated traffic from those developments. As such, no changes are necessary to the 2022 Traffic Analysis since the trip generation is consistent with the industry standard and is the accepted methodology per the March JPA and the other surrounding agencies.

As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4), utilizing the trip generation rates based on Rule 2305, the proposed Project would only generate an additional 52 truck trips. The analysis relies on the trip rates presented in the Project traffic study, which has been reviewed by RCTLMA. The trip rates presented in the Project traffic study are based on ITE rates and the SCAQMD High-Cube Warehouse Truck Trip Study, which are based on surveys of similar facilities. As such, DPM emissions from trucks are not understated in the analysis.

Notwithstanding, as shown above, even if the SCAQMD’s method and recommended trip rates were utilized, this would only result in an additional 52 daily truck trips (2,106 vs 2,054). This represents an approximate potential 2.53% increase in truck trips and consequently emissions and risk. Even if the health risk estimates disclosed in the DEIR were increased by 2.53%, they would remain less than significant, and no new impacts would occur. MM-AQ-5 requires all Project site plans to include documentation confirming the site plan’s environmental impacts do not exceed the impacts identified and disclosed in the Draft EIR; absent such documentation, additional environmental review will be required.

FL-B.8

This comment requests the Project implement additional mitigation measures such as 100% solar and a community benefit fund. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Regarding solar, MM-GHG-1 requires rooftop solar photovoltaic (PV) electricity generation sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. Regarding a community benefit fund, the Project Development Agreement includes the construction of the Meridian Fire Station. Additionally, under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with offsite utilities, drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete. Please see Recirculated Section 4.2, Air Quality, for discussion of the additional mitigation measures proposed.

FL-B.9 This comment requests mitigation requiring 40% of construction vehicles be battery-electric or zero-emission equivalents. MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. MM-AQ-3 would further reduce the Project's air quality impacts during construction with the following requirements and restrictions:

- No grading shall occur on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the project area (Source Receptor Area 23).
- Contractor shall require all heavy-duty trucks hauling onto the project site to be model year 2014 or later. This measure shall not apply to trucks that are not owned or operated by the contractor since it would be infeasible to prohibit access to the site by any truck that is otherwise legal to operate on California roads and highways.
- No construction equipment idling longer than three (3) minutes shall be permitted.
- All construction equipment to be tuned and maintained in accordance with the manufacturer's specifications, with maintenance records onsite and available to regulatory authorities upon request.
- No diesel-powered portable generators shall be used, unless necessary due to emergency situations or constrained supply.
- Contractor required to provide transit and ridesharing information to onsite construction workers.
- Contractor required to establish one or more locations for food or catering truck service to construction workers and to cooperate with food service providers to provide consistent food service.
- Use of electric-powered hand tools, forklifts and pressure washers, to the extent feasible.
- Designation of an area in the construction site where electric-powered construction vehicles and equipment can charge.

Recirculated Section 4.2, Air Quality, determined the Project would have less than significant construction air quality impacts with implementation of MM-AQ-1 through MM-AQ-4 and additional mitigation is not required. Furthermore, there is no certainty that it would be feasible for 40% of construction vehicles to be battery-electric or zero-emission equivalents at the time of construction. As the Project would have less than significant impacts as mitigated, March JPA declines to impose the requested additional mitigation.

FL-B.10 This comment requests mitigation prohibiting blasting in close proximity to housing. PDF-NOI-2 prohibits blasting within 1,000 feet of any residence or other sensitive receptor. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the Mitigation Monitoring and Reporting Program (MMRP). March JPA will monitor compliance through the MMRP.

FL-B.11 This comment requests mitigation requiring 50% of delivery vehicles and 30% of truck fleets to be electrified by 2028, increasing to 100% by 2031. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission

vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure's feasibility as the Project site is developed.

FL-B.12 This comment questions the implementation of mitigation and enforcement post March JPA sunset. The project design features and mitigation measures will be incorporated into the Project MMRP. Please see Topical Response 9 – Long-Term Project Implementation and Enforcement, for a discussion of the County of Riverside's role when March JPA's land use authority reverts back in 2025.

INTENTIONALLY LEFT BLANK

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

FL-C.1

FL-C.2

FL-C.3

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

FL-C.4

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

FL-C.5

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

FL-C.6

FL-C.7

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

FL-C.8

Thank you for allowing me to provide comments on this project.

Form Letter C Response – Biological Resources

- FL-C.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-C.2** This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- FL-C.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- FL-C.4** This comment expresses concern about the shrinking of open spaces and destruction of habitat. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations. The proposed Project will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development, including 78 acres for the proposed Park and additional buffering open space. Thus, the Project designates more land for non-development uses and does not introduce new designated uses.
- The comment requests the Draft EIR's analysis include the Western Riverside County MSHCP Species Observations Database. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), the Western Riverside County MSHCP Species Observations Database provides location documentation for MSHCP monitoring surveys conducted within MSHCP conservation areas. Locations from the MSHCP database for species considered to be special-status by state and/or federal agencies are also uploaded to the California Natural Diversity Database (CNDDDB), which was reviewed as part of the project effort. During desktop analysis, a CNDDDB search for a 3-mile radius around the Project site was conducted; this search radius distance is standard industry practice. Based on this comment, however, the Western Riverside County MSHCP Species Observations Database was reviewed on CDFW BIOS on March 2, 2023. No special-status wildlife species were recorded within this database for a 3-mile radius around the Project site.
- FL-C.5** This comment requests that studies that are more than a year old be redone. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), all surveys are relatively recent and reflect site conditions that continue to exist at the time of this writing. The vernal pool branchiopod surveys were completed in July 2022, protocol coastal California gnatcatcher surveys were completed on March 1, 2022, and protocol least Bell's vireo surveys were completed on July 21, 2022. There is

no formal regulatory guidance regarding survey 'age' and the agencies address survey validity on a case-by-case basis based on the type of survey, likelihood of species occurrence, seasonal conditions, etc. According to Section II(b) of the USFWS *Survey Guidelines for the Listed Large Branchiopods* (2017), "A complete survey consists of one wet season and one dry season survey conducted and completed in accordance with the guidelines and conducted within a 3-year period. The order of the surveys is not important." This guidance suggests that the USFWS considers surveys valid for more than one year for these species. Both the CDFW and USFWS have had the opportunity to review the survey results and timing during CEQA review and have not raised any concerns.

FL-C.6 This comment asks about details for coastal scrub. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), in the Upper Plateau Project Biological Technical Report (Appendix D-1), and Table 4.3-7 in the Draft EIR, permanent impacts on 5.54 acres of Riversidean sage scrub, 4.05 acres of disturbed Riversidean sage scrub, and 4.56 acres of flat-topped buckwheat are disclosed. These vegetation communities are subtypes of coastal scrub. MM-BIO-8 addresses the impacts to these habitats through the purchase of 13.66 acres of coastal or Riversidean sage scrub credits at an approved mitigation bank.

The Draft EIR assessed the impacts on coastal scrub. Riversidean sage scrub, disturbed Riversidean sage scrub, and flat-topped buckwheat are all forms of coastal scrub; therefore, coastal scrub is included in the analysis. The report previously referred to these communities as subtypes of coastal sage scrub. While coastal sage scrub and coastal scrub are often used interchangeably, it would be more correct to omit the word sage. As such, both the Draft EIR and the Upper Plateau Project Biological Technical Report have been revised accordingly. Please note that the plants section of Section 4.3, Biological Resources, and the Upper Plateau Project Biological Technical Report is an assessment of individual special-status plant species; all special-status plant species with potential for occurrence within on-site habitats, including sage scrub habitats, were assessed in the plant section. The wording in the plant potential for occurrence tables has been modified to ensure the presence of coastal scrub is evident. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

FL-C.7 This comment questions why surveys were done in a drought year and questions how some rare plants can be determined to be absent during a year and season where the rare plant life would grow. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), focused surveys for paniculate tarplant, a CRPR 4.2 species, and smooth tarplant, a CRPR 1B.1 species, were conducted during appropriate seasonal windows by qualified biologists experienced in identifying both species. While it is recognized that smooth tarplant is rarer than paniculate tarplant, it is not listed as threatened under the California Endangered Species Act.

Although 2022 was a drought year in Riverside County, there were areas of the Project site that supported conditions suitable for this species to bloom, including near drainages and in/around ponded areas examined during wet season vernal pool branchiopod surveys. During a drought year, it would be unlikely to find a large population of smooth tarplant in bloom as abundance is correlated with rainfall; however, drought conditions do not preclude all individuals in a population from blooming. Tarplant surveys were conducted to allow for 100% visualization; therefore, small numbers of individuals would have been detected, if present.

In addition, smooth tarplant was observed in Riverside County in 2022.¹ It was also recorded annually from 2000 through 2018 and Riverside County experienced drought conditions in the majority of these years.²

There is a smooth tarplant population at Sycamore Canyon Wilderness Park north of the Project site. Only one other record of smooth tarplant was located within the 3-mile study area. This record is from a collection made in 1995 from land east of the Project site. There are no additional records of smooth tarplant within a 3-mile radius of the Project. Other recent surveys for smooth tarplant performed in similar habitat within the vicinity of the Project site were conducted during non-drought years and were also negative for smooth tarplant.³ As such, no revisions or updates to the results of the 2022 tarplant survey are required.

The comment further requests the inclusion of coastal scrub in the plant section analysis and completion of a rare plant survey during a non-drought year. In response, please see Responses to Comments FL-C-6 and FL-C-7.

FL-C.8 This comment questions mitigation enforcement when March JPA sunsets. In response to this comment, please see Topical Response 9 – Long-Term Project Implementation and Enforcement.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

FL-D.1

FL-D.2

FL-D.3

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

FL-D.4

FL-D.5

FL-D.6

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

FL-D.7

FL-D.8

FL-D.9

FL-D.10

FL-D.11

FL-D.12

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

FL-D.13

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

FL-D.14

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

FL-D.15

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed.

FL-D.16

Thank you for allowing me to provide comments on this project.

Form Letter D Response – Hazards

- FL-D.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-D.2** This comment asserts that the Draft EIR does not adequately analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. The Draft EIR properly analyzed all topics. This comment does not raise any specific issues, concerns or questions about the environmental analysis in the Draft EIR, all specific comments related to the analysis are addressed below and more broadly in the Final EIR.
- FL-D.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative is introduced and evaluated.
- FL-D.4** This comment questions the amount and extent of site characterization activities that have occurred at the Specific Plan Area. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, of the Draft EIR, a Phase I Environmental Site Assessment (ESA) was performed by Leighton in 2021. The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the Specific Plan Area. As noted in Section 4.8, Hazards and Hazardous Materials, as well as the Phase I ESA, a REC is defined as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.” As such, the Phase I ESA is designed to assess whether soil or other additional testing is necessary to characterize the extent, if any, of contamination on the Specific Plan Area. As shown on Figure 1 thereof, the Phase I ESA covers the Specific Plan Area and determined the extent to which any additional soil characterization was required. The Phase I ESA found nine RECs at the Specific Plan Area. As a result of the RECs identified in the Phase I, a Phase II ESA for the Specific Plan Area was performed by Leighton in 2022 and included confirmation sampling activities, as recommended by the Phase I ESA.

A summary of the Phase I RECs and sampling activities conducted under the Phase II ESA, as well as the results of the Phase II ESA are summarized in the Recirculated Section 4.8, Hazards and Hazardous Materials. Soil samples from various areas of the Specific Plan Area were selectively analyzed for the following compounds, using the USEPA analytical methods described below:

Table 7A: Analytical Methods		
Compound	USEPA Method	Notes / Method Detection Limits (MDLs)
Total Petroleum Hydrocarbons (TPH)	8015B	C ₅ -C ₄₄ carbon chain range Standard MDLs= 10 to 50 mg/kg
Semi Volatile Organics (SVOCs)	8270C	Standard MDLs = 0.014 to 0.387 mg/kg
Organochlorine Pesticides (OCPs)	8081A	Standard MDLs = 0.0001 to 0.010 mg/kg
PCBs	8082	Standard MDLs = 0.005 mg/kg
Chlorinated Herbicides (CH)	8151A	Standard MDLs = 0.01 – 10 mg/kg
Asbestos	600/R-93/116 600/MR-82-020	MDL = 1%
Title 22 Metals / Individual Metals	6010B / 7471A	17 metals Standard MDLs = 0.0062 to 0.432 mg/kg

The analytical results by Area were as follows:

- Historical Area of Unknown U-Shaped Feature
 - Sampling trenches SP1-SP5 were completed in this area, which was previously identified to have been actively used between approximately 1962 and 1989. This U-shaped feature is an asphalt covered area, with an asphalt access roadway leading to it. A summary of analytical results is as follows:
 - TPH - No TPH C5-C44 was detected in any of the analyzed soil samples, except for 18.7 mg/kg of TPH C10-C28 (diesel range) in one sample (SP4-0.5).
 - SVOCs - No detected SVOCs were reported in any of the five soil samples analyzed from this area.
 - OCPs - Trace concentrations of 4,-4' DDE (0.0008 mg/kg maximum) and Endrin Aldehyde (0.0006 mg/kg maximum) were reported in three of six samples analyzed for OCPs. Every other OCP compound was reported to be not detected.
 - PCBs - No detected PCBs were reported in any of the six samples analyzed from this area.
 - Title 22 Metals – Seven soil samples from this area (most from 0.5 feet bgs, and a few from 2.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening level for commercial/industrial use soil. The maximum reported lead concentration in these samples is 6.66 mg/kg.
- Historical Building/Storage Area 1
 - TPH - No detected TPH C5-C44 was reported in any of the six analyzed soil samples from this area.
 - SVOCs, OCPs, PCBs - No detected SVOCs, OCPs or PCBs were reported in any of the four soil samples analyzed from this area.
 - Title 22 Metals - Six soil samples from this area (half from 0.5 feet bgs, and half from 2.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or

detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 1.95 mg/kg.

- Historical Cleared Area 1
 - TPH - No detected TPH C5-C44 was reported in any of the six analyzed soil samples from this area.
 - SVOCs, OCPs, PCBs - No detected SVOCs, OCPs or PCBs were reported in any of the four soil samples analyzed from this area.
 - Title 22 Metals - Four soil samples from this area (all from 0.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 4.12 mg/kg.
- Historical Cleared Area 2 and Building Storage Area 2
 - TPH - No detected TPH C5-C44 was reported in any of the ten analyzed soil samples from this area.
 - SVOCs, OCPs - No detected SVOCs or OCPs were reported in any of six soil samples analyzed from this area, with the exception of sample SP17-0.5, which was reported to contain eight SVOC compounds at low concentrations.
 - Title 22 Metals - Six soil samples from this area (half from 0.5 feet bgs, and half from 2.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 2.64 mg/kg.
- Decomposed Granite Stockpile
 - TPH - No detected TPH C5-C44 was reported in any of the three analyzed soil samples from this area.
 - SVOCs, PCBs - No detected SVOCs or PCBs were reported in any of three soil samples analyzed from this area.
 - Title 22 Metals - Three soil samples from this area were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 0.536 mg/kg.
- Water Cooling Tower Area
 - SVOCs - No detected SVOCs were reported in any of four soil samples analyzed from this area, with the exception of sample CT2-0.5 and CT4-0.5, which were each reported to contain numerous SVOC compounds at minor concentrations.
 - Asbestos - No detected asbestos was reported in any of the four shallow (0.5 feet bgs) soil samples collected near this feature.
 - Title 22 Metals - Nine soil samples from this area (some from 0.5 feet bgs, and some from 2.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 71.4 mg/kg.

- Building 2 Area
 - TPH – TPH C5-C12 (gasoline range) is reported in 2 of 12 samples from this area, at reported concentrations ranging from 5.23 to 10.2 mg/kg. TPH C10- C28 (diesel range) is reported in 8 of 12 samples from this area, at reported concentrations ranging from 8.24 to 25.8 mg/kg. TPH C17-C44 (oil range) is reported in 4 of 12 samples from this area, at reported concentrations ranging from 26.5 to 138 mg/kg.
 - SVOCs, PCBs - No detected SVOCs or PCBs were reported in any of six soil samples analyzed from this area.
 - CHs – No detected CHs were reported in any of the three soil samples analyzed from this area.
 - Title 22 Metals - Six soil samples from the soil borings in this area were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 3.13 mg/kg.
- Electrical Substation Areas (Building 2 and Building 4)
 - PCBs - No detected PCBs were reported in any of ten soil samples analyzed from this area, with the exception of one sample (ES1-3-2.5), which was reported to contain 0.009 mg/kg of only one isomer of PCB (i.e PCB1254). This concentration is considered minor.
 - Title 22 Metals – Five soil samples from this area (all from 0.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 3.3 mg/kg.
- Pad Mounted Electrical Transformers (Bldg. 5 and NE Edge of Ordnance Bunker Area)
 - PCBs - No detected PCBs were reported in any of six soil samples analyzed from this area.
 - Title 22 Metals – Two soil samples from this area (from 0.5 feet bgs) were analyzed, and were reported to have Title 22 metals either not detected, or detected at concentrations below the respective metal screening levels for commercial/industrial use soil. The maximum reported lead concentration in these samples is 26.0 mg/kg.

The Phase II ESA included a summary of these results relative to USEPA and DTSC generic soil screening levels, which have been established to determine a concentration of no significant additional health risks, in this case, for a commercial/industrial use scenario.

- TPH
 - No detected TPH was reported in 40 of 49 total samples analyzed.
 - TPH C5-C12 (gasoline range) was reported in only one sample, at a minor concentration of 5.32 mg/kg. This is below the 420 mg/kg USEPA soil screening level for soil in a commercial/industrial use scenario.
 - TPH C10-C28 (diesel range) was reported in nine samples at concentrations ranging from 8.24 to 25.8 mg/kg. These concentrations are all below the 500 to 560 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario.
 - TPH C17-C44 (oil range) was reported in four samples at concentrations ranging from 26.5 to 138 mg/kg. These concentrations are all below the 18,000 to 30,000 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario.
- SVOCs

- No detected SVOCs were reported in 26 of 29 total samples analyzed.
- Minor concentrations of 10 SVOCs (acenaphthylene, benzo(a)anthracene, benzo (b) fluoranthene, benzo (g,h,i) perylene, butylbenzylphthalate, chrysene, fluoranthene, fluorine, phenanthrene and pyrene) were reported in three samples, all at concentrations below DTSC and USEPA soil screening levels (where they exist) for soil in a commercial/industrial use scenario.
- OCPs
 - No detected OCPs were reported in 17 of 20 total samples analyzed.
 - Minor concentrations of 3 OCPs (4-4' DDE and Endrin Aldehyde) were reported in three samples, all at concentrations below DTSC and USEPA soil screening levels (where they exist) for soil in a commercial/industrial use scenario.
- PCBs
 - No detected PCBs were reported in 38 of 39 total samples analyzed.
 - One sample was reported to contain 0.009 mg/kg of Aroclor1254, which is below the 0.59 to 0.97 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario.
- Chlorinated Herbicides
 - No detected Chlorinated Herbicides were reported in 3 of 3 total samples analyzed.
- Asbestos
 - No detected asbestos was reported in 4 of 4 total samples analyzed. Samples around the base of the water cooling tower were analyzed for asbestos due to concerns with potential asbestos containing materials on the tower.
- Title 22 Metals
 - A total of 48 samples, all collected from 0.5 to 2.5 feet bgs, were analyzed for Title 22 metals. All reported concentrations of metals, except arsenic, were below their respective DTSC and USEPA soil screening levels (where they exist) for soil in a commercial industrial use scenario.
 - Arsenic concentrations in some samples exceed their DTSC and/or USEPA soil screening level for commercial/industrial use; however, the maximum reported concentration is 3.89 mg/kg, which is substantially below the more applicable DTSC Regional Background Arsenic Concentration screening level of 12 mg/kg.
 - A maximum of 71.4 mg/kg of total lead was reported in sample CT2-0.5. The next highest detected total lead was 26 mg/kg. These concentrations are below the 320 to 800 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario. The sample with 71.4 mg/kg of total lead was also run for soluble lead, and reported to contain 1.33 mg/L, which is below the Soluble Threshold Limit Concentration of 5.0 mg/L (criteria for determining if a waste is California hazardous or not).

The Phase II ESA confirms that based on field observations and laboratory analytical data from the soil samples collected during the Phase II. The expert consultant concluded that no additional soil sampling was recommended. In addition, as indicated in the 2023 Leighton Report, all COCs in soil samples collected during the Phase II are below construction worker and residential screening levels.

FL-D.5 This comment asserts, without any evidence or reason, that “when trucks begin driving into the complex, more than diesel PM will be admitted [*sic*].” It is unclear from the comment what additional emissions are being asserted. At the outset, we note that CEQA does not require speculation. See, e.g. *Laurel Heights Improvement Assn. v Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1137.

With respect to other toxic air contaminants, the Health Risk Assessment (HRA) prepared for the project includes diesel particulate matter (DPM) because it is the primary toxic air contaminant (TAC) that would be emitted during construction and operation of the Project from construction equipment and trucks. While passenger vehicles would also emit TACs, because the passenger vehicle fleet is predominantly gasoline powered, and TAC emission rates from gasoline engines are significantly lower than diesel engine TAC emission rates, the TAC emissions generated by heavy duty trucks result in significantly more risk. Please see Response RA-6.3 for an expanded discussion of gasoline emissions and health risk assessments. Consistent with industry standards, the focus of the HRA is on diesel exhaust as the primary TAC that has the propensity to affect receptors in the vicinity of the Project. All other TACs that may result from passenger vehicles would not generate a greater risk, and in fact, would represent a fraction of the risk for diesel exhaust. Furthermore, the International Agency for Research on Cancer (IARC), which is part of the World Health Organization (WHO), has classified diesel engine exhaust as “carcinogenic to humans” (Group 1) based on sufficient evidence of its carcinogenicity to humans. This classification is in contrast to gasoline engine exhaust, which is classified as “probably carcinogenic to humans” (Group 2A) due to limited evidence in humans. (Appendix C-4)

With respect to hazardous substances, as noted in Response FL-D.4 above, there are no concentrations of any contaminant of concern (COC) in soil that exceed screening levels for a commercial/industrial use scenario, with the exception of arsenic, which was still substantially below the DTSC Regional Background Arsenic Concentration screening level.¹ In addition, as summarized in the 2023 Leighton Report, included as Appendix J-6 to this Final EIR, “all concentrations of analyzed compounds in the soil samples are well below the screening levels for hypothetical on-site construction workers or hypothetical on-site residential occupants.” As such, no COCs will be present at any unacceptable level in the dust generated during construction at the Specific Plan Area. In addition, despite there being no evidence that any hazardous substances will be encountered during construction of the Project, we note that the Project will be required to comply with dust suppression and other air quality measures identified in the Draft EIR, including compliance with SCAQMD Rule 403, which governs fugitive dust and “requires fugitive dust sources to implement best available control measures for all sources to ensure all forms of visible particulate matter are prohibited from crossing any property line. SCAQMD Rule 403 is intended to reduce PM10 emissions from any transportation, handling, construction, or storage activity that has the potential to generate fugitive dust (SCAQMD 2005).”

FL-D.6 This comment asks the JPA to require the applicant to perform comprehensive soil testing on the Specific Plan Area. As noted in Response FL-D.4 above, comprehensive soil testing has been performed on the Specific Plan Area. A Phase I ESA was prepared for the Project, which determined the type and extent of soil characterization required. That soil characterization was then performed as part of the Phase II ESA. The findings of the Phase II ESA are outlined in Section 4.8, Hazards and Hazardous

¹ As summarized by DTSC Human and Ecological Risk Office (HERO) Note 11, “[b]ackground inorganic elements in soil can prove problematic for risk assessment purposes because these elements detected at a site may be comprised of naturally occurring metals, regional anthropogenic contributions or a site-specific release.” As further delineated in HERO Note 11, concentrations of arsenic in soil not exceeding the background level are not indicative of a site-specific release.

Materials, of the Draft EIR, as well as in Response FL-D.4 above, and found that there were no concentrations of any COC in soil that exceed screening levels for a commercial/industrial use scenario, with the exception of arsenic, which was still substantially below the DTSC Regional Background Arsenic Concentration screening level.

FL-D.7 This comment questions how the JPA determined “which chemicals to test for and which to omit.” As noted in Response FL-D.4 above, a Phase I ESA was performed to determine the extent to which additional testing and characterization of the Specific Plan Area was required. A Phase I ESA consists of a review of all publicly available information pertaining to the uses and history of a site to determine whether any of those uses represent RECs, which may require additional sampling or characterization (typically done in a Phase II ESA). A Phase I ESA typically includes the following:

- Site reconnaissance, or a site visit to observe current and past conditions and uses of the property and adjacent properties;
- A review of federal, state, tribal, and local regulatory databases including, but not limited to, underground and aboveground storage tanks, known or suspected release cases, the storage of hazardous substances and disposal of hazardous wastes including petroleum products, and institutional and engineering controls;
- A review of historical records, such as historical aerial photographs, fire insurance maps, historical city directories, and historical topographic maps;
- A review of state and local agency records, including but not limited to state environmental agencies, Building Departments, Fire Departments, and Health Departments;
- Interviews with current and past property owners, operators, and occupants, or others familiar with the property.
- Interviews with the Report User for title or judicial records for environmental liens and activity and use limitations, specialized knowledge or experience, actual knowledge, commonly known or reasonably ascertainable information, and the reason for the preparation of the Phase I ESA.

Based on this information, the environmental consultant, in its professional judgment, determines which, if any, areas of the site require additional sampling or characterization activities and the COCs and media that should be sampled in those areas. This was the case here, as explained in Response FL-D.4 above, which details the RECs identified by the Phase I ESA as well as the recommendations for further sampling.

FL-D.8 This comment asks why diesel particulate matter was the only substance considered in the Human Risk Assessment. While passenger vehicles would also emit toxic air contaminants, because the passenger vehicle fleet is predominantly gasoline powered, and TAC emission rates from gasoline engines are significantly lower than diesel engine TAC emission rates, the TAC emissions generated by heavy duty trucks result in significantly more risk. Please see Response RA-6.3 for an expanded discussion of gasoline emissions and health risk assessments. Consistent with industry standards, the focus of the HRA is on diesel exhaust as the primary TAC that has the propensity to affect receptors in the vicinity of the Project. All other TACs that may result from passenger vehicles would not generate a greater risk, and in fact, would represent a fraction of the risk for diesel exhaust. Furthermore, the International Agency for Research on Cancer (IARC), which is part of the World Health Organization (WHO), has classified diesel engine exhaust as "carcinogenic to humans" (Group 1) based on sufficient evidence of its carcinogenicity to humans. This classification is in contrast to gasoline engine exhaust,

which is classified as "probably carcinogenic to humans" (Group 2A) due to limited evidence in humans and strong evidence in experimental animals. (Appendix C-4)

- FL-D.9** This comment asks why known contaminants from other soil studies at the base were not tested in the soil studies for this Project. The comment does not further specify or assert contaminants that were not included which should have been included. The activities at the Specific Plan Area were different than other parts of the base. The sampling conducted at the Specific Plan Area as part of the Phase II ESA is consistent with the past activities at the Specific Plan Area, taking into account historical sampling and remediation conducted at the Specific Plan Area. As noted in Responses FL-D.4 and FL-D.7 above, the environmental consultant prepared a Phase I ESA to determine the extent to which additional site characterization was required and which COCs and media should be tested. If other COCs were previously identified at the Specific Plan Area and remediated to the satisfaction of the applicable regulatory agency, the environmental consultant may determine that additional characterization of those particular COCs is not necessary as, following remediation to the satisfaction of the applicable regulatory agency, those COCs no longer represent a risk to future site users. Various areas of the former March AFB has been assessed by the AFCEC for hazardous substances based on the nature of historical usage of these areas, and the likely risk of their release. In each case, assessment plans unique to the area were developed and then implemented under oversight from the following three environmental regulatory agencies: United States Environmental Protection Agency (USEPA), State of California Department of Toxic Substances Control (DTSC), and the Regional Water Quality Control Board (RWQCB). The AFCEC (with regulatory oversight) did not identify the former ordnance facility as needing assessment (AFCEC, 1998).
- FL-D.10** This comment asks why PFAS and perchlorate were omitted in soil testing. With respect to PFAS, please refer to the Recirculated Section 4.8, Hazards and Hazardous Materials as well as Topical Response 3 – Hazards, for a discussion of PFAS. With respect to perchlorate, we have no information that indicates perchlorate would be present in soil on the Specific Plan Area. As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, the proposed Project is located in a former munitions storage area, in which munitions (and later fireworks) were stored indoors in secured concrete bunkers. As part of the Phase I, the concrete bunkers were inspected and the environmental professional noted that the “bunkers are constructed entirely of concrete” and that “[n]o evidence of floor pitting or staining was observed in the bunkers, and the concrete flooring was noted to be in excellent condition.” As such, there is no pathway for perchlorate to the soil. There is no information to indicate that munitions or fireworks were disposed of in the Development Area and no indication that fireworks were manufactured on site and, as such, there is no evidence indicating a release of perchlorate to soil. Please refer to Topical Response 3 – Hazards as well as Recirculated Section 4.8, Hazards and Hazardous Materials, for a discussion of munitions disposal investigations. CEQA does not require speculation. See, e.g. *Laurel Heights Improvement Assn. v Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1137.
- FL-D.11** This comment asks questions related to the contents of the bunkers as well as radioactive materials and chemical weapons. Please refer to Topical Response 3 – Hazards, as well as Recirculated Section 4.8, Hazards and Hazardous Materials, beginning on page 4.8-9, for a discussion of radiological weapons and biological and chemical weapons.
- FL-D.12** This comment asks why soil sampling was only conducted in certain areas on the Specific Plan Area and suggests that a “systematic soil test panel” be conducted “in a grid pattern” over the entirety of

the construction area. As noted in Response FL-D.4 above, a Phase I ESA was performed for the Specific Plan Area, which identified RECs on the Specific Plan Area warranting additional sampling or characterization based on the historic uses of those areas. The findings of the Phase II ESA are outlined in Recirculated Section 4.8, Hazards and Hazardous Materials, as well as in Response FL-D.4 above, and found that there were no concentrations of any COC in soil that exceed screening levels for a commercial/industrial use scenario, with the exception of arsenic, which was still substantially below the DTSC Regional Background Arsenic Concentration screening level. The comment also suggests that migration of COCs may have occurred. There is no data to indicate, and commenter provides no evidence, that any COCs have migrated on site. CEQA does not require speculation. See, e.g. *Laurel Heights Improvement Assn. v Regents of Univ. of Cal.* (1993) 6 Cal 4th 1112, 1137. Given that the concentrations of COCs even at possible source sites identified as RECs are well below regulatory thresholds, there is no reason to test anywhere else. In addition, based on the topography of the March AFB, it is highly unlikely that anything would migrate from the rest of the March AFB up on to the Specific Plan Area.

FL-D.13 This comment lists several hazardous materials that commenter requests be included in the analysis. Please refer to the Recirculated Section 4.8, Hazards and Hazardous Materials, as well as Topical Response 3 – Hazards, for a discussion of PFAS, radiological, and biological and chemical weapons. With respect to perchlorate, please refer to Response FL-D.10 above. Trichloroethylene and perchloroethylene (tetrachloroethylene), also known as TCE and PCE, are volatile organic compounds or VOCs. As detailed in Section 4.2.6 of the Phase I ESA, the only facility within the area of concern of the Specific Plan Area with respect to vapor encroachment is Site 25, at which no VOCs, semi-VOCs, chlorinated herbicides, PCBs, PAHs, organophosphorus pesticides, or nitroaromatics/nitroamines were found in soil. Section 4.2.3 of the Phase I ESA notes that Site 3, which is also in the vicinity of the Specific Plan Area, also had no VOCs, semi-VOCs, chlorinated herbicides, PCBs, PAHs, organophosphorus pesticides, or nitroaromatics/nitroamines detected in the confirmation soil samples. This comment also requests “any information [the JPA] has as to what was stored in the bunkers.” As indicated previously, we understand that the bunkers were used for the storage of munition. For more information on the types of munitions stored in the bunkers, please refer to Topical Response 3 – Hazards as well as Recirculated Section 4.8, Hazards and Hazardous Materials, for a discussion of radiological weapons and biological and chemical weapons.

FL-D.14 This comment questions the treatment of PCB-impacted soil on the Specific Plan Area. As indicated in Response FL-D.4 above, PCBs were sampled in connection with the Phase II ESA and no detected PCBs were reported in 38 of 39 total samples analyzed. One sample was reported to contain 0.009 mg/kg of Aroclor1254, which is below the 0.59 to 0.97 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario. As such, no data was found to indicate that PCB in soil needs to be remediated or otherwise “handled” on the Specific Plan Area.

FL-D.15 This comment indicates that the CEQA requires the lead agency to evaluate and disclose environmental risks and asserts that local residents “deserve to know the potential risks to their health.” The JPA agrees with these comments. The comment goes on to assert that these risks can only be disclosed “with a full evaluation of the Weapons Storage Area.” The JPA agrees with this comment as well and notes that the environmental status of the WSA has been comprehensively evaluated through numerous studies and remediation under the oversight of USEPA, DTSC, and RWQCB as well as through the studies conducted in connection with the Project. Please refer to Responses FL-D.4 and FL-D.9 above, and please refer to

Recirculated Section 4.8, Hazards and Hazardous Materials, as well as Topical Response 3 – Hazards, for a discussion of PFAS, radiological, and biological and chemical weapons.

FL-D.16 This comment requests that “comprehensive soil and weapons bunker testing” be performed to issuance of demolition or grading permits for the area and requests that, if any hazardous materials are “found in the soil or bunker in quantities that could be harmful during the project demolition phase” that such materials be removed. Please refer to Response FL-D.15 above, Recirculated Section 4.8, Hazards and Hazardous Materials, and Topical Response 3 – Hazards. Comprehensive environmental characterization of the Specific Plan Area has been completed and no contaminants of concern in soil were found in concentrations exceeding relevant screening levels for a commercial/industrial use scenario, or for construction worker or residential use scenarios. Multiple documents from relevant regulatory agencies have cleared the Project site for unrestricted use, including the Santa Ana Regional Water Quality Control Board in 2006, which, concurring with a site investigation, indicated that it concurred “with your finding of no release at the site, and the recommendation for no further action for the Weapons Storage Area.” As such, no further remediation or removal activities are required. Please refer to Response FL-D.5 above for a discussion of safety measures to be followed during the construction phase.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MIPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

FL-E.1

FL-E.2

FL-E.3

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

FL-E.4

FL-E.5

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

FL-E.6

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

FL-E.7

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

FL-E.8

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered

FL-E.9

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

FL-E.9

FL-E.10

Form Letter E Response – Project Consistency

- FL-E.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-E.2** This comment raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- FL-E.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative is introduced and evaluated.
- FL-E.4** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative is introduced and evaluated.
- FL-E.5** This comment inaccurately states the Project site is zoned C-2. The March JPA General Plan designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. The Project site has not been assigned a zoning designation per the official March JPA Zoning Map, as shown on Figure 3-3, March JPA Zoning Designations, of the EIR. The comment may be referencing the Project site’s compatibility zone under the March ARB/IPA Airport Land Use Compatibility Plan (ALUCP). Under the ALUCP, the Project site is located within the C1 Primary Approach/Departure Zone and C2 Flight Corridor Zone. The ALUCP provides noise and safety policies governing development of compatible future land uses in areas within the airport influence area.
- FL-E.6** The comment references Planning Process C1F of the Final Reuse Plan and questions public engagement. March JPA used Planning Process C1F to develop the Preferred Land Use Plan outlined in the Final Reuse Plan. The March JPA General Plan was then developed based on that Preferred Land Use Plan. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices. Additionally, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative is introduced and evaluated.
- FL-E.7** This comment questions the Project’s consistency with March JPA General Plan Goal 2, Policies 2.3 and 2.4, which call for discouraging land uses that conflict with the services or plans of adjoining jurisdictions and protecting the interests of local residents and jurisdictions, given the Project’s

significant and unavoidable noise and air quality impacts. The Project is consistent with Land Use Element Policy 2.3 because development of the Project would occur in a logical pattern of growth through the guidance of the proposed Specific Plan, compatible with adjacent land uses to the east and northeast. The Conservation Easement will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. The Project is also consistent with Land Use Element Policy 2.4. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution are expressly identified as allowed uses within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses. As detailed in Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside, and as detailed in Topical Response 4 – Project Consistency, the Project is generally consistent with the Good Neighbor Guidelines for the City of Riverside.

With respect to noise impacts, as disclosed in Section 4.11, Noise, of the EIR, the Project would not generate substantial temporary or permanent increases in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Segment 13, which passes through industrial development and is a non-sensitive receiving land use, meaning that there are no nearby sensitive receptors, including residential uses. As such, this impact, while significant and unavoidable, would not impact any residential or other sensitive uses in the vicinity of the Project. All Project noise impacts to residential uses would be less than significant.

With regard to air quality impacts, the air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for the revised air quality mitigation measures, Section 4.7, Greenhouse Gas Emissions, for the revised GHG mitigation measures, and Topical Response 2 – Air Quality, for the Project’s consistency with the following:

- Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act – Office of the California Attorney General, September 2022
- SCAQMD 2022 Air Quality Management Plan
- U.S. EPA – Mobile Source Pollution: Environmental Justice and Transportation
- World Logistics Center Settlement Agreement Air Quality Measures
- Centerpoint Properties Air Quality Conditions of Approval
- City of Fontana Ordinance 1891 Air Quality Measures

The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

Public benefits provided by the Project would include increased job opportunities for local residents, preservation of open space, extension of the roadway infrastructure and the pedestrian and bicycle circulation system, a new approximately 60-acre public park, and construction of the Meridian Fire Station, at the intersection of Opportunity Way and Meridian Parkway (see Topical Response 6 - Meridian Fire Station, for additional details).

FL-E.8 This comment claims the Project site was never intended to be an industrial zone and references the Final Reuse Plan. The March JPA General Plan implements the Final Reuse Plan and designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. Under the current General Plan land use designations, 85% of the Project site would be slated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. Please see Recirculated Section 4.10, Land Use and Planning, for further discussion of the Final Reuse Plan and March JPA General Plan.

FL-E.9 This comment references the Final Reuse Plan and the March JPA General Plan and states “warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.” The comment further references the draft update to the March JPA General Plan but this document was never adopted. The March JPA General Plan implements the Final Reuse Plan and designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. Under the current General Plan land use designations, 85% of the Project site would be slated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. Additionally, under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations. The proposed Project will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

Further, as detailed in Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside, and as discussed in Topical Response 4 – Project Consistency, the Project is generally consistent with the Good Neighbor Guidelines for the City of Riverside. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing

trails in the Conservation Easement for passive recreational use. The Project is compatible with the surrounding land uses.

The comment also states that the “West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community input.” However, the March JPA General Plan includes warehousing in the definition of Business Park uses. This Business Park definition and the designation of the Project site as Business Park, Industrial, and Park/Recreation/Open Space were included in the March JPA General Plan and Master EIR when it was adopted at a noticed public meeting in 1999. The March JPA General Plan divides land use designations into four general classifications: Industry, Commerce, Special, and Public. Business Park is grouped with Industrial under the Industry classification with the following introduction:

“Two industrial land use designations are established to complement the aviation and employment generating uses. Due to the location of the March JPA Planning Area within the region, available and planned street access, and availability of rail service to the area, industrial designations in the Land Use Plan include industrial businesses, and research and development companies as well as large scale manufacturing uses. The land use designations include Industrial and Business Park which will allow for both large and small scale businesses, light manufacturing and assembly, storage, warehousing, research and development and related uses.”

Uses allowed under General Plan land use designations are not mutually exclusive. The Industrial land use designation under the General Plan does allow for more intensive uses, such as fuel storage and solid/liquid waste facilities. Please note, however, those uses are not permitted under the proposed Specific Plan. The Master EIR for the March JPA General Plan acknowledged that operations and activities within Business Park could include limited industrial. In addition to warehousing, the Business Park definition includes industrial uses such as light manufacturing and research and development centers. Moreover, wholesale, storage and distribution are expressly identified as allowed uses within the Business Park Zoning District, as identified in the March JPA Development Code. Similar to the March JPA General Plan, the Development Code was adopted and amended in publicly noticed meetings. As discussed in Recirculated Section 4.10, Land Use and Planning, since the adoption of the March JPA General Plan in 1999, the Project site has been designated for development.

FL-E.10 This comment expresses general opposition to the Project and summarizes earlier comments. Please see Responses FL-E.4 through FL-E.9, above.

trails in the Conservation Easement for passive recreational use. The Project is compatible with the surrounding land uses.

The comment also states that the “West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community input.” However, the March JPA General Plan includes warehousing in the definition of Business Park uses. INTENTIONALLY LEFT BLANK

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

F-1.1

F-1.2

F-1.3

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

F-1.4

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

F-1.5

F-1.6

F-1.7

F-1.8

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

F-1.9

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

F-1.10

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

F-1.11

It is clear that the immediate region of 630,000 residents doesn’t have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

↑
E-1.11
Cont.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

↑
E-1.12

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

↑
E-1.13

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

↑
E-1.14

Form Letter F Response – Jobs

- FL-F.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total buildout of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-F.2** This comment raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- FL-F.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- FL-F.4** This comment questions the Project’s estimated job generation. The Draft EIR utilizes the Project jobs estimate of 2,595 employees used by Western Municipal Water District (WMWD) in its Water Supply Assessment (Appendix O) for the Project. As discussed in Topical Response 5 – Jobs, the Project on-site employee estimate included within the Draft EIR does not include ancillary jobs. The Project would generate ancillary jobs for approximately 1,027 truck drivers based on the Project truck trip generation. When the Project’s estimated truck drivers (1,027) are added to the Project’s estimated on-site employees (2,595), the Project has an estimate of 3,622 total jobs generated. The Project’s combined jobs estimate of 3,622 conservatively exceeds the March JPA employment ratio estimate (of 3,357) by only 8%, or 265 jobs.
- FL-F.5** This comment states the Draft EIR’s GHG section claims the Project would have a net positive effect because of reductions in commute times. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), contrary to this comment’s suggestion, Section 4.7 of the Draft EIR does not conclude that the Project would have a net positive effect on GHG emissions but rather concludes that with implementation of mitigation measures, the proposed Project would not conflict with any applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. As such, with mitigation the Project would be expected to have a less than significant impact with regard to GHG emissions but would not result in a net reduction in GHG emissions.
- FL-F.6** This comment questions employment wages in relation to area rental rates. This comment does not raise questions, concerns, or issues regarding the environmental analysis in the EIR. Please see Topical Response 5 – Jobs, for a discussion of the regional unemployment, wages, and housing costs.
- FL-F. 7** This comment questions the Draft EIR’s employment assumptions. Please see Topical Response 5 – Jobs, for a discussion of the Project’s job generation and employment assumptions. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), Goal 5 of Connect SoCal is to reduce greenhouse gas emissions and improve air quality. To meet that goal, “Connect SoCal includes a sustainable communities strategy which sets forth a forecasted development pattern

for the region, which, when integrated with the transportation network, and other transportations measures and policies, if implemented, will reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region.” The forecasted development pattern is based on a regional growth forecast that was developed by working with local jurisdictions using the most recent land use plans and policies and planning assumptions.¹

SCAG explicitly found that “For the purpose of determining consistency with Connect SoCal for California Environmental Quality Act (CEQA), grants or other opportunities, lead agencies such as local jurisdictions have the sole discretion in determining a local project’s consistency.” Connect SoCal p. xiv. March JPA determines consistency with Connect SoCal based on consistency with the long-term employment and growth projections. The SCS also indicates that this is a jobs poor area so providing more jobs will actually reduce GHG emissions and reduce VMT as it will provide local jobs to achieve a more favorable jobs-housing balance.

The proposed Project is consistent with the long-term employment and growth projections used by SCAG in the RTP/SCS and is therefore consistent with Connect SoCal. Moreover, the Project does not impede implementation of improvements to the transportation network, and other transportations measures and policies. Therefore, the Project would be consistent with the SCAG’s goal to “reduce the GHG emissions from automobiles and light trucks to achieve the regional GHG targets set by ARB for the SCAG region.”

FL-F.8 This comment questions why the traffic models assumed a 16-mile commute rather than a 21-mile commute. The comment appears to misinterpret the information presented in the Draft EIR on page 4.2-23. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4 of the Final EIR), the discussion notes that for passenger vehicles, the historic CalEEMod default for the trip length is approximately 16.6 miles – however for analytical purposes, the CalEEMod 2022 model defaults were utilized which identify a weighted average of approximately 20 miles. Therefore, contrary to the comment’s assertion, the traffic model did not assume 21-mile commutes would be shortened to 16 miles.

FL-F.9 This comment requests that the EIR include data about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. This request does not raise any questions, concerns, or issues about the environmental analysis in the EIR. Please see Topical Response 5 – Jobs, for a discussion of the regional unemployment, wages, and housing costs.

FL-F.10 This comment says that the number of approved and planned warehouses in the region exceeds the number of available employees in the region and provides a link to the City of Riverside’s economic development data. As discussed in Topical Response 5 – Jobs, Project buildout would occur over an approximately 5-year horizon. The employment growth projections (i.e., forecasts) utilized within the Draft EIR are provided by each local jurisdiction (e.g., Riverside County, City of Riverside, City of Moreno Valley, City of Perris) to the Southern California Association of Governments (SCAG) and based on the anticipated growth in population in Riverside County during the near-term (projected increase of 360,000 new County residents by 2030) and long-term (projected increase of 759,000 new County residents by 2045). As such, additional jobs will be needed to continue to provide employment

¹ <https://scag.ca.gov/read-plan-adopted-final-connect-socal-2020>

opportunities for future residents of Riverside County. The Draft EIR cites SCAG data in which, “48.6% of residents within unincorporated Riverside County work and live in the County, while 51.4% commute outside of the County (SCAG 2019b)”. SCAG identified similar trends for Riverside County as a whole (inclusive of the incorporated and unincorporated areas). Approximately 48.0% work and live in Riverside County, while 52.0% commute to other places (SCAG 2019a). Further, as discussed in the General Plan, March JPA was formed to create jobs within this portion of Riverside County as part of the March Air Reserve Base realignment. Therefore, it is reasonable to assume the jobs generated by the Project could be filled with existing local residents residing within the County, either from the unemployed population or residents looking to reduce their commutes. The comment identifies a jobs/acre rate of 8.8 but does not provide any citation to support this rate.

FL-F.11 This comment provides speculation regarding regional employment and provides a link to the Draft EIR for the World Logistics Center. Please see Response FL-F.10, above. Contrary to this comment’s suggestion, the Draft EIR does not use VMT/employee estimates indicating shorter commutes. As discussed in Section 4.15, Transportation, of the Draft EIR, mixed-use projects such as the proposed Project need to evaluate each component of the Project independently and apply the relevant significance threshold for each Project type (e.g., office, retail). As an alternative, a lead agency may choose to evaluate the Project’s dominant use. For the purposes of proposed Project’s VMT analysis, the dominant uses retail and non-retail (i.e., employment uses such as office, business park, and non-retail mixed use) were considered.

For large projects such as the proposed Project, model-based approach (tour- or trip- based travel demand models) offer the best methods for assessing VMT and for comparing those assessments to VMT thresholds. WRCOG Guidelines identifies Riverside County Transportation Demand Model (RIVCOM) as the appropriate tool for conducting VMT analysis for land development projects in the March JPA planning area. WRCOG is the developer/owner of RIVCOM and recently launched the new modeling tool for use by its member agencies in August 2021. The Project’s VMT analysis was prepared using the latest available version of model, i.e., RIVCOM Version 3.0. The RIVCOM is a trip-based model that has been developed using Southern California Association of Governments (SCAG) Sub-Regional Model Development Tool.

As stated in OPR’s Technical Advisory for evaluating VMT impacts, “Lead agencies can evaluate each component of a mixed-use project independently and apply the significance threshold for each project type included (e.g., residential and retail).” Consistent with OPR’s direction in the Technical Advisory, the VMT metric for retail projects greater than 50,000 sf of gross leasable area is to utilize the metric of net change in total VMT. Therefore, for purposes of this analysis, a significant impact to VMT would occur if the addition of the Project’s retail component would result in a net increase in total VMT for the region. For purposes of the Project’s VMT analysis, the region is defined as a 15-mile service area from the Project site. A 15-mile service area is a conservatively estimated distance from the Project as the retail component is not anticipated as a regional shopping destination but instead is anticipated to serve the surrounding communities of Riverside, Moreno Valley, Perris, etc. As such, the 15-mile service area ONLY applies to the retail component of the Project and not the Business Park and Industrial components of the Project.

For projects that are not residential or retail land use types, the Technical Advisory identifies VMT per employee as the appropriate VMT metric for analysis. Therefore, the Project’s industrial, business park, and non-retail mixed use land uses were evaluated based on the metric of VMT per employee. A significant

impact to VMT would occur if the addition of the Project's industrial/business park/non-retail mixed use components would result in Project-generated VMT per employee to exceed 15% below the WRCOG's baseline VMT. This specifically applies to the non-retail components of the proposed Project.

As shown in Table 4.15-6, Specific Plan Area Non-Retail VMT per Employee Comparison, the regional average VMT in the Western Riverside County area is 29.97 vehicle miles traveled per employee. Under the VMT significance thresholds, a significant impact to VMT would occur if the addition of the Project's industrial/business park/non-retail mixed use components would result in Project-generated VMT per employee to exceed 15% below the WRCOG's baseline VMT, which is 25.47 vehicle miles traveled per employee. Again, this specifically applies to the non-retail components of the proposed Project. As calculated in the West Campus Upper Plateau Vehicle Miles Traveled (VMT) Analysis dated October 11, 2022 (Appendix N-2), and as shown in Table 4.15-6 of the Draft EIR, the Project's VMT would be 24.12, which is less than the established threshold of 25.47 vehicle miles traveled.

FL-F.12 This comment questions the impact of automation and electric vehicle purchases in relation to GHG analysis. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. Additionally, it is speculative to assume transition to an electric personal vehicle fleet. Any future automobile electrification will reduce air and GHG emissions such that the emissions disclosed by the Draft EIR are conservative.

FL-F.13 This comment requests that estimates be made using actual job/population/housing estimates from the last 3 months rather than "7-year-old SCAG projections." Per SCAG's "Current Context, Demographics and Growth Forecast Technical Report, adopted on September 3, 2020, "The regional and county growth forecasts reflect recent and past trends and expert-derived demographic and economic assumptions. As part of the development of the forecast, SCAG met one-on-one with all 197 local jurisdictions to understand each community's vision for the future so that it can be integrated into the outlook for the future of the region. This "best of both worlds" approach ensures the forecast reflects a balance between regional and local expertise as well as a balance between future employment, population and households."² As such, it is appropriate to use SCAG numbers, which take into account past trends, the current situation, and projections from all 197 local jurisdictions (including County of Riverside, City of Riverside, City of Moreno Valley and City of Perris) within the SCAG region.

FL-F.14 This comment requests that single-family residential be considered as an alternative to the Project. Please see Topical Response 8 – Alternatives, where a discussion is provided about the infeasibility of a single-family residential alternative.

INTENTIONALLY LEFT BLANK

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

FL-G.1

FL-G.2

FL-G.3

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

FL-G.4

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

FL-G.5

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

FL-G.6

FL-G.7

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

FL-G.8

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

FL-G.9

Form Letter G Response – Traffic

- FL-G.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- FL-G.2** This comment raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- FL-G.3** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- FL-G.4** This comment expresses concerns about the traffic relative to the 215 Freeway and the 215/60 corridor, cumulative projects, and roadway segment and intersection analysis.

I-215 Freeway and 215/60 Corridor

As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), March JPA has adopted its own guidelines for traffic analysis: the March JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). As March JPA is the lead agency for this Project, the Project Traffic Analysis (Appendix N-2) was developed pursuant to the March JPA Guidelines, rather than the WRCOG or County of Riverside Transportation Planning guidance documents. Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, Caltrans does not utilize peak hour intersection operations analysis and instead utilizes vehicle miles traveled (VMT) in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Guidelines were adopted before the Caltrans VMT Guide and reference superseded Caltrans guidance. The Project VMT Analysis (Appendix N-1) was prepared in compliance with the Caltrans VMT Guide and meets the transportation analysis requirement for Caltrans. Caltrans was notified about the Project through the release of the Notice of Preparation on November 18, 2021. Caltrans also received the Notice of Availability for the Draft EIR when the document was circulated for public review beginning on January 9, 2023. No comments were provided by Caltrans during the scoping period or public review for the Project.

Pursuant to Caltrans safety requirements, the Project Traffic Analysis (Appendix N-2) included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. The Project Traffic Analysis (Appendix N-2)

performed a queuing analysis for these I-215 Freeway off-ramps for all scenarios (Existing [2021], Existing plus Project, Existing plus Ambient Growth plus Project, Opening Year [2028] Cumulative Without Project, Opening Year [2028] With Project, Horizon Year [2045] Without Project, and Horizon Year [2045] With Project). Based on the results of this queuing analysis, there are no study area off-ramps that are anticipated to experience queuing issues under any scenario. Caltrans is one of the state reviewing agencies for the Project and had the opportunity to comment on the transportation analysis. <https://ceqanet.opr.ca.gov/2021110304>. Caltrans did not submit any comments on this Project.

Further, to improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission (RCTC), has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging with the SR-60 Freeway. Another regional facility, the Mid-County Parkway (MCP), is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway.

To address identified intersection/roadway segment deficiencies, Table 1-4 of the Project Traffic Analysis (Appendix N-2) recommends off-site improvements and the Project's fair share contribution thereto. PDF-TRA-4 requires the Project to contribute its fair share as shown in Table 1-4. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. For each analyzed scenario, the Project Traffic Analysis (Appendix N-2) discloses conditions "Without Improvements" and conditions "With Improvements."

Cumulative Projects

As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), to ensure that the Project Traffic Analysis (Appendix N-2) satisfied the March JPA Guidelines, Urban Crossroads, Inc. prepared a Project traffic analysis scoping package for review by March JPA staff prior to the preparation of the Project Traffic Analysis (Appendix N-2). The December 22, 2021 scoping agreement provides an outline of the Project study area, trip generation, trip distribution, analysis methodology, and cumulative project list and map. The agreement is included in Appendix 1.1 of Project Traffic Analysis (Appendix N-2). The scoping agreement was also shared with the County of Riverside, City of Riverside, and City of Moreno Valley for review and comment, and those comments were taken into consideration as part of the Project Traffic Analysis (Appendix N-2). The scoping agreement expressly requested the agencies provide the latest cumulative projects.

The March JPA Guidelines utilizes a 5-mile radius around the Project site for determination of approved and pending projects for cumulative analysis. This is consistent with traffic study guidelines for WRCOG, County of Riverside, and the cities of Riverside and Moreno Valley. The 5-mile radius is intended to capture all of the regional intersections where the Project would contribute 50 or more peak hour trips. This also captures the areas where the Project would have more concentrated air quality and GHG impacts.

The Project Traffic Analysis (Appendix N-2) included cumulative development projects within 5 miles of the Project site that were known at the time of the Project Notice of Preparation, dated November 18, 2021. Both the Stoneridge and World Logistics Center projects are just over 8-miles from the Project site. The Project Traffic Analysis (Appendix N-2) cumulative list was developed in coordination with and reviewed by March JPA, City of Riverside, City of Moreno Valley, and County of Riverside.

Smaller projects and projects located a greater distance from the Project, such as Stoneridge and World Logistics Center, are accounted for through the application of the ambient growth factor. The Project Traffic Analysis (Appendix N-2) added an ambient growth factor of 14.87%¹ to existing (2021) traffic volumes for Opening Year (2028) Cumulative conditions in addition to traffic manually added to account for the listed cumulative projects and proposed Project. Cumulative traffic for Horizon Year (2045) conditions is based on the Riverside County Model (RIVCOM) (a traffic model representing 2045 conditions for the Western Riverside County region), which includes traffic associated with projects such as Stoneridge and World Logistics Center.

Roadway Segment and Intersection Analysis

As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project Traffic Analysis (Appendix N-2) analyzed the Project’s effects on traffic on truck routes, other roadways, and intersections located within March JPA, City of Riverside, City of Moreno Valley, and County of Riverside. The scope of the study area was based on input provided by March JPA, the City of Riverside, City of Moreno Valley, and County of Riverside. Study area intersections at a minimum include locations where the Project would contribute 50 or more peak hour trips (consistent with the minimum standards used by these same agencies). This Project Traffic Analysis (Appendix N-2) included 15 roadway segments (see Table 1-2), including 9 truck route segments, and 38 intersections (see Table 1-1 and Exhibit 1-2), including eight intersections along Alessandro Boulevard, and seven intersections along Van Buren Boulevard. Urban Crossroads, Inc. worked closely with these agencies to determine travel patterns for Project traffic, including truck traffic. As shown on Exhibits 4-1 and 4-2 of Appendix N-2, Project traffic is not anticipated to utilize Krameria Avenue in any substantial way. The Project Traffic Analysis (Appendix N-2) conforms to the March JPA Guidelines and the 2021 scoping agreement.

FL-G.5

This comment expresses concerns about traffic on arterial streets, trucks not following the approved truck routes, and questions what enforcement mechanisms will be used to mitigate traffic. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue to the east. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section

¹ Additional ambient background traffic that is calculated at 2.0% per year compounded annually over 7 years, or 14.87%.

4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

FL-G.6 This comment asks who will ensure that mitigation measures are followed when March JPA sunsets. In response to this comment, please see Topical Response 9 – Long-Term Project Implementation and Enforcement.

FL-G.7 This comment questions how the traffic study would change in actual (versus “ideal”) traffic patterns of truck drivers were taken into account. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), traffic studies provide the best representation of anticipated traffic flows and volumes and are based on data gathered from existing developments and local conditions. The models used are routinely revised to incorporate updated information.

As required by Section 5.5.4 of the March JPA Guidelines, Urban Crossroads prepared figures illustrating the percentage of Project peak hour traffic going to and from various destinations along the transportation network. As stated in the 2021 scoping agreement:

“The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding land uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the March JPA, City of Riverside, City of Moreno Valley, and Caltrans. Truck traffic will be directed to utilize Cactus Avenue to the I-215 Freeway; however, it is anticipated some trucks may use Meridian Parkway to head north or south. Given these differences, separate trip distributions were generated for both passenger cars and truck trips.”

Appendix N-2. At the request of March JPA, passenger car and truck trip distributions are consistent with other March JPA projects within the immediate vicinity. The trip distribution figures were shared with the County of Riverside, City of Riverside, and City of Moreno Valley as part of the scoping agreement for review and comment, and those comments were taken into consideration as part of the Project Traffic Analysis (Appendix N-2).

Charlene So P.E., of Urban Crossroads has worked in transportation planning and traffic engineering since 2002. Since earning her Bachelor of Science degree in Civil Engineering from the University of California, Irvine, Ms. So has developed a wide range of expertise in transportation planning and traffic impact analyses. She is a registered professional traffic engineer in the State of California. Ms. So is

an experienced project manager leading the traffic group and traffic engineer who is familiar with the analysis techniques of the most current Highway Capacity Manual. Further, March JPA, the County of Riverside, City of Riverside, and City of Moreno Valley are experts with regards to traffic flow and patterns within their jurisdictions.

Regarding truck route enforcement, please see Response FL-G.5, above.

FL-G.8 This comment questions existing truck route compliance and burden of enforcement. Regarding truck route enforcement, please see Response FL-G.5, above.

FL-G.9 This comment requests that the traffic study be redone to reflect actual conditions. Based on the Responses FL-G.1 through FL-G.8 above, the traffic study does not require any revisions or additional analysis to reflect actual conditions. No further response is provided.

Subject: West Campus Upper Plateau DEIR

Mr. Fairbanks -

The West Campus Upper Plateau DEIR was released this evening, and the March JPA is holding a public comment meeting on Weds. 1/11 at 6:30 pm.

Would you please confirm that public comments made at the 1/11 public meeting , whether in person, via zoom, or in writing, will be included in and responded to in the FEIR? Please also include all those giving public comment in any future notices of meetings or notices availability of documents related to this DEIR,

I-1.1

Thank you.

- I-1.1** This comment requests confirmation that all public comments made at the public meeting for the Project held on January 11, 2023, will be responded to in the Final EIR. The comment also requests that all commenters be given notice of future public meetings or availability of documents associated with the Draft EIR. All comments made at the public meeting held on January 11, 2023 are included and responded to in the Public Meeting Responses to Comments subsection within this volume of the Final EIR. Members of the public who have requested to be added to the distribution list for the Project will receive a notice for all public matters associated with the Project. This comment does not include any specific issues or concerns regarding the environmental analysis in the Draft EIR; as such, no further response is provided.

Subject: West Campus Upper Plateau Draft EIR comment

Dear Mr. Fairbanks,

Thank you for alerting me to the release of the Draft EIR. I will be following up with the community, and I will likely be submitting multiple comments, but here is my first one.

I want to submit to the public record our online petition: www.change.org/no-more-warehouses

I submitted this petition, which is just shy of 2,800 names this morning, back in May to the Commission. Riverside Neighbors Opposing Warehouses (R-NOW) has been diligently engaging in public processes, attending developer meetings, speaking at Commission meetings, and using whatever mechanisms we have to alert the March JPA to our opposition to industrial development on the West Campus Upper Plateau for the past 10 months.

I-2.1

I am disappointed that none of your alternate plans consider land use other than industrial development. There is no consideration of an office park with high-tech jobs (as you originally planned for the area in your Draft General Plan 2010), nor do you consider solar panels as some community members have suggested multiple times in public comments. Our suggestions and concerns have been repeatedly ignored. The only thing for which our community can unanimously agree is that we do not want industrial warehouses, let alone an industrial warehouse complex, built on that land. Your alternate plans do not consider our feedback.

I-2.2

You are a public agency charged with repurposing taxpayer land. You have a responsibility to meaningfully engage the public. You cannot announce to someone that you will set fire to their house and then claim to have meaningfully engaged them because you gave them a public forum to make their pleas before you burned it down. We want you to actually respond to the public's concerns, not merely hold meetings where we can express them.

I-2.3

Please do better.

Thank you.

Sincerely,

Jen Larratt-Smith
Riverside Neighbors Opposing Warehouses (R-NOW)

Letter I-2

Jen Larratt Smith
January 10, 2023

- I-2.1** This comment includes a link to a petition to March JPA opposing the Project. No specific comments or questions on the environmental analysis in the Draft EIR are included in this comment; as such, no further response is provided.
- I-2.2** This comment states that the Draft EIR does not consider non-industrial alternatives, such as office park uses or solar panels. The commenter requests that additional alternatives be considered. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated. Further, the draft specific plan allows numerous non-industrial uses within the Business Park and Mixed-Use districts, including financial institutions, government offices, medical clinics, business and professional offices, regional and corporate offices, and research and development. In fact, many of these uses, including government offices, medical clinics and research and development are also allowed uses within the Industrial district. Regarding solar, due to the Project site's proximity to March ARB/IPA, solar photovoltaic systems require approval by the Riverside County Airport Land Use Commission and March ARB to ensure such systems do not interfere with airport operations. Rooftop solar for the Project was assumed and included within the analysis and evaluation throughout the Draft EIR. MM-AES-3 requires the submittal of a glint and glare study to the Riverside ALUC and March ARB for review and approval. Revised MM-GHG-1 requires the Project to generate 100% of the buildings' power requirements, or the maximum permitted by the Riverside ALUC.
- I-2.3** This comment is conclusory in nature and does not raise any specific issues or concerns regarding the environmental analysis in the Draft EIR; as such, no further response is provided.

Lenora Mitchell	Riverside	CA	91766	US	3/31/2022	"Riverside or Warehouse-side : where do you want to live?"
Violet Rugh	Pomona		91766	US	4/1/2022	"We need open land."
kevin castellanos	College Park	MD	20740	US	4/1/2022	"More parks, orange groves, and housing. No more warehouses, mundane jobs or cheap labor!!!"
Esther Cervantes	Riverside	CA	92507	US	4/2/2022	"We do no need more warehouse near our homes."
Cheryl Voss	Riverside	CA	92506	US	4/2/2022	"Our streets and highways are already neglected and traffic is horrid. As residents, the last things we need or want are more pot holes caused by trucks and an infrastructure that can't support the increased traffic."
Jiovanni Hernandez	Mead valley	CA	90220	US	4/2/2022	"Stop building so many warehouses."
Karissa Hammar	Riverside	CA	92501	US	4/2/2022	"There are already too many warehouses in our area. I enjoy looking at and walking in and around the areas of nature. They improve my quality of life."
MARisol Lomeli	Woodland Hills	CA	91367	US	4/2/2022	"I love sycamore"
Cindi Robertson	Lake Forest	CA	92630	US	4/2/2022	"Riverside has enough warehouses and not enough nature areas. This is not needed and only wanted for financial greed."
Kelly Wrightstone	Riverside	CA	92508	US	4/2/2022	"No more warehouses!"
Jennifer Stoever	Riverside	CA	92508	US	4/2/2022	"We need wilderness areas to walk and bike!!"
Elizabeth Young	Riverside	CA	92508	US	4/2/2022	"We have more than enough warehouses! We need open spaces for families to enjoy recreation. Bike paths, walking, fishing, etc. Orange County has some beautiful open spaces for families amid their concrete so we can too!!!"
Priscilla Adair	Riverside	CA	92508	US	4/2/2022	"I live in this neighborhood, and the big trucks coming through for the warehouses are destroying our streets"
charissa adams	riverside	CA	92504	US	4/2/2022	"The area doesn't need more semi truck traffic and smog. Don't decimate the land our wildlife has left"
Rose Daniels	Temecula	CA	92591	US	4/2/2022	"I work in Riverside. More warehouses will"

Tracie Rodrigues	Riverside	CA	92507 US	4/3/2022	"There are no places to walk or play anymore"
sherry miller	Riverside	CA	92508 US	4/3/2022	"I live here and I don't want to live in an industrial zone"
tina ely	Corona	CA	92882 US	4/3/2022	"Stop building industrial buildings a majority of them sit empty for years build more walking areas for hiking and for biking. How about a big park for our kids to play i was in AZ and there Parks are beautiful for kids."
Noelle Chamberlain	Riverside	CA	92501 US	4/3/2022	"We need some natural, open space in this city preserved before it's all gone!"
Claudia Cervantes	Riverside	CA	92506 US	4/4/2022	"Our children need the nature, why take that away from them?"
Dianna Hentzschel	Perris	CA	92571 US	4/5/2022	"We have enough warehouses and traffic in this area. We need to keep some recreational area of active and healthy."
Sherry Marshall	Riverside	CA	92653 US	4/5/2022	"My father was an avid mountain biker and enjoyed this place so much. He spent that last moments of his life on these trails. He built a community of friends and spent time with them on this trail, enjoying the city he lived in, the wildlife out on these trails. You can see the warehouses encroaching on this are and it would be terrible to loose these recreational areas and all the amazing wildlife that live and thrive in this natural area. You would displace an ever decreasing amount of area that is home to this wild life. Some amazing huge birds that nest in the trees out here. Please keep it wild and open."

Sherry Marshall	Riverside	CA	92653 US	4/5/2022	"There are so few places for people to go and just enjoy time away from city life without packing up and going away. This area also gets the community out there moving and meeting others in their community. Please don't take this area for warehouses. The wildlife that this undeveloped area houses is amazing and so beautiful. You would be displacing so many. What a shame losing this trail would be. Please share on your FB pages and social media accounts."
Rafael Jimenez	Riverside	CA	92508 US	4/5/2022	"I'm signing because my neighborhood is going to be directly affected by these warehouses. If built as planned, these mega-warehouses will be surrounded by homes on three sides, including mine. This undeveloped area is the only buffer left between our neighborhoods and the hundreds of warehouses going up by the 215 Freeway, south of the 60 Freeway interchange."
eric Walker	riverside	CA	92508 US	4/6/2022	"Enough is enough. We need wilderness to thrive not useless buildings serving people who live in areas without warehouses and a Better Quality of life! We want and deserve better."
dawn villavicencio	Riverside	CA	92508 US	4/7/2022	"I want to keep the peace and quiet that we all currently enjoy, keep the wildlife and serenity that nature provides"
ang mum	Riverside	CA	92508 US	4/7/2022	"No more warehouses"
Kristy Bauer	Riverside	CA	92508 US	4/7/2022	"This lot is directly behind my backyard"
Helena Craig	Riverside	CA	92587 US	4/7/2022	"We do not need anymore warehouses or wildlife being destroyed!"
Maria Garde			US	4/7/2022	"That open space is lovely right behind the church and a testament to God's serenity. We don't need more traffic, pollution, etc."
Amanda Gomez	Riverside	CA	92508 US	4/7/2022	"No more trucks up Van Buren."

Gabriela Mendez	Riverside	CA	92503 US	4/8/2022	"I would like to preserve this green space and warehousing should not be placed next to sensitive receptors!"
Gina Binhimaid	Pompom121@live.com	CA	92508 US	4/8/2022	"Too much traffic and pollution already!!"
Michael Kaudze	Riverside	CA	92505 US	4/8/2022	"We don't need the warehouses. Keep the land green."
Terry Smith	Los Angeles	CA	90026 US	4/8/2022	"Our land needs our protection. There's enough traffic and whearhouses. Keep them out of our neighborhoods!"
Victoria Bavier			US	4/8/2022	"My family uses these trails every single day either to walk our dogs, run, bike, or hike. It would be a shame to lose this beautiful preserve!"
Marc Feldstein	Riverside	CA	60030 US	4/9/2022	"We live kiddie-korner to the barton/alessandro distribution center.1. Barton goes only 2 blocks north and south of alessandro. There is no room for this development.2. This puts a significant burden on public safety where the police department is lacking 20 officers and the fire department would need to engage in multiple change of quarters once the site is complete.3. The area has significant, severe vehicle accidents and this will only make that worse.4. A common concern on highways and local streets is semi trucks and this doubles or triples the semis in the area."
Mark Lien	Riverside	CA	92508 US	4/10/2022	"I do not want warehouses by the old March ammunition storage area."
Doug Bailey	Riverside	CA	92503 US	4/14/2022	"No more warehouses, no more traffic, no more people"

Gary Williams	Riverside	CA	92508 US	4/16/2022	"I have lived in this area for 16 years, and I frequent this area on my bike several times per week. As warehousing proliferates in this area, and more open space gets built on, the disappearing habitat for wildlife is creating a litany of impacts for those threatened species, and for local residents and pet owners as well. These are open spaces that will disappear forever."
Aaron Rolens	Riverside	CA	92508 US	4/19/2022	"The warehouse development around here is ridiculous."
Sandi Cabrera	Riverside	CA	92508 US	4/20/2022	"Pollution, traffic, displacement of precious wildlife(hawks, eagles, coyotes and protected species KRats. Too close to schools, churches and parks- (diesel fumes.) Ruining our community and decreasing property values."
Jill McCormick	Riverside	CA	92505 US	4/20/2022	"I'm glad to see a petition about this as it's been a concern of mine and the negative impact on surrounding neighborhoods as well as the wildlife. It might be super helpful to others if a clear map or full description of the boundaries was included with the petition pages."
Sara Sara A Martinez	Riverside	CA	92508 US	4/23/2022	"I oppose the building of more warehouses as it will have a negative impact on wildlife and cause more pollution."
Stacey Guzman	Lake Elsinore	CA	92530 US	4/25/2022	"My daughter is on the mountain bike team at Woodcrest Christian and the team practices twice a week. It's so Nice to see young kids out around nature."
selena wilson	Riverside	CA	92503 US	4/27/2022	"No more warehouse! Enough already. NO!!!!"
Sara Lopez	Riverside	CA	92506 US	4/28/2022	"i want to keep riverside green"
Alma Brigandi	Corona	CA	92880 US	4/28/2022	"To much traffic"
Ashley Trumbull	Riverside	CA	92503 US	4/28/2022	"This is our home we need a nice area not to be run down."

Kevin Conklin	Riverside		92504 US	4/28/2022	"I don't want gross air and noise pollution in their back yards. In a canyon where all the noise will be amplified and carry well past the homes on the edge. Enough of Fontana is already here."
Corinne Perez	Riverside	CA	92508 US	4/30/2022	"The City, Joint Powers and Developers can say or work for the outcome they want. How can an environmental study be completed when the warehouses and traffic of 3500 jobs are not here yet? There are plenty of empty warehouses. Think about that, City Counsel espoused at a meeting last year that we should be grateful this will bring 3500 jobs to the area. Presently, there are plenty of jobs that employers can't fill. This means 3500 cars and trucks in our neighborhood all competing for access to and on 215 or Van Buren. Our neighborhood is locked in and does not have enough emergency egress/ingress. Once it is allowed, we won't know the damage to the local population until well after this project is complete, people and property has been damaged, making it too late. They should review environmental studies of Los Angeles neighborhoods that have truck freight traffic. There is plenty of vacant desert land, move out."
Connie Austin	Perris	CA	92570 US	4/30/2022	"I like rural"
Eunice Ramirez	Perris	CA	92570 US	4/30/2022	"Ton many warehouses that are polluting the air."
Toni Sandell	Riverside	CA	92503 US	5/1/2022	"The VOTERS in this area are being ignored by our politicians who are bowing to big money."

Peggy Matthews

Riverside

CA

92507 US

5/2/2022 "This is ridiculous!!! Isn't there enough warehouses in Riverside area already? Or in the I. E. area period? STOP THE HOUSING AND COMMERCIAL BUILDING ALREADY! You are taking homes from what little of wild life we have left in Riverside. It's bad already that the wild life is having to come deeper into city limits looking for food or a place to make a home. It won't be much longer before our coyote's, road runners, snakes, bob cats, etc end up on the endangered species list because they are being kicked out of their natural habitats and being forced to go deeper into the city, which then puts them at more risk of being killed. It's sad to look around here and see all the unnecessary buildings that once were beautiful wild life areas. Where do you expect Riverside residents to jog, bike, walk, or even hike? Let me guess the bike trail near Fairmount Park? I think not. It's more dangerous now than I ever known it to be and I was born in Riverside and raised here. I've been here 40 years. And what about our health,"

Rose Cook	Riverside	CA	92507 US	5/2/2022	"Riverside is irresponsibly approving warehouse developments adjacent to residential neighborhoods with no regard for the people who live there. They even put one in my neighborhood, right across the street from a middle school. "Legal" doesn't make it right. Nobody invests in a home expecting a massive warehouse next door, with all of the truck traffic and pollution they bring. This has to stop! We need careful, thoughtful planning that respects human health, quality of life, and our environment!"
N V	Panorama City	CA	91402 US	5/4/2022	"Nou Verrett"

M E	Riverside	CA	92508 US	5/4/2022	"Quality of life matters...noise, pollution, traffic congesting our already packed roads, impacting the streets our children travel to school on and family neighborhoods."
Michele Cole	Riverside	CA	92508 US	5/5/2022	"I live in this neighborhood and this will take away the safe area we have. The park, baseball and softball fields won't be safe for our children to play at anymore due to the additional traffic on our streets!"
Marie Rodriguez	Riverside	CA	92508 US	5/5/2022	"I agree with the statements about residents should come first We all knew living here would mean MILITARY planes, and, we learned that the almighty dollar was so important that we were not talked to about 2 ups and 3 Amazon planes every day. So now they want to allow truck traffic right in our front door. Oh they'll say they are going to make it difficult for trucks, but, how many times have you seen trucks make a U-turn on Meridian and go north on Van Buren heading to the 91. We were promised shopping on Van Buren and Barton Instead we get more vacant warehouses. When does it stop. March stopped being an active base before I moved here in 1995. So it's BS about jobs it's about filling up the buildings. Anyone who tries to get around here during school arrivals and departures knows what a mess that is, now add more trucks in the neighborhoods and no one will be able to move. As it is now in the morning's btw Van Buren and Allesandro on Trautwein it can take 30-45 minutes to go 2.5 miles. At th"
James Thomson	Moreno Valley	CA	92555 US	5/6/2022	"The 1st phase already killed most of my view, "The reason I bought it in the 1st place over 20 years ago when it was a Stephens Kangaroo preserve and would never be developed!!!!!"

Sally Quintana	Riverside	CA	92508 US	5/8/2022	"We don't need any more warehouses! Don't need the additional traffic!"
Sharon Gate	Riverside	CA	92508 US	5/11/2022	"I don't want anymore where houses near my home!"
Margaret Gate	Corona	CA	92882 US	5/11/2022	"We need the natural wilderness areas for hiking, biking and wildlife."
Prisela Gonzalez	Riverside	CA	92508 US	5/14/2022	"Because I choose to live here because of the openness and nature around us. Can't even see the mountains anymore"
Marcine McBride	West Babylon	NY	11704 US	5/15/2022	"Too much development is destroying the ambiance of people's neighborhoods, destroying the environment, and driving wildlife to extinction. It's creating more air pollution, light and noise pollution, soil and wastewater pollution, traffic congestion, heat, and garbage. The people already living there have the rights over the developers who want to destroy this land."
Suzanne Page	Riverside	CA	92508 US	5/15/2022	"Why the constant need to build on open spaces? Drive down Van Buren and you'll find that there are already too many warehouse's. The "jobs" are low paying and the environmental impact is too great. Certainly our city leadership can do better."
Kaitlin Munoz	Riverside	CA	92507 US	5/16/2022	"We dont need more warehouses around our home!"
Hector Luna	Nuevo	CA	92567 US	5/16/2022	"No more warehouse"
Crystal Blystone	Moreno Valley	CA	92553 US	5/16/2022	"I am a resident of Moreno Valley and I do not believe building warehouses brings more jobs to Moreno Valley. A warehouse job is not promising and it will only create more people commenting to our city. This is create worst air and road conditions. This is not a good use of land and should not be continued to be built. We already have too many warehouses and some are empty."
Mayra Sigalaandrade	Moreno Valley	CA	92553 US	5/17/2022	"A lot of warehouses but low income salaries"

Gerri Vaughn	Corona	CA	92882 US	5/17/2022	"Gerri vaughn"
Manny DeBaca	Riverside	CA	92506 US	5/17/2022	"I want to keep open spaces for my grandchildren and their kids. Riverside is already to crowded. We need to keep open spaces open."
Teresa Chavez	Moreno Valley	CA	92555 US	5/17/2022	"These warehouses are bringing the value of our homes down, the traffic is insane in the mornings and the make our city ugly!"
Jonathan Mota	Perris	CA	92570 US	5/17/2022	"They should put real things that could make the cities look nice and help out local cities"
Nidia Santiago	Moreno Valley	CA	92555 US	5/17/2022	"I am a concerned and affected resident"
Hector Rodriguez	Moreno Valley	CA	92553 US	5/17/2022	"Hector Rodriguez"
Elias Valencia	Riverside	CA	92505 US	5/17/2022	"Somethings are more important than money!"
Claudia Rodriguez	Bloomington	CA	92316 US	5/17/2022	"Building warehouse worsens quality of air and creates high traffic of semi trucks. The community does not benefit by having tons of warehouses. We want to protect the wildlife and the environment."
Lorena Alvidrez	Moreno Valley	CA	92555 US	5/17/2022	"Because i live near these damn warehouses!! Truck drivers in our neighborhoods!! Absolutely ridiculous"
Davin Tate	Moreno Valley	CA	92557 US	5/17/2022	"I would like more actual restaurants grocery stores shopping malls built instead of warehouses"
Audrey Sanchez	Riverside	CA	92501 US	5/17/2022	"We don't need more empty warehouse. Make more homes parks etc fir the cummunity!"
Bryanna Gonzalez	Nuevo	CA	92567 US	5/17/2022	"It's bad for our health"
Hector Bautista	Riverside	CA	92508 US	5/17/2022	"Tired of all these new warehouses polluting and bringing traffic and affecting the wild life (birds) out here."

William Jones	Riverside	CA	92509 US	5/17/2022	"i'm signing because there is no reason for these warehouses to destroy what little nature we have left. Riverside sets itself apart from the surrounding cities because it isn't completely overrun by warehouses like Moreno Valley, Fontana, Bloomington, etc. We aren't in need of the extra jobs, and instead we should be focusing on the existing opportunities that lie in our city's long-standing businesses."
Desiree De La Rosa	San Jacinto	CA	92583 US	5/17/2022	"we have enough to warehouses >:(it's bad for the native animals"
Naomi Sampson	Sonora	CA	95370 US	5/18/2022	"I moved away from the area a couple of years ago and whenever I visit I was so excited for all the memories. Hiking! The animals! The overall outdoor experience that I grew up on and every time I visit the fields I once knew are filled with new buildings, housing, warehouses, etc! The Burroughs in Moreno Valley are already being pushed out and losing there homes and now this. When will it end? Children and families deserve the ability to enjoy the outdoors close to home and the animals deserve to keep their homes."
Nancy Garcia	Perris	CA	92571 US	5/18/2022	"WE NEED DIFFERENT TYPES OF BUILDINGS NOT JUST WAREHOUSES ITS SO ANNOYING THAT OTHER CITIES GET NICE RESTAURANTS OR MORE STORES BUT WE GET MORE ANNOYING WAREHOUSES"
Yadira Camarena	Riverside	CA	92508 US	5/19/2022	"No more warehouses. We have too many of them already"
Gerardo Gonzalez	Ontario	CA	91761 US	5/19/2022	"Moreno Valley doesn't need anymore warehouses."
Jason Gonsman	Riverside	CA	92505 US	5/21/2022	"I'm a mountain biker and this area is pack with so many animals and birds."

Sara Amend	Riverside	CA	92508 US	5/21/2022	"We've been walking this area for years. A peaceful getaway from traffic & crowds. Warehouses don't need to take up every available piece of land around us."
Mark Lien	Riverside	CA	92508 US	5/22/2022	"No more warehouses next to our homes. Does this ward pay the highest real estate taxes in the county? Is it not enough to keep the land undeveloped?"
Cheryl Gutierrez	Moreno Valley	CA	92557 US	5/22/2022	"We already have too many warehouses & trucks to go with them!"
Lon Walcker	Riverside	CA	92508 US	5/25/2022	"The mandate to replace lost jobs has been met with millions of square feet of warehouse space recently built on appropriate flat land in the "corridor". This goal has been met and should eliminate any economic pressure for more warehouses. This piece of remaining land that hasn't been built out yet would require massive grading of the hills and valleys to accomodate huge buildings and massive truck traffic, virtually eliminating an entire ecosystem. What sort of city builds vibrant communities around existing open space (federal land) then later decides to put warehouses and trucks in the center of it all?WTF?"
Rigo Estrada	Riverside	CA	92508 US	5/30/2022	"The condition of Van Buren is disgusting, if they can't afford to repave it,they should stop the big rigs from using it and now they want to add more commercial vehicles to itNo thank you"
Renee Hill	Riverside	CA	92503 US	6/1/2022	"I value my health, neighborhood and environment.If we don't stand now we will loose it to the politicians who chose money over people!!!"
Denise Stephenson	Riverside	CA	91767 US	6/11/2022	"I don't want warehouses built in this area. We have enough of them."

Karen Renfro	Riverside	CA	92501 US	6/29/2022 "Warehouses are not compatible with residential, parks, schools, libraries, churches, hospitals, nursing homes, community stores, business districts, farming, ranching, fruit orchards, vineyards, flood zones, earthquake zones, etc. They should be built somewhere far away from urban areas and anywhere nature is known to exert itself in ways destructive to man's intrusions. Truck traffic should be banned in residential and commercial areas."
HARRY KNAPP	Riverside	CA	92507 US	7/13/2022 "I am twenty-five years resident of Riverside. I agree with the goal of this petition."
Karen Kinstley	Riverside	CA	92504 US	8/2/2022 "I feel it is wrong to build on land that wildlife use."
April Glatzel	Riverside	CA	92506 US	8/4/2022 "I'm signing because Riverside has enough warehouses. More warehouses will contribute to more noise and air pollution, traffic, and the desecration of our open wildlife spaces. Enough is enough already!"
