The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small).

Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area?

Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics.

Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based?

I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit.

This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically.

It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission.

The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

Please don't allow one final grand act of poor land use planning be your lasting legacy.

I await your detailed response.

Sincerely,

Maria Estabrooks

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service.

Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level.

I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence.

The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Maria Estabrooks

Sent: Wednesday, March 1, 2023 7:54 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted.

I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area?

Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers.

I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks.

Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Maria Estabrooks

From: Tyftun20 <Tyftun20@protonmail.com>
Sent: Wednesday, March 1, 2023 7:59 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections.

It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year.

Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density.

Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents?

Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community

relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v).

In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses.

The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat. Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated, “The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear.

The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol.

The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Maria Estabrooks

Sent: Wednesday, March 1, 2023 8:04 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside.

The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR.

The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development.

Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund.

At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts.

Can you explain why these mitigations were not considered in the DEIR for this site? We would ask for significant mitigations to be put in place to reduce the impacts on local residents. 1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents) 2. Do not allow blasting - the disturbance

of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing. I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I

am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031.

I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

INTENTIONALLY LEFT BLANK

From: Tyftun20 <Tyftun20@protonmail.com>
Sent: Wednesday, March 1, 2023 8:07 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects.

You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account.

Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods.

This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area.

Thank you!

Sincerely,

Maria Estabrooks

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000%2

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

Having studied the effects of land use on the expected survival of a local species (Stephens' Kangaroo Rat), I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Senanu Spring-Pearson

Letter I-428

Senanu Spring-Pearson

March 1, 2023

I-428.1 This comment letter is a variation of Form Letter C – Biological Resources with an addition to the second paragraph expressing concerns about the shrinking of open space and destruction of habitat, and the effects of land use on the expected survival of a local species. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), Stephens' Kangaroo Rat is presumed present on the project site. As discussed in Section 4.3, Biological Resources, of the Draft EIR, project impacts on this species were addressed as part of the March Air Force Base closure USFWS Section 7 consultation (BO 1-6-99-F-13) and CBD Settlement Agreement (S.D. Cal. No. 09-cv-1854-JAH-POR). Pursuant to those agreements, 664 acres of lands were placed into conservation easement to offset potential species habitat losses due to development of project site and other 'developable lands'. Additionally, the CDFW reviewed the USFWS BO decision and issued a consistency determination (2080-1999-056-6) stating that "Biological Opinion No. 1- 6-99-F-13 is consistent with the California Endangered Species Act (CESA) as to anticipated take of the least Bell's vireo and Stephens' kangaroo rat" (CDFW 1999). Additionally, the USFWS and CDFW confirmed in 2006 that the areas taken out of the "Stephens' kangaroo rat management area" were no longer part of the core reserve and incidental take was authorized within these areas pursuant to the HCP (USFWS/CDFG WRIV-3259.5). The existing Conservation Easement will be expanded to include the Upper Plateau Conservation area acreage. Funding will be established by the Developer upon the expansion of the existing Conservation Easement. Thus, incidental take of Stephens' kangaroo rat on the project site is permitted and potential Project direct impacts to Stephens' kangaroo rat are less than significant. With implementation of MM-BIO-1 (Best Management Practices) and MM-BIO-4 (Stephens' Kangaroo Rat Avoidance and Mitigation), Project construction-related indirect impacts to Stephen's kangaroo rat would be less than significant. With implementation of MM-BIO-3 (Operation-Related Indirect Impacts to Special-Status Wildlife), operation-related indirect impacts to Stephen's kangaroo rat would be less than significant. All other text within the letter remains the same as Form Letter C. As such, in response to this comment, please see Form Letter C Response.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Senanu Spring-Pearson

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Sent: Wednesday, March 1, 2023 4:16 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sent: Wednesday, March 1, 2023 4:16 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Senanu Spring-Pearson

From: Senanu Pearson <senanu.pearson@gmail.com>
Sent: Wednesday, March 1, 2023 4:16 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,9agV82jGtjFgG2hobrprvFASPGYzi2cvHhur47P44_9XpgJNINgAN7_i8kvdc1KziR9XO_L8CLa0sgLvgxKO7-m_B8rdr4RtSE2QhTmmU55GfEjXuWpRNw,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,gUxnbBHUQIAO3iBkNHts99KScqx0MMAxcKScs4-yQ_giL4YVfz55HTThNzEjL3DK_gQuPjJH0MVa6c_WEZfCvcTuipyBF4tDrRDNwiDfuoESsYMJ&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Carlos Lliguin

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Carlos Lliguin

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would generate over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

I-440.1

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-440.1
Cont.

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

To show you just how often trucks travel on Alessandro Blvd already (past the "nothing over 4 axles" sign), I attach here some photographs of the trucks on this route taken on the 7:30 commute since September 2022. We already have a problem with trucks traveling on our roads, and your proposed traffic enforcement measures are insufficient. Without real traffic calming measures that are enforced by the police, this problem will get even worse.

I-440.2

Sincerely,
Carolyn Rasmussen
19597 Denair Court, Riverside, CA 92508

Letter I-440

Carolyn Rasmussen

March 2, 2023

I-440.1 This comment is Form Letter G – Traffic with one non-substantive text modification in the introductory paragraph: “site” is replaced with “generate.” This added text does not raise any new or different environmental issues than what is already included in the form letter. As such, in response to this comment, please see Form Letter G Response.

I-440.2 This comment raises concerns regarding truck route enforcement and includes ten photos purporting to show trucks violating the “nothing over 4 axels” sign posted on Alessandro Boulevard. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway.

Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. (Appendix N-3)

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Kristin Fyfe

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,_x9uh4HUa2PhvHtE4FMMmYAlaw4OsH-KRj69YsT4z2w-XCfUGdkVPPNi_Cd0t7F9HRlxsWKY9gdD9o-1sD-hXt9p2NiIM5EYSFRy_HDpdm3FONumhEI5AY0,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,ZJhXOz3fwqq2BhG9s-JTrPL1nbal4fWhv5ESOY9lspGuF-q21J0OWClaabN0rfZeUkXelvWzBrT9dxeLs3fZNw-5b4ZtQpwKWKZ9qo9Tsu24M8Hn&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Peter Pettis

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Peter Pettis

INTENTIONALLY LEFT BLANK

From: Peter Pettis <pettis.peter@gmail.com>
Sent: Thursday, March 2, 2023 7:35 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Peter Pettis

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Peter Pettis

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Peter Pettis

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Peter Pettis

Sent: Thursday, March 2, 2023 7:35 AM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

As a concerned, longtime resident of Orangecrest and a member of R-Now (Riverside Neighbors Opposing Warehouses), I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau.

I have serious concerns regarding the proposed project's long-term ownership and maintenance. This proposed project is in an area outside the City of Riverside.

Nowhere in the March JPA West Campus Upper Plateau Draft Environmental Impact Report (DEIR) is long-term ownership and maintenance of the completed project discussed. There will be roads to be maintained, landscaping, park and playgrounds, parking lots, etc. The City of Riverside has not claimed this property.

My concerns are as follows:

- **Who will inherit this land when the March JPA sunsets?**
- **If this has not yet been determined, who will be responsible for holding the developer accountable for mitigation measures? How will the March JPA ensure that there is follow-through for agreed-upon terms in the EIR?**
- **Who will be in charge of enforcement if the occupants violate agreed-upon terms of the EIR (traffic flow, operating hours, etc.)? What will the enforcement mechanism be?**

I-459.1

Without established terms and accountability for maintenance and enforcement, the public is concerned that there simply won't be any.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Susan Nipper
Longtime Orangecrest Homeowner
Member of R-Now (Riverside Neighbors Opposing Warehouses)

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and demand that the project applicant be required to make every effort to preserve endangered and threatened wildlife and plant-life in the area.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDB.
2. Are any of the wildlife studies over a year old? The final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant-life

1. Why is the coastal scrub documented in some parts of the DEIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant-life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why was the plant survey conducted during a drought year? How can the DEIR claim it is absent or assess the significance of impact unless its absence has been documented during a year and season of normal rainfall, when the rare plant life would be able to grow?

Given these deficiencies, I demand that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also demand that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that the project will not be destroying rare plant life unless a more thorough survey is conducted.

Finally, I demand that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can the public be assured that these mitigation measures will be enforced?

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPJA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section are highly disconcerting. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than diesel particulate matter will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous military use of the project construction area.

Please specifically address the following items:

1. How did you determine which chemicals to test for and which to omit? Why was diesel particulate matter the only substance considered in the "Human Risk Assessment" section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the weapons bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long timeframe since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I demand that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any others that may have been stored in the weapons bunkers. I also demand that you share with the public all information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil will be treated, given its high concentration.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health, and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I demand that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issuance of demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, those materials must be completely removed.

Thank you,
Aaron Bushong
8562 Orchard Park Drive
Riverside, CA 92508

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am appalled that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses, as long as they are low-density. Please specify what other land uses C-2 zoning allows and why they are not being pursued.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on three sides by residential homes, and that residents have submitted over 2,500 signatures, hundreds of emails, and scores of comments at public meetings opposing the project, how is that feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how can the utter disregard for the community opposition in relation to the reuse plan policies be justified?

In the General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air-quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways has Community Preference been incorporated in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for

“Industrial/Warehousing” uses and it explicitly shows “Industrial/Warehousing” land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as a Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 states,

The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space. When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to “up zone” the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, the March JPA is obligated to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you,
Aaron Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The traffic section of the document presents serious concerns. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project, and the project's own traffic estimates indicate that approximately 20,000 additional trips will use the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in the analysis, especially when considering that the traffic analysis fails to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. The traffic sections also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How can the analysis justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did the analysis exclude known construction projects that have already been permitted to be built?

I demand the traffic section be updated to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable.

How traffic will affect our arterial streets is another major concern. The analysis assumes drivers will use approved paths, but it is clear from experience this is not the case. For instance, on February 2, a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orancrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were considered? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should one trust the analysis to be accurate if past analyses underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

I demand that the traffic study be updated to reflect the actual conditions of the surrounding area.

Thank you,
Aaron Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air-quality impacts on surrounding residents. However, beyond that admission, there are numerous deficiencies in the analysis, and it underestimates the air-quality impacts.

The analysis does not consider the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. I demand that these impacts be included in both the local and regional analysis for the final EIR. The analysis also fails to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. The air-quality and health-risk assessment must be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, the project applicant must apply the conservative AQMD Rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, it is important to be more conservative in truck trip rate projections. Using the Rule 2305 numbers would almost double the daily truck trips.

Also, the March JPA has a responsibility to mitigate significant impacts on the surrounding community. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Why were such mitigations not considered in the DEIR for this site?

Significant mitigations must be put in place to reduce the impact on local residents:

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

The impact on air quality must also be mitigated by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least that can be done to protect the surrounding community. California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning. A minimum of 50% of delivery

vehicles must be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. 30% of trucks must also be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I demand that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will the March JPA assure adjacent residents that their interests will be protected?

Thank you,
Aaron Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How was that number calculated? On what evidence was it based? There is no analysis in the DEIR to justify the number of jobs. Please provide a detailed, evidence-based analysis justifying the number of jobs.

The Greenhouse Gas (GHG) section claims that the development will have a net positive effect because local community members will have less of a commute driving to work. No one with a temporary, part-time, and/or low-paying warehouse job will be able to afford to live anywhere within the surrounding community? On what data was the assumption that local residents need or desire low-paying warehouse jobs based? What data was used to calculate the vehicle miles travelled? How were the traffic models that assume 21-mile commutes would be shortened to 16-mile commutes created? Please justify the assertions by providing data detailing the mean, median, and mode monthly salary of the jobs that will be created and the mean, median, and mode monthly rent/mortgage in the surrounding communities. It is clear that the job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region far exceeds the number of available employees in the region. The current unemployment rate is at a 50-year low, and there are over 4,000 acres of approved and planned warehouses along the 215/60 corridor. At 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318,000 in Riverside, 212,000 in Moreno Valley, 80,000 in Perris, and 20,000 in Mead Valley). There are about 300,000 people in the labor force (For those aged 16+, the labor force participation rate is 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work in warehouses. Assuming that 50% can work in warehouses, that still leaves well over 20,000 jobs to be filled. The population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support any additional warehouse jobs. The only way to fill those jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This

demonstrates that the vehicle miles travelled per employee estimates indicating shorter commutes are incorrect. This project will further exacerbate housing stress by requiring workers to commute from well outside of a 15-mile radius of the project. Even if allowed for the faulty assumption that locals would commute to the site, how would the analysis change if one accounts for automation in warehouses, or the fact that Californians are required to purchase electric vehicles by 2035? Please justify the current vehicle miles travelled per employee estimates using actual job, population, and housing estimates from the last three months, rather than seven-year-old SCAG projections that are completely incorrect.

It is obvious that the region does not have the capacity to staff these warehouses locally. Please consider more appropriate alternatives for the project, such as single-family residential homes that would actually serve to improve the real-world jobs-to-housing imbalance. Housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Thank you,
Aaron Bushong

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-466.1

The project site comprises approximately 817.9 acres within the western portion of the March JPA planning sub-area (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and the City of Moreno Valley.

The zoning designation in the DEIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities, but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have, including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant?” Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. The March JPA must demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here. Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-466.2

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view

image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? Furthermore, the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. The Aesthetics section must be revised, so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Images that reflect the actual appearance of warehouses in the area must also be used. Otherwise, the images and the Aesthetics section are a lie and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond the visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which have been identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of Western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. The March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large, industrial, mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal, low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan, and the community demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. They also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered, and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Do not allow one final, grand act of poor land use planning to be the lasting legacy of the March JPA.

Thank you,
Aaron Bushong

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I have lived in the same house in the Orangecrest neighborhood for 23 years. During that time, I have joined my neighbors in attempting to work with the March Joint Powers Authority on responsible planning for the 4,400 acres of surplus property. My neighbors and I worked to oppose the DHL cargo facility in the early aughts. We were ignored, and DHL failed within four years. My neighbors and I have worked over the past 15 years to oppose the development along Meridian Parkway and Van Buren Boulevard. We have been ignored, and one merely needs to drive those roads to see the numerous unoccupied, nondescript, and/or anemic buildings, many of which have remained vacant since they were built.

I-467.1

The March Joint Powers Authority has demonstrated its poor planning, lack of foresight, and utter disregard for Riverside residents' well-being and safety for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for local residents.

I-467.2

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. The West Campus Upper Plateau Project will only exacerbate the pollution and traffic congestion in Riverside. I demand that the developer revise the entire project to include non-industrial alternatives, has been consistently requested by the community for over a year.

I-467.3

Thank you,
Aaron Bushong

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I have lived in the Orangecrest neighborhood since March of 2000. Over the past 23 years, I have experienced the same deception and lies from the March JPA as are presented in the draft environmental impact report: lies about jobs that don't pay enough for employees to even live in the City of Riverside and that, with automation, will soon be obsolete; lies about parks, trails, and open spaces that never come to fruition; and lies about construction, an abundance of which is currently vacant and has never been occupied. Those lies have systematically transformed one of the most desirable and attractive residential neighborhoods in the City of Riverside into a sea of unsightly office buildings and warehouses that are inconsistent with responsible city planning. The March JPA is using the same tactics to promote the West Campus Upper Plateau Project.

I-468.1
I-468.2
I-468.3

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in that document. They also have a duty to work with local communities to develop the West Campus Upper Plateau in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project must be reconsidered, and reasonable alternative configurations must be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

Thank you,
Aaron Bushong

Riverside, CA 92508
aaron.bushong@verizon.net

Letter I-468

Aaron Bushong

March 4, 2023

- I-468.1** This comment expresses general opposition to the Project and does not raise any specific issues, questions or concerns about the analysis in the Draft EIR. Regarding automation, while existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. Regarding the Park development, under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with offsite utilities, drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete.
- I-468.2** This comment states that March JPA and the Applicant have a duty to adhere to the March ARB General Plan and engage the local communities and municipalities. It should be noted that the March Air Reserve Base does not have an adopted General Plan. The Project's consistency with the March JPA General Plan goals and policies is included in Recirculated Section 4.10, Land Use and Planning. March JPA and the Applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation. Using a radius of 1,200 feet around the perimeter of the Project site, March JPA distributed 2,172 public notices. March JPA engaged with local jurisdictions and service providers (see, e.g., the traffic scoping agreement in Appendix N-2).
- I-468.3** This comment requests consideration of alternatives to reduce aesthetic impacts. CEQA Guidelines Section 15126.6(f) provides that "[t]he range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project." As examined in Section 4.1, Aesthetics, of the Draft EIR and Topical Response 1 - Aesthetics, the EIR has disclosed the Project's aesthetic impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. As such, the reduction of aesthetic impacts would not be a required priority in the selection of a reasonable range of alternatives to the Project. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR, have all been evaluated for potential aesthetic impacts. Similar to the analysis included in Section 4.1, Aesthetics, consideration of visual changes to publicly available views of the Project site were considered. Alternative 2 (Reduced Development) and Alternative 4 (Reduced Cultural Resource Impact) were determined to have reduced aesthetics impacts compared to the Project. Topical Response 8 - Alternatives, presents and analyzes Alternative 5 - Non-Industrial Alternative, determining its aesthetic impacts would be similar to the Project's.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would be over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Annabelle Porter

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Annabelle Porter

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Annabelle Porter

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect beca

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

I-477.1

I also have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing

I-477.2

I-477.3

commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

I-477.3
Cont.

I-477.4

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric

I-477.4
Cont.

I-477.5

vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

I-477.5
Cont.

I-477.6

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023. The methods used in the development of Calif. have instead deteriorated the standard of living Calif residents once shared. Warehouses, not only add to congestion, but pollution as well. We need to maximize the properties that already exist!

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents. The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response. Sincerely,

Chris Shearer

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000%2

It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in the area.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive studies to accurately test the pollution.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. How will that level be met?

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,nOfEFTIXOfHSWS5a2Wkr80J3J5KBjgX79UCmXJX9JGuOAU_Y0WBs5PIVQF3DUtscTqEzSvE2XBrFXIbsOv2Q5-YCubQp8RnD42mlxGHbXhWOKbklrMI,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,hD3nKQjtzs50Wk1quJzXi7WTQpGiiNOs--_ -
3qBEe11pA7mpMP_w9oYF6MibPbv4unL5lJyaaz_wL7ZwfvbCP8FgrzmXHA0W7PGHvKQXzD7kzYI,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Riverside, CA 92518

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

We have serious concerns about the shrinking of open spaces and destruction of habitat, and we ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, we request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. We also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I-489.1

We also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

↑ I-489.1
↓ Cont.

Living on the edge of the area that will be preserved in the project, we can confirm that it is used daily by bikers, hikers, and those walking their dogs. It is an important green space that should not be bordered by ugly warehouses and idling trucks spewing pollution into our environment.

↑ I-489.2
↓

Thank you for allowing us to provide comments on this project.

Sincerely,
Lynn and Paul Larsen
20304 Dayton St., Riverside, CA, 92508

Letter I-489

Lynn & Paul Larsen

March 4, 2023

- I-489.1** This comment is Form Letter C – Biological Resources with non-substantive text edits (“I” replaced with “we”). As such, in response to this comment, please see Form Letter C Response.
- I-489.2** This comment expresses concern regarding the Project’s aesthetics and air quality impacts to the Conservation Easement and its recreational users. As explained in Section 4.1, Aesthetics, and Topical Response 1 - Aesthetics, the EIR has disclosed the Project’s aesthetic impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Specifically, Recirculated Section 4.2, Air Quality, has further evaluated and disclosed the Project’s air quality impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The comment does not raise specific issues, questions or concerns about the environmental analysis in the Draft EIR and as such, no further response is provided.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Amy Litt

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Amy Litt

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Amy Litt

Please oppose any warehouses within close proximity to residential homes. Our beautiful neighborhoods are beginning to look like a truck stop. Our quality of life has been changing for the negative. Diesel emissions, noise pollution around the clock, grid lock traffic. There is no good reason to build industrial buildings so close to residential homes. City planners please use your planning knowledge to do the right thing for our residents of Riverside.

Thank you.

- I-494.1** This comment expresses opposition to the Project's location near residential areas, specifically regarding potential air quality and noise impacts and traffic. The comment also expresses concerns that the neighborhood is turning into a truck stop with visual examples of truck cabs parked in neighborhoods. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Recirculated Section 4.2, Air Quality, disclosed the Project's air quality impacts, Section 4.11, Noise, of the Draft EIR determined the Project's noise impacts to sensitive receivers, and the Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. March JPA does not have the authority to govern where homeowners choose to park truck cabs. March JPA has defined truck routes that all drivers are required to follow. As such, the comment does not raise specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR.
- I-494.2** This comment is an attached photo of a truck cab parked in a residential driveway. This comment does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-494.3** This comment is an attached photo of a truck cab parked in front of a residence. This comment does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wlc-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity

to staff these warehouses locally. Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023. Sincerely, <include name, address, email in signature line>

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green

building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. Thank you for letting me comment on this.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn’t have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old

I-500.1

SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally. Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

An additional step March JPA should do is require only clean air CNG trucks access warehouses in the area.

Sincerely,
Chris Gate

March 5, 2023

- I-500.1** This comment is Form Letter F – Jobs. As such, in response to this comment, please see Form Letter F Response.
- I-500.2** This comment suggests that March JPA allow only clean air CNG trucks to access area warehouses. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when commercially available for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030. In response to this comment, please see Recirculated Section 4.2, Air Quality.

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you! Sincerely,

Chris Gate

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Christine Heinemann
8715 Morninglight Circle

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,wVn0klhYw2dY08QLYuhn1PVjIwJz4Rx3L5U__20k1F7445ISfyEpqjAWxG_GQ98csDOE0asHFn-61erv_iLFKVzkaKJmbkLtbGUVcYhiqaw10Q84sg,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,M5uzljKNay1eW325FWwnnfJuvfADu4LLXvhu-141TviFslYIC1Cu-E_z2unpww2Ok51FmSxrh2TLrLFtyMV_I9XVRo_SH-e8KNUzlrwkYS09bwk,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Danela Jimenez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted. I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced? Thank you for allowing me to provide comments on this project. Sincerely,
Dr Christian Craddock

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

I-509.1

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

I have been told, from a very reliable source, that Riverside Police Department no longer has Commercial Enforcement due to budget cuts implemented by the Riverside City Council. So, which agency is going to be responsible for making sure that these big trucks don't come down residential streets, specifically Barton, when you make it through from Alessandro? Barton, south of Alessandro, is not wide enough for heavy traffic, much less big rig trucks. There are residential homes on that part of the street. The homes on the east side of Barton face Barton. It's a very, very bad idea to make that part of Barton go through to Van Buren.

I-509.2

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-509.3

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Elisa Estrella - Hahn, 20021 Camino Del Sol, Riverside, CA, 92508

- I-509.1** This comment is a portion of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-509.2** This comment questions who will be responsible for enforcement for trucks associated with the proposed Project and also expresses concerns about truck traffic through neighborhoods with the extension of Barton. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-509.3** This comment is a portion of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Sent: Sunday, March 5, 2023 11:59 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Elisa Estrella-Hahn, 20021 Camino Del Sol, Riverside, CA, 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Sent: Sunday, March 5, 2023 12:03 PM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Elisa Estrella-Hahn, 20021 Camino Del Sol, Riverside, CA, 92508

INTENTIONALLY LEFT BLANK

From: Gayle Dicarlantonio <gayledmail@gmail.com>
Sent: Sunday, March 5, 2023 9:00 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Subject: Public Comment for the West Campus Upper Plateau Project, EIR, State Clearinghouse No. 2021110304 - Primary Objectives

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518
RE: Public Comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 – Primary Objectives

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-518.1

This is a project looking for reasons to be built. I listed the primary objectives stated in the EIR, followed by my comments:

- Provide increased job opportunities for local residents through the provision of employment generating businesses.

The March JPA has already replaced all of the jobs that were lost when March AFB was realigned. During a recent drive along Meridian Parkway and Van Buren Boulevard, I saw many signs on the existing warehouses stating they are hiring. So, the existing warehouses cannot even find enough employees. The U.S. unemployment rate is at its lowest point in half a century. Additional low-paying warehouse jobs are not needed in the Orangecrest neighborhood.

I-518.2

- Provide open space amenities to serve the region.

The proposed area IS ALREAY AN OPEN SPACE! How can building warehouses on it provide more? They can only decrease the amount of open space that exists now.

I-518.3

- Provide an active park consistent with the 2009 Safety Study prepared by March JPA.

A better park plan would be to leave the site as is, with some improvements to the trails.

I-518.4

• Complete the buildout of the roadway infrastructure by extending Cactus Avenue to the Development Area from its existing terminus, extending Barton Street from Alessandro Boulevard to Grove Community Drive, and extending Brown Street from Alessandro Boulevard to Cactus Avenue.

I-518.5

None of these improvements are necessary. Orangecrest has been fine for the past 35 years without these streets. They are not needed.

• Remove and redevelop a majority of the former munitions storage area of the March AFB.

I-518.6

The bunkers have become part of the landscape of the Upper Plateau. Hikers respect the fences and don't bother the bunkers, and the bunkers don't bother the hikers. Demolition costs of the bunkers will be very high.

• Encourage the use of alternative modes of transportation through the provision of a pedestrian and bicycle circulation system that is safe, convenient, and comfortable.

I-518.7

This is a phony argument. I ride my bike along the Krameria Avenue bike lanes between all the warehouses, and I am always the only bicyclist. I don't recall ever seeing another bicyclist on Krameria. As much as you are trying to encourage public transportation, you will have a hard time getting Orangecrest residents out of their cars.

Please remove the project objectives which you cannot substantiate/defend.

I-518.8

Thank you for allowing me to provide comments on this project.

George Harvilla
8736 Desert Rock lane
Riverside, CA 92508

Letter I-518

George Harvilla

March 5, 2023

- I-518.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 SF of warehouse use, 528,951 SF of office use, and 160,921 SF of retail use. The comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-518.2** This comment questions the Project's objective to provide increased job opportunities, stating March JPA has already replaced the jobs lost through March ARB realignment and questions whether the Project's jobs would be filled by local residents. The Project would create over 2,600 new permanent onsite jobs, and over 1,000 temporary construction jobs including union labor. In response to this comment, please see Topical Response 5 – Jobs. The comment raises concerns regarding vacancies in area warehouses. According to Table 1 of the draft "Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects" by Dr. Qisheng Pan presents 2023 employment data for the various existing developments within the March JPA Planning Area (Appendix U), there are few vacancies within the March JPA Planning Area.
- I-518.3** This comment questions the Project's objective to provide open space amenities when the Project site is currently open space. The intent of the Project Objectives is to outline all aspects of the Project, not just one component of the Project. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.
- I-518.4** This comment objects to the Project's objective to provide an active park and requests only some improvements to the existing trails. This comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. Under the 2003 Settlement Agreement with the Center for Community Action and Environmental Justice and Community Alliance for Riverside's Economy & Environment, a 60-acre active park was required to be developed within the March JPA Planning Area. Under the 2012 CBD Settlement Agreement (Appendix S), the Project site was identified to incorporate a 60-acre park. Please see Topical Response 4 – Project Consistency, for additional information regarding the Project's consistency with these settlement agreements. Under the proposed Development Agreement, the applicant will be required to retain a consultant to prepare the Park Feasibility Study prior to the issuance of the first grading permit for the Project. The applicant will pay the costs to prepare the Study and grading of the 60-acre site, along with offsite utilities,

drainage, and any additional permitting, not to exceed \$6.5 million. Separately, the applicant will contribute \$23.5 million to a March JPA-established Park Fund Account. Within 36 months of completion of the Park Feasibility Study and site grading, the applicant will complete construction of the Park. The LLMD will be responsible for the maintenance of the Park once complete. The Project would the existing trail network in Upper Plateau that Riverside and County of Riverside residents use daily.

- I-518.5** This comment objects to the Project’s objective to extend the roadway network within the Project site as unnecessary. This comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. The Project would extend and connect Barton Street per the City of Riverside’s General Plan Circulation Element – enhancing public safety access and reducing response times. The Barton Street extension would also allow surrounding residents direct access to the Park and access points for existing trails in the Conservation Easement for passive recreational use. Only a gated emergency vehicle access road would connect Barton Street and Cactus Avenue. Campus Development traffic would be funneled east along Cactus Avenue towards I-215. Extending Brown Street will also enhance local connectivity.
- I-518.6** This comment objects to the Project’s objective to remove and redevelop the structures in the Weapons Storage Area as they do not affect use of the site and would be expensive to remove. This comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. Currently, the Weapons Storage Area is fenced off and inaccessible to the public. Upon completion of the Project, there will be dual 6’ bike lanes and sidewalks throughout the Specific Plan Area. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers.
- I-518.7** This comment objects to the Project’s objective to encourage the use of alternative modes of transportation and relays the commenter’s experience utilizing the bike lanes in the vicinity of other development within March JPA. This comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. Upon completion of the Project, there will be dual 6’ bike lanes and sidewalks throughout the Specific Plan Area which will connect with existing non-motorized circulation systems, improving local connectivity and access.
- I-518.8** This comment requests the removal of the Project objectives identified in the letter. CEQA Guidelines Section 15124(b) states that an EIR shall include, “A statement of the objectives sought by the proposed project. A clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the project and may discuss the project benefits.” Consistent with CEQA Guidelines Section 15124(b), the Draft EIR includes a complete list of project objectives, all of which can be substantiated and defended as being components of the Project, as proposed. This comment does not raise any specific issues, questions or concerns about the adequacy or defensibility of the Project Objectives; as such, no further response is provided.

RE: Public Comment on Record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 – Air Quality

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's impact on air quality. The project applicant conceded that there will be "Significant and Unavoidable" air quality impacts on surrounding residents. This is not acceptable, since I will have to breath poisonous, carcinogenic diesel fumes every day. There are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a

community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

RE: Public Comment on Record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 – Land Use and Noise

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Please ensure your**

I-520.1

I-520.2

noise tests are done in the early morning hours as well as during normal business hours. Orangecrest residents have stated they hear the backup devices of big rigs at the newly-constructed warehouses in the early morning hours (between midnight and 7:00 a.m.), and this wakes them up. Noise is much more obvious to the listener in quiet, nighttime conditions. Please study this thoroughly.

I-520.2
Cont.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

I-520.3
Cont.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

George Harvilla

March 5, 2023

- I-520.1** This comment is the first half of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-520.2** This comment asks that noise tests be done in the early morning as well as during normal business hours given that surrounding residents have stated they hear the backup devices in the early morning hours. As discussed in Section 4.11, Noise, of the Draft EIR, to assess the existing noise level environment, 24-hour noise level measurements (including early morning hours as well as during normal business hours) were taken at eight locations within the public right-of-way throughout the Project study area on Thursday July 22, 2021. The receiver locations were selected to describe and document the existing noise environment within the Project study area. The long-term noise level measurements were positioned as close to the nearest sensitive receiver locations as possible to assess the existing ambient hourly noise levels surrounding the Project site. Table 4.11-1 identifies the hourly daytime (7:00 a.m. to 10:00 p.m.) and nighttime (10:00 p.m. to 7:00 a.m.) noise levels at each noise level measurement location. As shown in Table 4.11-1, average daytime noise levels ranged between 47.3 dBA L_{eq} and 61.5 dBA L_{eq} , while nighttime noise levels ranged between 43.9 dBA L_{eq} and 56.6 dBA L_{eq} . As shown in Table 4.11-28, daytime Project noise level increases at receiver locations would range from 0.1 dBA L_{eq} to 2.0 dBA L_{eq} , below the increase threshold of 5.0 dBA L_{eq} . As shown in Table 4.11-29, nighttime Project noise level increases at receiver locations would range from 0.1 dBA L_{eq} to 2.3 dBA L_{eq} , below the increase threshold of 5.0 dBA L_{eq} . Based on the analysis included within Section 4.11, as well as the Project Noise Study (Appendix M-1), operational noise impacts at residences would be less than significant and would not require mitigation.
- I-520.3** This comment is the second half of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

Subject: Public Comment on Record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 - Traffic

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public Comment on Record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 - Traffic

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-521.1

The draft EIR does not properly analyze the Project’s traffic impacts.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. It should also include the 91 Freeway, from Riverside to the ports.** The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

I-521.2

I-521.3

Please redo your traffic section to include the 215, 215/60, and 91 corridors, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please rewrite your traffic study to reflect the actual conditions of the surrounding area. Thank you.

Sincerely,

George Harvilla
8736 Desert Rock Lane
Riverside, CA 92508

Letter I-521

George Harvilla

March 5, 2023

- I-521.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 SF of warehouse use, 528,951 SF of office use, and 160,921 SF of retail use. The comment raises general concerns about the traffic analysis. Responses to specific comments are provided below.
- I-521.2** This comment states that the traffic analysis does not include the 215 Freeway or the 215/60 corridor and that it should also include the 91 Freeway from Riverside to the ports. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Caltrans does not utilize peak hour intersection operations analysis and instead utilizes VMT in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Traffic Impact Study Guidelines were adopted before the Caltrans VMT Guide and reference superseded Caltrans guidance. The Project VMT Analysis (Appendix N-1) was prepared in compliance with the Caltrans VMT Guide and meets the transportation analysis requirement for Caltrans. For additional discussion regarding the 215 Freeway and the 215/60 corridor, please see Form Letter G Response. The Project Traffic Analysis (Appendix N-2) analyzed the Project's effects on traffic on truck routes, other roadways, and intersections located within the March JPA, City of Riverside, City of Moreno Valley, and County of Riverside. The scope of the study area was based on input provided by March JPA, the City of Riverside, City of Moreno Valley, and County of Riverside. Study area intersections at a minimum include locations where the Project would contribute 50 or more peak hour trips (consistent with the minimum standards used by these same agencies). Notwithstanding the Caltrans VMT Guide, the 91 Freeway is well outside of the geographic region in which the analysis was based.
- I-521.3** This comment is the same as a portion of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

RE: Public Comment on Record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304 – Jobs and Greenhouse Gases

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's impact on jobs and greenhouse gases.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. This area does not need more low-paying warehouse jobs.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor

force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment.

Sincerely,

George Harvilla

RE: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

On behalf of Riverside League of Women Voters (LWV) Southwest Unit, we are writing to submit comments on the draft Environmental Impact Report for the Proposed West Campus Upper Plateau.

I-523.1

The LWV is a non-partisan organization with strong positions on many aspects relative to the West Campus Upper Plateau. Our membership includes Perris, Menifee, Hemet, Murrieta, Lake Elsinore, Temecula, Corona and Norco.

1. Land Use, City and County of Riverside:

It is critical to protect the quality of life and the preservation of open space. To achieve this we strongly support significant citizen input and viewpoints.

I-523.2

2. Environmental Concerns:

The Projects’s warehouses are sited within 500 feet of residents, a proposed park and reserved passive recreation area and is less than quarter of a mile from a preschool. Air quality needs to be a top priority. One example on air quality impact would be to require a minimum of 50% of delivery be battery electric vehicles at the project opening date of 2028, increasing to 100% by 2031.

I-523.3

I-523.4

3. Traffic Congestion:

It is important that your data is accurate in how congestion will be impacting on local streets and freeways. The 215 is already overburdened with truck traffic. It is not clear that you have accounted for the reality that truck drivers do not follow agreed-upon routes.

I-523.5

Thank you for allowing us to provide comments on this project. We know that you will want to do what is best for current residents as well as those considering relocating to Riverside.

I-523.6

Letter I-523

Members of the League of Women Voters – SW Unit

March 5, 2023

- I-523.1** This comment is introductory in nature and does not raise any issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-523.2** This comment stresses that it is critical to protect the quality of life and the preservation of open space. The comment requests citizen input and viewpoints. This comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-523.3** This comment describes the location of the Campus Development relative to residents, the proposed Park, and an existing preschool. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. No specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-523.4** This comment requests air quality mitigation requiring a minimum of 50% of delivery be battery electric vehicles at the Project opening date of 2028, and increasing to 100% by 2031. MM-AQ-20 requires tenants utilize heavy-duty trucks with a model year of 2014 or later from the start of operations and transition to zero-emissions vehicles by 2030 or when commercially available for the intended application. MM-AQ-20 further requires tenants to utilize a "clean fleet" of vehicles/delivery vans/trucks as follows: 33% at start of operations, 65% by 2026, 80% by 2028, and 100% by 2030. In further response to this comment, please see Recirculated Section 4.2, Air Quality.
- I-523.5** This comment discusses potential traffic congestion and truck route enforcement. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction

addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Regarding the I-215 freeway, please see Form Letter G, Traffic, Response.

I-523.6 This comment is conclusory in nature and does not raise any issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Greg Russell

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Greg Russell

Sent: Sunday, March 5, 2023 11:36 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Greg Russell

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

When I moved to the Orangecrest area twenty-three years ago, as a Riverside native, I chose my new home because it did have neighboring areas of wilderness. Now, as a UCCE Master Gardener of Riverside County, I have serious concerns about the shrinking of open spaces and destruction of habitat. I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Georgia Renne

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, which include a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a Church/preschool and a existing park where outdoor youth sports are held and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-529.1

I have serious concerns about the shrinking of open spaces, destruction of habitat and vista’s. We as a community, also ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.
3. We have trees behind our home that the MJPA has never allowed us to touch due to birds that mate there during the year. We had neighbors that were heavily fined for cutting down the trees. How will these birds be protected throughout this region?
4. They say wildlife can sense danger to their habitat long before humans react. The developments along the Meridian corridor have forced the migration of habitat into the yards and arterials of the surrounding communities. How does JPA propose to reverse this trend?

I-529.2

I-529.3

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

I-529.4

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

In addition, I have concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

I-529.5

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

Furthermore, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed. If there are hazardous materials present, they must be removed prior to demolition and grading to avoid airborne pollution and contamination of the surrounding aquifers.

I-529.6

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than

I-529.7

a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

- “The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.
- b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space
- d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park,

I-529.7
Cont.

mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

I-529.7
↑ Cont.

I personally have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, Meridian, Trautwein, Washington, Van Buren, Harley Knox and Cajalco Rd. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

I-529.8

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central, Chicago, Trautwein, Alessandro, Washington, Madison, La Sierra, Wood Rd., Calico Rd., or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area.

The project applicant should also concede, that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it

I-529.9

is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

- 1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I-529.9
Cont.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA produce a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

In the 1960's, 70's and 80's the experts called them "summer colds", resulting from a combination of outdoor childhood games and smog so dense that you could not see across the street. It took approximately 35 years to clean the skies of the Inland Empire. I am an old man now with many grandchildren and I fear left unchecked that the increased smog of the last 10 years will allow them to experience "summer colds", of my youth.

I-529.10

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

I-529.11

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, which is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

A responsible developer, who is engaged with the community would consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of

I-529.11
Cont.

I-529.12

building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don’t allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

John and Mary Viafora

March 5, 2023

Mr. Dan Fairbanks, AICP
 Planning Director
 March Joint Powers Authority (March JPA)
 14205 Meridian Parkway, Suite 140
 Riverside, CA 92518

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City and County of Riverside. The Project's warehouses are sited within 500 feet of residents, which include a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a Church/preschool and an existing park where outdoor youth sports are held and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces, destruction of habitat and vista's. We as a community, also ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.
3. We have trees behind our home that the MJPA has never allowed us to touch due to birds that mate there during the year. We had neighbors that were heavily fined for cutting down the trees. How will these birds be protected throughout this region?
4. They say wildlife can sense danger to their habitat long before humans react. The developments along the Meridian corridor have forced the migration of habitat into the yards and arterials of the surrounding communities. How does JPA propose to reverse this trend?

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess

I-529.13

the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

In addition, I have concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

Furthermore, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any

I-529.13
Cont.

hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed. If there are hazardous materials present, they must be removed prior to demolition and grading to avoid airborne pollution and contamination of the surrounding aquifers.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

I-529.13
Cont.

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

I personally have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, Meridian, Trautwein, Washington, Van Buren, Harley Knox and Cajalco Rd. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

I-529.13
Cont.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central, Chicago, Trautwein, Alessandro, Washington, Madison, La Sierra, Wood Rd., Calico Rd., or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area.

The project applicant should also concede, that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to

I-529.13
Cont.

electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA produce a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

In the 1960's, 70's and 80's the experts called them "summer colds", resulting from a combination of outdoor childhood games and smog so dense that you could not see across the street. It took approximately 35 years to clean the skies of the Inland Empire. I am an old man now with many grandchildren and I fear left unchecked that the increased smog of the last 10 years will allow them to experience "summer colds", of my youth.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, which is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

I-529.13
Cont.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

A responsible developer, who is engaged with the community would consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the

I-529.13
Cont.

correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

John and Mary Viafora

Letter I-529

John & Mary Viafora

March 5, 2023

- I-529.1** This comment is the first half of Form Letter C – Biological Resources with minor text edits. The text edits to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter C Response.
- I-529.2** This comment questions how nesting birds will be protected. As discussed in Section 4.3, Biological Resources, the Project site supports suitable habitat for nesting birds. The Project is required to comply with MM-BIO-7 (Nesting Bird Avoidance and Minimization Measures). With implementation of MM-BIO-7, impacts to nesting birds would be less than significant.
- I-529.3** This comment raises concerns that development will force migration of habitat into the surrounding communities. As part of the proposed Project, a Conservation Easement would be established to permanently maintain open space for the wildlife species in the Project vicinity. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the wildlife habitat values of the Conservation Easement in perpetuity.

As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), neither the Project site nor any areas in the vicinity of the Project site are within any of the 38 designated MSHCP habitat linkages. Additionally, the analysis within the Draft EIR evaluated the potential impacts upon migration corridors for wildlife species. As discussed in Section 4.3, Biological Resources, the Project site likely serves as a local wildlife corridor between undeveloped areas to the south of the site and the open space areas immediately north of the Project site, north of Alessandro Boulevard, which includes Sycamore Canyon approximately 4,000 feet to the northwest of the site. The Project site also likely serves as a stepping stone corridor for avian species moving through this area, including least Bell's vireo which occur in Meridian Conservation Areas 1 and 2 to the south of the site north and south of Van Buren Boulevard. With full build-out of the Specific Plan Area, an undeveloped corridor would be retained immediately east of the site as part of the Conservation Easement. This undeveloped land would maintain a corridor between site development and nearby residential development, including significant areas of riparian habitat. (Figure 4.3-4 in the Draft EIR). To further buffer the Conservation Easement, the Specific Plan proposes three open space areas, including an additional 30-foot-wide landscaped buffer on the proposed parcels to the north, west, south, and southeast of the Specific Plan Area.

Finally, the Specific Plan Area includes the installation of three wildlife crossings: two under Cactus Avenue in the eastern portion of the Study Area, which will provide additional opportunities for wildlife to safely move north to south through the eastern Conservation Easement corridor; and one beneath Brown Street that will facilitate wildlife movement east and west through the Conservation Easement corridor. The two Cactus Avenue crossings will be soft-bottomed culverts approximately 8 feet in height, 20 feet in width, and 240 feet in length. The Brown Street crossing will consist of a soft-bottomed culvert approximately 8 feet in height, 20 feet in width, and 150 feet long. These specifications follow the CBD Settlement Agreement, which prescribed design standards suitable to accommodate local, land-locomotive species (Appendix S of the Draft EIR). Additionally, 60 acres of open space/park is planned for the western portion of the project that buffers the existing residential

uses west of the site, which will be included within the project's General Plan Amendment. This western open space area will still allow for the movement of wildlife to the west of the project as well. As such, impacts on wildlife corridors would be less than significant. (Appendix D-2)

I-529.4 This comment is the second half of Form Letter C – Biological Resources. As such, in response to this comment, please see Form Letter C Response.

I-529.5 This comment is Form Letter D – Hazards. As such, in response to this comment, please see Form Letter D Response.

I-529.6 This comment states that if hazardous materials are present, they must be removed prior to demolition and grading to avoid airborne pollution and contamination. In response to this comment, please see Recirculated Section 4.8, Hazards and Hazardous Materials, which provides further detailed information about the environmental conditions at the Project site. As discussed therein, no hazardous materials risks are present at the site.

I-529.7 This comment is Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

I-529.8 This comment is Form Letter G – Traffic. The commenter also adds Meridian, Trautwein, Washington, Harley Knox and Cajalco Road as representative streets excluded from the traffic analysis. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. With regard to the additional roads identified in the comment, the analysis includes Meridian Parkway from Alessandro Boulevard to Van Buren Boulevard and the following intersections:

- Washington Street and Van Buren Boulevard
- Trautwein Road and Alessandro Boulevard
- Trautwein Road and Grove Community Drive
- Trautwein Road and Orange Terrace Parkway
- Trautwein Road and Van Buren Boulevard
- Meridian Parkway and Alessandro Boulevard
- Meridian Parkway and Cactus Avenue
- Meridian Parkway and Van Buren Boulevard

Harley Knox and Cajalco Road were not included because the Project is not anticipated to add 50 or more peak hour trips to any of those intersections. In response to the remainder of this comment, please see Form Letter G Response.

I-529.9 This comment is Form Letter B – Air Quality with non-substantive modifications. The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter B Response.

- I-529.10** This comment discusses “summer colds” experienced in the 1960’s, 1970’s, and 1980’s. The comment references the dense smog that was present during those decades. As discussed in Recirculated Section 4.2, Air Quality, regional air quality has improved over the past 35 years, even with the growth experienced in the region. Additionally, the air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments, as detailed in Recirculated Section 4.2, Air Quality. The Project is implementing all feasible mitigation measures to address potential air quality impacts.
- I-529.11** This comment is Form Letter F – Jobs with non-substantive modifications. The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter F Response.
- I-529.12** This comment is Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.
- I-529.13** This comment is a duplicate letter for which responses were provided in Responses I-529.1 through I-529.12 above. As such, please see Responses I-529.1 through I-529.12 above.

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

The League of Women Voters Riverside writes in support of a letter sent to your office from Vicki Broach, a long-time League Member and former staff attorney for the state Court of Appeal. Ms. Broach has 20 years of experience conducting appellate review of CEQA cases. We strongly support Ms. Broach’s opinion that the EIR in its present draft form will receive an unfavorable review by the Superior Court and the Court of Appeal.

I-530.1

Air quality impacts The negative effects on air quality caused by warehouses and the truck trips they generate are well documented. Strikingly, diesel PM accounts for 70% of cancers attributable to toxic air contaminants. Local residents are legitimately worried about the health effects for themselves, their families, and their community.

I-530.2

Land Use and Planning, Population and Housing Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project. Clearly, community feedback is not being "seriously" and "carefully" considered.

I-530.3

The historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings.

All March JPA planning documents indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

The Draft EIR acknowledges the City of Riverside is mandated by state law to provide adequate housing. But it does not recognize that the City is failing to meet its state-mandated goals. The EIR should be corrected to reflect honestly the challenges presented by increasing the number of employees in an area that already lacks sufficient housing for its citizens.

I-530.4

Transportation In its present form, the Draft EIR is deficient in its traffic analysis. The analysis does not account for the 215/60 freeway corridor, which is within one mile of the site and would necessarily be the route the trucks would use.

The Final EIR should include consultation with CalTrans as part of its traffic analysis of the 215/60 corridor to reflect the reality of the impact of the project on the local area. The Final EIR should also include a plan for enforcement and maintenance that does not shift the burden to local jurisdictions and includes mitigation measures requiring the tenants to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police forces.

I-530.5

Job creation claims The claims about job creation are dubious. According to the Southern California Association of Governments Economic Report (SCAG), job growth in the Inland Empire since 2001 has resulted in numerous jobs but they tend to be relatively lower paying compared to other parts of the state and nation.

The report also discusses how the logistics industry "will likely go through a transformation as advances in automation and artificial intelligence displace workers." It warns: "There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot."

I-530.6

League of Women Voters Riverside finds the Draft EIR is legally insufficient for multiple reasons. We urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. We also encourage the developer to consider non-industrial, alternative uses of the land for the sake of all Riverside city and county residents, as well those living adjacent to the site.

I-530.7

Sincerely,

Joan Donahue, President

**Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse
No. 2021110304**

I-530.8

Dear Mr. Fairbanks:

The League of Women Voters Riverside writes in support of a letter sent to your office from Vicki Broach, a long-time League Member and former staff attorney for the state Court of Appeal. Ms. Broach has 20 years of experience conducting appellate review of CEQA cases. We strongly support Ms. Broach's opinion that the EIR in its present draft form will receive an unfavorable review by the Superior Court and the Court of Appeal.

Air quality impacts The negative effects on air quality caused by warehouses and the truck trips they generate are well documented. Strikingly, diesel PM accounts for 70% of cancers attributable to toxic air contaminants. Local residents are legitimately worried about the health effects for themselves, their families, and their community.

Land Use and Planning, Population and Housing Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project. Clearly, community feedback is not being "seriously" and "carefully" considered.

The historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never

considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings.

Moreover, all March JPA planning documents indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

The Draft EIR acknowledges the City of Riverside is mandated by state law to provide adequate housing. But it does not recognize that the City is failing to meet its state-mandated goals. The EIR should be corrected to reflect honestly the challenges presented by increasing the number of employees in an area that already lacks sufficient housing for its citizens.

Transportation In its present form, the Draft EIR is deficient in its traffic analysis. The analysis does not account for the 215/60 freeway corridor, which is within one mile of the site and would necessarily be the route the trucks would use.

The Final EIR should include consultation with CalTrans as part of its traffic analysis of the 215/60 corridor to reflect the reality of the impact of the project on the local area. The Final EIR should also include a plan for enforcement and maintenance that does not shift the burden to local jurisdictions and includes mitigation measures requiring the tenants to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police forces.

Job creation claims The claims about job creation are dubious. According to the Southern California Association of Governments Economic Report (SCAG), job growth in the Inland Empire since 2001 has resulted in numerous jobs but they tend to be relatively lower paying compared to other parts of the state and nation.

The report also discusses how the logistics industry “will likely go through a transformation as advances in automation and artificial intelligence displace workers.” It warns: “There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot.”

Letter I-530

Joan Donahue
League of Women Voters
March 6, 2023

I-530.1 This comment offers support for Comment Letter I-160 and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis within the Draft EIR. As such, no further response is provided.

I-530.2 This comment raises concerns about the health effects of diesel particulate matter (DPM). Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks.

I-530.3 This comment is a condensed version of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

I-530.4 This comment states that the Draft EIR should be corrected to reflect that the City of Riverside is failing to meet its state mandated housing goals and that there is a lack of sufficient housing. Section 4.12, Population and Housing, of the Draft EIR determined that the Project would not result in the need to

construct new housing as the jobs generated by the Project could be filled by existing local residents. See also, Topical Response 5 – Jobs, for additional discussion regarding unemployment rates.

Since 1969, the State of California has required all local governments to adequately plan to meet the housing needs of everyone in the community. California's local governments meet this requirement by adopting housing plans as part of their General Plan.

The California Department of Housing and Community Development (HCD) is required to prepare a Regional Housing Needs Assessment (RHNA) for each Council of Governments in the State that identifies projected housing units needed for all economic segments based on Department of Finance population estimates. The Southern California Association of Governments (SCAG) is the Council of Governments for Riverside County (as well as Ventura, Los Angeles, Orange, San Bernardino, and Imperial Counties) and allocates to the six counties and 191 cities their fair share of the total RHNA housing needed for each income category. Each local government must demonstrate that it has planned to accommodate all of its regional housing need allocation in its Housing Element.

State law requires that jurisdictions demonstrate in the Housing Element that the land inventory is adequate to accommodate that jurisdiction's share of the regional growth. Failure to do so has consequences for jurisdictions that are deemed non-compliant. HCD is authorized to review any action or failure to act by a local government that it determines is inconsistent with an adopted housing element or housing element law. This includes failure to implement program actions included in the housing element. HCD may revoke housing element compliance if the local government's actions do not comply with state law. Examples of penalties and consequences of housing element noncompliance:

- **General Plan Inadequacy:** The housing element is a mandatory element of the General Plan. When a jurisdiction's housing element is found to be out of compliance, its General Plan could be found inadequate, and therefore invalid. Local governments with an invalid General Plan can no longer make permitting decisions.
- **Legal Suits and Attorney Fees** Local governments with noncompliant housing elements are vulnerable to litigation from housing rights' organization, developers, and HCD. If a jurisdiction faces a court action stemming from its lack of compliance and either loses or settles the case, it often must pay substantial attorney fees to the plaintiff's attorneys in addition to the fees paid by its own attorneys. Potential consequences of lawsuits include: mandatory compliance within 120 days, suspension of local control on building matters, and court approval of housing developments.
- **Loss of Permitting Authority:** Courts have authority to take local government residential and nonresidential permit authority to bring the jurisdiction's General Plan and housing element into substantial compliance with State law. The court may suspend the locality's authority to issue building permits or grant zoning changes, variances, or subdivision map approvals – giving local governments a strong incentive to bring its housing element into compliance.
- **Financial Penalties:** Court-issued judgment directing the jurisdictions to bring its housing element in substantial compliance with state housing element law. If a jurisdiction's housing element continues to be found out of compliance, courts can multiply financial penalties by a factor of six.
- **Court Receivership:** Courts may appoint an agent with all powers necessary to remedy identified housing element deficiencies and bring the jurisdiction's housing element into substantial compliance with housing element law.

As such, it is in the City of Riverside's best interest to have an HCD-compliant and approved Housing Element as expeditiously as possible. Neither March JPA nor the Project applicant have the power or authority to force the City of Riverside to come into compliance with state laws.

- I-530.5** This comment is a condensed version of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹
- I-530.6** This comment discusses general job trends in the Inland Empire and does not raise any specific issues, questions or concerns about the Project or the environmental analysis in the Draft EIR. Regarding automation, while existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. However, to further understand the job estimates for the Project, please see Topical Response 5 – Jobs.
- I-530.7** This comment is conclusory in nature and requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 – Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.
- I-530.8** This comment is a duplicate letter for which responses were provided in Responses I-530.1 through I-530.7 above. As such, please see Responses I-530.1 through I-530.7 above.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Jean Aklufi

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-533.1

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. I lived in Riverside when driving from Moreno Valley to Riverside meant you could not see the town, the mountains, or anything toward LA. It was an impenetrable thick black Smog that we had to drive down into to get home. It took years for the smog to be cleared up and now again every year the air is getting worse. You are voting to increase the number of smog producing trucks in the area. How long before our grandchildren will be unable to see the mountains or the Inland Empire as they come down the grade from Moreno Valley. They also will know that they will have to breathe the foul air of the dark cloud they are driving into. Do you really want that? Then act responsibly. Think about the major consequences of your actions. Not just the relatively little bit of money you will make off of this but the long term consequences to the people who live here and hopefull will want to live here in the future.

I-533.2

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-533.3

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Jean Aklufi

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,20P1n7FlkWu0AS9F4w93lvLo6aZnavsCbEr_NBZ-5YHok3gtKW3qDFY6LoQlybyb52yCWt28zs5siokLLG3-aipMIG9RAshX_ap1d5rSbHecZo,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,MbMNTb1ASHkdorUeUW8zRFTweF2_RXWHPykpIldJlljBeTmHvbeNyH7Au_y40_9xnHm5soldKvyr
kiNUjO8FzQt0BFb731sAjH2Lyqdy5W4e5vpvxuTP1Cw,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the
unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still
leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add
sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage
workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional
warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like
Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect.
This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile
radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you
account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035?
Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its
estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3
months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not
have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-
family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive,
whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Joseph Aklufi

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,
Joseph Aklufi

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Joseph Aklufi

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Joseph Aklufi

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Joseph Aklufi

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The proposed site sits in the middle of my neighborhood.

I-541.1

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance.

I have lived very close to the proposed site of this development for 22 years and have spent many hours enjoying the beauty of this open area. It has been a lovely location to walk my dog, my kids rode their bikes there and we even took family photos there. Much of the open space in my community had been overtaken with concrete tilt ups and warehouse space. These developments have drastically increased traffic and noise in our once peaceful and quiet community. This development will only increase this problem. I am deeply concerned about the impact of this development to the aesthetics of my community and the destruction of open space and nature.

I-541.2

I would like to know in what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction.

I-541.3

If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents. To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Mary Harris

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Milo Rivera

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

I-545.1

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-545.1
Cont.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Please don't surround this beautiful family-oriented community with more warehouses and big rig trucks. Our community of Orangecrest is a community that Riverside should be emulating in other regions of the county, not destroying it with industrial looking warehouses.

I-545.2

As a person who came from Orange County, it was nice to find an area in Riverside that felt safe to raise your children. Don't destroy it. Otherwise it becomes the type of area that hard-working families with kids end up leaving and it just becomes ugly here. There's enough of that in this county.

Sincerely,

Melissa Walker

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. My family has lived in our home since February 1999. For the past 2 years we avoid driving the N/B I-215 from Alessandro Blvd. it is absolutely terrible. Our family and friends from the Menifee, Murrieta and Temecula areas attempt to find alternate routes when visiting to avoid the I-215 freeway. Had I known the traffic congestion and pollution would would have been this severe I would have chosen a different area to call home.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How

I-546.1

might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area.

I have to assume you read newspapers and follow the local news. Numerous cities in the inland empire have put moratoriums on new warehouses or stopped future building altogether. Can’t you learn from other cities mistakes in allowing all these warehouses, along with their concrete footprints, when making decisions of this magnitude? I have to assume you and the other proponents do not reside in the Orangecrest/Mission Grove neighborhoods.

Sent: Sunday, March 5, 2023 7:20 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Ryan Joseph

To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Ryan Joseph

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Ryan Joseph

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Ryan Joseph

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Ryan Joseph

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Sara Amend

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

As a concerned, longtime resident of Orangecrest, longtime attendee of The Grove Community Church, and a member of R-Now (Riverside Neighbors Opposing Warehouses), I am writing to submit comments on the draft Environmental Impact Report (DEIR) for the proposed West Campus Upper Plateau.

I am also a Mayo Clinic Certified Wellness Coach and a National Board-Certified Health & Wellness Coach. I have serious concerns regarding the proposed project's **significant and unavoidable** (81 locations in the DEIR) impacts on air quality, especially in regard to children and sports teams attending local schools and/or using local parks. "Sensitive receptors" are referred to in twenty-two (22) locations in the DEIR. Sensitive receptors are defined as follows by the California Air Resources Board (ww2.arb.ca.gov):

Sensitive receptors are children, elderly, asmatics [sic] and others whose [sic] are at a heightened risk of negative health outcomes due to exposure to air pollution. The locations where these sensitive receptors congregate are considered sensitive receptor locations. Sensitive Receptor locations may include hospitals, schools, and day care centers, and other such locations as the air district board or California Air Resources Board may determine (California Health and Safety Code 42705.5(a)(5)).

My specific concerns are regarding these "**sensitive receptors.**" I am referring to the young children who attend the preschool at The Grove Community Church as well as the hundreds of children who play sports on the fields at The Grove. The Grove Community Church is one of the closest structures to this project. The project applicant conceded that there will be "**significant and unavoidable**" air quality impacts on surrounding residents. Various mitigations are provided but:

- Who is responsible for monitoring the air quality during construction and operation?
- Who is responsible for following through with these mitigations to be on sure the air our children are breathing is safe?

I-558.1
Cont.

I-558.2

I-558.3

- Who can parents turn to when their children become sick from the “significant and unavoidable” air quality?

↑ I-558.3
| Cont.

Considering the serious impacts and minimal benefit to our neighborhood from the proposed warehouses, I ask the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. Any large warehouses build on this site would cause irreversible harm to our community and especially our children.

I-558.4

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Susan Nipper

- I-558.1** This comment is introductory in nature and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis within the Draft EIR. As such, no further response is provided.
- I-558.2** This comment identifies the number of locations in the Draft EIR where there is discussion of the Project's air quality impacts and identification of sensitive receptors. The comment further cites CARB's description of sensitive receptors. Recirculated Section 4.2, Air Quality, analyzes potential health risk impacts to sensitive receptors, including school children. The nearest school is the preschool located at Grove Community Church (Location R8), which was conservatively assumed to be at the Church property line closest to the Specific Plan Area, the maximum incremental cancer risk impact attributable to the Specific Plan without mitigation is calculated to be 0.74 in one million and with mitigation is calculated to be 0.32 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to the Specific Plan were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Specific Plan would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, and Appendix C-2 for further the discussion of cumulative health risks from toxic air contaminants.
- I-558.3** This comment questions who is responsible for enforcement of air quality mitigation measures. As required under CEQA Guidelines Section 15097(a), in order to ensure that mitigation measures and project revisions identified in an EIR are implemented, the public agency shall adopt a program for monitoring or reporting on the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. As such, and as part of this Final EIR, a Mitigation Monitoring and Reporting Program (MMRP) will be adopted to ensure that all mitigation measures included in the EIR are implemented. While March JPA is currently the lead agency for the Project, the March JPA is expected to relinquish its land use authority in 2025 and the County of Riverside will assume oversight of the Project site. Please see Topical Response 9 – Long-term Project Implementation and Enforcement.
- I-558.4** This comment raises general concerns about and opposition to the proposed Project. The comment does not raise any issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. As such, no further response is provided.

Dear JPA,

I am writing this email to comment on the Draft Environmental Impact Report to the West Campus Upper Plateau. It is a treasured area for residents and a wildlife habitat. I am concerned about the construction of over 4.5 million square feet and how it will displace wildlife. Our open spaces are shrinking, and I do not think the mitigations in your report will adequately preserve the space needed for wildlife to thrive. Furthermore, I believe that the displaced wildlife will then be forced into our neighborhoods and city streets. Please consider how the displacement of wildlife may affect our local neighborhoods.

I-559.1

I have attached a video of mountain lion tracks I recently discovered on the trail in the West Campus Upper Plateau. Please do not mar the beauty of this land so that a developer who lives in Upland can make a few more dollars.

I-559.2

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-559.3

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Letter I-559

Shayn Sowers
March 5, 2023

I-559.1 This comment is introductory in nature and expresses general concerns about the loss of habitat, impacts upon biological resources and wildlife displacement. Impacts to biological resources are evaluated and disclosed in Section 4.3, Biological Resources, of the Draft EIR. As part of the proposed Project, a Conservation Easement would be established to permanently maintain open space for the wildlife species in the Project vicinity. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the wildlife habitat values of the Conservation Easement in perpetuity.

Neither the Project site nor any areas in the vicinity of the Project site are within any of the 38 designated MSHCP habitat linkages. Additionally, the analysis within the Draft EIR evaluated the potential impacts upon migration corridors for wildlife species. As discussed in Section 4.3, Biological Resources, the Project site likely serves as a local wildlife corridor between undeveloped areas to the south of the site and the open space areas immediately north of the Project site, north of Alessandro Boulevard, which includes Sycamore Canyon approximately 4,000 feet to the northwest of the site. The Project site also likely serves as a steppingstone corridor for avian species moving through this area, including least Bell's vireo which occur in Meridian Conservation Areas 1 and 2 to the south of the site north and south of Van Buren Boulevard. With full build-out of the Specific Plan Area, an undeveloped corridor would be retained immediately east of the site as part of the Conservation Easement. This undeveloped land would maintain a corridor between site development and nearby residential development, including significant areas of riparian habitat. (Figure 4.3-4 in the Draft EIR). To further buffer the Conservation Easement, the Specific Plan proposes three open space areas, including an additional 30-foot-wide landscaped buffer on the proposed parcels to the north, west, south, and southeast of the Specific Plan Area.

Finally, the Specific Plan Area includes the installation of three wildlife crossings: two under Cactus Avenue in the eastern portion of the Study Area, which will provide additional opportunities for wildlife to safely move north to south through the eastern Conservation Easement corridor; and one beneath Brown Street that will facilitate wildlife movement east and west through the Conservation Easement corridor. The two Cactus Avenue crossings will be soft-bottomed culverts approximately 8 feet in height, 20 feet in width, and 240 feet in length. The Brown Street crossing will consist of a soft-bottomed culvert approximately 8 feet in height, 20 feet in width, and 150 feet long. These specifications follow the CBD Settlement Agreement, which prescribed design standards suitable to accommodate local, land-locomotive species (Appendix S of the Draft EIR). Additionally, 60 acres of open space/park is planned for the western portion of the Specific Plan Area that buffers the existing residential uses west of the site, which will be included within the project's General Plan Amendment. This western open space area will still allow for the movement of wildlife to the west of the Specific Plan Area as well. As such, impacts on wildlife corridors would be less than significant.

I-559.2 The comment notes that a video of mountain lion tracks was transmitted and expresses general opposition to the Project. Mountain lions are known to be present in Southern California and occupy undeveloped open spaces. The presence of a mountain lion on the Project site is not considered

unusual. The Project includes a conservation area that will remain as open space in perpetuity, and as such, habitat and linkages with open space will continue to exist for mountain lions and other native species in the Project vicinity. As such, no further response is provided.

I-559.3 This comment letter is Form Letter C – Biological Resources. As such, in response to this comment, please see Form Letter C Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Please listen to the community!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Tia Ballesteros

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Please listen to the Community!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Tia Ballesteros

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Please hear our voices!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is

not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Tia Ballesteros

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

We are begging you to listen to us!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Tia Ballesteros

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Please do not put warehouses in my backyard!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to

know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Tia Ballesteros

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Tia Ballesteros

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Please do not put massive warehouses in my backyard.

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Tia Ballesteros

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

From: Tony Musumba <tonymusumba@gmail.com>
Sent: Sunday, March 5, 2023 2:21 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Anthony Musumba

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips. Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site? We would ask for significant mitigations to be put in place to reduce the impacts on local residents. 1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents) 2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing. I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028. I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Beverly M. Arias

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When

planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers. In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance. As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted. I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents. The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and

to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

Please don't allow one final grand act of poor land use planning be your lasting legacy.

I await your detailed response.

Sincerely,

Beverly Arias

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Brady Goodson

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

This week as I drove along Alessandro Boulevard near the 215 freeway, I saw warehouses with signage advertising that they are hiring. If the warehouses in the same area as the West Campus Upper Plateau are currently understaffed, how do you expect the new warehouses, offering less than living wages and poor benefits, to find and hire employees? Data shows that the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in

warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

Public safety is a significant concern for me. With the increased semi-truck traffic, it will be important for the community driving cars alongside these trucks to be aware the differences in vehicles that might be the cause of serious accidents, e.g. large trucks have larger blind spots than regular vehicles, they are much less maneuverable than regular vehicles and they have longer stopping distances than regular vehicles. What communication campaign will you develop to inform the driving public of these differences that could make the streets hazardous?

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement?

I-579.1

I-579.2

I-579.3

When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Christine M. Clese Martin

March 6, 2023

- I-579.1** This comment is the same as the first half of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-579.2** This comment raises concerns of roadway interactions between passenger vehicles and trucks. Section 7 of the California DMV Driver’s Handbook details the rules and guidance for passenger vehicles sharing the road with large vehicles such as trucks, which California drivers are required to know. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-579.3** This comment is the same as the second half of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

From: Felicia Valencia <feliciavalencia@msn.com>
Sent: Monday, March 6, 2023 5:07 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Felix and Felicia Valencia

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Felix and Felicia Valencia

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Felix and Felicia Valencia

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers. In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance. As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed. Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sent: Monday, March 6, 2023 7:55 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Leo Bobadilla

The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Larry Iest

Subject: West Campus Upper Plateau DEIR

3/6/2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA) 14205 Meridian Parkway, Suite 140 Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-593.1

In addition, by failing to address the negative impact on senior citizens, this proposed warehouse development is discriminatory.

I am 70 years old and live in the Camino del Sol area off of Alessandro, near the future warehouse development in Sycamore Canyon(in effect, surrounded by proposed warehouses). Westmont Village is a retirement community on Arnold Drive in Orangecrest. Both areas are already experiencing an extremely large increase in truck traffic. The Project would negatively lead to further social isolation for seniors through decreased confidence in driving on local streets by being surrounded and blocked by large diesel trucks.

I-593.2

The National Library of Medicine reports “Driving plays a vital role in older adults’ maintaining their preferred ways of life and is an important component of self-autonomy and independence.” “However, many older adults eventually cease driving due to medical conditions, functional impairments, and decreased confidence in driving. Driving cessation has also been linked to poor physical performance and functioning, elevated depressive symptoms and reduced engagement in social activities.”

Kaiser Medical has doctors offices, lab and x-ray services on Meridian Parkway only 1000 ft from the proposed Project entry on Cactus. My doctors office is located there and it is obvious that many seniors receive treatment at this facility. Increased truck traffic will surely make doctors visits more problematic for seniors and could result in hesitation in seeking healthcare that the increase in stress, depression and air pollution would necessitate. Older adults are especially vulnerable to harm from climate change brought on by declining air quality.

I-593.3

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to “upzone” the land use as specified in the General Plan from Business Park to industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and

I-593.4

commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as being incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

I-593.4
Cont.

Thank you for letting me comment on your project.

Sincerely,

Lenora Mitchell

March 6, 2023

- I-593.1** This comment is the first paragraph of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-593.2** This comment states that the increase in truck traffic leads to social isolation for senior citizens through decreased confidence in driving on local streets. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-593.3** This comment raises additional concerns regarding truck traffic in the vicinity of the Kaiser Medical offices located near the Project site. In response to this comment, please see Response to Comment I-593.2 above. Exhibit 4-1 of the Project Traffic Analysis (Appendix N-2) identified approximately 5% of the Project trucks utilizing the segment of Cactus Avenue identified in the comment. Approximately 85% of Project trucks are projected to remain on Cactus Avenue through its intersection with Meridian Parkway because the Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, beyond Meridian Parkway.

EXHIBIT 4-1: PROJECT (TRUCK) TRIP DISTRIBUTION

Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human

health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, and Appendix C-2 for further the discussion of cumulative health risks from toxic air contaminants.

I-593.4 This comment is the remainder of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,BG3btfhCNAdo9fntBlhpj_qBAdCTGW95T7i3thRPFgF5OT8CK4EQo5afLFjuX4wn6QBR3io_7xGZ7D-tViKeYqL-vZFPXZqt9UMJf1sPnqkkGvpUIX0GMSeBJyQ,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,Qtb8IclDIA0r0a--ea3WIMozEgMcwRr57wxnYcXphIgh4_Mdb6i44AbsQHM6O6DbXYFyFii8Lg5KJUXNmJQLzanLclqUiGM9s8VxsGD6&typo=1p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Maria R

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Maria R

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Maria R

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

Currently, minimum wage does not provide enough income for parents to support a family while meeting housing costs. Additionally, more and more older workers desire and need health insurance for themselves and their families. Whether or not this is standard for the industry is irrelevant as your ability to create an adequate employee pool is foundational for this proposal.

Please specifically address how you will provide incentives for prospective employees in terms of a total compensation package that will be attractive to those looking for employment in the region.

I-600.1

I-600.2

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Tim Martin

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

I-601.1

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

There are nearly 10,000 students who attend school in the areas most impacted by truck traffic. Please detail prescriptive efforts that will be made to ensure the safety of our students with the increase in truck traffic that will result from developing the West Campus Upper Plateau Project.

I-601.2

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How

I-601.3

might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Tim Martin

Cont.

Letter I-601

Tim Martin
March 6, 2023

I-601.1 This comment is the first half of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

I-601.2 This comment raises concerns about truck traffic and school traffic. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately $\frac{1}{4}$ miles and $\frac{1}{2}$ miles, respectively, directly past the next cross-street, Meridian Parkway. Exhibit 4-1 of the Project Traffic Analysis (Appendix N-2) shows the anticipated truck distribution. There are no schools along the routes 97% of the Project's trucks would use. There are schools in the vicinity of the City of Moreno Valley's truck routes, but only three percent of truck trips (approximately 62 trips) would continue east along Cactus Avenue.

Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

I-601.3 This comment is the second half of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

The “State of the Air” 2022 report found that despite decades of progress on cleaning up sources of air pollution, more than 40% of Americans - over 137 million people - are living in places with failing grades for unhealthy levels of particle pollution or ozone. The terrible reality that the proposed warehouses will increase pollution and unhealthy living for the people in the Orangecrest neighborhood as well as throughout the extended community takes us steps in the wrong direction. I am extremely concerned about the degradation of the air we breathe. What will you do to mitigate the adverse impact of increased pollution on the health and well-being of neighbors of the proposed warehouses?

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

I-602.1
I-602.2
I-602.3

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Christine M.Clese Martin

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Riverside, CA 92508
JAGOLDMAN@GMAIL.COM

I-604.1
Cont.

Aesthetics:

I do not agree that the potentially significant aesthetic impacts during construction will be mitigated by MM AES 1. Please provide site specific locations of where construction equipment will be stored and provide visual simulations and line of site studies from adjacent properties that illustrate that these areas will not have significant impacts on the community.

I-604.2

The DEIR needs to include an exterior point by point photometric study at this time and not defer it to prior the issuance of building permit stage to ensure that these impacts are not significant. The public will have no ability to review and provide input if the studies are done after the project is approved.

I-604.3

The Project needs to commit to installing solar photovoltaic systems on all buildings prior to approval of the Project and not defer to a future date after the Project is approved.

I-604.4

Air Quality

I do not agree that air quality impacts will be less than significant during construction. The DEIR does not include any mitigation measures to minimize or reduce project impacts during construction. The 15 mitigation measures that are included for air quality are standard requirements and will do little to minimize air quality impacts resulting from this Project.

I-604.5

Biology

No Comments

I-604.6

Cultural Resources

No Comments

I-604.7

Energy

I do not agree that energy impacts are less than significant given that the DEIR defers the commitment of solar photovoltaic systems to after project approval. The DEIR needs to incorporate specific mitigation measures for energy impacts and not use AQ and GHG measures to mitigate these potentially significant impacts.

I-604.8

Geology and Soils

No Comments

I-604.9

Greenhouse Gas Emissions

I do not agree that GHG impacts will be less than significant. MM-GHG 1 requires a commitment of 30% photovoltaic energy generation, however there is no guarantee that photovoltaic solar will be approved by the ALUC and the March JPA. There should be a commitment at this time that the Project will install photovoltaic systems for each building that provides 100% of the project’s energy needs, not 30%. What does MM-GHG-11 have to do with greenhouse gas mitigation and why provide the Applicant 7 years to construct the bus shelter?

I-604.10

Hazards and Hazardous Materials

I do not agree that this potentially significant impact will be mitigated through the 3 mitigation measures that are included in the DEIR. There should be additional mitigation measures that are included that provide the community with status reports to ensure no contaminants leave the site during project construction and/or operations.

I-604.11

Hydrology and Water Quality

MM-HYD-2 requires that a WQMP be prepared prior the issuance of each building permit. There should be a project wide WQMP prepared as part of the DEIR that future buildings need to adhere to. If not, the potential exists for fragmented water quality system that has the potential to impact adjacent properties and neighborhoods.

I-604.12

Land Use and Planning

The DEIR needs to include specific mitigation measures for this potential impact and not merely reference other mitigation measures.

I-604.13

NOISE

I do not agree that noise impacts will be less than significant during construction. Additionally, the DEIR fails to include even one mitigation measure to lessen noise impacts during construction or operation. The DEIR needs to be revised to include a noise study that analyzes potential noise impacts and includes effective mitigation measures to lessen noise.

I-604.14

Population and Housing

The DEIR states that this section is Not Applicable for this Project. Again, the DEIR needs to be revised to address the development of this Project and it’s impacts on Population and Housing in the area.

I-604.15

Public Services

The DEIR states that these impacts are Not Applicable and includes 1 mitigation measure for Fire. The DEIR needs to be revised to provide a complete analysis of the impacts this project will have on public services and provide mitigation measures that lessen any significant impacts.

I-604.16

Recreation

The DEIR states that impacts to recreation are Not Applicable and simply refers to a myriad of mitigation measures in other sections. The DEIR needs to be revised to provide a complete analysis of the impacts this project will have on recreation and provide mitigation measures that lessen any significant impacts.

I-604.17

Transportation

The DEIR concludes that Transportation impacts will be less than significant. This finding is **ludicrous** given existing transportation patterns within the area. The DEIR includes two mitigation measures, one requires a construction traffic management plan and the other requires a traffic safety plan for Barton Street. Both measures need to be performed at this time and included in the DEIR. It is inconceivable to defer these essential studies to a future milestone.

I-604.18

There is no way that additional traffic from this Project can be accommodated within Barton Street and Grove Community Drive. The existing street pattern was not planned for industrial traffic generated by the Project. At all times of the year, thousands of people use Grove Community Church and Orange Terrace Community Park for sporting activities. There should be no connection from this Project from Barton Street to Grove Community Drive.

I-604.19

Please provide detailed list of all freeway improvements (215 and 60) planned for this project.

I-604.20

Tribal Cultural Resources

No Comments

I-604.21

Utilities and Service Systems

The DEIR states that impacts to these systems are Not Applicable. The DEIR needs to be revised to include a complete discussion of potential impacts and provide specific mitigation measures.

I-604.22

FIRE

The DEIR concludes that Fire impacts are less than significant and includes 3 mitigation measures, none of which include the funding or construction of a new fire station or any supplemental funding for increased fire personnel. There is no way that the RCFD can provide adequate

I-604.23

coverage for the proposed project without additional facilities and manpower, both of which should be provided by this project.

↑ I-604.23
| Cont.

ALTERNATIVES

The DEIR needs to include residential alternative for the project site on all or portions of the site. Any of the other 4 alternatives are superior to what is being proposed.

| I-604.24

Letter I-604

Jeremy Goldman

March 7, 2023

I-604.1 This comment is introductory in nature and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis within the Draft EIR. As such, no further response is provided.

I-604.2 This comment questions the effectiveness of MM-AES-1 to reduce the Project's aesthetics impacts during construction. Regarding MM-AES-1, CEQA Guidelines Section 15126.4(a)(1)(B) states in part that the specific details of a mitigation measure "may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review, provided the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve the performance standard that will be considered, analyzed, and potentially incorporated in the mitigation measure." As detailed in Section 4.1, Aesthetics, of the Draft EIR, MM-AES-1 (Construction Equipment Staging and Screening) requires the staging of large construction equipment and vehicles outside of the public viewshed when not in use – the performance standard. MM-AES-1 would achieve this standard by concealing staging areas with existing intervening topographical or natural features. If not possible, then staging areas shall be concealed by fence screening and/or berming. Any fencing used shall incorporate vinyl tarps or slatted chain links to screen potential views of construction equipment. Inclusion of MM-AES-1 in the Project's MMRP would commit March JPA to the mitigation. As such, MM-AES-1 complies with CEQA Guidelines Section 15126.4(a)(1)(B) and would be effective in reducing the Project's aesthetic impacts during construction to public vantage points to less than significant levels.

In addition, the comment requests specific locations on the Project site where construction equipment would be stored and visual simulations from adjacent properties to illustrate the potential effects. The comment's request is too speculative to fulfill due to the dynamic changes that would occur during various construction phases and the phases of the Specific Plan's implementation. According to CEQA Guidelines Section 15204(a), "CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR." "A project opponent... can always imagine some additional study or analysis that might provide helpful information, [but] [i]t is not for them to design the EIR [and the fact] [t]hat further study... might be helpful does not make it necessary." *Laurel Heights Improvement Association v. Regents of the University of California* (1988) 47 Cal.3d 376, 415.

I-604.3 This comment requests the implementation of MM-AES-2 (Exterior Lighting Point-by-point Photometric Study Approval) during the preparation of the Final EIR instead of prior to the issuance of a building permit. Similar to Response I-604.2, above, the request is too speculative to be implemented at this time given that future buildings constructed under the Specific Plan are not proposed at this time (with the exception of Buildings B and C). MM-AES-2 is drafted in accordance with Section 15126.4(a)(1)(B) of the State CEQA Guidelines, as March JPA commits itself to require each building permit to submit a photometric study with specific performance standards: Compliance with the March JPA Development Code, the proposed Specific Plan, and the 16 project design features related lighting and glare, as detailed in Section 4.1, Aesthetics, of the Draft EIR.

- I-604.4** This comment contends the Draft EIR defers solar commitment to a later date. Under revised MM-GHG-1, the applicant will install rooftop solar photovoltaic systems for each building sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside ALUC. Because of the Project site's proximity to the March ARB, MM-AES-3 requires the applicant to submit a glint and glare study and the system's design for Riverside ALUC and March ARB review and approval. Similar to Response I-604.2, MM-GHG-1 and MM-AES-3 do not constitute deferred mitigation and are in compliance with CEQA Guidelines Section 15126.4(a)(1)(B).
- I-604.5** This comment generally objects to the conclusions in the Draft EIR regarding construction-related air quality impacts. The comment further states the proposed mitigation measures are standard requirements and would not reduce impacts related to air quality. Recirculated Section 4.2, Air Quality, disclosed and analyzed construction-related air quality impacts. As shown in Table 4.2-7, the Project's unmitigated construction emissions would exceed the SCAQMD construction significance threshold for VOCs and NO_x. MM-AQ-1 requires offroad equipment used during construction meet CARB Tier 4 Final emissions standards or better. To ensure the Project's construction activities proceed within the assumptions utilized in the Project's Revised Air Quality Impact Analysis (Appendix C-1), MM-AQ-2 requires the construction contractor to submit biweekly logs to March JPA detailing construction equipment hours and acreage graded. MM-AQ-3 (Construction Best Practices) would reduce construction-source emissions. MM-AQ-4 requires the use of "Super-Compliant" low VOC paints which have been reformulated to reduce VOC emissions so that the regulatory VOC limits put forth by SCAQMD's Rule 1113 are not exceeded or, in the alternative, tilt-up concrete buildings that do not require the use of architectural coatings. The proposed mitigation is feasible, consistent with SCAQMD Rule 1113, and measurable, as shown in Table 4.2-12, which demonstrates the Project's mitigated construction emissions would be below SCAQMD's construction significance thresholds for all criteria air pollutant emissions.
- I-604.6** The commenter indicates that they have no comments on the biology section of the Draft EIR. As such, no further response is required.
- I-604.7** The commenter indicates that they have no comments on the cultural resources section of the Draft EIR. As such, no further response is required.
- I-604.8** This comment generally objects to the Draft EIR's determination on energy impacts asserting the Project defers a commitment to solar photovoltaic systems to after approval. In response to this comment, see Response I-604.4 for discussion on the Project's commitment to solar photovoltaic systems. The comment further disagrees with the use of air quality and GHG mitigation measures to address energy impacts. Mitigation measures can lessen a project's impacts across multiple topic areas. Section 4.5, Energy, of the Draft EIR determined the Project's energy impacts to be less than significant and no mitigation would be required. Although not required, the Draft EIR then discloses that PDF-AQ-1, MM-AQ-21 and MM-GHG-1 through MM-GHG-12 would further reduce the Project's energy usage and impacts. Additionally, MM-AQ-7 (Passive Heating, Cooling, and Natural Light), MM-AQ-13 (Electrical Service for Landscaping Equipment), MM-AQ-14 (Electrical or Battery-Operated Landscaping Equipment), MM-AQ-18 (Electrical On-Site Equipment), MM-AQ-20 (Clean Fleet Trucks, Vans and Vehicles), and MM-AQ-11 (Clean Fleet Electric Supply) are incorporated into the Project and would also reduce the Project's energy usage.

I-604.9 This commenter indicates that they have no comments on the geology and soils section of the Draft EIR. As such, no further response is required.

I-604.10 This comment objects to the Draft EIR's determination on greenhouse gas impacts asserting the Project defers a commitment to rooftop solar photovoltaic systems until after approval through MM-GHG-1. In response to this comment, see Response I-604.4, above, for discussion on the Project's commitment to solar photovoltaic systems.

The comment questions the effectiveness of MM-GHG-11 to reduce the Project's GHG impacts and its 7-year timeframe. MM-GHG-11 would require, prior to the issuance of any grading permit, the applicant to pay \$17,000 to March JPA for the installation of a bus shelter on Alessandro Boulevard. Installation of the bus shelter would improve the local public transit network and further encourage the use of alternative forms of transportation. Increased public transit usage along Alessandro Boulevard would result in reduced GHG emissions in the Project vicinity. In-lieu fee payments are consistent with the constitutional requirements, as detailed in Section 15126.4(a)(4) of the State CEQA Guidelines, including an essential nexus between the mitigation and a legitimate government interest (*Nollan v. California Coastal Commission*, 483 U.S. 825 (1987)). Under MM-GHG-11, March JPA is responsible for the installation of the bus shelter. Only if the bus shelter has not been installed within seven years of Project approval would the funds be refunded to the applicant.

I-604.11 This comment generally questions the effectiveness of MM-HAZ-1 through MM-HAZ-3 to reduce impacts related to hazards and hazardous materials. Recirculated Section 4.8, Hazards and Hazardous Materials, analyzed the Project's construction and operational impacts and determined potentially significant impacts could occur. MM-HAZ-1 would require the abatement of hazardous building materials by implementing the recommendations of the Phase II Environmental Site Assessment (Appendix J-2). MM-HAZ-2 would prohibit toxic or highly toxic gases at quantities that exceed California Health and Safety Code Section 25532 threshold levels from being stored, handled, or used within one-quarter mile of an existing school. MM-HAZ-3 would implement airport compatibility measures prior to the issuance of building permits within the Specific Plan Area. MM-FIRE-1 would require implementation of vegetation management at the start of and throughout all phases of construction, and combustible materials would not be brought on site until site improvements (e.g., utilities, access roads, fire hydrants, fuel modification zones) have been implemented and approved by RCFD. Out of an abundance of caution, the Campus Development would be required to comply with all provisions in the Riverside County Code regulating development in a HFHSZ. With implementation of these mitigation measures, all hazards and hazardous materials impacts associated with the proposed Project would be less than significant.

The comment requests additional mitigation measures in the form of community status reports "to ensure no contaminants leave the Project site during construction and operation." As discussed above, Recirculated Section 4.8, Hazards and Hazardous Materials, determined the Project would have less than significant hazards and hazardous materials impacts with mitigation incorporated; additional mitigation is not required. Additionally, the proposed mitigation measure would not reduce the Project's hazards and hazardous materials impacts.

I-604.12 This comment asserts a Project-wide WQMP should be prepared and that MM-HYD-2 would result in inconsistencies in the Project site's water quality system. Appendix K-2 of the Draft EIR is the Master Project Specific Water Quality Management Plan, the Project-wide WQMP. As further detailed in Section

4.9, Hydrology and Water Quality, of the Draft EIR, MM-HYD-2 would require the development of future WQMPs prior to the issuance of each building permit within the Specific Plan Area be consistent with the Master Project Specific Water Quality Management Plan. Moreover, this measure would ensure compliance with the requirements of the Riverside County Municipal Separate Storm Sewer System (MS4) Permit, as well as the National Pollutant Discharge Elimination System (NPDES) New Development & Redevelopment Guidelines for Projects Under the March Joint Powers Authority, also known as the 2008 March JPA WQMP Guidance Document. In addition, a long-term maintenance and funding plan would also be approved by the March JPA as part of each WQMP, thereby ensuring consistency for future development under the Specific Plan.

- I-604.13** This comment requests specific mitigation measures to reduce impacts related to land use and planning. Recirculated Section 4.10, Land Use and Planning, incorporates mitigation measures identified in other sections of the Draft EIR to demonstrate consistency with applicable land use plans, policies, and regulations adopted for the purpose of avoiding or mitigating an environmental effect. See Response I-604.8 related to the use of mitigation measures across multiple sections of the Draft EIR.
- I-604.14** This comment objects to the Draft EIR's determination related to construction noise and absence of mitigation measures. The comment requests a noise study to analyze noise impacts and include effective mitigation measures. Appendix M-1 is a Noise and Vibration Impact Analysis (Appendix M-1) prepared by Urban Crossroads in October 2022 and revised in December 2023. Based on the findings of the noise study, the EIR determined the Project would result in less than significant construction noise impacts. As detailed further in Section 4.11, Noise, of the Draft EIR, the impact analysis is based on quantifiable thresholds and relies on existing regulations to reduce impacts. The Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling activities. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Mitigation is required when there is a potentially significant environmental impact. The Project would have less than significant impacts due to construction noise and no mitigation is required. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project's traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant. Section 4.11, Noise, of the Draft EIR evaluated the mitigation potential of rubberized asphalt but determined such a measure would not lower off-site traffic noise levels below the level of significance for Roadway Segment #13, so the Project's noise impacts for Roadway Segment #13 is significant and unavoidable. No changes or revisions to the Draft EIR are required in response to this comment.
- I-604.15** This comment suggests impacts related to population and housing were not evaluated in the Draft EIR. Section 4.12, Population and Housing, evaluates the Project's potential to induce substantial unplanned population growth and determined the Project's impacts to be less than significant. The Draft EIR determined the Project would not displace substantial numbers of existing people or housing through the analysis provided in the Initial Study. For details regarding this threshold, refer to Chapter 5, Other CEQA Considerations, and the Initial Study included as Appendix A of the Draft EIR. No changes or revisions to the Draft EIR are required in response to this comment.

- I-604.16** This comment suggests impacts related to public services were not evaluated in the Draft EIR. Section 4.13, Public Services, analyzed potential impacts related to public services, including fire protection, police protection, schools, parks, and other public facilities. The Draft EIR determined impacts to fire protection services would be less than significant and identified that MM-FIRE-1 would further reduce impacts related to fire protection services. Impacts for other public services (i.e., police, schools, parks, etc.) were found to be less than significant due to proximity to existing services, funding sources, and design considerations. No changes or revisions to the Draft EIR are required in response to this comment.
- I-604.17** This comment suggests impacts related to recreation were not evaluated in the Draft EIR. Section 4.14, Recreation, analyzed potential impacts related to recreation and determined the Project's impacts to be less than significant and no mitigation was required. Section 4.14.5 identified a list of mitigation measures that would be applicable to the construction and operation of the proposed Park. No changes or revisions to the Draft EIR are required in response to this comment.
- I-604.18** This comment objects to the impact determination within Section 4.15, Transportation, due to existing area transportation patterns. Traffic delay and Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine transportation impact and mitigation measures for CEQA.

The comment suggests MM-TRA-1 (Construction Traffic Management Plan) and MM-TRA-2 (Traffic Safety Plan for Barton Street) are deferred and should be implemented prior to Project approval. CEQA Guidelines Section 15126.4(a)(1)(B) states in part that the specific details of a mitigation measure “may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review, provided the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve the performance standard that will be considered, analyzed, and potentially incorporated in the mitigation measure.” It would be impracticable to develop a construction traffic management plan at this time as the specific details of coordination for Project construction are not yet determined; MM-TRA-1 commits the March JPA to implement the mitigation, sets forth the performance standard and actions that would be potentially incorporated into the final plan. It is infeasible to develop the Barton Street traffic safety plan at this time because the ultimate plan for the proposed Park has not been determined; MM-TRA-2 commits the March JPA to implement the mitigation, sets forth the performance standard and actions that would be potentially incorporated into the final plan. No changes or revisions to the Draft EIR are required in response to this comment.

- I-604.19** This comment asserts additional industrial traffic cannot be accommodated within Barton Street and Grove Community Drive. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become

accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

I-604.20 This comment requests a detailed list of all freeway improvements planned for the proposed Project. A queuing analysis at freeway off-ramps is included in Section 4.15, Transportation, and shows acceptable stacking distance for the Project (Table 4.15-7). PDF-TRA-4 requires the payment of fair share cost towards improvements at off-site intersections. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. These improvements are listed in Table 1-4, Summary of Improvements and Rough Order of Magnitude Costs, of Appendix N-2 of the Draft EIR. For the I-215 ramps:

- I-215 NB Ramps and Alessandro Boulevard – Project would pay its fair share (\$16,926) to add a NB 2nd left turn lane
- I-215 SB Ramps and Cactus Avenue – Project would pay TUMF fees to contribute towards adding an EB 3rd through lane and a WB 3rd through lane
- I-215 NB Ramps and Cactus Avenue – Project would pay TUMF fees to contribute towards adding a NB 2nd left turn lane, EB right turn lane, WB 3rd through lane, EB 3rd through lane and WB 4th through lane
- I-215 SB Ramps and Van Buren Boulevard – Project would pay its fair share (\$3,925) to restripe SB through as a left lane and modify EB right turn lane to single free right turn lane. Project would also pay TUMF fees to contribute towards adding a WB 3rd through lane

I-604.21 This commenter indicates that they have no comments on Section 4.16, Tribal Cultural Resources, of the Draft EIR. As such, no further response is required.

I-604.22 This comment suggests impacts related to utilities and service systems were not evaluated in the Draft EIR. Section 4.17, Utilities and Service Systems, analyzed utilities, including water, wastewater, storm water, electric power, natural gas, telecommunications and solid waste, determining impacts to be less than significant and no mitigation required. See Section 4.17 for more discussion on utilities. No changes or revisions to the Draft EIR are required in response to this comment.

I-604.23 The comment raises concern for fire protection services without the construction of a new fire station or funding for increased fire personnel. The Project Development Agreement includes the construction of the planned County fire station to be located at the northeast corner of Meridian Parkway and Opportunity Way. See Topical Response 6 - Meridian Fire Station for additional details. No changes or revisions to the Draft EIR are required in response to this comment.

I-604.24 The comment requests a residential alternative for the Project site. In addition, the comment expresses support for any of the other four alternatives to the proposed Project. In response to this comment, please see Topical Response 8 – Alternatives.

From: jenna pontious <jennapbird@icloud.com>

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,aZDw5nQ5ppZN12IG2hEbL-cxfO59D94IMAq-VsICVKD3gIJ2EuWMdgYFIIFjdqR3mHx9qZ-ZzM0WoRltz2PsJ3RI3VpPIIJI8gn71xI0Zm1XEh81xK1WzRTqBA,,&typo=1>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,muJCK7EjtyxvpcI2u1M9rIG-9nVdZeLOTj48BPkpNqcNdqOWhi26cVvFtvGyDmDzuPw7vK0H9II8Q0NA128GZJ9nYGL0bEZsS1Kd3zwsrl,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Jenna Pontious She/Hers

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Jenna Pontious She/Hers

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Jenna Pontious She/Hers

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-609.1

The justification for this widely opposed project appears to be the creation of 2,600 jobs. There is no analysis that I can find to justify this assertion *nor is there any agreement to not replace jobs with AI now or in the future. Please provide any analysis that you may have. The softening of the labor market is not due to the absence of jobs. Jobs are abundant because of the Gig economy changing landscape. We don't need warehouses reducing quality of life in neighborhoods to create jobs which will be filled by AI.*

Moreover, we have a large community of asthmatics in Orangecrest including my entire family who moved here for better air quality. Air quality matters in this neighborhood! Increased traffic and trucks in this area will increase Riverside resident's medical costs, the burden on our hospitals and absenteeism from school/work.

I-609.2

This is not just a traffic issue and a nuisance, it's a health issue that will detrimentally impact Riverside residents and increase local government and warehouse corporation's liability. ALL FOUR VOTERS in my household are OPPOSED to warehouses being built in Orangecrest!

Sincerely,
Mark Sullivan, Jennifer and family

Mark and Jennifer Sullivan

Letter I-609

Mark and Jennifer Sullivan

March 7, 2023

I-609.1 This comment is the first two paragraphs of Form Letter F – Jobs. In response to this comment, please see Form Letter F Response. The comment further questions the potential for job replacement through AI. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR.

I-609.2 This comment expresses concern about the health effects of increased air pollution from vehicle and truck traffic. The Draft EIR assessed the Project's health risks in Recirculated Section 4.2, Air Quality and Appendix C-2. At R11 (971 Saltcoats Drive), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 , which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 , which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, and Appendix C-2, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-613.1

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive s (remaining template is not available, but it's the same template as the others you have received).

We don't need warehouses reducing quality of life in neighborhoods to create jobs which will be filled by AI..

I-613.2

Moreover, we have a large community of asthmatics in Orangecrest including my entire family who moved here for better air quality. Air quality matters in this neighborhood! Increased traffic and trucks in this area will increase Riverside resident's medical costs, the burden on our hospitals and absenteeism from school/work.

I-613.3

This is not just a traffic issue and a nuisance, it's a health issue that will detrimentally impact Riverside residents and increase local government and warehouse corporation's liability. ALL FOUR VOTERS in my household are OPPOSED to warehouses being built in Orangecrest!

Sincerely,
Mark Sullivan, Jennifer and family

Mark and Jennifer Sullivan

Sent: Tuesday, March 7, 2023 8:57 AM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

I-615.1

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance.

We don't need warehouses reducing quality of life in neighborhoods to create jobs which will be filled by AI..

I-615.2

Moreover, we have a large community of asthmatics in Orangecrest including my entire family who moved here for better air quality. Air quality matters in this neighborhood! Increased traffic and trucks in this area will increase Riverside resident's medical costs, the burden on our hospitals and absenteeism from school/work.

I-615.3

This is not just a traffic issue and a nuisance, it's a health issue that will detrimentally impact Riverside residents and increase local government and warehouse corporation's liability. ALL FOUR VOTERS in my household are OPPOSED to warehouses being built in Orangecrest!

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. There is no analysis that I can find to justify this assertion *nor is there any agreement to not replace jobs with AI now or in the future. Please provide any analysis that you may have. The softening of the labor market is not due to the absence of jobs. Jobs are abundant because of the Gig economy changing landscape. We don't need warehouses reducing quality of life in neighborhoods to create jobs which will be filled by AI.*

Moreover, we have a large community of asthmatics in Orangecrest including my entire family who moved here for better air quality. Air quality matters in this neighborhood! Increased traffic and trucks in this area will increase Riverside resident's medical costs, the burden on our hospitals and absenteeism from school/work.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, I appreciate you taking the time to read this.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Michele Muehls

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, I know there are a lot of letters coming across your email but I sincerely appreciate your time.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Michele Muehls

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, I hope you're doing well and enjoying this lovely day.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Michele Muehls

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, thank you for taking the time to read this letter.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Michele Muehls

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, I sincerely appreciate you taking the time to read and consider my letter!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Michele Muehls

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, my community is united in this cause, and we appreciate your time in this matter!

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Michele Muehls

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who **will** ensure that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Milo Rivera

From: MJ Rivera <milo.rivera21052@gmail.com>
Sent: Tuesday, March 7, 2023 12:41 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Milo Rivera

Sent: Tuesday, March 7, 2023 9:19 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Michelle Singleton

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Michelle Singleton

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Michelle Singleton

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Michelle Singleton

Sent: Tuesday, March 7, 2023 9:22 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Michelle Singleton

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Michelle Singleton

From: Michelle Singleton <michellesingleton.adem67@gmail.com>
Sent: Tuesday, March 7, 2023 9:23 AM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Michelle Singleton

Name: Michael Wilson
Email: Bloomington51@outlook.com

Message: I wish to address an issue in the Aesthetics section of the Environmental Impact Report which received no attention but deserves consideration.

Section 4, Aesthetics, addresses views of the project area and scenic vistas from publicly-accessible points at ground level only. Page 4.1-3 contains the statement "...views from private residences are not considered in this analysis as they are not covered under CEQA Guidelines." While the CEQA Guidelines are not concerned with views of the project site from private locations, Section 15064 does give the Lead Agency (in this case, March JPA) the discretion of setting its own thresholds of significance for environmental effects that could have been included in the report. March JPA has, either intentionally for the purpose of expediting approval of the project, or as an oversight by presumption of public opinion, not given regard to the effect of the development on public perception, attitude, and mental health, particularly of those in the community most impacted through their immediate proximity to the project property in all its phases of development and activity.

The justification for minimizing the impact of project development views from private locations can be attributed either to the small number of people impacted, or the significance of the impact itself. In my analysis of the perimeter of the project area, I counted 276 residences immediately adjacent to the development property on three sides. Of those, 192 residences will be adjacent to some form of development, with the rear side of the residences facing either structures, sports field/park, or the access road. Most of these residences are in the newer residential developments of Mission

I-635.1

Grove and Orangecrest, and those are overwhelmingly two-story structures, with views through second-floor rear windows looking over fences and walls down onto adjacent project property and beyond. What is now seen as open fields with vegetation, with some old bunkers, power poles, and fences, will become largely industrial and business buildings with paved parking lots, loading docks, trucks, and parked trailers. It will go from land occupied exclusively by small animals living among the grass, shrubs, and rocks, to land largely covered by asphalt, concrete, and vehicles. There will also be noise, lighting, and added air pollution, the sources of which will be obvious, coming with the project development. No consideration is given in the EIR to the potential effects on the morale of residents who have appreciated the property in its current state, and in some cases, moved to where they now live because of it with the expectation that it would remain so because it was an endangered Stephens' Kangaroo Rat habitat.

I-635.1
Cont.

I submit that the number of residents affected by the aesthetics is significant enough to warrant consideration. I also submit that the effects on morale, and even mental health, of residents in immediate proximity of this project must be considered. The value of greenspace—an area of grass, trees, and vegetation in urban areas, even if it is just for aesthetics—is being increasingly recognized as important for overall health (for example, see *Why More Green Space is Essential for Cities*, isoglobal.org, Oct. 28, 2021). Even in this project, the desirability of undeveloped area is acknowledged, as some of the project property will be left as is. (It does, however, give the appearance of being a token gesture, an attempt to minimize community objection along with providing amenities assumed to make the commercial-industrial part of the project palatable.) Section 15064.7(a) of the CEQA Guidelines allows for the environmental effect to be of a qualitative level, which this is. It is subjective, but it is real, with real effects that rightfully should not be disregarded. Section 15064(e) of the Guidelines states “...economic and social effects of a physical change may be used to determine that the physical change is a significant effect on the environment. If the physical change causes adverse economic or social effects on people, those adverse effects may be used as a factor in determining whether the physical change is significant.” The existence of adverse effects expected from proceeding with this project is not acknowledged even though it has been communicated at public meetings and in communications with elected officials in person and by letters.

I-635.2

Forced replacement of comfort with discomfort and the effect on mental health is the main issue here, but it is compounded by, first, that it is a change judged as unnecessary by the community, and, second, that there is even a perception that an agency expected to protect community interests misjudges or disregards those interests. As evidenced in the EIR by the attention given to views from publicly-accessible points, there is interest in pleasing members of the general public who may drive or stroll by, who may or may not take a look, and then move on, but not for the feelings of residents who have made a commitment and investment in being where they are and won't have a choice about what they will see if they want to look out their upstairs rear windows.

Sincerely,

Michael Wilson
7642 Greenock Way
Riverside, Ca 92508

Letter I-635

Michael Wilson
March 7, 2023

- I-635.1** The comment raises concerns that the Draft EIR does not consider aesthetic impacts to private views. The lead agency has the discretion to set its own thresholds of significance for assessing environmental effects, in accordance with Section 15064.7 of the State CEQA Guidelines. March JPA, as the lead agency, has adopted Local CEQA Guidelines. The Draft EIR's analysis on aesthetics from publicly-accessible vantage points, as opposed to effects on private views, is in accordance with CEQA case law. This is supported by numerous court cases, including *Ocean View Estates Homeowners Assn., Inc. v. Montecito Water Dist.* (2004) 116 Cal.App.4th 396, 402; *Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 492-493; and *Association for Protection etc. Values v. City of Ukiah* (1991) 2 Cal.App.4th 720, 734. However, the public viewpoints selected for analysis have similar vantage points and views as surrounding private development so the Draft EIR discloses potential impacts to private views. No changes or revisions to the Draft EIR are required in response to this comment.
- I-635.2** The comment raises general concerns regarding the proposed Project's impacts related to noise, lighting, and air pollution. The Draft EIR analyzes these environmental topic areas within Sections 4.11, Noise, and 4.1, Aesthetics, and Recirculated Section 4.2, Air Quality, respectively.

This comment states the Project site was identified as habitat for Stephens Kangaroo Rat (SKR) and not to be developed. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. Although Exhibit 5-1 of the March JPA General Plan identifies the former Weapons Storage Area as SKR Open Space and the remainder of the Project site as SKR Management Area, the General Plan explains the intent to purchase better quality SKR habitat elsewhere so that "the lands currently designated for SKR management and open space purposes will be available for development." Figure 1-4, Land Use Plan, of the March JPA General Plan designates the former Weapons Storage Area as Park/Recreation/Open Space and the remainder of the Project site as Business Park. The swap of March JPA lands, including the Project site, for more and better quality SKR habitat was the subject of the 2012 Settlement Agreement with the Center for Biological Diversity and San Bernardino Valley Audubon Society (Appendix S). Under the CBD Settlement Agreement, the land uses were inverted, with the Weapons Storage Area identified for development, along with a 60-acre park, and the remainder of the Project site identified as a conservation easement (see Figure 3-4 of the Draft EIR). The Project's potential direct and indirect impacts to SKR and its habitat are evaluated within Section 4.3, Biological Resources, of the Draft EIR. With implementation of MM-BIO-1 (Best Management Practices), MM-BIO-3 (Operation-Related Indirect Impacts to Special-Status Wildlife), and MM-BIO-4 (Stephens' Kangaroo Rat Avoidance and Mitigation), the Project's direct and indirect impacts to SKR and its habitat would be less than significant.

The comment also asserts the Draft EIR does not consider the potential effects on morale or mental health for surrounding residents as a result of the Project site's redevelopment, citing CEQA Guidelines Section 15064(e). The comment misinterprets CEQA Guideline Section 15064(e) which states in its first sentence that "[e]conomic and social changes resulting from a project shall not be treated as significant effects on the environment." The Guideline uses overcrowding of a public facility that causes an adverse effect on people as an example of a physical change that could be used as factor in

determining whether the physical change is significant. There is no factual or legal support for the idea that an effect on morale is considered a factor that could cause a physical change to be deemed significant. Impacts related to morale are not recognized in CEQA as an environmental topic area. *Preserve Poway v. City of Poway* (2016) 245 Cal.App.4th 560, 576-82 (CEQA does not require analysis of psychological and social impacts of negative impacts on city's community character). Overall, the comment's suggestion is not in line with the physical impacts associated with the overcrowding example as described in Section 15064(e) of the State CEQA Guidelines. No changes or revisions to the Draft EIR are required in response to this comment.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-636.1

I was told by a senior guard at the facility, many years ago, that the chemical hazards at the site are huge. What did he know, that this project is ignoring?
We know that past military operations are hidden in secrecy. There is no audit trail of what the military did here. Why is the hazards at the site being ignored??

I-636.2

Nuclear munitions were probably kept here at the west campus. Legacy nuclear weapons - I think around the 60's, had many maintenance tasks that were done to keep them operational. Where did they dispose of this maintenance waste? Perhaps at the site itself? Has the Air Force had any input on this? Have they confirmed or do they deny nuclear weapons were stored there?

I have serious concerns about the study’s multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

I-636.3

Specifically, I would like to ask:

- 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
- 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
- 3. Why were PFAS and perchlorate omitted in soil testing?
- 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren’t tests related to radioactive materials or chemical weapons conducted in your analysis?
- 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-

phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Rod Deluhery

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Rosario Garcia

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Rosario Garcia

Sent: Tuesday, March 7, 2023 11:56 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Rosario Garcia

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Rosario Garcia

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Rosario Garcia

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Rosario Garcia

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Stephanie Jimenez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Stephanie Jimenez

Sent: Tuesday, March 7, 2023 11:34 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Stephanie Jimenez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Stephanie Jimenez

Sent: Tuesday, March 7, 2023 11:36 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Stephanie Jimenez

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Stephanie Jimenez

Sent: Tuesday, March 7, 2023 7:57 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

I-651.1

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I-651.1
Cont.

As an adult with cystic fibrosis, which is recognized as a disability in the Americans With Disabilities Act (ADA), I would like to know what measures you will take to ensure the legal protections afforded to me and others like me in the proximity of your proposed warehouses will not be ignored or violated.

I-651.2

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

I-651.3

Thank you for the opportunity to comment.

INTENTIONALLY LEFT BLANK

From: Aaron Bushong <aaron.bushong@verizon.net>
Sent: Wednesday, March 8, 2023 8:36 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

What do an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes have in common? They all occurred in the Orangecrest neighborhood of Riverside within the past three years, with the warehouse fire and jack-knifed big rig both occurring on September 12 of this year; all three put local residents in danger; and all three were the result of the poor planning, lack of foresight, and utter disregard for local residents' well-being and safety demonstrated by the March Joint Powers Authority for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for Riverside, Perris, and Moreno Valley residents.

I-653.1

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. If you have any doubts about that you should contact the California Air Resources Board on Iowa Avenue in Riverside or the College of Engineering Center for Environmental Research and Technology at UC Riverside, rather than relying on the biased environmental impact report that the developer clearly paid to be written in their favor. If the project is approved, the traffic and pollution problems will most certainly worsen, and they won't be localized to the City of Riverside. The City of Perris and the City of Moreno Valley will necessarily experience the detrimental impacts, as well.

I-653.2

I demand that the developer specifically address how traffic and pollution problems will be mitigated, how big rigs will be strictly prohibited from using residential streets in perpetuity, and how airplane crashes and warehouse fires can be guaranteed never to occur again. If the developer is unable to meet any of those demands, the project should not be allowed to proceed.

I-653.3
I-653.4
I-653.5

Thank you,
Aaron Bushong

aaron.bushong@verizon.net

Letter I-653

Aaron Bushong

March 8, 2023

- I-653.1** This comment expresses opposition to the Project and identifies recent incidents involving warehouses, trucks and the March ARB. The comment does not raise specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR.
- I-653.2** This comment raises general concerns regarding the Project's impacts to existing air quality and traffic conditions. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- I-653.3** This comment asks how the Project will mitigate for traffic and pollution problems. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Section 4.15, Transportation, evaluated the Project VMT impact and determined it to be less than significant.
- I-653.4** This comment questions how big rigs will be restricted from traveling on residential streets in perpetuity. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway.
- Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions

of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. No changes or revisions to the EIR are required In response to this comment.

I-653.5 This comment questions how airplane crashes and warehouse fires can be guaranteed to never occur again. Both warehouse fires involved stored products and airplane crashes are anomalies and rarely occur. However, given the Project's proximity to the March Inland Port Airport, the risk of airplane crashes remains. The Riverside County Airport Land Use Commission (ALUC) reviews projects to maximize consistency with airport land use plans for projects within close proximity to an active airstrip. This Project has undergone review by ALUC, as discussed in Recirculated Section 4.10, Land Use and Planning. ALUC provided their consistency determination in a letter dated May 16, 2022, which is included within Appendix L of the Draft EIR.

As detailed in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, a new Riverside County fire station will be constructed at Meridian Parkway and Opportunity Way. The provision of a new fire station within the Meridian Business Park will allow for more rapid response to any potential future warehouse fire. Given existing fire mutual aid agreements serving March JPA, the Project site would be adequately served by fire protection services through the buildout of the Specific Plan. In addition, Section 4.18, Wildfire, includes mitigation measures to help reduce wildfire-related impacts, such as MM-FIRE-1 (Pre-Construction Requirements). This measure would also help reduce impacts to fire protection services, as detailed in Section 4.13, Public Services. Moreover, the Project includes PDF-FIRE-1 through PDF-FIRE-3 which would ensure compliance with the California Fire Code, implementation of a fire protection plan, and educational materials on evacuation and wildfire risk. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Finally, MM-FIRE-2 would implement vegetation management measures and MM-FIRE-3 would require compliance with the Fuel Management Zone protections related to alternative materials and methods.

It is beyond the scope of this Project and EIR to guarantee that airplane crashes and warehouse fires will never occur again; however, the analysis within the Draft EIR, the consistency with the airport land use plan, and the buildout of the new Meridian Fire Station would minimize potential impacts to the Project site and surrounding communities in the event of another catastrophic event. No changes or revisions to the EIR are required in response to this comment.

Sent: Wednesday, March 8, 2023 2:26 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Avery Cintura, Chino CA, acintura1@gmail.com

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-655.1

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Considering the significant growth predicted for Riverside, please explain your rationale for not developing a large percentage of this land as residential and recreational uses. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

I-655.2

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-655.3

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as

shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Christine M.Clese Martin

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Christine M.Clese Martin

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Greg Garnier, Riverside, CA 92508

I ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected? Thank you for the opportunity to comment.

As previously recommended the March JPA should think "outside the box" here and review the City of Irvine's Great Park handling and the current and future amenities it brings to the community with very similar, former US Government, property.

I-658.2

[Now at the Park | City of Irvine](#)

<https://youtu.be/odQxP0ac2UQ>

The March JPA also should have been in discussions with Microsoft, Google, and Amazon on locating a high-tech cloud computing data center at the location as this would be a win-win for all parties involved. Lower cost of operations for the tech company and high paying jobs for the communities and no big rig traffic nor increased air pollution in an area already one of the worst in the nation. Riverside also cannot afford to maintain their current thoroughfares, this increased truck traffic would significantly increase the cost here.

I-658.3

Sincerely,

John Lyell

Letter I-658

John Lyell
March 8, 2023

- I-658.1** This comment is a slightly modified version of Form Letter B – Air Quality with the addition of the following phrase at the end of the first sentence of the second paragraph: “...in an area already known for some of the worst air quality in the US.” The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter B Response.
- I-658.2** This comment suggests that March JPA consider an alternative similar to Irvine’s Great Park. In response to this comment, please see Topical Response 8 – Alternatives, where an explanation is provided for why a large park similar to Irvine’s Great Park was considered but not analyzed.
- I-658.3** This comment suggests that March JPA would consider discussions with Microsoft, Google and Amazon for locating high-tech cloud computing data centers at the Project site. Occupants for the Project site have not been determined at this time, and the land use designations within the Specific Plan would not preclude these uses in the future. The commenter notes that high-tech cloud computing data centers would reduce truck traffic, and therefore, air pollution. Because the occupants of the proposed Project are not known at this time, the Draft EIR considered the environmental impacts of more intensive uses being located at the site. Should a high-tech cloud computing data center locate at the site, this use would result in fewer vehicle trips. However, given the uncertainty at this time, the Draft EIR discloses potential impacts for more intensive uses. No changes or revisions to the EIR are required in response to this comment.

Sent: Wednesday, March 8, 2023 2:08 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside.

The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects.

You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the

I-659.1

traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area.

I-659.1
Cont.

It is known fact the City of Riverside for years now has not had the funding to make the needed repairs to city streets. Significantly increased traffic in this area, especially large trucks, will significantly exacerbate this issue, and as previously mentioned, trucks today regularly break the law and the city does little to enforce them.

I-659.2

Thank you!

Sincerely,

John Lyell

Letter I-659

John Lyell
March 8, 2023

I-659.1 This comment is the same Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

I-659.2 This comment raises concerns regarding road repair funding. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹

The commenter also asks about the enforcement of trucks not following the established truck routes. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. No changes or revisions to the EIR are required in response to this comment.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

I believe a task force is needed to work collaboratively in achieving an outcome that can benefit all parties. Personally I believe some of this former US government property should have been used for a large regional park, like Irvine Park and now the Great Park. I have heard of flight path concerns, but they seem illogical as planes fly over houses today on an almost daily basis. This would be an opportunity for a huge showcase attraction for the area and for residents of the surrounding communities. Large sports facilities also can be very profitable for youth sport tournaments, some of which have been known to bring in over a quarter of million \$ on a long weekend, and even more to local food, hotel, and other establishments.

I-660.1

[Irvine Regional Park | OC Parks](#)

As previously recommended the March JPA should think "Outside the box" here and review the City of Irvine's Great Park handling and the current and future amenities it brings to the community with very similar, former US Government, property.

[Now at the Park | City of Irvine](#)

<https://youtu.be/odQxP0ac2UQ>

The March JPA also should have been in discussions with Microsoft, Google, and Amazon on locating a high-tech cloud computing data center at the location as this would be a win-win for all parties involved. Lower cost of operations for the tech company and high paying jobs for the communities and no big rig traffic nor increased air pollution in an area already one of the worst in the nation. It is well known Riverside, for years now, cannot afford to maintain their current thoroughfares, this increased truck traffic would significantly increase the cost here.

I-660.2

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside and fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-660.3

The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's

land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of

I-660.3
Cont.

signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use.

Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process and seek a win-win solution that all can be proud of.

I-660.3
Cont.

Thank you for letting me comment on your project.

Sincerely,

John Lyell

Letter I-660

- I-660.1** This comment suggests that March JPA consider an alternative similar to Irvine’s Great Park. In response to this comment, please see Topical Response 8 – Alternatives, where an explanation is provided for why a large park similar to Irvine’s Great Park was considered but not analyzed.
- I-660.2** This comment suggests that March JPA would consider discussions with Microsoft, Google and Amazon for locating high-tech cloud computing data centers at the Project site. Occupants for the Project site have not been determined at this time, and the land use designations within the Specific Plan would not preclude these uses in the future. The commenter notes that high-tech cloud computing data centers would reduce truck traffic, and therefore, air pollution. Because the occupants of the proposed Project are not known at this time, the Draft EIR considered the environmental impacts of more intensive uses being located at the site. Should a high-tech cloud computing data center locate at the site, this use would result in fewer vehicle trips. However, given the uncertainty at this time, the Draft EIR discloses potential impacts for more intensive uses. No changes or revisions to the EIR are required in response to this comment.
- I-660.3** This comment is Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

After sitting in traffic, hemmed in by semi truck after semi truck after semi truck on the 215 South, I feel compelled to comment on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

It is common knowledge to area residents that hazardous materials were stored in the bunkers in the property.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-663.1

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

What is wrong with having an open space where local residents can hike, observe nature, and enjoy the ambience of nature? Study after study shows the positive impact of open spaces on people’s mental health, reduction of stress and anxiety. Why would you take that away??

I-663.2

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered

I-666.1

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Shouldn’t the people most impacted by the project have the most input? Residents have made their wishes very very clear -yet no part of the plan has been altered to reflect those wishes. Please use this opportunity to require the developer to submit alternate uses for the land that are inline with the original historical context of the proposed plan.

Thank you for letting me comment on your project.

Sincerely,

KrisTy Doty

March 8, 2023

- I-666.1** This comment is Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-666.2** This comment requests more input from residents and an alternative more in line with the original historical context of the proposed plan be considered. The March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three workshops, and one Zoom virtual meeting with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. The General Plan includes warehousing in the definition of Business Park uses. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations. The proposed Project will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development, including 78 acres for the proposed Park and additional buffering open space. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. Additionally, in response to the request that an Alternative more in line with the historical context be considered, please see Topical Response 8 – Alternatives, which introduces Alternative 5, a new Non-Industrial Alternative.

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

* The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDB.

* Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

* Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?

* Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I-667.1
Cont.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

I-667.2

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

* Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)

* Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

I have lived in Riverside almost my entire life and am so saddened to see us becoming a warehouse community. My son moved away because he said he couldn't stand the air quality here and this will only make it worse for ourselves and our

I-667.3

families. I'm exhausted with the freeway congestion exacerbated by logistics. I don't understand what the motivation would be to put in all of these warehouses-they add nothing to the community that we need.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-668.1

This is a nightmare of huge proportions for our community. We have repeatedly communicated with you our profound grief and anxiety over this and yet you proceed. Why have you not proposed other development options to us? Is this not a moral obligation desired by the Air Force when March JPA was formed? To better the community and not obliterate it. Please review your mandate.

I-668.2

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-668.3

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents) 2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely, Linda K. TingleyRivera

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Riverside, CA 92518

RE: Public comment on the record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500 foot range of residential homes. The Draft EIR does not properly analyze the Project's Hazards and Hazardous Materials (Section 4.8).

I am an Assistant Professor in the Department of Chemistry at the University of California, Riverside. I have a Ph.D. in Analytical Chemistry from the University of Connecticut and have > 15 years of experience in chemical analysis, chemical toxicology, and mechanistic studies of carcinogens. I have published nearly 40 peer-reviewed papers in highly regarded scientific journals in the fields of analytical chemistry, biochemistry, and chemical toxicology, which have been cited more than 1300 times by peers.

My comments reflect documents available publicly on the March JPA website. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al.), 2022
- General Plan of the March Joint Powers Authority^[1], assumed 1999 date – last updated 2/17/2022 (General Plan, 1999)
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018

- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

I-672.2

1. Critical Errors and Omissions in Section 4.8.

Polychlorinated biphenyls (PCBs)

Some background on the use and health effects of PCBs are described on page 455 (of 916) of the West Campus Upper Plateau Project Draft EIR (hereinafter referred to as Draft EIR), which states, “Polychlorinated biphenyls (PCBs) are organic oils that were formerly used primarily as insulators in many types of electrical equipment such as transformers and capacitors. After PCBs were determined to be carcinogenic in the mid-to-late 1970s, the EPA banned PCB use in most new equipment and began a program to phase out certain existing PCB-containing equipment (EPA 2021b). Fluorescent lighting ballasts manufactured after January 1, 1978, do not contain PCBs and are required to have a label clearly stating that PCBs are not present in the unit. PCBs are highly persistent in the environment, and exposure to PCBs has been demonstrated to cause cancer, as well as a variety of other adverse health effects on the immune system, reproductive system, nervous system, and endocrine system. The primary route of exposure to PCBs in the general population is the consumption of contaminated foods, particularly meat, fish, and poultry. Occupational exposure to PCBs occurs mainly through inhalation and dermal contact routes. According to the Phase I site assessment, the Project site includes pole-mounted electrical transformer banks east of Buildings 2 and 4 (Appendix J-1).”

The Draft EIR describes “PCBs – No detections in 38 of 39 samples with the one detection well below the regulatory screening level.” – page 455 (of 916)

I-672.3

Serious concerns include the limited scope of sampling and the sampling method as described below.

a. The scope of sampling is extremely limited.

As described in Appendix J-2 (page 27 of 656), “There are 42 pole-mounted transformers. There is also a black electrical wrap present on power feeds coming down off of pole-mounted transformers, and high-power lines, which may be wrapped with a PCB-containing product called Askerals. There are also 29 small capacitors on the ground inside and outside Building 5. It is recommended that each of these potential PCB-containing items be sampled in accordance with 40 CFR 761 to determine if they are PCB-containing as defined therein. If PCBs are identified in these features, it is further recommended that an assessment of nearby soils and/or hardscapes for PCBs be performed in accordance with the requirements set forth in 40 CFR 761.”

However, only 7 survey samples were collected and tested for PCBs from buildings 2 ,3 and 5 (Appendix J-2, page 24 of 656, Summary Results and Vista Environmental reports, pages 355

through 359, Attachment D in Appendix J-2, 3 for building 2; 2 for building 4; 3 for building 5). Especially for building 5, whereby 29 small capacitors were identified, only 3 wipe samples were collected on the concrete surface, according to the Vista Environmental report.

I-672.3
Cont.

Considering the extremely limited sample survey, MJPA should, at a minimum, follow the cited recommendation and order soil tests around all 42 pole-mounted transformers and 29 small capacitors.

b. Concerns with sample collection methods.

All the presented test results were from wipe tests from concrete surfaces, except one sample was from half metal and half concrete surfaces; however, according to the PCBs Question and Answer Manual (page 52, Q2) from the United States Environmental Protection Agency^[2], wipe sample is only suitable for determining the PCB concentration of concrete that has been contaminated by a spill of PCBs less than 72 hours old (see §761.79(b)(4)). For concrete contaminated by older spills, a bulk sample of the concrete must be analyzed to determine the PCB concentration. This is critically important for determining the proper disposal of the concrete at these potentially contaminated sites, especially for building 5. In addition, because of the porous nature of the concrete, the soil under the concrete should be sampled and tested to determine the proper mitigation measures.

I-672.4

2. Comprehensive chemical testing is required for all the bunkers within a 0.25-mile radius of the Grove Community Church preschool and single-family homes.

As summarized in Table 6A of Appendix J-2 (page 24 of 656), only a very limited number of wipe samples have been taken from inside the bunkers. Considering the history of ammunition and chemical storage in these areas and the close proximity of many to the Grove Community Church preschool and single-family homes, comprehensive chemical testing of the concrete and the soil underneath is necessary to ensure that no hazardous aerosols are produced during demolition. Additional tests should be conducted for per-and polyfluoroalkyl substances (PFAS) and radioactive materials.

I-672.5

3. Decontamination plans and testing results after decontamination should be made available to the public for all detected contaminations (toxic metals and VOCs). This is critical for sites within a 0.25-mile radius of the Grove Community Church preschool and single-family homes to ensure the well-being of the children and residues.

Letter I-672

Linlin Zhao
March 8, 2023

- I-672.1** This comment is introductory and refers to an attached comment letter. No further response is required.
- I-672.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment notes the Project site is less than a quarter mile from the Grove Community Church preschool. The structures discussed in this comment letter are all in excess of a quarter mile from the Preschool. The Project proposes to retain and preserve in open space two weapons storage bunkers, including the one bunker within a quarter mile of the Preschool. This comment further details the commenter's background and materials reviewed.
- I-673.3** The comment raises concerns with the scope of sampling conducted for polychlorinated biphenyl (PCB) containing materials. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, a Phase I Environmental Site Assessment (ESA) was performed by Leighton Consulting Inc. (Leighton) in 2021 and is included as Appendix J-1. The purpose of the Phase I ESA was to identify recognized environmental conditions (RECs), historical RECs (HRECs), or controlled RECs (CRECs) in connection with the Project Site. As such, the Phase I ESA was designed to assess whether soil or other additional testing is necessary to characterize the extent, if any, of contamination on the Project Site. As a result of the RECs identified in the Phase I, a Phase II ESA for the Project Site was performed by Leighton in 2022 (Appendix J-2) and included confirmation sampling activities, as recommended by the Phase I ESA. The PCB sampling conducted and described in the Draft EIR was the sampling as recommended by the Phase I ESA.
- The Draft EIR explained that after testing was performed as part of the Phase II investigation [Refer to Form Letter D Response – Hazards, for details], supplemental PCB and Treated Wood Waste sampling performed by Vista Environmental Consulting (Vista) for Leighton (Leighton, 2022b), dated May 5, 2022 (PCB Report). This report was inadvertently left out of the Draft EIR and has been added as Appendix J-5. The comment raises concern that only three wipe samples were utilized to assess Building 5, where capacitors had been identified laying on the ground. As explained in the PCB Report, the capacitors are all one make and model, three samples of the subject capacitors were collected during the follow-on testing, and all of those samples were determined to not contain detectable levels of PCBs. The comment's recommendation concerning assessing the soil at the base of each power pole with a mounted transformer, cited the discussion of pole-mounted transformers and black electrical wrap in the initial testing report. As explained in Recirculated Section 4.8, Hazards and Hazardous Materials, and the PCB Report attached as Appendix J-5, no PCB was detected in any of the samples collected of the black electrical wrap during the follow-on testing. Of the three randomly-selected transformers tested for PCB content, two resulted in "no PCBs detected" and one resulted in "1.5 mg/kg of Aroclor found," well below the 50 mg/kg standard of concern set forth in 40 CFR 761.
- I-672.4** This comment questions the use of wipe sampling to assess the potential for PCB spills. Five exploratory trenches were completed during the Phase II investigation at two electrical substation areas which had

multiple former elevated electrical transformers (adjoining Building 2 and Building 4). Two exploratory trenches were also completed near pad-mounted transformers (adjoining Building 5 and at northeast edge of the Ordnance Storage Bunkers Area). The results of this investigation are as follows:

- Electrical Substation Areas (Building 2 and Building 4): No detected PCBs were reported in any of ten soil samples analyzed from this area, with the exception of one sample (ES1-3-2.5), which was reported to contain 0.009 mg/kg of only one isomer of PCB (i.e., PCB1254). This is below the 0.59 to 0.97 mg/kg DTSC and USEPA soil screening levels for soil in a commercial/industrial use scenario, and is also below the DTSC and USEPA soil screening level for residential use of 0.24 mg/kg.
- Pad Mounted Electrical Transformers (Building 5 and NE Edge of Ordnance Bunker Area): No detected PCBs were reported in any of six soil samples analyzed from this area.

DTSC, the expert agency in California that regulates hazardous wastes and materials “does not recommend sampling of building materials or surrounding media unless there is evidence of a PCB release that may lead to exposure.”² As explained above, based on extensive testing, there is no evidence of a PCB release on the Project Site that may lead to exposure.

As explained in Vista Environmental Consulting Responses to Comments (Attachment A of Appendix J-6), as well as within Recirculated Section 4.8, Hazards and Hazardous Materials, in situations where it is known or expected that PCBs were present, the standard protocol would include the collection of concrete samples and even soil samples beneath the concrete. For example, this protocol would be used to assess the leakage of oil from a transformer that had been previously tested and determined to contain PCBs. There is no evidence of a leak containing PCBs anywhere within the Specific Plan area, therefore no sampling of the concrete, or any other building material is required.

The section of the Code of Federal Regulations cited by the commentor regarding wipe samples, Section 40 CFR 761.79(b)(4), applies to decontamination procedures after a known leak of PCBs. Had any detectable levels of PCBs been identified in any of the wipe samples that were collected, Vista would have recommended follow-on delineation sampling of the concrete or other substrate. However, the absence of PCBs in the wipe samples collected indicated that this step was unnecessary.

Despite the absence of PCBs in all samples collected, with the exception of one, which was still well below the regulatory level of concern, the Project is required to comply with MM-HAZ-1, which requires that all wastes be evaluated at the Project site for hazardous waste characterization and disposed of at an appropriately licensed disposal facility. Specifically, MM-HAZ-1 provides (in relevant part):

MM-HAZ-1. Abatement of Hazardous Building Materials. Prior to issuance of demolition or grading permits, the Project applicant shall submit documentation to the satisfaction of the March JPA that all recommendations from the January 17, 2022, Leighton Consulting Inc. Phase II Environmental Site Assessment for Meridian – West Campus Upper Plateau and the May 5, 2022, Leighton Consulting Inc. Hazardous Material (PCB/Treated Wood Waste) Investigation Report have been implemented at the Project site including but not limited to the following:

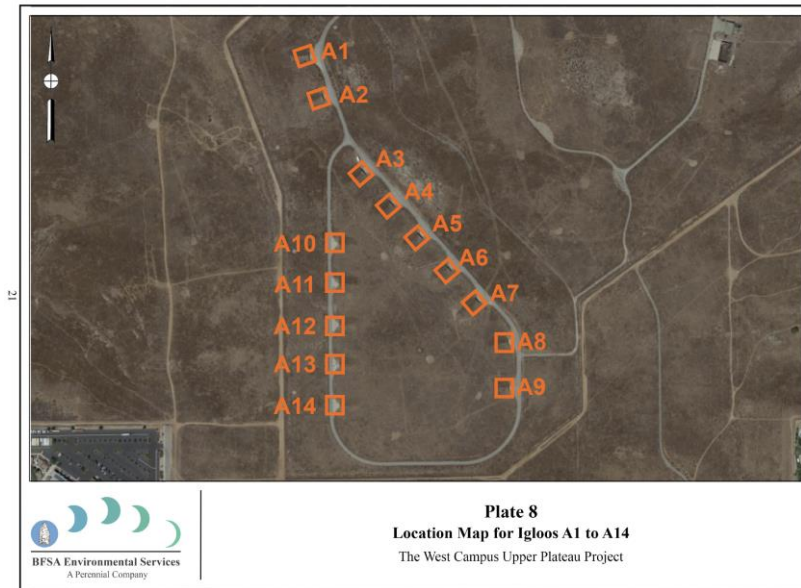

² DTSC, 2020, Human Health Risk Assessment Note Number 8: Recommendations for Evaluating Polychlorinated Biphenyls (PCBs) At Contaminated Sites in California

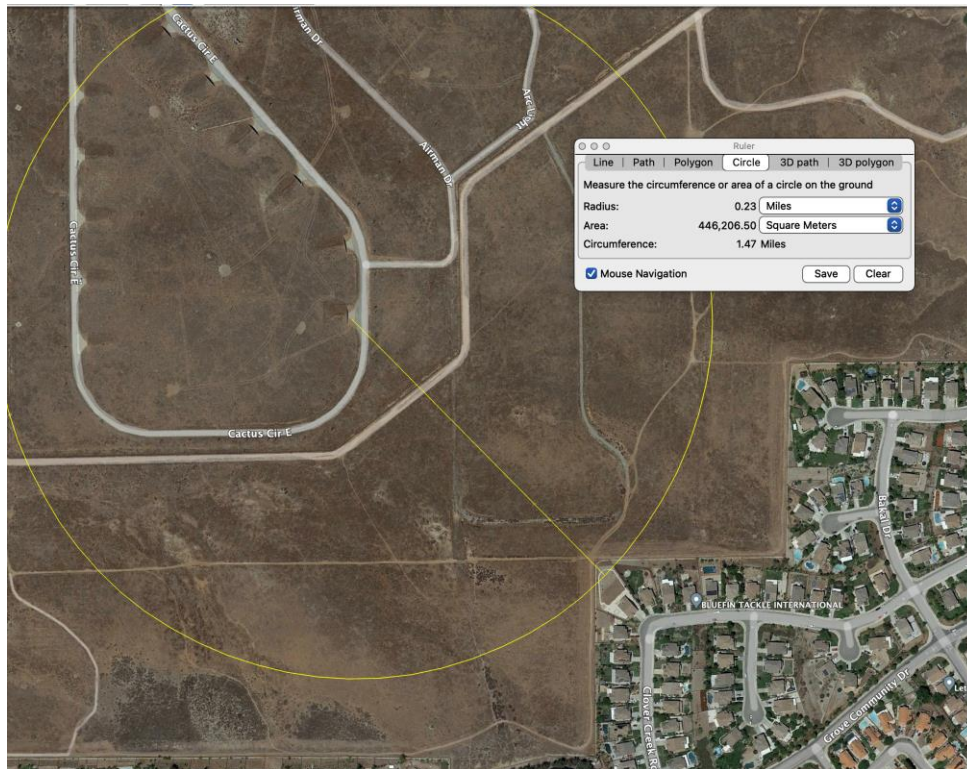

- The 42 pole-mounted transformers on site shall be disposed or recycled in accordance with 40 CFR 761 and accompanied by the findings of the April 26, 2022 sampling results including the one sample that showed the presence of Aroclor 1260 at a concentration of 1.5 milligrams per kilogram. In the event that during removal activities, transformer oil is identified or suspected in underlying soils, an assessment of nearby soils and/or hardscapes for PCBs shall be performed in accordance with the requirements set forth in 40 CFR 761.
- Applicable laws and regulations regarding the abatement and removal of asbestos containing materials, metals (cadmium, chromium and/or lead), mercury in light switches and fluorescent tubes, and lead-based paint shall be adhered to and implemented prior to demolition activities.
- Universal Waste Rule items shall be managed in accordance with applicable regulatory requirements.
- All wood poles found throughout the site shall be managed in accordance with California's Alternative Management Standards for treated wood waste consistent with California Health and Safety Code Sections 25230 through 25230.18.
- Evaluate various wastes identified at the site for hazardous waste characterization under California and RCRA standards for appropriate disposal to a licensed disposal facility.
- All ground disturbing activities shall be conducted by workers trained to look for any suspect contamination which can include odorous soils, soil staining, pipelines, underground storage tanks, or other waste debris. If encountered, earthwork activities shall cease until laboratory analysis of soil samples have been conducted and direction given from the Air Force and/or overseeing agency.

I-672.5

The comment states that chemical testing is required for all bunkers within a 0.25-mile radius of the Grove Community Church Preschool and single-family homes. None of the bunkers proposed for demolition are within a 0.25-mile radius of the Grove Community Church Preschool and as such, will not be disturbed. Consistent with the CEQA Guidelines Appendix G, Recirculated Section 4.8, Hazards and Hazardous Materials, analyzed hazards within 0.25 miles of a school.

As shown in the Figure below, bunkers A13 and A14 (also referred to as 5033 and 5034), the bunkers located closest to the Preschool, are the bunkers that will be retained for historical purposes within open space, as discussed in the Draft EIR. There is no similar radial threshold in the CEQA Guidelines Appendix G for single-family residential uses. As seen in the Figure below, the backyard of one residence is within 0.25 miles of bunker number A9 (5035) that will be demolished. As discussed further below and in Recirculated Section 4.8, Hazards and Hazardous Materials, the entire Weapons Storage Area, including the bunkers within a 0.25-mile radius of the Preschool and residential uses, has been cleared for unrestricted use in multiple documents from relevant regulatory agencies.

Per the Final Comprehensive Site Evaluation Phase I Report prepared for the Military Munitions Response Program (2013, USAF MMRP), the Church, Preschool, and nearby residences are within a prior ammunition disposal area also known as the Demolition Area. The Demolition Area was addressed under the Formerly Used Defense Sites (FUDS) Program.

There is no evidence that PCBs were ever present in the bunkers. As outlined in the Phase I, Phase II, and the PCB Report, the PCB considerations on the Project Site revolve primarily around electrical equipment. In addition, the Phase I explicitly notes that “[n]o evidence of floor staining was observed in the bunkers, and the concrete flooring was noted to be in excellent condition.” (Leighton, 2021). As such, there is no evidence or reason to believe that any PCB was released in the concrete bunkers.

With respect to PFAS, as detailed in Recirculated Section 4.8, Hazards and Hazardous Materials, the only place within the Specific Plan Area identified by the Air Force and all appropriate expert environmental agencies with the potential for PFAS contamination is the former Landfill No. 5 (Site 3).³ The Air Force recently tested soils in the former Landfill No. 5 and found no detections of PFOA, PFOS, or PFBS above screening criteria. The Santa Ana Regional Water Quality Control Board concurred with the conclusion that no additional soil sampling is recommended in the former Landfill No. 5 area. Further, multiple documents from relevant regulatory agencies have cleared the Project site for unrestricted use, including the Santa Ana Regional Water Quality Control Board in 2006, which, responding to a site investigation, indicated that it concurred “with your finding of no release at the site, and the recommendation for no further action for the Weapons Storage Area.” As such, no further remediation or removal activities are required. Please refer to Recirculated Section 4.8, Hazards and Hazardous Materials, and Topical Response 3 – Hazards, for further discussion of PFAS, radiological materials, and biological and chemical weapons.

- I-672.6** The comment requests public disclosure of decontamination plans and testing results after decontamination. It is unclear as to what “decontamination plans” are being referenced, but assuming the commenter is referring to decontamination recommended in the Phase II, such decontamination, as indicated therein, will be conducted in compliance with the applicable state and federal regulations. Any asbestos or lead based paint requiring abatement will be mitigated by a licensed contractor, with oversight and clearance sampling by a licensed professional. A report on the abatement will then be issued. As discussed above, pursuant to MM-HAZ-1, wastes at the Project site must be evaluated for hazardous waste characterization and disposed of at an appropriately licensed disposal facility. MM-HAZ-1 also requires that all ground disturbing activities be conducted by workers trained to look for any suspect contamination, including odorous soils, soil staining, pipelines, underground storage tanks, or other waste debris. MM-HAZ-1 requires that documentation to the satisfaction of the JPA be submitted to verify compliance with this mitigation measure.

³ AFCEC, 2022, Final Quality Program Plan (QPP) for the Remedial Investigation of Per- and Polyfluoroalkyl Substances (PFAS) at the Former March Air Force Base (AFB) and March Air Reserve Base (ARB), California; memorandum dated May 10, 2022.

From: Melody Clark <melodyeclark@icloud.com>

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
<include name, address, email in signature line>

INTENTIONALLY LEFT BLANK

From: MJ Rivera <milo.rivera21052@gmail.com>
Sent: Wednesday, March 8, 2023 11:07 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation, and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Milo Rivera

Riverside, CA 92518

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As someone who commutes to LA, OC, and SD almost every day for work, I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Shaan Saigol

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year's timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. **Who will be tasked with enforcing mitigations for the habitat?** How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Sarah Williams

Sent: Wednesday, March 8, 2023 8:13 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-678.1

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-678.2

Please explain the weight given in the decision making process to an extensive and unanimous opposition to the plan communicated so clearly and in different forums by those who will be most impacted by the West Campus Upper Plateau warehouse project. What value is assigned to the desires of the community and how does it inform the decision being made by JPA?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

I-678.3

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996,

p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Tim Martin

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Tim Martin

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sent: Wednesday, March 8, 2023 6:41 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for

youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

2. Alternate plan #2: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

3. Alternate plan #3: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

Thank you for allowing me to provide comments on this project.

Sincerely,

ann.marchand1@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Anza Akram

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Anza Akram

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sent: Thursday, March 9, 2023 12:53 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Sent: Thursday, March 9, 2023 12:54 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPJA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Sent: Thursday, March 9, 2023 12:55 PM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Abigail Banning 19138 Broken Bow Drive 92508 h2oabby@gmail.com

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email. Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR. Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement. · Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources. · Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan). · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in

education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park. · Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources. · Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB. · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA). · Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire. · Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5. · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities. These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area. Thank you for allowing me to provide comments on this project.

Sincerely,
Adolfo Jimenez

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Amber Peaslee

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-696.1

My family and I have noticed the overwhelming amount of semi-trucks cutting through Orange crest and Woodcrest using Van Buren which is damaging our roads! We absolutely hate the increased amount of traffic we now experience due to truck drivers who don't abide by the law. It is even more upsetting to see that the agreed-upon paths are not strictly enforced! Where is the accountability?

I-696.2

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

I-696.3

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Amber Peaslee

Letter I-696

Amber Peaslee
March 9, 2023

- I-696.1** This comment is the same as Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-696.2** This comment expresses concern about trucks on residential streets and lack of enforcement. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately $\frac{1}{4}$ miles and $\frac{1}{2}$ miles, respectively, directly past the next cross-street, Meridian Parkway. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. No changes or revisions to the EIR are required in response to this comment.
- I-696.3** This comment is the same as the last two paragraphs of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Amber Peaslee

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Amber Peaslee

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

I-701.1

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-701-1
Cont.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

I grew up down the freeway in Perris, near Mead Valley. The warehouses that have sprung up like weeds over the last several years have truly been a disgusting example of how those in power with money will easily prey on those who don't know better. The people I grew up with didn't have the resources they needed to understand that they had a voice about the warehouses that were built right in their backyard. As an RNOW member myself, I will fight for my neighborhood, my future, and my family. You may intimidate others who do not know better but this community has done its homework; we are thoroughly prepared and we will not be subdued by ill-supported "facts" and promises.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Ana Ramirez

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

ANDREA WOOD

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan, you have ignored the community, and it seems you did so intentionally. For twelve months, we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and other sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area, and I have serious concerns with the lack of alternate plans in the DEIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the West Campus Upper Plateau. I am in favor of each of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational

opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

INTENTIONALLY LEFT BLANK

From: Aaron Bushong <aaron.bushong@verizon.net>
Sent: Thursday, March 9, 2023 9:32 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Over the past 23 years, the March JPA has never meaningfully engaged with the community, has never formed a community advisory board to guide their development decisions, and has never pursued a project that respects the safety, well-being, and quality of life of residents. Instead, the March JPA has ignored the concerns of the community and hidden from scrutiny by withholding information from the community and scheduling meetings in the middle of the day when most community members are unable to attend.

I-707.1

Ignoring the concerns and opposition of the community has resulted in, among other disasters, an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes, each of which put residents in danger, and all three of which were the result of the lack of foresight and utter disregard for residents' safety and well-being demonstrated by the March JPA. The proposed West Campus Upper Plateau project will only increase the possibility of similar disasters and place them even closer to residential homes.

I-707.2

I demand that the developer specifically address how big rigs will be strictly prohibited from using residential streets in perpetuity and how airplane crashes and warehouse fires will be guaranteed never to occur again. If the developer is unable to meet those demands, the project should not be allowed to proceed.

Thank you,
Aaron Bushong
8562 Orchard Park Drive
Riverside, CA 92508
aaron.bushong@verizon.net

Letter I-707

Aaron Bushong
March 9, 2023

I-707.1 This comment raises concerns regarding March JPA's public engagement regarding development decisions. March JPA is a public agency that holds public meetings that are noticed and open to the public. Regarding this Project, March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR.

I-707.2 This comment questions how big rigs will be restricted from traveling on residential streets in perpetuity. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway.

Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

This comment further questions how airplane crashes and warehouse fires can be guaranteed to never occur again. Warehouse fires caused by airplane crashes are an anomaly and rarely occur. However, given the Project's proximity to the March Inland Port Airport, the risk of airplane crashes remains. The Riverside County Airport Land Use Commission (ALUC) reviews projects to maximize consistency with airport land use plans for projects within close proximity to an active airstrip. This Project has undergone review by ALUC, as discussed in Recirculated Section 4.10, Land Use and Planning. ALUC provided their consistency determination in a letter dated May 16, 2022, which is included within Appendix L of the Draft EIR.

Additionally, as detailed in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, the Project will construct the new Riverside County fire station at Meridian

Parkway and Opportunity Way. The provision of a new fire station within the Meridian Business Park will allow for more rapid response to any potential future warehouse fire. Given existing fire mutual aid agreements serving March JPA, the Project site would be adequately served by fire protection services through the buildout of the Specific Plan. In addition, Section 4.18, Wildfire, includes mitigation measures to help reduce wildfire-related impacts, such as MM-FIRE-1 (Pre-Construction Requirements). This measure would also help reduce impacts to fire protection services, as detailed in Section 4.13, Public Services. Moreover, the Project includes PDF-FIRE-1 through PDF-FIRE-3 which would ensure compliance with the California Fire Code, implementation of a fire protection plan, and educational materials on evacuation and wildfire risk. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Finally, MM-FIRE-2 would implement vegetation management measures and MM-FIRE-3 would require compliance with the Fuel Management Zone protections related to alternative materials and methods.

It is beyond the scope of this Project and Draft EIR to guarantee that airplane crashes and warehouse fires will never occur again; however, the analysis within the Draft EIR, the consistency with the airport land use plan, and the buildout of the new Meridian Fire Station would minimize potential impacts to the Project site and surrounding communities in the event of another catastrophic event. No changes or revisions to the EIR are required in response to this comment.

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and demand that the project applicant be required to make every effort to preserve endangered and threatened wildlife and plant-life in the area.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? The final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant-life

1. Why is the coastal scrub documented in some parts of the DEIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant-life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why was the plant survey conducted during a drought year? How can the DEIR claim it is absent or assess the significance of impact unless its absence has been documented during a year and season of normal rainfall, when the rare plant life would be able to grow?

Given these deficiencies, I demand that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also demand that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that the project will not be destroying rare plant life unless a more thorough survey is conducted.

Finally, I demand that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can the public be assured that these mitigation measures will be enforced?

Thank you,
Allison Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section are highly disconcerting. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than diesel particulate matter will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous military use of the project construction area.

Please specifically address the following items:

1. How did you determine which chemicals to test for and which to omit? Why was diesel particulate matter the only substance considered in the "Human Risk Assessment" section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the weapons bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long timeframe since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I demand that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any others that may have been stored in the weapons bunkers. I also demand that you share with the public all information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil will be treated, given its high concentration.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health, and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I demand that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issuance of demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, those materials must be completely removed.

Thank you,
Allison Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am appalled that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses, as long as they are low-density. Please specify what other land uses C-2 zoning allows and why they are not being pursued.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on three sides by residential homes, and that residents have submitted over 2,500 signatures, hundreds of emails, and scores of comments at public meetings opposing the project, how is that feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how can the utter disregard for the community opposition in relation to the reuse plan policies be justified?

In the General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air-quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways has Community Preference been incorporated in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for “Industrial/Warehousing” uses and it explicitly shows “Industrial/Warehousing” land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as a Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 states,

The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space. When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to “up zone” the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, the March JPA is obligated to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you,
Allison Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The traffic section of the document presents serious concerns. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project, and the project's own traffic estimates indicate that approximately 20,000 additional trips will use the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in the analysis, especially when considering that the traffic analysis fails to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. The traffic sections also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How can the analysis justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did the analysis exclude known construction projects that have already been permitted to be built?

I demand the traffic section be updated to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable.

How traffic will affect our arterial streets is another major concern. The analysis assumes drivers will use approved paths, but it is clear from experience this is not the case. For instance, on February 2, a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were considered? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should one trust the analysis to be accurate if past analyses underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

I demand that the traffic study be updated to reflect the actual conditions of the surrounding area.

Thank you,
Allison Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air-quality impacts on surrounding residents. However, beyond that admission, there are numerous deficiencies in the analysis, and it underestimates the air-quality impacts.

The analysis does not consider the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. I demand that these impacts be included in both the local and regional analysis for the final EIR. The analysis also fails to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. The air-quality and health-risk assessment must be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, the project applicant must apply the conservative AQMD Rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, it is important to be more conservative in truck trip rate projections. Using the Rule 2305 numbers would almost double the daily truck trips.

Also, the March JPA has a responsibility to mitigate significant impacts on the surrounding community. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Why were such mitigations not considered in the DEIR for this site?

Significant mitigations must be put in place to reduce the impact on local residents:

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

The impact on air quality must also be mitigated by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least that can be done to protect the surrounding community. California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning. A minimum of 50% of delivery vehicles must be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. 30% of trucks must also be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I demand that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will the March JPA assure adjacent residents that their interests will be protected?

Thank you,
Allison Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-713.1

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How was that number calculated? On what evidence was it based? There is no analysis in the DEIR to justify the number of jobs. Please provide a detailed, evidence-based analysis justifying the number of jobs.

I-713.2

The Greenhouse Gas (GHG) section claims that the development will have a net positive effect because local community members will have less of a commute driving to work. No one with a temporary, part-time, and/or low-paying warehouse job will be able to afford to live anywhere within the surrounding community? On what data was the assumption that local residents need or desire low-paying warehouse jobs based? What data was used to calculate the vehicle miles travelled? How were the traffic models that assume 21-mile commutes would be shortened to 16-mile commutes created? Please justify the assertions by providing data detailing the mean, median, and mode monthly salary of the jobs that will be created and the mean, median, and mode monthly rent/mortgage in the surrounding communities. It is clear that the job and greenhouse gas assumptions are wildly inaccurate.

I-713.3

Moreover, the cumulative impact of approved and planned warehouses already in the region far exceeds the number of available employees in the region. The current unemployment rate is at a 50-year low, and there are over 4,000 acres of approved and planned warehouses along the 215/60 corridor. At 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318,000 in Riverside, 212,000 in Moreno Valley, 80,000 in Perris, and 20,000 in Mead Valley). There are about 300,000 people in the labor force (For those aged 16+, the labor force participation rate is 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wlc-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work in warehouses. Assuming that 50% can work in warehouses, that still leaves well over 20,000 jobs to be filled. The population growth (<1% per year) in our region is

I-713.4

not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support any additional warehouse jobs. The only way to fill those jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the vehicle miles travelled per employee estimates indicating shorter commutes are incorrect. This project will further exacerbate housing stress by requiring workers to commute from well outside of a 15-mile radius of the project. Even if allowed for the faulty assumption that locals would commute to the site, how would the analysis change if one accounts for automation in warehouses, or the fact that Californians are required to purchase electric vehicles by 2035? Please justify the current vehicle miles travelled per employee estimates using actual job, population, and housing estimates from the last three months, rather than seven-year-old SCAG projections that are completely incorrect.

It is obvious that the region does not have the capacity to staff these warehouses locally. Please consider more appropriate alternatives for the project, such as single-family residential homes that would actually serve to improve the real-world jobs-to-housing imbalance. Housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Thank you,
Allison Bushong

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents’ homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-714.1

The project site comprises approximately 817.9 acres within the western portion of the March JPA planning sub-area (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and the City of Moreno Valley.

The zoning designation in the DEIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities, but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have, including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant?” Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. The March JPA must demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here. Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-714.2

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the

March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? Furthermore, the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. The Aesthetics section must be revised, so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Images that reflect the actual appearance of warehouses in the area must also be used. Otherwise, the images and the Aesthetics section are a lie and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond the visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which have been identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of Western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. The March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large, industrial, mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal, low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan, and the community demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. They also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered, and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Do not allow one final, grand act of poor land use planning to be the lasting legacy of the March JPA.

Thank you,
Allison Bushong

March 9, 2023

- I-714.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment also raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required. The comment further requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.
- I-714.2** This comment is Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I have lived in the same house in the Orangecrest neighborhood for 23 years. During that time, I have joined my neighbors in attempting to work with the March Joint Powers Authority on responsible planning for the 4,400 acres of surplus property. My neighbors and I worked to oppose the DHL cargo facility in the early aughts. We were ignored, and DHL failed within four years. My neighbors and I have worked over the past 15 years to oppose the development along Meridian Parkway and Van Buren Boulevard. We have been ignored, and one merely needs to drive those roads to see the numerous unoccupied, nondescript, and/or anemic buildings, many of which have remained vacant since they were built.

I-715.1

The March Joint Powers Authority has demonstrated its poor planning, lack of foresight, and utter disregard for Riverside residents' well-being and safety for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for local residents.

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. The West Campus Upper Plateau Project will only exacerbate the pollution and traffic congestion in Riverside. I demand that the developer revise the entire project to include non-industrial alternatives, as has been consistently requested by the community for over a year.

I-715.2
I-715.3

Thank you,
Allison Bushong

Riverside, CA 92508
bushongucr@gmail.com

Letter I-715

Allison Bushong

March 9, 2023

- I-715.1** This comment expresses opposition to the development of industrial projects within the March JPA Planning Area, including the proposed Project. The comment raises concerns regarding vacancies in area warehouses. According to Table 1 of the draft “Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects” by Dr. Qisheng Pan presents 2023 employment data for the various existing developments within the March JPA Planning Area (Final EIR Appendix U), there are few vacancies within the March JPA Planning Area. The comment does not raise any specific issues, questions or concerns regarding the adequacy of the environmental analysis in the Draft EIR.
- I-715.2** This comment raises general concerns regarding the Project’s impacts to existing air quality and traffic conditions. Recirculated Section 4.2, Air Quality, has disclosed the Project’s air quality impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- I-715.3** This comment requests consideration of a non-industrial alternative. In response to this comment, please see Topical Response 8 – Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I have lived in the Orangecrest neighborhood since March of 2000. Over the past 23 years, I have experienced the same deception and lies from the March JPA as are presented in the draft environmental impact report: lies about jobs that don't pay enough for employees to even live in the City of Riverside and that, with automation, will soon be obsolete; lies about parks, trails, and open spaces that never come to fruition; and lies about construction, an abundance of which is currently vacant and has never been occupied. Those lies have systematically transformed one of the most desirable and attractive residential neighborhoods in the City of Riverside into a sea of unsightly office buildings and warehouses that are inconsistent with responsible city planning. The March JPA is using the same tactics to promote the West Campus Upper Plateau Project.

I-716.1

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in that document. They also have a duty to work with local communities to develop the West Campus Upper Plateau in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project must be reconsidered, and reasonable alternative configurations must be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

Thank you,
Allison Bushong
8562 Orchard Park Drive
Riverside, CA 92508
bushongucr@gmail.com

Letter I-716

Allison Bushong

March 9, 2023

I-716.1 This comment expresses general opposition to the Project and does not raise any specific issues, questions or concerns about the analysis in the Draft EIR. Regarding automation, while existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. The Project Development Agreement includes up to \$3.5 million for the construction of the Park.

This comment further states that March JPA and the Applicant have a duty to adhere to the March ARB General Plan and engage the local communities and municipalities. It should be noted that the March Air Reserve Base does not have an adopted General Plan. The Project's consistency with the goals and policies of the March JPA General Plan is included in Recirculated Section 4.10, Land Use and Planning. March JPA and the Applicant conducted multiple public outreach efforts including three community meetings, two Technical Advisory Committee workshops, and one Zoom virtual presentation. Using a radius of 2,000 feet around the perimeter of the Project site, March JPA distributed 2,172 public notices. March JPA engaged with local jurisdictions and service providers (see, e.g., the traffic scoping agreement in Appendix N-2).

This comment requests consideration of alternatives to reduce aesthetic impacts. CEQA Guidelines Section 15126.6(f) provides that "[t]he range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project." As examined in Section 4.1, Aesthetics, of the Draft EIR and Topical Response 1 - Aesthetics, the EIR has disclosed the Project's aesthetic impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. As such, the reduction of aesthetic impacts would not be a required priority in the selection of a reasonable range of alternatives to the Project. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR, have all been evaluated for potential aesthetic impacts. Similar to the analysis included in Section 4.1, Aesthetics, consideration of visual changes to publicly available views of the Project site were considered. Alternative 2 (Reduced Development) and Alternative 4 (Reduced Cultural Resource Impact) were determined to have reduced aesthetics impacts compared to the Project. Topical Response 8 - Alternatives, presents and analyzes Alternative 5 - Non-Industrial Alternative, determining its aesthetic impacts would be reduced compared to the Project's.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

What do an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes have in common? They all occurred in the Orangecrest neighborhood of Riverside within the past three years, with the warehouse fire and jack-knifed big rig both occurring on September 12 of this year; all three put local residents in danger; and all three were the result of the poor planning, lack of foresight, and utter disregard for local residents' well-being and safety demonstrated by the March Joint Powers Authority for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for Riverside, Perris, and Moreno Valley residents.

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. If you have any doubts about that you should contact the California Air Resources Board on Iowa Avenue in Riverside or the College of Engineering Center for Environmental Research and Technology at UC Riverside, rather than relying on the biased environmental impact report that the developer clearly paid to be written in their favor. If the project is approved, the traffic and pollution problems will most certainly worsen, and they won't be localized to the City of Riverside. The City of Perris and the City of Moreno Valley will necessarily experience the detrimental impacts, as well.

I demand that the developer specifically address how traffic and pollution problems will be mitigated, how big rigs will be strictly prohibited from using residential streets in perpetuity, and how airplane crashes and warehouse fires can be guaranteed never to occur again. If the developer is unable to meet any of those demands, the project should not be allowed to proceed.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan, you have ignored the community, and it seems you did so intentionally. For twelve months, we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and other sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area, and I have serious concerns with the lack of alternate plans in the DEIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the West Campus Upper Plateau. I am in favor of each of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Over the past 23 years, the March JPA has never meaningfully engaged with the community, has never formed a community advisory board to guide their development decisions, and has never pursued a project that respects the safety, well-being, and quality of life of residents. Instead, the March JPA has ignored the concerns of the community and hidden from scrutiny by withholding information from the community and scheduling meetings in the middle of the day when most community members are unable to attend.

Ignoring the concerns and opposition of the community has resulted in, among other disasters, an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes, each of which put residents in danger, and all three of which were the result of the lack of foresight and utter disregard for residents' safety and well-being demonstrated by the March JPA. The proposed West Campus Upper Plateau project will only increase the possibility of similar disasters and place them even closer to residential homes.

I demand that the developer specifically address how big rigs will be strictly prohibited from using residential streets in perpetuity and how airplane crashes and warehouse fires will be guaranteed never to occur again. If the developer is unable to meet those demands, the project should not be allowed to proceed.

Thank you,
Allison Bushong

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach
 - Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
 - Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
 - Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-720.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-722.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-723.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email. Your consideration and implementation of one of these alternative plans would insure, for coming generations, a positive and beneficial effect on the surrounding communities as well as a path away from the industrialization of our community. You and your decisions would be remembered for giving back to the community.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

I-724.1

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-725.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. INTENTIONALLY LEFT BLANK

From: Cindy Jessen <cjessen022@gmail.com>
Sent: Thursday, March 9, 2023 7:44 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Cynthia Jessen

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Cynthia Jessen

Sent: Thursday, March 9, 2023 7:45 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Cynthia Jessen

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Cynthia Jessen

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Cynthia Jessen

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Cynthia Jessen

Sent: Thursday, March 9, 2023 7:45 PM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Cynthia Jessen

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-733.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Christine M. Clese Martin

INTENTIONALLY LEFT BLANK

From: christine martin <cmcelsemartin@gmail.com>
Sent: Thursday, March 9, 2023 7:54 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Christine M.Clese Martin

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat. California has lost more than 1 million acres of natural area in the last 20 years. This devastation has wrecked many ecosystems. I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Christine M.Clese Martin

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents. Riverside is a community based on healthy, thriving neighborhoods. Aesthetics are an important element in the continued growth of our city as an appealing place to live, work, and raise a family. The Orangecrest neighborhood is recognized as one of the best areas in Riverside to settle. I am asking for you to explain how 4.7 million square feet of warehouses will improve the aesthetics of the neighborhood, maintaining

Orangecrest as a desirable place to make a home.

I-736.2
↑
I
Cont.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-736.3

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Christine M.Clese Martin

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the

I-737.1

future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities. These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to

I-737.1
Cont.

consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Clay Muehls

Sent: Thursday, March 9, 2023 5:38 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Clay Muehls

Sent: Thursday, March 9, 2023 5:39 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Clay Muehls

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Clay Muehls

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Clay Muehls

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Clay Muehls

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

I-744.1

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

INTENTIONALLY LEFT BLANK

From: Perez, Corinne <perezc@ajiusa.com>
Sent: Thursday, March 9, 2023 12:45 PM
To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MIPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-745.1

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. It is apparent around the United States, how communities are being impacted by industrial hazards and accidents. Increasing events such as train derailments, fire, toxic chemicals, electric batteries and so on.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various areas surrounding our neighborhood, including airplanes that are overhead almost daily performing training maneuvers or when jets fly causing the noise decibel to be remarkable.

I-745.2

I-745.3

This project is the most egregious as it is right up into our neighborhood from the freeway, not in the surrounding industrial areas. We literally will have warehouse buildings inside our backyards. How can you conscientiously do this and explain down the hazards? We moved into this lovely neighborhood in 1994 because of the schools and the city/rural life; expecting this to be our forever home. We have now reached retirement age, and are faced with this tragedy.

I-745.4

There are plenty of open spaces traveling east. It is difficult to understand how the powers that be, believe this is a viable option for our community and force this on us. Existing traffic is horrendous and causes gridlock as we are a captive audience surrounded by only 2 exits, Van Buren or Trautwein. Opening Barton Road is not a positive move since the project proposes 2500 more diesel trucks and vehicles. The drive to electric vehicles does not remedy the situation. Zero-emission technologies...don't really exist for big heavy-duty trucks that are pulling cargo. This is our green space where we live and walk around the neighborhood with our grandchildren and dogs.

I-745.5

I-745.6

We don’t want industrial jobs neighboring homes and the hazards and risks that come with it. At this time, there are many vacant industrial buildings with more to come as many employees continue to work from home, including me. Companies are being challenged with finding people to work. Orangecrest is and has been exposed to airplane pollution, noise from maneuvers and jets overhead, on an almost daily basis. Even slight increases in people's exposure can lead to a heightened risk of premature illnesses and death. Exposure to diesel exhaust can lead to serious health conditions like asthma and respiratory illnesses and can worsen existing heart and lung disease, especially in children and the elderly. These conditions can result in increased numbers of emergency room visits, hospital admissions, absences from work and school, and premature deaths.

I-745.7

Sincerely,
Corinne Perez

perezc@ajiusa.com

Letter I-745

Corinne Perez
March 9, 2023

I-745.1 This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required. The comment further requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

The comment further raises general concerns regarding the Draft EIR's air quality analysis. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27.

The comment concludes with a general statement regarding industrial hazards and accidents. No further response is required.

I-745.2 This comment states that the Draft EIR did not take cumulative impacts of adjacent industrial development into consideration. Throughout Chapter 4, Environmental Impact Analysis, within Sections 4.1 through 4.18, of the Draft EIR, existing development, including adjacent industrial development, is incorporated in the existing baseline conditions. Cumulative impacts of the Project and approved/proposed development listed in Table 4.2 in addition to existing baseline conditions were evaluated for each environmental topic within the Draft EIR. Additionally, in response to this comment, please see Topical Response 7 – Cumulative Impacts where additional discussion about cumulative impacts is provided.

I-745.3 This comment discusses aircraft flying overhead. Existing flight operations are existing conditions that were taken into account in the noise analysis included in Section 4.11, Noise. The Project would not result in any new or different aircraft operations. As such, no further response is provided.

I-745.4 This comment raises concerns about hazards associated with warehouse uses adjacent to residential uses. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. The proposed Conservation Easement will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum

of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. Industrial buildings must be set back a minimum of 1,000 feet from residential. In addition, any industrial-use building will require a 1,000-foot setback from existing residential to any proposed truck courts or loading docks. Section 3.5.4, Off-Street Loading Facilities, and Section 4.4.2, Truck Courts and Loading Docks, of the Specific Plan require truck courts and loading docks to be oriented away or screened to reduce visibility public roads, publicly accessible locations within the West Campus Upper Plateau Specific Plan, and surrounding residential properties, and prohibits loading and unloading activities within view of public streets or residential land uses.

Potential hazards associated with hazards and hazardous materials being used and/or stored at the Project site are evaluated within Recirculated Section 4.8, Hazards and Hazardous Materials. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project's health risks. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Specific Plan construction-source DPM emissions is estimated at 0.59 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. For operations, at the MEIR, is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, and Appendix C-2 for the discussion of cumulative health risks from toxic air contaminants.

- I-745.5** This comment requests consideration of alternative sites for the Project and raises concerns about traffic increases on Van Buren and Trautwein. Chapter 6, Alternatives, of the Draft EIR determined there were no viable alternate sites for the Project. The Project Traffic Analysis (Appendix N-2) provides

analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

The comment raises concerns regarding trucks on Barton. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately $\frac{1}{4}$ miles and $\frac{1}{2}$ miles, respectively, directly past the next cross-street, Meridian Parkway.

I-745.6 This comment questions the conversion of heavy duty trucks and vehicles to zero-emission technologies. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the Project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the Project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed.

I-745.7 This comment summaries Comments I-745.1 to I-745.6; please see Responses I-745.1 to I-745.6, above. The comment mentions ‘many vacant industrial buildings.’ According to Table 1 of the draft “Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects” by Dr. Qisheng Pan presents 2023 employment data for the various existing developments within the March JPA Planning Area (Final EIR Appendix U), there are few vacancies within the March JPA Planning Area.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-746.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Chad Smith

To: Dan Fairbanks
Cc: district5@rivco.org; Conder, Chuck; rrogers@cityofperris.org; mvargas@cityofperris.org; district1@rivco.org; jperry@riversideca.gov; mayor@moval.org; edd@moval.org; Dr. Grace Martin; Cindy Camargo
Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

I-747.1

This is public comment for the record on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. Remember that 40+ MILLION square feet of ‘World Logistic Center’ warehouse space is breaking ground this year just east of us in Moreno Valley. That project is 10% of the ENTIRE CITY!

I-747.2

The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-747.3

Please go back and look at the feasibility of developing a TRUE industrial/manufacturing hub that, by its nature, will pull real, sustainable, high-paying/high-education jobs to the facilities which would mean far better community integration potential and doing a MUCH better job of satisfying the agreed upon “good neighbor” concept.

I-747.4

Thank you.

Duffy Atkinson
Riverside, CA

Letter I-747

Duffy Atkinson
March 9, 2023

- I-747.1** This comment is introductory in nature and does not raise any specific issues or concerns regarding the adequacy of the analysis in the Draft EIR. As such, no further response is provided.
- I-747.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. This comment references the World Logistics Center project in the City of Moreno Valley. This comment does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-747.3** This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required. The comment further requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.
- I-747.4** This comment requests consideration of an industrial/manufacturing hub alternative. Under the proposed Project, industrial and manufacturing uses such as those suggested by the comment are allowed, as specified in Table 3-2, Land Uses by Land Use Designation, in Recirculated Chapter 3, Project Description. The Project does not have identified end-users and nothing under the proposed Project would preclude the development of campus facilities and research centers if there were an interest and need for these facilities within the Project area. The comment also references the "good neighbor" concept. In response to this comment, please see Recirculated Section 4.10, Land Use and Planning, and Topical Response 4 – Project Consistency, for an analysis of the Project's consistency with the Good Neighbor Guidelines of the County of Riverside and the City of Riverside. As discussed in Recirculated Section 4.10, Land Use and Planning, the purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses.

Subject: Jobs/green house commitment

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,1_ydfWXa-L5ffYWpLYKJ10X-DFnB9or-O3eEYbKpJry4O-BASArSIH6xByQG2luZkHOj4n1av3xzjDhCSJeLKFXTJnZ_bCqTUj5Xk-4&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,yj9gDa-MYVd-BC25-->

oOX14UQDtMN8C_uZwRG1OuBrGJ7z3l5M5qbC4a_TdzcZtkN1WQoKvz8iCVmDscC900m3gUpjXEYnMxsUilO17TOal,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

David Doty

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I'd like to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual, real time conditions of the surrounding area. Thank you!

Sincerely,
David Doty

Sent: Thursday, March 9, 2023 9:28 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

David Doty 8805 Morninglight Cir Riverside 92508 animal.adventure.army@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

David Doty 8805 Morninglight Cir Riverside 92508 animal.adventure.army@gmail.com

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I would like to provide comments on the March Joint Powers Authority (MJPJA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

David Doty 8805 Morninglight Cir Riverside 92508 animal.adventure.army@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

David Doty 8805 Morninglight Cir Riverside 92508 animal.adventure.army@gmail.com

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

David Doty 8805 Morninglight Cir Riverside 92508 animal.adventure.army@gmail.com

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach
 - Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
 - Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
 - Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-755.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-756.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

INTENTIONALLY LEFT BLANK

From: David Reznick <gupy@ucr.edu>
Sent: Thursday, March 9, 2023 10:11 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, EIR, State Clearinghouse No. 2021110304

March 8, 2023
Dear Mr. Fairbanks,

I would like to comment on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The draft EIR does not properly analyze the Project’s impacts, in particular, with regard to biological resources. It also discounts non-industrial alternatives to the Project as requested by the community.

I-757.1

I am a professor in the Department of Evolution, Ecology and Organismal Biology at UC Riverside and have lived in Riverside for over 30 years. I have done research on local wildlife and am intimately familiar with the local fauna. I have several concerns regarding the biological resources section of the EIR, as outlined below, including both the methodology of the studies and the conclusions drawn from them.

I-757.2

Plants and Wildlife:

1. I challenge the assessment that up to 80% of the grasses in the Project Study Area are non-native. Native grasses are often interspersed within clumps of non-native shrubs. I suspect that the assessment that 80% of the grasses are non-native is an over-estimate.

I-757.3

2. The overestimate error of native grasses is important because it leads to a second problem in the report, which is that certain wildlife species, for example the Los Angeles pocket mouse, are listed as being low potential to occur there. This judgement may be incorrect because their habitat has been underestimated. This would also be the case for coast horned lizards, which could be in the Project Study Area. The horned lizards normally occupy such habitat in this area. One way to assess the likelihood of their presence is to assess the abundance of harvester ant mounds. A usual cause of the disappearance of horned lizards in the vicinity of suburbs is that the enhanced availability of water attracts the invasive Argentine ants, which in turn eliminate the harvester ants that are the preferred food of the horned lizards. If harvester ants continue to thrive on portions of the property, then the horned lizards are likely to be present. They are not likely to be seen in a cursory survey.

I-757.4

I-757.5

3. Some wildlife such as the orange-throated whiptail were not observed but listed as moderate potential to occur within the Project Study Area. This species is certain to be in the Study Area based on my personal observations.

I-757.6

4. The red-diamond rattlesnake (which should be listed as red-diamondback rattlesnake) is listed under the Potential to Occur section as “low” and “suitable chaparral, coastal sage scrub, or creek bank habitats are limited or not present.” However, the habitat listed is incorrect since these snakes prefer rocky areas. I have seen this snake species in the Study Area in the past.

I-757.7

5. I did not see an insect survey which should be done since insects are especially important parts of the ecosystem in the Project Study Area.

I-757.8

Vernal Pools:

It appears that the studies used in the EIR were conducted in 2021 and 2022, which were drought years. The fact that Protocol surveys were conducted for Riverside Fairy Shrimp and Vernal Pool Fairy Shrimp and were negative is meaningless under these dry conditions. Studies should be conducted during years with adequate rainfall to support vernal pools throughout the wet season. The few rains early in the season in 2021 and 2022 were not enough to perform a correct assessment since some species will not emerge until later rains are present. This year would be ideal

I-757.9

for such surveys. The fact that spadefoot toads are present on the property means that it is likely that there are appropriate vernal pools to sustain the fairy shrimp.

I-757.9
Cont.

Based on my experience, fairy shrimp should be present in this Study Area given that it is known from appropriate vernal pools on March Air Force base, which is close by and is similar habitat. If fairy shrimp are not observed in vernal pools, sampling needs to include collecting dirt from the bottom of the vernal pools and incubation under correct conditions to see if fairy shrimp emerge from dormant cysts in the soil.

Blue Line Stream:

The direct or indirect effects of the Project on the Blue Line stream running through Sycamore Canyon is not analyzed. This stream is a tributary of the Santa Ana River and is an ecologically sensitive aquatic environment.

I-757.10

Wildlife Corridors:

The presence of the Project Study Area in a multi-species wildlife corridor is of grave concern. This corridor is part of the Multispecies Habitat Conservation Plan. A critical feature of that plan is that appropriate corridors that join larger tracts of land, such as Sycamore Canyon and the Box Springs Mountains, be maintained to allow for animals to move between them. Such movement and mixing of populations is essential for them to sustain larger effective population sizes and genetic diversity. The mitigation measures proposed are inadequate to deal with the harm that the Project will impose on this sensitive wildlife area.

I-757.11

Given these deficiencies, I request that you do the additional analyses and studies listed above. These include appropriate surveys for harvester ant mounds as a measure of the suitability of the habitat for horned lizards, an appropriate survey of the vernal pools during a rainy season, a more complete assessment of the role this land plays as a wildlife corridor and how losing it would affect the connections among the larger tracts of land that flank it, and an assessment of whether or not construction activities and subsequent land use will affect the drainage area feeding the blue line stream in Sycamore Canyon.

I-757.12

Thank you for allowing me to provide comments on this project.

Sincerely,

David Reznick, Ph.D.

Letter I-757

David Reznick, Ph.D.

March 9, 2023

- I-757.1** This comment summarizes the letter's overall concerns. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR. As such, no further response is provided.
- I-757.2** This comment summarizes the commenter's subject matter expertise and overall concerns. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR. As such, no further response is provided.
- I-757.3** The comment raises concerns regarding the amount of non-native grasses that is reported to be on the Project site in Section 4.3, Biological Resources, of the Draft EIR and the Project Biological Resources Technical Report (Appendix D-1). As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), the Project Biological Technical Report does not present an assessment of the relative quantity of native versus non-native grasses on the Project site. The report does note that the vast majority of the Project site (approximately 342 acres) is classified as non-native grassland herbaceous semi-natural stand as defined by the Manual of California Vegetation, 2nd Edition (Sawyer et al. 2009). While sporadic native plants may be present within this vegetation community, it is heavily dominated by non-native grasses. Following the Manual of California Vegetation, dominate species and relative cover of those species are used to classify the land into distinct alliances. The on-site non-native grassland is classified as *Bromus rubens* – *Schismus (arabicus, barbatus)* Herbaceous Semi-Natural Alliance which requires greater than 80% relative cover in the herbaceous layer of *Bromus rubens* and/or *Schismus barbatus*. During the general biological field surveys, RBC biologists estimated that non-native grasses accounted for greater than 80% relative cover of the herbaceous vegetation. Please note that vegetation classifications are based on relative cover which is an estimation of the percentage of the area covered by the vegetation rather than a count of the number of individuals within each species. A widely acknowledged disadvantage of this method is that cover can vary greatly depending on climatic conditions including seasonality. In addition, cover is based on estimations that can vary between researchers when looking at the same area. Despite these shortcomings, the industry accepts this method of classification as best practice.
- I-757.4** This comment raises concerns regarding potential Project impacts to wildlife species that rely on native grasses for habitat. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2) and noted in Response I-757.3, above, RBC biologists estimated that non-native grasses accounted for greater than 80% relative cover of the herbaceous vegetation. This qualifies the land as *Bromus rubens* – *Schismus (arabicus, barbatus)* Herbaceous Semi-Natural Alliance under the Manual of California Vegetation.

The relative cover of non-native grasses on the site is not the sole environmental factor assessed for determining Los Angeles pocket mouse potential to occur. Many other conditions help determine the likely of species occurrence, including, but not limited to, soils suitable for burrowing and general disturbance level on site. (Appendix D-2)

Based on habitat assessments, local knowledge, and previous records of this species, the Los Angeles pocket mouse has low potential to occur. Recent trapping studies from locations approximately 1.5

and 2 miles from the proposed Project site did not detect this species. Specifically, trapping was conducted in 2018 by Dr. Phil Brylski (USFWS TE148555 and CDFW MOU) for the Meridian Trunk Sewer Project south of the Project site, which yielded captures of six small mammal species: Stephens kangaroo rat (SKR), San Diego pocket mouse (*Chaetodipus fallax fallax*), deer mouse (*Peromyscus maniculatus*), harvest mouse (*Reithrodontomys megalotis*), house mouse (*Mus musculus*) and black rat (*Rattus rattus*). Trapping was also conducted the same year at the K4 Warehouse Project east of the Project site, which yielded captures of one small mammal species: the deer mouse (*Peromyscus maniculatus*). (Appendix D-2)

Three records of Los Angeles pocket mouse within the vicinity of the Project site are documented in CNDDDB. These records are approximately one to three miles from the Project site and were documented in 1990, 1992, and 1993. There are no recent records of this species from the immediate area. (Appendix D-2)

- I-757.5** This comment raises concerns regarding potential Project impacts on horned lizards. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), while the dense non-native grasslands have low suitability for supporting this species, there are portions of the study area with various dirt roads, parking areas, and trails that have potential to support coast horned lizards and harvester ants. The habitat description, potential to occur, and impacts analysis have been revised in the Project Biological Technical Report (Appendix D-1) to include information about these open areas that may have potential to support coast horned lizard. During Project construction, direct mortality of coast horned lizard could potentially occur. A discussion of potential impacts on coast horned lizard have been added to the Project Biological Technical Report (Appendix D-1). With the implementation of MM-BIO-1 (Best Management Practices), potential impacts to the coast horned lizard would be less than significant. In addition, habitat-based mitigation would occur as described in MM-BIO-8 (Upland Vegetation Communities).
- I-757.6** The commenter asserts that the orange-throated whiptail is in the Study Area. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), within Section 4.3, Biological Resources, of the Draft EIR and the Project Biological Technical Report (Appendix D-1), the potential for orange-throated whiptail was determined to be moderate; therefore, the analysis considered potential impacts on this species and impacts on this species will be less than significant with the implementation of MM-BIO-1.
- I-757.7** This comment raises concerns regarding the nomenclature of the red-diamond rattlesnake in the Project's Biological Resources Technical Report, as well as potential Project impacts to this species. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), the Project Biological Technical Report (Appendix D-1) adheres to the nomenclature used by CDFW on the CNDDDB Special Animals List (2022) which lists this species as "red-diamond rattlesnake". When this species was first described (Cope 1892), the common name "red-diamond rattlesnake" was assigned to this species. This common name has persistent throughout changes in nomenclature: *Crotalus ruber* - Red Diamond Rattlesnake (Stebbins & McGinnis 2012), *Crotalus ruber ruber* - Northern Red Rattlesnake (Stebbins 1985, 2003), *Crotalus ruber ruber* - Red Diamond Rattlesnake (Wright & Wright 1957, Stebbins 1966, Klauber 1982), *Crotalus ruber* - Red Diamond Rattlesnake (Stebbins 1954), *Crotalus exsul* - Red Rattlesnake (*Crotalus atrox*, part; *Crotalus adamanteus ruber*; *Crotalus atrox ruber*;

Crotalus ruber. Red Diamond Rattlesnake; Western Diamond Rattlesnake, part) (Grinnell and Camp 1917), *Crotalus ruber* - Red Rattlesnake (Atsatt 1913)¹.

Red diamond rattlesnake is a CDFW Species of Special Concern. Rocky outcrops are limited within the Project site and primarily occur in the adjacent lands to the south and east. Areas with suitable habitat for red-diamond rattlesnake primarily occur in the planned conservation areas. Habitat with highest suitability occurs outside the proposed Project limits and the species does not have a high likelihood for occurrence within the Project impact area; therefore, this species has a low potential to occur on the Project site. The habitat description, potential to occur table information, and impacts analysis have been revised in the Project Biological Technical Report (Appendix D-1). Similar to other species, habitat-based mitigation would occur as described in MM-BIO-8 (Upland Vegetation Communities) and potential direct mortality would be minimized to the maximum extent practicable with implementation of MM-BIO-1 (Best Management Practices). (Appendix D-2)

I-757.8 The comment raises concerns regarding the lack of an insect survey as part of the Project's environmental analysis. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), habitat assessments were performed for all special-status species, including insects, in compliance with CEQA requirements. No special status insects were observed during general biological surveys and no special status insects have a moderate or high potential for occurrence on the Project site (please see section 3.4.2 of the Project Biological Technical Report – Appendix D-1). Note that biological evaluation of the Project site and observed species lists were not intended to be exhaustive, but to provide sufficient information for decision makers to understand the environmental consequences of the proposed Project. Please note also that impacts on native vegetation communities were assessed as part of the analysis and mitigation is provided for those impacts; much like NCCP planning it is generally assumed that habitat mitigation also protects more common (non-special status) species that those habitats support. Please see sections 4 and 5 of the Project Biological Technical Report (Appendix D-1) for additional information.

I-757.9 This comment raises concerns regarding potential Project impacts on vernal pool fairy shrimp. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), Project fairy shrimp surveys were done in compliance with USFWS protocols and included both wet season and dry season surveys. Dry season surveys were performed by collecting soil at multiple locations within each potential habitat area, sieving collected soil for cysts, hatching out cysts and identifying any hatched shrimp to species level (all performed by USFWS permitted biologists).

The dry season surveys that were performed on-site help ensure species detection regardless of wet season rainfall or ponding duration. Of the ten Project site basins sampled during dry season, eight basins supported fairy shrimp cysts. The hatched fairy shrimp were all identified as the common versatile fairy shrimp (*Branchinecta lindalhi*). Dry season soil sampling and subsequent hatching and rearing of fairy shrimp followed protocols determined by the agencies to provide reliable data. The presence of spadefoot toad does not necessarily indicate the presence of listed fairy shrimp species. (Appendix D-2)

¹ California Herps. (2023). Red Diamond Rattlesnake. Retrieved March 18 from <https://californiaherps.com/snakes/pages/c.ruber.html>.

I-757.10 The comment raises concerns regarding the analysis of Project impacts on aquatic resources, such as a Blue Line stream. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), the proposed Project site and Sycamore Canyon are now separated by residential development and Alessandro Blvd. It appears that water from the Project site flows down Avenida Munoz, Camino Del Sol, and several concrete drainages prior to flowing under Alessandro Blvd through culverts to Sycamore Canyon. The Project Aquatic Resources Delineation Report (ARDR; Appendix D-1) identifies two areas that may have been historically connected to the Blue Line stream running through Sycamore Canyon; these are identified as non-wetland water (NWW)-1 and NWW-2 in ARDR figures.

Direct and indirect impacts on non-wetland waters of the U.S. identified on the Project site are accounted for within the Project impact analysis (please see sections 4.2 and 5.8 of the Project Biological Technical Report – Appendix D-1) and the Project will be permitted through the Army Corps of Engineers, CDFW and the Regional Water Quality Control Board. All requirements by the agencies during permitting, including best management practices as it pertains to water quality, will be adhered to. (please see MM-BIO-9 [Aquatic Resources Mitigation] and sections 4.2 and 5.8 of the Project Biological Technical Report [Appendix D-1])

I-757.11 The comment raises concerns regarding potential Project impacts to MSHCP wildlife corridors. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), neither the proposed Project site nor any areas in the vicinity of the Project site are within any of the 38 designated MSHCP habitat linkages identified on Figure 3-2 of the MSHCP plan. The conservation areas near the site are identified as existing quasi-public core reserves in MSHCP mapping; however, neither the site nor any surrounding areas are identified as an existing or proposed MSHCP linkage (Dudek 2003)².

As stated in Section 4.5 of the Project Biological Technical Report (Appendix D-1), the Project area likely serves as a local wildlife corridor between undeveloped areas to the south of the site and the open space areas immediately north of the Project site, north of Alessandro Avenue, which includes Sycamore Canyon approximately 4,000 feet to the northwest of the site. The Project area also likely serves as a steppingstone corridor for avian species moving through this area, including least Bell's vireo which occur in Meridian Conservation Areas 1 and 2 to the south of the site north and south of Van Buren Boulevard. (Appendix D-2)

With full build-out of the development area (e.g., Specific Plan Area), an undeveloped corridor would be retained immediately east of the site as part of the 664 acres of land placed into conservation easement. This undeveloped land would maintain a corridor between site development and nearby residential development, including significant areas of riparian habitat. (Appendix D-2)

The planned extension of Cactus Avenue bisects the undeveloped corridor; however, two wildlife crossings under the road are planned to mitigate for impacts to wildlife that rely on land locomotion. In addition, one wildlife crossing is planned under the Brown Street extension to further facilitate wildlife movement. The crossings will consist of soft-bottomed culverts approximately 6 feet in height by 20 feet in width to allow for adequate passage of animals north to south under Cactus Avenue and east to west under Brown Street. The two Cactus Avenue wildlife crossings will be approximately 240 feet in length and the Brown Street wildlife crossing will be approximately 150 feet in length. These

² Dudek. 2003. Western Riverside County Multiple Species Habitat Conservation Plan. Information obtained from <https://rctlma.org/Portals/0/mshcp/volume1/index.html>

specifications follow the CBD Settlement Agreement, which prescribed design standards suitable to accommodate local land locomotive species.

Additionally, 60 acres of open space/park is planned for the western portion of the Project that buffers the existing residential uses west of the site, which will be included within the Project's General Plan Amendment. This western open space area will still allow for the movement of wildlife to the west of the Project as well. As such, impacts on wildlife corridors would be less than significant.

I-757.12 The comment requests that additional analyses be conducted to address the commenter's previous concerns. Please see Responses I-757.5 and I-757.8 regarding horned lizards and insects; Response I-757.9 regarding fairy shrimp; Response I-757.11 regarding wildlife corridors; and response to comment I-757.10 regarding drainage/aquatic resources.

INTENTIONALLY LEFT BLANK

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-758.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
