· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach
 - Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
 - Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
 - Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-759.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

I-760.1

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics.

The plan’s inclusion of parks, recreation, and open space are only creating an attractive barrier around the one thing that will have the greatest negative effect on the surrounding community — the warehouses! For those of us who have lived here for the majority of our lives, especially the children, we are accustomed to the fact that our parks/recreation spaces aren’t surrounded by industrial buildings. That being said, **who would choose a new park, that’s right next to warehouses, over the current ones that are well integrated into the community?** Has anyone working on this project contacted the community to see if they agree that this construction will benefit them? Also, the EIR’s Aesthetics section states that “total construction activities are expected to be underway for approximately 4.5 years”. If it is anticipated that neighbors will deal **solely** with the construction for so long, that is more reason to include the communities input!

I-760.2

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. **Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units.** Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

I-760.3

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. **I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit.** This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Esmeralda M 92553

- I-760.1** This comment is the first half of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.
- I-760.2** This comment questions the placement and desirability of a park immediately adjacent to warehouses. Please see Topical Response 4 - Project Consistency, for a discussion of settlement agreements directing the location of the proposed Park. The comment raises general aesthetics concerns regarding the 4.5-year estimated construction period. MM-AES-1 (Construction Equipment Staging and Screening) requires all large construction equipment and vehicles to be outside the public viewshed when not in use. With incorporation of MM-AES-1, the Project’s aesthetics impacts during construction would be less than significant. The comment expresses general opposition to the Project and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-760.3** This comment is the second half of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

Also, with the finished construction of Meridian, Cactus Avenue ended in a cul-de-sac. Coincidentally, this street will connect to the West Campus Upper Plateau Project. Was this cul-de-sac part of Cactus intended to lead further down to the bunkers? How long has the project been in the works without the knowledge of the neighbors?

I-761.1

I-761.2

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Esmeralda M 92553

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-762.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. **It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers** as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Esmeralda M 92553

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-763.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Felix and Felicia Valencia

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Freddie Quintana

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Freddie Quintana

INTENTIONALLY LEFT BLANK

From: Sally Quintana <quintanasb@yahoo.com>
Sent: Thursday, March 9, 2023 9:28 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,ZPS5tkIVCnSTCUaRNXXswmekoKJsQ1i0aOKV5GvwsMPOcCi8e4TavsHLa8v2oWDONgkK0fNg92BXIb4XARGFazeknuT9GnMrIKg1Dy7UFy1okK8fCc_2AA,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,TZoQa5GLBLVgBlhoc4G47aStCm1kxecgUquEP_4nZktvCnfSuadfYdwZA6Dm6H-4t6RrXZBcotXbPczpk1lKNa61uAUdyBIVePFzJS4FY3pLPRYnQQ,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Freddie Quintana

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Freddie Quintana

Sent: Thursday, March 9, 2023 9:33 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Freddie Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Freddie Quintana

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Freddie Quintana

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-772.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Personally, I feel we need areas to shop and dine so that our tax dollars remain in Riverside. Currently, Corona and Rancho Cucamonga are areas that our residents go to be entertained. The areas that the unsightly warehouses are located would better serve our community as a beautiful green space to enjoy family time.

Freddie Quintana

March 9, 2023

- I-772.1** This comment letter is Form Letter H – Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.
- I-772.2** This comment suggests that the area needs more shopping and dining opportunities locally as well as more green space. The proposed Specific Plan allows retail and dining uses in the Mixed Use parcels. Additionally, the Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-773.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Fernando Sosa Jr . Orangecrest resident

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Gayle DiCarlantonio
Riverside 92507

Subject: Alternate Plan Proposal/Public Comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Importance: High

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool, and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-775.1
 I-775.2

Sincerely,

Honey Bernas

Letter I-775

Honey Bernas
March 9, 2023

- I-775.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- I-775.2** This comment requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 – Alternatives for the evaluation of Alternative 5, Non-Industrial Alternative.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant. Let’s make our community better, not continue to degrade it. Riverside families deserve it!

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while

I-776.1

offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-779.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Justin Dillon

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach
 - Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
 - Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
 - Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-780.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-783.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

John W. Hagmann

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-784.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Attachments: PublicCommentWestCampusUP-draftEIR-S4.pdf

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (JPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. Please find the attached letter. I look forward to your thoughts and appreciate your consideration.

I-785.1

Please reply to confirm receipt of this public comment.

Sincerely,

Kevin Shearer
Riverside 92508

8 March 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Attention Mr. Fairbanks:

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority, assumed March 11, 1997 date
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

The zoning designation in the draft EIR on page 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of these developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project making it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarize the impacts this project would have on the land and local inhabitants as included in Section 4.1 Aesthetics. This is where the comments of my letter are focused.

I-785.2

I-785.3

While not considered a grave impact on human life, the aesthetics of the Upper Plateau holds a significant concern for a majority of the residents of Riverside and its surrounding communities. Aesthetics is defined as a branch of philosophy concerned with the nature and appreciation of art, beauty and good taste. It has also been defined as “critical reflection on art, culture and nature”. Within aesthetics, there are two main branches: one branch focuses on the appreciation of nature and natural landscapes (the Upper Plateau now), and the other branch focuses on the appreciation of human creation and in this case architecture (the Upper Plateau with warehouses on it). When considering the nature of aesthetics, people contemplate and define the ideas of beauty and value to the natural or human made objects they are examining.

When defining beauty and value, people usually arrive at a rational or even objective conclusion that an item is beautiful (like El Capitan in Yosemite) or that it has a human value (like Van Gogh’s *the Starry Night*). In these instances, people can view an object and using logic and objectivity, they can agree on its beauty and value. In these cases, the object can have an aesthetic value in and of itself, the object is beautiful or valuable because it exists. On the other hand, people also add a more personal judgment to the object, one that is more subjective, one that carries with it an experience to enhance the beauty or value of an object aesthetically. These experiences can be internal to one or a few people (for example, a homeowner or a street of houses), or they can be external and observable by many people (for example, a community or congregation). With God’s grace, we all deserve to enjoy the aesthetic wonders found in the Meridian West Campus, Upper Plateau. We will get to the draft EIR and Upper Plateau soon.

I-785.4

It is of importance to note first that, broadly speaking, aesthetics deals with a kind of perception, the perception of all people able to observe or consider the object, not just of the ones benefiting from possession of the object. People have to see the grace or the raw emotions of a song (from a Cooper’s hawk or yellow warbler, for example), to hear the plaintiveness and comfortable quiet of nature, to notice a scenic vista’s subtle curves and colors (of the sand aster or California buckwheat, for example), to feel the power of a day outdoors (on a real mountain bike trail, not one paved by developers), or to find happiness in one’s surroundings without distraction and impact from the landscape or environment.

There is no instance where unbiased people find the aesthetics of large industrial development aesthetically pleasing. By proposing to destroy a natural landscape that so many people find pleasing aesthetically, you are by default saying that aesthetics are only relevant when considering building guidelines and definitions, and disregarding the public’s view of aesthetics. Your sections on aesthetics in the draft EIR are written by and for the same audience, a for-profit business and is entirely dismissive of how residents and visitors to the Upper Plateau find beauty and value in this land outside of profit incentives. Your consideration of aesthetics without genuine engagement with the public is unfairly biased toward those who stand to profit financially from this project and not toward those who must live with it after the developer and the March JPA have left the area.

It is with this idea of unfair and biased consideration of aesthetics that I'd like to voice my objection to the plan proposed in the draft EIR: building mega-warehouse do not align with my idea of preserving the aesthetics of the Upper Plateau, or as I know it the March Bunkers area. Specifically, I find the following details biased, misleading, neglectful, and dismissive of the rational and experiential aesthetics of this unique, precious, and beautiful piece of land.

I-785.5

- Table 1-2, 4.1 Aesthetics indicates that for three specific factors (impact on scenic vistas, degradation of existing visual character, and substantial light pollution) the impacts of the proposed development potentially are significant, but with mitigations implemented by the developer these impacts are less than significant. The people who live near this land enjoy open views of two mountain ranges in one direction and another mountain range off in the distance in the other direction. On clear days, which are rare, resident and visitors to this land can see to the Cajon Pass in the north and the Agua Tibia Wilderness to the South. Even with the proposed mitigations, how can the March JPA and developer say that the aesthetic impacts will be less than significant? Please spare me the code that allows you to do what you are planning; it simply rings hollow and shows a bias toward profit over quality of life and sustainable development practices.

I-785.6

As described above, aesthetics on a rational level will see all scenic vistas and the visual character of this land destroyed, and the persistent noise and light pollution (and air quality) emitting from this land do not lend themselves to enhancing or preserving beauty or value of this land. Why did the JPA and the developer evaluate aesthetics solely from a developmental perspective? Rationally, no one in the community likes these buildings, we do not find them artful or aesthetically pleasing. And the impact of these buildings and all their trucks intruding on the open space do not enhance the personal experience one can have in nature. Speaking from an aesthetics point of view, this plan does not promote an appreciation of natural or human made objects and therefore Table 1-2 is neglectful and dismissive of the residents of western Riverside County, especially the neighborhoods in eastern Riverside and adjoining unincorporated County land specifically. Will the March JPA demand that the developer proposes an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? And will the March JPA seriously consider Alternate Plan 1 that involves doing nothing with this land? If not, what justification does the March JPA offer to not seriously consider Alternate Plan 1? It would be insulting and irresponsible to claim that this project must provide much needed jobs in Riverside County, that response is invalid, irresponsible, and misleading.

I-785.7

- Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic

I-785.8

presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction and without grade elevations of these buildings or boundaries in the draft EIR there is no way to determine the accuracy of them. What is there a reason the developer neglected to include grade elevations of these buildings? There are no buildings located in the Meridian complex today that look like these fictional images; these images are misleading to the public and demonstrate a dismissive viewpoint by the applicant. (The proposed views are inaccurate based on the size and number of buildings being proposed, as well as height factoring in grade elevations, which is not only a misleading presentation of the project but also dismissive of how the public values things like aesthetics and scenic vistas.)

I-785.8
Cont.

Based on the description of aesthetics above, Figures 4.1-3 to 4.1-7 also do not satisfy the rational or experiential standard for beauty or value to anyone that has to live near them. How does the JPA and the developer justify the finding that there is less than significant impact to aesthetics with this project? While a bit of hyperbole, one would not view the Grand Canyon the same if there was a pile of garbage at the bottom of it. And when I ask this question, I am asking you to consider the people that live here, not building codes, land use guidelines, or the developer's profit margin. Why are there no grade elevations provided for all buildings and the perimeter? Is this an oversight or a neglectful and purposefully misleading representation?

I'd remind you that you are bound by the General Plan, Goal 2, Policies 2.3 and 2.4 to "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." A racially, culturally, and economically diverse community of people will forever be negatively impacted by this project if developed as proposed. Why have you chosen to turn your focus away from these goals at this time? What justification can you offer concerned residents who have lost trust in the March JPA for these unfair and biased decisions? Where are your legal and moral obligations to the community surrounding March ARB? How will you hold the applicant accountable to propose more sustainable land use plans now and in the future just as Randall Lewis has advocated for throughout industry and via the lecture series that bears his name at UC Riverside?

I-785.9

- Section 3.5.2 Project Design Features focuses mostly on aesthetics and lighting or minimizing obstruction and light pollution. While PDF-AES-1 through 16 address the visual element related to aesthetics, they do not address other experiential aesthetic qualities impacted by these developments, things like noise and air pollution associated with noisy trucks that smell like diesel fuel. This oversight by the March JPA and the developer is again misleading to the public; it is neglectful to the people who live near or visit the Upper Plateau area, and it is dismissive of their aesthetic experiences related to

I-785.10

this unique landscape. Why didn't the project design features include non-visual aesthetics? Why do they not address the rational and experiential aesthetic qualities inherent in this land? Lastly, how does the March JPA defend the fact that this plan does not reflect any of the feedback the community has provided for nearly a year before the release of this misguided plan? It is appropriate, and I am calling for, further evaluation of the impacts on aesthetics related to non-visual pollution sources with criteria that consider the impacts to people not just data levels that codes recommend or measure.

I-785.10
↑
Cont.

I-785.11

The draft EIR's consideration of aesthetics is decidedly one-sided and communicates a clear anti-community message to residents living near the Upper Plateau. Was this your intention? Will the JPA and the developer sanction a project that ignores the aesthetic appreciation of people who live her just so the applicant can meet the demands of its hedge-fund and non-local investors? How is this adhering to the spirit and guidance of the March ARB General Plan developed in the late 1990s?

I-785.12

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporate Riverside County have made one thing clear in response to the specific plan: **no more warehouses**. In every meeting, public engagement, and modification to your site plan you have ignored the community and you did so it seems intentionally. For a year we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

I-785.13

Fortunately, the group Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community that have realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

I-785.14

- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

I-785.14
Cont.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

I-785.14
Cont.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area. Why have you ignored the community and relied on them to propose a land use plan for you? What steps will you take to engage the public in these alternate plans, especially when these alternate plans glorify a higher purpose instead of the applicant's profit goals? People must feel that the natural world is important and valuable and beautiful and wonderful and an amazement and a pleasure. I hope you recognize the higher calling for beauty, good, and value for all of God's people and reject the applicant's specific plan.

The March ARB General Plan was written more than 20 years ago, and established a goal of repurposing former military land for public benefit and use and to create more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-

I-785.15

warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationalists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors to the area beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

May God lead your path,

Kevin Shearer
Riverside, CA 92508

Letter I-785

Kevin Shearer
March 9, 2023

- I-785.1 This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-785.2 This comment summarizes the location of the Project site and lists various publicly accessible documents, including the Draft EIR. This comment is introductory in nature and does not raise an issue specific to the environmental analysis in the Draft EIR. As such, no further response is required.
- I-785.3 This comment raises notes that the Project envisions a variety of uses but is concerned that most of the development associated with the Project will be warehouses and raises concerns about these impacts, in particular regarding aesthetics. The Project proposes the following mix of land uses on corresponding acreages, as indicated in Table 1-1 of the Draft EIR:
- Business Park – 65.32 acres
 - Industrial – 143.31 acres
 - Mixed Use – 42.22 acres
 - Public Facility – 2.84 acres
 - Parks/Recreation/Open Space – 78.00 acres
 - Streets – 37.91 acres
 - Existing Public Facility – 2.87 acres
 - Open Space/Conservation Easement – 445.43 acres

For purposes of analysis, the Draft EIR assumed the following buildout scenario:

- Building B – 1,250,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 587,000 SF of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 SF of high-cube fulfillment center warehouse use
- Industrial Area – 500,000 SF of high-cube cold storage warehouse use
- Business Park Area – 1, 280,403 SF of business park use
- Mixed Use Area – 160,921 SF of retail use (25%)
- Mixed Use Area – 482,765 SF of business park use (75%)
- 60.28-acre park (with Active and Passive uses)
- 17.72 acres of Open Space use
- Public Facility – 2.84 acres for future sewer lift station and electrical substation (within the Specific Plan Area)

As detailed in Table 3-2, Land Uses by Land Use Designation, of Recirculated Chapter 3, Project Description, the Industrial, Business Park, and Mixed Use land use designations permit a wide range of uses, including manufacturing, storage and distribution, office, and commercial uses. The Draft EIR evaluates warehousing as a dominant use under the Specific Plan buildout scenario because warehousing is one of the more intensive uses allowed under the Specific Plan. However, the only plot plans proposed under the Project are for Buildings B and C on industrial-zoned parcels; no specific development is proposed on the remaining parcels within the Campus Development. As such, through

the evaluation of the buildout scenario, the Draft EIR discloses the impacts of the Specific Plan at the maximum foreseeable level of development.

Additionally, this comment raises concerns about the relevancy of Appendix B to the Draft EIR and notes that Table 1-2 of the Draft EIR summarizes the impacts of the Project, including aesthetic impacts. Section 4.1, Aesthetics, of the Draft EIR and Appendix B, Meridian Upper Plateau Sight Line Sections, describe sight line sections that show existing and proposed grades at five sections through the Project site to match the locations of the viewpoints evaluated in the EIR. These sections were prepared to demonstrate the general scope of grading required for the Project as well as the elevations of the Specific Plan Area as they relate to the Conservation Easement and neighboring off-site residential areas. They show the topography of the Project at these locations under existing and proposed conditions. Appendix B also includes the photometric lighting analysis for field lighting that would be included in the Park component of the Project. Appendix B supports the analysis of the Specific Plan buildout scenario included in Section 4.1, Aesthetics, of the Draft EIR. Regarding Table 1-2, no specific comments, questions, or concerns about the environmental analysis included in the Draft EIR are raised. As such, no further response is provided.

I-785.4 This comment provides discussion on the importance of aesthetics and raises concerns regarding the aesthetics analysis in the Draft EIR. In addition, the comment questions the public engagement process for the Project, with respect to aesthetics.

Consistent with the requirements of CEQA, Section 4.1, Aesthetics, of the Draft EIR provides discussion of the Project site's existing visual character and surroundings, identifies State and local regulatory requirements, and evaluates potential impacts. The Draft EIR's analysis is based on significance criteria adopted by the lead agency, March JPA, and required by law under CEQA. The 2022 March JPA Local CEQA Guidelines is consistent with the State CEQA Guidelines published by the Governor's Office of Planning and Research. These guidelines have been updated in recent years to assess potential impacts of proposed projects on an objective basis. As such, the potential impacts presented in the Draft EIR are assessed utilizing existing and proposed guidelines and regulations governing aesthetics on the Project site and the March JPA Planning Area, including the proposed Specific Plan and its defined design guidelines, the General Plan, and the Development Code. Therefore, as further detailed in Section 4.1, Aesthetics, of the Draft EIR, impacts to existing visual character and quality of public views were found to be less than significant, whereas impacts to scenic vistas were found to be less than significant with mitigation incorporated. Please see Topical Response 1 – Aesthetics for additional information.

With respect public engagement, as summarized in Recirculated Chapter 2, Introduction, a Notice of Preparation for the Project was published on November 19, 2021, which started a public review period that ended on December 20, 2021. Comments received were considered as part of the preparation of the EIR. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. In addition, these responses to comments represent another instance in the CEQA process in which the public, agencies, and organizations have the opportunity to provide feedback on the proposed Project and the environmental analysis presented in the Draft EIR.

- I-785.5** This comment objects to the Project as proposed and expresses personal opposition to the conclusions related to aesthetics. See more discussion under Topical Response 1 – Aesthetics. Specific comments regarding the Draft EIR are provided and responded to below.
- I-785.6** This comment notes mountain ranges within the vicinity of the Project site’s surroundings and questions the less than significant conclusions presented in the Draft EIR. The aesthetics analysis in the EIR is based on established thresholds. As explained in Section 4.1.4, Thresholds of Significance, the significance criteria used to evaluate the Project impacts related to aesthetics are based on the following thresholds contained in Form J of the 2022 March JPA CEQA Guidelines, which mirror the thresholds in Appendix G of the CEQA Guidelines. See Topical Response 1 – Aesthetics, for a discussion of the thresholds of significance selected by March JPA for evaluation of aesthetic impacts.
- I-785.7** This comment states the proposed Project would result in impacts related to scenic vistas and visual character, as well as noise, light pollution, and air quality. These issue areas are analyzed in the Draft EIR within Section 4.1, Aesthetics (i.e., scenic vistas, visual character, and light pollution), Recirculated Section 4.2, Air Quality, and Section 4.11 Noise. As discussed above in Response I-785.4, the Draft EIR includes extensive analysis of the potential aesthetic impacts of the Project and concludes that its impacts will be less than significant with mitigation incorporated, in compliance with CEQA. Additionally, the comment requests “an alternate plan that truly considers aesthetics from the point of view of the people who live” in the Project vicinity. As discussed in Topical Response 1 – Aesthetics, and Section 4.1, Aesthetics, of the Draft EIR, five viewpoints were used to evaluate the Project’s impacts in relation to scenic vistas and existing visual character and quality of public views of the Project site and its surroundings. As shown in Figure 4.1-2, Key Points Viewpoint Map, the five viewpoints used by the Draft EIR provide representative views likely to be experienced by residents. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR – including the No Project Alternative – have been evaluated for potential aesthetic impacts and will be considered by March JPA in deciding whether to approve the Project. Similar to the analysis included in Section 4.1, Aesthetics, visual changes to publicly available views of the Project site were considered. Additionally, see Topical Response 8 – Alternatives, within which a new Alternative 5 – Non-Industrial Alternative, is presented and its aesthetic impacts are evaluated. Please see Response I-785.4 above for more discussion on the thresholds of significance required under CEQA for aesthetics.
- I-785.8** This comment questions the presentation of the buildings depicted in the visual simulations as different from existing buildings within the March JPA Planning Area. As explained in the Draft EIR, to visually identify anticipated changes from public viewpoints surrounding the Campus Development, and to specifically identify if the Campus Development would have a substantial adverse effect on a scenic vista, visual simulations were prepared from the five key vantage points discussed above. To prepare the photosimulations, the five viewpoint photographs were used as a base layer in AutoCAD, and the Project buildout scenario was overlaid, including setbacks, height, materials, color palettes, and landscaping consistent with the plant palette and Design Guidelines in the proposed Specific Plan. For ornamental and screening landscaping within the Specific Plan Area, a 10-year growth factor was applied to each plant species.
- The comment also suggests that the viewpoints do not include grade elevations or boundaries. The photosimulations accounted for the proposed grades and elevations within the Campus Development. Appendix B to the Draft EIR illustrates conceptual grading plans and sight line sections to support the

analysis of each viewpoint considered within Section 4.1, Aesthetics, of the Draft EIR. Please see Topical Response 1 – Aesthetics for further discussion.

- I-785.9** This comment questions the Project's consistency with March JPA General Plan Goal 2, Policies 2.3 and 2.4, which calls for discouraging land uses that conflict with the services or plans of adjoining jurisdictions and protecting the interests of local residents and jurisdictions. The Project is consistent with Land Use Element Policy 2.3 because development of the Project would occur in a logical pattern of growth through the guidance of the proposed Specific Plan, compatible with adjacent land uses to the east and northeast. The Conservation Easement will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. The Project is also consistent with Land Use Element Policy 2.4 The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses.
- I-785.10** This comment asserts PDF-AES-1 through PDF-AES-16 are inadequate because they do not include non-visual features that would expand the scope of aesthetics. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. As detailed throughout the Draft EIR, the impact analysis is consistent with CEQA, the CEQA Guidelines, and the 2022 March JPA Guidelines. Thus, environmental review of aesthetics concerns the thresholds of significance as outlined in 2022March JPA CEQA Guidelines. See more discussion above in Response I-785.4. Other environmental issues areas referenced in the comment, such as noise and air pollution, are discussed and analyzed in other sections of the EIR: Section 4.11, Noise, and Recirculated Section 4.2, Air Quality.
- I-785.11** This comment asserts the Project does not reflect community feedback. This comment is similar to comments made above. See Response I-785.4 above for more discussion on the public review process under CEQA. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices.
- I-785.12** This comment asserts the Draft EIR's impact analysis on aesthetics is inadequate. This comment is similar to comments made above. See Response I-785.4 above regarding the Draft EIR's analysis of aesthetic impacts and compliance with CEQA. Further, the comment questions the Project's consistency with the General Plan. See Response I-785.9, above, and Recirculated Section 4.10, Land Use and Planning, for an analysis for the Project's consistency with the relevant goals and policies of the March JPA General Plan.

- I-785.13** This comment expresses opposition to proposed warehouses on the Project site and requests alternatives without these land uses. Chapter 6, Alternatives, of the Draft EIR considered and evaluated four alternatives to the proposed Project. All except Alternative 1 (No Project) would have industrial land uses (i.e., warehouses). The Draft EIR considered an All Residential Alternative but rejected it from consideration as it would not meet the basic Project objectives outlined in Section 6.2. Moreover, the March JPA General Plan currently designates the Project site as Business Park and Parks/Recreation/Open Space. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. The General Plan does not include land zoned for new residential uses because the purpose of the jurisdiction is to increase employment opportunities within the region. In addition, see Topical Response 8 – Alternatives, which includes analysis of a new Alternative 5 – Non-Industrial Alternative.
- I-785.14** This comment is Form Letter H, Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.
- I-785.15** This comment expresses opposition to the proposed Project and summarizes the comments made within Comment Letter I-785, which are responded to above.

INTENTIONALLY LEFT BLANK

Subject: Public Comment: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304
Attachments: PublicCommentWestCampusUP-draftEIR-S3.pdf

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (JPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. Please find the attached letter. I look forward to your thoughts and appreciate your consideration.

Please reply to confirm receipt of this public comment.

Sincerely,

Brenda Shearer
Riverside 92508

8 March 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Attention Mr. Fairbanks:

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority, assumed March 11, 1997 date
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

As a naturalist and casual birder, I have had the privilege of traveling the western United States and observing the incredible diversity of life in our little part of the planet. In my many expeditions, I have seen firsthand the devastating effects that human development can have on wildlife, and I am writing to express my opposition to the proposed construction of a warehouses proposed for the Meridian West Campus Upper Plateau area.

I-786.1

I-786.2

The proposed site for this warehouse complex is home to a wide variety of birds, from the majestic Cooper’s Hawk to the delicate Burrowing Owl. These birds, like so many species around the world, are facing increasing threats from human activities, and the construction of these warehouses would only add to these pressures.

I-786.3

The destruction of native vegetation, which provides food and shelter for these birds, is one of the most immediate and obvious impacts of warehouse construction. The loss of this critical habitat would leave many birds with limited or without any the resources they need to survive, and would have devastating consequences for local bird populations.

I-786.4

Furthermore, the noise and light pollution generated by these warehouses would further disrupt the birds’ natural rhythms, behaviors, and nesting making it even more difficult for them to survive in the area. And this is merely a reflection of surveyed species in the draft EIR. There are many more visitors to this land that rely on the open space and natural resources as they migrate from location to location. Species observed on this land include the Canadian Goose, the Great Egret, a variety of hummingbirds, the Wilson’s Warbler, the Common Ground Dove, and the Turkey Vulture.

I-786.5

As someone who has spent considerable time studying and protecting the natural world, I urge you to consider the impact that these warehouses would have on local bird populations, and to find alternative locations for these buildings or find alternate land use plans that would not have such severe consequences for wildlife. Always putting human interests first when developing land use plans is irresponsible and does not fall in line with the sustainable development reputation that Randall Lewis (the applicant) promotes in the lecture series bearing his name at UC Riverside. Nor is this project consistent with the policies and innovation espoused by the programs bearing his name at Claremont McKenna College (the Randall Lewis Center for Innovation and Entrepreneurship) or La Verne University (the Lewis Center for Entrepreneurship). Please explain to me how the hope and forward-looking policies and programs discussed at these centers for learning are demonstrated by the proposed mega-warehouse plan for the West Campus Upper Plateau. (See alternate plans below.)

I-786.6

Further, please explain how this disastrous plan falls in line with Mr. Lewis’s public statements in the Student Life News from 2020? “Innovation exists everywhere,” Lewis said. “It’s not necessarily charismatic leaders who drive innovation but the companies and organizations who have systems for innovation, who are thinking, ‘How can we be better? How can we use existing resources differently?’” Placing a mega-warehouse complex that is largely speculative investing for hedge-fund managers, Wall Street investors, and international business does not meet the standards for Mr. Lewis’s words or wishes for the future of California. It also does not meet the standards for a healthy environment that works in harmony with local residents and the economy. Building warehouses today is the furthest thing from being innovative or a leader. Please explain to me how this plan demonstrates a value to the public (outside of a few low paying and seasonal warehouse jobs). How is this plan an example of the applicant innovating

(aside from placing nearly 5 million square feet of warehouses inside of a community of homes)? And how is this plan promoting the entrepreneurial spirit for small and local businesses? The answer clearly is that it does none of those things. So, what else does this plan lack?

I-786.6
Cont.

In addition, the draft EIR does not properly analyze the land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections impacted by this plan. It fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-786.7

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

I-786.8

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.
3. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
4. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence.
5. The draft EIR omits a thorough study of reptiles, specifically the study needs to evaluate the impact of construction on migration of snakes, brumation, species variety and reproduction, and prey habits. There is a rich community of reptiles on this land and the draft EIR negligently ignores them and their benefit to the landscape, environment, and local community. As a resident who watches for the migrating coachwhips in early May, I know I would lose a sense of what makes living near this unique land so special.

The public cannot trust that we are not destroying rare animal, bird, and plant life unless a more thorough survey is conducted, one that is done over a more representative timeframe that includes the local variations in seasonal temperatures, migration, and rainfall. I request the developer and its consultants produce a more complete survey of the life forms that call this land home at one time or another. I also request they JPA, the developer, and its consultants survey

local residents to assess the value of uninterrupted open space, not the kind provided for in the 2012 Center for Biological Diversity settlement, but the type of open space that allows animals to move freely throughout a landscape without the disruptions of traffic, light, noise, and water pollution associated with industrial development.

I also request that you determine what will happen to this land when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? If the land falls within the County, what support and finances exist to keep up this land and permit the open space to remain in its natural undisturbed state? How can you ensure the public that these mitigation measures will be enforced? Saying it will be done by the next agency is like passing the cost of balancing the budget to the next generation of tax payers. What specific plans does the March JPA have developed? When will these plans be available to the public? And what enforcement mechanisms are or will be in place to ensure we are not eradicating more life forms due to human activities? And why do your plans in the EIR not line up with the County's standards for siting and developing industrial and warehouses?

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporate Riverside County have made one thing clear in response to the specific plan: **no more warehouses**. In every meeting, public engagement, and modification to your site plan you have ignored the community and you did so it seems intentionally. For a year we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, the group Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community that have realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area. Why have you ignored the community and relied on them to propose a land use plan for you? What steps will you take to engage the public in these alternate plans, especially the one that preserves open-space and habitat so critical to plants and animals that rely on this land to live? People must feel that the natural world is important and valuable and beautiful and wonderful and an amazement and a pleasure.

The March ARB General Plan was written more than 20 years ago, and established a goal of repurposing former military land for public benefit and use and to create more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB.

I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to

public benefit and the natural environment. This large industrial mega-warehouse development holds no aesthetic beauty or real-world value to residents of and visitors to western Riverside County. It offers minimal low-paying jobs (which your EIR erroneously assessed) in exchange for destroying a public recreation areas and valuable open space for plants and wildlife to exist. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

“Do not let what you cannot do interfere with what you can do.”

Brenda Shearer
Riverside, CA 92508
shearer32@verizon.net

Letter I-786

Brenda Shearer

March 9, 2023

- I-786.1** This comment summarizes the Project vicinity and the documents reviewed by the commenter. The comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis included in the Draft EIR; as such, no further response is provided.
- I-786.2** This comment summarizes a personal experience and general opposition to the proposed Project. This comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis included in the Draft EIR; as such, no further response is provided.
- I-786.3** The comment raises concerns regarding the Project's potential impacts to bird species, including Cooper's Hawk and burrowing owl. Impacts to bird species, including Cooper's Hawk, are evaluated in Section 4.3, Biological Resources, of the Draft EIR and determined to be less than significant with mitigation incorporated. This comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis included in the Draft EIR; as such, no further response is provided.
- I-786.4** The comment raises concerns regarding the Project's potential impacts on bird habitat. As discussed in Section 4.3, Biological Resources, of the Draft EIR, impacts on avian habitat would occur with the implementation of the proposed Project; however, impacts on nesting birds would be less than significant with the implementation of MM-BIO-7 and impacts on native habitat would be less than significant with the implementation of MM-BIO-8. Cumulative impacts on local birds were determined to be not significant with mitigation.
- I-786.5** The comment raises concerns regarding the Project's potential impacts on bird species associated with noise and light. Indirect impacts of light were assessed as part of this analysis and MM-BIO-3 (Operation-Related Indirect Impacts to Special-Status Wildlife) and MM-BIO-4 (Stephens' Kangaroo Rat Avoidance and Mitigation) reduce the potential impact of light on native wildlife species: (1) Construction activities will be limited to daylight hours. Construction lighting will be shielded away from surrounding natural areas. Fixtures will be shielded to downcast below the horizontal plane of the fixture height and mounted as low as possible. (2) Permanent night lighting shall be directed away from proposed open space and/or suitable habitat for special-status species to protect species from direct night lighting. Shielding shall be incorporated in Specific Plan designs to ensure ambient lighting is not increased. Any trails that intersect proposed open space will not include night lighting.
- Potential noise impacts on sensitive avian receptors were assessed as part of the analysis and is provided in Section 4.3, Biological Resources, of the Draft EIR and sections 4.3.2 and 5.3 of the Project Biological Technical Report (Appendix D-1). MM-BIO-2 (Least Bell's Vireo) and MM-BIO-3 restrict construction and operational noise levels within riparian habitats.
- I-786.6** This comment requests consideration of alternatives without warehouses. The commenter also questions how this development complies with objectives identified in lecture series at UCR and at Claremont McKenna College. The comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis included in the Draft EIR; as such, no further

response is provided. However, please see Topical Response 8 – Alternatives, for a discussion of Project alternatives.

I-786.7 This comment is a general opinion regarding the adequacy of the CEQA analysis and personal concerns and also notes the lack of a non-industrial alternative. In response, see Topical Response 8 – Alternatives.

I-786.8 The comment raises concerns regarding the Project’s potential impacts on wildlife and plant species, including those located within the Western Riverside County Multispecies Habitat Conservation Plan. Comment bullets 1 through 4 are similar to Comments FL-C.4 through FL-C.7 of Form Letter C – Biological Resources. In response, please see Form Letter C Response. Regarding comment bullet 5, as explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), habitat assessments were performed for all special-status species, including reptiles, in compliance with CEQA requirements (please see section 3.4.2 of the Project Biological Technical Report [Appendix D-1]). Although suitable habitat for red racer (e.g., red coachwhip) is present, this species is not considered rare, endangered, or threatened and impacts on this species are not required to be individually assessed under CEQA. Evaluations of the communities on the Project site were not intended to be exhaustive, but to provide sufficient information for decision makers to understand the environmental consequences of the proposed Project. With impacts on native vegetation communities present on the Project site, it is assumed that species inhabiting those communities would also be impacted, including reptiles. Impacts on these native upland vegetation communities and the species they support would be mitigated through purchase of credits at an approved mitigation bank.

I-786.9 The comment raises concerns regarding the validity of the biological surveys conducted for the Project. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), the studies presented in the Project Biological Technical Report (Appendix D-1) are not intended to be exhaustive of all life forms that occur or have occurred on the proposed Project site. CEQA does not require the lead agency to perform all research. The Project Biological Technical Report (Appendix D-1) provides decision makers with information which enables them to make a decision which intelligently considers potential environmental consequences of the proposed Project. The study provides information from a snapshot in time and may not be exhaustive of all common (non-listed) species that may occur; however, all habitats were assessed and all special-status species with potential for occurrence were addressed in the analysis.

The CBD Settlement Agreement (Appendix S) presents the decisions agreed upon by the Center for Biological Diversity and San Bernardino Valley Audubon Society, organizations that are staffed by experts in the field of environmental law and conservation biology, and March JPA and LNR Riverside LLC. The conclusions drawn in the Settlement Agreement were based on adequate consideration of all impacts resulting from realignment of the previous March Air Force Base and proper valuation of the land regarding biological resources. See Topical Response 4 – Project Consistency, for further discussion of the CBD Settlement Agreement.

I-786.10 This comment raises concerns regarding the transfer of land use authority from March JPA to the County of Riverside. In response to this comment, please see Topical Response 9 – Long Term Project Implementation and Enforcement.

I-786.11 This comment is Form Letter H, Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.

I-786.12 This comment is the last two paragraphs of Form Letter A, Aesthetics. In response to this comment, please see Form Letter A Response.

Subject: Public Comment: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304
Attachments: PublicCommentWestCampusUP-draftEIR-S2.pdf

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (JPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. Please find the attached letter. I look forward to your thoughts and appreciate your consideration.

I-787.1

Please reply to confirm receipt of this public comment.

Sincerely,

Christopher Shearer
Riverside 92508

8 March 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Attention Mr. Fairbanks:

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

I-787.2

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority, assumed March 11, 1997 date
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

I object to many things found in the draft EIR, but it does show one thing quite clearly; the March JPA and Dudek spared no expense in developing this monstrous document. The technical writing, subject area specialists, consultants, and graphic designers must have spent considerable time and cost quite a bit of money throughout the development of this land use plan and project proposal. And in some ways, their expertise and skill are quite good, making something so unpopular at best and completely deceitful at worst shine as the nice portfolio piece that it is. But

I-787.3

in so many ways, this document is a work of fiction. Why does the JPA and the applicant insist on misleading the public with a document containing so many errors and omissions?

I-787.3
↑
Cont.

The project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The warehouses would be sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool (which your initial study and draft EIR neglect to identify) and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the project as consistently requested by the community.

I-787.4

As a member of the community, I am disappointed that none of the alternative development plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-787.5

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p.

I-787.6

II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses.

The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat. Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated, “The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear.

The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. With these objections in mind, it is appropriate to take some time to consider the inaccurate and misleading information provided in the draft EIR for public consideration. Gathering feedback on this type of inconsistent and erroneous documentation is either sloppy work or purposefully dismissive of public concern and requests.

Let’s look more closely. Figure 4.1-2 identifies key points that illustrate what the views are today and will be once the project is complete. I object to this section as misleading and inaccurate. First and foremost, this image provides elevations for scenic vistas but not building elevations to

I-787.6
Cont.

I-787.7

compare the views to today. It combines satellite imagery with an overlay that is one dimensional and misleading to the public. This image doesn't show contour, landscape changes, and fails to communicate the enormity of the space and of these buildings on the land. And without grade elevations of each building and the perimeter of the complex, this image does not adequately portray the dramatic impact this project would have on the area from simply an aesthetics standpoint. Why did the JPA and applicant not provide this information for public consideration? I hope to demonstrate a possible answer in this letter.

I-787.7
Cont.

Let's explore this further: the draft EIR provides creatively composed images of present and proposed views in Figures 4.1-3 through 4.1-7. That is where those talented graphic artists and

overly creative project managers come in handy. I equate the images in these figures to the experience of seeing the original Superman movie and then comparing it to a modern Batman movie, modern CG makes it a totally different experience for viewers just like your artists have created something fictional for the public, something we will never experience.

View #1, Figure 4.1-3 shows the following existing and proposed views:

EXISTING

PROPOSED

I-787.7
Cont.

Yet if one merely turns 90-degrees from this same location, one gets a current view of warehouses build by the March JPA and the developer.

This image from the same location shows precisely what the JPA and the developer have provided on previous similar warehouse projects. Where is the landscaping that your graphic designers added to Figure 4.1-3 above? How does the yellow and white blend in with the dramatic landscape and backdrop of the Box Spring and snow-covered San Bernardino mountains? How do the multi-colored containers blend with the seasonal green of the floral in December through April? Why would anyone believe that the view provided in Figure 4.1-3 will look like the proposed version and not the real views that exist in this area today? How is this not a significant impact to aesthetics and views for residents and visitors alike? Your document claims mitigation but the proof is in what you already have done and there is no mitigation being done on existing warehouses under the JPA and this developer. What enforcement exists for the developer when they fail to sufficiently mitigate impacts and the project is complete? Why is there no plan in place to detail remedies for poor development standards and practices? It is reasonable to all who live in this area to demand an enforcement plan and significant in-kind contribution by the applicant to mitigate their existing intrusive development practices, and a plan for the Joint Powers Commission to implement for all future monitoring and enforcement of these neglectful practices.

View #2, Figure 4.1-4 shows the following existing and proposed views:

I-787.7
Cont.

EXISTING

PROPOSED

I-787.7
Cont.

This is where the graphics team shined. I'd almost believe that I was going to have a garden and a natural walking path to enjoy near these warehouses. So much green in the proposed image that it makes one believe that the JPA is in fact making my life healthier by building high-polluting warehouses near thousands of homes, a large church, and a pre-school (the one omitted in the initial study and draft EIR). But this image is also fictional. What is missing here is the real view of what will happen under this project near the newly opened Barton Road. This road will pass

within 50 feet of homes, a neighborhood that straddles the line between the City of Riverside and unincorporated (for now) County residents. There are a couple of other obvious errors in the proposed graphic: for one there is not that much room to the right of the road in the image. If this were a real image, the photographer would have been taking the picture from the block wall of one of the closest neighbors. And just how close is that building to their homes? The Site Plan in Figure 3-5 states it is 300 feet but there is no way that is true based on the Site Plan map and a measuring tape that shows the road and these proposed smaller warehouses would be closer than that. This image is irresponsible and misleading. Why is the JPA and developer willing to put residents of Riverside and the County at risk in this way? Why would they significantly impact their views and the aesthetics of this land as it stands at the connection of existing and future Barton Road as seen below? Your document claims mitigation to lessen the significance of the impact to aesthetics here but the proposed view in Figure 4.1-4 is a work of fiction.

This project will irreversibly negatively impact residents bordering this land. If built as proposed, the newly opened Barton Road and neighboring warehouses would offer around the clock noise

I-787.7
Cont.

I-787.8

and light pollution to residents in ways that alternate plans would not. Why hasn't the JPA and the applicant proposed any alternate plans that do not include industrial?

View #3, Figure 4.1-5 shows the following existing and proposed views:

I-787.8
Cont.

EXISTING

PROPOSED

I-787.9

The grandeur of the vista from Grove Community Drive is one of the most amazing scenic points in all of Riverside. The sweeping vista of Box Springs and San Bernardino mountains on a clear

day (apparently even a graphic artist can't erase the visible air pollution cause be the dramatic cumulative effects of industrial sprawl) is unparallel in this region. Once again, the proposed image in Figure 4.1-5 is fictional and is not consistent with existing JPA warehouse projects. For starters, the fictional element is that the proposed image does not include the correct number, size, or placement of warehouses proposed in the EIR, and it does not include grade elevations to site the warehouses at a trustworthy height for the public to consider. There are at least five smaller building visible from this viewpoint on the site plan and there isn't nearly enough space in that plan for the type of tree cover and vegetation shown in Figure 4.1-5. That alone makes the proposed image inaccurate and misleading to the public.

About those mature trees and landscaping in Figure 4.1-5, they exist nowhere else in the JPA's territory, so at best you have taken creative license here and at worst you have an intentionally misleading representation of the project for the purposes of persuading the public and the commission that the impacts of developer on aesthetics and scenic vistas surrounding this plan are adequately mitigated and will not adversely harm surrounding residents and their quality of life. Since the West Campus Upper Plateau is a highly prized piece of land to the community, a place of recreation and family and community harmony, why is the JPA and the developer so eager to put warehouses in a place with such significant and calming aesthetics that are found nowhere else in western Riverside County? No number of projected (not actual) jobs can replace the value of this land for residents and visitors to it.

And why should residents believe the JPA when you have never delivered the promises you made to the community in similar EIR documents, project plans, and community outreach meetings for existing warehouse developments? What part of the images provided below demonstrate that the JPA and its developer are trustworthy neighbors, people who will honor their commitment to protect the aesthetics and scenic vistas for the residents of western Riverside County? One only needs to look at past examples to predict what will happen in the future. Where are the mitigations in the images below? Mature trees? Most of these warehouses are 4-6

I-787.9
Cont.

I-787.10

years old. How about the preservation of scenic vistas? Before these warehouses were built, I could see the March ARB runway from the tops of these small hills. Now I am luck to hear the March ARB runway over the persistent logistics noise from the tops of these same small hills.

I-787.10
Cont.

One last comment on Figure 4.1-5, why is it that the existing and proposed images of this viewpoint both have mildly hazy skies? Is this the result of a coastal marine layer/onshore flow? Not that I am a meteorologist, but those clouds look to be cirrostratus, cirrocumulus, or altostratus clouds which are generally mid to high level clouds that occur at altitudes of 20,000 feet and above. So no, it doesn't look like this image has a marine layer in it, rather this is good old southern California smog, the kind of pollutants that are caused in part by the same diesel trucks shown in the images above and that you proposed to amplify in our neighborhood and increase on our freeways. There is no way that this project will not significantly impact the aesthetics and scenic views of this area as proposed today. What will the JPA do to correct the misleading and erroneous renderings of this project? They are highly misleading to the public and do not accurately represent what the JPA and applicant have built for years of land use upscoping the original intentions for this land. You don't get to continue to claim that jobs are the reason the general plan was created while ignoring the other reasons it was created in order to satisfy your greedy and dishonest development practices.

It is worth repeating here, under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-787.10
Cont.

I-787.11

View #4, Figure 4.1-6 shows the following existing and proposed views:

EXISTING

PROPOSED

I-787.12

The first image below shows just how scenic the views are of the West Campus Upper Plateau. From residents' homes, one can see green hillsides, rolling hills, and on clear days like this one, one can see all the way to the Ontario warehouse giga-plex and line of semi-trucks heading north up the Cajon Pass. It is difficult for the public to imagine the proposed image above because it is not something can see today. It is misleading and it does not exist anywhere within the JPA's developments today. The image perspective is that of a person standing in the field looking at the buildings rather than of the neighbors living adjacent to this project. It is misleading because it is

not what people will actually see if the project is built. It is misleading because you do not provide grade elevations for all buildings with the draft EIR and this view specifically will see the most direct impact of the obstructive buildings and semi-truck burdened streets of Barton and Cactus (and I don't just mean the trucks driving past, I mean the ones parked or idling nearby illegally since there is no enforcement plan in place to prevent this from happening).

I-787.12
Cont.

A few other errors in the fictional image include there will not be mature trees surrounding it (there are none surrounding existing JPA warehouses today, see image below for proof), the grade of the pad the buildings are placed on in the image is not what the grade will be for the project, and once again the size, number, and type of buildings in these images is not consistent with the Site Plan in Figure 3-5. How as public representatives can you allow the developer to say that there is a less than significant impact to these scenic vistas? The trees next to the yellow warehouse below are several years old. They don't cover half of the height of that building and there are not enough of them to actually mitigate the impact these warehouses will have on aesthetics and scenic vistas. What would you do to ensure that this project is different and significantly better than ALL of the other JPA projects? Again, why is there no enforcement plan in place for the Joint Powers Commission to hold the developer and occupants of these warehouses accountable for their illegal or disruptive behaviors? How is approving more warehouses protecting and preserving the aesthetics of this land?

I-787.13

I-787.13
Cont.

View #5, Figure 4.1-7 shows the following existing and proposed views:

EXISTING

I-787.14

PROPOSED

In the case of the misleading images in Figure 4.1-7 above, there are no viewpoints anywhere in the JPA controlled and redeveloped land that has an unobstructed view after building industrial on it. This proposed image is dishonest and misleading to the public. While not all from the Upper Plateau area, the following images show just what an intrusion and disruption of scenic views these warehouses are in this area (and real images should be worth more than fake ones).

I-787.14
Cont.

I-787.14
Cont.

Interestingly enough, the scenic vistas and impacts on aesthetics for this plan don't consider all of the scenic views of the Upper Plateau. It might be relevant to consider what nearly five million square feet of industrial buildings and the necessary infrastructure would do to other scenic views of this area and from different viewpoints than were provided in the draft EIR.

The following images show the view from Cactus Ave. heading into the Upper Plateau area.

While not taken under the best lighting conditions, they are good enough to show the scope of the land from a different angle and view. Once again, the images and graphic representation of the proposed development are misleading and irresponsible. Real images, such as the ones here, of this land provide a better representation of this land and its surroundings.

I-787.14
Cont.

As these images show, the elevation gain from Cactus to the top of the Upper Plateau is more significant than the other images or the draft EIR indicate. Because of this significant change in elevation, the developer would need to remove even more of this land to make it so the roads rise at a gentler grade to allow semi-trucks and their cargo easier access to the warehouses. This significant rise in elevation also means these trucks will make more noise accelerating going uphill and braking going downhill. It means removing more dirt in just the construction of the road than is detailed in the draft EIR. It means destroying the mountain bike and hiking trails in the area to accommodate the grade of the extension of Cactus. It means destroying the natural drainages, plant and animal habitats, and the characteristic of this unique piece of land.

It is from this view that the public will notice a significant and unavoidable impact to the aesthetics and scenic vistas of the Upper Plateau. Why has the JPA chosen to over build this area around Cactus and Meridian with warehouses? Why is it insisting on adding nearly five million sq. ft. of additional industrial space here? Does the JPA and the developer view the aesthetic character and value of this land to be purely derived by development codes? Allowable under law? Or does the JPA consider and care about the people who live and drive in this area daily? Do you value the public's interest in this grand landscape as much as you value the profit you and the developer will derive from more industrial development? Please detail for me a non-jobs-based justification for developing on this land and misleading the public as to the impacts it will have on their lives.

Another interesting item to note in these images is the black tire marks on the road. I know you are aware of the significant amount of car and motorcycle racing that takes place in and around these existing warehouses. The evidence of this illegal activity is seen throughout the JPA controlled Meridian Business Center and the connecting roads.

I-787.14
Cont.

I-787.15

I-787.15
Cont.

It is difficult for the public to understand how the 40 hours of patrol time by the Riverside Sheriff’s department paid for by the JPA is preventing this kind of illegal activity, but it seems to be the answer provided by the March JPA whenever a community member asks for help stopping this unaccounted for noise pollution and illegal and damaging activity. So again, I point to the images you provided in the draft EIR and ask why you have purposefully misled the public to believe that your plan will look anything like your graphic designers say it will? As far as I can tell, there is no plan to mitigate the things, such as overnight racing and drifting, that are indirectly caused by the development you proposed. Because your draft EIR is insufficient in the area of public safety and lacks a way to measure and mitigate noise pollution of this type, I request a more thorough review, documentation, discussion, and solution to the problems you are creating with this misleading and erroneous draft EIR.

With one final look at this landscape, in winter before the rains turn the plans green and the mountains white, this view is rare in southern California. It is rare in western Riverside County. It is rare in such an urban area to have so much open space that allows residents to shed some of the stress and anxiety they store up from their daily lives, horrible air quality, and overbearing road and highway traffic (at all times of the day and night). This image is a jewel even in its brown phase. Why does the JPA and the developer want to destroy it? Why is the JPA turning its back on the community it is tasked with serving? And why is the JPA willing to continue to destroy a community that was once strongly centered on March AFB? Does it really come down to “jobs” and “economic growth”? I am having a difficult time believing you right now.

I-787.16

I-787.16
Cont.

Frankly, I am disappointed that none of the alternative plans consider non-industrial uses, and that the images found throughout the draft EIR mislead the public so blatantly. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

I-787.17

The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings which I attended. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. The Project is incompatible with the General Plan, Final Land Use Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporate Riverside County have made one thing clear in response to the specific plan: **no more warehouses**. In every meeting, public engagement, and modification to your site plan you have ignored the community and you did so it seems intentionally. For a year we have asked for alternate plans

I-787.18

that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, the group Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community that have realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with

I-787.18
Cont.

low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.
- *Conclusion:* Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- *Conclusion:* Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an

I-787.18
Cont.

ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area. Why have you ignored the community and relied on them to propose a land use plan for you? What steps will you take to engage the public in these alternate plans? Will you have the courage to preserve this landscape for future generations, saving a tiny part of southern California from the developer's blade and blasting, in the name of health and happiness?

I-787.18
Cont.

While the March ARB General Plan was written more than 20 years ago, and you have publicly stated that it is a guideline rather than a requirement for the JPA to follow it, you owe it to the public the plan was created to help to do something solely in our interest. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. The general plan was the government's best effort to do something positive for Riverside, Moreno Valley, and Perris residents who directly felt the blow of decommissioning the March base. Ask anyone that does not work for you, has the JPA achieved their mission of revitalizing the community surrounding the Base? Has the JPA made Riverside, Moreno Valley, Perris, and the unincorporated County a better place to live and work? Has the JPA improved people's (not you or your contractors) lives? Your misleading economics report fail to tell the real story of destruction and degradation of community the JPA is engaged in today.

I-787.19

I urge the March JPA to reject any specific plan that includes warehouses in any zoning type as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. The March JPA and the applicant have a duty to adhere to the March ARB General Plan and Final Land Use Plan and to follow the vision established in these documents. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations be developed, limiting the negative impacts developing this land will have on the residents who will have to live with this development. Please don't allow one final grand act of poor land use planning be your lasting legacy. You can do better and you have people willing to help you realize a positive path forward for this land. I await your detailed response.

I-787.20

Namaste (catch you later),

Christopher Shearer
Riverside, CA 92508
shearer32@verizon.net

Letter I-787

Christopher Shearer

March 9, 2023

- I-787.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-787.2** This comment summarizes the location of the Project site, as well as notes the comment letter is based on the availability of various publicly accessible documents, including the Draft EIR. This comment is introductory in nature and does not raise issues on the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-787.3** This comment expresses general opposition to the Project. The comment does not raise specific concerns regarding the adequacy of the environmental analysis in the Draft EIR. Specific comments regarding the Draft EIR are provided and responded to below.
- I-787.4** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment also incorrectly suggests that the Draft EIR neglects to identify that the Project site is located approximately a quarter mile from a preschool. As stated in Recirculated Chapter 3, Project Description, Grove Community Church Preschool is located on the Grove Community Church campus, which is approximately one-quarter mile southwest of the Specific Plan Area. The preschool is also discussed in the environmental analysis; for example, in Section 4.1, Aesthetics, the Draft EIR states: “The closest school to the Project site is a preschool, located at the Grove Community Church approximately one-quarter mile southwest of the Project.”
- The comment also raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts, but does not raise specific issues, concerns or questions about these environmental analyses in the Draft EIR.
- This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- I-787.5** This comment is the same as the second and third paragraphs of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-787.6** This comment is the same as the remainder of Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-787.7** This comment suggests Figure 4.1-2, Key Points Viewpoint Map, should include additional information such as contour, landscape changes, and grade elevations of each building and the perimeter of the complex. However, the purpose of Figure 4.1-2 is to provide locational and directional orientation context for the five viewpoint photographs used to illustrate existing conditions and the Project

photosimulations. Contrary to the comment, the elevations provided in Figure 4.1-2 are not for scenic vistas, but rather the elevation at the location where each viewpoint photograph was taken. The Specific Plan Area and the Conservation Easement are shown for informational purposes so that the reader can understand what portion of the Project each viewpoint is capturing. The additional information requested by the comment is detailed in Section 4.1, Aesthetics. The Project site ranges in elevation approximately from 1780 feet above mean sea level (AMSL) at the center of the site to approximately 1640 feet AMSL and 1560 AMSL along the western and eastern portions of the site, respectively. According to conceptual grading plans (Appendix B), after the Specific Plan Area is graded, Campus Development buildings would be built on level sites that with finished floor elevations ranging from 1,702 AMSL to 1,731 AMSL. Therefore, assuming the maximum building height of 50 feet, Campus Development buildings, as a worst-case scenario, would have a maximum building height elevation as high as 1,781 AMSL. Sight line sections were prepared for the Project that show existing and proposed grades at five sections throughout the Project site. These sections were prepared to demonstrate the general scope of grading required for the Project as well as the elevations of the Specific Plan Area as they relate to the Conservation Easement and neighboring off-site residential areas (see Appendix B). Section locations were selected to match the locations of the viewpoints described above to show the topography of the Project at those locations under existing and proposed conditions. Section 4.1, Aesthetics, describes the contour and existing gradient for each viewpoint.

This comment objects to the photosimulations presented in the Draft EIR. To prepare the photosimulations, the five viewpoint photographs were used as a base layer in AutoCAD, and the Project buildout scenario was overlaid, including setbacks, height, materials, color palettes, and landscaping consistent with the plant palette and Design Guidelines in the proposed Specific Plan. For ornamental and screening landscaping within the Specific Plan Area, a 10-year growth factor was applied to each plant species. The photosimulations accounted for the proposed grades within the Campus Development.

With regard to Viewpoint No. 1, the comment includes a picture facing east towards existing industrial development as “what the JPA and the developer have provided on previous similar warehouse projects.” However, the development depicted is on the west side of Brown Street, which is outside the March JPA Planning Area boundaries (see Exhibit 1-2, Cantonment Boundaries, of the March JPA General Plan). Neither March JPA nor Project applicant were involved in the identified development. The Project would be constructed in accordance with the proposed Specific Plan, which includes design guidelines and standards, providing the site planning, landscaping, and architectural theme within the proposed Specific Plan guidelines on architectural design, landscape design, streetscapes, walls and fencing, and signage. The photosimulation included as Figure 4.1-3, Viewpoint No. 1, of the Draft EIR and referenced in the comment utilized a maximum building height of 50 feet as well as an earlier version of the Specific Plan Area site plan where four larger business park buildings would be constructed instead of seven smaller business park buildings. Figure 4.1-3 has been revised in the Final EIR to reflect a 45-foot building height and the construction of smaller-scale buildings under the Project buildout scenario.

The comment further suggests Viewpoint No. 2 is misleading based on the existing location of Barton Street. As part of the Project construction, Barton Street would be extended to connect with the existing City of Riverside street network to the north and south of the Specific Plan boundary. Barton Street would be realigned to be a 66-foot Collector design classification pursuant to the City of Riverside General Plan Circulation Element, consisting of a 66-foot wide right of way with 40 feet of curb-to-curb

pavement width providing for a single 13.5-foot travel lane, a 1-foot striped median, and a 6-foot bicycle lane in each direction. A 6-foot curb adjacent sidewalk will be provided on each side of the street. In addition, a 17-foot wide LLMD easement will exist along the west side of the roadway, providing for a 10-foot-wide multi-purpose trail, as well as a 5-foot landscape buffer that will be associated with a 7-foot-wide landscape buffer and drainage swale located within the street right-of-way. Figure 4-8 of the proposed Specific Plan details the Barton Street Streetscape and Figure 4-7 details the Barton Street Plant Palette. As shown in Figure 3-5, Site Plan, of Recirculated Chapter 3, Project Description, there would be 300' of buffer between the northernmost Mixed Use parcel and residential uses.

The comment raises concerns regarding the implementation and enforcement of mitigation for the Project. The proposed Project would be built in accordance with the design standards outlined in the proposed Specific Plan and compliance would be ensured through the plan check and permitting process. Please see Topical Response 9 – Long-Term Project Implementation and Enforcement for further discussion regarding enforcement of mitigation measures.

I-787.8 This comment states the Project and the Barton Street extension would result in adverse impacts related to noise and light pollution “around the clock.” The Draft EIR analyzes the Project’s effect on lighting in Section 4.1, Aesthetics, and determined less than significant impacts with mitigation incorporated. Similarly, the Draft EIR analyzed the Project’s noise effects within Section 4.11, Noise. PDF-NOI-1 ensures construction activities would cease from 7:00 p.m. to 7:00 a.m. the following day, with shorter hours within 500 feet of a residential area. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. During operations, the impact analysis determined operational noise would be less than significant at the nearest noise-sensitive receptor. No mitigation is required. Regarding Barton Street, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue.

The comment also raises concerns regarding alternatives to the Project. See Topical Response 8 – Alternatives, for more discussion, including a no-warehouse alternative as suggested by the comment.

I-787.9 This comment asserts Viewpoint No. 3 provided in the Draft EIR from Grove Community Drive, as shown in Figure 4.1-5 is inadequate and that the image is not consistent with existing projects nearby. See Response I-787.7 above and Topical Response 1 – Aesthetics for discussion on the visual simulations. Section 4.5.5 Landscape Design Guidelines, of the Specific Plan and Section 9.17.040(D) require 40 feet on center tree spacing, a minimum size of 24-inch box trees in public ROW, and on-site landscape trees shall be a minimum of 60% 24-inch box trees and 40% 15-gallon trees. Finally, on-site trees shall be a minimum of 80% evergreen, and no more than 20% deciduous. For ornamental and screening landscaping within the Specific Plan Area, the photosimulation applied a 10-year growth factor to each plant species, which is standard practice given the long term nature of development. The comment also raises concern for air pollution from the cumulative projects in the region. Recirculated Section 4.2, Air Quality, analyzed cumulative effects and determined impacts would be cumulatively considerable and significant due to the Project’s contribution and exceedance in regional VOC, NO_x, CO, PM₁₀, and PM_{2.5} emissions during operations. No changes or revisions to the Draft EIR are required in response to this comment. Lastly, the comment questions the Project’s employment generation. See Topical Response 5 – Jobs, for more discussion.

- I-787.10** This comment expresses opposition to past projects within the Project site's vicinity and opposition to the proposed Project. The comment raises concerns for impacts to aesthetics and air pollution. The comment asserts the visual simulations are inadequate. See Responses I-787.7 and I-787.9 above for more discussion. Please see Recirculated Section 4.2, Air Quality, for further discussion regarding air pollution.
- I-787.11** This comment references Planning Process C1F of the Final Reuse Plan and questions public engagement. March JPA used Planning Process C1F to develop the Preferred Land Use Plan outlined in the Final Reuse Plan. The March JPA General Plan was then developed based on that Preferred Land Use Plan. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. Additionally, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- I-787.12** This comment raises concerns about the public vantage points used in the viewpoints, specifically in Figure 4.1-6. As shown in Figure 4.1-2, Key Points Viewpoint Map, the five viewpoints used by the Draft EIR were taken from public spaces but also provide representative views likely to be experienced by residents. The comment alleges the photosimulations are misleading. See Response I-787.7 and Topical Response 1 – Aesthetics for discussion on the visual simulations.

The comment raises concerns for truck parking and idling along Barton Street and Cactus Avenue. Regarding Barton Street, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. The comment asserts there would be no enforcement. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid for through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. See also Recirculated Section 4.2, Air Quality, for further discussion regarding air quality and mitigation measures, including idling restrictions.

I-787.13 This comment raises concerns for the visual simulations in the Draft EIR, in particular the representation of mature trees as compared to other projects under existing conditions. The comment provides a photo of an existing industrial development. However, the development depicted is on the west side of Brown Street, which is outside the March JPA Planning Area boundaries (see Exhibit 1-2, Cantonment Boundaries, of the March JPA General Plan). Neither March JPA nor Project applicant were involved in the identified development. The Project would be constructed in accordance with the proposed Specific Plan, which includes design guidelines and standards, providing the site planning, landscaping, and architectural theme within the proposed Specific Plan and guidelines on architectural design, landscape design, streetscapes, walls and fencing, and signage.

The comment raises concerns regarding the implementation and enforcement of mitigation for the Project. The proposed Project would be built in accordance with the design standards outlined in the proposed Specific Plan and compliance would be ensured through the plan check and permitting process. Please see Topical Response 9 – Long-Term Project Implementation and Enforcement for further discussion regarding enforcement of mitigation measures.

I-787.14 This comment questions the visual simulations in Figure 4.1-7 and states there will be no viewpoint without warehouses. The Draft EIR identified project design features and March JPA Development Code provisions that would ensure compliance with applicable regulations. See Response I-787.7 above and Topical Response 1 – Aesthetics for further discussion on the visual simulations, an explanation of the Project’s aesthetic impacts, and March JPA’s application of the thresholds of significance. The commenter also stated that there will be a significant and unavoidable impact to aesthetics from Cactus/Meridian Parkway. This is not a recognized viewpoint or scenic view within the General Plan, and as such impacts from this viewpoint were not evaluated.

With regard to grading, pursuant to the proposed Specific Plan, a conceptual grading design will be required for each Tentative Map application consistent with the March JPA Development Code, and grading designs will implement the goals and policies of the March JPA General Plan. Grading in the Specific Plan Area will balance, meaning no import or export of soils. Figure 6-9, *Conceptual Grading Exhibit*, in the proposed Specific Plan shows the proposed grading for each individual parcel in the Specific Plan area. Among other requirements, the Grading Plan Development Standards in the proposed Specific Plan require the overall shape, height, and gradient of any cut and fill slope to be designed to be consistent with the existing natural contours and scale of the natural terrain to the extent feasible. As set forth in Section 4.6, Geology and Soils, of the Draft EIR, the Project would incorporate MM-GEO-1, which requires all grading to be performed in accordance with the grading guidelines outlined in the March JPA Development Code and the proposed Specific Plan, among other measures.

The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with

active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.

With respect to noise impacts, as disclosed in Section 4.11, Noise, of the Draft EIR, the Project would not generate substantial temporary or permanent increases in ambient noise levels, with the exception of traffic noise level increases along a non-sensitive roadway segment: Cactus Avenue east of Meridian Parkway (Segment #13). Segment 13, which passes through industrial development and is a non-sensitive receiving land use, meaning that there are no nearby sensitive receptors, including residential uses. As such, this impact, while significant and unavoidable, would not impact any residential or other sensitive uses in the vicinity of the Project. All Project noise impacts to residential uses would be less than significant.

- I-787.15** This comment raises concern for street racing within the Project site's vicinity and asserts existing police protection services would be indirectly impacted due to the proposed Project. The comment's assertion is speculative. Under existing conditions, the isolation and sparse development surrounding the Cactus Avenue cul-de-sac can be attractive to individuals wishing to engage in such activities. Under the proposed Project, this cul-de-sac would be eliminated, and Cactus Avenue would extend to the Project site. Project traffic would significantly reduce the times when that area is isolated, thereby relieving pressure on local law enforcement. Impacts to public services, including police protection, were analyzed in the Draft EIR under Section 4.13, Public Services. The Project is not anticipated to adversely affect service ratios or response times for police services, through payment of required Development Impact Fees, such that new or expanded police facilities would be required. Therefore, the Draft EIR determined the Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered police protection facilities, or the need for new or physically altered police protection facilities; impacts would be less than significant, and no mitigation is required. Similarly, the comment's assertion on street racing-related noise is speculative. No changes or additions to the Project description or analyses included in the Draft EIR are required.
- I-787.16** This comment expresses general opposition to the proposed Project and concern regarding the existing open space that benefits residents in the area. The Project consists of two components: the Specific Plan Area and the Conservation Easement. The approximately 370-acre Specific Plan Area includes the remnants of the March AFB Weapons Storage Area which has consistently been fenced off to prevent public access. The remainder of the Project site will be preserved in the approximately 445-acre Conservation Easement, which includes undisturbed land and trails the public has accessed for passive recreation purposes. As detailed throughout the Draft EIR, there is no development proposed within the Conservation Easement and no physical alteration is anticipated, and the Conservation Easement would provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.
- I-787.17** This comment claims the Project site was never intended to be an industrial zone and references the Final Reuse Plan. As discussed in Recirculated Section 4.10, Land Use and Planning, the March JPA General Plan implements the Final Reuse Plan and designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in

Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. The Conservation Easement would provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. Please see Recirculated Section 4.10, Land Use and Planning, and Topical Response 4 – Project Consistency, regarding consistency with the March JPA General Plan goals and policies and the Good Neighbor Guidelines for the City of Riverside and County of Riverside. As discussed in Recirculated Section 4.10, Land Use and Planning, the purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City’s Guidelines, demonstrating consistency provides additional support for the Project’s compatibility with surrounding land uses.

The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use. The Project is compatible with the surrounding land uses. The comment further requests an alternative based on community feedback. See Topical Response 8 – Alternatives, for more discussion, including a no-warehouse alternative.

- I-787.18** This comment is Form Letter H, Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.
- I-787.19** The comment further asserts the Project is not consistent with the March JPA General Plan. Please see Recirculated Section 4.10, Land Use and Planning, for more discussion on the Project’s consistency with the relevant goals and policies of the General Plan.
- I-787.20** The comment expresses general opposition to the proposed Project and any warehouse use within the Specific Plan Area. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis within the Draft EIR, no further response is provided. Specific comments regarding the Draft EIR are addressed above.

INTENTIONALLY LEFT BLANK

Subject: Public Comment: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304
Attachments: PublicCommentWestCampusUP-draftEIR-S1.pdf

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (JPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. Please find the attached letter. I look forward to your thoughts and discussing them with you further, and I appreciate your consideration and time during this process.

I-788.1

Please reply to confirm receipt of this public comment.

Sincerely,

Jerry Shearer
Riverside 92508

8 March 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Attention Mr. Fairbanks:

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority, assumed March 11, 1997
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

For the purposes of this comment letter, I will refer to the March Joint Power Authority (JPA) which includes the Commission members, the developer that is understood to be LNR Riverside, LLC, Meridian Park West, LLC, the Lewis Group of Companies (partners and subsidiaries), and member entities the cities of Riverside, Moreno Valley, and Perris, and the County of Riverside.

The West Campus Upper Plateau is a unique piece of land. It is an extension of the Sycamore Canyon Park natural area geographically, historically, culturally, environmentally, and

I-788.2

recreationally. There is no other place like it in western Riverside County. Any development of this land should complement the unique characteristics and value (human value, not just economic value) of this land not destroy it. As much as the applicant via this draft EIR tries, this industrial development plan and land use zoning do not preserve the landscape even with the inclusion of the 2012 agreement that sets aside open space and a conservation easement. Viewing this land from a settlement map or a parking lot don't begin to do adequate justice to its human value. The public wants to understand your thoughts on taking this special piece of land away from residents of western Riverside County and turning it over for private development. The establishment of the 2012 settlement does not adequately reflect how people value and enjoy this land currently. This warehouse project is not like other warehouse projects and it will have a significant negative impact on the community it borders regardless of the developer's mitigation efforts and claims.

There are many clear and obvious errors, omissions, misrepresentations, and discrepancies in the draft EIR. I write this letter to call attention to as many of them as I can, especially those that to me, my family, and my community are the most egregious. My concerns focus on the following areas and items of the draft EIR:

1. A clear disregard for the 2012 and 2003 settlements, and the destruction of a unique natural habitat and ecosystem in western Riverside County.
2. The lack of authentic community engagement and involvement when making decisions that impact people's lives, and the lack of enforcement mechanisms or policies in place for existing and future warehouses within the JPA jurisdiction.
3. The continued privatization of public lands surrounding March ARB and throughout southern California.
4. The omission of non-industrial alternative plans in spite of public demands.
5. Misleading and inconsistent baseline information used to develop this plan.

The Settlements: Center for Biological Diversity (2012) and CCAEJ (2003)

The damage and disturbance to this unique piece of land is unquestionable. The draft EIR admits as much throughout the impacts and mitigations described in several locations of the draft EIR. The climate and extreme weather events of the past few years, from severe drought in California to unprecedented rain and snowfall in early 2023, the fact that our climate and weather patterns are changing is unquestionable. Anyone paying attention can hear the environmental alarm bells ringing, warning us of changes to our lives that we may not be prepared to handle, and that we may well be contributing to on a daily basis with our life choices. It is not my intention to argue climate change related to the West Campus, Upper Plateau project, but it is my intention to question why the JPA and developer feel it is imperative to eliminate more open space and natural landscapes in the name of greed and predatory capitalist practices. Where in the March ARB General Plan are you tasked with harming people who rely on the land around them? Where does it instruct you, the commission, or the developer to ignore the value and aesthetics of

I-788.2
Cont.

I-788.3

open-space for the sake of open-space? And more importantly, how does this specific plan begin to comply with California’s push to net zero emissions standards?

↑ I-788.3
| Cont.

To this end, there are two settlement agreements in place within the JPA and they affect any plans put forward and then developed by the JPA and developer including the West Campus Upper Plateau. The **September 2012 agreement** with the Center for Biological Diversity and San Bernardino Valley Audubon Society (S.D. Cal No. 09-cv-1864-JAH-POR) provides for a conservation easement or water quality open space area to be managed as a wildlife habitat for sensitive species and riparian areas. The purpose of this settlement is to preserve this land for light recreation use, for archaeological and historic purposes, and for the safeguarding and conservation of native plants, animals, and topography. Aside from providing the 2012 settlement as Appendix S, can you explain to the community how the JPA is adhering to the scope of this agreement with this plan?

According to Tables 1-2 and 1-3 of the draft EIR, some of these areas will see “significant and unavoidable” impact due to this project. These items include air quality, cultural resources, noise, and tribal cultural resources. In each instance, these unavoidable items are in conflict with the 2012 Settlement Agreement.

There seems to be many inconsistencies especially in area of preservation of habitat under the 2012 agreement. The first environmental alarm bell centers around a blatant disregard for the preservation of species on this land. For example, the culverts (see the 2012 Slope Maintenance Exhibits) under Cactus are insufficient and will not accommodate all animals in their migration between Sycamore Canyon north and south areas. Similar wildlife corridors along the 101 freeway in California, Wallis Annenberg wildlife crossing, the Irvine-Laguna Wildlife Corridor and Greenbelt, the I-15 wildlife crossing in Temecula, and the I-10 wildlife crossing connecting the San Bernardino and San Jacinto wildernesses are (a) more numerous giving wildlife options for crossing at different locations, proposing two culverts is negligent wildlife and conservation planning on your part, and (b) larger or wider allowing for small and medium sized animals to move freely without feeling confined or forced into an uncomfortable setting that may restrict their movement and condense the gene pool of many threatened species. These successful corridors improve bio- and genetic diversity which will help ensure a healthy riparian habitat in the Upper Plateau. Granted these examples include must larger roadways, but the idea remains the same especially considering a large number of vehicles traveling on Cactus, Alessandro, and other roads surrounding the Upper Plateau will be semi-trucks that are unable to stop quickly and will undoubtedly cause an increase in deaths of small animals and reptiles living in and visiting this environment.

I-788.4

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

↓ I-788.5

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. The applicant should disregard any of the wildlife studies over a year old. My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.
3. The applicant should consistently account for species and their vulnerability throughout the document. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
4. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence.
5. The draft EIR omits a thorough study of reptiles, specifically the study needs to evaluate the impact of construction on migration of snakes, brumation, species variety and reproduction, and prey habits. There is a rich community of reptiles on this land and the draft EIR negligently ignores them and their benefit to the landscape, environment, and local community.
6. The draft EIR does not account for migratory birds sufficiently. At different times of the year, residents and visitors can view geese, ducks, egrets, eagles, vultures, and a host of songbirds as they use the Upper Plateau to migrate from one place to the next. Why does the study of birds not include the migratory nature of birds making use of this land?
7. The draft EIR does not account for migratory butterflies, cicadas, and tarantulas, among other insects. Some of these insects are beneficial to our community from an aesthetics point of view and some of them simply kill other invasive pests. Why were these items omitted from the draft EIR? Along with the migratory and beneficial insects, the construction process will drive many of the less than desirable insects already in the open space into people's homes. Ants and mosquitoes (some carrying West Nile Virus) will be driven from their homes and into closer contact with people. Why does the draft EIR not include mitigations for residents impacted by this invasion? This is not imaginary, and happened to my house when you last built warehouses so close to people's homes. What responsibility does the JPA take for increasing my pest control bill?

The public cannot trust that we are not destroying rare animal, bird, and plant life unless a more thorough survey is conducted, one that is done over a more representative timeframe that includes the local variations in seasonal temperatures, migration, and rainfall. I request the

I-788.5
Cont.

developer and its consultants produce a more complete survey of the life forms that call this land home at one time or another. I also request they JPA, the developer, and its consultants survey local residents to assess the value of uninterrupted open space, not the kind provided for in the 2012 Center for Biological Diversity settlement (which is open space in name only), but the type of open space that allows animals to move freely throughout a landscape without the disruptions of traffic, light, noise, and water pollution associated with industrial development.

I-788.5
Cont.

Under the Terms of the 2012 settlement agreement, item B Defendant-Intervenors’ Obligations, subitem 1a on page 4, the agreement establishes, “That any currently existing service roads within the Conservation Areas...can continued to be utilized by the public for passive recreation.” Subitem 1b on page 4 refines this to say that public access these roads can be restricted if the land management agency deems the access a threat to “conservation value or public safety.” Yet Figures 3-2, 3-3, 3-4, and 3-5 (Site Plan) clearly show a plan that will infringe on and limit public access to existing trails and roadways in the Upper Plateau area. You are in all likelihood aware of this requirement and believe that your plan adequately complies with the terms of the settlement agreement, but I fail to understand how. The construction of Cactus alone will destroy several hiking and biking trails in the area frequently used by the public for active and passive recreation. The large-scale demolition needed to level grades associated with roadways and building foundations will clearly impair access to these trails and roads and may eliminate some of them entirely. I like walking in this area, hiking into places that make me feel like I am somewhere outside of civilization. These trails that I and many residents enjoy hiking on will be destroyed by the construction. How is this not in violation of the 2012 agreement that quite clearly calls for maintaining existing roads and trails? I hope subitems 2 and 3a are not the answer to my questions here as they seem subjectively contrary to the idea of conservation and to the items identified in 1a and 1b.

I-788.6

I also question the status of subitem 7. What has LNR Riverside, or the applicant, done to establish and fund this endowment to date? Please provide establishment dates, payment dates and amounts, corresponding permit dates, and progress toward the \$2 million funding level projected for April 1, 2027. Since the signing of this agreement, depending on your sources, inflation has risen 22%-30%. The funding obligation may have been fair in 2012, but today the number is about 25% behind. Is there precedent and a need to increase the funding level to align with the construction value and time period? What role does the JPA and commission have in requiring a fair financial settlement from the applicant who has waited to develop this land more than 10 years? Also, please indicate if the applicant has missed deadlines for funding or permits, what accountability exist for their actions, and what would happen if the applicant defaults on this obligation. What would need to happen for all parties regarding this settlement to allow for the BRAC-Park alternate plan I have identified below? Lastly, what happens to this agreement once the JPA sunsets at the end of June 2025? The nature of this question isn’t who takes over the land management function, it is more what legal obligation will exist when the applicant is not longer tied to the March JPA? Does the developer’s DDA transfer along with its entitlements to the County or the MSHCP to ensure conservation is the primary focus of this set aside land?

I-788.7

I-788.8

I-788.9

The **August 2003 agreement** with Center for Community Action and Environmental Justice places conditions for further development of the March Business Center. The conditions include a reduction of semi-truck emissions (which frankly are outdated by today’s air quality standards), increased use of bio-diesel and alternate clean burning fuels (with the advances in EVs, there has to be some application here), improve landscaping and scenic vistas from the Orangecrest neighborhood, amend land uses for lots 16-18 and 54-56 to exclude logistics warehouses, limit semi-trucks on Van Buren Blvd (which certainly did not happen), and provide public amenities that include community, regional, and open space parks, and police and fire sub-stations. How is the proposed project complying with the requirements of the 2003 settlement? Specifically, how does this plan account for the amended land uses on lots that exclude logistics warehouses?

I-788.10

According to Tables 1-2 and 1-3 of the draft EIR, some of the requirements in this settlement will see “significant and unavoidable” impact or were completely ignored by the EIR. The decision to leave this agreement out of the draft EIR is concerning. Can you explain to me and the community how the JPA is adhering to the scope of this agreement with this plan? There seems to be many inconsistencies especially in area of supporting the lives of residents of Riverside in the 2003 agreement.

The first area I have serious concerns about is the traffic section of the document. The traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. Since the 2003 settlement agreement specifies that you work to reduce traffic on these streets, and you have not included this settlement in the draft EIR, it is clear that you do not intent to adhere to the settlement requirements and guidelines. How do you justify not considering the main truck traffic routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Why don’t you consider the cumulative impacts for traffic within a five-mile radius of this project? Ignoring it is irresponsible.

I-788.11

I-788.12

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives or travels in this region knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I-788.13

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, at 4:00 AM on 2/2/23 a semi-truck overturned carrying a heavy shipping container and blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This driver knew he was driving down a road that prohibited the type of truck he was driving but he did it anyway because he was trying to find the quickest route to his destination. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. This fact is also in violation of the 2003 settlement agreement and is difficult to monitor by law enforcement. Your plan does not account for the 2003 settlement and does not help mitigate this kind of problem on the streets surrounding the Upper Plateau.

I-788.13
Cont.

Your plan also does not account for the noise pollution associate with idling semi-trucks. While not explicitly part of traffic patterns or congestion, it is part of vehicles moving to and from the warehouses. Many of these trucks sit idling for 20 or more minutes and according to you that is illegal. Yet there are virtually no enforcement mechanisms in place to prevent them from doing this, and there certainly is no acknowledgement of this problem in the draft EIR. You and I have traded many emails, phone calls, and in-person conversations about this problem yet there is no solution. I bring this up now because it also seems like a violation of the 2003 settlement agreement in the areas of reducing truck emissions and reducing truck traffic on our streets.

I-788.14

Why was it not considered as part of your plan? What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area.

I-788.15
I-788.16

Community Engagement: Decision Making and Enforcement of Policy

Building on this idea that the plan is inconsistent or insufficient with the two agreements that pertain to any development plans by the March JPA, residents believe that the JPA is working for the builder rather than the residents of western Riverside County. How can you claim otherwise when you advocate for their business and allow them to propose development plans that do not support your main goals in the General Plan? This development project poses many

I-788.17

concerns for local residents, the people of the Cities of Riverside, Moreno Valley, and Perris, and western Riverside County including air and water pollution, increased crime and traffic, an increase of homeless and vagrant camps as seen near many of the warehouses along the 215 corridor and on existing March JPA developed land, a loss of aesthetics and scenic vistas for this natural area, it detracts from or limits economic opportunity for home owners and places undue financial burden on them to repair construction caused damage to their homes and exposure for people and appliances like HVAC and pool filtration systems to higher levels of “significant and unavoidable” pollution (p.1-81), a lower quality of life for humans and non-humans alike, and a significant burden on and health risk for residents.

I-788.17
Cont.

Of the approximately 817.9-acre area, your plan calls for 250.85 acres for Mixed Use, Business Park and Industrial (143.31 acres) development, 523.43 acres designated as Park, Open Space, and Open Space Conservation (445.43 acres), and 40.75 acres for roadways and public facilities. After reviewing the draft Environmental Impact Report dated January 9, 2023 in some detail, you have clearly demonstrated how this project benefits the public. Your claim that this is bringing jobs and industry for people that live near this space is complete nonsense (see comments below) and I believe you know it. I have some serious concerns about your draft EIR and what looks like (at least per your working and reworking of the CEQA process) the JPA intentionally acquiescing to the developer on all ideas and decisions related to the former redevelopment March AFB lands. Why aren't your mitigation efforts supported by evidence?

I-788.18

For one, the JPA has never genuinely engaged the effected communities (of which I am a member and I currently deal with the daily adverse effects of your advocacy for unrestrained logistics sprawl). For proof one only needs to look at the ongoing fiasco of your plans with the area around the Air Force Village West. Warehouses right next to a retirement village, one that houses veterans? Who thinks this is a good idea? How does the JPA defend such decisions if not that you are allowing the developer (might I remind you the applicant is ONLY concerned with profit margin and to think otherwise is purposeful nativity) to do as they please, unchecked. As it relates to the West Campus Upper Plateau, the draft EIR refers to “A public scoping period was held to solicit input on the scope of the analysis for the EIR between November 19 and December 20, 2021. Additionally, an open house scoping meeting was held by March JPA on December 8, 2021. The purpose of this meeting was to seek input from public agencies and the general public regarding the potential environmental impacts of the proposed Project” (p.1-13). As someone living on the perimeter of this proposed project and will be directly impacted by your construction insensitive construction plan for more than four years, where was my invitation to participate in this meeting? Where were invitations to any of the more than 1,000 homes in the area? In fact, where was my invitation to attend planning and community meetings for any of the warehouses that impede my views, give off excessive light and noise pollution, and are the cause of an increase in migraines for both me and my son?

I-788.19

These warehouses did not exist when I bought my home and they were not planned, the JPA maneuvered around the community and revised land use plans to build warehouses against the

I-788.20

wishes or sometimes knowledge of the community. In fact, these changes to your General Plan Land Use Plan have gotten so far out of hand that the 5-10% of space set aside for industrial and warehouses has grown exponentially (I do not know the figure but believe it is more than 50%). Had anyone who bought these homes, anyone who paid a premium to have a home that bordered such a grand open space and natural area known that within five years we would be rewarded with views of warehouses and the sound and smell of illegally idling semi-trucks, I am sure that most people, me included, would not have bought a home here. The lack of genuine engagement implies you purposefully neglected to inform residents (and municipalities) of your plans. It also implies that you are likely flying by the seat of your pants and proposing land use zoning based on whatever the developer tells you is in demand at the time. The nature of their non-competitive contract with you is shameful, one that I view as criminal but also one that I rarely see in government work where contracts must be awarded to the business with the lowest price for the best value to the government. How is this any different? Why does the public, whose land this is/was, have to pay and settle for whatever a sole source bidder wants to build? This is a disturbing pattern for your para-private-government operation. The practice of conducting business in private that directly impacts the public is unethical, unfair, and seemingly is a violation of the public's trust (if not a misuse of tax dollars). Please explain to me how the Air Force, the State of California, and the US Government allows the JPA to negatively harm the public in this way.

I-788.20
Cont.

Per the JPA's website, on February 24, 2022 you hosted a public Q&A forum online, virtually via Zoom where you did not permit people to speak with you instead forcing people to comment or ask questions via the website's chat. You did not monitor that chat appropriately or professionally, ignored comments and questions at your discretion (much like you did when you failed to protect the health of residents by choosing to site warehouses within 200 feet of people's homes in Riverside along Barton Road), and you allowed a member of your commission to berate residents (also a disturbing pattern for this commissioner as he professed to represent the JPA and the USAF) who questioned or expressed frustration with your plans. If you would have listened to this first public discussion of your plan one year ago, you would have heard a common and consistent message: no more warehouses. **No more warehouses!**

I-788.21

Again, per the JPA's website, on August 18, 2022 you hosted a presentation of the proposed plan at an open house at the March Air Museum. This event was open to the public and the public believed we were going to be able to discuss the plans with you, provide meaningful feedback on the plans, and work together to meet the goals of the JPA's mission and the needs of the community that surrounds this land. Wrong again. The event turned into a show by the JPA and developer and became quite heated. Again, one of your commissioners, who said publicly that he was there to learn more about the project, stood with you and the builder as he argued with residents for more than an hour. How is this type of engagement productive or genuine? If you, and I know because I listened to you intentionally mislead residents at your station that night, had listened to residents at this second gathering five months ago, you would have heard that same common and consistent message: no more warehouses. **No more warehouses!**

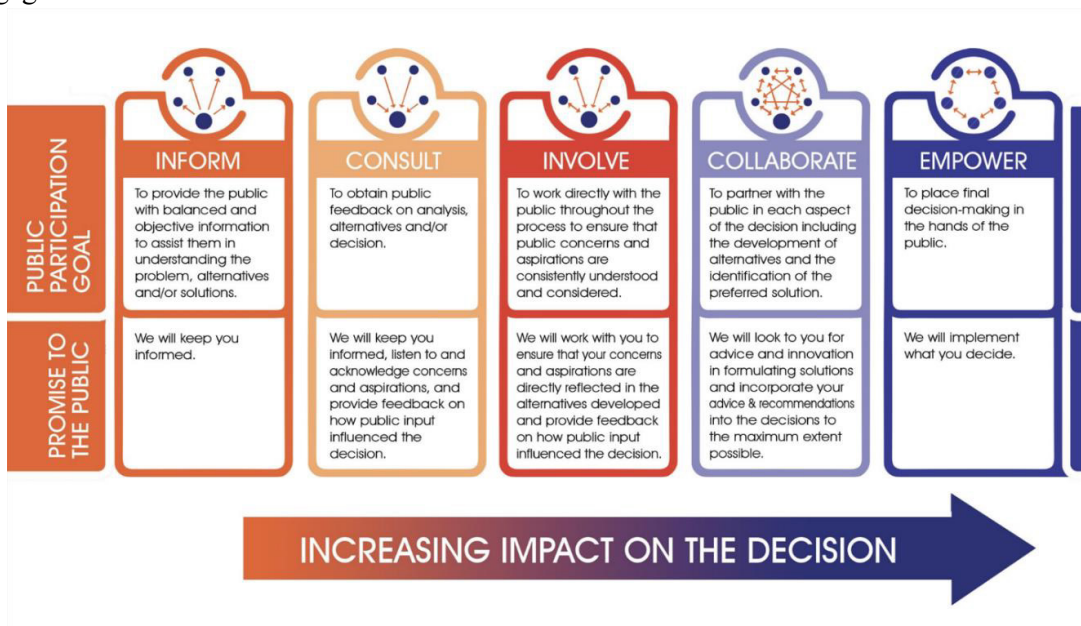

At a public meeting on January 11, 2023 held at the Moreno Valley Conference Center, 40 residents spoke against this project. Directing their words to the commission, they spoke honestly, emotionally, and factually about their continued desire to have a plan that excluded industrial and logistics sprawl. No more warehouses they demanded. I spoke that night and questioned the JPA’s insistence on providing development and land use plans that included solely industrial and logistics. I asked why no alternate plan was offered. I also asked for the convening of a Public Advisory Board to the JPA much like the TAC severs today. Since that time, our requests have been “heard” by the JPA but no action has been taken. How is this genuine public engagement? Where in this story so far have the voices of the public been acted upon? They have not. **No more warehouses!**

I-788.21
Cont.

In a final show of public engagement, the developer hosted another public showing of the project and their plans to develop the Upper Plateau. This meeting was held again at the March Air Museum on February 9, 2023 and involved nothing more than a live reading of the project. The applicant did its best to justify the warehouses but few from the public attended. I was one who did and found the meeting insulting and less than authentic. It is quite clear to someone who has attended as many of these meetings in person as possible, the JPA and developer have no interest in considering alternate land use plans, nor have you ever considered them in the past, and this meeting was more box checking to say that you gave the public time to share their thoughts. This again was an act, a misrepresentation of what it means to engage the public, and I believe it was done with the intention of misleading the public to view the project and applicant positively.

The image below comes from the Environmental Protection Agency. It describes what public engagement looks like at the federal level.

I-788.22

The JPA has clearly kept the public in the inform category despite the many public meetings that you claim you have held over the last year. You have never ventured beyond informing the public of your plans and have never empowered people to help make decisions about their lives. You, someone who does not live here, unilaterally make decisions for me. How is this just, legal, reasonable? Do you even understand what I am saying? I think you do and have chosen to ignore me hoping to see this through without consequence to you personally.

I-788.23
Cont.

On a more personal note, I live within 800 feet of several of your warehouses today. I have contacted the JPA and your office many times to request help with bad warehouse tenants and illegal public activity within your jurisdiction.

1. On January 22, 2023, I submitted a public request form asking the JPA for all correspondence in support of the West Campus Upper Plateau project. After two extensions to the time for response from Ms. Carmago and Mr. Fairbanks, I still have no answers other than a phone call that says the JPA likely has no such correspondence.
2. On January 30, 2023, I emailed the March JPA and Commission with a complaint about the warehouses near my home. I detailed the air, light, and noise pollution caused by these warehouses and asked you what from my experiences give me confidence that the proposed Upper Plateau development would be any different than what currently exists under the JPA’s management today. I also asked what accountability exists for the lack of mitigations to these problems. After several emails with the JPA, I am still left wonder what is being done as I observe these problems continuing even today. Regarding these exchanges, how and where they the JPA be monitoring the noise from in relation to the existing warehouses, and how will these enforcements be applied to future developments like the mega-warehouses at Upper Plateau? How can residents access the data that the JPA will collect to confirm that the noise, light, and air pollution being monitored is represented accurately? This applies to existing and future warehouse developments. And What noise levels are considered unacceptable by JPA ordinance? How do these levels impact residents and wildlife? And what enforcement exists today and in the future to prevent significant noise, air, and light pollution generated by the JPA’s warehouses?
3. The week of January 9, 2023, I visited the JPA’s offices to discuss my concerns and report idling semi-trucks. My concerns were addressed with the promise to speak with the tenants of the warehouses near my home and to conduct some noise level measurements. And you agreed to speak with the Riverside Sheriff’s Department about ticketing idling or illegally parked semi-trucks. These promises are a step in the right direction but offer no accountability or proof they are occurring. Because the JPA’s word hold very little value with me right now, I am not included to believe this engagement is genuine. How under the draft EIR for the Upper Plateau, and with the JPA sunseting in 2025, would the public enforce clearly illegal activity and major disruptions to our lives today and in the future? The draft EIR offers no plan, nor have I experienced such accountability from the March JPA over the past five years.
4. On September 18, 2022, I emailed the March JPA and commission to ask for help with a pack of migratory coyotes who had taken up residence in my front yard and along the

I-788.24

fence of my back yard. These animals, like many others, are being pushed out of their territory by development and increased human activities within the JPA management lands. While I live in the City of Riverside, these animals don't but did visit and cause a problem related to safety for residents of the City. Again, the lack of accountability, changes to the climate and the coyotes' homes, and a lack of empathy for residents is the clear signal from the March JPA in your response.

I-788.24
Cont.

As I have demonstrated, it is misleading and disingenuous to say that the March JPA has authentically engaged with the public during this process. I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative development plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

I-788.25

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes (including mine) and that residents have submitted thousands of signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-788.26

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Also, how does this plan align with this goal and the subsequent 2003 and 2012 settlement agreements that require more of the same from the JPA?

I-788.27
I-788.28

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of

I-788.29

your plan? To date, the only comments we have been given is that a few members helped the developer reconsider siting of a road or placement of smaller industrial buildings deceptively identified as mixed use or business.

I-788.29
Cont.

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein; b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space; d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.”

I-788.30

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. Why has the JPA kept the public in the

I-788.31

“Inform” and “Consult” stages of the EPA’s decision-making continuum? And how do all of these examples constitute authentic public engagement?

Land Use Decisions: Privatizing Public Lands

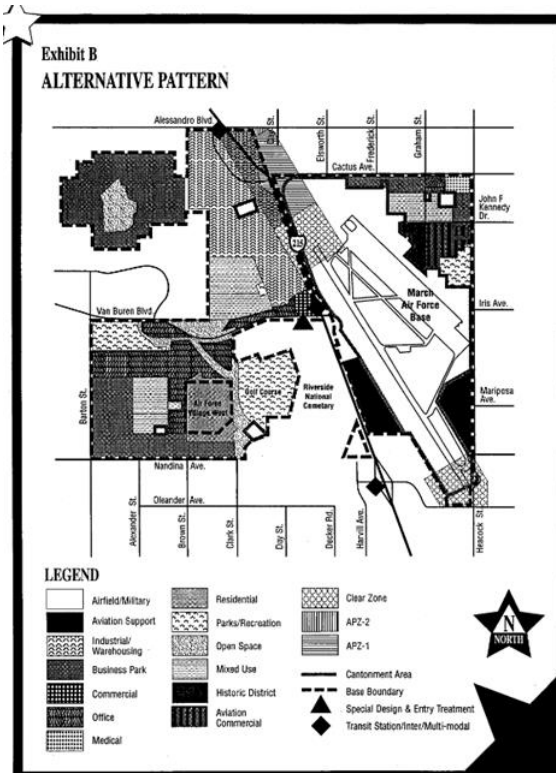

It seems almost that as soon as the March ARB General Plan was released, the JPA and developer began to ignore it, began to upscope and maximize profits from this land, and began to ignore and disregard the public interest in the repurposing of this land. In the initial planning process, the March ARB Final Reuse Plan, 1996 describes how the community was included in the planning of land-uses.

“With the formulation of the Land Use Plan, the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v).

As part of the Base Realignment and Closing (BRAC) process four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B (shown below) is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered East of Brown Street within the first three quarters of a mile adjacent to the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. While the Business Park category allows warehouses, it also allows a wide range of other less intense land-uses identified in General Plan Table 1-1 below.

The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. This was the same map and designation I was presented with when I bought my house in 2009. In fact, I was given the maps in Exhibits 5-1 and 5-4 from the original owner and they clearly indicate the intention for this land was conservation. It was what the original owner, a municipal judge and retired Marine Corps officer, understood at the time he paid a premium to own a house next to this unique landscape and the military base that played such an important role in his life. Did the JPA change their minds after they wrote and disseminated the final General Plan? If so, why? What changed? Have the JPA modified the Final Land Use Plan in the past? If not, why are you proposing a specific plan that is inconsistent with the Final Land Use Plan (see your own diagrams and roadways)? Any specific plan needs to comply with the Final Land Use Plan and it is clear this one does not.

I-788.32

I-788.32
Cont.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” which incorporated clearly a desire to avoid incompatible warehouse land uses adjacent to residential homes. In Section 2.2.25(d) it stated, “Any and all future distribution/warehouse development in the Meridian West area shall maintain a 1000’ distance from existing residential uses in accordance with the Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities. (See 2.1.4 of the Land Use Element).”

The historical precedent of the Final Reuse Plan (1996), General Plan (1999) and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses and all discussion of warehouse uses focused on appropriate setbacks to protect adjacent residential zoning.

Finally, the specific plan for this campus changes the definition of the mixed-use land category. In the existing General Plan (1999), mixed-use is explicitly defined on page 1-34, “Mixed uses include a variety of complementary land uses; including commercial, business park, office, medical, educational and vocational, research and development, and services. Industrial and major warehousing uses are excluded.”

I-788.33

However, in the draft EIR (2023), p. 2-4, mixed-use is now defined as, “Mixed uses include a variety of complementary land uses, including commercial, business park, office, medical, research and development, business enterprise, and services. Industrial, and outdoor storage is prohibited.” Why change this designation? To approve unwanted warehouses on the Upper

Plateau that was always set aside as a conservation and parks area? This makes no sense to the public and many who serve in local government of the surrounding jurisdictions.

Major warehousing uses are now acceptable to the March JPA in the mixed-use zoning, despite a 24-year precedent in its 1999 General Plan and the definition that excluded this use. This sudden change is as deceptive and malevolent. It is misleading to the public, and it gives rise to the belief that the JPA, at the direction of the applicant, can do whatever it wants without consequence. The public expects better of the JPA and the Commission. What justification do you offer to explain this apparent privatization of public lands?

The region of western Riverside County is overly populated with warehouses, largely because of the JPA's TFZ244. The residents of eastern Riverside, western Moreno Valley, north Perris, and unincorporated Riverside County all along the 60/215 freeway corridors are disproportionately impacted by these warehouses thanks to the JPA and the predatory nature of the developer.

As the maps above demonstrate, the 215/60 freeway corridor is disproportionately impacted by the sprawl of warehouses and logistics. The JPA has specialized in placing warehouses on a majority of the land it was tasked with repurposing. So, one has to ask why build so many warehouses when they are not the land use planning option that the original General Plan and its

I-788.33
Cont.

I-788.34

creators envisioned in the late 1990s. Well, it doesn't take long for a mistrusting public to draw rash conclusions like "it's all about the money" or "it is a land grab by the (insert your adversarial foreign government of choice here)."

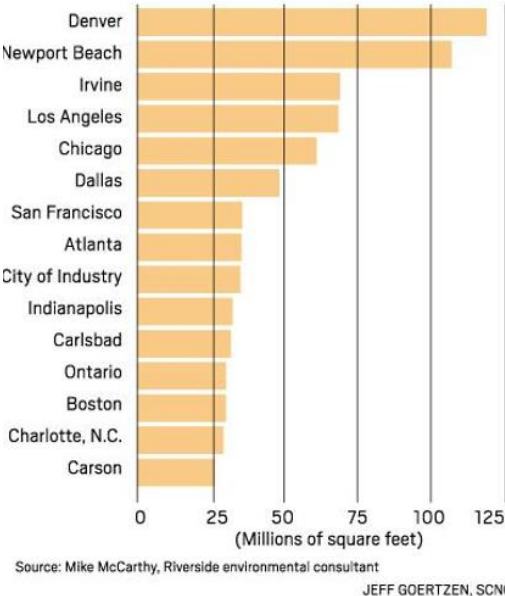

Fortunately, a little work and publicly available information provides me with some insight to avoid the conspiracies about why there are so many warehouses in the JPA's territory. In a meeting with the JPA in April 2022, I was told that most of these warehouses are built as speculative developments, and that they don't have tenants waiting to lease or buy them. This is the case with the West Campus, Upper Plateau project as well. I was still new to this the development around March ARB in April, but I have had some time to learn about it since that meeting. The graphic below demonstrates the listed owners of the warehouses for warehouses in Riverside County, including the warehouses built by the JPA.

Inland warehouses, non-Inland owners

Most of the Inland Empire's logistics footprint is owned by companies with addresses outside the two-county region.

Top 15 cities with companies that own Inland warehouses

I-788.34
Cont.

The nature of this speculative development means that the developer is incentivized to find financial backers, investors, that will fund the development of this land with the promise of a return on their investment. The way that the developer ensures that it and its investors profit is to spend the least amount of money in order to make the most amount of money in return. If the JPA or the developer had the public interest in mind, then why is it that the mailing addresses for the owners of these businesses do not have a more equitable spread favoring local owners? Is it because as the graphics indicate, and what I learned at the April 2022 meeting, that these

warehouses were never intended to consider local business owners or local jobs for residents of western Riverside County? Is it because these warehouses are part of an investment portfolio for companies more concerned with Wall Street than the local streets of Alessandro or Van Buren? Is this another example of the JPA allowing their exclusive private developer to profit off lands that were intended for public benefit?

If I were to dig further, would these addresses stop in Denver, Tulsa, Chicago, Atlanta, or Newport Beach? Or would they quickly leave the North American shores and head to destinations far and wide? Are you, the JPA, telling me that my desire to live a happy and healthy life is not as significant as the portfolio of the investors of your exclusive developer and their wealthy corporate friends? It is at times like this that you have to decide where your obligations lie. Do they lie with those that will profit from bad decisions or do they lie with the people you were hired and tasked to serve? How will you enforce the JPA’s own mission identified in the General Plan, the one that protects community values, health, and history from narrowly focused and neglectful land use decisions? I cannot see how building more warehouses accomplish this clear and focused goal as described by the writers of the original General Plan document. Where again is the accountability to the public? What will it take to get the JPA to stop privatizing public lands? Fortunately, I have some recommendations for you.

I-788.34
Cont.

Alternate Plans: Non-Industrial Options

This brings me to a crucial and consequential point in this comment letter and the heart of my objection to this project, a project that would build nearly 5 million square feet of industrial warehouses right in the middle of a large residential neighborhood. Ever since the community became aware of and engaged in the plans for this shocking large industrial project, the community has repeatedly asked the JPA for one thing: no more warehouses. Warehouses are a part of life today, Chair Conder is right about that, but it is egregious to consider putting so many of them right in the middle of thousands of homes, something Chair Conder, the JPA, and the developer fail to acknowledge. This specific plan is a bad idea and real alternatives are needed.

I-788.35

But before we get to the alternative plans, on page 860/916 of the draft EIR, the JPA and developer address alternatives to the project that were rejected. The first reason listed (6.3.1) is that there is no alternate site for this project (because of its size). This explanation implies that this project (a mega-warehouse complex) is pre-decisional, the realization of a legal entitlement for the developer to build warehouses anywhere it wishes. It implies that because the developer wants mega-warehouses to lease or sell to whomever (foreign or domestic) it wants that it is their right to repurpose public land for private gain. It implies that the decision to build only warehouses here was made long ago and by approving their plans the JPA and this commission are helping to privatize public lands in a way that damages the public interest and our infrastructure but benefits the developer financially. There is absolutely no community sentiment for building warehouses here (nor is there a need for the few temporary, low paying jobs created by these eyesores), but there is wide ranging public support for development that improves our

I-788.36

lives and community. The developer does not prioritize the values of the community, the protection of its citizens, or the collaboration with communities impacted by this project. They have a history of sanctioned negligence and their lack of accountability and accuracy is even written in the draft EIR. Residents of Riverside, Moreno Valley, Perris and unincorporated Riverside County expect the JPA to hold the developer accountable for our lives as much as it allows them to profit from this project. What lengths have you taken to do this? How will you hold them accountable on our behalf? How will you enforce your own mission identified in the General Plan, the one that protects community values, health, and history from narrowly focused and neglectful land use decisions? The economic risk here is massive; as quickly as the economy moved to demand more storage space, it will in all likelihood swing back and once built that space will sit as an empty concrete monument to bad government decisions and capitalism at its worst.

I-788.36
Cont.

Now on to the alternate plans: Section 1-10 of the draft EIR presents four alternative plans evaluated for the release of this document. If the JPA and developer had truly listened to the public when you met with us, if you had genuinely engaged with residents of Riverside who are directly and adversely impacted by this plan, then maybe one of your four alternative plans would have included development without warehouses as thousands in the community have asked for the last 12 months. At the risk of being repetitive, why have you ignored this request? The public expects the JPA to honor its commitment (page “v” of the General Plan) to serve as a link between community values and physical (land use) decisions. Is this line guidance or a mission statement? After 11 months of communication with the JPA, why is there no option to develop this land in a way that reflects community values and input?

I-788.37

In the draft EIR, Alternate Plan 1 under consideration is titled “No Project” and under section 6.4.2 the explanation of this plan appears to be a mandated option in the EIR, primarily for comparison purposes with the main plan and the other three alternate plans. This plan can be easily dismissed as naïve and misguided, and more than once I have been accused of being the loudest of the unreasonable proponents of this alternative. Alternate plan 1 is ideal and is the right decision for this land from a residential land use and quality of life point of view. Think about it, this land has historical significance for Riverside, Moreno Valley, and Perris communities that grew up largely because of March AFB and these weapons storage facilities. The historical and native artifacts found in the area are irreplaceable and according to Table 1-3 this project will cause significant and unavoidable damage to these American and Native American symbols of our past. The notion that any paleontological monitor or program (page 1-53) would have the authority to protect of slow demolition or construction of these warehouses is not a genuine offer or mitigation for unearthing items from our history, some of which may have been placed in their resting spots intentionally and with purpose or meaning. I do not believe the JPA or the builder will do the mitigation described in your draft EIR and want to understand why (a) I should take your word in writing for it (legal action is not a suitable response), and (b) why the JPA erase the history and public image of March Air Force Base?

I-788.38

Conversely, Alternative plans 2-4 all include significant warehouse development, major and heavy demolition and construction to build these warehouses, and will still have significant (maybe not according to your legal terms in table 1-3) impact on surrounding residents health and quality of life. These alternate plans demonstrate that the JPA held public meetings as a matter of process and did not genuinely intend to work with the community (as indicated in your own general plan) to repurpose this land and positively build up (literally and metaphorically) the surrounding communities. Also, within these three alternate options, for you to tell the people that live here that the proposed plan and three of the alternative plans WILL HAVE significant and unavoidable impacts on our lives is reprehensible, especially for an agency who says they are committed to protecting (at your discretion apparently) our lives.

We have asked you in person, in writing, on the phone, virtually, and in every way we could to offer development plans that think forward, that offer jobs to our kids and to the bright engineering students and scientists graduating from UC Riverside and other area colleges, jobs and land use that grow our community with essential services, conserving resources like water and electricity (even generating and storing that electricity), providing a place for the community to gather without congested roads and polluted landscapes: **no more warehouses**. You ignored the community and you did so it seems intentionally. Was this at the direction of your commissioners? Was it at the direction of your exclusive developer? Did the Air Force tell you it wanted more warehouses? Did you read some online reports as I did about the economy? Or are you like an addict reaching for the quickest and most immediately gratifying type of development project available today? Maybe this letter can be your intervention. Maybe you just need help kicking the habit you have so clearly demonstrated over the past five years and finally consider the people that live and make up the municipalities you claim to represent.

I-788.39

To that point, when it became clear to me that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial and logistics, I began working with concerned members of government, business, and a diverse and engaged members of the community to develop three reasonable alternatives to your plan for the Upper Plateau. Having been rejected by the JPA, the developer, and Commission members in the past by proposing everything from a solar farm and energy storage facility to a winery (the bunkers would make great tasting rooms providing they are not radioactive) to mixed use residential and commercial centers, all reasonable ideas seemed to fall on predetermined ears. Thus, it seems like the right time to describe alternate projects with considerable appeal to the community and with traits of realistic development opportunities for the JPA and the applicant as I express my strong objection to the specific plan and alternate plans proposed in the draft EIR.

I-788.40

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

I-788.40
Cont.

- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.
- *Conclusion:* Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This is a patriotic plan that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- *Conclusion:* Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses. And it is easily the most popular alternate plan offered here. The public is aware of and has asked for this plan as their clear first choice.

I-788.40
Cont.

My preference is clear and I have indeed spoken with the National Parks Service about making alternate plan #3 a reality. There is funding available to do this and all agencies (JPA and the four member agencies) would profit from the establishment of such a park. The JPA could engage with the National Parks Service, for example, and initiate a BRAC agreement to purchase this incredibly unique land and preserve the entire property for the very reasons identified in the 2012 Center for Biological Diversity agreement which seeks to preserve a delicate desert riparian ecosystem, preserve historic and cultural artifacts (hidden well within your draft EIR so much so that I have yet to discover them), and protect (without discretion) threatened or endangered species like the Stephen’s Kangaroo Rat and the burrowing owls located at the northern end of the property. Such an agreement would pay the JPA member agencies and immensely benefit the surrounding community by giving them recreation opportunities and serving as a buffer from the dreaded industrial sprawl that you are advancing without restraint. This solution is feasible, positive from all points of view, and something you have control over. It would serve as a compromise for all involved and would not negatively impact the airport/USAF.

I-788.40

Should the JPA consider any of these plans as viable solutions, I am happy to serve as a member of a community advisory board that will help facilitate, discuss, and explore how any of these plans could materialize. I am happy to also help advocate for and work to make any of these plans a reality for the JPA and my surrounding neighbors. And while the business minded persona deep inside of me would like to profit from such involvement and work, I would convince that part of me that an alternate solution to more industrial warehouses is more than enough reward for my time and hard work.

Baseline Information: Misleading and Inaccurate Data Used in Project Plan

I am not sure how any of this is legal; it is difficult to imagine how the draft EIR complies with CEQA and common sense (maybe the two are incompatible) without considering the cumulative impact the specific plan would have on the region. The draft EIR fails to consider the cumulative impacts the specific plan would have on traffic, air, light and noise pollution, housing, and use of resources and infrastructure like water, gas, and electricity and roadways and law enforcement regionally. In many cases, the draft EIR makes use of multiple datasets to form its findings and justification for moving forward with this project. In some cases, this data is a preference of the JPA and the developer because it helps you make your point or it justifies your vision for the project. But in other cases you have mistakenly or purposefully used multiple, dated, or inaccurate studies and data in the EIR and the inconsistencies raised by old or incompatible data and reports is misleading to the public.

I-788.41

To begin, in all of the presentations and reports I have seen published by the JPA related to this project, jobs has been the primary justification for building industrial on the Upper Plateau. It has been an ever-present and leading comment by Dr. Martin and the developer in public meetings or briefings: this project will provide jobs for local residents. But there are many, many

I-788.42

problems with this argument, again your primary argument for building industrial warehouses on the West Campus Upper Plateau. This justification just doesn't hold up to further scrutiny.

Publicly available data from city, county, and federal jobs reports indicate that there are not enough unemployed people in the local area to fill the number of jobs that the logistics industry claims they are creating. Let's look at the population in western Riverside County for example; there are approximately 630,000 residents (approximately Riverside 318,000, Moreno Valley, 212,000, Perris 80,000, and Mead Valley 20,000). Based on the most recent employment statistics for the area, it is safe to estimate approximately 300,000 employed working-age people and 11,000 unemployed (based on the 3.5% unemployment rate). Even adding in residents from unincorporated areas like Woodcrest, Nuevo, and Sun City, there is nowhere near enough capacity for the jobs the industrial sector is claiming. The World Logistics Center in Moreno Valley is supposed to generate 35,000 jobs. Stoneridge Commerce Center is will generate 10,000 or more jobs. There's no way this region can add 45,000 jobs in just warehouses locally. Even if everyone who turned 18 decided to work in warehouses for 10 straight years, the data just doesn't add up. And with college enrollment beginning to rise again after COVID, it is unreasonable to believe that there will be enough local residents who will be willing to work for low paying wages and still be able to afford the cost of living in western Riverside County.

I-788.42
Cont.

I'd like you to explain to me how graduates of local colleges like UC Riverside, Cal Baptist University, California State University San Bernardino, University of Redlands, and the community colleges in Riverside, San Bernardino, San Jacinto, Moreno Valley, and Yucaipa will find employment in the industrial sector and at these warehouses? If this area is to keep growing, it will require high paying jobs in the medical, technology, and energy sectors in order to keep the next generation of educated citizens an income that allows them to live in western Riverside County. Please explain in detail how this plan helps employ college educated workers. And if there is no explanation, please revise your jobs argument and projections for this plan or propose an alternate plan that meets the goals identified above in this letter.

I-788.43

You see, the majority of warehouse jobs are low-wage and temporary work with reduced hours, and workers cannot afford to live in the local area. Per Indeed.com, the average annual salary of a warehouse associate in Riverside, CA is \$35,160. Even if one assumes that a resident is fortunate enough to find a warehouse job that provides 40 hours a week for 12 months out of the year, a rare find in this industry where workers average is less than 30 hours a week right now, a person could not afford to live in the local area. Rather than living close to where these warehouse workers live, as indicated in the draft EIR in multiple locations, warehouse workers at the Upper Plateau would have a considerable commute to earn their low wages. In fact, according to rentdata.org, the fair market rent for a 1-bedroom apartment in the 92508-zip code is \$1398/per month. As of January 2023, the median home price for the zip code 92508 is \$667,500. Even if a warehouse associate were to find a rare steady, full-time job, they would have to pay an unsustainable amount of their paycheck to rent alone. These jobs you insist are the primary reason for building only industrial on the Upper Plateau simply cannot support the

I-788.44

lives of people who live within a 30-40 mile radius of these buildings. These jobs cannot and will not serve the local residents. They will increase traffic on the 215, 60, and 91 freeways and local arterial roads, and they will not return the economic boon that you are projecting in your justification for more industrial buildings on the Upper Plateau. Your findings on the impact on housing for the project is faulty, inaccurate, and misleading to the public. This project needs a more detailed and realistic study on housing for these low paying warehouse jobs and low-income warehouse employees. Why did you not provide it with the draft EIR?

I-788.44
Cont.

In fact, the logistics industry has actually weakened the economic outlook of our region overall. According to the SCAG December 2022 economic outlook report, “In 2001, GDP per capita in Riverside County and San Bernardino County were 64 percent and 69 percent of U.S. per capita GDP, respectively. When compared to the Rest of California, the ratios are worse: 52 percent and 56 percent. Moreover, by 2022, Riverside County’s position had deteriorated to a per capita GDP of only 59 percent of the U.S. level and 40 percent of California. San Bernardino County was at least able to improve to 71 percent of the U.S. level, but still fell to 48 percent of the rest of California level. These numbers are alarming, especially given the success of the Logistics Industry. They imply that the impressive job growth in the Inland Empire since 2001 resulted in numerous jobs, but they tend to be relatively lower paying jobs compared to other parts of the state and nation. This explains, in part, why such a large number of workers prefer to commute into the coastal areas, despite the heavy cost involved in terms of time lost on the road. It also explains why the Inland Empire’s per capita GDP has sunk to a rank of 340 out of 386 MSAs, despite being the twelfth largest by population count.” More than anything, the draft EIR lacks a detailed analysis of why the JPA insists on contributing to the economic downfall of its member organizations. Why do the cities of Riverside, Moreno Valley, and Perris want to support low-income jobs and residents? What social infrastructure exists for employees who do not have access to affordable healthcare because they only work on a part-time basis? Why has the JPA not included this as a consideration of impacts for the surrounding communities? Any approval of the plan as presented simply ignores the needs of disadvantaged communities and seems to ignore the facts of what really is happening in the current warehouses located within the JPA’s territory today.

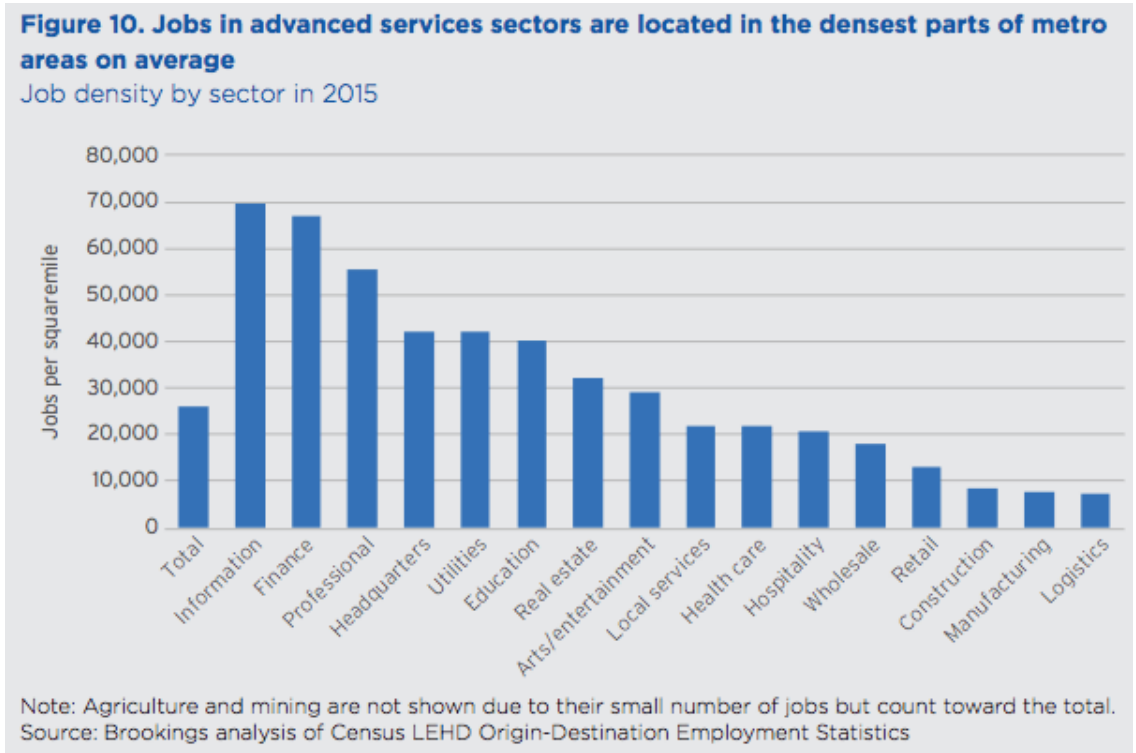

I-788.45

The continued insistence for only industrial and logistics jobs and buildings in western Riverside County is a slide backwards economically and socially. Some may argue it is a form of social and economic injustice. By forcing a specific industry or employer on people who live in an area, you are forcing young people to decide to live in the community they grew up in, near family and friends they love and value, and work in jobs that disregard their quality of life, negatively affect their health and mental wellbeing, and limit their potential income levels, or move out of the region to find better quality of life and employment opportunities. Most valid and widely accepted studies show that industrial is the worst land use possible when it comes to job generation. Warehouses provide 0.000212 jobs per square foot and are the lowest economic jobs density of any professional category. It is literally the worst job creator per unit of land there is. The table provided below is from 2015, but the data has only gotten worse for the logistics and

industrial warehouse sectors. The advances in technology and efficiencies gained through automation have only reduced the number of warehouse workers inside of buildings today.

I-788.45
Cont.

Advances in automation may lead to mass unemployment if we overinvest in this industry. According to the December 2022 SCAG report quoted above, “Over the long-run, Logistics will likely go through a transformation as advances in automation and artificial intelligence displace workers. This means that the industry may continue to thrive, but it may not support the same number of workers as it presently does. In turn, the region must look to other industries as sources of employment and output growth. There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot.” What evidence have you provided in the draft EIR that refutes this report? What evidence does it provide to tout the benefits by way of high paying jobs related to the coming of advanced automation and technology in the logistic sector? What mitigations do you have in place to deal with the loss of the very few jobs that you say this project will create? What mitigations do you offer the public in the event of a down or changed economy that no longer values or utilizes e-commerce as we do today? There are few easy answers here and it is likely that the JPA is gambling that these buildings can be completed before people abandon the e-commerce trends that rose so swiftly during the monumental changes in life due to COVID-19.

I-788.46

For these reasons related to jobs, I urge the March JPA to think harder before making the jobs argument for the West Campus Upper Plateau. We do not need, nor can we support, 2,600 more warehouse jobs in this region. We are already oversaturated with the logistics industry and need to think more creatively about land uses so that it benefits the local region and doesn't simply line the pockets of developers.

I-788.47

Another area where the draft EIR does not sufficiently address the cumulative impacts of these buildings is in how they will adversely impact **traffic** beyond the immediate roads surrounding the project site. The traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main truck traffic routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Why have you ignored the cumulative impacts traffic will cause within a 8-mile radius of these buildings?

I-788.48

If you insist on moving forward with this negligent plan, please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. Your poor land use decisions will have a significant and lasting impact on the lives of the residents of western Riverside County and at this time I see no reason to believe you have considered how to mitigate this major oversight.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on February 2, 2023 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the

“ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-788.48
Cont.

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. What financial demands would you make of the developer to account for all the damage they are causing our neighborhoods? Will you leave the burden of cost to fix roads, police wrong-doers, and provide essential services to these monstrous warehouses to the public via higher taxes and bond measures? Is the March JPA operating in direct conflict with the spirit and words of the General Plan?

I-788.49

Lastly, the draft EIR concedes that there will be “significant and unavoidable” **air quality** impacts on surrounding residents. However, I believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts in order to mislead the public of the cumulative severity the impact of poor air quality will have the health of the residents of western Riverside County.

I-788.50

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project and thus the draft EIR is incomplete, inaccurate, and provides the public with erroneous information to consider related to the specific project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others are being planned or built right now. They will drastically increase airborne pollutants and significantly worsen the air quality in western Riverside County. If you insist on continuing with this harmful project, please include the cumulative impacts in both the local and regional analysis for the final EIR.

I-788.51

The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips. I again ask how this project helps California push for net zero emissions moving forward?

I-788.52

You have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including

I-788.53

installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the JPA and developer should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the draft EIR for this site? Will you require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)? Will you insist that the developer avoids blasting during demolition? The disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing, especially considering the potential toxic nature of parts of the munitions bunkers you will be removing.

I-788.53
Cont.

I ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I-788.54

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected? Will you help establish a Community Advisory Board to the JPA with the authority to work along side the TAC and Commission?

I-788.55

Publicly, the JPA points to language in the General Plan and the March JPA website that states the primary justification for this sprawling industrial project is their duty to develop and repurpose March ARB lands and to bring jobs to the area. Yet the JPA has documented that it has already replaced the jobs lost by the realignment of the base in 1993, Dr. Martin proudly stated this in front of the Riverside City Council in October. The draft EIR references in many places that 2,600 jobs would be created at the peak of operations resulting from this project, but later this document admits that the jobs would not result in long-term employment growth for the region (section 4.7.32), and public data suggest that this number is also inaccurate. The unemployment rate in this region of Riverside County is between 3.3-3.7% and the average household income is \$103,513. There is no need for a giant concrete logistics center that will not impact the jobs numbers for this area, nor would those jobs pay the kind of wage that would allow people to live in this area.

I-788.56

The EIR contains some mixed messaging (at best) on jobs for sure, but the end result is this is not an overwhelming driving reason to build warehouses on the Upper Plateau. This argument by the JPA and developer is misleading and is not supported by data on your local agency websites. Please explain how the low quality and temporary jobs this project would provide will employ residents (as stated multiple times by the draft EIR). Western Riverside County cries out for jobs

that can support the cost of living in this region and warehouse jobs cannot do this. How is this a primary reason to approve this project? If job creation is a primary driving factor for this project, why hasn't the developer and the JPA created a land use plan that focuses on jobs for residents of western Riverside County? There must be a better use for this special piece of land, one that the Air Force, residents and visitors, local municipalities, lawyers and lawmakers, and the JPA and the applicant can all support. Are you ready to do your part?

I-788.56
Cont.

Conclusion: an unpaved path forward

As a concerned citizen, it is not enough to just find problems with the draft EIR and the process undertaken by its developers. Responsible citizens take an interest in their community for the benefit of all people and businesses, working to avoid the economic and social injustices these warehouse projects present our communities. With this in mind, I have the following mitigations and solutions to request of you related to the West Campus Upper Plateau project, the draft EIR, and the March JPA's operations moving forward.

First, commission a community advisory board that works alongside of the JPA and the developer working collaboratively to develop a list of alternative plans that would support the goals of the JPA and meet the needs of the community while allowing the developer to realize a profit and an incentive to do the work. This advisory board would need to have some level of authority, a voice in how this land is used and in the enforcement of policies that protect the neighbors surrounding it. Genuine public engagement is recommended by the March JPA General Plan (p.1-3, 1st paragraph; p.1-5, 1st paragraph; p.1-13, goal 2; p.1-14, goal 4; p.1-18, goal 8; and p.1-37, all) and the Final Reuse Plan (p.I-2, last paragraph; and p.II-10, item F) and a community advisory board is one way for you to align with these recommendations and work harmoniously with business, developers, public government, and the people whose taxes pay for all of this. It is also a tool your organization has successfully used in the past and it seems like an essential step to take in order to maintain the close public connection March AFB has always enjoyed in this area.

I-788.57

Second, the public and local jurisdictions would support the JPA if it represents the interests of the people who live in these communities and the USAF instead of representing the interest of the entitled developer and its Wall Street investors. Be our leader and advocate for one of the researched and vetted alternate plans recommended in this letter. Thousands of voices of the residents of western Riverside County have spoken clearly over the last year. The people who have invested in and helped pay for the land that March AFB was built on demand a voice and a return on their investment. There is a time to rise above the legal loopholes that allow private companies to derive profit from public lands. Local businesses would appreciate a voice in this effort as they would benefit and offer jobs at a much more significant level than a million square foot warehouse ever would. Residents would enjoy natural landscapes with open space and unimproved trails that allow them some relief from the urban world around them. The land itself would appreciate it too. And the JPA gets to satisfy its mission and realize its economic goals by

redeveloping the land and bringing jobs that would actually employ the people who live near March ARB. Once again, we'd have a community living in harmony and with purpose (the roots of the March AFB community) instead of one literally divided by an investment or development portfolio for global investors.

Lastly, while the March General Reuse Plan was written more than 20 years ago, and you have publicly stated that it is a guideline rather than a requirement for the JPA to follow it, you owe it to the public the plan was created to protect and benefit to develop this land primarily in our interest, not in the interest of outside investors. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. The general plan was the government's best effort to do something positive for Riverside, Moreno Valley, and Perris residents who directly felt the blow of decommissioning the March base. Ask anyone that does not work for you, has the JPA lessened that life altering change from the 90s today? Has the JPA improved people's (not you or your exclusive developer partner) lives?

The March JPA and its exclusive developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. You have a duty to think about this land after your organization sunsets in 2025. Your overreliance on heavy industrial development will leave the communities surrounding March ARB with more problems than they will be able to handle 10 years from now. I have found nothing in the draft EIR to convince me that you have planned for this area beyond the conclusion of its construction. This, it must be stated, is irresponsible land use planning and land management. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations developed, limiting the negative impacts developing this land will have on the residents who will have to live with this development. Please don't allow one final grand act of greed and poor land use planning be your lasting legacy. I await your detailed response. See you down the road.

"There is a wisdom that is woe; but there is a woe that is madness."

Letter I-788

Jerry Shearer

March 9, 2023

- I-788.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-788.2** This comment summarizes the Project location and the documents reviewed by the commenter. The comment also raises general concerns regarding the Draft EIR. Please see Topical Response 4 – Project Consistency, of this Final EIR, for a discussion of the Project’s consistency with the referenced settlement agreements. With regard to community engagement, March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one Zoom virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. The comment also refers to public lands. The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant. With regard to the request for a non-industrial alternative, please see Topical Response 8 – Alternatives, which includes a no-warehouse alternative. The comment also refers generally to baseline information used to develop the plan but does not identify specific issues with respect to the environmental analysis.
- I-788.3** The comment raises general concerns related to climate change and aesthetics. The Draft EIR addresses climate change in Section 4.7, Greenhouse Gas Emissions, and aesthetics in Section 4.1, Aesthetics. See also Topical Response 1 – Aesthetics. With regard to zero emissions standards, MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the Project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the Project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed. In addition, as discussed in the EIR, with implementation of MM-GHG-1 through MM-GHG-12, the Project will be consistent with the applicable GHG reduction plans and GHG impacts would be less than significant. The Project will not impede the State’s progress to carbon neutrality by 2045. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for a detailed discussion and list of the mitigation measures being added to the Project.
- I-788.4** This comment questions the Project’s consistency with the CBD Settlement Agreement (Appendix S). The Project complies with Exhibit A of the CBD Settlement Agreement, which outlines precisely which areas would be placed into conservation and which would be developed. As such, the Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat

value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use. In response to this comment, please see Topical Response 4 – Project Consistency, where the Project’s consistency with the CBD Settlement Agreement is discussed.

The Project adheres to the conditions laid out in the CBD Settlement Agreement which was approved by the wildlife agencies. Two wildlife crossings are planned under the extension of Cactus Avenue and one wildlife crossing is planned under the Brown Street extension. The crossings will consist of soft-bottomed culverts approximately 6 feet in height by 20 feet in width to allow for adequate passage of animals north to south under Cactus Avenue and east to west under Brown Street. These specifications follow the CBD Settlement Agreement, which prescribed design standards suitable to accommodate local land locomotive species.

I-788.5 This comment expresses concern about the shrinking of open spaces and destruction of habitat. Comment bullets 1 through 4 are similar to Comments FL-C.4 through FL-C.7 of Form Letter C – Biological Resources. In response, please see Form Letter C Response. Regarding comment bullet 5 questioning the Draft EIR’s evaluation of reptiles, as explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), habitat assessments were performed for all special-status species, including reptiles, in compliance with CEQA requirements (please see section 3.4.2 of the Biological Resources Report [Appendix D-1]). Evaluations of the communities on the Project site were not intended to be exhaustive, but to provide sufficient information for decision makers to understand the environmental consequences of the proposed Project. With impacts on native vegetation communities present on the Project site, it is assumed that species inhabiting those communities would also be impacted, including reptiles. Impacts on these native upland vegetation communities and the species they support would be mitigated through purchase of credits at an approved mitigation bank.

Regarding comment bullet 6 questioning the Draft EIR’s evaluation of migratory birds, as explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), all special-status avian species, both resident and migratory, were assessed for their potential to occur on the proposed project site. Potential impacts on any special-status species with moderate or high potential to were evaluated in this analysis. These include Bell’s sparrow, burrowing owl, California gull, California horned lark, Cooper’s hawk, Lawrence’s goldfinch, northern harrier, sharp-shinned hawk, Southern California rufous-crowned sparrow, yellow warbler, and yellow-breasted chat. Impacts were assessed for all special-status migratory bird species, whether they have potential to occur while overwintering or during the nesting season (i.e., burrowing owl, California gull, sharp-shinned hawk, yellow warbler, and yellow breasted chat). The Project Biological Technical Report (Appendix D-1) discloses the potential presence of many non-special-status migratory bird species and that habitat-based impacts on these species would occur with Project implementation. Impacts on native habitats and the species they support, including migratory bird species, would be mitigated through purchase of credits at an approved mitigation bank. In addition, impacts on nesting birds would be less than significant with the

implementation of MM-BIO-7 and impacts on adjacent habitat that supports avian species would be less than significant with the implementation of MM-BIO-1.

Regarding comment bullet 7 questioning the Draft EIR's evaluation of insects, as explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), habitat assessments were performed for all special-status species with potential for occurrence in the region in compliance with CEQA requirements. No special-status insects are known from the Project vicinity, and none have a moderate or high potential for occurrence on-site. As discussed above, evaluation of the communities on the Project site were not intended to be exhaustive, but to provide sufficient information for decision makers to understand the environmental consequences of the proposed Project. With impacts on native vegetation communities present on the Project site, it is assumed that species inhabiting those communities would also be impacted, including insects. Impacts on these native upland vegetation communities and the species they support would be mitigated through purchase of habitat credits at an approved mitigation bank. Regarding disturbance of insect populations, such as ants and mosquitos, during Project construction, the Conservation Easement will remain undisturbed and available to provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

The comment raises concerns regarding the validity of the biological surveys conducted for the Project. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2) and discussed above, the studies presented in the Project Biological Technical Report are not intended to be exhaustive of all life forms that occur or have occurred on the proposed Project site. CEQA does not require the lead agency to perform all research. The Project Biological Technical Report (Appendix D-1) provides decision makers with information which enables them to make a decision which intelligently considers potential environmental consequences of the proposed Project. The Draft EIR and Project Biological Technical Report (Appendix D-1) provides information from a snapshot in time and may not be exhaustive of all common (non-listed) species that may occur; however, all habitats were assessed and all special-status species with potential for occurrence were addressed in the analysis.

The CBD Settlement Agreement (Appendix S) presents the decisions agreed upon by the Center for Biological Diversity and San Bernardino Valley Audubon Society, organizations that are staffed by experts in the field of environmental law and conservation biology, and March JPA and LNR Riverside LLC. The conclusions drawn in the Settlement Agreement were based on adequate consideration of all impacts resulting from realignment of the previous March Air Force Base and proper valuation of the land regarding biological resources. See Topical Response 4 – Project Consistency, for further discussion of the CBD Settlement Agreement.

- I-788.6** The comment references a term of the CBD Settlement Agreement regarding the use of existing service roads by the public for passive recreation and expresses concern about the public's continued ability to access the trails. The Project consists of two components: the Specific Plan Area and the Conservation Easement. The approximately 370-acre Specific Plan Area includes the remnants of the March AFB Weapons Storage Area which has consistently been fenced off to prevent public access. The remainder of the Project site will be preserved in the approximately 445-acre Conservation Easement, which includes the trails the public has accessed for passive recreation purposes. The public's utilization of this area for passive recreation is subject to the discretion and authorization of March JPA, as noted in Chapter 4.0, Environmental Analysis, of the Draft EIR. As detailed throughout the Draft EIR, there is no development proposed within the Conservation Easement and no physical

alteration is anticipated. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use. Please see Topical Response 4 – Project Consistency, where the Project’s consistency with the CBD Settlement Agreement is discussed.

- I-788.7** This comment questions what has been done to establish and fund the endowment. The comment requests dates on which the endowment was established, payment dates and amounts, corresponding permit dates, and progress toward the \$2 million funding level projected for April 1, 2027. The endowment was created in late 2012, and the current endowment balance is \$1,095,182, as of January 2024.
- I-788.8** The comment refers to a Base Realignment and Closure Act (BRAC) park alternative plan suggested by the comment. Please see Topical Response 8 – Alternatives, for discussion of the suggested alternative.
- I-788.9** This comment questions what will happen in June 2025 when March JPA’s land use authority reverts to the County of Riverside. In response to this comment, please see Topical Response 9 – Long Term Project Implementation and Enforcement.
- I-788.10** This comment questions the Project’s consistency with the 2003 Settlement Agreement. In response to this comment, please see Topical Response 4 – Project Consistency, where the Project’s applicability to the 2003 Settlement Agreement is discussed.
- I-788.11** This comment is similar to Comment FL-G.4 of Form Letter G – Traffic. In response to this comment, please see Form Letter G Response

Additionally, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway. With regard to the 2003 Settlement Agreement, please see Topical Response 4 – Project Consistency.

- I-788.12** The comment questions why cumulative impacts for traffic were not considered within a five-mile radius of the Project. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. The March JPA Traffic Impact Study Guidelines utilizes a 5-mile radius around the Project site for determination of approved and pending projects for cumulative analysis. This is consistent with traffic study guidelines for WRCOG, County of Riverside, and the cities of Riverside and Moreno Valley. The 5-mile radius is intended to capture all of the regional intersections where the Project would contribute 50 or more peak hour trips. This also captures the areas where the

Project would have more concentrated air quality and GHG impacts. Please see Topical Response 7 – Cumulative Projects, of this Final EIR for further information.

I-788.13 This comment expresses concerns about traffic on arterial streets, trucks not following the enforcement codes, and questions what enforcement mechanisms will be used to mitigate traffic. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. The comment also references prior comments regarding the I-215 and 215/60 corridor, and other projects and truck routes in the area. Please refer to Response I-788.11 above for detailed discussion. With regard to the 2003 Settlement Agreement, please see Topical Response 4 – Project Consistency.

I-788.14 The comment suggests that noise associated with idling semi-trucks has not been accounted for. As explained in the Urban Crossroads Noise Responses to Comments (Appendix M-2), in Section 4.11, Noise, of the Draft EIR, and in Section 9.2.2 of the Project Noise Study (Appendix M-1), the Project’s noise analysis specifically includes truck idling. As the Draft EIR explains, the noise analysis used the reference noise levels to represent the Specific Plan operations and calculate the operational source noise levels, including loading dock activity and truck movements, that are expected to be generated at the Specific Plan area and the Specific Plan-related noise level increases that would be experienced at the sensitive receiver locations.

As explained in the Draft EIR, the reference loading dock activities are intended to describe the typical outdoor operational noise activities associated with the Specific Plan, and noise source levels from the loading dock activity includes truck idling, reefer activity (refrigerator truck/cold storage), deliveries, backup alarms, trailer docking including a combination of tractor trailer semi-trucks, two-axle delivery trucks, and background operation activities. The reference noise level measurement represents multiple concurrent noise sources, including trucks with their engines idling based on actual observed activities. However, the primary source noise activity is related to the docking activities, backup alarms and refrigerator units, not extended truck idling. As explained in the Draft EIR, the operational noise levels associated with the Project, including loading dock activity and truck movements, would not exceed the daytime and nighttime exterior noise level standards, and operational noise impacts would be less than significant at the nearby noise-sensitive receiver locations. (Appendix M-2)

In addition, the Project’s air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments, including three-minute truck idling limits (MM-AQ-17 and MM-AQ-22) and electrical hookups at all transport refrigeration units (TRUs) loading docks (MM-AQ-8). Please see Recirculated Section 4.2, Air Quality, for a detailed discussion and list of the mitigation measures being added to the Project. March JPA will monitor compliance through the MMRP. With regard to the 2003 Settlement Agreement, please see Topical Response 4 – Project Consistency.

I-788.15 This comment questions “Why was it not considered part of your plan?” It is unclear as to what the commenter is referring to in this comment. As such, no further response is provided.

I-788.16 This comment asks who will ensure that mitigation measures are followed when March JPA sunsets. In response to this comment, please see Topical Response 9 – Long-Term Project Implementation and Enforcement.

The remainder of this comment is similar to Comment FL-G.7 of Form Letter G – Traffic. In response to this comment, please see Form Letter G Response.

I-788.17 This comment cites general social and environmental concerns, including air pollution, water pollution, increased crime and traffic, increase of homeless and vagrant camps, a loss of aesthetics and scenic vistas, economic opportunity, and health risk for residents. The Draft EIR includes analysis for all the environmental topics raised in this comment through Chapter 4, Environmental Analysis. Please see Topical Response 1 – Aesthetics, regarding the Project’s aesthetics impacts. In addition, please see Recirculated Section 4.2, Air Quality, for further information regarding air quality, health risks, and the Project’s air quality and GHG project design features and mitigation measures, which have been revised and expanded to incorporate additional feasible mitigation in response to comments.

I-788.18 This comment summarizes the proposed Project, expresses general concerns about the Draft EIR and questions the jobs analysis in the Draft EIR. In response to this comment, please see Topical Response 5 – Jobs. Public benefits provided by the Project would include increased job opportunities for local residents, preservation of open space, extension of the roadway infrastructure and the pedestrian and bicycle circulation system, a new approximately 60-acre public park, and construction of the Meridian Fire Station, at the intersection of Opportunity Way and Meridian Parkway (see Topical Response 6 - Meridian Fire Station, for additional details). The comment also alleges the EIR mitigation measures are not supported by evidence. To the contrary, throughout the Draft EIR, the analysis explains how the mitigation measures are intended to reduced the Project’s impacts.

I-788.19 This comment raises concerns regarding public engagement. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. This comment also discusses a separate project located near Air Force Village West. This comment does not raise issues or concerns regarding the adequacy of the environmental analysis in the Draft EIR. The comment generally references construction impacts, views, light and noise, which are all addressed in the environmental analysis in the Draft EIR.

- I-788.20** This comment states the Project site was not intended for development. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. Although Exhibit 5-1 of the March JPA General Plan identifies the former Weapons Storage Area as SKR Open Space and the remainder of the Project site as SKR Management Area, the General Plan explains the intent to purchase better quality SKR habitat elsewhere so that “the lands currently designated for SKR management and open space purposes will be available for development.” Figure 1-4, Land Use Plan, of the March JPA General Plan designates the former Weapons Storage Area as Park/Recreation/Open Space and the remainder of the Project site as Business Park. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. The swap of March JPA lands, including the Project site, for more and better quality SKR habitat was the subject of the 2012 Settlement Agreement with the Center for Biological Diversity and San Bernardino Valley Audubon Society (Appendix S). Under the CBD Settlement Agreement, the land uses were inverted, with the Weapons Storage Area identified for development, along with a 60-acre park, and the remainder of the Project site identified as a conservation easement (see Figure 3-4 of the Draft EIR). Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. The Conservation Easement would provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses.
- I-788.21** This comment questions public engagement. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. With regard to an alternative without warehouses, please see Topical Response 8 – Alternatives, which includes the analysis of Alternative 5 – Non-Industrial Alternative.
- I-788.22** This comment presents a chart used by the US EPA for public engagement. The comment does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.23** This comment is similar to comments raised previously by the commenter regarding public engagement. Please refer to Response I-788.21 above. The comment does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.24** This comment discusses the commenter’s contacts and communications with March JPA regarding information requests, complaints about existing warehouses tenants and other activity and questions enforcement and accountability under the Draft EIR for the proposed Project. Regarding support received by outside parties, March JPA responded to a public records request from Mr. Shearer on April 17, 2023. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours

of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

Regarding the reversion of March JPA’s land use authority to the County in 2025, please see Topical Response 9 – Long-Term Project Implementation and Enforcement. The Draft EIR includes the information needed for evaluation and review of the Project’s potential impacts, and the required Project mitigation measures will be included in the MMRP, which will provide for monitoring, implementation, and enforcement of all mitigation measures, including those for noise, air and light pollution. Please see Section 4.11, Noise, for information regarding March JPA’s noise standards and noise impacts.

Regarding wildlife concerns, the Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity.

- I-788.25** With regard to public engagement, please refer to Response I-788.21 above. This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated. The remainder of this comment is similar to Comment FL-E.5 of Form Letter E – Project Consistency. In response to this comment, please see Form Letter E Response

- I-788.26** This comment is similar to Comment FL-E.6 of Form Letter E – Project Consistency. In response to this comment, please see Form Letter E Response

- I-788.27** This comment is similar to Comment FL-E.7 of Form Letter E – Project Consistency. In response to this comment, please see Form Letter E Response.

- I-788.28** This comment questions how the Project aligns with the goals of the 2003 and CBD Settlement Agreements. In response to this comment, please see Topical Response 4 – Project Consistency.

- I-788.29** This comment is similar to Comment FL-E.8 of Form Letter E – Project Consistency. In response to this comment, please see Form Letter E Response.

- I-788.30** This comment is similar to Comment FL-E.9 of Form Letter E – Project Consistency. In response to this comment, please see Form Letter E Response.

- I-788.31** This comment expresses general opposition to the Project and summarizes and repeats earlier comments. The comment also includes images of Exhibit B of the Final Reuse Plan and Table 1-1 of the General Plan. Please see Responses I-788.21 and I-788.22, and I-788.25 through I-788.30, above. Additionally, please see Recirculated Section 4.10, Land Use and Planning, for further discussion regarding the Final Reuse Plan and March JPA General Plan. The comment also refers to public land. The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- I-788.32** This comment refers to the March JPA General Plan and includes images of Exhibits 5-1 and 5-4. Please see Response I-788.20 above regarding the original intent for development of the Project site. The comment further references the draft update to the March JPA General Plan but this document was never adopted. Please see Response I-788-30, above regarding the Project's compatibility with surrounding uses.
- I-788.33** This comment questions whether the proposed Specific Plan's definition of Mixed Use is consistent with the General Plan's definition regarding warehousing. The March JPA General Plan excludes "major warehousing uses" from Mixed Use designated parcels. The proposed Specific Plan includes business enterprise within the Mixed Use designation. Business enterprise use is not major warehousing and is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale industrial warehouse activity. Under Table 3-1, West Campus Upper Plateau Specific Plan Land Use Table, of the proposed Specific Plan, all major warehousing uses (Warehouse – Medium, Warehouse – Heavy, High Cube Transload and Short-Term Storage Warehouse, High Cube Fulfillment Warehouse, High Cube Code Storage Warehouse, Parcel Delivery Terminal) are prohibited under the Mixed Use designation.
- Under Table 3-2 Development Standards, of the Specific Plan, Business Park and Mixed Use buildings greater than 100,000 square feet are required to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. The proposed Specific Plan's Mixed Use definition is consistent with the March JPA General Plan. The comment also refers to the privatization of public land. The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- I-788.34** This comment is about the general trend of warehouse development in Western Riverside County. The comment does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.35** This comment expresses general opposition to the Project and does not raise specific issues or questions about the environmental analysis included in the Draft EIR. The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. In response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative. The comment also states that the Project would place warehouses in the middle of a residential neighborhood. To clarify, the Project site is not developed with residential uses or designated for residential development. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park

Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations, of the EIR. The Conservation Easement would provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

- I-788.36** This comment raises concerns regarding the Draft EIR’s analysis of alternative sites and the lack of a non-warehouse alternative. The comment further speculates, without support, that the Draft EIR’s rejection of an alternate site is pre-decisional. “Although CEQA requires that an EIR identify alternatives to a project, it does not expressly require a discussion of alternative project locations. ([Pub. Res. Code] §§ 21001, subd. (g), 21002.1, subd. (a), 21061.) The CEQA Guidelines require a description of ‘a range of reasonable alternatives to the project, or to the location of the project,’ implying that an agency may evaluate on-site alternatives, off-site alternatives, or both. (CEQA Guidelines, § 15126.6, subd. (a).)” *Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 491. Chapter 6, Alternatives, of the Draft EIR considered and dismissed an alternate site. In response to the remainder of this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5 - Non-Industrial Alternative. The comment also describes the Project site as ‘public land.’ The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- I-788.37** This comment requests an alternative without industrial uses. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- I-788.38** This comment expresses support for Alternative 1 – No Project Alternative. The comment further expresses skepticism in the enforcement of mitigation measures. March JPA will monitor compliance through the MMRP. The comment does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.39** This comment requests an alternative without industrial uses. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.
- I-788.40** This comment describes and expresses support for three other alternatives to the proposed Project: “The Campus Approach,” “The Veterans Village Approach,” and “The State or County Park Approach.” See Topical Response 8 – Alternatives, for discussion regarding these suggested alternatives.
- I-788.41** This comment states that the Draft EIR did not evaluate cumulative impacts. Throughout Chapter 4, Environmental Analysis, within each section of the Draft EIR (i.e., Sections 4.1 through 4.18), potential cumulative effects were evaluated and disclosed in compliance with the requirements of CEQA. The comment states that different datasets were used throughout the document. As outlined in detail in CEQA Guidelines Section 15130, the cumulative analysis in an EIR can be based on either a list of past, present, and probable future projects producing related statewide plan, or related planning document. CEQA Guidelines Section 15130(b)(3) states that lead agencies should define the geographic scope of the area affected by the cumulative effect. As discussed in detail in Topical Response 7 – Cumulative Projects, the EIR identifies the geographic scope for each environmental topic and the method of

evaluation, consistent with the requirements of CEQA. For further information regarding cumulative projects and cumulative impacts, please see Topical Response 7 – Cumulative Projects.

- I-788.42** This comment questions the calculation and characteristics of jobs anticipated to be created by the proposed Project. In response to this comment, please see Topical Response 5 – Jobs.
- I-788.43** This comment requests an alternative to specifically employ college-educated workers. This comment is outside the scope of CEQA and does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.44** This comment describes socioeconomic conditions in the Project vicinity and Western Riverside County and questions the likelihood the Project would employ local residents. In response to this comment, please see Topical Response 5 – Jobs, for a discussion of local employment. The comment further raises concerns regarding potential traffic impacts on the roadway system. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Housing is addressed in Section 4.12, Population and Housing, of the Draft EIR.
- I-788.45** This comment discusses economic outlooks and gross domestic product, as well as socioeconomic conditions in the region and industrial job generation. This comment refers to general issues beyond the scope of the Project and the environmental analysis included in the Draft EIR. As such, no further response is provided. Specific comments regarding the Draft EIR are provided and responded to above and below.
- I-788.46** This comment discusses advances in automation and the potential effect that could have on economic conditions in Western Riverside County. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. As such, no further response is provided.
- I-788.47** This comment expresses general concern about the jobs associated with the proposed Project. In response to this comment, please see Topical Response 5 – Jobs, for a discussion of local employment. This comment does not raise specific issues or questions about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-788.48** This comment states that the Draft EIR does not sufficiently address cumulative traffic impacts. Most of this comment is repetitive of the commenter’s prior comments. As such, please refer to Responses I-788.11 through I-788.13, I-788.15 and I-788.16 above. Also, please see Topical Response 7 – Cumulative Projects.

The commenter requests that the traffic analysis look at a 5-mile radius from the Project site. Please refer to Response I-788.12 above. Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

- I-788.49** This comment asks about the funding and mitigation for fixing neighborhood roads, and enforcement of truck routes. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Regarding funding, commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).³ Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Additionally, regarding the transfer of March JPA's land use authority in 2025, please see Topical Response 9 – Long-Term Project Implementation and Enforcement.
- I-788.50** This comment acknowledges the Draft EIR's determination of significant and unavoidable air quality impacts and generally claims there are deficiencies in the analysis. Recirculated Section 4.2, Air Quality, assessed the Project's air quality impacts and health risks. More specific issues are addressed in responses below.
- I-788.51** This comment is the same as Comment FL-B.5 of Form Letter B – Air Quality. In response to this comment, please see Form Letter B Response.
- I-788.52** This comment is the same as Comments FL-B.6 and FL-B.7 of Form Letter B – Air Quality. In response to this comment, please see Form Letter B Response. The comment also repeats a question regarding zero emissions raised in Comment I-788.3 above. As such, please refer to Response I-788.3 above.
- I-788.53** This comment is the same as Comments FL-B.8 through FL-B.10 of Form Letter B – Air Quality. In response to this comment, please see Form Letter B Response. Additionally, this comment notes the potential toxic nature of parts of the munitions bunkers that would be removed under the proposed Project. In response to this comment, please see Recirculated Section 4.8, Hazards and Hazardous Materials, where additional information about the munitions bunkers is provided.
- I-788.54** This comment is the same as Comment FL-B.11 of Form Letter B – Air Quality. In response to this comment, please see Form Letter B Response.

³ <https://www.dmv.ca.gov/portal/dmv-research-reports/department-of-motor-vehicles-dmv-performance-reports/where-did-your-2020-fees-go/>

- I-788.55** This comment is the same as Comment FL-B.12 of Form Letter B – Air Quality. In response to this comment, please see Form Letter B Response.
- I-788.56** This comment questions the jobs information included in the Draft EIR. In response to this comment, please see Topical Response 5 – Jobs.
- I-788.57** This concluding comment is conclusory in nature and offers the commenter’s suggestions that a community advisory board be created and that March JPA advance one of the alternate plans recommended earlier in the comment letter. The comment also urges March JPA to reconsider the Project. The comment does not discuss the contents of the Draft EIR or raise any issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided. Responses to the commenter’s specific comments on the Draft EIR are provided and responded to above.

Subject: R-NOW Public Comment for the West Campus Upper Plateau DEIR
Attachments: R-NOW Alternate Plans.pdf

Dear Mr. Fairbanks,

Please see the attached letter written on behalf of the R-NOW Board of Directors. As the Draft EIR for the West Campus Upper Plateau did not have alternate plans with non-industrial land use, the community has drafted three alternate land uses for the West Campus Upper Plateau.

Thank you for your consideration on this matter.

Sincerely,

Jen Larratt-Smith
Chair, R-NOW

Jennifer Larratt-Smith, Chair

Planning Director
March Joint Powers Authority
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearhouse No.
2021110304

Dear Mr. Fairbanks:

I write on behalf of R-NOW’s Board of Directors in response to the Draft Environmental Impact Report (DEIR) for the West Campus Upper Plateau. My primary reasons is to submit three alternate land use plans generated by the community; but first, I want to set the context by detailing the relationship R-NOW has had with the March JPA over the past year. I ask that the March Joint Powers Authority (JPA) and the Commission consider community input in determining land use as your founding documents — the General Plan (1999) and the Final Reuse Plan (1994) — urge you to do.

I-789.1

Background: A Community Movement Opposing Warehouses

As you are well aware, R-NOW formed approximately a year ago at a developer’s meeting in opposition to the West Campus Upper Plateau proposal. At that February 24, 2022 meeting, the developer presented a footprint similar to the one in the DEIR, which now includes over 4.7 million square feet of industrial warehouses in an area surrounded on more than three sides by sensitive receptors: residential homes as well as a church which houses a thriving pre-school. The community raised objections at that time, but because developers largely ignored the relevant questions in the Zoom chat, and our own Councilmember, who in spite of supposedly

I-789.2

being a neutral Commission vote, was on the Zoom meeting praising the developers, saying, “I am very proud to stand with them,”¹ angered residents began to organize.

As many community members could not take time off their busy work and family schedules to attend Wednesday, 3 pm JPA Commission meetings, we began to email. At this point, the Commission has received hundreds of emails from R-NOW members with concerns about the development, urging Commission members to consider the negative impact it will have on surrounding communities.

Four R-NOW members met with Timothy Reeves, Grace Martin, Adam Collier, and you on April 21, 2022. At that meeting, we shared our concern about the West Campus Upper Plateau proposal. At that meeting, we reiterated our belief that his piece of land is unique. Unlike the many industrial warehouse complexes the Lewis Group has built, this one encroaches in a unique way upon our residential neighborhoods, as it is surrounded on more than three sides by homes. During the meeting, Adam Collier admitted that, to his knowledge, The Lewis Group has never built an industrial complex in an area like this before. Given the unprecedented negative impact that this development would have on the surrounding community, we urged you to consider non-industrial alternatives.

In that meeting, the developer and the JPA staff mentioned the need for low-density development as the primary reason you are proposing an industrial complex. However, in that meeting, we pointed out that most of the land has C2 zoning, the same zoning as the surrounding neighborhoods. Therefore, there are alternative projects that could be built there, including residential homes or high-tech business parks. Please specify in the final EIR what other land uses C2 allow for and why you did not pursue these options.

We left the meeting hoping that some of our concerns might lead to tangible changes in the project and continued to engage through public comment at meetings, emails, and petitions in the ensuing months. However, when the DEIR was released last month, it became clear that our feedback fell on deaf ears. There is no non-industrial alternative plan in the DEIR.

Our numbers steadily grew, as did our voice. Last May we submitted a petition with over 2,000 signatures of concerned residents, mostly from Riverside, Perris, and Moreno Valley, informing the Commission that there is widespread community concern about the plan as is. (Under separate cover, I submitted the now close to 2,800 signatures as public comment earlier on in January.) It went largely ignored.

I-789.2
Cont.

I-789.3

I-789.4

I-789.5

¹ Video of Councilmember Chuck Conder’s statement on February 24, 2022:
<https://riversideca.granicus.com/player/clip/5238?&redirect=true&h=ae844f6bc6ce6050d42195ec26c4320b>

In May we also hosted an R-NOW meeting, where the now Chair of the Commission, our Councilmember, attended and fed misinformation to the public regarding the development. He said repeatedly that the DDA restricted him from voting no, that it is illegal for him to do so, a statement that would indicate he is pre-decisional.² He repeated this misconception at a September 6 city council meeting in spite of the fact that his own City Attorney disagrees with this interpretation of the DDA.³

I-789.5
Cont.

On August 18, 2022, the developer had a public information night for the public. Over 100 members attended. We wrote comments and even signed a straw poll at the event. According to the straw poll, the attendees were unanimous, signing that they wanted non-industrial alternatives for this piece of land.

I-789.6

On October 26, 2022, in spite of community opposition and before the DEIR was even released, the Commission voted to amend the DDA and approve a Schedule of Payment for the development. It included payouts for the construction of four (yet unapproved) buildings. This looked pre-decisional to R-NOW, and we submitted a letter on November 28, 2022 informing you of this. It is also baffling to us that the same developer has been allowed to have a non-competitive agreement and option to buy every parcel of taxpayer land for their own profits for the past 30 years. Industrial warehouses are owned mostly by people not in the community and bring in trucks and pollution of workers who are travelling out of our area. They are bad economic investments if we are hoping to prosper the local community. The only person who truly profits off the land in this scenario is Randall Lewis. Of what benefit besides your dubious job claims (to be addressed later in this letter) would these monstrosities give to the community?

I-789.7

I-789.8

We also visited the only evening public comment the March Joint Powers Authority was willing to have on January 11, 2023 with approximately 100 residents online and in person. 40 speakers shared their opposition to the West Campus Upper Plateau. There were touching testimonies at this meeting, including a mother fighting for her child after another had died of cancer which she had in part because of environmental factors. The comments were unanimously in opposition. No one spoke in favor of the project. At that meeting we unanimously asked for a community advisory group similar to the TAC, which would give formal recommendations to the Commission. The Executive Director reached out the next day, but other than trying to get us to meet with the developer and go to yet another “community engagement meeting” which the developer had in May 9, these meetings proved fruitless. After meetings and emails back and

forth, the Executive Director told us that they will not form an advisory group in spite of their clear ability to do so in their bylaws because the March JPA is sunsetting soon.

I-789.9
Cont.

One of our R-NOW members, Jerry Shearer, has submitted a Public Information Act request asking for emails in support of the West Campus Upper Plateau. While the agency continues to ask for extensions, you yourself relayed privately to him that you have yet to find any.

We have been steadily and persistently engaging the process and the March JPA throughout the past year, so it is inexcusable that you have not considered our feedback or asked the developer to alter their plan in any way. The West Campus Upper Plateau proposal has not reduced one square inch of industrial development since February 24, 2022. If anything, it has increased the square footage since it has clarified that the business park parcels will also be industrial. Why weren't non-industrial plans considered?

I-789.10

The March JPA has not acted in good faith with the community. And in fact, the Chair of your Commission has been making inappropriate public statements that he cannot and will not vote no on this project. I have video proof of these pre-decisional statements. How is a public supposed to trust that the March JPA will consider the interests of the community in such a climate?

Lack of Responsiveness and Inconsistency with Founding Documents

The most disappointing part of our current situation is that it is in the March JPA's DNA to incorporate community preferences when repurposing our taxpayer land. Many of your founding documents address this, but these were all ignored in your DEIR.

I-789.11

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-789.12

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million

square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

- b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space
- d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from

I-789.12
Cont.

Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

I-789.12
Cont.

Non-Industrial Alternate Plans

As neither the JPA nor the applicant have shown interest in discussing nor offering alternate plans to industrial and logistics, members of the R-NOW community have worked with concerned members of government, business, and community to develop three reasonable alternatives to your plan for the West Campus Upper Plateau. In the past, the JPA, the developer, and Commission members blithely dismissed ideas proposed by the community, everything from a solar farm and energy storage facility to a winery to mixed use residential and commercial centers. All reasonable ideas seemed to fall on predetermined ears.

However, we (perhaps naively) remain hopeful that a course correction is possible. We believe the JPA and the developer's legacy does not have to be more warehouses pollution our air, jamming our roads, and bringing little to no benefit to our community. We believe the alternatives presented below would better serve the JPA's overall mission to repurpose federal land for the benefit of the community and would give Randall Lewis the opportunity to live up to the legacy he is hoping to establish in innovation, strategy, and sustainable development.

I-789.13

Today R-NOW is presenting three viable alternate plans for your consideration, alternate projects with considerable appeal to the community and with traits of realistic development opportunities for the JPA and the applicant. We hope that you will seriously consider these ideas, as we believe they would bring considerable community benefit and be compatible with adjacent land uses.

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology,

public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).

- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This plan would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

I-789.13
Cont.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses. And it is easily the most popular alternate plan offered here. The public is aware of and has asked for this plan as their clear first choice.

R-NOW members have even spoken with the National Parks Service about making alternate plan #3 a reality. There is funding available to do this and all agencies (JPA and the four member agencies) would profit from the establishment of such a park. The JPA could engage with the National Parks Service, for example, and initiate a BRAC agreement to purchase this incredibly unique land and preserve the entire property for the very reasons identified in the 2012 Center for Biological Diversity agreement which seeks to preserve a delicate desert riparian ecosystem, preserve historic and cultural artifacts (hidden well within your draft EIR so much so that I have yet to discover them), and protect (without discretion) threatened or endangered species like the Stephen's Kangaroo Rat and the burrowing owls located at the northern end of the property. Such an agreement would pay the JPA member agencies and immensely benefit the surrounding community by giving them recreation opportunities and serving as a buffer from the dreaded industrial sprawl that you are advancing without restraint. This solution is feasible, positive from all points of view, and something you have control over. It would serve as a compromise for all involved and would not negatively impact the airport/USAF.

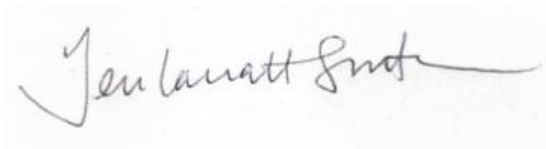

We are hopeful that you will consider the options presented and would be happy to speak with you further should you decide to further investigate any of these three options.

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearhouse No.
2021110304

Dear Mr. Fairbanks:

I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. As you are well aware, I founded a grassroots group of neighbors approximately a year ago at a developer's meeting in opposition to the West Campus Upper Plateau. At that February 24, 2022 meeting, the developer presented a footprint similar to the one in the DEIR, which now includes over 4.7 million square feet of industrial warehouses in an area surrounded on more than three sides by sensitive receptors: residential homes as well as a church which houses a thriving pre-school. The community raised objections at that time, but because developers largely ignored the relevant questions in the Zoom chat, and my own Councilmember, who in spite of supposedly being a neutral Commission vote, was on the Zoom meeting praising the developers, saying, "I am very proud to stand with them,"¹ angered residents began to organize.

As many community members could not take time off their busy work and family schedules to attend Wednesday, 3 pm JPA Commission meetings, we began to email. At this point, the Commission has received hundreds of emails from R-NOW members with concerns about the development, urging Commission members to consider the negative impact it will have on surrounding communities.

¹ Video of Councilmember Chuck Conder's statement on February 24, 2022:
<https://riversideca.granicus.com/player/clip/5238?&redirect=true&h=ae844f6bc6ce6050d42195ec26c4320b>

I-790.1

Four R-NOW members met with Timothy Reeves, Grace Martin, Adam Collier, and you on April 21, 2022. At that meeting, we shared our concern about the West Campus Upper Plateau proposal. At that meeting, we reiterated our belief that his piece of land is unique. Unlike the many industrial warehouse complexes the Lewis Group has built, this one encroaches in a unique way upon our residential neighborhoods, as it is surrounded on more than three sides by homes. During the meeting, Adam Collier admitted that, to his knowledge, The Lewis Group has never built an industrial complex in an area like this before. Given the unprecedented negative impact that this development would have on the surrounding community, we urged you to consider non-industrial alternatives.

I-790.1
Cont.

In that meeting, the developer and the JPA staff mentioned the need for low-density development as the primary reason you are proposing an industrial complex. However, in that meeting, we pointed out that most of the land has C2 zoning, the same zoning as the surrounding neighborhoods. Therefore, there are alternative projects that could be built there, including residential homes or high-tech business parks. Please specify in the final EIR what other land uses C2 allow for and why you did not pursue these options.

I-790.2

We left the meeting hoping that some of our concerns might lead to tangible changes in the project and continued to engage through meetings, emails, and petitions in the ensuing months. However, when the DEIR was released last month, it became clear that our feedback fell on deaf ears. There is no non-industrial alternative plan in the DEIR.

I-790.3

Our numbers steadily grew, as did our voice. Last May we submitted a petition with over 2,000 signatures of concerned residents, mostly from Riverside, Perris, and Moreno Valley, informing the Commission that there is widespread community concern about the plan as is. (Under separate cover, I submitted the now close to 2,800 signatures as public comment earlier on in January.) It went largely ignored.

I-790.4

In May we also hosted an R-NOW meeting, where the now Chair of the Commission, our Councilmember, attended and fed misinformation to the public regarding the development. He said repeatedly that the DDA restricted him from voting no, that it is illegal for him to do so, a statement that would indicate he is pre-decisional.² He repeated this misconception at a September 6 city council meeting in spite of the fact that his own City Attorney disagrees with this interpretation of the DDA.³

² Clips of Councilmember Conder at May R-NOW meeting:
<https://riversideca.granicus.com/player/clip/5239?&redirect=true&h=22f3c4bf4f7e312a83a042b12c844ffa> &
<https://riversideca.granicus.com/player/clip/5242?&redirect=true&h=99ab66fed54c91fd9db464b08a4e6a57>

³ Video clips from September 6, 2022 Riverside City Council Meeting:
<https://riversideca.granicus.com/player/clip/5247?&redirect=true&h=5e72b72100729dd1121f378e99b162f1> &
<https://riversideca.granicus.com/player/clip/5248?&redirect=true&h=7539b5b12d15673c348a77f2d09275e4>

On August 18, 2022, the developer had a public information night for the public. Over 100 members attended. We wrote comments and even signed a straw poll at the event. According to the straw poll, the attendees were unanimous, signing that they wanted non-industrial alternatives for this piece of land.

I-790.5

On October 26, 2022, in spite of community opposition and before the DEIR was even released, the Commission voted to amend the DDA and approve a Schedule of Payment for the development. It included payouts for the construction of four (yet unapproved) buildings. This looked pre-decisional to R-NOW, and we submitted a letter on November 28, 2022 informing you of this. It is also baffling to us that the same developer has been allowed to have a non-competitive agreement and option to buy every parcel of taxpayer land for their own profits for the past 30 years. Industrial warehouses are owned mostly by people not in the community and bring in trucks and pollution of workers who are travelling out of our area. They are bad economic investments if we are hoping to prosper the local community. The only person who truly profits off the land in this scenario is Randall Lewis. Of what benefit besides your dubious job claims (to be addressed later in this letter) would these monstrosities give to the community?

I-790.6

I-790.7

We also visited the only evening public comment the March Joint Powers Authority was willing to have on January 11, 2023 with approximately 100 residents online and inperson. 40 speakers shared their opposition to the West Campus Upper Plateau. There were touching testimonies at this meeting, including a mother fighting for her child after another had died of cancer which she had in part because of environmental factors. The comments were unanimously in opposition. No one spoke in favor of the project. At that meeting we unanimously asked for a community advisory group similar to the TAC, which would give formal recommendations to the Commission. The Executive Director reached out the next day, but other than trying to get us to meet with the developer and go to yet another “community engagement meeting” which the developer had in May 9, these meetings proved fruitless. After meetings and emails back and forth, the Executive Director told us that they will not form an advisory group in spite of their clear ability to do so in their bylaws because the March JPA is sunseting soon.

I-790.8

One of our R-NOW members, Jerry Shearer, has submitted a Public Information Act request asking for emails in support of the West Campus Upper Plateau. While the agency continues to ask for extensions, you yourself relayed privately to him that you have yet to find any.

I-790.9

We have been steadily and persistently engaging the process and the March JPA throughout the past year, so it is inexcusable that you have not considered our feedback or asked the developer to alter their plan in any way. The West Campus Upper Plateau proposal has not reduced one square inch of industrial development since February 24, 2022. If anything, it has increased the

square footage since it has clarified that the business park parcels will also be industrial. Why weren't non-industrial plans considered?

The March JPA has not acted in good faith with the community. And in fact, the Chair of your Commission has been making inappropriate public statements that he cannot and will not vote no on this project. I have video proof of these pre-decisional statements. How is a public supposed to trust that the March JPA will consider the interests of the community in such a climate?

The most disappointing part of this is that it is in the March JPA's DNA to incorporate community preferences when repurposing our taxpayer land. Many of your founding documents address this, but these were all ignored in your DEIR.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it

I-790.9
Cont.

I-790.10

I-790.11

explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

In this letter, I detail many of the specific concerns I have about the West Campus Upper Plateau proposal and its Draft Environmental Impact Report (DEIR). My concerns illustrate why I believe the DEIR to be inaccurate and incomplete, neither meeting the standards of CEQA nor

I-790.11

I-790.12

community preferences and needs. I end the letter sharing three non-industrial alternate plans drafted by R-NOW members. I hope you will seriously consider my feedback.

| Cont.

2003 Settlement Agreement

I am curious as to why the 2012 Settlement Agreement with the Center for Biodiversity is listed under the Appendices of this Draft EIR, but the 2003 Settlement Agreement with CAREE and CCAEJ is not. Is there a reason it was left off the webpage? Is it no longer legally binding? Are there terms of the agreement that the current project would violate? If so, could you make these clear to the public?

For instance, I notice that in the settlement terms of the agreement there are provisions for the reduction of semi-truck emissions. Have the terms for the section 2.1 been met on semi-trucks that will be travelling to and from the project site? How will you assure the public that these provisions will be enforced? Who holds the occupants accountable?

I-790.13

Have you been cooperating with AQMD to promote the use of bio-diesel or other clean fuels as outlined in 2.2.1?

I notice that in 2.5.3 the settlement asks that the developer construct physical constraints to make sure trucks cannot use Van Buren Blvd. Did the project applicant follow through with this item? I have seen semi-trucks on Van Buren every day when I drive to work. If you have not followed through on this item, are there plans to do so now? I have not seen plans for this in the project description.

Furthermore, to my knowledge, none of the March JPA sites have provided a site for a County Fire Station (2.6.3) or a Police Station (2.6.4). And while you have set aside 60 acres for a public park, you are only grading it and not providing for active recreation as outlined in the agreement (2.6.1). I note that for items 2.6.3 and 2.6.4 it specifies that you only need to provide a “site” for these amenities. However, for 2.6.1 it designates that you will actually provide the park, not merely the site for it. Have you chosen not to follow through with the terms of this settlement? If so, why and how was this decision made?

I-790.14

I-790.15

I notice that the Settlement Agreement on Item 2.4.2 says “Parties agree that no land use meeting the description of Logistics Warehouse, will be developed on lots 54, 55, 56 as identified in the Approvals, or within the Industrial area west of ‘Z’ street if these lots are modified to realign with ‘Z’ street.” In Exhibit A of the Settlement Agreement, “Z” Street appears to be Meridian Parkway. Clearly, this term of the settlement agreement were to protect the residential homeowners west of the project by limiting the kind of industrial land use adjacent to them. The West Campus Upper Plateau is even further west of “Z” Street and encroaches on our residential

I-790.16
↓

neighborhoods. How do you justify building an industrial complex of over 4.5 million square feet full of logistics warehouses which violates the intention behind this settlement agreement?

I request that the Final DEIR include the 2003 Settlement Agreement and that it address how it does or does not meet its terms. In the ways that it does not meet the terms of the agreement, I would like an explanation as to why the applicant has been allowed to deviate from them.

Good Neighbor Guidelines

On March 30, 2022, I sent an email to Adam Collier and to you attaching the Attorney General’s Best Practices and Mitigation measures asking you to address its points in the draft EIR, which you did not do. For instance, it advises that warehouses be set back at least 1000 feet from sensitive receptors, but according to your site plan, several of the 100,000 square foot warehouses on the north side are 300 feet from homes. The document also suggested a community advisory board in the early stages of the process. Although quite late in the process, R-NOW’s request to form an advisory board for the March JPA but were told no in spite of close to 40 speakers asking for this at a public meeting on January 11, 2023. There are also many guidelines designed to mitigate air quality of greenhouse gas emissions that you did not include, even though you conceded that air quality would have “significant and unavoidable” impacts.

My understanding is that the March JPA has no Good Neighbor Guidelines in spite of the fact that every entity that makes up the JPA does. How is it that a public agency can refuse to adopt any of the land use limitations of its adjacent jurisdictions? It honestly makes me question the legality of public agencies like the JPA. It is almost as if they are formed to avoid accountability.

Even if you are not beholden to specific Guidelines, I would hope you would be beholden to your public (and recorded) spoken words and written agreements. At the September 6 City Council meeting, the Executive Director Dr. Grace Martin said in a presentation to the Council that the March JPA would “meet or exceed” the City of Riverside’s Good Neighbor Guidelines, but the plan as presented violates it in several ways:

1. Mixed use zones allow warehouses in the ‘business park enterprise’ setting. This would not be allowed based on City of Riverside Title 19 standards, and isn’t allowed in the current March JPA general plan or in any other specific plan area of the March JPA.
2. The mixed-use parcels in the southwest corner of the warehouse complex are clearly within 800’ feet of the Grove Church and are 9.12 and 7.84 acres, respectively. The Grove Church is in a residential zone. At a FAR of 0.35 – the warehouses in these parcels do not currently conform to the 100,000 square feet limit for City of Riverside Title 19 standards and thus do not appear to guarantee City Guidelines would be implemented based on current parcel sizes.

I-790.16
Cont.

I-790.17

3. Building heights in the industrial zone have a max height of 50 feet as shown in the Specific Plan and building plot plans. City of Riverside standards are 45 feet max height. This does not meet or exceed City guidelines, especially given that these buildings are on a hill 50 to 75 feet higher than surrounding homes in Mission Grove and Camino Del Sol. This may also fall afoul of the GNG neighborhood character goal 1 related to heights and setbacks, for industrial uses to ‘minimize visual impacts.’ Similarly, the warehouse complex screens industrial mega-warehouses using smaller warehouses as screens. That seems ineffective at minimizing visual impacts.
4. Health risk assessment sensitive receptors did not include the proposed park to be used for active recreation less than 100 feet from warehouses. The park is extremely likely to be used for preschool children and active recreation that will enhance breathing rates leading to higher exposures for these children. Riverside Good Neighbor Guidelines clearly state that a health risk assessment should be performed and diesel exposures to sensitive receptors (schools, parks, playgrounds, etc.) should be **minimized**. This park is likely to receive higher doses of diesel PM and NOx due to its closer proximity to the proposed warehouses yet is not included in the health risk assessment at all as a sensitive receptor location (see appendix C2 Exhibit 2-D).
5. The construction phase noise mitigation does not seem to be consistent with city Good Neighbor guidelines to ‘minimize’ noise, allows blasting, and allows noises starting at 6 AM until 10 PM, rather than the city 7-7 guidelines.
6. The City Good Neighbor Guidelines are in flux. The City’s Land Use Committee is considering adding a 1,500 foot setbacks for warehouses over 500,000 square feet. They are also looking at revising the FAR to include cumulative impacts, not allowing more than 3x a the maximum building size within a given range. If either of these policies become a reality, the development would violate the City’s guidelines.

I-790.17
Cont.

Doubtless, the March JPA will say that they are not beholden to adjacent jurisdictions and their Good Neighbor Guidelines, but it is frustrating to the community that you hold yourself to no standard but are allowed to say publicly that you will and that you do. The continued misinformation from the March JPA has not engendered trust with R-NOW over the past year.

Hazards and Hazardous Waste

The West Campus Upper Plateau is a unique site in that it has been the location of 16 munitions bunkers for almost a century. March AFRB is known for having B-52 bombers fly in and out of the base, which carried nuclear weapons. “The B-52B’s maximum bomb load was 43,000 pounds (19,505 kilograms). It could carry a maximum of 27 1,000-pound conventional explosive bombs. For strategic missions, the bomber carried one Mark 6 nuclear bomb, which had a yield ranging from 8 to 160 kilotons, depending on Mod, or two Mark 21 thermonuclear bombs, each with a

I-790.18

yield of 4–5 megatons.”⁴ It stands to reason that the munitions bunkers constructed to hold weapons would be where nuclear weapons would be stored when not on the planes. How were they stored? How were they transported? How deep underground would they have been housed?

I-790.18
Cont.

There are many other kinds of planes and ammunition that have flown through March Airforce Base over the years as well including the Condor B2, the Keystone C4, B-29’s, B-47’s and KC-97’s, all carrying various forms of conventional and thermonuclear armaments that would presumably be stored in the munitions bunkers.⁵ Has the soil been tested for residue from any of these weapons? If so, how deep did you test in the soil? There are rumors that the munitions bunkers also housed Agent Orange and perhaps other chemical weapons that may have leached into the soil as well. The railroad tracks that used to run along the property were rumored to have been built because the military did not want to carry chemical weapons by truck. I submitted FOIA to March Air Force Base last year requesting information on what had been stored in the munitions bunkers. They responded that they did not have these records.

Does the March JPA have records of what was stored in those bunkers? If so, please release them. The public and the decision-makers deserve to know what is in the soil before it is disturbed. If you do not have records, then it is incumbent upon the March JPA to test for all possible toxic substances that may have leached into the soil. You will not find what you have not tested for. And I submit that your hazards section does not do a comprehensive test of the soil to ensure safety to the surrounding residents given the uniqueness of the munitions bunkers history, especially given that there is also an unexploded munitions ordinance that has not been properly addressed or mitigated in the Draft EIR either.

I-790.19
Cont.

I request that rather than spot test, the March JPA ask for grid testing of the entire West Campus Upper Plateau, especially in the areas where the soil will be disturbed. I also ask that the testing go deeper than merely five feet. How were weapons stored? Were they at ground level? If they were stored below ground, presumably any harmful substances might would be lower than five feet, especially when it may have leached into the soil decades ago.

The March Air Force Base (and The West Campus Upper Plateau in particular) has also been designated as a Superfund site. Why weren’t substances known to be present at the March Base tested for in your Draft EIR? The EPA has a full contaminants list for the March Air Force Base at this site.⁶ I request that the site be tested for all of the contaminants known to be on the base. How did you determine which chemicals to test for and which to omit? Why didn’t you test of known contaminants (e.g. PFAS, perchlorate) that are likely to be on site given the operations of the area?

I-790.20
Cont.

⁴ Source: <https://www.thisdayinaviation.com/tag/march-air-force-base/>

⁵ Source: <https://www.militarymuseum.org/MarchAFB.html>

⁶ Contaminant list:

<https://cumulis.epa.gov/supercpad/SiteProfiles/index.cfm?fuseaction=second.contams&id=0902761>

I also note that on the EPA website it only passes three of the five performance measures. Currently, there is a “no” on performance measures for Construction and Sitewide Ready for Anticipated Use.⁷ Can you please explain why these factors are still rated as “no”? What additional mitigations might the March JPA need to take given that these performance measures have not been cleared by the EPA yet? Can you tell the public what specific mitigations still need to occur to make the site ready for anticipated use?

I-790.21

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), the contaminants identified on the EPA contaminant list for the site, and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

I-790.22

In the Final EIR, please also address how the PCB-contaminated soil is to be treated, given its concentration is well over a ppm.

I-790.23

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

I-790.24

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, I ask that these materials be removed.

Environmental Justice

According to SB 1000 which was signed into law in 2016, local jurisdictions need to identify environmentally disadvantaged communities in their regions and address environmental justice in their General Plans. Neither the General Plan for the March JPA nor the Draft EIR for the West Campus Upper Plateau include an Environmental Justice section.

I-790.25

⁷ Performance Measures for March AFRB site:
<https://cumulis.epa.gov/supercpad/SiteProfiles/index.cfm?fuseaction=second.Healthenv&id=0902761#Perform>

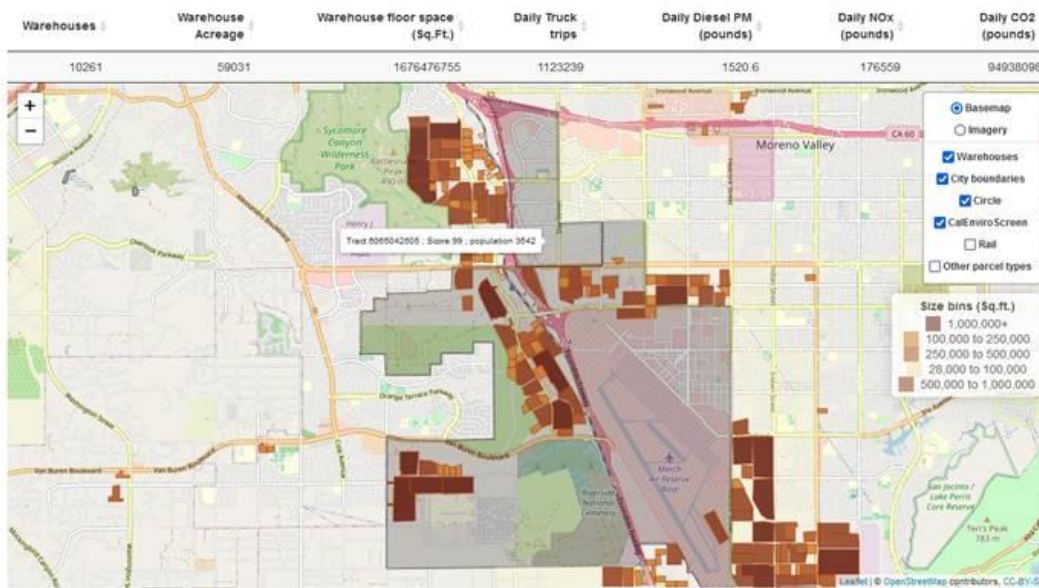

CalEnviroScreen is the state indicator of “Pollution Burden.” It weighs pollution exposure and socioeconomic factors in the affected census tract. Two socioeconomically disadvantaged census tracts in our area are directly affected by this project.

Tract 06065046700 is overlaid directly on the March JPA planning area. It is 98th percentile pollution burden and has a population of 4721.

Tract 06065042505 is north of Alessandro and East of the 215 along the old 215 frontage road. It is 99th percentile burden and has a population of 3542.

The picture below is from the Warehouse CITY app:

<https://radicalresearch.shinyapps.io/WarehouseCITY/>. It shows both the area with the 06065042505 tract moused over.

I-790.26

As General Plan (1999) Goal 2, Policy 2.4 directs the March JPA to “protect.. adjacent residents,” the March JPA should reject upzoning the West Campus Upper Plateau to allow for industrial uses given the heavy industrial uses that already surround these communities. They cannot afford further degradation of their air quality and quality of life.

At the very least, the March JPA needs to be transparent as to ways these already environmentally-vulnerable communities will be negatively impacted by this project. Please include an Environmental Justice section in your Final EIR detailing impacts and offering mitigations to address environmental justice.

I-790.27

Jobs

Jobs has been the only justification I have heard from the March JPA as to why they are proposing industrial warehouses for the West Campus Upper Plateau. However, this justification doesn't hold up to further scrutiny..

I-790.28

Consider:

1. **There are not enough unemployed people in the local area to fill the number of jobs that the logistics industry claims they are creating.** If we look at the population in our region, there are approximately 630,000 residents (Riverside 318k, MoVal, 212k, Perris 80k, Mead Valley 20k). Based on employment statistics, we can safely estimate approximately 300,000 employed working-age people and 11,000 unemployed (based on the 3.5% unemployment rate). Even adding in another 100 or 200k from unincorporated areas like Woodcrest, Nuevo, and Sun City, there is no where near enough capacity for the jobs the industrial sector is claiming. The World Logistics Center is supposed to generate 35,000 jobs⁸. Stoneridge Commerce Center is 10,000+ jobs.⁹ There's no way this region can add 45,000 jobs in just warehouses locally. Even if everyone who turned 18 decided to work in warehouses for 10 straight years.

I-790.29

2. **The majority of warehouse jobs are low-wage and temporary work with reduced hours, and workers could not afford to live in the local area.** Per Indeed.com, the average annual salary of a warehouse associate in Riverside, CA is \$35,160.¹⁰ Even if we assume a resident is fortunate enough to find a warehouse job that provides 40 hours a week for 12 months out of the year, a rare find in this industry, a person could not afford to live in the local area. According to rentdata.org, the fair market rent for a 1-bedroom apartment in the 92508 zip code is \$1398/per month.¹¹ As of January 2023, the median home price for the zip code 92508 is \$667,500.¹² Even a warehouse associate were to find a rare, steady, full-time job, they would have to pay an unsustainable amount of their paycheck to rent. These jobs cannot and will not serve the local residents.

I-790.30

3. **The logistics industry has actually weakened the economic outlook of our region overall.** According to the SCAG December 2022 economic outlook report,¹³ "In 2001, GDP per capita in Riverside County and San Bernardino County were 64 percent and 69 percent of U.S. per capita GDP, respectively. When compared to the Rest of California, the ratios are worse: 52 percent and 56 percent....Moreover, by 2022, Riverside County's

I-790.31

¹⁰ Data obtained at <https://www.indeed.com/career/warehouse-associate/salaries/Riverside--CA>

¹¹ Data obtained at <https://www.rentdata.org/lookup>

¹² Data obtained at <https://www.redfin.com/zipcode/92508/housing-market>

¹³ https://scag.ca.gov/sites/main/files/file-attachments/briefing_book_2022_final.pdf?1669774904

position had deteriorated to a per capita GDP of only 59 percent of the U.S. level and 40 percent of California. San Bernardino County was at least able to improve to 71 percent of the U.S. level, but still fell to 48 percent of the rest of California level. These numbers are alarming, especially given the success of the Logistics Industry. They imply that the impressive job growth in the Inland Empire since 2001 resulted in numerous jobs, but they tend to be relatively lower paying jobs compared to other parts of the state and nation. This explains, in part, why such a large number of workers prefer to commute into the coastal areas, despite the heavy cost involved in terms of time lost on the road. It also explains why the Inland Empire's per capita GDP has sunk to a rank of 340 out of 386 MSAs, despite being the twelfth largest by population count" (underlining added for emphasis).

4. **As recently detailed in an article in the Press Enterprise,¹⁴ the vast majority companies who own and operate the warehouses in the Inland Empire are not local.** To quote the article: "According to the study, companies with Denver, Colorado addresses are the top owners of Inland warehouse space and control 118.7 million square feet. Newport Beach came in second with 107.2 million square feet, followed by Irvine with 69.3 million, Los Angeles with 68.6 million and Chicago with 61.4 million. Of the top 15 Inland warehouse owners, the only local entry was Ontario, with 30.7 million square feet."

Note in the table below that **none** of the March Joint Powers Authority warehouses are owned locally. This means that the business owners and the white-collar office jobs (i.e. the higher-paid employees) live outside of the region. The Inland Empire simply becomes cheap land and cheap labor for them. In other words, our resources are being exploited. We pay all the costs in terms of air quality, traffic, and decreased quality of life but reap very few of the benefits. The community demands better use of this land that prioritizes local business and prioritizes quality high-paying jobs.

I-790.32
Cont.

- 5. **Industrial is the worst land use possible when it comes to job generation.** Warehouses provide 0.000212 jobs per square foot and are the lowest economic jobs density of any professional category. It is literally the worst job creator per unit of land there is.

I-790.33

I-790.33
Cont.

6. **Automation may lead to mass unemployment if we overinvest in this industry.**

According to the December 2022 SCAG report quoted above: "Over the long-run, Logistics will likely go through a transformation as advances in automation and artificial intelligence displace workers. This means that the industry may continue to thrive, but it may not support the same number of workers as it presently does. In turn, the region must look to other industries as sources of employment and output growth... There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot." (underlining added for emphasis).

I-790.34

I urge the March JPA to think harder before making the jobs argument for the West Campus Upper Plateau. We do not need 2,600 more warehouse jobs in this region. We are already oversaturated with the logistics industry and need to think more creatively about land uses so that it benefits the local region and doesn't simply line the pockets of developers.

I-790.35

Greenhouse Gas Emissions

I have already established in the section above that job numbers generated in the DEIR are problematic. Given that the region is already creating more warehouse jobs than there are unemployed people and that most of the workers would not be able to afford to rent or own in the

I-790.36

local vicinity, the assumptions underlying your Greenhouse Gase Emissions VMT are fundamentally flawed. You base your VMT on the assumption that workers would actually shorten their commute because locals will want to work at the West Campus Upper Plateau. How can you make this assumption when its clear that workers will have to commute from outside the area since there are not enough physical workers in the area to fill the projected vacancies? Furthermore, the assumption that local residents will give up their current job to work a seasonal, low-paying job of hard labor, especially when it has already been established that the vast majority of jobs will not generate enough income to afford an apartment in the area, is beyond absurd. How did you generate your numbers? Can you justify your assertion that commutes will decrease from 21 miles to 16 miles? Without justification, it feels as though numbers were fabricated to downplay project impacts.

I-790.36
Cont.

I can honestly say that when I share your Greenhouse Gas VMT logic to anyone who lives in the neighborhood, the response is to laugh out loud. It is an absurd work of fiction that does not stand up to the test of common sense. Please provide substantiation that holds up in the real world. What you have presented is misleading to the public.

Population and Housing

Furthermore, once you consider the actual job numbers for the region and the fact that there are not enough local workers to fill job vacancies, you must then consider the population and housing impacts of importing workers from outside the area. The Draft EIR acknowledges the City of Riverside is mandated by state law to provide adequate housing but fails to recognize that the City is failing to meet its state-mandated goals for any of four categories of housing ranging from very-low income to above-moderate income, with very-low income housing being wholly inadequate. The City’s overall compliance has been rated as “D” on a scale of “A-F”. Similarly, the cities of Perris and Moreno Valley and the unincorporated areas of Riverside County have been rated “D+”.¹⁵ Nevertheless, the Draft EIR rather blithely suggests that no new housing will be needed because the employees can be housed in the surrounding communities even though there is little such current availability. The Final EIR should be corrected to reflect honestly the actual challenges presented by increasing the number of employees in an area that already lacks sufficient housing for its citizens.

I-790.37

As you can see, once the flaws in the jobs assumptions are exposed, the entire Draft EIR analysis falls like a line of dominoes.

¹⁵ Source: <https://www.ocregister.com/2023/01/17/housing-scorecard-grades-breakdown/>

Traffic

Your omission of the 215 freeway from your analysis is grossly deficient. The freeway is less than one mile from the project, and the route you've determined the trucks will travel, yet you do not analyze the impact it would have on existing traffic conditions. You also failed to consult with CalTrans about the project. Anyone who drives on 215 near the 60 interchange has experienced gridlock at all hours of the day. Often when I drive this area of the freeway, my car is hemmed in by six-axle trucks. And this is describing *existing* traffic conditions. Your traffic analysis does not include cumulative impacts. It does not acknowledge the traffic that will be generated by other mega-warehouse projects in the area which have already received approval like the World Logistics Center. Your responsibility in assessing cumulative impact is not simply to look at current conditions but what conditions are likely to be in the year when the project is built, so your failure to include the nearby approved but unbuilt warehouse projects makes your analysis deficient according to CEQA.

I-790.38

You also do not analyze the potential impact on arterial streets such as Alessandro and Van Buren. While the truck routes you create are supposed to avoid these streets, anyone who drives these streets regularly to drop kids off at school or to work (as I do) know that semi-trucks violate their established truck routes all the time. Sometimes when police pull over trucks to cite drivers or when a trucker gets into an accident on one of these City streets, it backs the traffic up for hours making my children miss their morning classes. Moreover, the trucks' illicit use of these routes is precisely because of the aforementioned back up on the 215 and the 60.

I-790.39

In your DEIR analysis, you ought also to consider that trucks do 2,500 times the damage of a car to our streets and highways.¹⁶ The impact of over 2000+ diesel trucks daily on our roads will be immense. These details need to be better factored into the maintenance costs for local roads and highways in your Final EIR.

I-790.40

Lack of Non-Industrial Alternatives

As so many community members shared at the evening public comment period at the March Joint Powers Authority Commission meeting on January 11, 2023, the community is disappointed in the Draft EIR's lack of non-industrial alternatives. We understand that the land is zoned C-2 and reject the continued repetition of mistruths that industrial warehouses are the "only thing that can be built there." We know that the developer's primary objective is to make The Lewis Group money.

I-790.41

As a public agency formed to repurpose excess taxpayer land, the March Joint Powers Authority ought to have a different objective - to identify land uses that serve the surrounding community.

¹⁶ Source: <https://www.insidescience.org/news/how-much-damage-do-heavy-trucks-do-our-roads>

In spite of our steady and vocal opposition to industrial plans as detailed at the beginning of this letter, the Draft EIR contains no non-industrial alternative.

As it appears the March JPA has not yet pushed the developer to come up with alternative plans, allow me to share three options that R-NOW have identified, land uses which would actually bring benefit to the community.

1. Alternate plan #1: The Campus Approach

- *Concept:* University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- *Environmental Analysis:* No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- *Project Objectives:* Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus not would not be connected under this plan).

- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open-space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and a unique ecological habitat.

2. Alternate plan #2: The Veterans Village Approach

- *Concept:* A veteran's village that incorporates open-space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- *Environmental Analysis:* No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in

I-790.41
Cont.

conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- *Project Objectives:* Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open-space. This plan would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- *Concept:* A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- *Environmental Analysis:* These public parks help revitalize communities impacted by the closure of the military bases, providing close to home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- *Project Objectives:* Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- *Conclusion:* Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offer residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses. And it is easily the most popular alternate plan offered here. The public is aware of and has asked for this plan as their clear first choice.

Members of R-NOW have already spoken with the National Parks Service about making alternate plan #3 a reality. There is funding available to do this and all agencies (JPA and the four

I-790.41
Cont.

member agencies) would profit from the establishment of such a park. The JPA could engage with the National Parks Service, for example, and initiate a BRAC agreement to purchase this incredibly unique land and preserve the entire property for the very reasons identified in the 2012 Center for Biological Diversity agreement which seeks to preserve a delicate desert riparian ecosystem, preserve historic and cultural artifacts (hidden well within your draft EIR so much so that I have yet to discover them), and protect (without discretion) threatened or endangered species like the Stephen's Kangaroo Rat and the burrowing owls located at the northern end of the property. Such an agreement would pay the JPA member agencies and immensely benefit the surrounding community by giving them recreation opportunities and serving as a buffer from the dreaded industrial sprawl that you are advancing without restraint. This solution is feasible, positive from all points of view, and something you have control over. It would serve as a compromise for all involved and would not negatively impact the airport/USAF.

I-790.41
Cont.

Conclusion

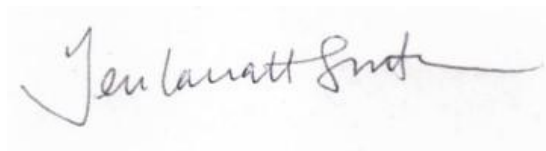

It is clear from the analysis above that the Draft EIR fails to properly convey the actual impacts of over 4.7 million square feet of warehouses in the West Campus Upper Plateau, nor does it incorporate community input or present non-industrial alternative plans. As the purpose of CEQA is to present clear and accurate information for how a project will affect the environment and the public, these oversights make this Draft EIR insufficient, and the project cannot be approved as is without being in violation of CEQA.

I-790.42

Moreover, considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Jennifer Larratt-Smith

Letter I-790

Jen Larratt-Smith

March 9, 2023

- I-790.2** This comment is the same as Comment I-789.3. As such, please see Response I-789.3, above.
- I-790.3** This comment is the same as Comment I-789.4. As such, please see Response I-789.4, above.
- I-790.4** This comment is the same as Comment I-789.5. As such, please see Response I-789.5, above.
- I-790.5** This comment is the same as Comment I-789.6. As such, please see Response I-789.6, above.
- I-790.6** This comment is the same as Comment I-789.7. As such, please see Response I-789.7, above.
- I-790.7** This comment is the same as Comment I-789.8. As such, please see Response I-789.8, above.
- I-790.8** This comment is the same as Comment I-789.9. As such, please see Response I-789.9, above.
- I-790.9** This comment is the same as Comment I-789.10. As such, please see Response I-789.10, above.
- I-790.10** This comment is the same as Comment I-789.11. As such, please see Response I-789.11, above.
- I-790.11** This comment is the same as Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-790.12** This comment refers to the comments on the Draft EIR that follow. No specific issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR are raised in this particular comment. As such, no further response is provided.
- I-790.13** This comment questions the relationship of the 2003 Settlement Agreement to the proposed Project. In response to this comment, please see Topical Response 4 – Project Consistency, for analysis of the Project’s consistency with the 2003 Settlement Agreement.
- I-790.14** This comment questions the provision of sites for a new County Fire Station and Police Station under the 2003 Settlement Agreement. Regarding the fire station site, the applicant previously dedicated a 2.12-acre parcel at the northeast corner of Meridian Parkway and Opportunity Way to the County of Riverside. As discussed in more detail in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, the Project Development Agreement includes the construction of the Meridian Fire Station as a Community Benefit. Regarding the police station site, the applicant dedicated a site to the City of Riverside for a Police Station off of Barton Road in Meridian South Campus, which the City of Riverside then relinquished back. In response to this comment, please see Topical Response 4 – Project Consistency, for analysis of the Project’s consistency with the 2003 Settlement Agreement.

I-790.15 This comment questions whether or not a 60-acre park would be provided. As evaluated through the Draft EIR, a 60-acre park is part of the proposed Project. This comment also asserts that the Project only includes the grading of the park, rather the provision of active recreation outlined in the 2003 Settlement Agreement. As described throughout the Draft EIR, the park “would be developed as an Active Park, including a playground, multi-use sports fields that could be used for soccer, football, and field hockey, and trails with cardio stops for recreational users.” In response to this comment, please see Topical Response 4 – Project Consistency, for analysis of the Project’s consistency with the 2003 Settlement Agreement.

I-790.16 This comment continues to question the relationship of the 2003 Settlement Agreement to the proposed Project. In response to this comment, please see Topical Response 4 – Project Consistency, for analysis of the Project’s consistency with the 2003 Settlement Agreement.

I-790.17 This comment details previous correspondence with the developer and March JPA regarding the Attorney General’s Best Practices and Mitigation Measures and indicates that it is not addressed in the Draft EIR as the commenter had requested. Presumably, the comment is referring to the Attorney General’s “Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act” (AG Warehouse Guidance). For an analysis of the Project’s consistency with the AG Warehouse Guidance, please see to Topical Response 2 – Air Quality.

This comment questions the Project’s Consistency with the City of Riverside’s Good Neighbor Guidelines. For analysis of the Project’s compliance with the Good Neighbor Guidelines for the County of Riverside and the City of Riverside, please see Recirculated Section 4.10, Land Use and Planning, and Topical Response 4 – Project Consistency. As discussed in Recirculated Section 4.10, Land Use and Planning, the purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City’s Guidelines, demonstrating consistency provides additional support for the Project’s compatibility with surrounding land uses.

I-790.18 This comment questions how nuclear weapons were stored at, and transported to and from, the Project site. The comment also questions at what depth the weapons were housed. In response to this comment, for a discussion of past uses of the Specific Plan Area and a summary of environmental investigations and remedial activities, including nuclear and chemical weapons, please refer to Recirculated Section 4.8, Hazards and Hazardous Materials.

I-790.19 This comment asks about what other weapons were stored at the Project site and asks for more details about testing that has been completed at the Project site. The environmental status of the Specific Plan Area has been fully characterized based on years of analysis under the oversight of multiple regulatory agencies, including United States Environmental Protection Agency, the Department of Toxic Substances Control, and the Regional Water Quality Control Board, in addition to numerous studies prepared in connection with the Project itself, including a Phase I Environmental Site Assessment (ESA) and Phase II ESA. The Phase I ESA assesses whether soil or other additional testing is necessary to characterize the extent, if any, of contamination on the Specific Plan Area. The Phase I ESA may not include constituents of concern (COCs) that have been fully investigated and/or remediated on the Specific Plan Area already. The Phase II ESA sampling was conducted as a result of the

recommendations in the Phase I ESA. The Phase II ESA found that all constituents of concern in soil samples collected during the Phase II ESA were below commercial/industrial screening levels.

As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, additional research confirms that all COCs in soil samples collected during the Phase II ESA are also below construction worker and residential screening levels. The Phase I determined the depths at which COCs could be encountered and the Phase II sampled to those depths. Given that all COCs in soil in the Phase II ESA are below the most conservative residential and construction worker standards, rather than only the required commercial/industrial standards, there is no indication that any COCs would be encountered below those depths. As confirmed in Recirculated Section 4.8, Hazards and Hazardous Materials, the environmental soil sampling was completed “in the locations, and to the depths, judged appropriate based on the potential concern for the former Ordnance Storage Facility/Weapons Storage Area activities to have caused a potential impact to shallow soils. Historical research indicates these former activities occurred at the existing site grade. There is no indication of former activities/features likely to have caused a release (of the chemicals of concern for which analyses were completed) that originated well below the existing ground surface (such as deeply buried tanks or pipelines, etc.). Leighton completed various environmental soil sampling trenches to five feet deep below ground surface (bgs), as well as environmental sampling borings to approximately 25 to 30 feet bgs. ... Given the known site conditions, and future planned site usage, the depth of environmental investigations were appropriate.” As such, no further sampling or analysis is required. Please refer to Recirculated Section 4.8, Hazards and Hazardous Materials, for further discussion of the Specific Plan Area’s environmental characterization.

I-790.20 This comment questions why sampling for certain substances was not conducted in connection with the Draft EIR and questions how March JPA determined which chemicals to test for and which to omit. The comment also cites a known contaminants list for the March AFB provided by EPA. This list refers to the entire March AFB, of which the Specific Plan Area is only a portion. The soil on the remainder of the Project site, such as the 445.43 acres under the Conservation Easement, will not be disturbed in connection with the Project. As noted above, a Phase I ESA was prepared for the Specific Plan Area. The Phase I ESA assesses whether soil or other additional testing is necessary to characterize the extent, if any, of contamination on the Specific Plan Area *based on previous activities on the Specific Plan Area*. The Phase I ESA may not include constituents of concern (COCs) that have been fully investigated and/or remediated at the Specific Plan Area already, as is the case with the PFAS, one of the “known contaminants” cited by the comment. For a further discussion of PFAS testing at the Specific Plan Area, please refer to Recirculated Section 4.8, Hazards and Hazardous Materials. With respect to perchlorate, there is no information that indicates perchlorate would be present in soil on the Specific Plan Area. As discussed in Recirculated Chapter 3, Project Description, the proposed Project is located in a former munitions storage area, in which munitions (and later fireworks) were stored indoors in secured concrete bunkers. As part of the Phase I, the concrete bunkers were inspected and the environmental professional noted that the “bunkers are constructed entirely of concrete” and that “[n]o evidence of floor pitting or staining was observed in the bunkers, and the concrete flooring was noted to be in excellent condition.” As such, there is no pathway for perchlorate to the soil. There is no information to indicate that munitions or fireworks were disposed of in the Specific Plan Area and no indication that fireworks were manufactured on site and, as such, there is no evidence indicating a release of perchlorate to soil. CEQA does not require speculation. See, e.g. *Laurel Heights Improvement Assn. v Regents of Univ. of Cal.* (1993) 6 Cal.4th 1112, 1137. Please refer

to Recirculated Section 4.8, Hazards and Hazardous Materials, for further discussion of environmental characterization of the Specific Plan Area and for a discussion of munitions disposal investigations.

- I-790.21** This comment refers to the same EPA Superfund summary website referenced in Comment I-790.20 and notes that the March AFB only meets 3 of the 5 Performance Measures required for site reuse. As noted above, this Superfund listing is for the entire March AFB, of which the Specific Plan Area is only a portion. There are ongoing remedial efforts on other portions of the March AFB, none of which are located in the Specific Plan Area and none of which will be impacted by the Project. As indicated by the EPA under the “Construction Complete” Performance Measure, “**Yes** means the physical construction of the cleanup is complete for the **entire site**” [emphasis in original]. Because there are still remedial activities in process on portions of the March AFB, the physical construction of the cleanup is not complete for the entire site (which, as noted above, includes areas outside of the Specific Plan Area). The last Performance Measure, “Sitewide Ready for Anticipated Use,” also applies to the entire site and, as explained by the EPA therein, “a site listed as **no** may still have redevelopment occurring on portions of the site and additional redevelopment may be possible.” In addition, the performance measure for “Human Exposure Under Control” is “Yes” which means “assessments indicate that across the entire site: (1) There are currently no unacceptable human exposure pathways; and (2) EPA has determined the site is under control for human exposure.” As explained above and in Recirculated Section 4.8, Hazards and Hazardous Materials, the environmental status of the Specific Plan Area has been fully characterized and there are no COCs present in the Specific Plan Area that present a risk to future users of the Project or nearby residents.
- I-790.22** The majority of this comment is the same as the fourth paragraph of Form Letter D – Hazards, but includes the addition of “the contaminants identified on the EPA contaminant list for the site” to the list of additional sampling requests. With respect to this item, please refer to Response I-790.20 above. In response to the remainder of this comment, please see Form Letter D Response.
- I-790.23** This comment is the same as Comment FL-D.12 in Form Letter D. As such, in response to this comment, please see Form Letter D Response.
- I-790.24** This comment is the same as the last two paragraphs of Form Letter D – Hazards. As such, in response to this comment, please see Form Letter D Response.
- I-790.25** This comment refers to SB 1000 and indicates that “local jurisdictions need to identify environmentally disadvantaged communities in their regions and address environmental justice” but that neither the General Plan for March JPA nor the Draft EIR include an environmental justice section. The powers and duties of the Office of Planning and Research include coordinating environmental justice programs and, as referenced in the comment, defines “environmental justice” as “the fair treatment and meaningful involvement of people of all races, cultures, incomes, and national origins, with respect to the development, adoption, implementation, and enforcement of environmental laws, regulations, and policies.” California Government Code, Section 65040.12(e)(1). Environmental justice includes: the availability of a healthy environment for all people; the deterrence, reduction, and elimination of pollution burdens for populations and communities experiencing the adverse effects of that pollution, so that the effects of the pollution are not disproportionately borne by those populations and communities; governmental entities engaging and providing technical assistance to populations and communities most impacted by pollution to promote their meaningful participation in all phases of the environmental and land use decision making process; and at a minimum, the meaningful consideration

of recommendations from populations and communities most impacted by pollution into environmental and land use decisions. California Government Code, Section 65040.12(e)(2).

However, “environmental justice” is not a term used anywhere in CEQA and is not an issue area identified in CEQA for analysis in an EIR. As explained in Recirculated Chapter 2, Introduction, the purpose of the EIR is to evaluate and disclose the potential environmental consequences of the proposed Project, which does include the deterrence, reduction, and elimination of environmental impacts on all people, including communities experiencing the adverse effects of pollution. The EIR describes the applicable requirements and purposes of CEQA, including to inform governmental decisionmakers and the public, including the meaningful participation in all phases of the environmental and land use decision making process. The EIR discloses the potential significant environmental effects of proposed activities; identifies the ways that environmental damage can be avoided or significantly reduced; prevents significant and unavoidable damage to the environment by requiring changes in the project through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible; and discloses to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved. The EIR includes analysis of the Project’s potential cumulative environmental effects, and the cumulative effects analysis methodology is explained in Chapter 4.0, Environmental Analysis, of the Draft EIR. See also Topical Response 7 – Cumulative Projects for further cumulative impacts discussion. Thus, the EIR complies with CEQA and the environmental impacts of the proposed Project are fully considered, including the impacts on populations listed in the Government Code related to environmental justice.

As discussed in Recirculated Chapter 3, Project Description, Senate Bill 1000 (Government Code Section 65302[h]) requires jurisdictions to adopt an environmental justice element if the jurisdiction includes a disadvantaged community and two elements of the jurisdiction’s General Plan are proposed for amendment. The March JPA Planning Area is within a disadvantaged community (Census Tract 6065046700) as identified by CalEnviroScreen 4.0. March JPA will need to adopt an Environmental Justice Element for its General Plan to address this requirement prior to considering approval of the Project.

In November 2023, March JPA released a Draft Environmental Justice Element. The Draft Environmental Justice Element incorporates the environmental justice policies of the County of Riverside Healthy Communities Element pursuant to Government Code Section 65301(a) (March JPA 2023). The County of Riverside Board of Supervisors adopted environmental justice policies by Resolution 2021-182 on September 21, 2021. The County’s environmental justice policies apply to the disadvantaged communities within unincorporated territory in the County of Riverside. March JPA’s land use authority will revert back to the County of Riverside on July 1, 2025, in accordance with the 14th Amendment to the March JPA Joint Powers Agreement.

- I-790.26** This comment provides existing conditions information from CalEnviroScreen about two census tracts, one of which includes the Project site. CalEPA’s Office of Environmental Health Hazard Assessment (OEHHA) developed the California Communities Environmental Health Screening Tool (CalEnviroScreen), which provides statewide data that can be used to identify communities disproportionately burdened by multiple sources of pollution.⁴ The CalEnviroScreen model includes two components representing pollution burden (exposures and environmental effects) and two

⁴ <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

components representing population characteristics (sensitive populations and socioeconomic factors).⁵ An overall pollution burden score is calculated by CalEnviroScreen based on indicators related to exposures (i.e., ozone concentrations, PM_{2.5} concentrations, diesel particulate matter emissions, drinking water contaminants, etc.) and environmental effects (e.g., cleanup sites, groundwater threats, hazardous waste, etc.). As noted in the comment, the census tract that includes the Project site has a high overall pollution burden score. The Project's census tract is large and includes all of the March ARB and the March JPA jurisdiction along with three blocks within the City of Moreno Valley, which appear to have been mapped as part of March JPA. Residential uses within the Project's census tract are limited to the Westmont Village retirement community off of Village West Drive, which was originally developed for retired military housing, Green Acres, which consists of 111 homes as part of the March Field Historic District, the US Veterans transitional housing facility, and the residential block surrounding the Cottonwood Golf Center, and a few scattered residences in blocks of Moreno Valley included in the census tract. These residential uses within the March ARB census tract are located approximately two miles from the Project site, the residents in the retirement community are to the south of Van Buren Boulevard and the residents in Moreno Valley are to the east on the opposite side of the 215 Freeway. These residences are also located outside the area where the Project's truck route will emit TACs as evaluated in the Project Health Risk Assessment (See Recirculated Section 4.2, Air Quality). The other census tract referenced in the comment, census tract 6065042505, is located to the north of the census tract that includes the Project site, on the opposite side of the 215 Freeway north of the March ARB, even further from the Project site. As such, the proposed Project is not proximate to these residences such that it will increase their pollution burden.

The census tracts adjacent to the Project site (6065042012, 6065042014, and 6065042013), which include the Mission Grove neighborhood, the residences located in Riverside County to the north of the Project site, and the Orangecrest neighborhood south of the Project site, are not identified as disadvantaged or overburdened with pollution.

This comment provides information but does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

I-790.27 This comment references March JPA General Plan Goal 2, Policy 2.4 to “protect... adjacent residents” and asserts that March JPA “should reject upzoning the West Campus Upper Plateau to allow for industrial uses given the heavy industrial uses that already surround these communities” and notes that the communities “cannot afford further degradation of their air quality and quality of life.” As noted above, the proposed Project is not proximate to the residences in the two referenced census tracts such that it will increase their pollution burden. As further noted above, the census tracts that *are* adjacent to the Project site are not identified as disadvantage or overburdened with pollution. The comment further asks for transparency with respect to how the Project will affect “these already environmentally vulnerable communities” and asks that the Final EIR include an environmental justice section. Please refer to Responses I-790.25 and I-790.26 above.

I-790.28 This comment is general in nature about the adequacy of the jobs numbers. In response to this comment, please see Topical Response 5 – Jobs.

⁵ <https://oehha.ca.gov/media/downloads/calenviroscreen/report/calenviroscreen40reportf2021.pdf>

- I-790.29** This comment states that there are not enough unemployed people in the local area to fill the number of jobs that the logistics industry claims they are creating. In response to this comment, please see Topical Response 5 – Jobs.
- I-790.30** This comment states that the majority of warehouse jobs are low-wage and temporary work with reduced hours, and workers could not afford to live in the local area. The comment, however, does not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided. Please refer to Topical Response 5 – Jobs for a further discussion of job creation and fulfillment.
- I-790.31** This comment questions the impacts of the logistics industry for the economic outlook of the region. Pursuant to CEQA Guidelines 15131, “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” The Guidelines further explain that, among other things, under CEQA, economic effects are relevant only insofar as they may serve as a link in a chain of cause and effect that may connect the proposed project with a physical environmental effect, or they may be part of the factors considered in determining the significance of a physical environmental effect. This comment does not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-790.32** This comment questions the ownership locale of companies who own and operate warehouses in the Inland Empire. Company ownership falls outside the scope of the environmental analysis required for the proposed Project. This comment does not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-790.33** This comment states that industrial is the worst land use possible for generation of jobs. This comment is outside the scope of the environmental analysis required for the proposed Project. This comment does not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. However, in response to this comment, please see Topical Response 5 – Jobs for an explanation for how the number of jobs anticipated from the proposed Project was calculated.
- I-790.34** This comment raises concerns regarding future automation. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. This comment does not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-790.35** This comment provides general opposition to the Project and its potential job creation. These comments do not raise any issues about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided. However, for further discussion of the jobs projections and related information for the Project, please see Topical Response 5 – Jobs.
- I-790.36** This comment repeats assertions that there are not enough workers in the area to fill new jobs created by the Project and that the wages paid by the jobs created would be too low for area residents. For responses to these comments, please refer to Responses I-790.29 and I-790.30 above. The comment alleges that the VMT estimates for the Project are inaccurate and asks for justification for the assertion that commutes will decrease from 21 miles to 16 miles. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-3), for passenger vehicles, the historic CalEEMod default for the

trip length is approximately 16.6 miles – however for analytical purposes, the CalEEMod 2022 model defaults were utilized which identify a weighted average of approximately 20 miles. Therefore, the traffic model did not assume 21-mile commutes would be shortened to 16 miles.

I-790.37 The comment states that there are not enough local people to fill the new employment positions associated with the proposed Project. In response to this, please see Topical Response 5 – Jobs. The comment also raises the fact that local cities in the vicinity are not in compliance with meeting state-mandated goals for the provision of housing. The Project site’s local vicinity is planning to experience housing growth as facilitated by local jurisdictions’ Housing Element updates and the Regional Housing Needs Allocation (RHNA). Section 4.12, Population and Housing, of the Draft EIR describes RHNA as mandated by State Housing Element Law as part of a periodic process of updating local housing elements in city and county general plans. The RHNA is produced by SCAG and contains a forecast of housing needs within each jurisdiction within the SCAG region for eight-year periods. The RHNA provides an allocation of the existing and future housing needs by jurisdiction that represents the jurisdiction’s fair share allocation of the projected regional population growth. Table 4.12-2, SCAG’s 6th Cycle Final RHNA Allocation, details the housing goals for each of March JPA’s member jurisdictions: unincorporated Riverside County (40,647 units), City of Riverside (18,458 units), City of Perris (7,805 units), and City of Moreno Valley (13,627 units). Therefore, a total of 80,537 housing units are planned for 2029 within the Project site’s vicinity. Given this, the Project’s introduction of new jobs within the local vicinity would support future population and housing growth anticipated over the next 6 years.

The comment asserts that the Draft EIR needs to assess the RHNA goals for each member agency of March JPA. As detailed in the Draft EIR, the 6th Cycle RHNA has been underway since October 2021. The planning period ends in October 2029. The EIR notes the housing goals for each member jurisdiction to supplement the analysis of future housing growth. However, the progress of meeting these housing goals by 2029 is too speculative at the time of drafting this Final EIR. As detailed in Topical Response 5 – Jobs, it is reasonable to assume the jobs generated by the Project could be filled with existing local residents residing within the County, either from the unemployed population or residents looking to reduce their commutes. The comment does not raise any specific environmental issues, questions or concerns related to the adequacy of the environmental analysis within the Draft EIR.

I-790.38 This comment is similar to Form Letter G – Traffic Comment FL-G-4, expressing concerns about the traffic relative to the 215 Freeway and 60 interchange, cumulative projects, and Caltrans review of the Project. In response to this comment, please see Form Letter G Response FL-G-4.

I-790.39 This comment expresses concerns about traffic on arterial streets, including Alessandro and Van Buren, and trucks not following the enforcement codes, and questions what enforcement mechanisms will be used to mitigate traffic. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial

phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

- I-790.40** This comment asserts that trucks damage roads and highways 2,500 times more than cars and requests that the Final EIR factor these details into the maintenance costs for local roads and highways. Roadways that handle truck traffic are typically designed with additional structural support to account for number of heavy trucks. With respect to damage to the roadways, commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).⁶ .
- I-790.41** This comment letter is Form Letter H – Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.
- I-790.42** This comment is a conclusion to the comment letter and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. The comment incorrectly identifies the land use square footages of the Specific Plan buildout scenario. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-791.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Josie Sosa

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-794.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MIPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-795.1
I-795.2

Thank you for preserving our neighborhood as I trust your conscience will not allow you to go through with this. As you know, if these warehouses go in and Barton road is put through into Orangecrest, our neighborhood will deteriorate dramatically, the environment will be further devastated and Riverside will experience a net loss as all the good work being done to revitalize older areas will not be able to offset the nosedive of Orangecrest.

I-795.3

Regards,

Kevin Carney

8268 Laurel Ridge Rd, Riverside

Letter I-795

Kevin Carney
March 9, 2023

- I-795.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 SF of warehouse use, 528,951 SF of office use, and 160,921 SF of retail use. This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- I-795.2** This comment requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 – Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.
- I-795.3** This comment expresses general opposition to the Project and concern regarding the Barton Street extension. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-796.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The proposed project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside ("The City of Arts and Innovation") and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant calculate this number? Was the concept of automation factored in? It should be known there are companies that have designed and currently selling automated high-pile racking systems that use robotics to move pallets on and off racks at nearly four times the speed of an average employee. Robotic fork lifts are also used in tandem with the previously described system. In fact a company that designed these systems and sells them resides in one of the JPA's member jurisdictions. There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. You can clearly see that the labor shortage in the region of people willing to work in these facilities is an issue, which once again underscores the move toward automation across the entire industry. I would suggest reading one of the key researchers in this field, Dr. Johannes Moenius, University of Redlands, or better yet call him to discuss the threat of automation to these industry groups. If you do, it will be clear that any job generation benefits realized today will be eliminated in the near future.

I-797.1

I-797.2

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. The number of entitled warehouses in correct areas that do not have neighborhoods or sensitive receptors nearby is sufficient for future job growth. There is no rationale that supports warehouse projects being approved near incompatible land uses.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses as I suggest above? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Kyle Warsinski

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside ("The City of Arts and Innovation") and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

I-798.1

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning my lungs and those of my two small children. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028. The report titled "Warehouses, pollution, and social disparities" authored by Torres, Victoria, Klooster, 2021 (https://earthjustice.org/wp-content/uploads/warehouse_research_report_4.15.2021.pdf) shows that asthma rates and cardiovascular disease rates are 5% and 9% higher respectively in areas with warehouses than compared to the state average. Approving projects like these in such close proximity to homes and schools, which contain children and the elderly, should be avoided at all costs. There is no financial benefit to the community or developer that can offset the negative health impacts that have been documented and are readily available for review. The Draft EIRS statement the project will have significant and unavoidable air quality impacts sounds benign, but what it really means is if the project is approved, my children's and my neighbor's children's risk of developing asthma and cardiovascular disease are greatly increased.

I-798.1
Cont.
I-798.2
I-798.3

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Kyle Warsinski

EXECUTIVE SUMMARY

In collaboration with the University of Redlands, the People’s Collective for Environmental Justice (PC4EJ) used a collection of data to analyze the 3,321 warehouses above 100,000 sq.ft that fall in the South Coast Air Basin, which covers Los Angeles, Orange, Riverside, and San Bernardino counties. The regional board responsible for regulating air quality in Southern California—the South Coast Air Quality Management District (SCAQMD)—is considering adopting an Indirect Source Rule for warehouses in an attempt to address the air quality and health impacts associated with the goods movement industry. While warehouses do not produce pollution directly, the mobile sources of pollution they attract (the most notable of these sources being diesel trucks) contribute to the region’s high levels of smog and ozone¹ that have consequential impacts on the respiratory health of Southern California’s residents.

As the warehouse and logistics industry continues to grow and net exponential profits at record rates,² more warehouse projects are being approved and constructed in low-income communities of color and serving as a massive source of pollution by attracting thousands of polluting truck trips daily. Diesel trucks emit dangerous levels of nitrogen oxides and particulate matter that cause devastating health impacts including asthma, chronic obstructive pulmonary disease (COPD), cancer, and premature death. As a result, physicians consider these pollution-burdened areas ‘diesel death zones.’³

Using data sources from the SCAQMD and the California Office of Environmental Health Hazard Assessment’s CalEnviroScreen 3.0 tool, the following data sets were analyzed: warehouse location to a toxic facility (such as gas and oil facilities), warehouse location to e-commerce sales for 2020, warehouse location to schools, warehouse locations to traffic, and warehouse locations to a variety of other demographic variables.

It is important to note that maps with the aforementioned variables were not publicly available or accessible. Until now, no industry, research institution, or agency found it necessary to map warehouse locations with vital correlations to socio-economic demographics. It has been clear to many community members, advocates, and many others in the clean air and environmental

¹ “State of the Air 2020” (American Lung Association), <https://www.stateoftheair.org/assets/SOTA-2020.pdf>.

² “2020 North America Industrial Big Box Review & Outlook,” CBRE, <https://www.cbre.us/research-and-reports/2020-Industrial-Big-Box-Inland-Empire>.

³ Tony Barboza, “Freeway Pollution Travels Farther than We Thought. Here’s How to Protect Yourself,” Los Angeles Times (Los Angeles Times, December 30, 2017), <https://www.latimes.com/local/california/la-me-freeway-pollution-what-you-can-do-20171230-htlstory.html>.

justice movement that the growth of the logistics industry in Southern California correlates with health, economic, and racial disparities.

These maps will serve to demonstrate the severity of our region's air pollution woes and raise urgency for important policies such as the Indirect Source Rule, the Advanced Clean Fleet rule, and other air quality management and community emissions reduction plans that will work to clean our air, create sustainable freight and goods movement, and protect public health.

Warehouse Locations and Proximity to Toxic Facilities

Warehouse facilities in Southern California are approved in communities already experiencing pollution burdens from toxic facilities, such as oil and gas refineries and power plants.

Through existing data, we found that the top 10 communities in the South Coast Basin with the most warehouses also fall in the highest percentiles of toxic facilities.

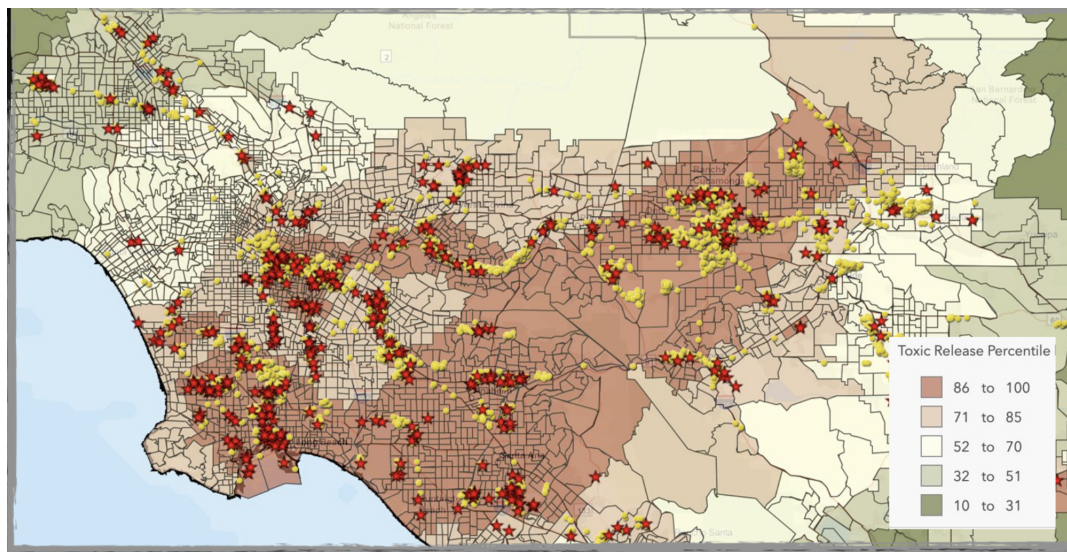

Figure 1: In the following map an overlay of warehouse locations in yellow points and toxic facilities in red stars is seen. As well as the different shaded areas of the percentiles for toxic releases. Source: University of Redlands.

- **The Carson/Wilmington** area that has the 7th highest amount of warehouses (126 warehouses total) falls in the toxic percentile of 92.89, meaning it is higher than 92.89% of the census tracts in California. Toxic releases in this area include railroad operations and refineries.
- **The Ontario** area, which has the highest concentration of warehouses (289 warehouses), falls in the toxic percentile of 97.26, meaning it is higher than 97.26% of the census tracts in California. Toxic releases in this area include the Cal Portland Cement plant, tool and die shops, and a multitude of interstate freeways.
- **The City of Industry** area that has the 2nd highest concentration of warehouses (197 warehouses) falls in the toxic percentile of 98.28, meaning it is higher than 98.28% of the census tracts in California. Toxic releases in this area include

chemical manufacturers, Union Pacific Railroad operations, and other processing plants such as metal manufacturers.

- **The Anaheim** area that falls as the 14th highest in warehouses (75 warehouses) falls in the toxic percentile of 95.55, meaning it is higher than 95.55% of the census tracts in California. Toxic releases in this area include the cement and gas plants.
- **The Los Angeles/ Vernon** area that falls as the 3rd highest in warehouses (262 warehouses total) falls in the toxic percentile of 97.57, meaning it is higher than 97.57% of the census tracts in California. Toxic releases in this area include lacquer companies and other contaminated areas such as lead, metal, and chemical manufacturers.

Warehouse Locations and Proximity to Schools

There are 640 schools in the South Coast Air Basin within ½ mile radius of a warehouse. Land use and zoning ordinance changes approved through local municipal and county governments have resulted in warehouses being constructed in already pollution and economically burdened areas.

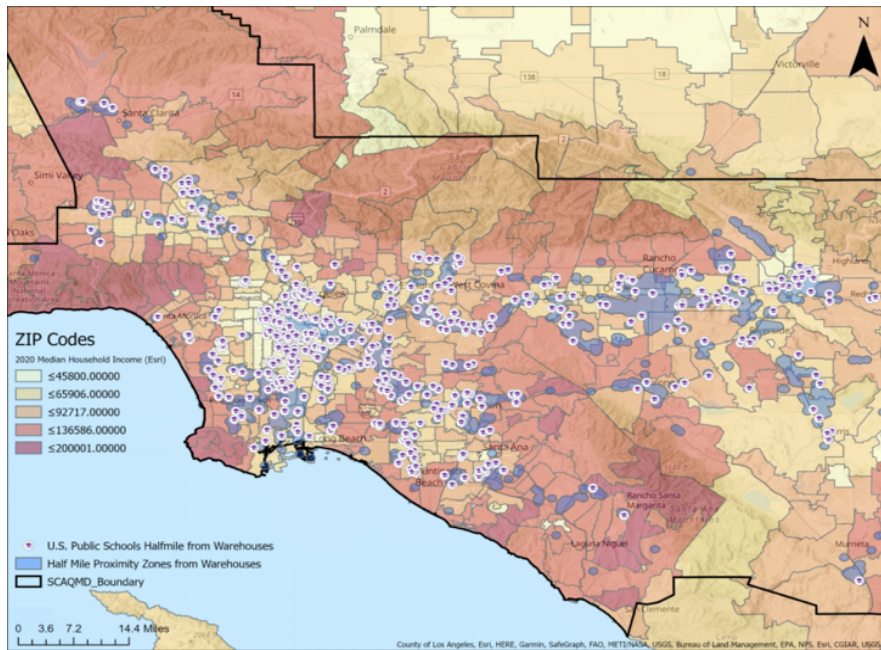

Figure 2: In the following map you can see warehouse zones be highlighted as blue circles and schools as purple/white dots. The warehouse and school data is also overlaid with household income data. Source: University of Redlands.

As seen in Figure 2 and Table 2, historically warehouses have been developed within .5 of a mile, if not closer, of educational institutions. Unfortunately, we see this trend growing, as warehouse developments continue to encroach on these sensitive receptors.

Comparative Statistics for Schools

Area	Variable
Entire SCAQMD	3,712 Schools \$74,237 2020 Med HH Income
State of California	10,442 Schools \$77,500 2020 Med HH Income
0.5 miles from a warehouse	640 Schools \$60,218 Med HH Income
0.5 miles from a warehouse in a disadvantaged zone	473 Schools
0.5 miles from a warehouse in a disadvantage zone that contains at least one warehouse	242 Schools

Table 2: Comparative Statistics for schools in the South Coast Air Quality Management District ½ of a warehouse
Public Source: CDE-Data-CA, SCAQMD, CALENVIRO OEHHA

The most blaring and unfortunate example is the unincorporated community of Bloomington in San Bernardino County, which is seeing an upward trend in warehouse development near homes and schools. In fact, as of publication time for this report, Bloomington community leaders are leading an ongoing organizing effort to oppose a proposed 3 million square foot warehouse development plan located directly adjacent to several schools. If approved, the Bloomington Business Park Specific Plan will demolish 213 homes to make way for a warehousing district in an area already impacted by millions of square feet of warehouse development. Figure 2.1 contextualizes how much space of housing would become logistics near three Colton Joint Unified School District locations.

Six of the eight schools in the Bloomington community sit, or will sit, right next to a warehouse.

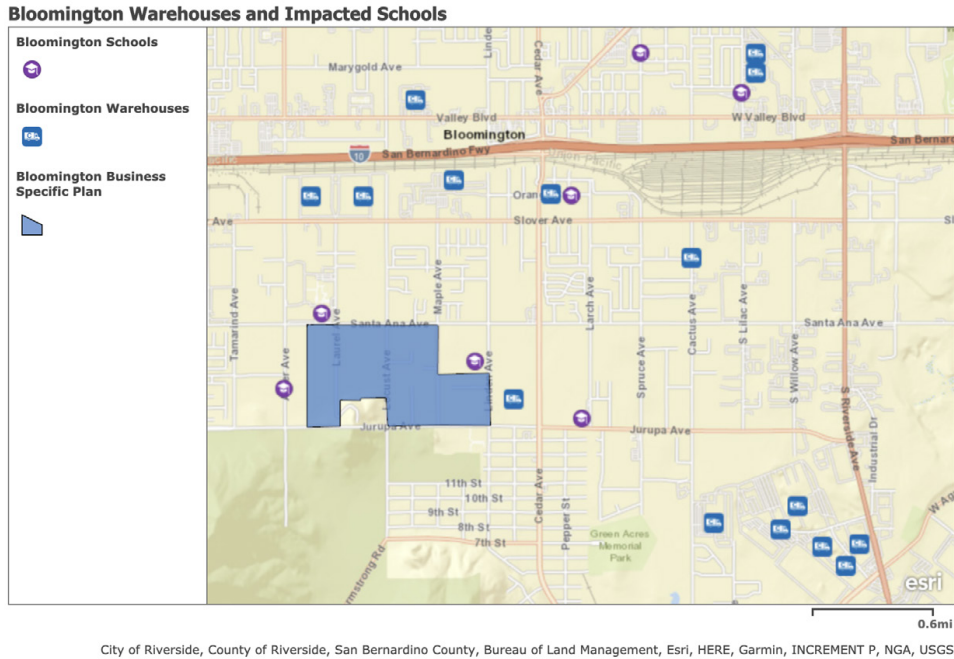

Figure 2.1 : The following map is of the community of Bloomington in San Bernardino County, with warehouses over 100000 sq ft already present mapped and schools in the community mapped, as well as a proposed project. Source: Torres, I.

It is why communities recommend that any policy that advances the deployment and investment in zero-emissions technology (e.g. electric trucks, yard haulers, and forklifts) take place in disadvantaged communities first.

Amazon's influence on the Inland Empire

Amazon has made record profits in the last decade, and it has come largely at the cost of communities in the Inland Empire that have seen several large fulfillment centers built near their backyards. Worse, we see a huge disconnect on warehouse locations to e-commerce sales, meaning the communities who order the least online experience the direct pollution and health impacts of the industry by living close or right next to large facilities.

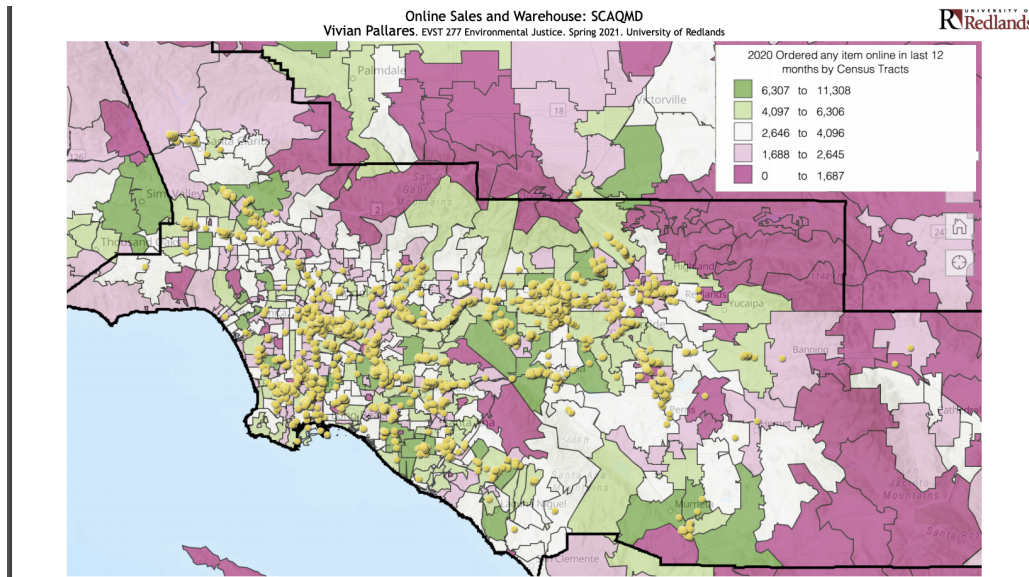

Figure 3: The trends analyzed are e-commerce sales of 2020 per household by census tracts on scale from least (dark pink) to most ordered (dark green) overlapped by warehouse locations. Source: University of Redlands

WAREHOUSES, POLLUTION, AND SOCIAL DISPARITIES REPORT 11

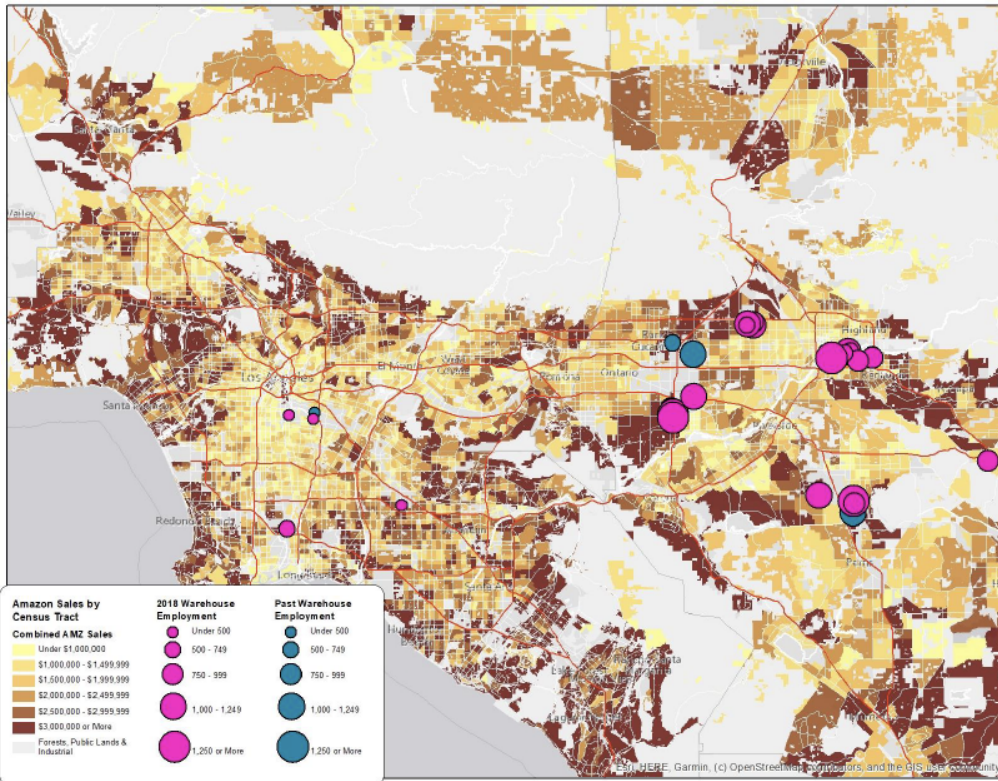

Figure 2: Estimated Amazon Sales per Household in the 40 Largest Cities in the Los Angeles Metropolitan Area

Source: Derived from U.S. Census Bureau American Community Survey 2013-2017 household income data, U.S. Bureau of Labor Statistics Household Consumption breakout of household consumption by item and income level, and Amazon e-commerce sales in the U.S. in 2018.

Figure 3.1: Estimated Amazon Sales per household. Source: Too Big to Govern.

Figure 6: Amazon Warehouses in the Four-County Study Area

Source: Public records of Amazon facilities, using the ratio of square feet of warehouse space to employment from city environmental impact reports.

Figure 3.2: The map plots census tract data from 2013-2017 of Amazon sales per household and overlays it with warehouse locations and their employment rates. Source: Too Big to Govern.

The Economic Roundtable’s “Too Big to Govern” report directly looked at Amazon online sales parallel to warehouse locations from 2013-2017.⁴ A parallel map to our 2020 map of e-commerce sales is the one above from the Economic Roundtable report that analyzed Amazon sales by census tracts. In the Economic Roundtable report, the census tracts with a warehouse or Amazon facility nearby spend the least online compared to the coastal, more affluent communities with higher online shopping rates that have no Amazon or other online retail warehouse facilities nearby. We see the pattern remains the same from 2013 to 2020, where sales online are higher in non-goods movement communities and extremely lower in goods movement communities with warehouses present.

University of Redlands student researcher Vivian Pallares shares the following based on the data she helped gather:

⁴ <https://economicrt.org/publication/too-big-to-govern/>

“The majority of warehouses in Southern California are placed in the areas that online shopping is done the least. This is important to investigate because it shows how the communities that are the most impacted by warehouses and their pollution are not the communities that are consuming the products. The neighborhoods in green are free riders of pollution in this case because they are able to enjoy the benefits and convenience of online shopping and shipping without having to be in close proximity to warehouses. Those who are closest to the warehouses suffer the consequences of having pollution from warehouses and transportation in their neighborhoods and this can have a negative impact on their health at a disproportionate rate from the other communities.”

Amazon touts being strong on climate, but actions demonstrate that that they are in fact doing the opposite by continuing to build warehouses near communities of color without considering existing cumulative impacts. In addition, despite making commitments to take strong action on the climate crisis, Amazon has turned to outdated and harmful technologies that will worsen, not improve our climate. Recently, Amazon applies and received public funding through the SCAQMD to support the company’s purchase of 100 natural-gas Class 8 trucks and only 10 zero-emission trucks.⁵ Natural gas developments will ultimately hurt communities in the long term.

Warehouse locations and truck traffic impacts

The average percentile for traffic across census tracts with warehouses is 67% compared to the state average of 50%. While California has the strictest auto emissions standards in the U.S., our state is also known for its high number of large freeways and heavy vehicle traffic. Traffic is a significant source of air pollution, particularly in urban areas, **where more than 50% of particulate emissions come from traffic. Specifically, diesel and gas truck emissions—the main source of pollution warehouses attract**—contains a large number of toxic chemicals, including nitrogen oxides, particulates, carbon monoxide, and benzene.

In recent years, communities across the South Coast Air Basin have conducted truck counts to demonstrate the magnitude of the truck pollution issue. For example, residents held a truck count in early 2020 near the 60 freeway in Jurupa Valley and found that approximately 1,161 trucks pass through the corridor per hour.

⁵ <http://www.aqmd.gov/docs/default-source/Agendas/Governing-Board/2021/2021-Apr2-009.pdf?sfvrsn=6>

It is important to note that the traffic data also revealed 465 (16%) of warehouses fall in the top 10% worst census tracts for traffic (90-100%)

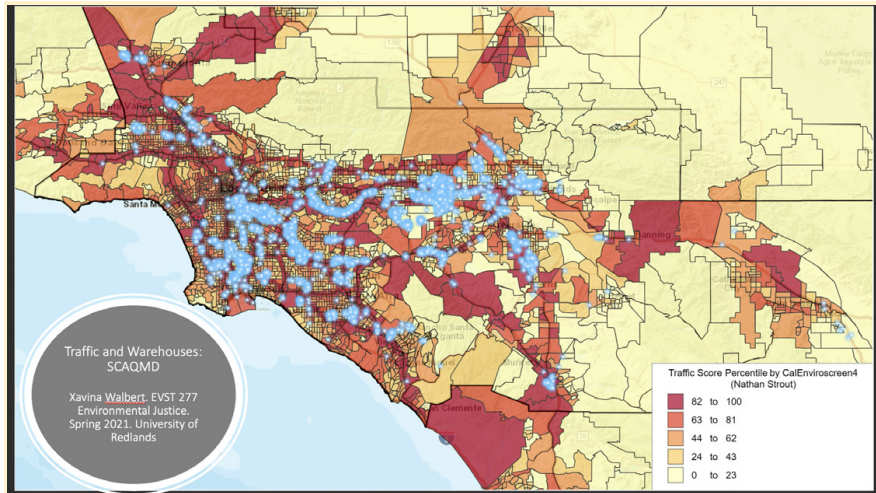

Figure 4: Warehouse locations (blue dots) mapped with traffic score percentiles. Source: University of Redlands.

- The overwhelming impacts of truck traffic activity related to the logistics industry is very much known in the South Coast; the unaccounted costs, however, are not.
- People who live within 1,500 feet of a highway are the most heavily exposed to air pollution from traffic, including from dirty diesel trucks, and are therefore the most harmed by diesel truck air pollution.⁶
- Asthma rates and cancer risk are drastically elevated in areas close to ports, warehouse distribution centers and other freight corridors that bring residents in contact with pollution from heavy-duty vehicles.
- A case study of truck traffic impacts in the South Coast is the community of Long Beach and the I-710 expansion.
 - Due to the overwhelming volume of cargo being moved from the ports of Los Angeles and Long Beach to logistics and warehouse facilities more inland through I-710 through diesel and gas trucks, city planners and leaders voted to expand the freeway to accommodate industry at the expense of the community. The freeway expansion will likely displace community residents and longtime community-ran businesses. Advocates are calling on Metro and CalTrans to make amendments to their expansion plans to include no displacement as well as local hiring and zero-emissions policies.

⁶ “Public Comment by American Lung Association,” Regulations.gov (U.S. Environmental Protection Agency), accessed April 6, 2021, <https://www.regulations.gov/document/EPA-HQ-OAR-2014-0827-4846>.

Warehouse locations and socioeconomic impacts

Warehouses are more likely to be located in neighborhoods with lower median household incomes and higher levels of poverty. Specifically, as distances between warehouses and residential neighborhoods shorten, poverty rates increase, and so do minority populations, and many other socio-economic demographics: linguistic isolation, asthma rates, housing inequality, cardiovascular rates, and unemployment rates.

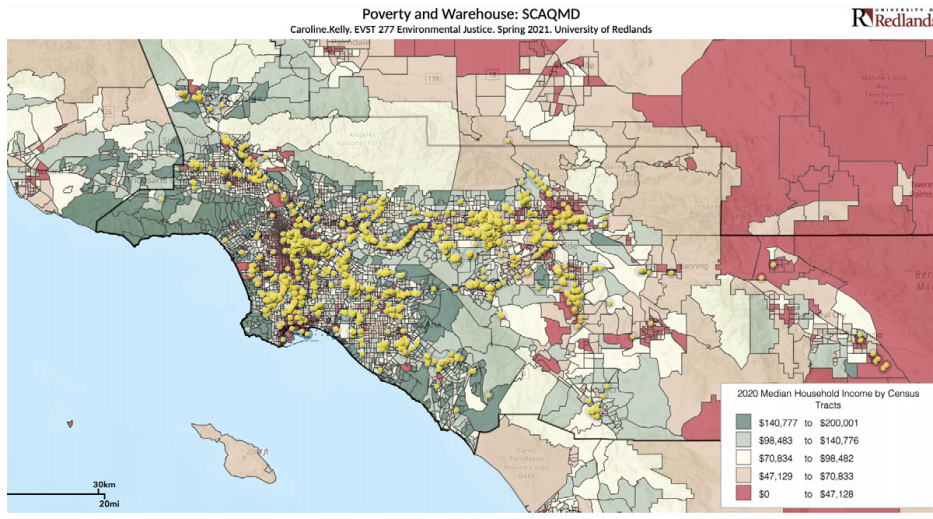

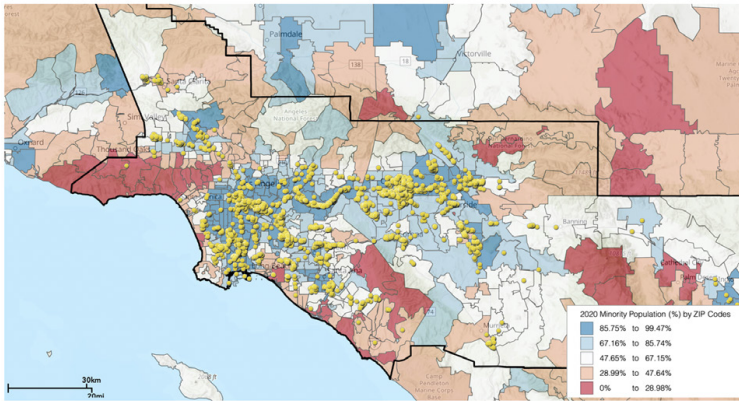

Figure 5: Looking at the following map warehouse locations (yellow dots) are overlapped with 2020 median household income by census tract. Source: University of Redlands

Researcher Quan Yuan points out in his research on warehousing locations in environmental justice communities that warehouses are disproportionately and deliberately built in low-income communities of color. Figure 5 confirms Yuan’s academic assertions countering industry arguments that these populations move into these areas for job opportunities.⁷

⁷<https://reader.elsevier.com/reader/sd/pii/S0264837717309134?token=2039D46FD4D4B3EDCD57FAADE043AD4FBDD418E81792034AAB1B2CBECCBDEB25529A0A3961C20521840A91358BBCA20E&originRegion=us-east-1&originCreation=20210405212514>

Minority Population % and Warehouses: SCAQMD

Figure 5.1: Warehouse locations (yellow dots) are overlaid with 2020 minority population (%) by zip codes. Source: University of Redlands

As we look at **Figure 5.1**, we again see a similar pattern seen earlier: **the closer we get to warehouses in distance, the more communities of color we see. This unfortunately is not the only socio-economic demographic that sees this trend.**

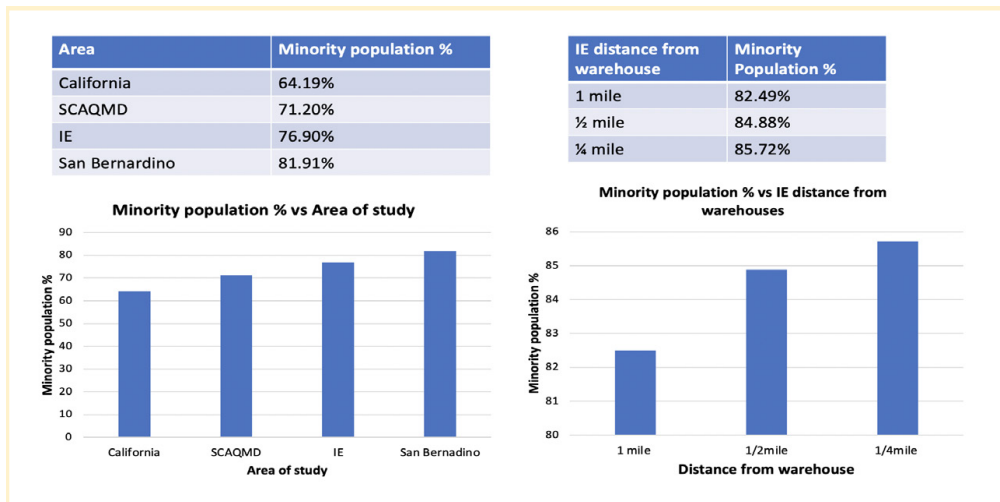

Figure 5.2: Comparative Statistics of Minority Population (%). Source: University of Redlands

As Figure 5.2 demonstrates, the closer in distance a household is to a warehouse, the more probable it is for the home to belong to a person of a minority group. This further raises the point that warehouses and the mobile sources of pollution they attract disproportionately impact communities of color more than to their white counterparts.

Figure 5.3: *Housing Burdened Low Income Households are looked at by warehouses (black dots) overlaid with housing needs. Source: Sierra Club My Generation.*

Figure 5.3 compares housing needs with warehouse locations. We found that the average percentile for housing burden across warehouses is 61% compared to the state average of 50%; 206 (7%) of warehouses fall in census tracts with the top 10% of housing burdened low income households (90-100%). This claim was also proven true by Quan’s research and his other studies on warehouse locations: “In spite of the limitations, the study explicitly points out that the disproportionate siting of warehouses, rather than the housing market dynamics, is the dominant causal factor of the environmental justice problem in warehousing location.”⁸

The following figures further emphasize the relationship between warehouses and socio-economic demographics.

⁸ Ibid

Figure 5.4: Comparative statistics of previous mapped data of minority and poverty, with and include variable of linguistic isolation. Source: University of Redlands.

Figure 5.4 compares two demographic variables we are familiar with, poverty and population. There is one important variable to consider: linguistic isolation. Linguistic isolation serves as a large obstacle for residents of color that use English as a second language. If a truck is idling or a new project is being proposed, community members may not be able to voice their concerns if adequate translation is not provided by local, regional, and state regulatory agencies to have translated resources. By providing proper translation local agencies will improve their oversight, and overall, air quality and community health by doing the utmost possible to address concerns around pollution from warehouses.

Asthma

Figure 5.5: Asthma and respiratory impacts are looked at by warehouses (black dots) overlaid with age adjusted rate of emergency department visits for asthma. Source: Sierra Club My Generation.

Figure 5.5 reveals that the average percentile for Asthma rates across warehouses is 55% compared to the state average of 50% and 262 (9%) of warehouses fall in the worst 10% of asthma rates across all census tracts (90-100%).

Cardiovascular

Figure 5.6: Cardiovascular impacts are looked at by warehouses (black dots) being overlaid with cardiovascular percentiles. Source: Sierra Club My Generation.

In figure 5.6, we see the average percentile for cardiovascular disease across warehouses is 59% compared to the state average of 50% and 436 (15%) of warehouses fall in census tracts with the top 10% of cardiovascular disease percentiles (90-100%).

Unemployment Rates

Figure 5.7: Unemployment impacts are looked at by warehouses (black dots) being overlaid with unemployment percentiles. Source: Sierra Club

Because low socioeconomic status often goes hand-in-hand with high unemployment, the rate of unemployment is a factor commonly used in describing disadvantaged communities. On an individual level, unemployment is a source of stress, which is implicated in poor health reported by residents of such communities. Lack of employment and resulting low income often oblige people to live in neighborhoods with higher levels of pollution and environmental degradation.

- In **figure 5.7** we see **the average percentile for unemployment across warehouses is 58% compared to the state average of 50%** and 66 (2%) of warehouses fall in the top 10% worst census tracts for unemployment (90-100%)

CONCLUSION

It is clear from our collected data that building large warehouses with no consideration for public health will continue to diminish the quality of life for low-income communities of color. The prevalence of warehouses and goods movement facilities in low-income, communities of color is a textbook example of environmental racism.

As environmental justice advocates, clean air champions, and more importantly, as members of the community, we are presenting this data to make an urgent call to the South Coast Air Quality Management District to adopt a strong Indirect Source Rule for warehouses that brings 100% zero-emission technology to frontline communities of color that have the right to clean air and deserve environmental and racial justice.

METHODOLOGY

The research and data analyzed in the report was all public sourced. The sources varied from the SCAQMD, the California Office of Environmental Health Hazard Assessment’s CalEnviroScreen 3.0 tool, California Department of Education, previous research reports from the Economic Round Table, and research by Quan Yuan.

In order to map the open sourced data ArcGIS Online Community Analyst was used by the researchers and student researchers of the University of Redlands. Added sourced maps were also created from ArcGIS Online/Pro. Other figures referred to the Research report “Too Big to Govern” by Daniel Flaming and Patrick Burns.

Of the 3,321 warehouses that were analyzed in the South Coast Basin only 2870 (86%) had available census tract data through Census Geocode API.

The following figure summarizes the top 20 cities that would be most impacted by South Coast AQMD’s proposed Rule 2035 aka Warehouse Indirect Sources Rule.

Table 1: Cities with large warehouse concentrations above 100,000 sq ft in the South Coast Basin that will have to comply with ISR. Source: Torres,I

Top 20 Cities with Large Warehouse Concentrations

Number of Warehouses	CITY	NOTES
289.00	Ontario	San Bernardino County and still expanding in warehouse development
197.00	City of Industry	Los Angeles County and surrounded by many other toxic facilities
168.00	Los Angeles	Los Angeles County and surrounded by many other toxic facilities
140.00	Fontana	San Bernardino County and still expanding in warehouse development
126.00	Santa Fe Springs	Los Angeles County
121.00	Commerce	Los Angeles County and surrounded by many other toxic facilities

WAREHOUSES, POLLUTION, AND SOCIAL DISPARITIES REPORT 22

Letter I-798

**Kyle Warsinski
March 9, 2023**

I-798.1 This comment is Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

I-798.2 This comment requests additional mitigation measures to address the significant and unavoidable air quality impacts associated with the proposed Project. Please see Recirculated Section 4.2, Air Quality, for a discussion of the additional mitigation measures being incorporated into the Project. As explained in Recirculated Section 4.2, Air Quality, air dispersion modeling was performed to analyze pollutant concentrations at nearby sensitive receptors, and the analysis indicates that pollutant concentrations would remain well below the applicable SCAQMD localized significance thresholds during Project construction and operation. Additionally, the HRA prepared for the proposed Project (Appendix C-2) indicated that cancer and non-cancer risk to nearby sensitive receptors would be well below the applicable SCAQMD significance thresholds during construction and operation.

The City of Perris prepared a study titled “Air Quality, Greenhouse Gas Emissions, and Environmental Noise Conditions Study for Industrial Developments” in July 2022. As seen in the table below taken from the study, none of the 20 warehouse projects approved in the last 20 years had significant health risk impacts. (Appendix C-4)

REPRESENTATIVE WAREHOUSE PROJECTS APPROVED IN THE CITY OF PERRIS SINCE 2010						
Project	Size (square feet)	Significant Impacts After Mitigation				
		Regional Construction Emissions	Regional Operational Emissions	Construction LST	Operational LST	Health Risks
Optimus Logistics Center	1,455,781	No	<u>Yes</u>	No	No	No
IDI Rider 2 & 4	1,352,736	<u>Yes</u>	<u>Yes</u>	No	No	No

IPT Perris DC III Western/Nandina	251,504	No	No	No	No	No
Core5 Rider Business Center	248,483	No	No	No	No	No
First Perry Logistics	241,000	No	No	No	No	No
Walnut and Indian Industrial	205,830	No	No	No	No	No
First Harley Knox Industrial	154,250	No	No	No	No	No
First Industrial Warehouse 2 at Wilson	154,558	No	No	No	No	No

The comment refers to a 2021 report titled “Warehouses, pollution, and social disparities” authored by Torres, Victoria, and Klooster, and the commenter expresses concern regarding potentially disproportionate health impacts to nearby residents. The report analyzes all of Southern California air quality and traffic impacts and is not specific to this Project or region. The report shows that the Project site and surrounding area is in the 52 to 70 toxic release percentile, which is not in the high toxic release percentiles. Recirculated Section 4.2, Air Quality, considers the environmental air quality impacts of the Project on the community surrounding the Project site such as analysis of the potential health risks, including asthma and cardiovascular disease, from criteria pollutant emissions. (Appendix C-1).

I-798.3 This comment is the last paragraph of Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and demand that the project applicant be required to make every effort to preserve endangered and threatened wildlife and plant-life in the area.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? The final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant-life

1. Why is the coastal scrub documented in some parts of the DEIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant-life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why was the plant survey conducted during a drought year? How can the DEIR claim it is absent or assess the significance of impact unless its absence has been documented during a year and season of normal rainfall, when the rare plant life would be able to grow?

Given these deficiencies, I demand that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also demand that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that the project will not be destroying rare plant life unless a more thorough survey is conducted.

Finally, I demand that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can the public be assured that these mitigation measures will be enforced?

Thank you,
Leslie Bushong

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section are highly disconcerting. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than diesel particulate matter will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous military use of the project construction area.

Please specifically address the following items:

1. How did you determine which chemicals to test for and which to omit? Why was diesel particulate matter the only substance considered in the "Human Risk Assessment" section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the weapons bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long timeframe since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I demand that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any others that may have been stored in the weapons bunkers. I also demand that you share with the public all information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil will be treated, given its high concentration.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health, and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I demand that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issuance of demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, those materials must be completely removed.

Thank you,
Leslie Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The traffic section of the document presents serious concerns. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project, and the project's own traffic estimates indicate that approximately 20,000 additional trips will use the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in the analysis, especially when considering that the traffic analysis fails to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. The traffic sections also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How can the analysis justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did the analysis exclude known construction projects that have already been permitted to be built?

I demand the traffic section be updated to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable.

How traffic will affect our arterial streets is another major concern. The analysis assumes drivers will use approved paths, but it is clear from experience this is not the case. For instance, on February 2, a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were considered? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the

predictions match reality, and why should one trust the analysis to be accurate if past analyses underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

I demand that the traffic study be updated to reflect the actual conditions of the surrounding area.

Thank you,
Leslie Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am appalled that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses, as long as they are low-density. Please specify what other land uses C-2 zoning allows and why they are not being pursued.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on three sides by residential homes, and that residents have submitted over 2,500 signatures, hundreds of emails, and scores of comments at public meetings opposing the project, how is that feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how can the utter disregard for the community opposition in relation to the reuse plan policies be justified?

In the General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air-quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways has Community Preference been incorporated in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for "Industrial/Warehousing" uses and it explicitly shows "Industrial/Warehousing" land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as a Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 states,

The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space. When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to "up zone" the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, the March JPA is obligated to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you,
Leslie Bushong

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air-quality impacts on surrounding residents. However, beyond that admission, there are numerous deficiencies in the analysis, and it underestimates the air-quality impacts.

The analysis does not consider the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. I demand that these impacts be included in both the local and regional analysis for the final EIR. The analysis also fails to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. The air-quality and health-risk assessment must be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, the project applicant must apply the conservative AQMD Rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, it is important to be more conservative in truck trip rate projections. Using the Rule 2305 numbers would almost double the daily truck trips.

Also, the March JPA has a responsibility to mitigate significant impacts on the surrounding community. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Why were such mitigations not considered in the DEIR for this site?

Significant mitigations must be put in place to reduce the impact on local residents:

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

The impact on air quality must also be mitigated by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least that can be done to protect the surrounding community. California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning. A minimum of 50% of delivery vehicles must be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. 30% of trucks must also be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I demand that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will the March JPA assure adjacent residents that their interests will be protected?

Thank you,

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How was that number calculated? On what evidence was it based? There is no analysis in the DEIR to justify the number of jobs. Please provide a detailed, evidence-based analysis justifying the number of jobs.

The Greenhouse Gas (GHG) section claims that the development will have a net positive effect because local community members will have less of a commute driving to work. No one with a temporary, part-time, and/or low-paying warehouse job will be able to afford to live anywhere within the surrounding community? On what data was the assumption that local residents need or desire low-paying warehouse jobs based? What data was used to calculate the vehicle miles travelled? How were the traffic models that assume 21-mile commutes would be shortened to 16-mile commutes created? Please justify the assertions by providing data detailing the mean, median, and mode monthly salary of the jobs that will be created and the mean, median, and mode monthly rent/mortgage in the surrounding communities. It is clear that the job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region far exceeds the number of available employees in the region. The current unemployment rate is at a 50-year low, and there are over 4,000 acres of approved and planned warehouses along the 215/60 corridor. At 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318,000 in Riverside, 212,000 in Moreno Valley, 80,000 in Perris, and 20,000 in Mead Valley). There are about 300,000 people in the labor force (For those aged 16+, the labor force participation rate is 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work in warehouses. Assuming that 50% can work in warehouses, that still leaves well over 20,000 jobs to be filled. The population growth (<1% per year) in our

region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support any additional warehouse jobs. The only way to fill those jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the vehicle miles travelled per employee estimates indicating shorter commutes are incorrect. This project will further exacerbate housing stress by requiring workers to commute from well outside of a 15-mile radius of the project. Even if allowed for the faulty assumption that locals would commute to the site, how would the analysis change if one accounts for automation in warehouses, or the fact that Californians are required to purchase electric vehicles by 2035? Please justify the current vehicle miles travelled per employee estimates using actual job, population, and housing estimates from the last three months, rather than seven-year-old SCAG projections that are completely incorrect.

It is obvious that the region does not have the capacity to staff these warehouses locally. Please consider more appropriate alternatives for the project, such as single-family residential homes that would actually serve to improve the real-world jobs-to-housing imbalance. Housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Thank you,
Leslie Bushong

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project site comprises approximately 817.9 acres within the western portion of the March JPA planning sub-area (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and the City of Moreno Valley.

The zoning designation in the DEIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities, but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have, including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant?" Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. The March JPA must demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here. Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex

within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? Furthermore, the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. The Aesthetics section must be revised, so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Images that reflect the actual appearance of warehouses in the area must also be used. Otherwise, the images and the Aesthetics section are a lie and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond the visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which have been identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of Western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. The March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large, industrial, mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal, low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan, and the community demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. They also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered, and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Do not allow one final, grand act of poor land use planning to be the lasting legacy of the March JPA.

Thank you,
Leslie Bushong

Dear Mr. Fairbanks:

I have lived in the same house in the Orangecrest neighborhood for 23 years. During that time, I have joined my neighbors in attempting to work with the March Joint Powers Authority on responsible planning for the 4,400 acres of surplus property. My neighbors and I worked to oppose the DHL cargo facility in the early aughts. We were ignored, and DHL failed within four years. My neighbors and I have worked over the past 15 years to oppose the development along Meridian Parkway and Van Buren Boulevard. We have been ignored, and one merely needs to drive those roads to see the numerous unoccupied, nondescript, and/or anemic buildings, many of which have remained vacant since they were built.

The March Joint Powers Authority has demonstrated its poor planning, lack of foresight, and utter disregard for Riverside residents' well-being and safety for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for local residents.

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. The West Campus Upper Plateau Project will only exacerbate the pollution and traffic congestion in Riverside. I demand that the developer revise the entire project to include non-industrial alternatives, as has been consistently requested by the community for over a year.

Thank you,

Dear Mr. Fairbanks:

I have lived in the Orangecrest neighborhood since March of 2000. Over the past 23 years, I have experienced the same deception and lies from the March JPA as are presented in the draft environmental impact report: lies about jobs that don't pay enough for employees to even live in the City of Riverside and that, with automation, will soon be obsolete; lies about parks, trails, and open spaces that never come to fruition; and lies about construction, an abundance of which is currently vacant and has never been occupied. Those lies have systematically transformed one of the most desirable and attractive residential neighborhoods in the City of Riverside into a sea of unsightly office buildings and warehouses that are inconsistent with responsible city planning. The March JPA is using the same tactics to promote the West Campus Upper Plateau Project.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in that document. They also have a duty to work with local communities to develop the West Campus Upper Plateau in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project must be reconsidered, and reasonable alternative configurations must be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

What do an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes have in common? They all occurred in the Orangecrest neighborhood of Riverside within the past three years, with the warehouse fire and jack-knifed big rig both occurring on September 12 of this year; all three put local residents in danger; and all three were the result of the poor planning, lack of foresight, and utter disregard for local residents' well-being and safety demonstrated by the March Joint Powers Authority for at least the past 23 years. The West Campus Upper Plateau Project is only the most recent misguided and uninformed project that, similar to past projects, will be detrimental to the quality of life for Riverside, Perris, and Moreno Valley residents.

Riverside consistently ranks near the top of any list of cities in California in terms of pollution and traffic congestion. If you have any doubts about that you should contact the California Air Resources Board on Iowa Avenue in Riverside or the College of Engineering Center for Environmental Research and Technology at UC Riverside, rather than relying on the biased environmental impact report that the developer clearly paid to be written in their favor. If the project is approved, the traffic and pollution problems will most certainly worsen, and they won't be localized to the City of Riverside. The City of Perris and the City of Moreno Valley will necessarily experience the detrimental impacts, as well.

I demand that the developer specifically address how traffic and pollution problems will be mitigated, how big rigs will be strictly prohibited from using residential streets in perpetuity, and how airplane crashes and warehouse fires can be guaranteed never to occur again. If the developer is unable to meet any of those demands, the project should not be allowed to proceed.

Thank you,
Leslie Bushong

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (DEIR) on the West Campus Upper Plateau Project (Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents' homes, a proposed park, and reserved passive recreation areas, and are cited less than a quarter mile from a preschool. The DEIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan, you have ignored the community, and it seems you did so intentionally. For twelve months, we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and other sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area, and I have serious concerns with the lack of alternate plans in the DEIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the West Campus Upper Plateau. I am in favor of each of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you,
Leslie Bushong

Sent: Thursday, March 9, 2023 2:49 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Over the past 23 years, the March JPA has never meaningfully engaged with the community, has never formed a community advisory board to guide their development decisions, and has never pursued a project that respects the safety, well-being, and quality of life of residents. Instead, the March JPA has ignored the concerns of the community and hidden from scrutiny by withholding information from the community and scheduling meetings in the middle of the day when most community members are unable to attend.

Ignoring the concerns and opposition of the community has resulted in, among other disasters, an airplane crashing into a warehouse, a warehouse fire, and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes, each of which put residents in danger, and all three of which were the result of the lack of foresight and utter disregard for residents' safety and well-being demonstrated by the March JPA. The proposed West Campus Upper Plateau project will only increase the possibility of similar disasters and place them even closer to residential homes.

I demand that the developer specifically address how big rigs will be strictly prohibited from using residential streets in perpetuity and how airplane crashes and warehouse fires will be guaranteed never to occur again. If the developer is unable to meet those demands, the project should not be allowed to proceed.

Thank you,
Leslie Bushong

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Linda TingleyRivera, 922 Kilmarnock Way, Riverside, Ca 92508 Linda.tingley@yahoo.com <include name, address, email in signature line>

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Linda TingleyRivera, Linda.tingley@yahoo.com 922 Kilmarnock Way, Riverside, Ca 92508,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties in this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors.

It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to the industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I favor these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership

with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Lin Zhao

INTENTIONALLY LEFT BLANK

From: Mark Jessen <mcInjessen@gmail.com>
Sent: Thursday, March 9, 2023 7:36 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Mark Jessen

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Mark Jessen

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Mark Jessen

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Mark Jessen

INTENTIONALLY LEFT BLANK

From: Mark Jessen <mcInjessen@gmail.com>
Sent: Thursday, March 9, 2023 7:39 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Mark Jessen

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Mark Jessen

From: Mark Jessen <mcInjessen@gmail.com>
Sent: Thursday, March 9, 2023 7:40 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Mark Jessen

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Mark Jessen

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Attached please find a comment on the air quality section of the draft EIR.

Please email me to confirm receipt of this public comment.

Sincerely,

Mike McCarthy

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation area; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-827.2

The draft EIR Air Quality section (sections 4.2 and Appendices C1, C2) systematically underestimates the air quality and health risk impacts to the community and region. It fails to evaluate cumulative impacts on both local and regional scales and engages in a series of flawed assumptions that demonstrably underestimate cumulative health risk. As a PhD atmospheric scientist from UC Berkeley with 20 years of experience in health risk assessment^{1,2,3} and data analysis examining gradients in near-road pollution near-roadways^{4,5,6,7,8}, I am astonished at the chained underestimates of the risk to human health made within this planning document. I ask that these deficiencies be addressed to accurately the cumulative effects of warehouse development in our region on human health, rather than minimize the potential dangers of yet more transportation related pollution on our roads, freeways, and in our communities that are already disproportionately impacted by the second largest cluster of warehouses in the region.

I-827.3

- 1) The overall project health risk assessment (HRA) exhibits a systemic bias in evaluating cancer risk through a series of individual decisions that all bias the results lower than a comprehensive analysis. Cumulatively, these choices display a callous disregard for the residents of the area and the true health-risk that will be experienced by residents. The HRA

I-827.4

- a. omits adjacent projects and regionally cumulative truck impacts to the 215 freeway from the analysis (undercounts emissions)

⁷ <https://www.sciencedirect.com/science/article/pii/S1361920920306295>

⁸ <https://www.sciencedirect.com/science/article/abs/pii/S1352231020305070>

- b. omits toxic air contaminants from consideration other than diesel PM (undercounts hazard)
 - c. omits the proposed park as a sensitive receptor site despite children exercising directly adjacent to warehouses (neglects evaluation of sensitive receptors in closest proximity to emissions)
 - d. drastically undercounts the truck trip rates, diesel PM emissions, and TRU idling associated with the 725,000 SF high-cube fulfillment center and the 500,000 SF cold-storage warehouse by omitting its own indicated 'east-side' dock doors from Appendix C2 – Table 2-4.
 - e. omits the cumulative health risks of the multi-pollutant mixture of mobile-source project related pollution other than diesel PM. The pollutants of benzene, formaldehyde, acetaldehyde, 1,3-butadiene, chromium, nickel, and naphthalene from mobile sources should be included as they are cumulatively important to total risk levels, especially given the high relative ratios of passenger vehicles to heavy-duty trucks from fulfillment center warehouses (e.g., Figure 4-7, MATES V)⁹.
- 2) The Project regional air quality analysis omits local vicinity and regional projects that are cumulatively considerable and of importance. The project near-field air quality analysis excludes more than 60 existing warehouses totaling over 20 million square feet within a few miles of the project. The project regional analysis of NO_x, PM_{2.5}, and ozone excludes the regional cumulative impact of over 100 million square feet of existing warehouses and the planned/approved impact of another 75 million+ square feet along the I-215 and SR-60 corridors. These warehouses have largely been approved by March JPA and its member agencies and must be evaluated and disclosed within the regional impacts.

I-827.4
Cont.

I-827.5

The Health Risk Assessment Systematically Underestimates Risk

The Health Risk Assessment (HRA) described in Section 4.2 and Appendix C2 estimated the carcinogenic risk from diesel PM for residents around the project. However, a series of poorly considered decisions and inaccurate assumptions systematically biased the risk levels lower.

1. The HRA omits known emissions sources from past, present, and probable future warehouses that I believe would contribute significant additional carcinogenic risk from both diesel PM and other mobile source air toxics (see bullet 2a below).
 - a. The HRA omits dozens of nearby existing warehouses and under construction warehouses from the model (see next section and cumulative impacts letter) – which cumulatively add thousands of every extra idling trucks around our community. These are not included in the Appendix C2 HRA.
 - b. The HRA omits many surrounding truck routes from the HRA – compare Appendix N – Exhibit 2-C included below and the Truck Route maps (JPA #21-02, City of Riverside, County of Riverside) which cumulatively include tens of thousands of trucks and passenger vehicles emitting pollution.
 - i. March JPA Truck routes (Meridian, Van Buren, Krameria)
 - ii. City of Riverside Truck routes (Alessandro Blvd)

I-827.6

⁹ <http://www.aqmd.gov/docs/default-source/planning/mates-v/mates-v-final-report-9-24-21.pdf?sfvrsn=6>

- iii. County of Riverside Truck routes (Brown Street)
 - iv. the I-215 freeway and State Route 60 freeway
 - c. The HRA omits the construction of South Barton Road from its emissions domain (see Appendix C2 – Exhibit 2-A) which is a few hundred feet from a preschool with vulnerable young children.
 - d. The HRA omits the construction activities and installation of a water tank from its emission domain (see Appendix C2- Exhibit 2-A) which is fewer than fifty feet from adjacent homes.
- 2. The HRA omits known carcinogens that add significant health risk emitted from Project construction and operational activities from its hazard assessment.
 - a. The SCAQMD Figure ES-2 in MATES V¹⁰ clearly indicates only 50% of cancer risk in the basin is attributable to diesel PM; other named significant contributors are all emitted directly or indirectly by mobile sources identified as nationally significant contributors to cancer risk¹¹
 - i. Benzene
 - ii. 1,3-butadiene
 - iii. Acetaldehyde
 - iv. Formaldehyde
 - v. Naphthalene
 - vi. Ethylbenzene
 - vii. polycyclic aromatic hydrocarbons (PAHs)).
 - b. Therefore, basing a health-risk assessment on heavy-duty truck emissions alone will significantly underestimate total carcinogenic health-risk from the project by at least 50%.
- 3. The HRA doesn't include the proposed Park as a sensitive receptor in its analysis, despite clear guidance from the CARB handbook, WRCOG, City, and County of Riverside Good Neighbor Guidelines that all define parks as sensitive receptors. The proposed 60-acre park is situated less than 100 feet across the street from four warehouses, and less than 500 feet from a major arterial and an arterial highway. It is less than 800 feet from the industrial warehouse loading docks. Given that the children using this park will be exercising, their increased respiration rate will increase the dose of carcinogenic exposure from the adjacent warehouses emissions.
- 4. The HRA botches its modeled operational on-site emissions for the industrial warehouses in Appendix C2.
 - a. Exhibit 2-B clearly shows a map of the old site plan. This Exhibit does not match the reported Dock doors and truck idling rate locations in Appendix C2 – Table 2-4 for the Building 'A'. First, the incorrect number of business park buildings are shown, indicating that emissions locations for buildings D-K (7 buildings) are not consistent with the current site plan for the project. More importantly, dock door locations for Building A should have dock doors to the north, east, and south. The Table 2-4 only shows dock

¹¹ <https://ehp.niehs.nih.gov/doi/full/10.1289/ehp.11861>

doors in two orientations (104 idling trucks north and south for A).

Exhibit 2-B from Appendix C2

- b. The truck emissions for 'Building A' and Building B in Appendix C-2 **Table 2-4** are incorrect. Building A should have the highest number of truck and the highest emissions of diesel PM according to the truck trip estimates in **Table 4.15-1** (474 truck trips for building B, 222 truck trips for building C, and 652 truck trips for 'Building A' (376 + 276 for high-cube and remaining industrial) combined. However, Appendix C-2 **Table 2-4** shows that Building A has 418 Trucks per day, Building B has 640 trucks per day, and Bldg C has 290 trucks per day. This underestimates diesel PM on-site emissions by at least 22%.
- c. As noted in my transportation comment letter and shown in **Table 1**, the truck trip rates used in the analysis are far lower than the SCAQMD 2305(d)1(C) weighted average truck trip rates and likely underestimate daily heavy-duty truck trips by a factor of 2. This is yet another underestimate in the same direction that lowers the HRA estimates. This again underestimates diesel PM emissions by 100%. Using the SCAQMD Rule 2305 WTRR values results in a more than doubling of truck trips for the project. That would seem to suggest that the default truck trip rates from ITE and WRCOG are likely to be underestimates of true truck trip rates.

Extra daily truck trips	176	1494	710	2381

I-827.9
Cont.

- d. Therefore, someone failed to accurately transcribe the truck trips from the Building A and Building B in the correct location and quantity. As a result the modeled diesel PM emissions are incorrectly located and the number of idling TRUs is underestimated and generated incorrectly. Correctly reallocating trucks will change both the location and magnitude of emissions from the diesel PM trucks by at least 20%.
- e. The project excludes off-site emissions from multiple nearby truck routes and the I-215 freeway which is almost exactly 0.75 miles from the nearest homes in the neighborhood. Given that over 20,000 trucks traverse that roadway daily, almost all of which are attributable to warehouses, it is important to include this facility in the off-site emissions health risk assessment. It is absurd to include Cactus Avenue in Moreno Valley but exclude the I-215 freeway, Van Buren, Alessandro, Brown Street, and Krameria Avenue.

I-827.9
Cont.

The combination of the undercounted emissions sources (at least 50 warehouses and associated idling trucks; at least 4 truck routes and a freeway), inadequate modeling domain, omission of carcinogens, and omissions of locally important sensitive receptors is leading to a cumulative misrepresentation of the cumulative project health-risk on the community. I estimate that the combined synergy of these effects will at least quadruple the diesel PM emissions. Adding in the missing carcinogens will basically double the cancer risk again. Cumulatively, I believe this will exceed the 10-in-a-million cancer risk threshold. Additionally, I note later in the errata section that the choice of the Riverside Municipal Airport wind rose will also systematically bias the results low; the Perris Valley station is more representative of the higher elevation West Campus Upper Plateau winds.

EXHIBIT 2-C: MODELED OFF-SITE EMISSION SOURCES

I-827.10

The March JPA Health Risk Assessment is significantly underestimating cumulative cancer risk. I ask that the March JPA justify and revise its health risk assessment.

- 1) Justify the omission of nearby approved and planned projects from construction phase HRA impacts.
- 2) Justify the omission of the surrounding truck routes from the modeling domain, especially Van Buren, Krameria, Brown St. Alessandro, and the 215 freeway.

- 3) Justify omitting the operational warehouse impacts (i.e., existing truck idling and car traffic from March JPA warehouses) from the HRA during the construction phase of the Project's warehouses. The residents are exposed to both the existing operational emissions and the construction phase emissions, not just the latter.
- 4) Justify the omission of known mobile source related pollutants from the HRA, given their significant contributions to cancer risk in the South Coast Air Basin and nationally.
- 5) Justify omitting the park from the set of sensitive receptors, given its proximity to the warehouses. I would hope that the health of the children exposed to the emissions from your project are of utmost importance, rather than a mere oversight.
- 6) Justify the incorrect table of models and inadequate modeling of TRU emissions by failing to accurately transcribe the truck trips to the correct buildings in the health risk assessment.
- 7) Justify omitting walking trails and passive recreation areas from the list of sensitive receptors in your analysis – these trails are required to be open and are intended for community use yet are completely omitted as a possible location for micro-exposures.

I-827.10
Cont.

Air Quality Analyses exclude both immediate and regional cumulative impacts

Immediate Vicinity – Health Risk Analysis Omissions

Multiple warehouse projects are planned/approved and under construction surrounding the Project. The Air Quality construction analysis omits these nearby projects from the cumulative analysis of construction emissions and omits the operational impacts of existing warehouse truck and car traffic during the construction phase. **Figure 1** shows the immediate vicinity of the project with approved and planned projects. Multiple other warehouses are likely to be under construction or operational during the construction phase of this project. There are over 100 million square feet of existing warehouses within 6 miles of the proposed project and there are over 5 million square feet of approved and under construction warehouses within 3 miles of the project. I detail the full list of projects in the Cumulative Impacts Letter but wanted to specifically identify those impacts on air quality for this section.

I-827.11

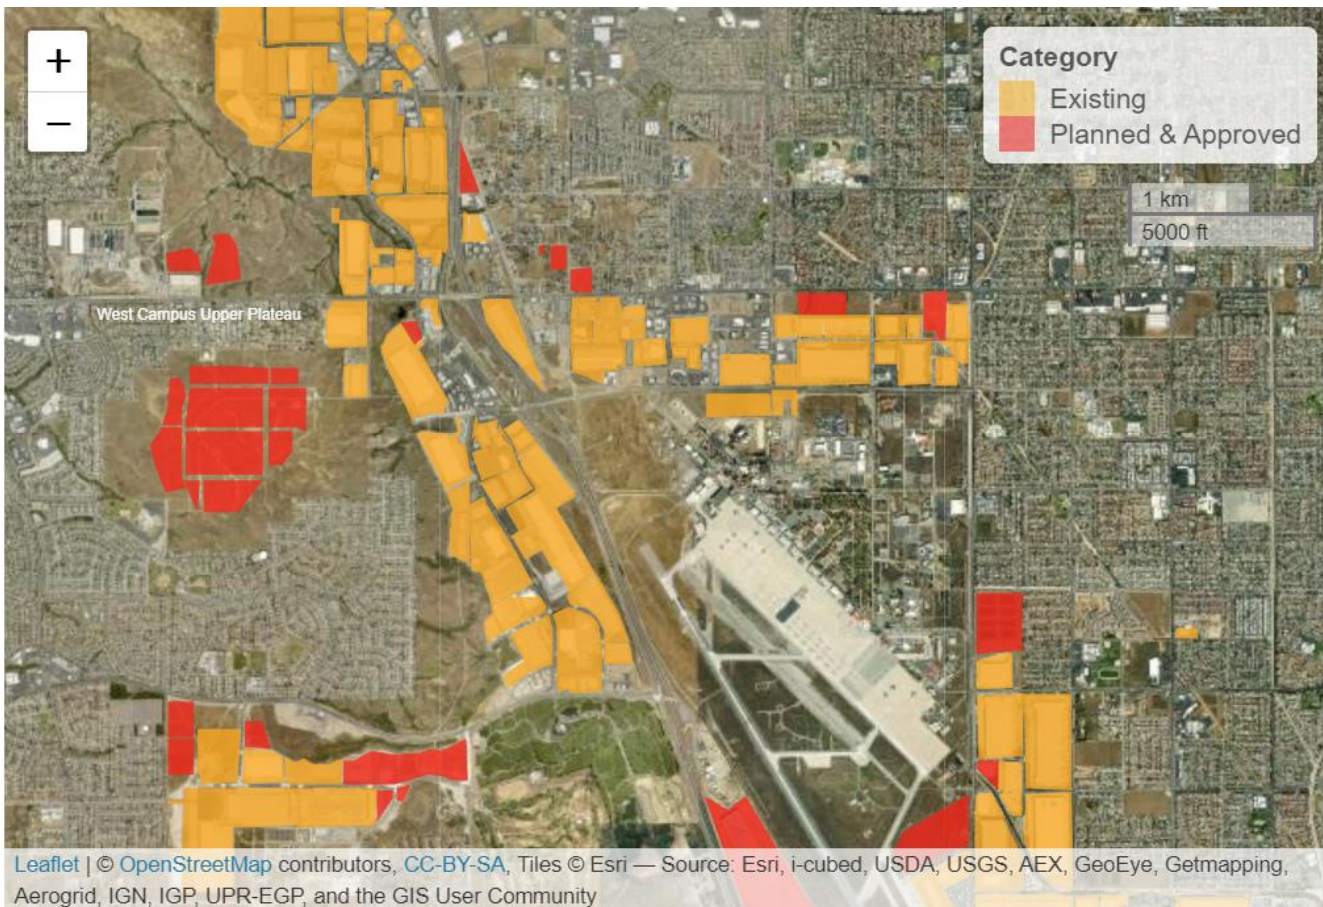

Figure 1- Proposed project (West Campus Upper Plateau) within the context of existing (brown) and approved/planned warehouses within a few miles of the project site.

Given that the projects cumulative impacts are cumulatively considerable when considered within the context of additional construction and operational diesel PM and other toxic air contaminant impacts (formaldehyde, acetaldehyde, benzene, naphthalene, 1,3-butadiene, ethylbenzene, and polycyclic aromatic hydrocarbons), it is important to include these localized impacts in the air quality and health-risk analyses.

Therefore, I ask that the March JPA

- 1) Justify excluding construction emissions from Sycamore Hills Distribution center, Buildings E, F, G, and 1 in the South Campus, and Meridian Building West. Other nearby under construction project include buildings H, I, 2, 3 in the South Campus, Old 215, Moreno Valley Commerce Center, the Edgemont Commerce Center, Meridian D1 Aviation Gateway, First March Logistics Project, Oleander Business Park, and Compass Danbe Centerpointe.
- 2) Justify excluding the operational emissions from trucks along March JPA truck routes in its air quality and health-risk analysis during the construction phase of the West Campus Upper Plateau. Specifically, justify excluding Alessandro Blvd, Meridian Parkway, Brown St., Van Buren and the 215 Freeway from the Health-Risk Analysis and localized air quality analysis during the 2023-2028 construction phase.
- 3) Demonstrate that the Construction Phase Air Quality thresholds of significance as estimated in Table 4.2-7 are met when including applicable regional construction and operational level impacts surrounding the project in addition to the specific project's impacts. Current estimates

I-827.11
Cont.

fail to include other immediate vicinity and regional projects under construction which will cumulatively impact the project.

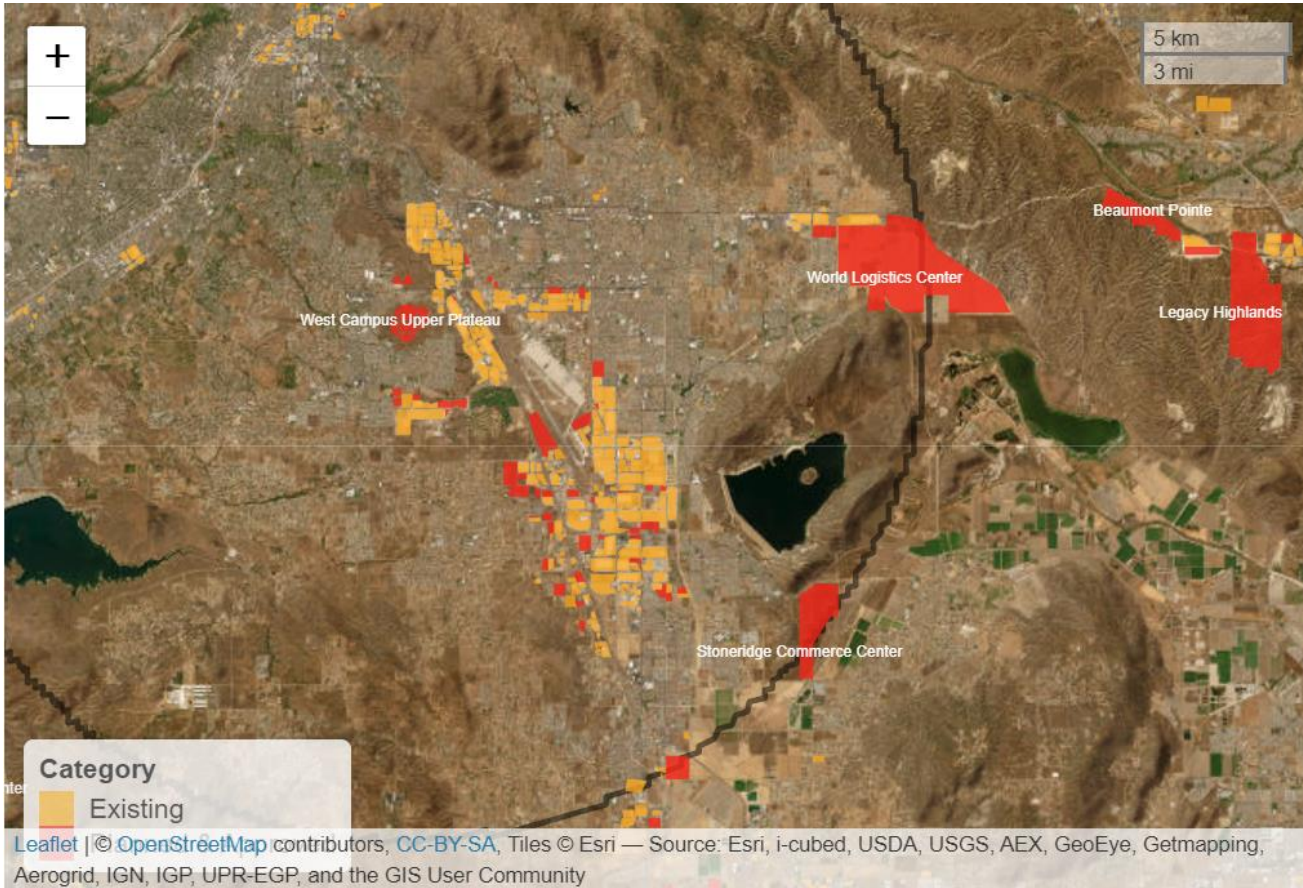

I-827.11
Cont.

Regional Analysis – Regional Air Quality issues – ozone, NO₂, and PM_{2.5}

In the regional analysis of cumulative air quality impacts, the scope of the analysis is completely inadequate. As mentioned in the cumulative impacts letter, the Air Quality section's regional scope is the South Coast Air Basin. Even if we limit the scope to merely a 10-mile buffer around the project, the intense scale of warehouse development along the 215/60 corridor is obvious as shown in **Figure 2**. The existing footprint¹² of warehouses is over 280 million square feet. The cumulative additional footprint of approved and planned warehouses in the region is another 207 million square feet, nearly doubling the existing footprint and cumulatively approaching a half a billion square feet devoted to warehouses within 10 miles of this project. The March JPA has 5 million square feet approved and under construction. Moreno Valley has the enormous World Logistics Center contributing over 100 million square feet of warehouse footprint. The County of Riverside has many projects in Mead Valley and the large Stoneridge Commerce Center (~20 million square feet footprint) near Nuevo. The Project's cumulative impact project list omits 90% of this area and projects, deliberately underestimating the regional scale of the past, present, and proposed future projects. Given the regional character of air quality problems in the SCAQMD area, it is important to identify the regional patterns in development that are characterizing the local land-use authority decisions cumulatively.

I-827.12

¹² Footprint = parcel area in square feet – includes both building size and parking lots and landscaping. Building size will depend on exact floor area ratio, but typical FAR are 0.4-0.65 within the area.

I-827.12
Cont.

Figure 2 – Regional map of existing, approved, and planned warehouse projects within Riverside County. The

The recently approved 2022 Air Quality Management Plan by the South Coast Air Quality Management District describes the joint and individual responsibilities of various agencies in improving air quality regionally. Two types of emissions management are possible – emissions controls and emissions demand management. Figure 1-1 from the AQMP¹³ indicates the responsible agencies.

¹³ <http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2022-air-quality-management-plan/final-2022-aqmp/04-ch1.pdf?sfvrsn=12>

FIGURE 1-1

ILLUSTRATION OF LOCAL, STATE, AND FEDERAL AGENCIES AND THEIR AUTHORITY OVER EMISSIONS CONTROL TECHNOLOGY OR EMISSIONS DEMAND MANAGEMENT.⁸

On the left-hand side, the U.S. Environmental Protection Agency, California Air Resources Board, and South Coast Air Quality Management District are responsible for emissions controls. Tailpipe emissions and local permits are controlled by these agencies. On the right-hand side, the land-use agencies are the ones responsible for local emissions demand management. Southern California Association of Governments, individual cities like Riverside, Los Angeles, and Ontario, and joint powers authorities like the March JPA control emissions demand by deciding what types of land-use to allow and the cumulative use of land. As it notes, *“Goods movement is a substantial source of smog-forming emissions in our region and the goods movement sector has recently experienced substantial growth in the region. Projections indicate that this expansion will continue. This growth has resulted in surging demand for warehousing, which has fueled the construction of new warehouses in the Inland Empire. Due to the substantial emissions associated with warehouses, it is critical that land use decisions regarding the siting of warehouses consider air quality impacts when approving new projects. While these decisions are typically made at the local level and South Coast AQMD lacks direct regulatory authority over land use, South Coast AQMD recognizes that collaboration across multiple public agencies and cities is required to promote better land use planning in consideration of air quality impacts.”¹⁴*

I-827.12
Cont.

The March JPA, along with its member agencies the City of Riverside, Moreno Valley, Perris, and the County of Riverside, have cumulatively decided to develop the 215/60 corridor almost exclusively for the Goods Movement Sector in a manner that increases the emissions of regional smog-forming pollution by increasing the numbers of vehicles, trucks, planes, and trains. Each individual decision has significantly and unavoidably degraded air quality and conflicted with the AQMP. Cumulatively, it exhibits a pattern of disregard for the air quality for the region given the overwhelming development of projects that conflict with the air quality management plan and undermine the emissions controls of the individual vehicles by adding so many more trucks and passenger vehicles to the roads, despite our worst in the nation air quality. It also induces additional cargo plane flights and goods-movement via locomotives, which have not been modeled or addressed at all in terms of cumulative air quality impacts.

Therefore, I ask that the March JPA

- 1) Demonstrate that the Operational Phase Air Quality thresholds of significance are not completely understated when including regionally representative operational emissions for the

¹⁴ AQMP – p.1-5 - <http://www.aqmd.gov/docs/default-source/clean-air-plans/air-quality-management-plans/2022-air-quality-management-plan/final-2022-aqmp/04-ch1.pdf?sfvrsn=12>

100 million square feet of warehouses already operational and cumulatively impacting air quality. Please account properly for the additional planned/approved warehouses regionally that will add another 50 million square feet of warehouses as shown in Figure 2. This is important for the regional nonattainment of NO₂, ozone, and PM_{2.5} and the estimated cumulative regional impact.

- 2) Justify the cumulative decisions of itself and its member agencies in continually ignoring the air quality impacts of its decisions and ignoring their responsibilities for managing emissions in the region by making responsible land-use decisions.
- 3) Identify how its pattern of land-use planning has been responsible and justified regionally in improving the air quality of its residents.

Errata

This section includes other observations of errors and questionable assertions by the March JPA and the Project Applicant in its submission.

I-827.13

p.4.2-3 - 2021 data was available as of July 2022 – Table 4.2-1 is out of date.

p.4.2-10 – Table 4.2-3. The new proposed PM_{2.5} 24-hr standard is proposed at 9-10 µg/m³ as announced January 6th, 2023¹⁵.

I-827.14

P.4.2-14 – There are a number of omissions from the General Plan Relevant Goals that we think are not being met and would like addressed within this section.

- Add policy 2.3 – Protect the interests of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses
- Goal 3 – Manage Growth and development to avoid adverse environmental and fiscal effects.
 - 3.2 - ...'minimize impacts on natural environmental resources'
- Transportation Goal 2 – minimizing negative effects on air quality, the environment and adjacent land-uses and jurisdictions
 - Require the installation of bus improvements such as bus turnouts, bus stops, and terminals as part of the conditions of development for employment centers and land uses that attract large numbers of persons, where appropriate.
- Goal 3 - Reduce air pollution through proper land use, transportation, and energy use planning
 - Locate ancillary uses within business and employment centers to reduce VMT
- Goal 4 – Pursue reduced emissions for stationary and mobile sources through the use and implementation of new and advancing technologies
 - Policy 4.1 – Pursue the use of equipment with reduced or zero emissions for stationary and mobile source equipment...
 - Policy 4.4 – Promote for all development and encourage end-uses to employ emission reducing or zero source equipment and processes

I-827.15

¹⁵ <https://www.epa.gov/pm-pollution/national-ambient-air-quality-standards-naaqs-pm>

- Policy 4.5 – Promote the development and advancement of reduced and zero emission technologies through R&D
- Goal 5 – Maximize the effectiveness of air quality control programs through coordination with other governmental entities
 - 5.3 - ...design transit-oriented development within the planning area
 - 5.5 – provide appropriate mitigation, where necessary
- 6.7 left off – promote ancillary uses to be located with primary uses, such as child care, cafeterias, and other supportive service uses where appropriate
- 9.2 left off – Support the use of efficient street cleaning equipment and practices.

I-827.15
Cont.

p.4.2-15 –

- Fails to mention the Good Neighbor Guidelines City of Riverside, and falsely claims that County of Riverside is consistent with WRCOG. County of Riverside Guidelines are weaker than WRCOG Good Neighbor Guidelines, especially with regards to setbacks from sensitive receptors (300 feet for County, 1,000 feet for WRCOG). Please justify the assertion that these are ‘consistent’.
- I request that offroad equipment include 20% of hours of operation to be battery-electric vehicles – these are feasible as shown here: <https://californiacore.org/resources/>
- PDF-AQ-4 – no natural gas use – why is there a natural gas backbone in Figure 3-7H if PDF-AQ-4 prohibits the use of natural gas in the Specific plan area?

I-827.16

I-827.17

I-827.18

Table 4.2-2 – NO₂ is not listed as being in state nonattainment but is, in fact, in state nonattainment along the SR-60 between San Bernardino and Riverside County.¹⁶ Please justify the failure to disclose this nonattainment area that this project will contribute traffic to from the analysis of nonattainment areas.

I-827.19

4.2-18 – KRAL is almost 8 miles from the project site and nearly 900 feet lower in elevation – March ARB has meteorological data and is less than 1 mile from the project site. As can be seen from a basic check of the runway orientations for the two airports, KRAL is completely inappropriate for use in meteorological dispersion modeling of this project. Winds at Riverside Municipal are channeled along the Santa Ana river valley east-west – its elevation is 820’ ASL. March Air Reserve Base is at 1535’ ASL and winds are predominantly north-northwest to south-southeast. March Air Reserve Base winds are significantly slower and lower than at RAL, which increases stagnancy and is less effective at dispersion. There is no scientifically valid reason to choose a less representative airport for winds for this project, especially since it will indicate lower pollution impact due to the higher winds and incorrect direction of winds.

I-827.20

Windroses from Riverside Municipal airport and March AFB – both are fully publicly available as ASOS data here: <https://mesonet.agron.iastate.edu/sites/windrose.phtml?station=RIV&network=CA> ASOS

If data from the SCAQMD must be used, the Perris data would be more representative of the local wind field than Riverside Municipal Airport.

4.2-21 – The current version of AERMOD is 22112 – not 21112 as of June 27, 2022 -

<https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models>

I-827.21

4.2-23 – Trip length of 20.27 miles for BP and fulfilment center uses for LDV and 32.03 miles for the trucks – SCAG average truck trip distances from 2016 are not justified given the location of this warehouse complex to the average warehouses in the SCAG basin. Please justify using average values when this project is much further from the Ports of LA/Long Beach and multimodal facilities than most other warehouses. The Streetlight Data¹⁷ indicate that average truck trip lengths for San Bernardino County are currently at 38 miles per trip as provided by San Bernardino County Transportation Authority. Please justify a SCAG default trip length of 32 miles for these trucks given that SCAG includes areas much closer to the primary ports of entry for these types of uses. A County specific number should be used here.

I-827.22

4.2-24 – PDF-AQ-2 refers to construction phase budget, not cargo-handling equipment. Should this be PDF-AQ-1? Tier 4 CARB equipment is already required throughout the basin and is not a mitigation measure.

I-827.23

p.4.2-25 – MM-AQ-1 affects VOC levels – the South Coast Air Basin is NO_x limited, not VOC limited, so VOC mitigation measures will have no impact at all. NO_x control measures are required to meet NAAQS for ozone and NO₂. This assertion is 20 years out of date.

I-827.24

Table 4.2-9 – PM₁₀ and PM_{2.5} background concentrations are omitted from this table which is used as the basis for a 'Less than Significant' impact. However, Riverside Metropolitan stations 1 - Rubidoux list the annual average means and max 24-hr concentration for those pollutants¹⁸. As the highest background concentration for both pollutants is above the SCAQMD localized significance threshold, the **Threshold of 10.4 µg/m³ is Exceeded and the project would have a Significant and Unavoidable Impact.**

I-827.25

2021	82.1 µg/m ³	76 µg/m ³
2020	41.0 µg/m ³	104 µg/m ³
2019	46.7 µg/m ³	99 µg/m ³

I-827.25
Cont.

p.4.2-32 – The boundaries for the construction HRA are inconsistent with the No Trespassing boundaries and project site boundaries for Barton road in the South part of the project. Given the road construction in South Barton the modeling domain needs to include the construction and expansion of asphalt roads at Barton adjacent to the Grove Church. As mentioned in multiple other sections, the construction phase emissions appear to omit other adjacent construction projects and operational truck traffic from the March JPA.

I-827.26

-Again **PDF-AQ-2** is a description of construction phase emissions (**CONSTRUCTION BUDGET**), not operational cargo handling. The HRA should only apply those project design features listed in the draft EIR in its assumptions. The operational HRA assumption of Less than Significant Impact is not justified here, especially given that the March JPA has not adopted County of Riverside standards.

I-827.27

-There is no mention of induced locomotive or commercial cargo traffic as a result of the cumulative impact of the additional warehouses for this project or in the region. Given that the RTP has no plans to improve the 215/60 interchange, the only way to add goods movement capacity is through additional cargo flights or train transport. Given the community flight path of March ARB commercial planes and the proximity of the rail line, noise and air quality from these alternate goods movement modes are also likely to increase. Please justify not including any induced commercial cargo flights or train trips in this project EIR.

I-827.28

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-827

Michael McCarthy

March 9, 2023

- I-827.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-827.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. This comment also raises concerns regarding cumulative air quality impacts.
- I-827.3** This comment raises generalized concerns regarding the air quality and health risk analysis. Please see the Final EIR and Appendix C-1 for an expanded discussion and analysis of cumulative conditions and impacts. Please see the Final EIR and Appendix C-2 for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million. The cumulative air quality impacts were evaluated and were not underestimated. (Appendix C-4) This comment provides the commenter's background information and represents himself as an expert regarding air quality. March JPA has not independently verified the commenter's qualifications and has relied on its expert air quality consultants, whose resumes are attached to Appendix C-4 of this Final EIR.
- I-827.4** This comment raises concerns regarding the Project Health Risk Assessment (HRA) Technical Report (Appendix C-2).
- a. This comment alleges the Project HRA omits adjacent projects and regionally cumulative truck impacts to I-215. Please see Recirculated Section 4.2, Air Quality, for the revised discussion of cumulative air quality impacts, including along truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million. (Appendix C-4)
 - b. The comment states that the Project HRA omits toxic air contaminants from sources other than DPM. While passenger vehicles would also emit toxic air contaminants, because the passenger vehicle fleet is predominantly gasoline powered, and TAC emission rates from gasoline engines are significantly lower than diesel engine TAC emission rates, the TAC emissions generated by heavy duty trucks result in significantly more risk. As such, no additional substantive health risk impacts would occur as a result of TAC emissions generated by passenger vehicles. Please see Response RA-6.3 for an expanded discussion of gasoline emissions and health risk assessments. Consistent with industry standards, the focus of the HRA is on diesel exhaust as the primary TAC that has the propensity to affect receptors in the vicinity of the Project. All other TACs that may result from passenger vehicles would not generate a greater risk, and in fact, would represent a fraction of the risk for diesel exhaust. Furthermore, the International Agency for Research on Cancer (IARC), which is part of the World Health Organization (WHO), has classified diesel engine exhaust as "carcinogenic to humans" (Group 1) based on sufficient evidence of its carcinogenicity to humans. This classification is in contrast to gasoline engine

exhaust, which is classified as "probably carcinogenic to humans" (Group 2A) due to limited evidence in humans and strong evidence in experimental animals.¹ (Appendix C-4)

- c. This comment requests the proposed Park be included as a sensitive receptor site. Please see Recirculated Section 4.2, Air Quality, for the evaluation of the proposed Park as a sensitive receptor. The analysis was revised to include the proposed Park as a sensitive receptor during operation of the proposed Project. As detailed in the Project HRA and Final EIR, the results of the analysis indicate that a less than significant impact would occur for users (including children) of the Park as a result of Project operational emissions. The risk to the Park users would be 1.18 in one million without mitigation and 0.62 with mitigation, both of which are less than the applicable SCAQMD threshold of 10 in one million. Additionally, at this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. The Project HRA contains the model runs and risk calculations. (Appendix C-4)
- d. The comment states that the analysis undercounts truck trip rates, DPM emissions, and TRU idling by omitting 'east-side' loading docks for the remaining Industrial parcel. As part of this Project, there are only site plans for Buildings B and C. However, for modeling purposes, the analysis assumed buildings on the remaining parcels and placed dock doors and loading areas in compliance with the development standards in the proposed Specific Plan. The number of idling trucks and TRUs is based on the Project Traffic Analysis and the building square footage, not the number of loading docks, thus the number of loading docks or dock doors would not affect the analysis. The comment makes the inaccurate assumption that the 500,000 square feet of cold storage and 725,600 square feet of high-cube fulfillment center warehouse would be two separate buildings on the remaining industrial parcel. The modeling assumed 3 industrial buildings – Buildings B and C and one on the remaining industrial parcel. (Appendix C-4)

The analysis accounts for the possibility that, while the allowed square footages on each parcel would remain the same, the ultimate uses (cold storage or high-cube fulfillment) could shift. The Project HRA is consistent with the Project Traffic Analysis, which only breaks out truck trips for Buildings B and C (both of which have proposed site plans). The remaining truck trips are split between high-cube cold storage warehouse, remaining industrial: high-cube fulfillment, business park warehouse, and business park mixed-use land uses. Additionally, because it is not known at this time in which buildings the high-cube cold storage warehouse uses would be placed, these truck trips were allocated between Buildings B, C, and the one building on the remaining industrial parcel based on the square footage for each building, proportional to the overall cold storage space allowed. As such, it is expected that the truck trip rates vary for each building based on the intended use of the building and allocation of cold storage trips. The analysis accounts for all daily truck trips identified in the analysis, and the manner in which these are apportioned between the various buildings would not alter the results of the analysis. (Appendix C-4)

- e. Please see Response I-827.4.b above as well as Recirculated Section 4.2, Air Quality, and Appendices C-1 and C-2 for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million. (Appendix C-4)

¹ https://www.iarc.who.int/wp-content/uploads/2018/07/FAQ_English-Mono105-1.pdf

I-827.5 This comment raises concerns regarding cumulative air quality impacts. Air pollution by nature is largely a cumulative impact. The cumulative geographic context for air quality impacts is the SCAB. The nonattainment status of regional pollutants is a result of past and present development, and the SCAQMD develops and implements plans for future attainment of ambient air quality standards. Appendix G of the CEQA Guidelines indicates that, where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the significance determinations. SCAQMD has developed regional significance thresholds for some regulated pollutants. March JPA has relied on these significance thresholds to make significance determinations for the Project's air quality impacts.

SCAQMD's CEQA Air Quality Significance Thresholds (April 2019) indicates that any projects in the SCAB with daily emissions that exceed any of the indicated thresholds should be considered as having an individually and cumulatively significant air quality impact. The potential for the Project to result in a cumulatively considerable impact, specifically a cumulatively considerable new increase of any criteria pollutant for which the Project region is nonattainment under an applicable NAAQS and/or CAAQS, is addressed in Section 4.2.5, Impacts Analysis. As set forth therein, because the Project would exceed the project-level thresholds for regional VOC, NO_x, CO, and PM₁₀, and PM_{2.5} emissions during operation, the Project's cumulative impacts with respect to such emissions would be considerable and significant. Please see Recirculated Section 4.2, Air Quality, for an expanded discussion of cumulative air quality impacts.

I-827.6 This comment raises concerns regarding cumulative health risks.

- a. This comment states the Project HRA omits nearby existing and under construction warehouses. Please see Recirculated Section 4.2, Air Quality, for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million.
- b. This comment states the Project HRA omits analysis of the Project's truck routes. Please see Recirculated Section 4.2, Air Quality, for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million.
- c. This comment states the HRA omits the construction of South Barton Road. As shown in revised Exhibit 2-A of the Project HRA, the analysis placed construction sources within 80 feet of the Grove Preschool (represented by Receptor R8), and the modeling conservatively assumed that construction would occur at these locations for the entire 4.35-year duration of Project construction, although construction on the southern Barton extension adjacent to the preschool would take place over a significantly shorter period of time. (Appendix C-4)
- d. This comment states the HRA omits the construction of the reclaimed water tank. As shown on the revised Exhibit 2-A of the Project HRA, the closest sensitive receptor (Receptor 11) is 32 feet from construction activities, specifically the northern Barton Street extension and the Mixed Use parcels of the Specific Plan Area. Even with analyzed exposure of 4.35 years of construction emissions, the mitigated construction health risk at Receptor R11 is 0.56 in one million, well below the SCAQMD significance threshold of 10 in one million. As noted in the Final EIR and Project HRA, TACs generally dissipate with distance from the source. The homes along Grove Community Drive and Barton Drive in the vicinity of the offsite water tank construction and waterline installation would not be exposed to construction source emissions to the extent or duration compared to Receptor R11 – the mitigated construction health risk

would be below 0.56 in one million. Offsite construction would occur over a significantly shorter duration than construction of the Project itself. As such, since the mitigated construction health risk at Receptor R11, the maximally exposed individual receptor (MEIR), is well below the SCAQMD significance threshold, the Project will not cause a significant human health or cancer risk to nearby residences from any on-site or off-site construction activity. (Appendix C-4)

I-827.7 This comment raises concerns regarding the analysis in the Project Health Risk Assessment. The Project HRA analyzes impacts from all construction and operational activities. While 50% of cancer risk in the basin may be attributed to DPM emissions, this does not mean that the remaining 50% is attributable to passenger vehicle emissions as stated in the comment. Stationary sources, including power plants, refineries, manufacturing facilities, boilers, and gas stations are also significant contributors to basin-wide cancer risk. As such, the analysis does not significantly underestimate risk as stated in the comment. Additionally, please see Response RA-6.3, which explains the contribution of toxics from gasoline vehicles.

I-827.8 This comment requests the proposed Park be included as a sensitive receptor in the Project Health Risk Assessment analysis. Please see Recirculated Section 4.2, Air Quality, for the evaluation of the proposed Park as a sensitive receptor. The analysis has been revised to include the proposed Park as a sensitive receptor during operation of the proposed Project. As detailed in the Project HRA and Final EIR, the results of the analysis indicate that a less than significant impact would occur for users (including children) of the Park as a result of Project operational emissions. The risk to the Park users would be 1.18 in one million without mitigation and 0.62 with mitigation, both of which are less than the applicable SCAQMD threshold of 10 in one million. Additionally, at this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. The Project HRA contains the model runs and risk calculations.

I-827.9 This comment questions the modeling in the Project Health Risk Assessment.

- a. This comment states the Project HRA uses an outdated Project site plan and questions the placement of dock door locations for the remaining Industrial parcel. As noted by the comment, the health risk assessment in the Draft EIR evaluated 1,763,168 square feet of business park use on seven business park parcels. After the original analysis was run, the site plan was changed slightly to distribute the same square footage of business park use onto 10 separate parcels. The Recirculated EIR disclosed the unmitigated operational health risk would be 5.26 in one million at the MEIR (R3). In response to recirculation comments, the Project HRA was revised to analyze warehouse buildings on each of the 10 Business Park parcels. The Project HRA confirms that the unmitigated operational risk was reduced from 5.26 in one million to 4.55 in one million as a result of this change. (Appendix C-4)

The comment further questions the analysis's placement of loading docks for the remaining Industrial parcel. There is currently no site plan proposed for the remaining Industrial parcel and the source configuration is simply conceptual for analytical purposes and shows loading docks on the northern and southern side of this modeled area in compliance with the development standards in the proposed Specific Plan. Emissions from on-site idling and on-site travel were included for the entirety of the Specific Plan Area. Notwithstanding, even if the configuration of the loading docks were different, there would be no change in the risk calculations due to the distance to the nearest receptor locations. (Appendix C-4)

- b. This comment questions the distribution of truck trips among Buildings B, C, and the remaining Industrial parcel. The comment assumes the remaining Industrial parcel would consist of a building with 725,000 square feet of high-cube warehouse and 500,000 square feet of cold storage warehouse uses. The truck trip estimates provided in Table 4.15-1 of the Draft EIR only break out truck trips for Buildings B and C, both of which have proposed site plans, and the remaining truck trips are split between high-cube cold storage warehouse, remaining industrial: high-cube fulfillment, business park warehouse, and business park mixed-use land uses. The analysis accounts for the possibility that, while the allowed square footages on each parcel would remain the same, the ultimate uses (the cold storage or high-cube fulfillment) could shift. Because it is not known at this time in which buildings the high-cube cold storage warehouse uses would be placed, these truck trips were allocated between Buildings B, C, and the one building on the remaining Industrial parcel based on the square footage for each building, proportional to the overall cold storage space allowed. As such, it is expected that the truck trip rates vary for each building based on the intended use of the building and allocation of cold storage trips. As such, a total of 418 truck trips were assigned to the remaining Industrial parcel (276 trips from the remaining industrial: high-cube fulfillment use and 142 trips from the high-cube cold storage warehouse land use). Additionally, TRU usage was assumed to take place at Buildings B, C, and the remaining Industrial parcel based on the cold storage truck trips assigned to each building. Because all truck trips presented in Table 4.15-1 are accounted for in the HRA analysis, diesel particulate emissions were not undercounted in the analysis. The analysis accounts for all daily truck trips identified in the analysis, and the manner in which these are apportioned between the various buildings would not alter the results of the analysis. (Appendix C-4)
- c. This comment questions the use of ITE truck trip rates rather than SCAQMD Rule 2305 truck trip rates and suggests the DPM emissions are understated. Please see Response FL-B.7 detailing the development and intended application of the Rule 2305 weighted average truck trip rates. The analysis utilized truck trips presented in the Project traffic study (Table 4.15-1 of the Draft EIR) and more accurately represents the specific land uses proposed by the Project. As such, DPM emissions from trucks are not understated in the analysis.
- d. This comment suggests the Project HRA incorrectly allocated truck trips and locations among Buildings B, C, and the remaining Industrial parcel. Please see Responses I-827.9.a and I-827.9.b above. Additionally, as Appendix C-2 footnotes, "Exhibit 2-B visually overstates the extent of warehousing allowed in the mixed-use parcels within the Project's Specific Plan so as to evaluate the 'worst-case' impacts at each sensitive receptor." As shown, the Project's HRA's modeling is overly conservative and currently overstates the potential loading docks and trucking activity that are expected to occur on-site.
- e. This comment states the Project HRA omits analysis of the Project's truck routes. Please see Recirculated Section 4.2, Air Quality, for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million.

I-827.10 This comment summarizes previous comments regarding the Project Health Risk Assessment.

- 1) This comment questions the omission of nearby approved and planned projects from the construction phase HRA analysis. There are several valid reasons why nearby approved and planned projects are not included in the construction phase HRA analysis:
 - a. Uncertain Construction Timing and Duration: The specific timing and duration of nearby approved and planned projects may not be known or could be subject to change. Since health risk assessments are time-sensitive and construction schedules can be fluid, it would be inappropriate to speculate on the stacking of risks without accurate information. Risk assessments need to be based on concrete data and reliable projections.
 - b. Source-Receptor Relationship: Health risk assessments are typically conducted based on a source-receptor relationship, where the emission source (e.g., diesel construction equipment) and the exposed receptor (e.g., residential area or sensitive population) are well-defined and quantifiable. Including nearby projects that are in various stages of approval or planning could introduce uncertainties in identifying the specific emission sources and receptors relevant to the assessment.
 - c. Variability in Source-Receptor Location: The location of receptors (e.g., residential areas, schools, workers) in relation to different emission sources can vary significantly. Each construction project may have a unique spatial distribution of potential receptors, and the stacking of risks without precise data could lead to misleading conclusions. Relying on speculative assumptions could undermine the accuracy and reliability of the health risk assessment.

As such, omitting nearby approved and planned projects from the construction phase diesel HRA is a prudent approach to ensure the assessment remains accurate, focused, and compliant with regulatory requirements. The potential uncertainties and speculative nature of including such projects could undermine the reliability and relevance of the assessment's findings. Instead, assessments should be based on available data and established source-receptor relationships for the specific construction project under consideration.

- 2) This comment states the Project HRA omits analysis of the Project's truck routes. Please see Recirculated Section 4.2, Air Quality, for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million.
- 3) This comment states the Project construction HRA should have included existing operational warehouse impacts. Please see Response I-827.10.1, above, as the reasoning provided also applies to existing operational warehouse impacts.
- 4) This comment states the Project HRA omits known mobile source related pollutants. The HRA does not omit known mobile source related pollutants from the HRA. Please see the Project AQIA for an expanded discussion and analysis of cumulative conditions and impacts. Please see the Project HRA for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million. See Response RA-6.3, which discusses why health risk assessments focus on diesel DPM.
- 5) This comment requests the proposed Park be included as a sensitive receptor in the Project Health Risk Assessment analysis. Please see Recirculated Section 4.2, Air Quality, for the evaluation of the proposed Park as a sensitive receptor. The analysis was revised to include

the proposed Park as a sensitive receptor during operation of the proposed Project. As detailed in the Project HRA and Final EIR, the results of the analysis indicate that a less than significant impact would occur for users (including children) of the Park as a result of Project operational emissions. The risk to the Park users would be 1.18 in one million without mitigation and 0.62 with mitigation, both of which are less than the applicable SCAQMD threshold of 10 in one million. Additionally, at this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. The Project HRA contains the model runs and risk calculations.

- 6) This comment summarizes prior comments regarding truck trips and TRU emissions modeling. Please see Response I-827.9, above.
- 7) This comment suggests the Project HRA should have included trails and passive recreation areas as sensitive receptors as a possible location for micro-exposures. Air quality sensitive receptor locations are places where people spend significant amounts of time and are, therefore, more vulnerable to potential air pollution exposure. Walking trails and recreational areas are typically not considered sensitive receptor locations for several reasons, one of which is the minimal time spent by individuals at these places. People typically visit walking trails and recreational areas for short periods, often for leisure or exercise purposes. Unlike residential or workplace locations where individuals spend a considerable portion of their day, the time spent on walking trails and recreational areas is limited. As a result, the potential exposure to air pollution is significantly reduced compared to sensitive locations where people reside or work. The LST analysis in Recirculated Section 4.2, Air Quality, evaluates potential short-term or micro exposures to criteria air pollutants and determined that impacts were less than significant.

I-827.11 This comment summarizes previous comments regarding cumulative air impacts.

- 1) This comment questions the exclusion of construction emissions from nearby approved and planned projects. Please see Response I-827.10.1, above, as the reasoning provided also applies to cumulative construction emissions.
- 2) This comment questions the exclusion of existing operational emissions from Project air quality and HRA construction phase analysis. Please see Response I-827.10.1, above, as the reasoning provided also applies to existing operational emissions during the Project construction phase.
- 3) This comment questions the Project construction phase significance determinations in relation to nearby construction emissions and existing operational emissions. Please see Responses I-827.11.1 and I-827.11.2, above.

I-827.12 This comment raises concerns regarding operational air quality thresholds of significance and cumulative air quality impacts. The comment questions the EIR's cumulative project list. Please see Topical Response 7 - Cumulative Projects, for an explanation of the development of the EIR's cumulative project list. The comment further describes the public agency responsibilities for improving regional air quality. The comment also characterizes the land use decisions of March JPA and its member agencies.

- 1) This comment states the EIR understated the operational phase air quality thresholds. Please see Recirculated Section 4.2, Air Quality, for additional operational phase analysis and expanded discussion of cumulative air quality impacts.

- 2) This comment states March JPA and its member agencies ignore cumulative air quality impacts. Please see Recirculated Section 4.2, Air Quality, for an expanded discussion of cumulative air quality impacts and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million.
- 3) This comment requests a discussion of the appropriateness of March JPA's land use decisions as it relates to regional air quality. This comment is outside the scope of CEQA and does not relate to the adequacy of the EIR. Over the years, the region has shown significant improvement in air quality. While there may be multiple factors contributing to this improvement, land use planning has played a crucial role in positively impacting air quality and justifying regional improvements for its residents. Some of the key aspects and measures that have been employed by March JPA include:
 - a. Smart Growth and Compact Development: Land-use planning has emphasized the development of compact urban centers, encouraging mixed land uses, and reducing urban sprawl. This strategy helps reduce the need for long commutes and encourages active transportation, such as walking and cycling, thereby lowering vehicular emissions.
 - b. Improvement of Public Transportation: The region has invested in enhancing and expanding public transportation networks, including buses, trains, and light rail systems. By providing viable alternatives to driving, this strategy reduces the number of vehicles on the road and subsequently cuts down on emissions.
 - c. Promotion of Active Transportation: Land-use planning has prioritized the creation of pedestrian-friendly and bike-friendly infrastructure, encouraging residents to opt for walking or cycling for short trips. This reduces the number of short car journeys, which are typically less fuel-efficient and more polluting.
 - d. Green Spaces and Urban Forestry: Creating and maintaining parks, green spaces, and urban forests can help absorb pollutants and improve air quality. Land-use planning has incorporated the development and preservation of such areas to mitigate the impact of air pollution.
 - e. Energy-Efficient Buildings: Implementing regulations and guidelines for energy-efficient buildings helps reduce energy consumption and subsequently lowers emissions from power plants and other energy sources.

By adopting and implementing these land use planning strategies, the South Coast Air Basin and March JPA have taken significant steps to improve air quality and create a healthier living environment for its residents. The regional justification for these improvements lies in the substantial evidence linking air pollution to various health issues, including respiratory diseases, cardiovascular problems, and other adverse health impacts. Reducing air pollution not only enhances the quality of life for residents but also contributes to long-term economic benefits by lowering healthcare costs and increasing overall productivity. Moreover, improved air quality can attract businesses and tourists to the area, boosting the local economy while fostering a sustainable and environmentally conscious community.

I-827.13 This comment states that the air quality data provided in Table 4.2-1 is out of date as it does not include 2021 data. Please see Recirculated Section 4.2, Air Quality, which includes 2021 data.

I-827.14 This comment states that the PM_{2.5} 24-hour standard presented in Table 4.2-3 is outdated. However, the proposed PM_{2.5} standard of 9-10 micrograms per cubic meter was released on January 6, 2023, and has yet to be adopted.

I-827.15 This comment lists goals and policies from the March JPA General Plan that are not identified in Recirculated Section 4.2, Air Quality, and asserts that these goals and policies are not being met.

- The comment requests that Policy 2.3 – “Protect the interests of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses” be added. Policy 2.3 in the Land Use Element of the General Plan is as follows: “Support land uses that provide a balanced land use pattern of the Planning Area, and discourage land uses that conflict or complete with the services and/or plans of adjoining jurisdictions.” The analysis within Section 4.10, Land Use and Planning, includes an evaluation of the Project’s consistency with land use goals and policies adopted specifically for the purpose of mitigating an environmental impact, consistent with Threshold LU-1.
- Land Use Element Goal 3 and Policy 3.2 - Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Goal 3 and Policy 3.2.
- Transportation Element Goal 2 – Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Goal 2.
- Air Quality Element Goal 3 – Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Goal 3.
- Air Quality Element Goal 4 – Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Goal 4.
 - Policy 4.1 – The Project is consistent because MM-AQ-18 requires the use of electric service yard trucks (hostlers), pallet jacks and forklifts, and other on-site equipment, with necessary electrical charging stations provided. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed.
 - Policy 4.2 – Please see response to Policy 4.1, above.
 - Policy 4.5 - Please see response to Policy 4.1, above.
- Air Quality Goal 5 – Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Goal 5.

- Policy 5.3 - Please see Recirculated Section 4.10, Land Use and Planning, for the consistency analysis with Transportation Element Goal 2, which would also apply to Policy 5.3.
- Policy 5.5 –The Project is consistent because Recirculated Section 4.2, Air Quality, has disclosed the Project’s air quality impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27.
- Policy 6.7 – The Project is consistent because Table 3-1 of the proposed Specific Plan identifies ancillary uses allowed in each land use designation. For example, Food and Beverage Sales may be an ancillary use in the Industrial zone.
- Policy 9.2 – The Project is consistent because MM-AQ-23 requires the facility operator to periodically sweep the property, including parking lots and truck courts, to remove road dust, tire wear, brake dust, and other contaminants. Under the proposed Specific Plan, street sweeping within the Specific Plan Area will be done by the LLMD.

I-827.16 This comment questions the omission of the City of Riverside’s Good Neighbor Guidelines. The comment further questions the consistency determination regarding the County of Riverside’s Good Neighbor Guidelines. Please see Recirculated Section 4.2, Air Quality, for an updated discussion of the City and County Good Neighbor Guidelines. As detailed in Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside. The Project’s consistency with the City of Riverside Good Neighbor Guidelines is discussed in Topical Response 4 – Project Consistency. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City’s Guidelines, demonstrating consistency provides additional support for the Project’s compatibility with surrounding land uses.

I-827.17 This comment requests battery-electric vehicles comprise 20% of offroad equipment hours. Regarding construction, MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. Recirculated Section 4.2, Air Quality, and the Revised Air Quality Impact Analysis (Appendix C-1) determined the Project would have less than significant construction air quality impacts with implementation of MM-AQ-1 through MM-AQ-4. Additional mitigation is not required for construction air quality impacts.

For operation, MM-AQ-18 requires all cargo handling equipment to be electric and requires tenant lease agreements include this restriction.

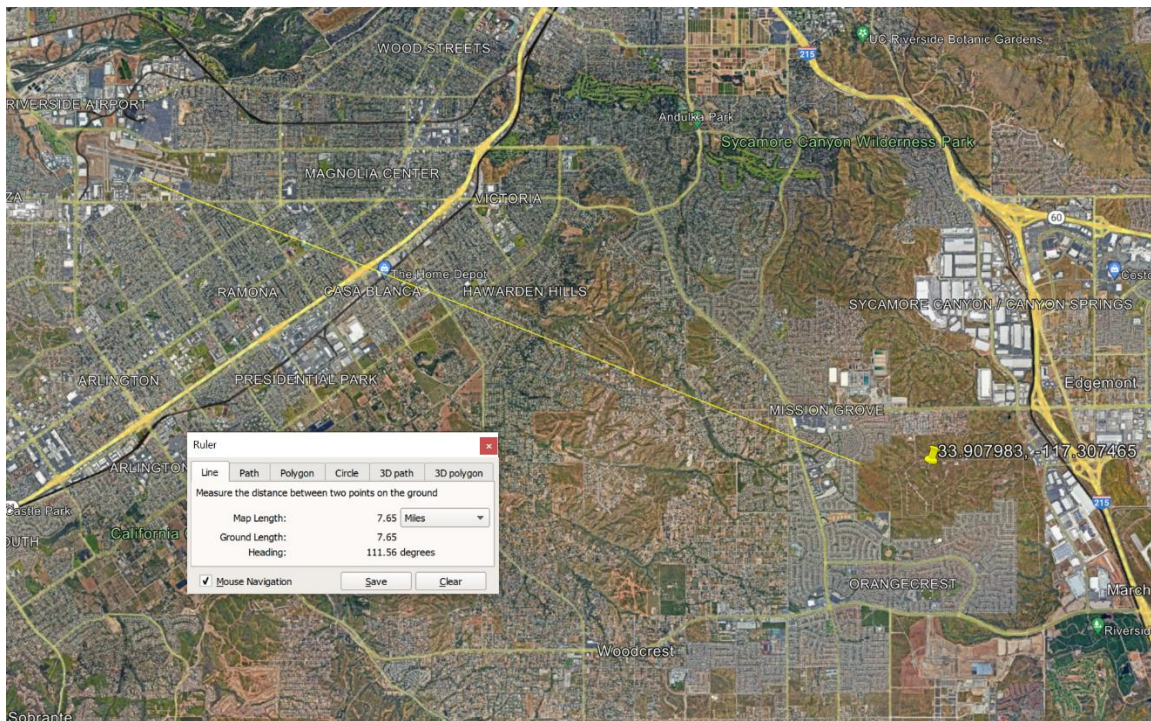

The comment cites to the Clean Off-Road Equipment Voucher Incentive Project (CORE) website. “The CORE Project was established to reduce price barriers, enabling users to adopt more zero-emission equipment. Created by the California Air Resources Board (CARB) in 2017, CORE provides point-of-sale discount vouchers that reduce the purchase cost of equipment operated in California.” This website does not indicate that it is feasible that offroad construction equipment can include 20% of hours of operation to be battery-electric vehicles.

- I-827.18 This comment questions the installation of a natural gas backbone when the Project will not use natural gas. SoCal Gas, as a public utility, will be notified prior to the start of construction and offered the opportunity to install a natural gas backbone within public roadways; however, the Project will not connect to it.

- I-827.19 This comment states that the analysis fails to disclose that route SR-60 between San Bernardino and Riverside Counties is in nonattainment for NO₂. The Project site is not located within this nonattainment area and is in fact located in an attainment area for NO₂. Please see Recirculated Section 4.2, Air Quality, which includes this information.

- I-827.20 This comment states that the use of meteorological data from Riverside is not appropriate and recommends the use of data from March ARB or Perris. Meteorological data from the SCAQMD’s Riverside monitoring station was utilized as this represents the nearest monitoring station to the Project site. As shown below, the Riverside monitoring station is located approximately 7.65 miles from the Project site, while the Perris Valley monitoring station is located approximately 8.30 miles from the Project site. SCAQMD does not provide meteorological data for March ARB. Data from SCAQMD’s Perris monitoring site was not used as this location is further from the Project site. Additionally, the Riverside monitoring station is located in the same source receptor area as the Project (SRA 23) and is closer to the Project, while the Perris monitoring station is located in a different source receptor area (SRA 24) and is farther away. SCAQMD’s jurisdiction is divided into several SRAs which reflect areas with similar topography, meteorological conditions, and air quality.

Riverside Monitoring Station (7.65 miles):

Perris Valley Monitoring Station (8.30 miles):

- I-827.21** This comment states that the analysis used AERMOD version 21112 rather than 22112. As revised, the Project HRA used Lakes AERMOD View (Version 11.2.0) to calculate annual average particulate concentrations associated with site operations. Lakes AERMOD View incorporates EPA's AERMOD Version 22112.
- I-827.22** This comment states that the trip distances utilized in the analysis are not appropriate. The passenger vehicle trip lengths utilized CalEEMod defaults, which are based on data from the local Metropolitan Planning Organization/Regional Transportation Planning Agency. Truck trip lengths are based on guidance from SCAQMD in the Rule 2305 Second Draft Staff Report, which recommends the use of a 14.2-mile trip length for class 4-7 trucks (LHDT1/2, MHDT) and 39.9 miles for class 8 trucks (HHDT). As such, a weighted average truck trip distance of 32.03 miles was used based on the assumed fleet mix.
- I-827.23** This comment identifies a typographical error on p. 4.2-24. Recirculated Section 4.2, Air Quality, corrects this error.
- I-827.24** This comment states that MM-AQ-1 affects VOC levels, and because the South Coast Air Basin is NO_x limited this would have no impact. As discussed in Recirculated Section 4.2, Air Quality, and the Project Air Quality Impact Analysis (Appendix C-1), the Project's unmitigated construction emissions would exceed the SCAQMD threshold for VOC and NO_x. Implementation of MM-AQ-1 through MM-AQ-4 would reduce the Project's VOC and NO_x emissions during construction to less than significant levels.

- I-827.25** This comment states that Table 4.2-9 should add PM₁₀ and PM_{2.5} background concentrations, which would cause the threshold of 10.4 micrograms per cubic meter to be exceeded. However, based on SCAQMD's Localized Significance Threshold Methodology, background concentrations should only be considered for CO and NO₂.² As such, consistent with SCAQMD's methodology, the analysis in Recirculated Section 4.2, Air Quality, did not consider background concentrations of PM₁₀ and PM_{2.5} when determining if the applicable localized significance threshold had been exceeded. In addition, please see the Project HRA, which explains that health risk impacts from construction of the Project would be well below the project level SCAQMD threshold of 10 in one million.
- I-827.26** This comment states that the boundaries for the construction HRA are inconsistent with the no trespassing boundaries and Project site boundaries for Barton Street. Regarding construction of the Barton Street southern extension, please see Response I-827.6.c, above. The comment further references previous comments related to adjacent construction projects and operational truck traffic. Please see Response I-827.10, above.
- I-827.27** This comment identifies a typographical error and states construction budget project design feature should not be included in the Project HRA. Please see Recirculated Section 4.2, Air Quality, which revises the typographical error and includes discussion and analysis of diesel-powered cargo equipment and implementation of MM-AQ-18.
- I-827.28** The comment states that the analysis does not mention any induced locomotive or commercial cargo traffic. The Project site is not served by any rail lines nor is any portion of March JPA or March Air Reserve Base/Inland Port. Because the March ARB/Inland Port Airport is a joint use airport, civilian flights, including commercial cargo flights, are limited through a Joint Use Agreement between the March JPA and the U.S. Air Force.³ Additional flights can only be approved after environmental review of an airport operating agreement through CEQA.⁴ No additional flights are proposed as a part of this Project.

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation area; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-828.2

The draft EIR Greenhouse gas section (section 4.7 and appendix I) fails to accurately consider the full greenhouse gas emissions impacts of the Project. Multiple errors and omissions undermine the draft EIR findings that the project will not create a significant and unavoidable impact on greenhouse gas emissions for GHG-1 and GHG-2 thresholds of significance. This GHG chapter is a bizarro dystopian version of climate change adaptation and greenhouse gas mitigation for a project entirely built around bad land-use that is unwalkable, unsafe to bike next to, and generate 35,000 daily vehicle trips from outlying areas where warehouse workers can afford to live.

- 1) The project completely omits the CO₂ emissions associated with concrete foundations and building materials in its analysis. Each cubic yard of concrete (~1 ton of concrete) emits ~180 kg CO₂ emissions, which is about 400 pounds of CO₂. Assuming the average concrete slab for a warehouse is 6 inches thick, the calculation for one acre of concrete is 43560 feet/acre * 0.5 feet thick * 27 cubic feet/yard * 400 pounds of CO₂/cubic yard of concrete = 161 tons of CO₂/acre slab. Concrete slab foundations for 288 acres of warehouses and roads will likely emit 46,000+ tons of CO₂ into the atmosphere. Note that this estimate will increase the project CO₂ estimates in Table 4.7-7 of 93,000 tons by almost 50% and therefore the project has significantly underestimated its greenhouse gas emissions by omitting building materials for foundations, much less the buildings themselves. The cumulative impacts of warehouses on our region have been completely omitted from CEQA analyses to date and there are currently over 6,500 acres of warehouses built and another 4,300 acres approved/under construction/and in various planning phases. The cumulative impact of these warehouse slabs is 1.6 million tons of CO₂ added to the atmosphere that hasn't been accounted for regionally.
- 2) Project VMT projections are based on flawed estimates of VMT per worker trip that assume workers are available locally (within 12 miles) to work at these warehouses. As described in the

I-828.3

I-828.4

jobs/housing/population letter, the current unemployment rate in the Inland Empire is 3.7%¹, literally the lowest value ever recorded in the 33 years of available data collected at a county level. There are approximately 650,000 residents within 12 miles of this project, of whom approximately 50% are of working age (16-67) and in the labor force. Apply some basic math and the number of unemployed workers within 12 miles of this project is currently 11,000. Cumulatively, there are over 50,000 jobs expected from the approved World Logistics Center² (35,000+ jobs), Stoneridge Commerce Center³ (10,000+ jobs) and other approved and planned warehouses in the region as shown in **Figure 1**. Therefore, we assert that the 2,600 workers estimated for this project don't exist locally and will have to commute from other areas where housing is cheaper to work here. There are plenty of existing warehouses that provide jobs, but very little local jobs that pay sufficient wages to work locally. Therefore, this project will NOT reduce VMT but will, in fact, increase it through increased VMT for local residents (who must commute long distances to find above-average paying jobs) and the workers for this project who must commute from Hemet or beyond to find affordable housing on typical warehouse wages (\$18.75/hr). Given these clear indications that the area is job rich and housing poor, as fully documented in the jobs housing population comment letter, I ask that the VMT calculations account for actual employment numbers as of December 2022, the most recent prior to draft EIR release.

I-828.4
Cont.

- 3) The greenhouse gas VMT/employee CO₂ emissions calculations do not account for autonomous trucks, delivery vehicles or future automation of warehouse jobs. A sensitivity study is needed to adequately calculate build-out year CO₂/employee emission rates based on a high-automation future in 2045 where autonomous trucks and delivery vehicles emit pollution but yield no jobs. Currently, the jobs section provides no description of how the jobs numbers are estimates, nor what the types of jobs might be, so it is impossible to analyze how they might be affected by possible automation trends in the 2045 build out year.
- 4) The greenhouse gas section Table 4.7-4 – Climate Action Plan Consistency claims 160 points of credit for EV charging ‘stations’. Given that the project includes 20 individual parcels (4 industrial after Building A is split, 10 business-park, 6 mixed-use), claiming 20 credits for a single charging station per building does not pass the laugh test. Each of the other uses is applied to ALL buildings (e.g., insulation, cool roof, water efficient toilets) but the charging station credit does not apply on a per building basis (i.e., one credit for one station per building). The 20 stations will need to supply the majority of 35,000 daily trips when combustion vehicles are phased out in 2035 by CARB regulations. For example, if this project was simply one warehouse, rather than 20 building complex, it would be able to claim 160 points, but as 20 buildings in a complex it cannot claim credits disproportional to the number of buildings and vehicles served. Therefore, this credit should be 8 points (160/20 = 8), not the 160 points claimed. Therefore the project has only achieved a total score 74 points, rather than the 100 point minimum necessary to achieve climate action plan consistency. Therefore, it is a **Significant Impact** with insufficient mitigation and consistency with climate action plan goals.

5)

Figure 1. Existing warehouses (brown) and approved/planned warehouses (purple) in the 215/60 corridor region within the 12 mile radius of the project VMT estimates.

Finally, I note that the mitigation measures are completely inadequate. MM-GHG-1 should be increased to at least 70% of building power requirements from solar. MM-GHG-7 should require one EV charging station per 200 vehicle trips – 175 charging stations. Additionally, it should include at least 20 heavy-duty truck chargers (one per every 100 truck trips).

Additional GHG mitigation measures that should be included are:

- Require the March JPA to ensure that all construction and operational requirements meet or exceed the County of Riverside GHG requirements, since the March JPA will be handing over enforcement and compliance responsibilities to the County prior to project opening and will be responsible for overseeing and enforcing construction phase activities for a minimum of 60% of the construction period (2025-2028).
- Require 25% of all off-road construction vehicles in each class or as a fraction of total CO₂ emissions to be battery-electric.
- Require low CO₂ concrete for the foundations and roads (less than 250 pounds of CO₂ per cubic yard)
- Require low albedo roads and roofs to reduce reflectivity and urban heat island effect
- Require roofs that do not include solar panels to be covered in vegetation to reduce urban heat island, sequester CO₂, and mitigate the air quality impacts of truck pollution

I-828.7

- Require 50% of tenant owned passenger vehicles by tenants that visit the West Campus to be battery-electric in the 2028 opening year and 100% to be battery-electric by 2030.
- Require 25% of tenant owned trucks that visit the West Campus to be battery-electric in the 2028 opening year and 100% to be battery-electric by 2035.
- Require 25% of trucks visiting the West Campus owned by subcontractors owning over 10 trucks to be battery-electric in the 2028 opening year and 100% to be battery-electric by 2035.

I-828.7
Cont.

Lastly, the climate change section notes that China is the largest emitter of carbon dioxide emissions in Table 4.7-2, nearly doubling the US emissions annually. However, the United States has outsourced the manufacturing of our goods to China, and thus outsourced our CO₂ emissions to that country as well. It is ironic that this warehouse complex project is entirely based around imports from China and other nations in a global supply chain that irresponsibly emits greenhouse gases in every steps of the goods movement industry. Goods are manufactured in China, shipped by rail/train/boat to the ports, where they are shipped by dirty ocean-going vessels across the Pacific. In the Ports of Los Angeles and Long Beach, the drayage trucks then take a 71 or 67 mile trek to the March JPA, emitting 2.44 pounds of CO₂ and a few milligrams of diesel PM for each mile they go.

I-828.8

Our planet is at a tipping point in the climate crises and the banality of corporations like the Lewis Group that put forward weak and backwards-looking projects that will contribute to climate change with zero effort to do anything positive, innovative, or even responsible in its mitigation efforts is astoundingly cynical. Randall Lewis is a philanthropist who has funded multiple centers for sustainability at education institutions throughout the region. That his name is associated with a project that is this blatantly terrible in climate impacts is a stain on his legacy within the Inland Empire.

I-828.9

Please justify this project as being responsive to the climate change impacts in any meaningful way. Please try to be a leader and propose real mitigation that will help our region respond to the threats facing our planet responsibly.

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-828

Michael McCarthy

March 9, 2023

- I-828.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-828.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- I-828.3** This comment requests the Draft EIR analyze CO₂ emissions associated with concrete foundations and cumulative impacts. GHG emissions resulting from the pouring of concrete and building materials were not included in the analysis as it is not known the quantities and types of concrete and other materials that would be used, and it would be speculative to estimate any resulting GHG emissions.
- The scope of GHG emissions is cumulative in nature, as further discussed in Response A-8.7. Additionally, as noted in Response A-8.7, the Project would also be required to comply with the County's Climate Action Plan. Lastly, it is not industry standard to perform a lifecycle analysis of potential greenhouse gas emissions from concrete and building materials as this type of emissions calculation is highly speculative in nature.
- I-828.4** This comment raises concerns regarding Project VMT projections and Project job generation. The Draft EIR analysis utilized data from the Project traffic study where possible, and otherwise relied on conservative estimates from CalEEMod and the local MPO/RTPA. Regarding jobs generation, please see Topical Response 5 - Jobs.
- I-828.5** This comment raises concerns regarding the VMT analysis and CO₂ emissions because of automation. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The comment also questions the Project's job generation. Please see Topical Response 5 - Jobs, for a discussion of the development of the Project's job generation estimate.
- I-828.6** This comment raises concerns regarding the Project's consistency with the Riverside County Climate Action Plan. Table 4.7-4, Climate Action Plan Consistency, in Section 4.7, Greenhouse Gas Emissions, of the Draft EIR is consistent with explicit direction in the Riverside County CAP to assign 8 points per charging station. Measure T4.B.1 Electric Vehicle Recharging allows for the following points:
- Provide circuit and capacity in garages/parking areas for installation of electric vehicle charging stations. 2 points/area
 - Install electric vehicle charging stations in garages/parking areas: 8 points/station.

Therefore, if the Project were to install 20 charging stations, it would receive 8 points/station for a total of 160 points.

However, as explained in the Project GHG Analysis (Appendix I), CALGreen includes mandatory requirements for the number of EV charging stations for nonresidential development. They are found in Table 5.106.5.3.1 which is reproduced here for convenience.

TABLE 5.106.5.3.1

TOTAL NUMBER OF ACTUAL PARKING SPACES	NUMBER OF REQUIRED EV CAPABLE SPACES	NUMBER OF EVCS (EV CAPABLE SPACES PROVIDED WITH EVSE) ²
0-9	0	0
10-25	4	0
26-50	8	2
51-75	13	3
76-100	17	4
101-150	25	6
151-200	35	9
201 and over	20 percent of total ¹	25 percent of EV capable spaces ¹

1. Calculation for spaces shall be rounded up to the nearest whole number.

2. The number of required EVCS (EV capable spaces provided with EVSE) in column 3 count toward the total number of required EV capable spaces shown in column 2.

The Project includes site plans for Buildings B and C, and shows 545 parking spaces for Building B and 306 parking spaces for Building C. Based on the mandatory measures in CALGreen, which the Project is required to comply with, the Project (Specific Plan Area) is required to install well over 20 EV charging stations.

Building	Total Number of Actual Parking Spaces	Number of Required EV Capable Spaces	Number of EVCS (EV Capable Spaces Provided with EVSE)
B	545	109	28
C	306	62	16

In response to comments on the Draft EIR, MM GHG-7 was revised to require compliance with the CALGreen Nonresidential Voluntary Tier 2 measures for EV chargers. These are found in Table A5.106.5.3.2, which is reproduced below for convenience.

TABLE A5.106.5.3.2

TOTAL NUMBER OF ACTUAL PARKING SPACES	TIER 2 NUMBER OF REQUIRED EV CAPABLE SPACES	TIER 2 NUMBER OF EVCS (EV CAPABLE SPACES PROVIDED WITH EVSE) ²
0-9	3	0
10-25	8	3
26-50	17	6
51-75	28	9
76-100	40	13
101-150	57	19
151-200	79	26
201 and over	45 percent of total parking spaces ¹	33 percent of EV capable spaces ¹

1. Calculation for spaces shall be rounded up to the nearest whole number.

2. The number of required EVCS (EV capable spaces provided with EVSE) in column 3 count toward the total number of required EV capable spaces shown in column 2.

Based on this revision, the Project will be required to install significantly more EV chargers. Assuming each lot in the Specific Plan will provide more that 50 parking spaces, at a minimum, each parking area would include 28 EV capable spaces, 9 of which would be provided with EV chargers. Under the CAP,

this site plan would achieve 2 points for “installing circuit and capacity in parking areas for installation of electric vehicle charging stations”, and 8 points for each of the 9 EV charging stations for a total of 74 points. For larger buildings, the parking areas would have more EV capable spaces and EV chargers. This is shown in the table below for Buildings B and C.

Building	Total Number of Actual Parking Spaces	Number of Required EV Capable Spaces	Number of EVCS (EV Capable Spaces Provided with EVSE)
B	545	246	82
C	306	138	46

March JPA recognizes that footnote to Table 4.7-4 may have led to the comment’s misunderstanding around the number of EV chargers that will be installed in the Specific Plan Area. As explained in Section 4.7, Greenhouse Gas Emissions, of the Draft EIR, each building/site plan will be reviewed by March JPA, and “the March JPA shall verify incorporation of the identified Screening Table Measures within the Project building plans and site designs prior to the issuance of building permit(s) and/or site plans (as applicable). The March JPA shall verify implementation of the identified Screening Table Measures prior to the issuance of Certificate(s) of Occupancy.” MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables. Table 4.7-4, Climate Action Plan Consistency, shows an example of how a Project site plan could show compliance with the CAP.

I-828.7

This comment requests additional GHG mitigation measures. Section 4.7, Greenhouse Gas Emissions, of the Draft EIR determined the Project would have less than significant GHG impacts. Regarding solar, MM-GHG-1 requires rooftop solar photovoltaic (PV) electricity generation sufficient to generate at least 100% of the building’s power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. MM-GHG-7 requires each Project site plan shall provide circuitry, capacity, and equipment for EV charging stations in accordance with Tier 2 of the 2022 CALGreen Code. PDF-GHG-1 requires conduit be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires demonstration that main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available. Further, the Project will comply with the requirements of Section 5.106.5.4.1 (Electric vehicle readiness requirements) of the CALGreen Code.

MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables. MM-GHG-4 requires construction of modest cool roof, defined as Cool Roof Rating Council (CRR) Rated 0.15 aged solar reflectance and 0.75 thermal emittance. MM-AQ-10 requires cool surface treatments to be added to all drive aisles and parking areas or such areas shall be constructed with a solar-reflective cool pavement such as concrete.

Regarding construction, MM-AQ-1 requires that off-road equipment used during construction shall meet CARB Tier 4 Final emission standards or better. Recirculated Section 4.2, Air Quality, of the Draft EIR and the Revised Air Quality Impact Analysis (Appendix C-1) determined the Project would have less than significant construction air quality impacts with implementation of MM-AQ-1 through MM-AQ-4.

Regarding fleet electrification, MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations, and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed. This measure would not apply to vehicles that are not owned or operated by the facility operator or facility tenants since it would be infeasible to prohibit access to the site by any vehicle that is otherwise legal to operate on California roads and highways.

At this time, March JPA declines to include additional mitigation related to the County’s standards, concrete or rooftop vegetation.

I-828.8 This comment requests the Draft EIR analyze CO₂ emissions from the global supply chain and questions the trip lengths used. Global impacts from the international supply chain is speculative and outside the expertise and jurisdiction of March JPA.

As explained in the EIR, climate change is a global phenomenon, and the effects of GHG emissions are considered cumulative. As also explained in Section 4.7, Greenhouse Gas Emissions, of the Draft EIR, “Governor Arnold Schwarzenegger signed EO S-01-07 on January 18, 2007. The order mandated that a statewide goal be established to reduce the carbon intensity of California’s transportation fuels by at least 10% by 2020. In particular, the executive order established a [Low Carbon Fuel Standard] LCFS and directed the Secretary for Environmental Protection to coordinate the actions of the CEC, CARB, the University of California, and other agencies to develop and propose protocols for measuring the “life-cycle carbon intensity” of transportation fuels.” “In 2018, CARB approved amendments to the regulation, which included strengthening the carbon intensity benchmarks through 2030 in compliance with the SB 32 GHG emissions reduction target for 2030. The amendments included crediting opportunities to promote zero-emission-vehicle adoption, alternative jet fuel, carbon capture and sequestration, and advanced technologies to achieve deep decarbonization in the transportation sector.” The State (through CARB) therefore takes into account life-cycle carbon intensity” of transportation fuels.

CARB’s 2022 Scoping Plan explains that “Low carbon fuel mandates similar to California’s Low Carbon Fuel Standards (LCFS) have been adopted by the U.S. EPA and by other jurisdictions, including Oregon, Washington, British Columbia, the European Union, and the United Kingdom. Many other jurisdictions from Japan to New Zealand, Australia, and the European Commission also continue to seek information and technical experience on our LCFS. California has and will continue to share information and encourage ambitious emissions reductions with interested jurisdictions, with a focus on China, India, Mexico, Canada, and the European Union. California’s early action to reduce super-pollutants such as methane and other SLCPs was reaffirmed by the 2021 Global Methane Pledge signed by the U.S. and over 100 other countries at the 26th Conference of the Parties to the United Nations Framework

Convention on Climate Change (UNFCCC).” [2022 Scoping Plan, p. 39]. It further explains that “at the national level, China has looked to California for cutting-edge requirements for car diagnostics and policies that promote zero-emissions vehicles. At a local level, Beijing has adopted California’s vehicle emissions standards and several other progressive environmental regulations. California will continue and renew such efforts across China, including through a 2022 MOU signed with China’s Ministry of Ecology and Environment.” [2022 Scoping Plan, p. 40.]

I-828.9 This comment raises general opposition to the Project and recaps previous comments. No further response is required.

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-829.2

A simple word search of 'justice' indicates only one word in the entire draft EIR. Criminal Justice is mentioned on p. 666/916 in the draft EIR pdf; there is no mention of environmental justice within the draft EIR or specific plan.

I-829.3

California state law 65040.12(e) defines the term environmental justice as *'the fair treatment and meaningful involvement of all people regardless of race, color, culture, national origin, income, and educational levels with respect to the development, implementation, and enforcement of protective environmental laws, regulations, and policies.'*

The CalEnviroScreen tool¹ published by the Office of Environmental Health Hazard Assessment (OEHHA) is the California tool used to identify low-income communities, communities of color, and other disadvantaged groups that are overburdened by high levels of pollution. California EPA uses CalEnviroScreen to prioritize enforcement and outreach in vulnerable communities.

I-829.4

As shown in **Figure 1**, CalEnviroScreen4.0 clearly indicates that the communities in and around the March JPA are in the top 10th percentile census tracts for CalEnviroScreen cumulative impacts indicator. Two census tracts are identified as extremely overburdened.

- **Census tract 6065046700** – 98th percentile cumulative impact score, population 4,721 – includes Air Force Village West, March ARB, and the eastern edge of the Edgemont community of Moreno Valley.
- **Census tract 6065042505** – 99th percentile cumulative impact score, population 3,542 – includes most of the Edgemont neighborhood along Old 215, an area adjacent to and within significant ongoing warehouse development.

¹ <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

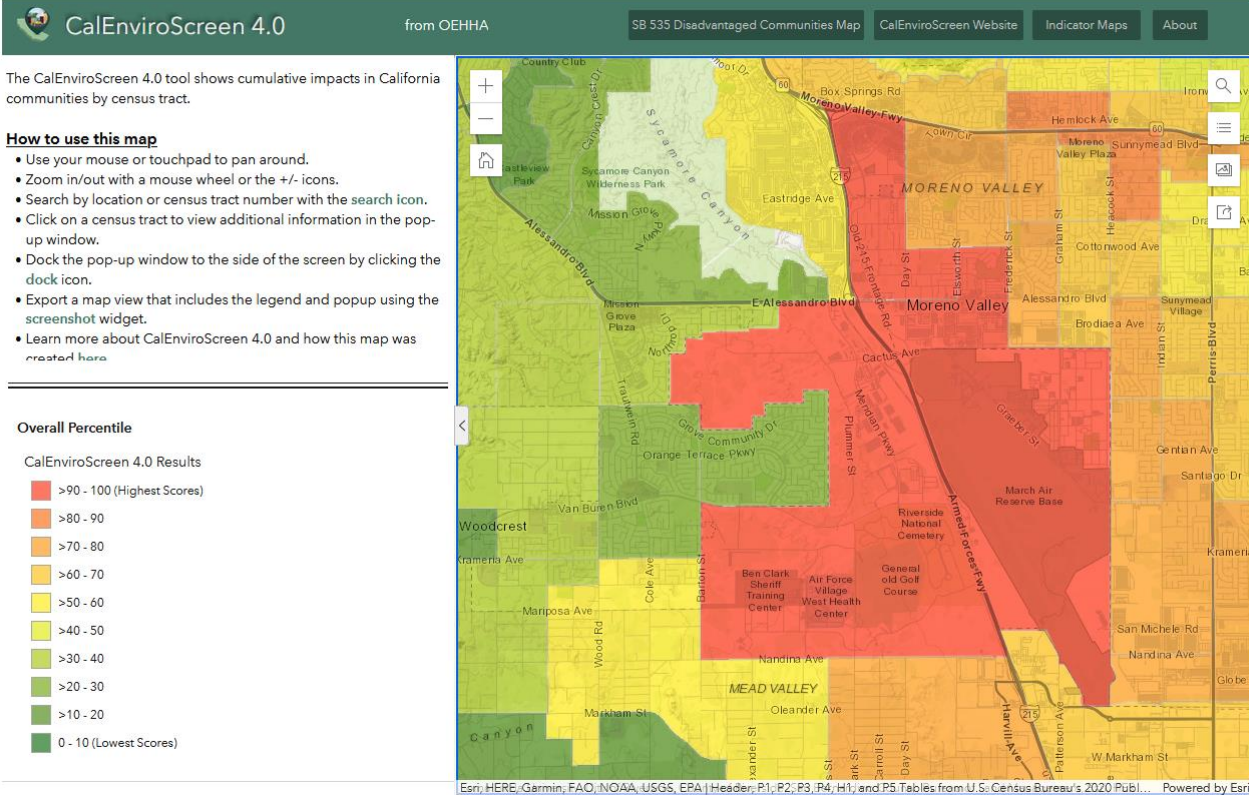

Figure 1 – CalEnviroScreen4.0 screen capture of the March JPA and surrounding communities cumulative impact score.

Census tract 6065046700 already contains at least 50 existing warehouses estimated at over 20 million square feet of cumulative space. Another 10 warehouses are entitled and/or under construction within the census tract (and March JPA), cumulatively adding another 5 million square feet. Adding the Project would put the cumulative total within the census tract at approximately 30 million square feet cumulatively – further overburdening the communities of Air Force Village West and Edgemont with truck traffic and localized pollution impacts.

Census tract 6065042505 also has multiple warehouse projects under approval or construction, including the Old 215 Business Park Project, Edgemont Commerce Center, Moreno Valley Business Center and is adjacent/downwind of the 215 Freeway which cumulatively adds emissions from ~20,000 daily truck trips to those residents.

Figure 2 shows the existing warehouses within the project area overlaid with the census tracts. **Figure 3** shows the planned and existing warehouses.

I-829.4
Cont.

This interactive map shows the logistics industry footprint in Los Angeles, Riverside, and San Bernardino Counties. Zoom in and/or click an area to see specific community impacts. Summary statistics are estimates based on best available information. Please see Readme tab for more information on methods and data sources.

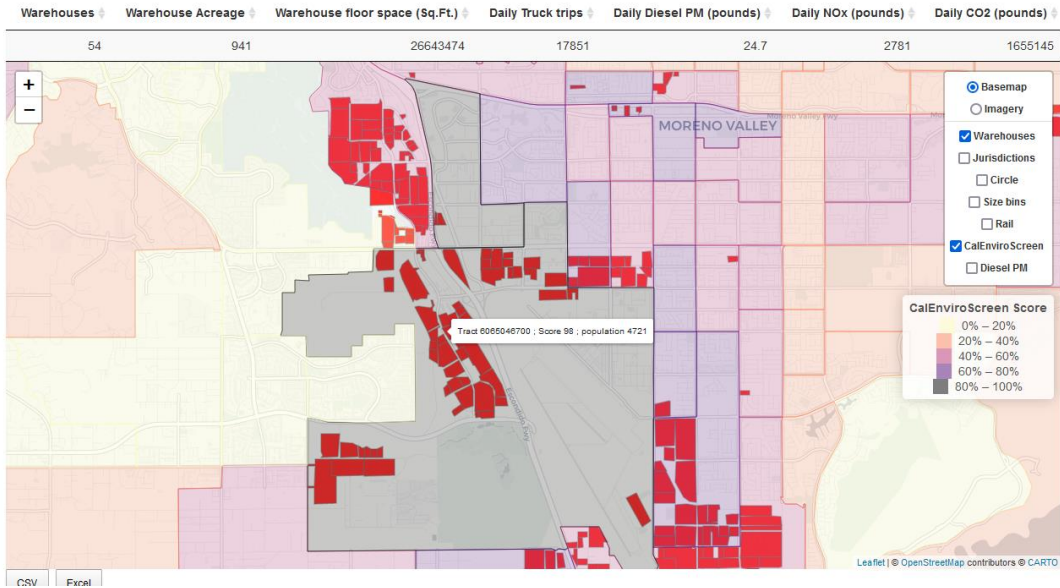

Figure 2 – Existing warehouses and census tract outlines – black polygons indicate census tracts in the top 20th quantile (disproportional impact).

I-829.4
Cont.

Figure 3 – Existing (dark gray fill) and approved/planned (light gray fill) warehouses around the March JPA. The cumulative impact of approved and planned warehouses in the region will disproportionately impact communities already overburdened with pollution impacts.

I-829.5

The March JPA and Project Applicant have completely omitted any analysis or mitigation measures aimed at the disproportionately overburdened communities within the identified census tracts. The March JPA General Plan does not include any mention of Environmental Justice and neither does the

I-829.6

proposed Specific Plan. It is a complete oversight that fails to provide any community benefits or outreach to the vulnerable populations within this area.

I-829.6
Cont.

The purpose of CEQA is to (1) inform the public and decisionmakers of all potential environmental impacts of proposed discretionary projects and (2) to mitigate or eliminate significant environmental effects of public agency decisions. I do not believe that the draft EIR can be considered a credible document when it entirely omits any discussion of environmental justice and the need to mitigate the cumulative environmental impacts of hundreds of warehouses adjacent to vulnerable communities.

I-829.7

Therefore, I ask the March JPA to justify its omission of Environmental Justice from this draft EIR. In addition, I ask for an analysis of the impacts of the cumulative projects within the March JPA on these census tracts to be evaluated and disclosed to the public as part of the EIR process. Finally, I ask that any project impacts that will disproportionately impact residents of these communities be involved in discussions around the most impactful mitigation measures that can be done to reduce the impacts of the encroaching warehouses on their communities.

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-829

Michael McCarthy

March 9, 2023

- I-829.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-829.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does raise any issues or questions about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-829.3** This comment notes the absence of the term “justice” in the Draft EIR, refers to the California Government Code definition of environmental justice, and states that environmental justice is not mentioned in the Draft EIR or proposed Specific Plan. The powers and duties of the Office of Planning and Research includes coordinating environmental justice programs and, as referenced in the comment, defines “environmental justice” as “the fair treatment and meaningful involvement of people of all races, cultures, incomes, and national origins, with respect to the development, adoption, implementation, and enforcement of environmental laws, regulations, and policies.” California Government Code, Section 65040.12(e)(1). Environmental justice includes: the availability of a healthy environment for all people; the deterrence, reduction, and elimination of pollution burdens for populations and communities experiencing the adverse effects of that pollution, so that the effects of the pollution are not disproportionately borne by those populations and communities; governmental entities engaging and providing technical assistance to populations and communities most impacted by pollution to promote their meaningful participation in all phases of the environmental and land use decisionmaking process; and at a minimum, the meaningful consideration of recommendations from populations and communities most impacted by pollution into environmental and land use decisions. California Government Code, Section 65040.12(e)(2).

However, “environmental justice” is not a term used anywhere in CEQA and is not an issue area identified in CEQA for analysis in an EIR. As explained in Recirculated Chapter 2, Introduction, the purpose of the EIR is to evaluate and disclose the potential environmental consequences of the proposed Project, which does include the deterrence, reduction, and elimination of environmental impacts on all people, including communities experiencing the adverse effects of pollution. The EIR describes the applicable requirements and purposes of CEQA, including to inform governmental decisionmakers and the public, including the meaningful participation in all phases of the environmental and land use decisionmaking process. The EIR discloses the potential significant environmental effects of proposed activities; identifies the ways that environmental damage can be avoided or significantly reduced; prevents significant and unavoidable damage to the environment by requiring changes in the project through the use of alternatives or mitigation measures when the governmental agency finds the changes to be feasible; and discloses to the public the reasons why a governmental agency approved the project in the manner the agency chose if significant environmental effects are involved. The EIR includes analysis of the Project’s potential cumulative environmental effects, and the cumulative effects analysis methodology is explained in Chapter 4.0, Environmental

Analysis, of the Draft EIR. Thus, the EIR complies with CEQA and the environmental impacts of the proposed Project are fully considered, including the impacts on populations listed in the Government Code related to environmental justice.

As discussed in Recirculated Chapter 3, Project Description, Senate Bill 1000 (Government Code Section 65302[h]) requires jurisdictions to adopt an environmental justice element if the jurisdiction includes a disadvantaged community and two elements of the jurisdiction's General Plan are proposed for amendment. The March JPA planning area is within a disadvantaged community (Census Tract 6065046700) as identified by CalEnviroScreen 4.0. March JPA will need to adopt an Environmental Justice Element for its General Plan to address this requirement prior to considering approval of the Project.

An environmental justice element is required when an agency amends two or more of its general plan elements. March JPA has already done this in the past without adopting a General Plan amendment to add an environmental justice element. March JPA separately processed the Environmental Justice Element as it was already needed and applies to the whole of the March JPA Planning Area. As described in Recirculated Chapter 3, Project Description, March JPA's land use authority will revert back to the County of Riverside on July 1, 2025, in accordance with the 14th Amendment to the March JPA Joint Powers Agreement. As the March JPA Planning Area will be absorbed by Riverside County, with the County fully responsible for future land use reviews and approvals after July 1, 2025, March JPA proposed an Environmental Justice Element based on Riverside County's adopted Environmental Justice Element. The Draft Environmental Justice Element incorporates the environmental justice policies of the County of Riverside Healthy Communities Element pursuant to Government Code Section 65301(a). The County of Riverside Board of Supervisors adopted environmental justice policies by Resolution 2021-182 on September 21, 2021. The County's environmental justice policies apply to the disadvantaged communities within unincorporated territory in the County of Riverside. Environmental evaluation of the Draft Environmental Justice Element was a separate process from the Project EIR. On April 24, 2024, in a public meeting, the March JPA Commission considered and adopted Resolution JPA 24-04, which found the Environmental Justice Element categorically exempt from CEQA pursuant to State CEQA Guidelines Class 7 and Class 8, and adopted the Environmental Justice Element. The adopted Environmental Justice Element is substantially similar to the Draft Environmental Justice Element released in November 2023. The Environmental Justice Element is now part of the March JPA General Plan. The Final EIR includes an analysis of the Project's consistency with the adopted Environmental Justice Element and concludes that the Project is consistent with all applicable policies.

- I-829.4** This comment provides existing conditions information from CalEnviroScreen about two census tracts, one of which includes the Project site. Figure 1 referenced in the comment is a screenshot from CalEnviroScreen of the census tracts including the March JPA and surrounding area. CalEPA's Office of Environmental Health Hazard Assessment (OEHHA) developed the California Communities Environmental Health Screening Tool (CalEnviroScreen), which provides statewide data that can be used to identify communities disproportionately burdened by multiple sources of pollution.⁵ The CalEnviroScreen model includes two components representing pollution burden (exposures and environmental effects) and two components representing population characteristics (sensitive

⁵ <https://oehha.ca.gov/calenviroscreen/report/calenviroscreen-40>

populations and socioeconomic factors).⁶ An overall pollution burden score is calculated by CalEnviroScreen based on indicators related to exposures (i.e., ozone concentrations, PM_{2.5} concentrations, diesel particulate matter emissions, drinking water contaminants, etc.) and environmental effects (e.g., cleanup sites, groundwater threats, hazardous waste, etc.). As noted in the comment, the census tract that includes the Project site has a high overall pollution burden score. The Project's census tract is large and includes all of the March ARB and the March JPA jurisdiction along with three blocks within the City of Moreno Valley, which appear to have been mapped as part of the March JPA. Residential uses within the Project's census tract are limited to the Westmont Village retirement community off of Village West Drive, which was originally developed for retired military housing, Green Acres, which consists of 111 homes as part of the March Field Historic District, the US Veterans transitional housing facility, and the residential block surrounding the Cottonwood Golf Center, and a few scattered residences in blocks of Moreno Valley included in the census tract. These residential uses within the March ARB census tract are located approximately two miles from the Project site, the residents in the retirement community are to the south of Van Buren Boulevard and the residents in Moreno Valley are to the east on the opposite side of the 215 Freeway. These residences are also located outside the area where the Project's truck route will emit TACs as evaluated in the Project Health Risk Assessment (See Recirculated Section 4.2, Air Quality). The other census tract referenced in the comment, census tract 6065042505, is located to the north of the census tract that includes the Project site, on the opposite side of the 215 Freeway north of the March ARB, even further from the project. As such, the proposed Project is not proximate to these residences such that it will increase their pollution burden.

The census tracts adjacent to the Project site (6065042012, 6065042014, and 6065042013), which include the Mission Grove neighborhood, the residences located in Riverside County to the north of the Project site, and the Orangecrest neighborhood south of the Project site, are not identified as disadvantaged or overburdened with pollution. Thus, the data the comment cites does not apply to these communities.

This comment provides information but does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

I-829.5 This comment refers to existing warehouse development within census tracts 6065046700 and 6065042505 and states that the cumulative impact of approved and planned warehouses in the region will disproportionately impact communities already overburdened with pollution impacts. Figure 2 included in the comment depicts existing warehouses in relation to the census tracts, and Figure 3 depicts existing and approved/planned warehouses around the March JPA. As discussed in Response I-829.4 above, the residential areas that are within the large census tract that includes the Project site are not proximate to the Project site. Please see Recirculated Section 4.2, Air Quality, which incorporates PDF-AQ-1 and MM-AQ-1 through MM-AQ-27 intended to reduce air quality impacts to the surrounding community, including those adjacent to the Project site and those residences cited in the comment.

⁶ <https://oehha.ca.gov/media/downloads/calenviroscreen/report/calenviroscreen40reportf2021.pdf>

- I-829.6** This comment states that the environmental analysis omitted any analysis or mitigation measures aimed at the disproportionately overburdened communities within the identified census tracts and that the March JPA General Plan and the proposed Specific Plan do not mention environmental justice. Please see Response I-829.3, above.
- I-829.7** Community benefits provided by the Project would include increased job opportunities for local residents, preservation of open space, extension of the roadway infrastructure and the pedestrian and bicycle circulation system, a new approximately 60-acre public park, and construction of the Meridian Fire Station, at the intersection of Opportunity Way and Meridian Parkway (see Topical Response 6 - Meridian Fire Station, for additional details). Regarding outreach, March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices.
- I-829.8** This comment summarizes earlier comments regarding environmental justice. Please see Response I-829.3 above regarding environmental justice and the analysis in the Draft EIR.

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation area; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-830.2

The draft EIR estimates of population, households, and jobs (Section 4.12) rely on out-of-date Southern California Association of Local Governments projections that do not reflect the existing conditions of the region. As a result, the analysis completely misses the mark on the current status of unaffordable housing surrounding the project area, uses incorrect unemployment rates and job numbers, and passes off its responsibility to add affordable housing to the region to its member agencies without assessing whether the member agencies are meeting their Regional Housing Needs Allocation requirements. Our region needs more housing, and that is reflected in extraordinarily high local housing and rental costs. The March JPA can help contribute to solving real community needs instead of attempting to justify a warehouse complex surrounded by residential zoning over the objections of thousands of residents when jobs are plentiful and housing supply is critically low.

I-830.3

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Southern California Association of Local Governments (SCAG) Local Profiles Report 2019 (SCAG 2019a, 2019b)
- 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (SCAG 2020a)

I-830.4

[Incorrect Population, Household, and Employment Numbers](#)

Section 4.12 relies on SCAG and Riverside County population, housing, and employment 'forecasts' to characterize existing conditions. This is incorrect and inappropriate for three reasons.

I-830.5

- 1) The values are based on 2016 and 2020 projections for the entire County of Riverside. Riverside County has a population larger than 15 states and encompasses an area larger than Rhode Island, Connecticut, or Delaware. Local estimates are available from the Cities of Moreno Valley,

Perris, and Riverside and from SCAG’s website which provide a more accurate and resolved view of the 215/60 corridor cities.

- 2) The values are wrong and too high – the 2020 population of Riverside County according to the US Census was 2.418M¹ - not the projected value of 2.493M used in the report on p. 4.12-3. The number of households (740,000 vs a projected 785,000) and jobs (1,000,000² vs a projected 823,000) were also incorrect. In sum, the projections overestimated population by over 3.1% while underestimating employment numbers, even during the peak pandemic year, by well over 17%.
- 3) The unemployment numbers are ridiculous – the draft EIR uses an out-of-date 2019 5.8% unemployment rate rather than a current December 2022 value of 3.7%³ - literally the lowest value ever recorded in the 33 years of available data collected at a county level.

Put these three things together and it is clear the entire analysis is based on a completely flawed and unrealistic characterization of ‘Existing Conditions’ of employment, housing, population, and jobs/housing balance. Unemployment is at a 50 year low nationally and locally. In each of the cities and unincorporated areas of the County around the Project, unemployment rates are below 4%. There is a surplus of jobs regionally. In contrast, 500,000 people recently migrated out of California⁴ because of the lack of affordable housing.

As a result of these inconsistencies, the jobs/housing balance in the draft EIR is completely backwards from the existing conditions in the region. On page 4.12-4, the Draft EIR estimates that the current jobs/housing ratio is 823,000/785,000 = 1.05; based on the SCAG 2019 projections. In fact, the correct number for 2020 – during the middle of the recession – **was 1,003,000/740,000 = 1.35**; this number is based on accurate reported data from the California EDD and the 2020 census reported number of households. A ratio of 1.0 to 1.29 jobs per household is considered ‘balanced’. Thus, the County of Riverside is out of balance and there are too many jobs – not enough people to fill them. In 2022, the labor force has expanded to 1,110,000 jobs², according to the California Employment Development Department - vastly outstripping population growth and higher than the SCAG 2020b 2045 projections of 1,103,000 jobs.

The population and housing section is incorrect because it is based on projections that were demonstrably wrong the minute they were published. It is abundantly clear based on current employment numbers that we have no pressing need for additional jobs around the 215/60 corridor. Existing conditions are inaccurately characterized and reported using regional projections that are demonstrably incorrect rather than actual reported values from reputable state and federal agencies.

Therefore, the proposed project is incompatible with the Jobs/Housing Balance ratio used to justify the need for additional jobs. Moreover, there are no local employees to take these jobs, requiring imported labor from areas with higher unemployment rates, such as Hemet and San Jacinto. This will break the VMT/employee estimates in the greenhouse gas section and the air quality and traffic estimates in those

I-830.5
Cont.

I-830.6

I-830.7

³ <https://fred.stlouisfed.org/series/CARIVE5URN>

⁴ <https://www.latimes.com/california/story/2023-02-15/californias-population-has-dropped-by-more-than-half-a-million-in-about-two-years-why>

sections – since the EIR naively asserts that this project will reduce VMT by providing locals with those jobs.

I ask that the March JPA

- 1) Justify its use of seven year-old projections for households and jobs without assessing current measured values from the census, California EDD, or other trusted government authorities
- 2) Justify using a 2019 unemployment rate when 2022 unemployment rates are available and are significantly lower.
- 3) Justify that the region has a jobs/housing imbalance weighted towards needing more jobs based on current jobs numbers and unemployment rates, and out-migration rates from the state of California
- 4) Justify using county-wide estimates of households and jobs when granular data from the Cities of Riverside, Perris, and Moreno Valley are available
- 5) Justify ignoring the enormous numbers of jobs expected regionally from cumulative projects such as the World Logistics Center and Stoneridge Commerce Center

I-830.8
Cont.

I-830.9

Affordable Housing and Regional Housing Needs Allocation

The section on the Regional Housing Needs Allocation (RHNA) lists that the Housing Element of the March JPA General Plan incorporates the four housing elements of each member jurisdiction by reference. While this is true, the March JPA is nonetheless still responsible to analyze whether each of the member agencies are meeting their RHNA requirements to establish that the regional housing balance is being met. The March JPA did not establish this in any credible way, but merely asserted that the four member jurisdictions are responsible for housing elements.

I-830.10

The Draft EIR acknowledges that its member jurisdictions are mandated by state law to provide adequate housing but fails to recognize that each of them is failing to meet state-mandated goals for any of four categories of housing ranging from very-low income to above-moderate income, with very-low income housing being wholly inadequate. The City of Riverside’s overall compliance has been rated as “D” on a scale of “A-F”⁵. Similarly, the cities of Perris and Moreno Valley and the unincorporated areas of Riverside County have been rated “D+”. Nevertheless, the Draft EIR rather blithely suggests that no new housing will be needed because the employees can be housed in the surrounding communities even though there is little such current availability.

Finally, I routinely peruse community message boards and a very common issue affecting people in our region is the completely unaffordable housing. Rents for one-bedroom apartments in the City of Riverside and City of Moreno Valley are routinely listed at prices over \$2,000 per month⁶. That is not something that people working at warehouses making \$18.75 per hour can afford. And if people can’t afford to live on the warehouse wages, then they can’t commute locally to those warehouses. They need to commute from cheaper areas – like Hemet, San Jacinto, or maybe Menifee.

I-830.11

The Project area is uniquely suited to developing residential housing which is sorely needed. The Section 6.3 - Alternatives Considered but Rejected – ignores the reality of the current needs of the region. There are no shortage of job opportunities regionally, especially at warehouses. Cumulatively, there are over

I-830.12

⁵ <https://www.ocregister.com/2023/01/17/housing-scorecard-grades-breakdown/>

⁶ <https://www.zumper.com/apartments-for-rent/riverside-ca>

50,000 jobs expected from the approved Stoneridge Commerce Center, World Logistics Center, and other warehouses being built in the region. In contrast, there is a huge shortage of affordable housing and the March JPA's impatient dismissal of the need for housing is at odds with the statewide mandate within the RHNA.

I-830.12
Cont.

I urge the March JPA to adjust its mandate to meet the current needs of the region, rather than meeting the needs of 1996 when the March AFB was closed. The purpose of the March JPA is to repurpose public lands for community benefit. Narrowly fixating on a 25 year old unemployment issue while the state hemorrhages people to other lower-cost-of-living parts of the country is ignoring the current issues in our region. Our region needs housing and open space, not more low-paying warehouse jobs.

I-830.13

I therefore ask that

- 1) The March JPA justify ignoring the RHNA grades of its member agencies when it states that residential allocations will be met. If the March JPA wants to delegate this to its member agencies, its member agencies must be on track to meet their RHNA obligations.
- 2) The March JPA specify how the member agencies will meet their RHNA obligations in a timely manner while adding so many jobs regionally.

I-830.14

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-830

Michael McCarthy

March 9, 2023

I-830.1 This comment is introductory in nature and does not raise issues on the adequacy of the environmental analysis in the EIR. No further response is required.

I-830.2 This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR and raises concerns about the Project's proximity to residential homes and other land uses. The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.

I-830.3 This comment questions the Draft EIR's reliance on Southern California Association of Governments (SCAG) data for population, housing, and employment. For discussion on unemployment data, see Topical Response 5 – Jobs.

The comment asserts the Draft EIR's analysis does not reflect the existing conditions of housing affordability in the Project site's vicinity. Further, the comment states March JPA is neglecting a responsibility to add affordable housing and is contributing to high local housing and rental costs. Per Section 15064(e) of the State CEQA Guidelines, "economic and social changes resulting from a project shall not be treated as significant effects on the environment." As such, housing affordability is not specifically assessed in the impact analysis. However, the Draft EIR establishes an existing condition for housing supply based on SCAG estimates and projections. These data sets are based on existing land use plans and demographic research prepared for Connect SoCal (i.e., RTP/SCS). Additionally, the EIR identifies the regional housing need goals (i.e., RHNA) for the March JPA member agencies (e.g., County of Riverside [unincorporated], City of Riverside, City of Perris, and City of Moreno Valley) in order to capture the planned housing goals within the Project site's vicinity. Describing its Housing Element, the March JPA General Plan states the "land use plan identifies no new housing areas and creates an employment center within the housing rich environment of western Riverside County." Additionally, the March JPA General Plan Housing Profile report states: "No housing opportunities are identified within the March JPA Planning Area due to land use compatibility issues related to the continued military activities of the Air Force Reserves and aviation operations." For additional discussion about why housing is not included in the Project, please see Topical Response 8 – Alternatives.

I-830.4 This comment is introductory in nature and does not raise issues on the adequacy of the environmental analysis in the EIR. No further response is required.

I-830.5 This comment questions the Draft EIR's use of SCAG data for population, housing and employment and references U.S. Census data. The Draft EIR establishes an existing condition for housing and population based on SCAG estimates and projections, which are based on existing land use plans and demographic research prepared for Connect SoCal (i.e., RTP/SCS). The comment's comparison with the US Census data is noted. However, despite the discrepancies, the Project would not result in new housing or residential population on the Project site. The conclusions within the Draft EIR would remain the same related to unplanned population growth. Less than significant impacts would occur.

The Project site is located within an unincorporated area of Riverside County and surrounded by March JPA's member agencies' jurisdictions (County of Riverside and the cities of Riverside, Moreno Valley, and Perris). Population, housing, and employment patterns are disproportionately located within the western region of Riverside County. Thus, solely utilizing unincorporated data for existing and projected conditions would not adequately capture the existing housing and population estimates within the vicinity of the Project site. Similarly, an assessment of each of March JPA's member agencies would not adequately capture existing housing and population estimates and projections within the unincorporated areas adjacent to the Project site, within and outside of the March JPA Planning Area. As such, the Draft EIR utilizes regional data sets as a comparison for impacts related to population growth due to the regional nature of the Project. Therefore, this determination represents a conservative approach in assessing the Project's potential impacts throughout the Draft EIR.

I-830.6 This comment raises concerns about unemployment data used in the Draft EIR. For discussion on unemployment data, see Topical Response 5 – Jobs.

I-830.7 This comment raises concerns about employment data used in the Draft EIR. For discussion on employment, see Topical Response 5 – Jobs. In addition, the comment questions the Draft EIR's analysis of the jobs/housing balance. This comment is similar to Comment I-830.8, below, and as such, see the following Response I-830.8.

I-830.8 This comment states the jobs/housing balance analysis with the Draft EIR is outdated and inaccurate in comparison to data provided by the US Census and the California Employment Development Department (EDD). The Draft EIR utilized SCAG's data from the most recent RTP/SCS (i.e., Connect SoCal). This is consistent with other environmental analysis within the Draft EIR that demonstrates consistency with regional plans such as the Air Quality Management Plan, which is designed to be consistent for regional planning purposes. At the time of drafting the Draft EIR, data from the US Census Bureau was not readily available across all data source needs (i.e., population, housing, and employment). Given this, the Draft EIR identified SCAG's 2020-2045 RTP/SCS (also known as Connect SoCal) as a basis for analysis due to the fact that data sources were all from the same source and to prevent data gaps between topics and available dates. For discussion on employment data, see Topical Response 5 – Jobs.

A jobs/housing balance is a ratio that indicates the number of available jobs in a jurisdiction compared to the number of available housing units. The ratio is one potential indicator of a community's ability to reduce commuter traffic and overall vehicle miles traveled (VMT) by maintaining a balance between employment and housing in close proximity to each other (Section 4.12, Population and Housing). An analysis of jobs/housing balance is based on the opportunities for a population who lives and works in an area. It is not an indication or requirement of the Project to directly meet the employment or housing needs of the surrounding community. However, additional employment opportunity is a desired objective of the Project, as explained in Recirculated Chapter 3, Project Description.

The comment asserts that the Project would provide more jobs than the amount of housing available. This estimate is purely speculative and not supported by substantial evidence given that the acreage and jobs cited within the comment's defined area (the "215/60 corridor") are provided without supporting sources. The Project site's local vicinity is anticipated to experience housing growth as facilitated by local jurisdictions' Housing Element updates and the Regional Housing Needs Allocation (RHNA). As discussed in Section 4.12, Population and Housing, of the Draft EIR, RHNA is mandated by

State Housing Element Law as part of a periodic process of updating local housing elements in city and county general plans. The RHNA is produced by SCAG and contains a forecast of housing needs within each jurisdiction within the SCAG region for eight-year periods. The RHNA provides an allocation of the existing and future housing needs by jurisdiction that represents the jurisdiction's fair share allocation of the projected regional population growth. Table 4.12-2, SCAG's 6th Cycle Final RHNA Allocation, details the housing goals for each of March JPA's member jurisdictions: unincorporated Riverside County (40,647 units), City of Riverside (18,458 units), City of Perris (7,805 units), and City of Moreno Valley (13,627 units). Therefore, a total of 80,537 housing units are planned for 2029 within the Project site's vicinity. Given this, the Project's introduction of new jobs within the local vicinity would support future population and housing growth anticipated over the next 6 years.

Despite the differences in data sources, the Project would contribute nominal employment growth to existing and future projected conditions of Riverside County. Thus, the conclusions of the Draft EIR would remain the same. The Project would not result in substantial unplanned population growth and impacts would be less than significant. For discussion on unemployment rate, see Topical Response 5 – Jobs.

I-830.9 This comment asserts the Draft EIR does not consider other projects, such as the World Logistics Center and Stoneridge Commerce Center, in assessing potential cumulative impacts related to employment growth.

For the purposes of assessing cumulative impacts related to population growth, the Project's contribution to population growth would be nominal, as detailed in Section 4.12, Population and Housing, of the Draft EIR. Thus, the Draft EIR concludes that impacts would not be cumulatively considerable. For additional information about cumulative projects, see Topical Response 7 – Cumulative Projects.

I-830.10 The comment asserts that the Draft EIR needs to assess the RHNA goals for each member agency of March JPA. As detailed in the Draft EIR, the 6th Cycle RHNA has been underway since October 2021. The planning period ends in October 2029. The EIR notes the housing goals for each member jurisdiction to supplement the analysis of future housing growth. However, the progress of meeting these housing goals by 2029 is too speculative at the time of drafting this Final EIR. As detailed in Topical Response 5 – Jobs, it is reasonable to assume the jobs generated by the Project would be filled with existing local residents residing within the County, either from the unemployed population or residents looking to reduce their commutes. The comment does not raise any specific environmental issues, questions or concerns related to the adequacy of the environmental analysis within the Draft EIR.

I-830.11 The comment raises concerns regarding affordability of local rental housing. Per Section 15064(e) of the State CEQA Guidelines, "economic and social changes resulting from a project shall not be treated as significant effects on the environment." As such, housing affordability is not specifically assessed in the impact analysis. Please see Topical Response 5 – Jobs, regarding local unemployment data.

I-830.12 The comment expresses support for an alternative with residential land uses. See Topical Response 8 – Alternatives, for more discussion about why housing was not evaluated in the Draft EIR.

I-830.13 The comment expresses general opposition to the Project and requests consideration of other alternatives. See Topical Response 8 – Alternatives, for discussion on alternatives.

I-830.14 This comment restates concern for meeting RHNA goals, as detailed in Comment I-830.10, above. See Response I-830.10 for more discussion. No further response is required.

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-831.1

The draft EIR Transportation analysis (section 4.15 and Appendix N) fails to adequately evaluate the regional impacts transportation of the proposed project and omits tens of millions of square feet of present and probably warehouse development along the I-215 and SR-60 corridors. The I-215 freeway is already one an incredibly overloaded route jam-packed with trucks that bottle-neck at the 215-60 interchange for 6+ hours a day; the additional trucks and passenger vehicle trips from the Project will significantly exacerbate that problem. However, the project didn't evaluate the 215/60 corridor or vehicle traffic and capacity along the 215 freeway, which is inconsistent with both WRCOG and County of Riverside guidance as well as the stated geographic scope of the transportation cumulative impacts analysis in Table 4-1. As a result, the project's transportation analysis is insufficient for evaluation and disclosure under CEQA and should be redone in full consultation with CalTrans to appropriately model the freeway impacts along the 215/60 interchange of the cumulative considerable warehouse traffic on that key piece of infrastructure.

I-831.2

Additionally, the transportation element of this project is inconsistent with the Final Reuse Plan (1996) and General Plan (1999) circulation elements. Both of these documents indicate that the connection of Barton Road from Camino Del Sol through to Grove Community was not considered. Moreover, Cactus Avenue in the General Plan goes no further west than Camino Del Oro – this plan increases the proximity of this major roadway to residents.

I-831.3

Finally, the project makes a number of flawed baseline assumptions in generating trip rates, bases its traffic estimates on a collection day two days after a major holiday, and provides nonsensical estimates of traffic that are physically and mathematically impossible.

I-831.4

Regional Traffic Analysis

In Table 4-1, the geographic scope of the Transportation Analysis is defined as 'Regional'. On p. 4.15-8, that regional definition is scoped as a '15-mile service area' from the Project site and displayed in

I-831.5

Attachment B. However, the Cumulative Impacts project table in Table 4-2 definitely does not include all cumulatively considerable warehouse projects within 15 miles of the project, and certainly excludes regionally significant projects such as the 40 million square foot World Logistics Center and the 9.5 million square foot Stoneridge commerce center, both of which are less than 10 miles from the Project site and both of which will influence regional traffic patterns. In addition the project omitted nearby warehouses that are planned or approved including projects in Moreno Valley (Edgemont Commerce Center, Moreno Valley Business Center, Compass Danbe Centerpointe, PAMA business park, Heacock Commerce Center), Mead Valley (Majestic Freeway, Seaton and Cajalco, Rider and Patterson, Placentia Logistics, Harvill and Rider, and Harvill Business Center) and Perris (First March Logistics, Duke Warehouse Project, Phelan Warehouse, Operon HKI, OLC3 warehouse, Ramona Indian Warehouse, Perris Valley Commerce Center, and the Ramona Gateway). **Figure 1** shows a regional warehouse map with a 15-mile project zone circle.

Each of the warehouses mentioned above are along the 215/60 corridor and truck traffic and passenger vehicles will all cumulatively add to existing traffic on the 215 Freeway. Additional large warehouse complexes along the SR-60 include the planned Beaumont Pointe¹ and Legacy Highlands Phase II² projects, which are cumulatively about 25 million additional square feet and are likely to generate significant truck and passenger traffic along SR-60.

I personally commute to Claremont from the Mission Grove neighborhood, and despite the 215 Alessandro freeway entrance being less than 3 miles from my house, it is ALWAYS faster to take Alessandro to Canyon Crest and enter the 215/60 freeway from Martin Luther King Blvd adjacent to UC Riverside rather than go through the 215/60 interchange. Similarly, when I want to go to Curry and Kebab³ in the Canyon Springs shopping center on Day Street right next to the 215-60 interchange, I always take surface streets (Sycamore Canyon to Box Springs) because it is faster and the interchange is a complete disaster.

What use is the 215 freeway if a route with a one-lane surface street (Canyon Crest Dr.) with multiple traffic lights is a guaranteed faster route 100% of the time? It is absurd that City of Riverside residents can't use the primary freeway entrance nearest their home because it is infinitely slower than taking a one-lane surface street during any daytime commuting hour.

³ The best local Indian restaurant – highly recommended by Mike

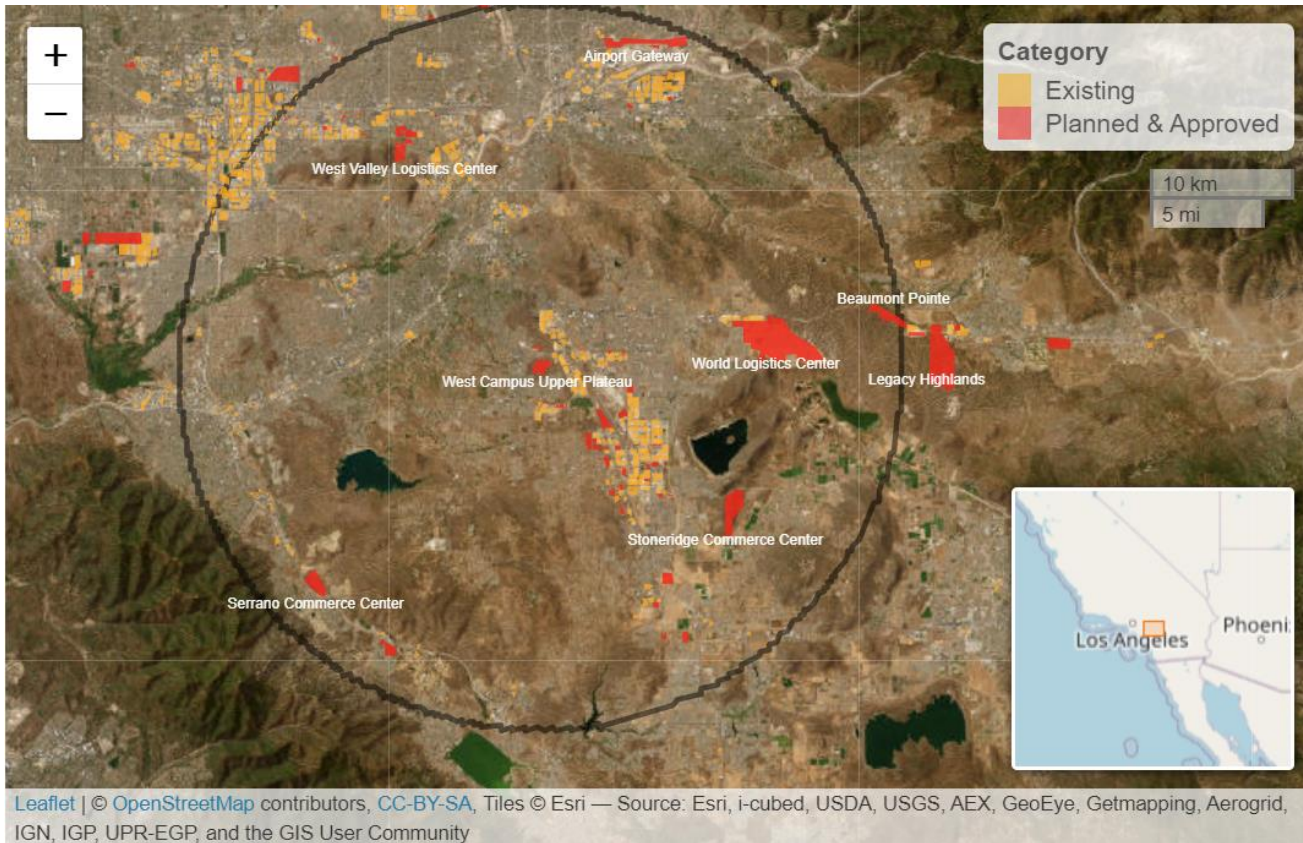

Figure 1. Map of project area with a 15-mile buffer for the regional transportation analysis that shows existing warehouses in orange and planned/approved warehouse plans in red. Projects that are approximately 5 million square feet or larger are labeled.

Therefore, I ask that

- 1) the March JPA justify how a regional traffic analysis with a defined (Appendix N – Attachment B) 15-mile service area can exclude the primary freeway (I-215) and primary freeway interchange (215/60) from its analysis of transportation impacts.
- 2) the March JPA justify its failure to consult with CalTrans on a project that will add significant traffic to the 215 Freeway (~20,000 passenger trips, ~2,000 truck trips, per Appendix N, Exhibits 4 & 5) and is less than 1 mile from the 215 freeway, in contravention of WRCOG and County of Riverside guidance? *“For projects within one mile of a state highway, or any project that may add traffic on the state highway, the Engineer shall also coordinate with Caltrans.”* (WRCOG 2020, County of Riverside 2020)⁴
- 3) the March JPA justify its exclusion of more than 60 million square feet of planned and approved new warehouses that are within the 15-mile service area from the cumulative impacts project list.
- 4) the March JPA justify its exclusion of March JPA commercial cargo flights from this analysis of transportation impacts – this project, in cumulatively considerable effect with the 60 millions square feet of planned and approved warehouses in the 15 mile service area, is likely to induce additional commercial cargo operations out of the March ARB inland port. Those are not

⁴ <https://www.fehrandpeers.com/wp-content/uploads/2019/12/WRCOG-SB743-Document-Package.pdf>

I-831.5
Cont.

included in the transportation modeling, but need to be included in the transportation, air quality and noise sections as part of the cumulative impact of this project on the local community.

- 5) Justify the Cumulative Effects on VMT in the context of the more than 50,000 jobs projected to be created within the 15-mile service area and the less than 11,000 unemployed residents currently available to work given the 3.7% unemployment rate in December 2022. There are no workers for these jobs locally.

I-831.5
Cont.

Project Transportation Plan is not Consistent with General Plan

The General Plan (1999) and Final Reuse Plan (1996) displayed maps indicating the likely circulation routes considered as part of the initial EIR and planning process. **Figure 4.15-2** in the Draft EIR shows the March JPA General Plan Circulation Element Roadway Classification, reproduced below for reference. In it, Cactus Avenue is clearly seen as a major arterial roadway, but it ends prior to the Weapons Storage Area of the West Campus Upper Plateau where it goes into a minor arterial loop. Barton Street is clearly shown in the map, going from Orange Terrace Road past Van Buren. Barton St. is also shown as an intersection with Alessandro Blvd. However, Barton Street does not connect in the March JPA General Plan. Thus, the proposed plan to connect Barton Street as shown in **Exhibit 1-1** from Appendix N is inconsistent with the March JPA General Plan. Additionally, we note that the Cactus Avenue extension to the proposed Airman Drive is also inconsistent with the General Plan – Cactus Avenue extends no further than Camino Del Oro in the General Plan. Finally, there is no connection between Brown St. and Cactus Avenue. As such, it appears that the entire proposed circulation element is inconsistent with the existing general plan.

I-831.6

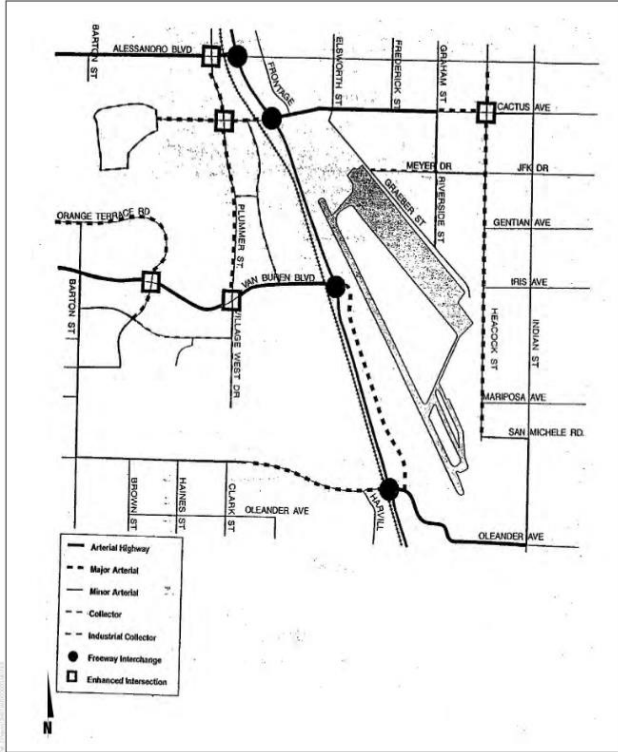

FIGURE 4.15-2

March JPA General Plan Circulation Element Roadway Classification
West Campus Upper Plateau EIR

Figure 4.15-2 (left) and Appendix N – Exhibit 1-1 (right) from the Draft EIR.

CEQA Guidelines state that an EIR must discuss inconsistencies between the proposed project and any provision of the General Plan. These inconsistencies have not been discussed or identified in the EIR and thus must be addressed, potentially with a modification to the March JPA General Plan.

Therefore, we ask that the March JPA justify and explain how this project is consistent with the March JPA General Plan circulation element. Also, we note that this violates TRA-1 (conflict with a program plan, ordinance or policy addressing the circulation system) and creates a significant and unavoidable impact. Threshold TRA-1 is not addressed as inconsistent within the EIR because the basic circulation conflicts were overlooked or ignored by the Project applicant and March JPA.

I-831.6
Cont.

Trip Generation Rates and Estimated Buildings Use

The Project Trip Generation Rates used in Table 4.15-1 use extremely liberal assumptions about the truck trip generation rates and the allocation of office/warehouse space in the business park and mixed-use land-use categories.

The South Coast Air Quality Management District Rule 2305 – warehouse indirect source rule – requires warehouse operators to collect and report truck trip rates. Under 2305(d)1(C) – the weighted average truck trip rates are defined as

WTTR = Weighted Truck Trip Rate, where:

Warehouses >200,000 = 0.95 trips/tsf/day

Warehouses >100,000 = 0.67 trips/tsf/day

Cold Storage Warehouses = 2.17 trips/tsf/day

I-831.7

Where tsf = thousand square feet.

Using the SCAQMD WTTR rates instead of truck trip generation rates from the ITE and WSP yields a near doubling of truck trip estimates. The basic business-park and mixed-use warehouses of ~100,000 square feet are nearly identical to the SCAQMD rates (0.57 vs. 0.67). High-cube fulfillment center warehouses greater than 200,000 square feet have a very low truck trip generation rate from ITE Trip Generation Model and WRCOG’s truck trip survey (0.379 vs. 0.95). Similarly, the cold storage warehouse indicate extreme differences in truck trip generation rates (0.75 vs. 2.17). The weighted truck trip rates would generate nearly double the number of daily truck trips as the default rates selected by the March JPA and project applicant.

Table 1. Contrasting the truck-trip rates from SCAQMD vs. the Project ITE based truck trip rates.

	Warehousing	High-cube fulfillment center	Cold storage	Total
total trip rate	12.44	2.129	2.12	
passenger trip rate	11.87	1.75	1.37	
Truck rate per TSF (Project)	0.57	0.379	0.75	
Rule 2305 truck rate per TSF	0.67	0.95	2.17	
Difference in truck rate	0.1	0.571	1.42	
Cumulative warehouse sq.ft.	1763168	2617000	500000	4880168
Current truck trips	1005	992	375	2372
Extra daily truck trips	176	1494	710	2381

I-831.7
Cont.

Using the SCAQMD Rule 2305 weighted truck trip rates results in a more than doubling of truck trips for the project. That would seem to suggest that the default truck trip rates from ITE and WRCOG are likely to be underestimates of true truck trip rates.

Secondarily, and of far less overall importance, the mix of business-park to office use in the project is not realistic. Approved, constructed, and planned Warehouses in the March JPA South Campus have universally had office space occupying less than 10% of total building floor space while warehouse is greater than 90% (see e.g., buildings E, F, G, H, I, 1, 2, and 3). Given that those warehouses are recently built/approved/constructed and are approved by the same agency, it seems reasonable to use those warehouse/office ratios, rather than default ITE ratios that drastically overestimate the amount of office space in modern warehouses.

I-831.8

If the ratio switched to follow a 90:10 ratio instead of a 70:30 ratio as used in Table 4.15-1, then the number of passenger car trips basically stays the same (20226 daily trips vs 20696 trips), but the timing of the trips going from office trips to warehouse trips shifts the timing to afternoon peak hours, exacerbating the evening peak hour trip. Importantly, the shift to a more appropriate warehouse ratio increases the number of estimated truck trips by 28% adding another 200 daily truck trips based on the 0.57 truck trip ratio.

I-831.9

Thus, I ask the March JPA to

- 1) Justify using such low truck trip generation rates based on the speculative nature of the warehouse occupants rather than the default truck trip rates in SCAQMD Rule 2305 to conservatively estimate truck trips
- 2) Justify using a ratio of 70:30 warehouse: office space for mixed-use and business park land-uses given the last 10 warehouse projects approved by the March JPA warehouse:office ratios.

I-831.9
Cont.

Non-Physical and Mathematically Impossible Modeled Traffic Volumes

Appendix N provides many exhibits indicating the increased increment of traffic volumes at various intersections near the project because of modeled project and cumulative impact traffic volumes. However, the modeled traffic volumes include many examples of impossible results.

Starting with Appendix N – Exhibit 3-17 – Existing (2021) Weekday Traffic Volumes. Existing ADT volumes were reportedly based on ‘factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

Weekday PM Peak Hour (Approach volume + Exit volume) x 10.20 = Leg Volume”

5 Trautwein Rd. & Alessandro Blvd.		24 Meridian Pkwy. & Alessandro Blvd.	
	42,850		44,050
	← 3031(1882) ↖ 157(234)	18,850 ↓ 126(126) ↓ 114(114) ↖ 87(87)	↑ 535(535) ← 1941(1941) ↖ 87(87)
1015(1782) → 4(17) ↘	↗ 1847(893) ↗ 7(11)	140(140) ↘ 963(963) → 244(244) ↓	↗ 585(585) ↗ 585(585) ↗ 61(61)
48,550	12,250	45,400	23,600

I-831.10

Exhibit 3-17 from Appendix N.

However, the basic numbers don't add up in many of the intersections in Exhibit 3-17. For example, Trautwein Rd. & Alessandro Blvd. has three ADT, (Peak AM, Peak PM) values as 42,850, (3,031, 1,882) - (top right), 48,550 (1,015, 1782) (bottom left) and 12,250 (1,847, 893) (bottom right). As you may notice, if you multiply the peak afternoon value (1782) by 24 hours, you get a value of 42,786, which is less than the average daily traffic value of 48,550. The math just doesn't work to reproduce the average daily traffic given that daily average is greater than the peak X 24.

Similarly, Meridian Blvd. and Alessandro Blvd. show that the average peak AM and PM rates in the bottom-left are 963+140+244 = 1347. Multiplying the peak 1,347 hour by 24 hours yields 32,238 daily trips, which is more than 25% lower than the average volume of 45,400 reported on the figure.

I am confused why these numbers don't add up for the EXISTING traffic volumes. It appears that the base traffic volumes were entered incorrectly or in the wrong directions for the lane of traffic. Given the mathematically inconsistent existing traffic volumes, it is very clear that starting with a garbage input will result in a garbage output and that the predicted volumes will simply compound the errors.

Another obvious example of a physical impossible modeling result is seen in Exhibit 4-3, which is the Project Only Weekday Traffic Volumes. We note for completeness that multiple traffic volumes exhibit the same kinds of daily peak vs. average volumes that lead to mathematically nonsensical results. More importantly, there are physically nonsensical results. In the Barton St. and Grove Community Dr. intersection, traffic is projected to occur at 4 different direction. However, Barton St. and Grove Community Dr. is a 3-way intersection. This result is nonsensical as a project level impact.

Exhibit 4-3 from Appendix N and a map of the 3-way intersection modeled as a 4-way intersection.

Thus, I ask the March JPA to

- 1) Justify existing project traffic counts that have average daily traffic volumes greater than peak daily traffic volumes times 24 hours.
- 2) Justify modeling four-way traffic at a three-way intersection
- 3) Given that the modeling has basic input and non-physical entries in the results section, how can it credibly project the traffic volumes in the future given that the basic results are unreliable?
- 4) Please revise traffic results to identify why intersections were incorrectly modeled mathematically and physically

JPA #21-02 & #17-06 – Adopted WRCOG Good Neighbor Guidelines

JPA Ordinance #21-02 is the March JPA General Plan Truck Route Map which explicitly includes the WRCOG Good Neighbor Guidelines. In it, the March JPA states in the first paragraph on p.2;

Whereas, this Ordinance seeks to implement objectives of the [‘Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities’](#) distributed and promoted by the Western Riverside Council of Governments.

The WRCOG document is very clear (even in its title) that the #1 objective of the document is the appropriate **siting of new warehouse facilities**. The Truck Route Ordinance JPA #17-06 and the subsequent Ordinance JPA #21-02 **must consider the end point of truck routes at warehouses** to implement objectives of the Good Neighbor Guidelines for Siting New and/or modified Warehouse/Distribution Facilities.’

I-831.10
Cont.

I-831.11

In this particular site plan, the end point of the truck routes are at 20 speculative warehouses with docking bays as close as 500 feet from adjacent residential homes. This site plan failed to consider and implement the objectives of the “Good Neighbor Guidelines for Siting New Warehouses” as adopted in JPA Ordinance #21-02 and #17-06. Those guidelines clearly recommend (1) Creating a buffer zone of at least 300 meters (~1,000 feet) ...between warehouse[s] and sensitive receptors. (2) Establish[ing] a diesel minimization plan that ‘establishes long-term goal for facility to eliminate diesel emissions at the facility’, and (3) Establishing a public outreach program and conduct[ing] periodic community meetings to address issues from neighbors.”

Therefore, the Project will conflict with Threshold TRA-1 (conflict with existing ordinance addressing the circulation system) and cause a significant, unavoidable impact.

I ask that the March JPA

- 1) Justify failing to follow its own adopted ordinance #17-06 and #21-02 regarding the siting of new warehouse facilities when considering its transportation plan.
- 2) Remove all warehouses/loading docks and circulation routes located within 1,000 feet of residential zoning to comply with its own adopted ordinance.

Jobs Estimate and VMT/Employee Automation sensitivity

Table 4.15-3 provides employees estimates and refers to Appendix O as the source of the estimates. However, Appendix O refers to the March JPA as the source of the estimates and provides no indication that the jobs estimate per acre are justified in any way.

Given that a jobs estimate is a requirement to calculate the estimated VMT/employee, it is important to disclose a reproducible or citable methodology for providing a jobs estimates.

In Table 4.15-5, project VMT is estimated at 58,874 miles for home-to-work based trips for employees. It estimates the VMT/employee as 24.12 based on a non-retail employment value of 2,340, with no citable methodology for the buildout year 2045 employee rate.

However, there are a large number of studies and articles indicating that warehouse jobs are extremely automatable and that autonomous vehicles (trucks and delivery) are likely to be added to the roads in the near-future, certainly at rates worth considering. The seminal work on this is ‘The Future of Employment’ by Frey and Osborne⁵. Automation of warehouse work is mentioned in many articles, with industry leaders such as Amazon being cited as investing large sums in automating these jobs.⁶

We believe that it is important to consider VMT/employee based on a sensitivity analysis of the possible automation of jobs that are core to the types of land-use being considered.

The following types of goods movement jobs are considered extremely susceptible to automation⁷.

- Driver/Sales workers – 98%
- Locomotive engineers – 96%

⁵ https://www.oxfordmartin.ox.ac.uk/downloads/academic/The_Future_of_Employment.pdf

⁶ <https://www.wsj.com/story/amazon-takes-steps-toward-warehouse-automation-14b7131d>

⁷ <https://mfgriffin.shinyapps.io/Shiny/>

I-831.11
Cont.

I-831.12

- Conveyor operators – 93%
- Industrial Truck and Tractor Operators – 93%
- Laborers and Freight Stock, and Material Movers – 85%
- Heavy and Tractor-Trail Truck Drivers – 79%
- Tank Car, Truck, and ship loaders – 72%
- Light Truck or Delivery Services Drivers – 69%
- Packers and Packagers, Hand – 38%

As one can see, almost all the key job categories in the goods movement industry are likely to be extremely susceptible to job automation. Even if only 33% of those categories actually get automated, it would still result in an enormous decrease in the number of jobs in the 2045 buildout year. Of key importance to warehouse jobs, the delivery of goods by people may be automated (heavy trucks and delivery trucks). This would result in VMT/employee estimates that would go explode – autonomous vehicles will create VMT with no employment.

Therefore, I ask that the March JPA

- 1) Justify its base jobs numbers on a per acre or citable basis.
- 2) Justify not performing a sensitivity analysis on the jobs estimates based on future automation of standard warehouse job categories.
- 3) Justify that the VMT/Employee are going to remain less than 25 miles per employee threshold of significance level in a more automated future with autonomous vehicles and trucks.

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-831

Michael McCarthy

March 9, 2023

- I-831.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-831.2** This comment summarizes the proposed Project and its location and does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- I-831.3** This comment asserts that the transportation analysis in the Draft EIR fails to adequately evaluate regional cumulative transportation impacts, specifically I-215 and the 215/60 corridor. Regarding cumulative projects, please see Topical Response 7 – Cumulative Projects. Please see Response FL-G.4, regarding I-215 and the 215/60 corridor.
- I-831.4** This comment states that the transportation element of the Project is inconsistent with the Final Reuse Plan and the March JPA General Plan. As explained in Recirculated Section 4.10, Land Use and Planning, the March JPA General Plan is the implementing document of the Final Master Reuse Plan and is the controlling document with regard to Project consistency. As described in Recirculated Chapter 3, Project Description, the Project’s requested entitlements include amending Exhibit 2-1, Transportation Plan, of the March JPA General Plan to identify the Project’s proposed revisions to the March JPA circulation network.
- I-831.5** This comment asserts that the Project has flawed baseline assumptions in generating trip rates and traffic estimates because traffic counts were completed two days after a major holiday and faulty estimates. Regarding trip generation, please see Response I-831.7 and I-831.8, below. Regarding traffic estimates, please see Response I-831.10, below. As explained in the Project Traffic Analysis (Appendix N-2), existing traffic conditions are based on the traffic volumes observed during the peak hour conditions using traffic data based on an adjustment of both historic (2019) traffic count data and new (2021) traffic count data collected on Tuesday, November 30, 2021. Although the Thanksgiving holiday was the previous week, traffic patterns and volume would have returned to normal by the time of the 2021 traffic count. Typically, holiday traffic increases the weekend after Thanksgiving and returns to normal the following week. As stated in the Project Traffic Analysis, there were no observations made in the field that would indicate atypical traffic conditions on the count date, such as construction activity or detour routes and nearby schools were in session and operating on normal schedules.
- Further, traffic counts were adjusted due to the COVID-19 pandemic. Adjusted factors were calculated based on historic (2019) traffic counts in conjunction with a 2.0% per year growth rate (compounded annually) to reflect 2021 conditions and compared to new (2021) traffic count data at the same intersections. Other locations where historic count data was not available, the traffic counts were adjusted and increased from the 2021 collected data based on a factor derived from the locations with both historic and 2021 traffic count data.

I-831.6 This comment states the EIR is inconsistent in evaluating traffic impacts because the cumulative projects list does not include projects within the regional 15-mile service area. Please see Response I-831.6.1, below, and Topical Response 7 – Cumulative Projects. The comment further questions impacts to I-215 and the 215/60 interchange, and describes personal experiences with area traffic. Please see Response FL-G.4, regarding I-215 and the 215/60 corridor. Regarding comment’s concerns about trucks accessing local roads, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway. Specific comments are addressed below.

- 1) This comment questions the geographic scope for regional traffic analysis. The 15-mile service area identified by the comment signifies the bounds of the region utilized by the Project VMT Analysis to determine if the addition of the Project’s retail component would result in a net increase in total VMT for that region. As explained in the Project VMT Analysis, a 15-mile service area is a conservatively estimated distance from the Project as the retail component is not anticipated as a regional shopping destination, but instead is anticipated to serve the surrounding communities of Riverside, Moreno Valley, Perris, etc. Please see Response FL-G.4, regarding I-215 and the 215/60 corridor.
- 2) This comment questions Caltrans consultation as required by WRCOG and County guidance, regarding I-215 and the 215/60 corridor. March JPA has adopted its own guidelines for traffic analysis: the March JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). As March JPA is the lead agency for this Project, the Project Traffic Analysis (Appendix N-2) was developed pursuant to the March JPA Guidelines, rather than the WRCOG or County of Riverside Transportation Planning guidance documents. Pursuant to Caltrans safety requirements, the Project Traffic Analysis (Appendix N-2) included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. Caltrans was notified about the Project through the release of the Notice of Preparation on November 18, 2021. Caltrans also received the Notice of Availability for the Draft EIR when the document was circulated for public review beginning on January 9, 2023. No comments were provided by Caltrans during the scoping period or public review for the Project.
- 3) This comment states the cumulative projects list does not include projects within the regional 15-mile service area. Please see Response I-831.6.1, above, regarding the purpose of the 15-mile service area. Separate from the Project VMT Analysis, the Project Traffic Analysis, included as Appendix N-2 to the Draft EIR, utilizes a 5-mile radius around the Project site for determination of approved and pending projects for cumulative analysis as required by the March JPA Guidelines. Please see Topical Response 7 – Cumulative Projects. Additionally, the cumulative analysis depends on data from the RIVCOM model. In other words, the cumulative analysis relies upon Riverside County’s model, and not solely on information from the proposed Project.
- 4) This comment questions the exclusion of commercial cargo flights from the transportation analysis. Because the March ARB/Inland Port Airport is a joint use airport, civilian flights,

including commercial cargo flights, are limited through a Joint Use Agreement between the March JPA and the U.S. Air Force.⁷ Additional flights can only be approved after environmental review of the proposed operating agreement through CEQA.⁸ No additional flights are proposed as a part of this Project. No revisions to the Project Traffic Analysis or other impact analyses are required.

- 5) This comment references employment growth projection within the 15-mile service area of 50,000 new jobs and an estimated unemployment rate of 3.7% as of December 2022, however, it should be acknowledged that it will take an as of yet undetermined amount of time for the estimated 50,000 new jobs stated by the commenter to materialize as they are projected from new development projects that are as of yet not fully entitled, yet to be constructed and/or not fully occupied. It is also important to note that consistent with SCAG growth projections for the region, as employment opportunities grow within the service area so does population. For additional information about employment and growth projections, please see Topical Response 5 – Jobs.

I-831.7 This comment questions the Project Transportation Plan’s consistency with the March JPA General Plan. As described in Recirculated Chapter 3, Project Description, the Project’s requested entitlements include amending Exhibit 2-1, Transportation Plan, of the March JPA General Plan to identify the Project’s proposed revisions to the March JPA circulation network.

I-831.8 This comment is about trip generation rates for trucks. The comment states that Project truck trips should be evaluated based on South Coast Air Quality Management District (SCAQMD) Rule 2305 rather than ITE trip rates. Please see Response FL-B.7 detailing the development and intended application of the Rule 2305 weighted average truck trip rates.

I-831.9 This comment asserts that the mix of business park to office use is unrealistic and requests an analysis of a different ratio. The trip generation rates utilized for the proposed Project are shown in Table 4-1 of the Project Traffic Analysis (Appendix N-2), and in Table 4.15-1 in Section 4.15, Transportation, of the Draft EIR. These rates are obtained from the ITE Trip Generation Manual (11th Edition, 2021) and the WRCOG High Cube Warehouse Trip Generation Study (WSP, January 2019) for the industrial uses. These sources are the industry standard in determining the proposed Project trip generation, as they are based on data from similar use facilities. The land uses evaluated in the Project Traffic Analysis are the most similar land use types to the function and operations of the proposed Project. Based on the ITE description for Business Park, the average mix is 20 to 30 percent office/commercial and 70 to 80 percent industrial/warehousing. As such, 30% of the business park area has been designated as office related uses, while the remaining 70% of the business park area has been allocated to warehousing uses. This 30/70 split is not intended to reflect office space within a warehouse but rather to capture other foreseeable uses allowed with the Business Park land use designation under the proposed West Campus Upper Plateau Specific Plan. As such, no revisions to the Draft EIR or Project Traffic Analysis are necessary based on this comment.

⁷ https://www.marchjpa.com/documents/docs_forms/joint_use_agreement.pdf

⁸ <https://marchjpa.com/wp-content/uploads/2022/05/MIP-Carrier-req-for-Operational-status-instructions-2021.pdf>

I-831.10 This comment asks that March JPA justify truck generation rates and the use of a ratio of 70:30 used in the Traffic Analysis. In response to truck generation rates, please see Response FL-B.7, and in response to the 70:30 ratio, please see Response I-831.9.

I-831.11 This comment is about modeled traffic volumes. As discussed in the Project Traffic Analysis (Appendix N-2 of the Draft EIR), existing weekday Average Daily Traffic (ADT) volumes are based on actual 24-hour tube count data. The traffic counts were adjusted to include ambient growth to reflect 2021 traffic conditions (reflected in the ADT volumes). ADT volumes are calculated using the formula:

$$\text{Weekday PM Peak Hour (approach volume + exit volume)} \times 10.61^9 = \text{Leg Volume}$$

As discussed in the Project Traffic Analysis, the factored ADT volumes from the PM peak hour traffic volumes is based on the sum of all approach volumes and all exiting volumes, to accurately reflect all the traffic volumes on that specific roadway segment.

For the calculation of daily traffic volumes, the factor discussed above (10.61) has been utilized. Daily traffic volumes should not multiply the total peak hour traffic by 24, as the peak hour volume is generally higher than other hours of the day. Multiplying by 24 would overstate the daily traffic volumes. As such, a peak-to-daily ratio has been calculated using the above formula, to forecast the daily traffic volumes for a roadway segment.

5		Trautwein Rd. & Alessandro Blvd.	
		42,850	
		← 3031(1882)	
		↙ 157(234)	
		↘	↘
1015(1782) →	↘	1847(893)	7(11)
4(17) →	↘		
48,550			12,250

In the first example identified in the comment (Intersection #5 – Trautwein Road and Alessandro Boulevard), the west leg of Alessandro Boulevard has a total Weekday PM Peak Hour volume of 4,574, which is the sum of all entering leg volume (893 + 1,882) and exiting leg volume (1,782 + 17) for that segment. This total volume is then multiplied by the ADT factor discussed above (4,574 x 10.61), which equates to 48,530. This number is rounded to the nearest 50 on the traffic volume exhibits (in this case 48,550).

⁹ The text of the Project Traffic Analysis incorrectly stated the ADT factor as 10.20. The correct ADT factor is 10.61. The text has been corrected in the Project Traffic Analysis. The analysis used the correct ADT factor and no further revisions to the Project Traffic Analysis are required.

24		Meridian Pkwy. & Alessandro Blvd.	
18,950			44,050
	↓ 126(254)	↑ 535(391)	
	↓ 114(490)	← 1941(1515)	
	↓ 87(125)	↑ 87(289)	
	↓ 140(131)	↑ 585(443)	
	↓ 963(1430)	↑ 585(394)	
	↓ 244(537)	↑ 61(77)	
45,750			23,650

In the second example identified in the comment (Intersection #24 – Meridian Parkway and Alessandro Boulevard),¹⁰ the west leg of Alessandro Boulevard has a total Weekday PM Peak Hour volume of 3,999, which is the sum of all entering leg volume (443+1,515+254) and exiting leg volume (131+1,430+537) for that segment, which totals 4,310. This total is then multiplied by the ADT factor (4,310 x 10.61), which equates to 45,729. This number rounds up to 45,750.

The referenced report volumes on the exhibits present a conservative analysis and volume for the study area. Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, there are no necessary changes to the Project Traffic Analysis.

As noted by the commenter, Exhibit 4-3 appears to show the incorrect lane configuration and volume for Intersection #12 – Barton Street and Grove Community Drive. Below is an image of the correct intersection.

12		Barton St. & Grove Community Dr.	
1,000			650
	↑ 4(24)	↑ 25(17)	
	↓ 8(48)		
	↓ 13(9)		
350			

¹⁰ The volumes at this location have been updated as the previous exhibit included incorrect volumes. The updated inset for intersection #24 shown above discloses the correct volumes and is included in Exhibit 3-17. The analysis used the correct volumes and no further revisions to the Project Traffic Analysis are required.

Exhibit 4-3 of the Project Traffic Analysis has been revised to reflect the corrected intersection diagram for Intersection #12. The analysis used the correct lane configuration and no further revisions to the Project Traffic Analysis are required. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

I-831.12 This comment asserts March JPA has adopted the WRCOG Good Neighbor Guidelines through JPA Ordinance #21-02. JPA Ordinance #21-02 references the WRCOG Good Neighbor Guidelines in a recital. That reference does not constitute adoption of the WRCOG Good Neighbor Guidelines. Please see Table 4.10-2 of Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project's consistency with the County of Riverside Good Neighbor Guidelines Topical Response 4 - Project Consistency includes a discussion of the Project's consistency with the City of Riverside Good Neighbor Guidelines.

I-831.13 This comment questions the jobs number and VMT analysis in the Draft EIR and Traffic Analysis, as well as the future of the logistics industry. Justification for the jobs estimate used throughout the Draft EIR is discussed in Topical Response 5 - Jobs. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Project VMT Analysis. In general, if there is an additional level of automation that impacts on-site jobs, overall VMT would decrease compared to what has already been evaluated in the Project VMT Analysis. Pursuant to OPR Guidance, truck trips are not included in the Project VMT Analysis and future automation of such jobs would not impact the Project VMT Analysis. Additionally, the goal of SB 743 and VMT-based analysis is to reduce greenhouse gases. The current trend is for autonomous vehicles to be hybrid or fully electric, which supports the ultimate goal of SB 743. As such, the Project VMT Analysis provides a more conservative analysis, and no additional analysis is necessary.

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR site documentation is unstable, with multiple versions of a site plan, construction plan, and project boundaries that are inconsistent throughout the draft EIR. As a community member attempting to understand the project's environmental impacts, it is extremely important that the project description matches the environmental analyses being performed. However, in the case of the draft EIR for this project, the inconsistent site plan and project description indicate a last-minute set of changes were made to the site plan, project boundaries, and construction boundaries that is not consistently reflected throughout analyses that were performed up to 18 months prior to the EIR's release. As such, I am asking that all figures and analyses reflect a single consistent project plan that is evaluated holistically across each of the environmental impact areas.

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority¹, assumed 1999 date – last updated 2/17/2022 (General Plan, 1999)
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

I-832.2

¹ https://www.marchjpa.com/documents/docs_forms/general_plan_update_02172022.pdf

Given that the project’s draft EIR and appendices do not reflect analyses that were performed on the final EIR’s site plan, we ask that all old analyses that do not reflect the current site plan be updated to display the correct information and evaluate the site plan as proposed in the Section 3 of the draft EIR.

Overview

Site Plan Map

The Key map that is inconsistent throughout the draft EIR is the Project **Site Plan** which is shown below and displays the individual zones for multiple industrial, business park, mixed-use, and parks/recreation/open space and easement boundaries. In the draft EIR, this is **Figure 3-5**. This site plan layout mostly reflects the project description – which we list here for completeness from Section 3.5.1

- Building B – 1,250,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 587,000 SF of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 SF of high-cube fulfillment center warehouse use
- Industrial Area – 500,000 SF of high-cube cold storage warehouse use
- Business Park Area – 1, 280,403 SF of business park use
- Mixed Use Area – 160,921 SF of retail use (25%)
- Mixed Use Area – 482,765 SF of business park use (75%)
- 60.28-acre park (with Active and Passive uses)
- 17.72 acres of Open Space use
- Public Facility – 2.84 acres for future sewer lift station and electrical substation (within the Specific Plan Area)

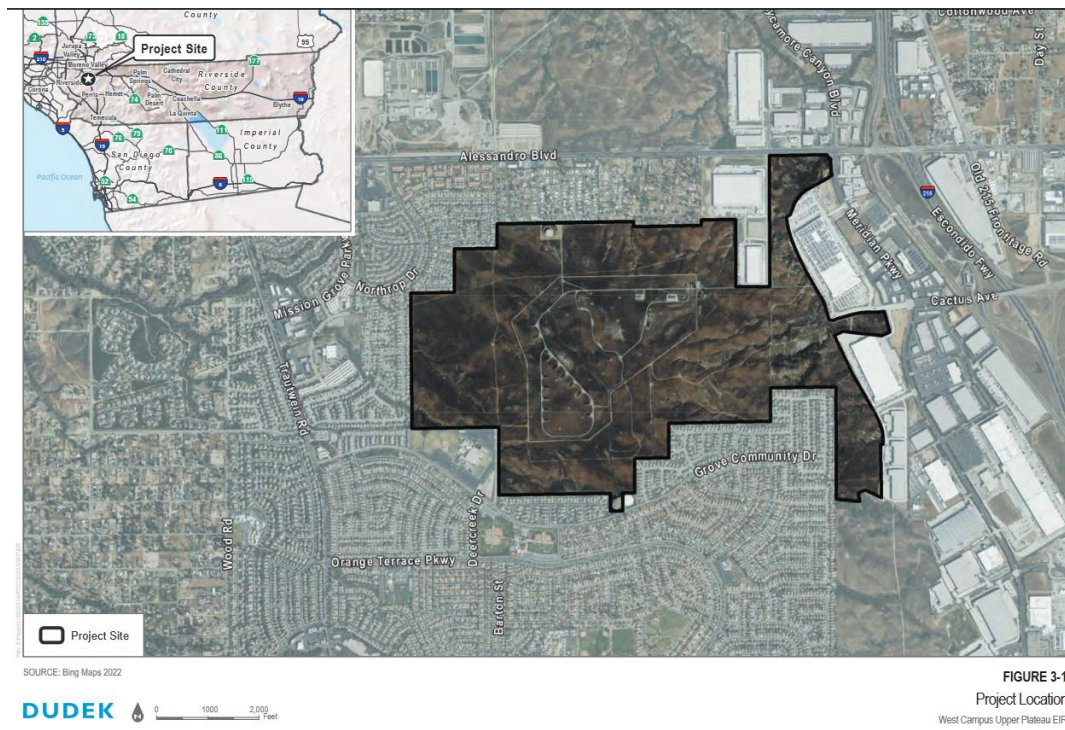

Of note, the Industrial Area 500,000 high-cube cold storage warehouse and 725,561 square foot warehouse are not specifically drawn into the ‘Building A’ industrial zone.

However, the site plan does clearly indicate that there are specific parcels planned out for the business park and mixed-use areas (but not the Building A industrial area, despite two separate types of uses being identified).

I-832.3
Cont.

Project Boundary Map

Three specific maps are used across the EIR to define the Project. The Project Location map is used to display the boundaries of the Project Site, and is shown in **Figure 3-1** of the draft EIR. I will call this the **'Project Boundaries'** throughout the draft EIR and a consistent boundary is shown for many EIR maps in the report.

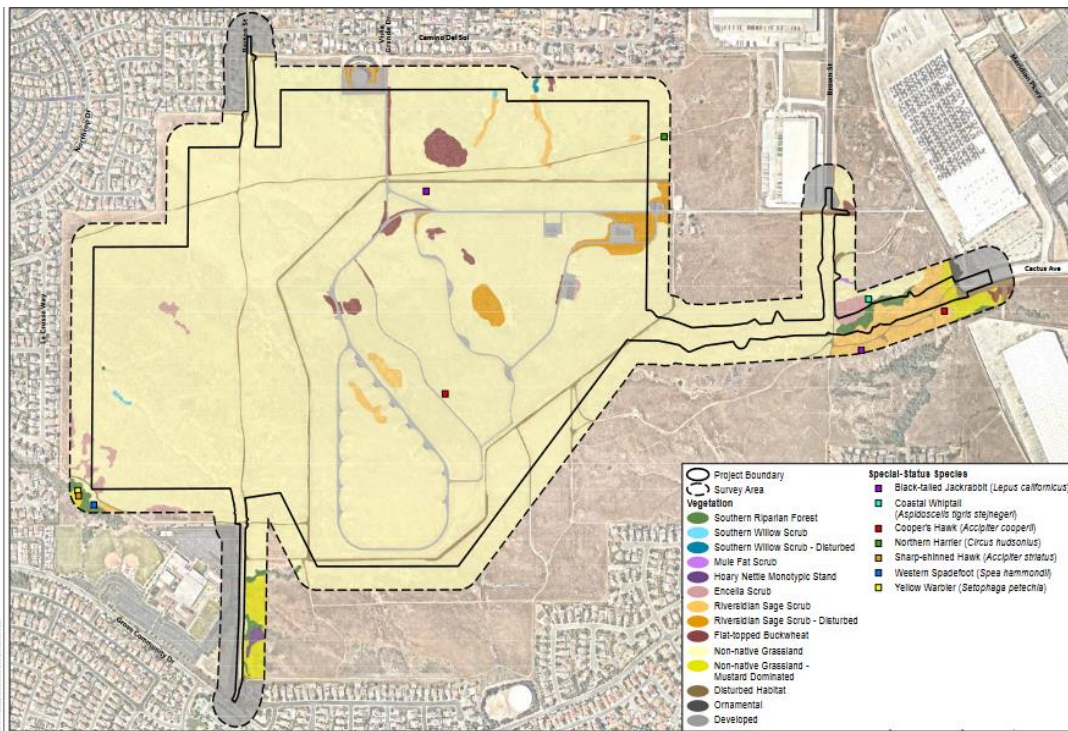

I-832.4

Construction Boundaries Map

The third map used inconsistently throughout the EIR is the Construction boundaries zone. The construction area isn't explicitly defined in the Section 3 project overview and is often-based on a buffer around the Specific-Plan area in **Figure 3-3**. The first occurrence of a construction boundary is shown in **Figure 4.3-1** in the Biological Resources section. The key differences between this figure and the Site Plan map is the inclusion of roadway segments along Barton to the North and South of the Specific Plan Area, and connections along Cactus Avenue and Brown Street. These construction boundaries include roadway segments connecting the Project to existing roadways. Of note, the roadway south along Barton connects all the way out to Grove Community Drive and appears to include potential construction within 10s of feet from homes and the Grove Church. Similarly, the connection on Barton North has a similar extrusion beyond the Project boundaries that is within 10s of feet of homes on both sides.

Project Site Plan Inconsistencies in EIR

In the Appendix A - IS/NOP **Figure 4** shows the original Site Plan for the project. We show it below across from the Figure 3-5 in the EIR for comparison purposes.

There are three key differences that are shown that changed between the IS/NOP Figure 4 and the Figure 3-5 Draft EIR that should be reflected in analyses within the EIR.

1. The number of business park parcels goes from 7 to 10, as the parcels in the north of the project were subdivided to conform to City of Riverside Good Neighbor Guidelines that restrict warehouse sizes to under 100,000 square feet within 800' of homes.
2. The number of mixed-use parcels goes from 3 to 6, as the mixed-use parcels are also zoned for warehouse uses and many of them are also within 800' of residential zoning – the ones to the North conform to City of Riverside Good Neighbor guidelines but the two to the southwest of the project do not.
3. The Park in the west section of the project boundary goes from 10 acres of park and 48 acres of open space to 60 acres of park.

Nothing else that we can identify changes between the two project site plans. The total size and acreage devoted to each zoning type is unchanged. Setbacks are identical and the public access points to trail parking are identical.

I-832.6

In

I-832.6

I-832.7
Cont.

As can be seen from Table 1, more than 80% of the draft EIR maps that include a Site Plan overlay are not consistent with specific plan, tentative parcel map, and Figure 3-5. This is not merely an oversight – this is a clear change in the Site Plan that occurred late in the planning process that resulted in a series of technical errors and omissions that do not account for the current site plan for the project.

A few of the key technical errors and omissions that occurred because of the late changes to the project are clearly visible in the maps. We'll provide a few here as examples of the why the entire EIR needs to be redone to consistently use the same site plan.

1. Connections of the individual parcels in the North Business Park and West Mixed-Use portions of the project to electrical, telephone, gas, and road routes in Figures 3-6, 3-7e, 3-7f, 3-7h all lack specific parcel drawings
2. Visual photosimulations in the Aesthetics Section mostly display the incorrect number of buildings (Figures 4.1-2 : 4.1-4)
3. Drainage basins in Figure 4.9-3 don't indicate correct layout of park or North Business Park and West Mixed-Use portions of the project and thus don't correctly indicate actual project drainage after current changes (watersheds go through buildings)
4. Noise source locations in Figure 4.11-9 are incorrect due to revised building and park plans – this needs to be fixed to reflect the current site plan
5. Modeled on-site emissions for air quality and health risk assessment sections in Appendix C1 and C2 Exhibit 2-B are incorrect and do not reflect the location of the proposed cold storage warehouse which is critical to model correctly due to the longer idling times and higher emissions for the TRU units at docking doors. The 'Industrial' Building A cannot be modeled as a single indistinguishable building when two separate mega-warehouses are proposed in that parcel that have very different emissions characteristics.
6. Specific Plan maps exhibit the same errors and inconsistencies that make it extremely confusing to tell which plan is being proposed. The circulation plan is wrong, the truck route is wrong, and the non-motorized circulation plan conflicts with the fence map.

I-832.8

Given the importance of accurately evaluating and disclosing the environmental impacts of the project, we respectfully submit that all incorrect and inaccurate maps in the draft EIR be corrected and replaced with accurate maps of the current site plan. In any cases where the maps are actually used for technical analysis, we request that the analyses be revised to reflect the 2023 site plan rather than the one from September 2021.

Construction Boundaries Inconsistencies in the Draft EIR

Construction area boundaries are also defined inconsistently through the draft EIR. This is at least partially due to there being no defined construction map overview section in Section 3. At least three separate versions of construction boundaries to be disturbed are defined in different technical sections.

The first version is the biological survey map, which is essentially the Specific Plan Area plus the roads, as shown in Figure 4.3-1 above. The second version is the Appendix E Cultural Resources section, which only examined the Weapons Storage Area, as shown in Plate 1 from Appendix E below. The third version is the Air Quality, Noise, and Sensitive Receptor Location map which shows a site plan plus some roads, but includes no buffer zone and excludes the Barton Road South along the Grove Church.

I-832.9

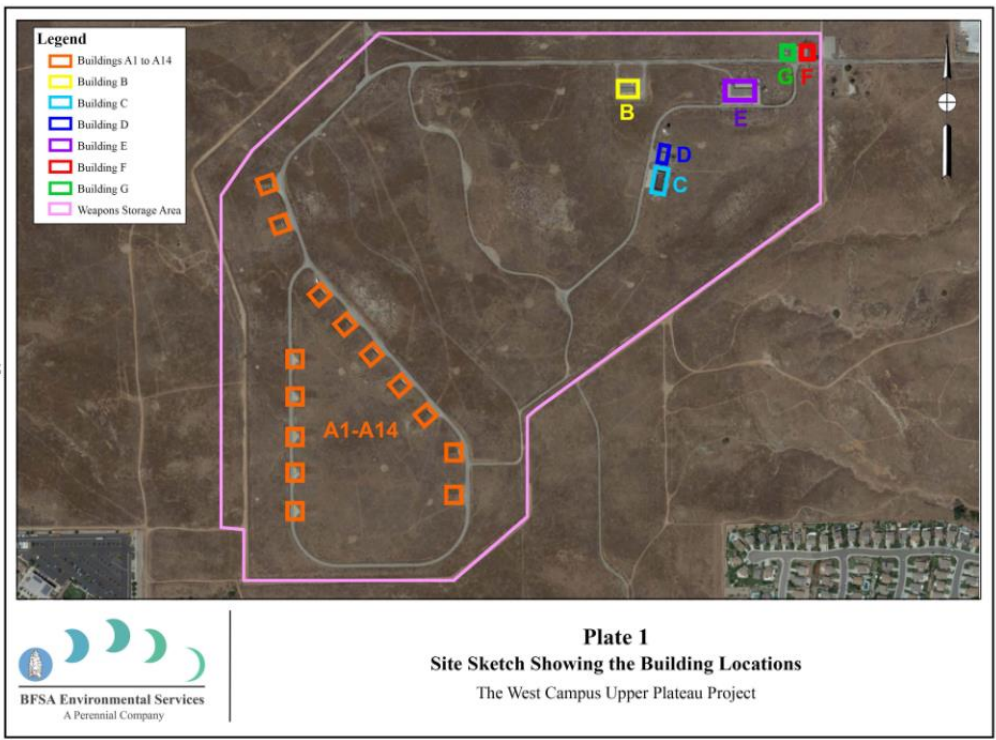

EXHIBIT 2-A: MODELED CONSTRUCTION EMISSION SOURCES

These three map types indicate different areas for different analyses, but also indicate that the different contractors responsible for each of these sections was provided different sets of information on the appropriate boundaries for modeling their section. The Biological Survey boundaries appear the most inclusive, and we believe those are the most reasonable for the overall construction analysis boundaries. However, we note that all construction boundaries exclude the water tank adjacent to residential homes

I-832.9
 Cont.

in Orangecrest and associated trenches required to install underground reclaimed water pipes. In contrast, we believe that the construction boundaries for the Air Quality, Health Risk Assessment and Noise analyses are all too small, include no buffers that will be required for grading and building the roads and are a drastic underestimate. These construction boundaries are inappropriate.

Given that the proximity of residential zones and sensitive receptors is highly sensitive to the distance from the nearest residence to the construction zone, it is imperative that the modeled construction zones accurately reflect the project construction boundaries – especially near the Grove preschool where children under the age of 4 are particularly sensitive to these impacts.

Project Boundary Inconsistencies

A few of the technical sections indicate deviations from the Project Boundary Map shown in the EIR on Figure 3-1. Of most importance, it is not clear from the Project Boundary Map whether there will be construction outside of the Project Boundary areas – especially on the two existing road connections with Barton Street North and South.

There are two primary types of inconsistencies. In the first, the Appendices G, J, and K all display inconsistent Project Boundaries compared to Figure 3-1. Specifically, these maps all display the ‘Specific Plan Area’ but exclude the road components and conservation easements in the project. Construction boundaries include the roadway segments which should be analyzed in the Geology Report, Environmental Site Assessment, and Hydrology sections. Roadway construction zones and operations need to be evaluated and analyzed as part of the assessment.

Figure 1 from Appendix G is displayed as an example. As can be clearly seen, Barton Street, Brown St. and the Cactus Avenue connector are excluded.

Finally, we note that the Appendix P2 Riverside Facilities Master Plan Appendix does not appear to include the West Campus Upper Plateau at all. As it clearly states in Table 2-18: The Meridian West Campus is only allocated for 16 acres of commercial development. This is the near-term development projections as of November 2021 for the period from 2020-2030.

I-832.9
Cont.

I-832.10

I-832.11

We respectfully submit these comments in the hope that the unstable set of maps and inconsistent analyses performed across each of these EIR sections is corrected and applied consistently such that the full effects of the project can be evaluated by the community with certainty. As it stands, the multiple iterations of the project map are allowing the project applicant to apply slippery and inconsistent standards of what the project will be. This is sloppy and indicates an inattention to detail. It is likely the project applicant will be equally sloppy and inattentive when executing the project and its mitigation measures. Our neighborhood deserves a higher level of professionalism than the Lewis Group and its contractors have shown in this draft EIR.

I ask that the March JPA provide adequate evaluations of project impacts that are consistent throughout the draft EIR such that the community members can understand and accurately comment on the proposed project environmental impacts without unclear and inaccurate maps presenting inconsistent information on the Project.

Sincerely,

Mike McCarthy, PhD
 Riverside Neighbors Opposing Warehouses

I-832.12

Letter I-832

Michael McCarthy

March 9, 2023

- I-832.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-832.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. This comment cites general concerns about the Draft EIR but does not raise any specific issues on the adequacy of the environmental analysis in the EIR. No further response is required.
- I-832.3** This comment discusses Figure 3-5, Project Site Plan and alleges the “Building A industrial zone” does not show 500,000 square feet of high-cube cold storage warehouse use and 725,561 square feet of warehouse use. The Project only includes site plans for Buildings B and C. There is currently no site plan proposed for the 56.27-acre Industrial parcel that the comment refers to as Building A. Since the ultimate location of the Cold Storage Warehousing is unknown at this time, it was estimated that Cold Storage usage could be allocated between Buildings B, C, and the remaining Industrial parcel (proportional to square footage of each building relative to the total amount of cold storage allowed), and the total number of truck trips associated with cold storage usage. The Draft EIR evaluated up to 500,000 square feet of cold storage, however, as a conservative measure, the Draft EIR’s analysis assumed that the cold storage use could be located in either Building B, Building C, or the remaining Industrial parcel because it is not currently known in which buildings the high-cube cold storage warehouse land use would be located. Inconsistencies related to Figure 3-5 are corrected throughout the EIR, as noted in Response I-832.7 below.
- I-832.4** This comment includes Figure 3-1 from the Draft EIR and notes the Project Boundaries. This comment does not raise any specific issues on the adequacy of the environmental analysis in the EIR. No further response is required.
- I-832.5** This comment identifies that Figure 4.3-1 in Section 4.3, Biological Resources, of the Draft EIR as an example of the Project’s Construction Boundaries. Please see Figure 3-11, Construction Limits, in Recirculated Chapter 3, Project Description. The comment references Figure 3-3, March JPA Zoning Designations, but it is unclear why as Figure 3-3 is not related to the Project’s limits of construction.
- I-832.6** This comment notes Project and Project Site Plan differences between Figure 4 in the Initial Study/Notice of Preparation (IS/NOP) included in Appendix A of the Draft EIR and Figure 3-5 in Chapter 3 of the Draft EIR.

Business Park: Following the release of the IS/NOP and public scoping period, revisions to the Business Park parcels in the most northern portion of the Specific Plan Area were made. These revisions involved reductions in parcel sizes and reductions in future building square footages on these parcels that are located closest to residences. Figure 3-5 correctly reflects seven smaller Business Park parcels instead of the four larger Business Park parcels shown in Figure 4 of the IS/NOP. The overall acreage of

Business Park has been reduced from 66.35 acres to 65.32 acres as a result of parcel line shifts since release of the IS/NOP.

Mixed Use: Following the release of the IS/NOP and public scoping period, revisions to the Mixed Use parcels in the western portion of the Campus Specific Plan Area were made. These revisions involved reductions in parcel sizes and splitting two larger parcels into five smaller parcels. Figure 3-5 correctly reflects five smaller Mixed Use parcels in the western portion of the Campus Specific Plan Area instead of the two larger Mixed Use parcels shown in Figure 4 of the IS/NOP. The overall acreage of Mixed Use has been reduced from 43.08 acres to 42.22 acres as a result of parcel line shifts since release of the IS/NOP.

Park: In response to community comments as well as consistent with the 2012 Settlement Agreement, following the circulation of the IS/NOP for the Project, the Park was increased to be 60.28 acres in size instead of 10 acres.

The comment suggests the Project does not conform to the City of Riverside Good Neighbor Guidelines because two of the Mixed Use parcels are within 800' of residential zoning. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential, consistent with the City of Riverside's Good Neighbor Guidelines.

- I-832.7** This comment provides a table identifying EIR figures that do not utilize the Project site plan as shown in Figure 3-5. The identified figures and exhibits within the Draft EIR, technical studies, and Specific Plan, have been updated to consistently reflect Figure 3-5. Despite the figure inconsistencies, the environmental analysis in the Draft EIR is based on Figure 3-5. These revisions do not constitute 'new information' under CEQA and do not impact the environmental analysis in the Draft EIR.
- I-832.8** This comment alleges the Draft EIR must be redone because of the figures identified in Comment I-832.7. As discussed in Response I-832.7 above, figures and exhibits within the Draft EIR, technical studies, and Specific Plan have been updated to reflect what was accurately described and evaluated within the text of the Draft EIR and technical analyses. As such, these revisions do not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR. The comment also suggests inconsistencies with modeling of cold storage emissions. In response, please see Response I-832.3, above.
- I-832.9** This comment alleges inconsistent construction boundaries throughout the Draft EIR. The figures cited by the comment are not meant to define construction boundaries; the figures are meant to show the evaluation of impacts for specific resources. Section 4.3, Biological Resources, explained Figure 4.3-1 identifies the areas of the Project site that would experience site disturbance plus a buffer to evaluate indirect impacts to biological resources. Plate 1 from Appendix E-2 of the Draft EIR does not delineate construction boundaries but identifies the Weapons Storage Area, which is the only built environment resource and the subject of Appendix E-2. Please see Figure 3-11, Construction Limits, of Recirculated Chapter 3, Project Description.

The comment alleges the Sensitive Receptor Location Map used for air quality and noise impacts (e.g., Figure 4.11-7) should have included a buffer similar to that used for biological resources. However, no noise or air emissions sources would be located within such a buffer as no construction activities are expected to occur there.

Regarding construction of the southern Barton Street extension, as shown in revised Exhibit 2-A of the Project HRA, the analysis placed construction sources within 80 feet of the Grove Preschool (represented by Receptor R8), and the modeling conservatively assumed that construction would occur at these locations for the entire 4.35-year duration of Project construction, although construction on the southern Barton extension adjacent to the preschool would take place over a significantly shorter period of time. The analysis determined there would be a less than significant impact. (Appendix C-4)

Regarding construction and installation of the water tank and water line, as shown on the revised Exhibit 2-A of the Project HRA, the closest sensitive receptor (Receptor 11) is 32 feet from construction activities, specifically the northern Barton Street extension and the Mixed Use parcels of the Specific Plan Area. Even with analyzed exposure of 4.35 years of construction emissions, the mitigated construction health risk at Receptor R11 is 0.56 in one million, well below the SCAQMD significance threshold of 10 in one million. As noted in the Final EIR and Project HRA, TACs generally dissipate with distance from the source. The homes along Grove Community Drive and Barton Drive in the vicinity of the offsite water tank construction and waterline installation would not be exposed to construction source emissions to the extent or duration compared to Receptor R11 – the mitigated construction health risk would be below 0.56 in one million. Offsite construction would occur over a significantly shorter duration than construction of the Project itself. As such, since the mitigated construction health risk at Receptor R11, the maximally exposed individual receptor (MEIR), is well below the SCAQMD significance threshold, the Project will not cause a significant human health or cancer risk to nearby residences from any on-site or off-site construction activity. (Appendix C-4)

Additionally, the Project includes open space areas on which construction activities would not occur. As such, sources were not placed on these areas as no construction activities are expected to occur there. (Appendix C-4)

- I-832.10** This comment alleges the Project's Geotechnical Exploration Report (Appendix G-1) did not analyze the construction of the Barton Street, Brown Street, and Cactus Avenue because these roadways were not depicted in the Report's figures. However, Section 4.7, Preliminary Pavement Design, of the Report provides specific recommendations for the construction of these roadway extensions. Leighton Geotechnical Response to Comments (Appendix G-2) confirmed the roadway extensions are suitable for the proposed development, from a geotechnical viewpoint.

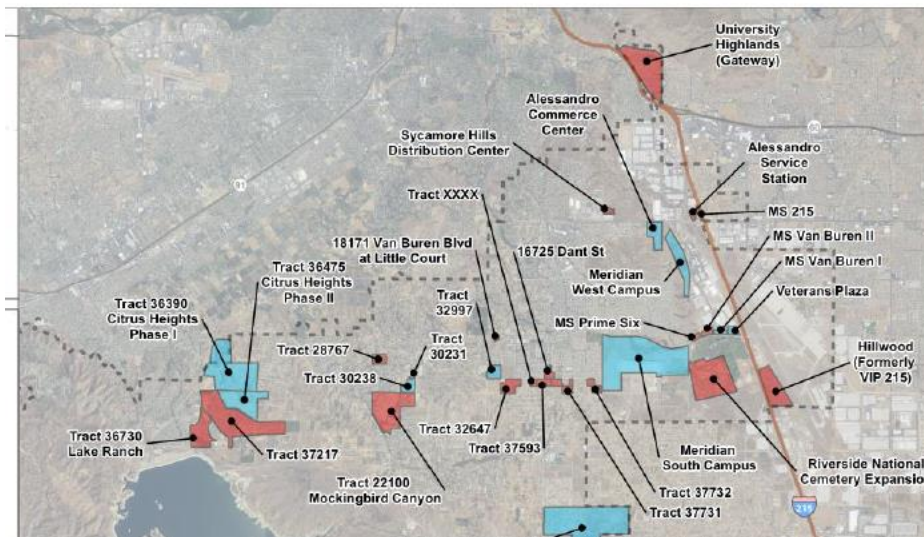

The comment also alleges Appendix J did not analyze the construction of the Barton Street, Brown Street, and Cactus Avenue because these roadways were not depicted in the included figures. The Draft EIR did not have an Appendix J; it is assumed the commenter is referring to the Project's Phase I and Phase II Environmental Site Assessments (ESAs; Appendices J-1 and J-2). As detailed in Recirculated Section 4.8, Hazards and Hazardous Materials, the proposed Barton Street extension was within the limits of the prior Phase I and Phase II ESAs completed by Leighton. No information was found in these assessments to indicate development along this proposed road extension alignment is likely to cause an unacceptable health risk to surrounding developments or future users of this roadway alignment.

Please see Recirculated Section 4.8, Hazards and Hazardous Materials for the analysis of the Brown Street and Cactus Avenue extensions.

The comment further alleges Appendix K did not analyze the construction of the Barton Street, Brown Street, and Cactus Avenue because these roadways were not depicted in the included figures. The Draft EIR did not have an Appendix K; it is assumed the commenter is referring to the Project’s Preliminary Hydrology Study (Appendix K-1) and/or Master Project Specific Water Quality Management Plan (Appendix K-2). However, the figures in both Appendices include the full Project site and all three roadway extensions.

I-832.11 This comment alleges the Riverside Facilities Master Plan (Appendix P-2) only allocates 16 acres of commercial development to Meridian West Campus as near-term development for the period from 2020-2030. In the Master Plan, near-term projects are those that have approved Specific Plans or are in the design or construction phases, which would not include the proposed Project. The Master Plan is not referring to the Project, but rather the Meridian West Campus Lower Plateau project that has already been approved and under construction. This is clearly shown in Figure 2-16, Near-Term Development Location Map, of the Master Plan:

Figure 2-16: Near-Term Development Location Map

The Master Plan analyzed the Project site as ‘mixed use’ (see Figure 2-17, Undeveloped Parcel Location Map), which “are typically associated with more urbanized areas, where various buildings and activities result in higher water demand.”

I-832.12 This comment summarizes what was raised in Comments I-832.1 through I-832.11. As discussed in Responses I-832.1 through I-832.11 above, figures have been updated to reflect what was accurately described and evaluated within the text of the Draft EIR. As such, these revisions do not constitute ‘new information’ under CEQA and does not impact the environmental analysis in the Draft EIR.

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Attached please find a comment on the inconsistency of this Project with 30 years of planning documents adopted by the March JPA.

Please email me to confirm receipt of this public comment.

Sincerely,

Mike McCarthy

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-833.2

My comments reflect documents available publicly on the March JPA website which to the best of my knowledge are the most recent available to me. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al), 2022
- General Plan of the March Joint Powers Authority¹, assumed 1999 date – last updated 2/17/2022 (General Plan, 1999)
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

Despite finding significant and unavoidable impacts, the EIR does not incorporate feasible mitigation, including basic mitigation measures such as electrified vehicles, solar panels, class IV bicycle lanes, and recommended warehouse setbacks. I respectfully submit these comments to urge the March JPA to correct its CEQA analysis and adopt a comprehensive plan that avoids the Project's significant impacts.

I-833.3

I. The PROJECT is inconsistent with the Final Reuse Plan 1996, General Plan 1999, Draft General Plan 2010, CBD 2012, JPA Ordinances #17-06 and #21-02, and the Consensus Community Land-use Preference of Existing Residents

¹ https://www.marchjpa.com/documents/docs_forms/general_plan_update_02172022.pdf

The Project Applicant has egregiously proposed a Project consisting of at least 4.7 million square feet of warehouses, including a minimum of 4 mega-warehouses each over 500,000 square feet. These industrial zoned warehouses are surrounded by buffer warehouses of 100,000 to 200,000 square feet size. This entire warehouse complex will be surrounded on more than three sides by residential communities ranging in distance from approximately 400 feet to 900 feet in distance from the closest warehouse. The entire warehouse complex is within ~1,500 feet of residential homes. This is inconsistent with a 25+ year history of planning process documents that have consistently and thoroughly repudiated the idea that industrial zoning was ever considered for this portion of the Meridian West Campus. This letter will show the historical planning record for each of those documents as being inconsistent with the Project.

I-833.4

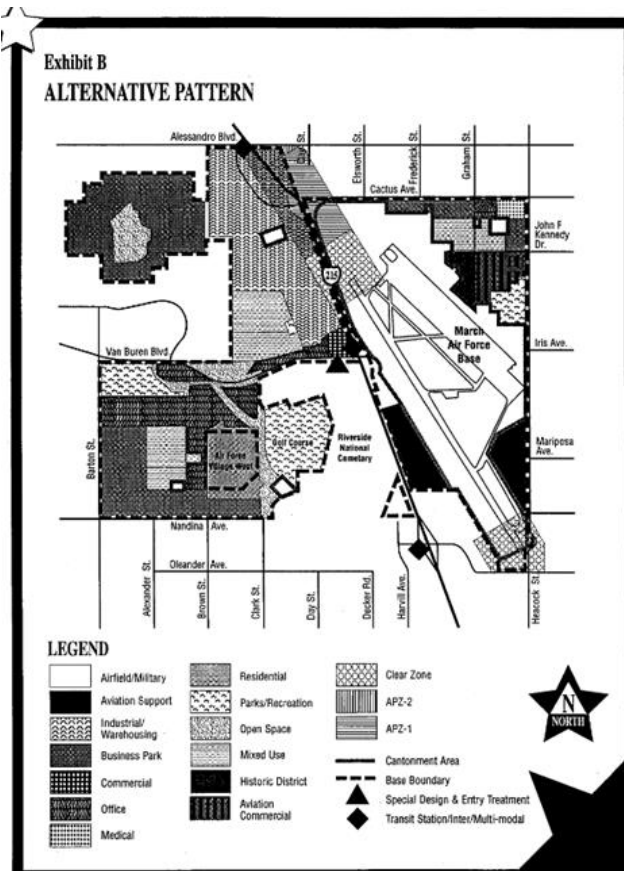

A. Final Reuse Plan

In the initial planning process, the Final Reuse Plan, 1996 describes how the community was included in the planning of land-uses.

*“With the formulation of the Land Use Plan, the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to **maximize the opportunity for citizen involvement with base reuse**” (Final Reuse Plan, 1996, p. II-v).*

I-833.5

In the Final Reuse Plan, there were multiple community stakeholder meetings to identify preferred land-use plans. Four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows that industrial land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. Business Park land-uses include ‘administrative, financial, commercial service, governmental and community support services, research and development centers; light manufacturing; vocational education and training facilities; business and trade schools; and emergency services.’

I-833.5
Cont.

Exhibits C and D identify the entire West Campus as Stephen's Kangaroo Rat management areas and Exhibit A has fewer industrial warehouses due to the suggested land-use of a theme park next to the freeway.

B. General Plan 1999

The March JPA General Plan 1999 clearly sets forth the planning mandates of the March JPA. Among its most prominent Land Use Policies are Goal 2, Policies 2.3 and 2.4 which state that the land uses should 'discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions' and 'Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.'

This language is completely consistent with the Final Reuse Planning Process. Similarly, the land-use plan Table 1-1 gave a specific Buildout plan for the March JPA planning area. In it, the Land-use designations are listed. It is included below. A total of 433 acres were initially designated for Industrial zoning. However, in each successive adoption of Specific Plans by the March JPA, the fraction of land devoted to Industrial zoning increased. The increase in Industrial use over time is shown in Figure 1 and as clearly shown, the acreage devoted to the most intensive zoning has gone from 433 acres in 1999 to an estimated 923 acres with the proposed Specific Plan 23-09. This is more than a doubling of the original land-use plan and there has been no consultation or revision of the General Plan in the intervening 24 years to determine if this is consistent with the interests of, and existing commitments to, adjacent residents, property owners, and local jurisdictions.

I-833.6

Growth in Industrial Land Use Zoning by March JPA

Figure 1. Change in Industrial Land-Use allocated at the March JPA in chronological order by JPA Specific Plan. The amount land-use allocated to the most intensive Industrial zoning has increased from the original 433 acres in 1999 to the current 832 acres (SP21-03) and a projected revision to 923 acres if SP23-09 is adopted for the West Campus area.

Finally, I note that the Specific Plan for this campus changes the definition of the Mixed Use land category. In the existing General Plan (1999), Mixed-Use is explicitly defined on page 1-34.

‘Mixed uses include a variety of complementary land uses; including commercial, business park, office, medical, educational and vocational, research and development, and services. Industrial and major warehousing uses are excluded.’

In the Draft Specific Plan (2023), p. 2-4, Mixed use is now defined as,

“Mixed uses include a variety of complementary land uses, including commercial, business park, office, medical, research and development, business enterprise, and services. Industrial, and outdoor storage is prohibited.”

‘Major warehousing’ uses are now acceptable to the March JPA in the Mixed Use zoning, despite a 24 year precedent in its 1999 General Plan definition that excluded this use. I interpret this change as deceptive and deliberate in its cynical attempt to mask the project’s intent to build as many warehouses as close to residential zoning as possible.

I-833.6
Cont.

I-833.7

Lastly, we note that the Transportation element from the General Plan, as shown in the Draft EIR, Figure 4.15-2 does not include Barton Road and does not include Cactus Avenue continuing through to Barton Road. Thus, the proposed circulation plan for the project is inconsistent with the General Plan.

- there is no General Plan basis to connect Barton Road between Camino Del Sol and Grove Community Drive.
- There is no General Plan basis to have Cactus Avenue proceed further west than Camino del Oro.
- There is no General Plan basis to connect Brown St. to Cactus Avenue.

I-833.8

Therefore, the Project creates significant and unavoidable conflicts with LU-1 – Conflicts with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project and TRA-1 – Conflict with a program plan, ordinance, or policy addressing the circulation system.

C) Draft General Plan – ‘Vision 2030’ – 2010

In addition to the original planning documents governing the March JPA, a Revised General Plan was drafted around 2010. Despite never being adopted, it provides insight into the thought process of the planning staff at a time of major economic turmoil during the great recession. Despite the desperate need for jobs and the problematic economy, it still clearly indicated a desire to avoid incompatible warehouse land uses adjacent to residential homes.

Section 2.2.25(d): *“Any and all future distribution/warehouse development in the Meridian West area shall maintain a 1000’ distance from existing residential uses in accordance with the Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities. (See 2.1.4 of the Land Use Element).”*

I-833.9

Section 2.2.24: *“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high paying jobs (such as corporate offices), high technology jobs, and jobs related to the green building industry are preferred.”*

D) Centers for Biological Diversity Settlement Agreement – 2012

In the Appendix S - CBD 2012 document, p.31/32 of the document contains a flyer about the Meridian campus co-published by LNR and March JPA. In it, the 7th bullet states, *‘the MJPA enforces the WRCOG Good Neighbor Guidelines for the siting of warehouse and distribution use near residential communities.’*

The WRCOG Good Neighbor Guidelines² were adopted in 2005 and establish criteria for siting warehouse and distribution centers away from adjacent residential uses. Policy members include Ron Loveridge, Mayor of Riverside, Penny Newman – Executive Director of CCAEJ, and others. It defined a

I-833.10

² <https://wrcog.us/DocumentCenter/View/318/Good-Neighbor-Guidelines-for-Siting-Warehouse-Distribution-Facilities-PDF?bidId=>

goal to minimize the impacts of diesel PM from on-road trucks associated with warehouses on existing communities and 'sensitive receptors'. Sensitive receptors were defined to include residential communities, parks, playgrounds, schools, hospitals, nursing homes, day care centers, and other places where residents were likely to spend time.

The #1 Goal of the WRCOG GNG was to minimize diesel exposure to neighbors in close proximity to warehouses/distribution centers. The recommended strategy was to 'create a buffer zone of at least 300 meters (~1000 feet, can be office space, employee parking, greenbelt) between warehouse/distribution center and sensitive receptors'.

The Specific Site Plan for this project completely ignores the WRCOG GNG guidance. More on that in Section E below.

Finally, the March JPA never amended the Land Use Plan of the March JPA to reflect the terms of the 2012 settlement agreement, while developing piecemeal portions of the lands subject to the 2012 Settlement agreement in the Meridian West Lower Plateau through JPA ordinance #17-04³. At no time between 2012 and 2023 has the March JPA amended its General Plan or Land Use Plan to reflect the terms of the 2012 Settlement Agreement, the agreed upon conservation easement, or the proposed acreages zoned for business park, park/recreation/open space, and industrial agreed upon through the terms of that Settlement Agreement.

The failure to update the Land Use Plan of the March JPA to reflect the 2012 Settlement Agreement indicated that the General Land Use Plan has been in conflict with legal settlements for over a decade. That failure should be fixed through an amended land use plan that reflects existing commitments of the March JPA rather than piecemeal attempts to redesignate the land use plan through the West Campus Upper Plateau project. Thus, we believe that the existing land use plan is in conflict with LU-1 given the existing legal commitments entered into the March JPA in 2012.

E) JPA Ordinance #17-06 and #21-02

In 2017, the March JPA adopted #17-06 truck route ordinance implementing mitigation measures within the March JPA Planning Area.

On p.1, last paragraph and first paragraph on p.2 are quoted verbatim;

Whereas, the March JPA has determined that commercial truck travel by vehicles with gross weights over 5 tons can produce negative impacts on surrounding residential neighborhoods.

Whereas, this Ordinance seeks to implement objectives of the 'Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities' distributed and promoted by the Western Riverside Council of Governments...

Implementing objectives of the Good Neighbor Guidelines (GNG) was reaffirmed in JPA Ordinance #21-02.

I-833.10
Cont.

I-833.11

I-833.12

³ <https://ceqanet.opr.ca.gov/2016061020/5>

The primary goal of the truck route ordinance was to establish truck routes that avoided residential streets in neighborhoods, designate truck routes, establish signage for truck routes, and allow vehicles to be weighed. However, it is not stated that the Ordinance is intended to only implement the objectives for truck routing.

As a result, the goals of the WRCOG GNG that apply include #1 Establish buffer zones of at least 1,000 feet (warehouses are within 400 feet), #5 Establish a diesel minimization plan to be implemented with new projects (not provided in the DEIR), and #7 Establish a public outreach program and conduct periodic community meetings to address issues from neighbors (not provided in the DEIR or by the March JPA).

Therefore, I submit that the March JPA Ordinance is consistent with its historical planning documents from 2010 (draft general plan) and 2012 (CBD settlement agreement). However, the Project is again in conflict with existing JPA ordinances in conflict with TRA-1 and LU-1.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), Draft General Plan (2010-never adopted), CBD Settlement Agreement (2012), and JPA Truck Route Ordinances (2017, 2021) are clear and consistent in considering warehouse uses inappropriate to site next to residential zoning. Moreover, the West Campus Upper Plateau Specific Plan area was never considered for intensive Industrial/Warehousing uses. All discussion of warehouse uses focused on appropriate setbacks of at least 1,000 feet to protect adjacent residential zoning. Initial business park zoning was intended to allow mixed uses that are compatible with adjacent residential communities – not warehouse uses only and certainly not mega-warehouses of over half-a-million square feet.

F) Community Preference 2022 and 2023

Finally, the record from the current project community ‘engagement’ is clear. As soon as the surrounding neighborhoods were notified in February 2022 that the Project was planned, opposition was immediate and unanimous. An organized community group spontaneously formed (Riverside Neighbors Opposing Warehouses) and started advocating for alternative plans that did not include warehouses for the West Campus Upper Plateau. The community engaged with the developer in meetings as listed below.

- February 2022 – Zoom meeting – Community comments are opposed but it is a zoom meeting with no open questions from the community moderated by Adam Collier of the Lewis Group and Dan Fairbanks of the March JPA who evaded community questions and indicated a complete lack of community involvement in the initial planning process for the Project.
- April 2022 – RNOW, Developer, March JPA meeting in person at March JPA– RNOW, March JPA, and Developer met at the March JPA to discuss the project. RNOW members again asked for non-industrial alternatives to be considered in the planning process, including residential, commercial, solar farms, etc.
- August 2022 – Developer open house at the March Air Force Museum – Over 100 community members attended and opposition was at least 9:1. Multiple community members submitted written comments which were neither published nor addressed by the developer in the project planning process.

I-833.12
Cont.

I-833.13

I-833.14

- February 2023 – Developer Engagement meeting during the draft EIR – Another presentation at the March Air Force Museum – About 10-20 community members attended. Most did not stay for long. As noted by the Developer, this was not part of the formal EIR process and comments submitted would not formally be included. As such RNOW advised community members that the process was not formal and was merely informational.

In addition to the developer hosted meetings, the RNOW group submitted a petition to the March JPA with multiple thousands of signatures indicating opposition to the West Campus Upper Plateau in May. Community members have attended March JPA meetings and given dozens of public comments including over 40 public comments at the single night meeting held in Moreno Valley Community Center. Community members have given public comment at multiple Riverside City Council meetings and at a Moreno Valley City Council meeting in October.

March JPA commissioners have received hundreds of emails in opposition to this project. They have received public testimony in writing and verbally. Community comment has been clear and consistent – the project is completely against community wishes and preferences. It will harm the community, cause decades of noise and pollution, and ultimately drive down property values and harm the region economically. Ownership of these mega-warehouses will be by outsiders and there will be no value because the jobs provided will not provide sufficient wages to live in the neighborhoods adjacent to the warehouses.

Thus, the Project land use conflicts with community preference, which is specifically incorporated into the General Plan through Specific Policy 2.3 and 2.4 as noted earlier. I believe that this is again a conflict with LU-1 – conflict with existing land use plan, policy, or regulation of the March JPA adopted for the purpose of mitigating or avoiding an environmental effect.

G) Summary

The March JPA has produced a remarkable set of documents over nearly 30 years of the planning phase for this piece of land. In my reading, they are incredibly consistent in showing that this land has no historical indication of being sited for warehouses. It is also clear that the goals of the March JPA clearly indicate that projects should defer to local community preference when determining land-uses that may harm residents of the area.

The homes surrounding this project are 50+ years old in the Camino del Sol neighborhood, 30 years old in parts of Orangecrest, and 20+ years old in Mission Grove. These are long-term communities with residents who have lived near March ARB and the March JPA for decades. The community has been active and engaged in all parts of the planning process for this project since being notified and have repeatedly asked that the March JPA follow its own guidelines for developing this land.

I ask that the March JPA address its deficiencies in the planning process that suggest that this land is compatible with adjacent residential uses, a park, and a church. Industrial zoning is incompatible with these uses and the March JPA’s own planning documents indicate that this project is a cynical attempt to upzone a parcel to a use that will not enhance the community or provide any local community benefit. The March JPA has embarked on being a bad neighbor to our communities and has failed to respond to consistent, unanimous community feedback on redeveloping this public land to benefit the local neighborhoods that are adjacent to it. The cynical way in which the March JPA has gone about checking the box of the CEQA process while ignoring all community feedback on the best use of this land

I-833.14
Cont.

I-833.15

is corruptive of public trust and unsuitable for a public agency. The public process should not betray residents and business interests to private developers developing land for-profit within a public land redevelopment process. This is not private land and this Project draft EIR is a perversely Orwellian version of doublespeak when it false claims to be consistent with March JPA goals and policies. Please do not betray our neighborhoods interests by moving forward with this egregious Project.

I-833.15

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-833

Michael McCarthy

March 9, 2023

- I-833.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-833.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. The comment further requests a non-industrial alternative. As such, in response to this comment, please see Topical Response 8 - Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative. The comment summarizes the documents reviewed by the commenter.
- I-833.3** This comment alleges the Draft EIR does not incorporate feasible mitigation. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Please see Recirculated Section 4.2, Air Quality, for a discussion of the revised measures. Regarding fleet electrification, MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a "clean fleet" of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following "clean fleet" requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure's feasibility as the Project site is developed. Regarding solar, MM-GHG-1 requires rooftop solar photovoltaic (PV) electricity generation sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. Regarding bike lanes, the proposed Specific Plan includes Class II, 6-foot dual bike lanes on all Specific Plan Area roadways. Regarding warehouse setbacks, please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project's consistency with the Good Neighbor Guidelines for the County of Riverside and Topical Response 4 - Project Consistency for a discussion of the Project's consistency with the City of Riverside Good Neighbor Guidelines.
- I-833.4** This comment inaccurately describes the Specific Plan buildout scenario land uses analyzed in the Draft EIR. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment alleges the Project would have "a minimum of 4 mega-warehouses

each over 500,000 square feet.” Based on the maximum floor area ratio (FAR) under the proposed Specific Plan, only the three industrial parcels are large enough for warehouses over 500,000 square feet. The comment further alleges “buffer warehouses of 100,000 to 200,000 square feet in size” within 400-900 feet of residences. Based on the maximum floor area ratio (FAR) under the proposed Specific Plan, the Business Park and Mixed Use parcels could have buildings, not necessarily warehouses, ranging from approximately 62,000 square feet to 214,000 square feet. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. Since the adoption of the March JPA General Plan in 1999, the Project site has been designated for development. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development, including 78 acres for the proposed Park and additional buffering open space. Thus, the Project designates more land for non-development uses and does not introduce new designated uses.

- I-833.5** This comment discusses the March Air Force Base Master Reuse Plan and the alternative land use plans included therein. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-833.6** This comment discusses the March JPA General Plan and redesignation of land uses since its adoption. The March JPA General Plan includes warehousing in the definition of Business Park uses. Moreover, wholesale, storage and distribution is expressly identified as an allowed use within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations. The proposed Project will provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development, including 78 acres for the proposed Park and additional buffering open space.
- I-833.7** This comment questions whether the proposed Specific Plan’s definition of Mixed Use is consistent with the General Plan’s definition regarding warehousing. The March JPA General Plan excludes “major warehousing uses” from Mixed Use designated parcels. The proposed Specific Plan includes business enterprise within the Mixed Use designation. Business enterprise use is not major warehousing and is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale industrial warehouse activity. Under Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. The proposed Specific Plan’s Mixed Use definition is consistent with the March JPA General Plan.
- I-833.8** This comment alleges the Project is inconsistent with the March JPA General Plan Exhibit 2-1, Transportation Plan (Planned Roadway/Street System. As detailed in Recirculated Chapter 3, Project Description, the requested General Plan Amendment 21-01 would, in part, amend Exhibit 2-1, as well as the Circulation Element of the General Plan, to incorporate the circulation system revisions proposed by the Project. The Project is consistent with the March JPA General Plan. As discussed in Section 4.15,

Transportation, of the Draft EIR, the Project would result in construction-related traffic deficiencies that could result in a significant impact to the circulation system. To reduce this potential impact to less than significant, MM-TRA-1 (Construction Traffic Management Plan) is required to be implemented. In addition, potential traffic operational impacts related to potential speeding and pedestrian safety were identified, and the implementation of MM-TRA-2 (Barton Street Traffic Safety Plan) would reduce potential impacts to less than significant. No significant and unavoidable traffic impacts would occur with the implementation of the proposed Project.

- I-833.9** This comment alleges the Project is inconsistent with the unadopted draft update to the March JPA General Plan. This update was never adopted and is not applicable to the Project.
- I-833.10** This comment cites a flyer attached to the 2012 CBD Settlement Agreement and alleges the Project is inconsistent with the WRCOG Good Neighbor Guidelines. That reference does not constitute adoption of the WRCOG Good Neighbor Guidelines. Recirculated Section 4.10, Land Use and Planning, includes a consistency analysis with the County of Riverside Good Neighbor Guidelines.
- I-833.11** This comment states the existing March JPA General Plan land use designations for the Project site are inconsistent with the land use plan set forth in the 2012 CBD Settlement Agreement. As detailed in Recirculated Chapter 3, Project Description, the requested General Plan Amendment 21-01 would, in part, amend the Project site's General Plan land use designations to conform with the 2012 Settlement Agreement.
- I-833.12** This comment asserts March JPA has adopted the WRCOG Good Neighbor Guidelines through JPA Ordinance #21-02. JPA Ordinance #21-02 references the WRCOG Good Neighbor Guidelines in a recital. That reference does not constitute adoption of the WRCOG Good Neighbor Guidelines. JPA Ordinance #21-02 does implement Goal 2 of the WRCOG Guidelines: Eliminate diesel trucks from unnecessarily traversing through residential neighborhoods. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid for through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Recirculated Section 4.10, Land Use and Planning, includes a consistency analysis with the County of Riverside Good Neighbor Guidelines.
- I-833.13** This comment claims the Project site was never intended to be an industrial zone. The March JPA General Plan designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover,

wholesale, storage and distribution are expressly identified as allowed uses within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses.

- I-833.14** This comment questions public engagement. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices. With regard to an alternative without warehouses, please see Topical Response 8 – Alternatives, which includes the analysis of Alternative 5 – Non-Industrial Alternative.

The comment further alleges the Project is inconsistent with JPA General Plan Policies 2.3 and 2.4, creating a conflict under Threshold LU-1. CEQA Guidelines Section 15125(d) requires EIRs to discuss any inconsistencies between the proposed project and applicable general plans, specific plans and regional plans. However, an inconsistency does not necessarily mean a potentially significant conflict under CEQA. Threshold LU-1 asks: Would the Project cause a significant environmental impact due to a conflict with any applicable land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect? So, unless (1) the applicable plan, policy or regulation was “adopted for the purpose of avoiding or mitigating an environmental effect” and (2) the conflict would cause a significant environmental impact, any inconsistency would not be a potentially significant conflict under CEQA. The comment cites General Plan Policies 2.3 (Support land uses that provide a balanced land use pattern of the Planning Area, and discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions) and 2.4 (Protect the interests of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses). These policies do not avoid or mitigate an environmental effect so any inconsistency would not be considered potentially significant under CEQA.

- I-833.15** This comment is conclusory in nature and summarizes previous comments. This comment does not raise any additional issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR not addressed in previous responses. As such, no further response is provided.

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Attached please find a comment on the Cumulative Impacts Projects List scoped in the draft EIR. I think you will find my list a bit more comprehensive.

Please email me to confirm receipt of this public comment.

Sincerely,

Mike McCarthy

I-834.1

March 9, 2023

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within ~1,600-foot range of residential homes.

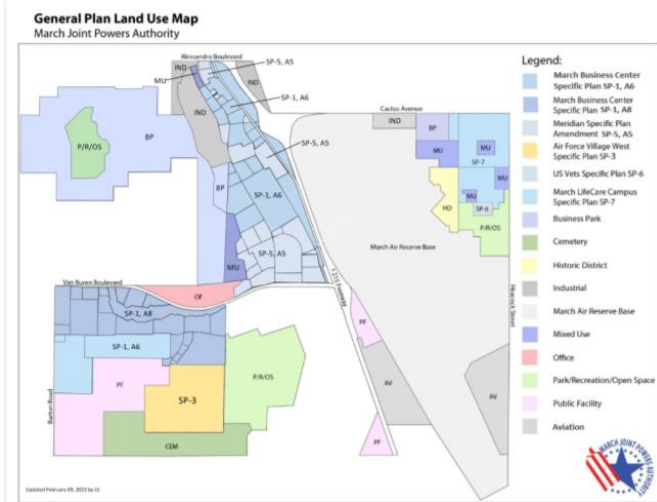

The draft EIR describes the Cumulative Impacts methodology in Section 4.0, lists the geographic scope of analysis in Table 4-1 and lists the projects considered for cumulative impacts in Table 4-2. Upon review, Table 4-2 omits tens of millions of square feet of past, present, and probable future warehouses projects approved by March JPA and its member agencies within the geographic area defined in Table 4-1. This letter provides a broader list of suggested projects to include for both Immediate Vicinity Projects and Regional Projects.

First, I note that the draft EIR omitted Figure 4-1, cited on page 4-4 of the draft EIR, which is the cumulative impacts map figure. I have assumed for the purposes of this comment letter that the Cumulative Impacts map listed as Exhibit 4-5 in Appendix N is correct, although I note that it does not include many of the 'ID' codes listed in Table 4-2.

I-834.2

I-834.3

cargo operations and the proposed Meridian D-1 Aviation Gateway are left off the March JPA planning area cumulative impacts list. These are clearly visible in the March JPA General Plan Land Use Map

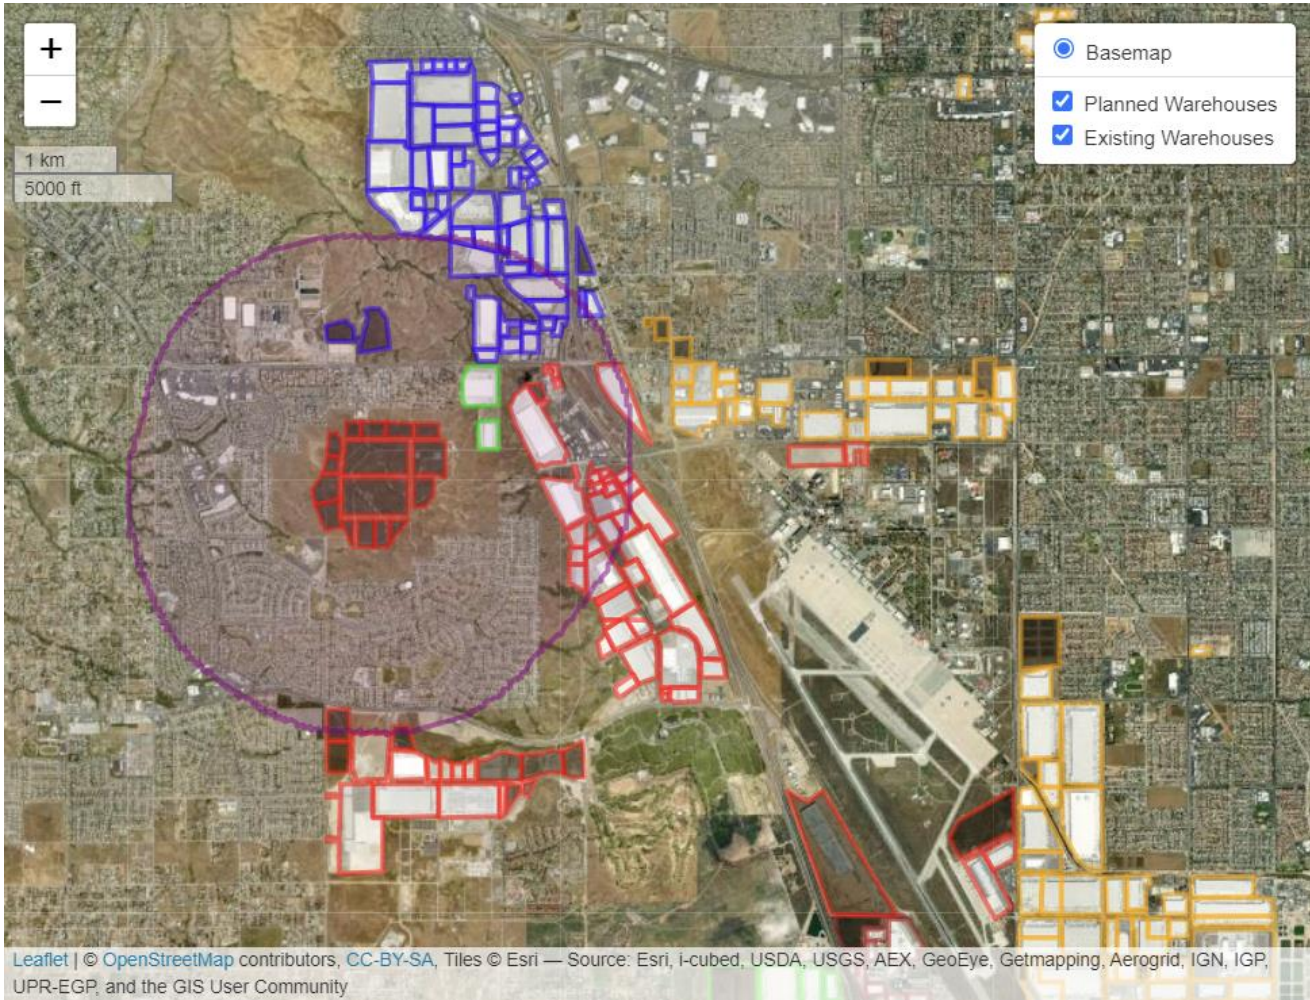

March JPA General Plan Land Use Map – February 2023.

However, it is also clear that the ‘immediate vicinity’ of the Meridian West Campus Upper Plateau has far more warehouses than the March JPA planning area includes. Therefore, we request that all ‘Immediate Vicinity’ analyses include **all warehouses and designated truck routes** located within 1-mile of project specific plan area as shown in Figure 1. Thus, we request that all warehouses and truck routes within this 1-mile boundary be explicitly included in all construction phase and operational phase analyses that fit the ‘Immediate Vicinity’ geographic scope.

I-834.4
Cont.

I-834.4
Cont.

Figure 1 - Map of project area, surrounded by a 1-mile buffer. Warehouse colors indicate the jurisdiction responsible for land-use authority, while the fill indicates an existing (white) or planned/approved (gray) warehouse project.

Table 1 – Immediate Vicinity Analyses that should include all 1-mile warehouses and adjacent Truck Routes (March JPA, County, City of Riverside).

Environmental Resource	Geographic area	List of Projects and Truck Routes
Aesthetics	1-mile	Table 2 List
Air Quality (Toxic Air Contaminants, odors)	1-mile	Table 2 List
Noise (Construction Phase)	1-mile	Table 2 List
Noise (Operational)	1-mile	Table 2 List

I-834.5

Specifically, the Table 1 project areas should be analyzed to include the truck routes, freeway, and warehouses within 1-mile of the project site for cumulative impacts on aesthetics, air quality, and noise. Thus, I ask that these analyses explicitly model the air quality from the loading bays of the 44 warehouses in this list, the five truck route arterial roads, and the 215 Freeway – in addition to the modeling of the 21 warehouses planned for this project. That is the ‘Immediate Vicinity’ cumulative impact of warehouses on our local air quality. Moreover, I ask that the construction phase noise

I-834.6

operations include the likely noise from construction of other 'under construction projects' including Sycamore Hills Distribution Center, Meridian South Campus Buildings F, G, and 1, and Meridian West Building 4.

I-834.6

Regional Impacts

In addition to immediate vicinity geographic impacts, multiple environmental resources drastically underestimated the regional impact of past, present, and probable future projects on the 215/60 Corridor area. For completeness, Table 3 shows the list of environmental resources that should be analyzed regionally.

Table 3 – Regional Analyses that should include all 10-mile warehouses and truck routes

Environmental Resource	Geographic area	List of Projects and Truck Routes
Air Quality (construction/mobile sources)	Regional	Table 4 List
Land Use and Planning	Regional	Table 4 List
Population and Housing	Regional	Table 4 List
Transportation	Regional	Table 4 List

I-834.8

Figure 2 helpfully identifies a 10mile buffer region around the project boundary, although I only include Riverside County warehouses to focus on the 215/60 corridor impacts as the primary transportation and land-use bottle-neck is within the Riverside county portion.

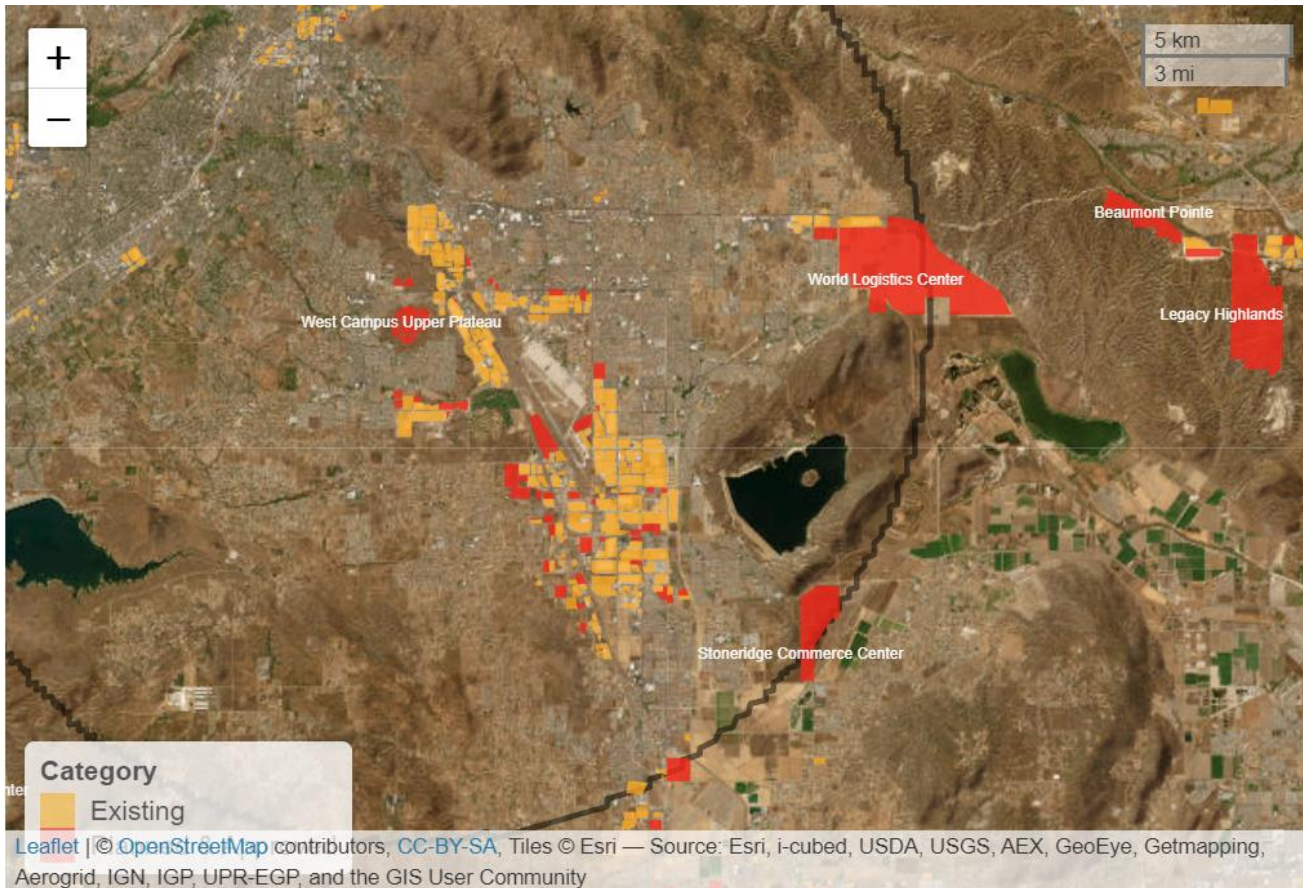

Figure 2 – 10-mile regional buffer region with warehouses (existing and planned/approved) overlaid. Existing warehouses have a white fill, while approved/planned warehouse areas are filled in gray.

The existing regional warehouse footprint of warehouses is approximately 280 million square feet. The planned and approved warehouse footprint includes another 200 million plus square feet of land, nearly doubling the existing footprint.

Of most importance, two critical projects are going to have an extremely large impact on the region – the World Logistics Center (east Moreno Valley) and the Stoneridge Commerce Center (Nuevo, unincorporated Riverside County).

The World Logistics Center is breaking ground in 2023. It will be developed in two phases over approximately 12 years and will include 40 million square feet of warehouses and over 19,000 daily truck trips when fully built out. Its environmental impact report suggested it would generate 35,000 jobs².

The Stoneridge Commerce Center has been approved by Riverside County. It is over 9.5 million square feet of warehouses and was projected to generate over 10,000 jobs³ and nearly 4,000 truck trips.

These two very large projects are projected to generate 45,000+ jobs and 23,000 daily truck trips, most of which will travel on the 215/60 corridor. While these are two of the largest projects in the region –

I-834.8
Cont.

together they account for 109 million square feet of the total footprint – they are just slightly more than 52% of the planned and approved warehouses in the 215/60 corridor within 10 miles. Another 100 million square feet of footprint is also approved. I list the projects below, along their approximate footprint for review. Our region will be adding an enormous number of warehouses to a region that is already overwhelmed by truck traffic and pollution and does not have the existing local workforce or housing to support this continued growth in industrial projects.

Table 4 provides a list of warehouses built since 2018 and planned/approved in the area along the 215/60 corridor. This is a reasonable list for a present and planned list of warehouses in the region to address for the regional environmental issues.

Table 4. List of warehouses and warehouse complexes in the region to include in Environmental Analyses.

In total, the existing and approved acreage of warehouses built and approved in the last 5 years has been enormous in the region. As a result, regional analyses of warehouses, traffic, jobs, population, and air quality that are not current will drastically underestimate the regional impacts of warehouses on the 215/60 corridor. This table should be adopted and included in a comprehensive cumulative impacts analysis for the regional air quality, jobs, population, and transportation sections.

I leave you with one last map showing the 15-mile regional buffer of warehouses within our region. It includes some of the other mega-projects just at or beyond the regional boundary defined in the Transportation analysis section. **Figure 3** shows the whole Inland Empire, a 15-mile buffer boundary around the project, and a few labeled mega-warehouse complexes that have been approved or are in planning stages ranging from NOP to draft EIR. Key complexes not mentioned yet include the Serrano Commerce Center, West Valley Logistics Center, Speedway Commerce Center, Airport Gateway, Bloomington Business Park, South Ontario Logistics Center, Merrill Commerce Center, and the Renaissance Ranch Commerce Center, and the South Perris Industrial Center.

I made these maps to provide a vision of what the future of our region looks like. The future is an unlivable wasteland of warehouse complexes – squeezing out the residents of the region to make room for the titans of eCommerce to make a few more \$\$\$\$. It would be awesome if our decision makers took a long hard look at our region and thought about how the quality of life looks in 10-20 years when all these warehouses will be fully built out. I don't think this looks like a place people will choose to come to unless they have no better options. I think better planning is possible, but it requires decision-makers to put quality of life issues over easy short-term profits and tax revenue.

To put this in proper perspective, it needs to be explicitly addressed in the EIR and these project lists are 100% consistent with the geographic scope listed in Section 4.0. Please add these projects and do a truly comprehensive analysis of the regional impacts of warehouse growth.

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-834

Michael McCarthy
March 9, 2023

- I-834.1** This comment is an email transmittal of the comment letter submitted by the commenter. Specific comments regarding the Draft EIR are provided and responded to below.
- I-834.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- The comment questions the scope of the cumulative projects included in Table 4.2 of the Draft EIR. For a discussion regarding the selection of the cumulative projects, please see Topical Response 7 – Cumulative Projects.
- I-834.3** This comment identifies the inadvertent omission of Figure 4-1, Cumulative Development Location Map. This figure has been included in the Final EIR. Table 4.2 includes cumulative development projects within 5 miles of the Project site. The figure included in the Traffic Scoping Agreement (Appendix N-2) does not show the full 5-mile radius in order to show the projects in the immediate vicinity. Therefore, not all projects listed in Table 4.2 are shown in the figure. The comment questions the scope of the cumulative projects included in Table 4.2 of the Draft EIR. For a discussion regarding the selection of the cumulative projects, please see Topical Response 7 – Cumulative Projects.
- I-834.4** This comment raises concerns regarding the geographic scope used to evaluate Project impacts on transportation in the Draft EIR. In response, please see Response FL-G.4. For a discussion regarding the selection of the cumulative projects, please see Topical Response 7 – Cumulative Projects. Please see the Project AQIA for an expanded discussion and analysis of cumulative conditions and impacts. Please see the Project HRA for expanded discussion and analysis of cumulative health risk impacts, including along the Project’s truck routes, and cumulative cancer risk utilizing the U.S. EPA’s threshold of 100 in one million. Table 4.1 has been revised in the Final EIR.
- I-834.5** This comment raises concerns regarding the cumulative analysis and adjacent truck routes. See Recirculated Section 4.2, Air Quality, for cumulative air quality impacts along adjacent truck routes. With regard to cumulative projects, please see Response FL-G.4 and Topical Response 7 – Cumulative Projects. Please see the Project AQIA for an expanded discussion and analysis of cumulative conditions and impacts. Please see the Project HRA for expanded discussion and analysis of cumulative health risk impacts, including along the Project’s truck routes, and cumulative cancer risk utilizing the U.S. EPA’s threshold of 100 in one million. Table 4.1 has been revised in the Final EIR.
- I-834.6** This comment requests cumulative construction noise analysis of other “under construction projects” including Sycamore Hills Distribution Center, Meridian South Campus Buildings F, G, and 1, and Meridian West Building 4 as shown below on Exhibit A. As explained in UXR Noise Response to Comments (Appendix M-2), since noise levels diminish quickly at a rate of 6 dB for each doubling of distance from a source, the potential cumulative construction noise source activities are expected to be lower than the Project related construction noise levels. This is largely due to distance, topography,

intervening building structures and development between the nearest noise sensitive receiver locations and the potential “under construction projects”. Using the same reference construction equipment noise levels published by the Federal Highway Administration (FHWA) in the Roadway Construction Noise Model (RCNM), in combination with the same FTA guidance for noise assessment used in the Project Noise and Vibration Analysis, the potential construction noise levels for each of the “under construction projects” was calculated. The construction noise levels from the Sycamore Hills Distribution Center are expected to range from 32.5 to 46.2 dBA L_{eq} at the Project noise sensitive receiver locations without accounting for any intervening building structures or topography. The cumulative construction noise levels from the Meridian South Campus are estimated at 24.8 to 34.8 dBA L_{eq} , and 30.2 to 42.5 dBA L_{eq} from Meridian West Building 4. With the Project related construction noise levels ranging from 33.7 to 48.0 dBA L_{eq} , the cumulative construction noise levels are not expected to meaningfully contribute to a potential cumulative construction noise increase.

LEGEND:

 Site Boundary
 Meridian South Campus
 Meridian West Building 4
 Sycamore Hills Distribution Center

In addition, the existing ambient noise levels ranging from 47.3 to 61.5 dBA L_{eq} show that noise from intervening roadways, specifically Alessandro Boulevard for the Sycamore Hills Distribution Center and Van Buren Boulevard for the Meridian South Campus development, will likely overshadow the potential cumulative construction noise source levels from these external projects.

Therefore, the proximity of the West Campus Upper Plateau project site to the nearest noise sensitive receiver locations suggests that any potential cumulative construction noise levels will be diminished below ambient levels and washed out by intervening roadway traffic noise.

I-834.7 The comment includes a list of warehouses within a one-mile radius of the Project site. The APNs listed on Table 2 without a designation on Table 4-3, Cumulative Development Land Use Summary, of the Project Traffic Analysis, have been confirmed as currently existing. The APNs currently have building structures on these sites and traffic already being generated by these sites is accounted for in the baseline traffic counts that were conducted for the Project Traffic Analysis (Appendix N-2). Meridian West Building 4 is included as part of MJPA 1 because Building 4 is part of the Meridian West Campus development. The Cactus Avenue, Meridian Parkway, and Van Buren Boulevard projects could not be confirmed because the location is too generic to correlate with a site/project.

I-834.8 This comment includes tables listing warehouses and truck routes within the larger geographic scope of Western Riverside County and requests inclusion of all these warehouses in the cumulative analysis. In response to this comment, please see Response FL-G.4 and Topical Response 7 – Cumulative Projects for an explanation about the selection process for cumulative projects. The traffic generated by the existing development projects are already accounted for in the existing baseline traffic counts. Also, please see Topical Response 7 – Cumulative Projects for a discussion of the method of evaluation for each impact area. Please see the Project AQIA for an expanded discussion and analysis of cumulative conditions and impacts. Please see the Project HRA for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of 100 in one million. Table 4.1 has been revised in the Final EIR. The method for cumulative evaluation for Greenhouse Gases is consistency with applicable statewide and local regulatory programs designed to reduce GHG emissions consistent with AB 32/SB 32 and consistency with SB 375. Under the Riverside County CAP, projects that garner at least 100 points (equivalent to an approximate 49% reduction in GHG emissions) are determined to be consistent with the reduction quantities anticipated in the County's GHG Technical Report, and consequently would be consistent with the CAP. As such, projects that achieve a total of 100 points or more are considered to have a less than significant individual and cumulative impact on GHG emissions. MM-GHG-12 requires each Project site plan implement Riverside County Climate Action Plan Screening Table Measures sufficient to provide for a minimum of 100 points per the County Screening Tables. The Project would not have cumulatively considerable GHG impacts. (Appendix C-4)

Subject: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304
Attachments: CommunityAlternatives.pdf

Dear Mr. Fairbanks, March JPC, Riverside City Council,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Attached please find a comment on the community vision for acceptable alternative plans endorsed by RNOW, along with my own edits on why the proposed Project is inconsistent with the March JPA’s own planning documents.

Our community has sent many other letters commenting (negatively) on the technical sections of the EIR, but we wanted to engage our elected officials in our positive vision for this land. I hope this sparks some dialogue and engagement on what a real shared vision of our future might look like.

Sincerely,

Mike McCarthy

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-835.2

I-835.3

I-835.4

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months I have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the Project applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR. As stated in my other letters, the Project as proposed by the Applicant is inconsistent with the thirty-year record of planning documents for the planned use of the West Campus parcel. It is inconsistent with the

I-835.5

- 1996 Final Reuse Plan –
 - *'incorporate consensus of the adjacent communities, creation of a **Community Preference** land-use plan consistent with the goals of the community relative to base reuse, and to **maximize the opportunity for citizen involvement with base reuse**'* (p. II-v).
 - See Exhibit B which clearly demonstrates that Industrial Development was not considered West of Brown St. on the Project Specific Plan area.
- 1999 General Plan –
 - Land Use Plan – The existing general land use plan does not consider Industrial Development for the Specific Plan of the West Campus Upper Plateau – this is upzoning to more intensive uses.
 - Specific Policies 2.3 and 2.4 – *'discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions' and 'Protect the interests of, and **existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses**'.*
- 2010 Draft General Plan (never adopted, but indicative of the thought process) –

I-835.6

- Section 2.2.25(d) – “Any and all future distribution/warehouse development in the Meridian West area shall maintain a 1000’ distance from existing residential uses in accordance with the Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities. (See 2.1.4 of the Land Use Element).”
- Section 2.2.24: “The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high paying jobs while protecting the environmental resources located therein.
 - b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between *Office, Business Park and Park, Recreation and Open Space*
 - d) When planning and approving future projects within the Meridian West area, *projects that provide large quantities of high paying jobs (such as corporate offices), high technology jobs, and jobs related to the green building industry are preferred.*
- Appendix S – Centers for Biological Diversity Settlement Agreement 2012
 - In the Appendix S - CBD 2012 document, p.31/32 of the document contains a flyer about the Meridian campus co-published by LNR and March JPA. In it, the 7th bullet states, ‘the MIPA enforces the WRCOG Good Neighbor Guidelines for the siting of warehouse and distribution use near residential communities.’
 - The #1 Goal of the WRCOG GNG was to minimize diesel exposure to neighbors in close proximity to warehouses/distribution centers. The recommended strategy was to ‘create a buffer zone of at least 300 meters (~1000 feet, can be office space, employee parking, greenbelt) between warehouse/distribution center and sensitive receptors’.
- JPA Ordinances #17-06 and #21-02 on Truck Routes
 - Whereas, the March JPA has determined that commercial truck travel by vehicles with gross weights over 5 tons can produce negative impacts on surrounding residential neighborhoods.
 - Whereas, this Ordinance seeks to implement objectives of the ‘Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities’ distributed and promoted by the Western Riverside Council of Governments...

I-835.6
Cont.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to the Project for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

Alternate plan #1: The Campus Approach

I-835.7

- **Concept:** University of California Riverside (or other institutions of higher learning) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and

economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- **Environmental Analysis:** No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- **Project Objectives:** Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan)
- **Conclusion:** Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

Alternate plan #2: The Veterans Village Approach

- **Concept:** A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- **Environmental Analysis:** No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- **Project Objectives:** Support the heritage of March ARB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local

I-835.7
Cont.

communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- **Conclusion:** Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

Alternate plan #3: The State or County Park Approach

- **Concept:** A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).
- **Environmental Analysis:** These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.
- **Project Objectives:** Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the March ARB. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.
- **Conclusion:** Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans represent the community’s consensus vision of alternative plans that would be suitable for consideration by the Project applicant and March JPA. In each of the alternatives, the Project would provide lower intensity uses with lower environmental impact. In alternatives 2 and 3, the jobs density provided would be higher than warehouse uses and less likely to be automated as technology advances. In all cases, the community preference that enhances our existing neighborhoods, blend in with the scale and focus of our area, and provide opportunities that enhance local and regional quality of life. I think these are of far higher economic value than the false promise of yet more low-

I-835.7
Cont.

paying warehouse jobs that provide little opportunity for economic advancement, home ownership, or the chance to achieve the American dream.

I hope that the March JPA and the Project Applicant seriously consider alternatives that reflect community preference. The community engagement to date has displayed a remarkable cynicism in this development of public land and it is a shame that the March JPA has not shown any leadership consistent with the Military Base with which it is affiliated. I hope this letter encapsulates the community's preferred vision for the land and allows the March JPA to reflect on its own mission within the context of the surrounding neighborhoods that it is supposed to be serving.

Sincerely,

Mike McCarthy

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Attached please find a comment on being a Good Neighbor. I hope the MJPA takes it to heart.

Please email me to confirm receipt of this public comment.

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-836.2

Diesel Particulate Matter and other associated mobile source air toxics (benzene, 1,3-butadiene, formaldehyde, acetaldehyde, ethylbenzene, naphthalene, and polycyclic aromatic hydrocarbons [PAHs]) are responsible for upwards of 80% of ambient inhalation cancer risk in the South Coast Air Basin, according to the MATES V Figure ES-2¹. This has been known for over two decades, and the CARB Air Quality and Land Use Handbook and the WRCOG Good Neighbor Guidelines, both released in 2005, indicate that the harms of warehouse siting were well established and understood at that time.

I-836.3

For the past twelve months, I have attempted to engage with the March JPA about the appropriate siting of warehouses adjacent to communities. I have sent dozens of emails to the March JPA staff and City of Riverside clarifying and discussing warehouse siting guidelines. Throughout this process, it has been extremely discouraging to see how disingenuous the March JPA is in actually appropriately siting this project to protect human health. This letter is intended to provide a record of how the March JPA has failed in its obligations to minimize environmental impacts from its project planning process and has had no interest in providing alternatives to industrial land-use in a parcel that is not zoned for industrial land-use in the general plan. This lack of addressing a key public health threat is cynical and corrosive of public trust. The March JPA is well aware of community concerns and has refused to take concrete steps to reduce warehouse acreage, increase warehouse setbacks from adjacent residential zoning, or propose alternative land-uses with less detrimental effects.

I-836.4

My comments reflect documents available publicly that discuss appropriate warehouse siting criteria, all of which have been included in documented correspondence over the past 12 months with the March JPA and Project Applicant and members of Riverside Neighbors Opposing Warehouses. These documents include:

- City of Riverside Good Neighbor Guidelines (GNG) – Adopted Nov. 2020² and associated Title 19 Development Standards

¹ <http://www.aqmd.gov/docs/default-source/planning/mates-v/mates-v-final-report-9-24-21.pdf?sfvrsn=6>

² <https://riversideca.gov/cedd/sites/riversideca.gov.icedd/files/pdf/planning/2021/Good%20Neighbor%20Guidelines.pdf>

- County of Riverside Good Neighbor Policy for Logistics and Warehouse/Distribution Uses³ – Adopted Nov.2019
- Western Riverside Council of Governments (WRCOG) – Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities⁴ - Adopted Sept. 2005
- California Attorney General’s Office - Warehouse Projects: Best Practices and Mitigation Measures to Comply with CEQA⁵ - 2021
- City of Moreno Valley Good Neighbor Guidelines for warehouse distribution facilities⁶
- City of Perris Good Neighbor Guidelines – Adopted 2022⁷
- California Air Resources Board (CARB), Air Quality and Land Use Handbook: A Community Health Perspective (April 2005)⁸.

I-836.4
Cont.

Notably, each of the member agencies that are a part of the March JPA have individually adopted Good Neighbor Guidelines for siting warehouses responsibly. These have been developed in response to community feedback asking for appropriate setbacks and development standards that take into account the harmful effects of heavy-duty trucks in close proximity to neighborhoods, parks, schools, and other so-called ‘sensitive receptors’ which is a fancy way of saying people. However, the March JPA has not established or adopted its own Good Neighbor Guidelines for warehouse siting, despite being comprised of four member agencies that have each adopted them.

However, the March JPA has:

1. included WRCOG 2005 GNG in its Ordinances #17-06 and #21-02 for Truck Routes – *‘Whereas, this Ordinance seeks to implement objectives of the ‘Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities’ distributed and promoted by the Western Riverside Council of Governments...*
2. declared that the West Campus will follow WRCOG GNG in its March JPA Vision 2030 General Plan Update Section 2.2.25(d) – *‘Any and all future distribution/warehouse development in the Meridian West area shall maintain a 1000’ distance from existing residential uses in accordance with the Good Neighbor Guidelines for Siting New and/or Modified Warehouse/Distribution Facilities.’⁹*
3. In the Appendix S - CBD 2012 document, p.31/32 of the document contains a flyer about the Meridian campus co-published by LNR and March JPA. In it, the 7th bullet states, *‘the MJPA enforces the WRCOG Good Neighbor Guidelines for the siting of warehouse and distribution use near residential communities.’*

I-836.5

Given the wide range of GNG mentions in the March JPA planning documents, it was surprising for me to learn that the March JPA does not actually have any GNG, at least with regards to planning the Project for the West Campus Upper Plateau. On June 1, 2022, I received the following email from Mr. Dan Fairbanks, Planning Director of the March JPA.

‘Mike,

⁹ Draft General Plan 2010 was never adopted by the March JPA but is available on CEQANET SCH 2010051054

We have not adopted a Good Neighbor policy for siting warehouses. However, we would analyze the proposal against the County and WRCOG guidelines.

Dan Fairbanks - Planning Director'

I then began asking my City Council to advocate for residents in the project, given that most of the warehouses are within 800 feet of City of Riverside Residents homes. As the City of Riverside is an adjacent jurisdiction, and a member agency, I presumed that the March JPA would respect and respond to City of Riverside GNG which specifically preclude warehouses larger than 100,000 square feet from being built within 800 feet of residential zoning.

Dr. Grace Martin, Executive Director of the March JPA, gave a presentation at the Riverside City Council meeting on September 6th, 2022. Her presentation included a statement at 3:44:03 that, "for the City of Riverside's Municipal Code 19.435.030, the Warehousing and Distribution Facilities Guidance - we have a checklist that whatever criteria was in the City's Code, this Project was meeting it or exceeding it."¹⁰

Similarly, Adam Collier, the Project Applicant's primary point-of-contact with the community, gave a presentation at the August, 2022 and February 2023 community information meetings that described the project's conformity. In the February 2023 meeting, he exclaimed that the project was meeting all City of Riverside criteria.

I find these assertions misleading and/or false. City of Riverside GNG include Title 19 Development standards and a set of goals for minimizing diesel PM and other traffic pollutant exposure. The West Campus Upper Plateau is maximizing the amount of developable space available for warehouses in this project and putting it within a few hundreds of feet of homes, a park, and a church. Every single parcel of developable land is zoned for warehouse use, with the minor exception of 2 acres of public facilities for a sewer lift and electrical substation necessary to support the project. **Figure 1** shows the proposed project and 800' buffers around each warehouse polygon, based on the City of Riverside GNG setback requirements for warehouses up to 100,000 sq.ft.

Figure 1 – Proposed project buildings and 800' buffers indicating City of Riverside GNG for buildings up to 100,000 sq.ft.

¹⁰ https://riversideca.granicus.com/player/clip/5220?view_id=2&meta_id=357122&redirect=true&h=04482c77561292e13c3f715f60e034a6

I-836.5
Cont.

I-836.6

Discrepancies with City of Riverside GNG

Specifically, I make note of the following conflicts between the City of Riverside GNG and the Project.

- 1) Mixed-use zones in the Specific Plan¹¹ allow warehouses in the ‘business park enterprise’ setting. This would not be allowed based on City of Riverside Title 19 standards and isn’t allowed in the current March JPA general plan or in any other specific plan area of the March JPA.
- 2) The Mixed-use parcels in the southwest corner of the Project are clearly within 800’ feet of the Grove Church and are 9.12 and 7.84 acres, respectively. The Grove Church is in a residential zone. At a FAR of 0.35 – the warehouses in these parcels do not currently conform to the 100,000 square feet limit for City of Riverside Title 19 standards and thus do not appear to guarantee City Guidelines would be implemented based on current parcel sizes.
- 3) Building heights in the industrial zone have a max height of 50 feet as shown in the Specific Plan and building plot plans¹². City of Riverside standards are 45 feet max height. This does not meet or exceed City guidelines, especially given that the Industrial Zone buildings are on a hill 50 to 75 feet higher than surrounding homes in Mission Grove and Camino Del Sol. This may also fall afoul of the GNG neighborhood character goal 1 related to heights and setbacks, for industrial uses to ‘minimize visual impacts’. Similarly, the warehouse complex screens industrial mega-warehouses using smaller warehouses as screens. That seems ineffective at minimizing visual impacts.
- 4) The health risk assessment in Appendix C2 did not include the proposed park as a sensitive receptor location in its analysis. The Park will be used for active recreation less than 100 feet from warehouses. The park is extremely likely to be used for preschool children and active recreation that will enhance breathing rates leading to higher exposures for these children. Riverside GNG clearly state that a health risk assessment should be performed and diesel exposures to sensitive receptors (schools, **parks**, **playgrounds**, etc.) should be **minimized**. This park is likely to receive higher doses of diesel PM and NOx due to its closer proximity to the proposed warehouses yet is not included in the health risk assessment at all as a sensitive receptor location (see appendix C2 Exhibit 2-D).
- 5) The construction phase noise mitigation does not seem to be consistent with city GNG to ‘minimize’ noise, allows blasting, and allows noises starting at 6 AM until 10 PM, rather than the city 7-7 guidelines.

I-836.7

Given these clear discrepancies, I ask that the March JPA and the Project Applicant go through the City of Riverside GNG once again with a checklist that includes these itemized bullets and revise the plans to fully meet or exceed all City of Riverside GNG to be in compliance with a project that could be built within the City of Riverside, as promised by Dr. Martin.

Additionally, the City of Riverside Land Use and Planning Committee is considering a matrix of policy options to strengthen City GNG. These are being discussed on March 13th, 2023 but the full details of the policy options are included in Agenda item #3¹³, including a report, revised matrix of policy actions, and a presentation. The two High committee priority items are:

- Amend Development Standards/GNG 2020 to include protections for additional Sensitive Receptors, revise building size, FAR and other development limits
- Revised outreach and notice procedures (timing, method, community meetings, etc.).

I-836.8

RNOW members and other concerned community stakeholders such as Friends of Riverside Hills, Riverside Neighbors Better Together, and CCAEJ are requesting cumulative development standards and building size standards that would block the development of Projects like the West Campus Upper Plateau. We are asking for buildings over 500,000 square feet to be prohibited within 1,500 feet of homes and for the cumulative square footage of warehouse buildings to not exceed 2X the individual maximum building size limit. The impacts to the

¹¹ <https://marchjpa.com/wp-content/uploads/2023/01/West-Campus-Upper-Plateau-Specific-Plan-5th-Screencheck-Clean-2023-01-10.pdf>

¹² <https://marchjpa.com/wp-content/uploads/2023/01/Plot-Plan-Building-B.pdf>

¹³ <https://riversideca.legistar.com/LegislationDetail.aspx?ID=6046856&GUID=E6904957-9600-46F2-85EE-DA91BC896E4F&Options=&Search=>

West Campus Upper Plateau project would limit the total square footage to approximately 1.2M square feet of warehouses, with no more than two 100,000 square foot warehouses within 800 feet and no more than two 500,000 square foot warehouses within 1,500 feet of homes. The mega-warehouses in this project would have to be scaled down and could not be surrounded 16 other warehouses. We think that is a more reasonable standard to apply.

I ask that the March JPA and the Project Applicant observe the March 13th, 2023 City Land Use Planning Committee meeting and agree to meet or exceed the potential future City of Riverside Good Neighbor Guidelines when considering the Project. I think it is important to be a good neighbor and would hope the March JPA would finally agree with that sentiment instead of continuing to push forward bad neighbor development that ignores community feedback.

Discrepancies with WRCOG GNG (as adopted in JPA #21-02 and #17-06 Truck Route Ordinances)

The primary goal of the JPA's truck route ordinance was to establish truck routes that avoided residential streets in neighborhoods, designate truck routes, establish signage for truck routes, and allow vehicles to be weighed. However, it is not stated that the adopted truck route ordinance is intended to only implement the objectives for truck routing and signage while ignoring the effects of warehouse siting.

The #1 Goal of the WRCOG GNG was to minimize diesel exposure to neighbors in close proximity to warehouses/distribution centers. The recommended strategy was to *'create a buffer zone of at least 300 meters (~1000 feet, can be office space, employee parking, greenbelt) between warehouse/distribution center and sensitive receptors'*.

Additional goals of the WRCOG GNG that apply include

#5 Establish a diesel minimization plan to be implemented with new projects (not provided in the DEIR), and

#7 Establish a public outreach program and conduct periodic community meetings to address issues from neighbors (not provided in the DEIR or by the March JPA).

Furthermore, it does not appear that there are any analyses within the project that meet Mr. Fairbanks, June 1, 2022 assertion that the project would be analyzed with respect to the WRCOG GNG. As such, it is not clear that the March JPA's correspondence on the project goals was true when discussing the project objective with residents or the Riverside City Council.

I ask that the March JPA include formal and clearly responsive plans and comments within the draft EIR to bring the project into full compliance with WRCOG GNG and require all warehouses to have 1,000 foot setbacks from residential zoning. Subdividing parcels with smaller buildings does not reduce the acreage of warehouses, their proximity to residential homes, nor the traffic footprint and the residential exposure to these toxic air contaminants. Real mitigation is required and that either requires substantial (50+%) battery-electrification fleet requirements for all tenants or a land-use that does not involve heavy-duty trucks.

Discrepancies with County of Riverside GNG

I-836.8
Cont.

I-836.9

The County of Riverside Guidelines are also extremely relevant, as the 14th Amendment to the March JPA has been approved by the Cities of Riverside, Perris, and Moreno Valley and is likely to be approved by the County of Riverside in April 2023. In it, the March JPA land-use authority and municipal enforcement authority will be returned to the County on July 1, 2025. As a result, the County of Riverside will oversee at least 60% and more likely 80+% of the construction phase and 100% of the operational phase of the Project through 2041.

It therefore makes a lot of sense to ensure that March JPA policies are consistent with the land-use and enforcement authority that will oversee the Project's lifecycle. Moreover, the March JPA promised to analyze the impacts of the project relative to County Good Neighbor Policy.

- Policy 1.4 - A "Construction Traffic Control Plan" shall be prepared prior to grading, which details the locations of equipment staging areas, material stockpiles, proposed road closures, and hours of construction operations. This is in addition to a Traffic Impact Study as may be required for the environmental review process. **Mitigation Measure MM TRA-1 requires a March JPA approved traffic management plan, but there is no indication it would be approved by the County.**
- Policy 2.3 - The maximum daily disturbance area (actively graded area) shall not exceed 10 acres per day. **March JPA allows 20 acres per day. Please conform with County guidelines.**
- Policy 2.9 - Construction Contractors shall prohibit truck drivers from idling more than five (5) minutes and require operators to turn off engines when not in use, in compliance with the California Air Resources Board regulations. **I do not see any construction anti-idling measures in the draft EIR.**
- Policy 2.10 - During construction, the Transportation & Land Management Agency representative shall conduct an on-site inspection with a facility representative to verify compliance with these policies, and to identify other opportunities to reduce construction impacts. **I do not see any enforcement of this policy in the draft EIR.**
- Policy 3.1 - Warehouse/distribution facilities should be generally designed so that truck bays and loading docks are a minimum of 300 feet, measured from the property line of the sensitive receptor to the nearest dock door using a direct straight-line method. This distance may be reduced if the site design include berms or other similar features to appropriately shield and buffer the sensitive receptors from the active truck operations areas. Other setbacks appropriate to the site's zoning classification shall be incorporated in the design. **The proposed Park is a 'sensitive receptor' within 300' feet of truck bays and loading docks.**
- Policy 3.8 - An additional "wing-wall" shall be installed perpendicular to the loading dock areas to further attenuate noise related to truck activities and also address aesthetics by screening the loading area when adjacent to sensitive receptors. **This does not appear to be considered for the mixed-use or business park warehouses closest to residential zoning and parks.**
- Policy 4.1 Facility operators shall maintain records of their facility owned and operated fleet equipment and ensure that all diesel-fueled Medium-Heavy Duty Trucks ("MHDT") and Heavy-Heavy Duty ("HHD") trucks with a gross vehicle weight rating greater than 19,500 pounds accessing the site use year CARB compliant 2010 or newer engines. The records should be maintained on-site and be made available for inspection by the County. **Not mentioned in the draft EIR.**

I-836.10

- Policy 4.6 - Facility operators shall establish specific truck routes between the facility and regular destinations, identifying the most direct routes to the nearest highway/freeway and avoid traveling near sensitive receptors. **Not mentioned in the draft EIR.**
- Policy 5.5 - Each Facility shall designate a Compliance Officer responsible for implementing the measures described herein and/or in the project conditions of approval and mitigation measures. Contact information should be provided to the County and updated annually, and signs should be posted in visible locations providing the contact information for the Compliance Officer to the surrounding community. These signs shall also identify the website and contact information for the South Coast Air Quality Management District. **Not mentioned in the draft EIR.**
- Policy 6.3 - Applicants for proposed new facilities should look beyond their immediate development footprint and look for opportunities to enhance the surrounding community through upgrades such as street paving, walls, landscaping, or other types of infrastructure improvements... **I would like these to be discussed in the draft EIR because this is what I have been asking for the last 12 months.**
 - Project design features that **directly offset NOx reductions** above and beyond what is required by existing air quality regulations
 - Provision of **additional buffers between the new facility and sensitive receptors**, in addition to those setbacks required pursuant to Section 3.1 herein; and
- Policy 6.4 - Given the potential for community impacts related to the construction and operation of logistics and warehouse facilities, the applicant for any new facility may be required to provide a supplemental funding contribution, which would be applied to further off-set potential air quality impacts to the community and provide a community benefit above and beyond any CEQA related mitigation measures. Said financial contribution would generally be determined by the Transportation and Land Management Agency based on the level of nitrogen oxides (NOx) emissions generated by the project that exceeds the regional NOx significance thresholds established by the appropriate AQMD. Said supplemental funding contribution will be collected on a one-time basis. Funds collected under said supplemental funding program will be subject to designation for use by the Board of Supervisors, and will generally be used for projects that directly benefit the impacted community wherein the project is located. The types of projects that the Board of Supervisors may designate for use of these funds include, but are not limited to: **I would like these to be discussed in the draft EIR because this is what I have been asking for the last 12 months.**
 - Project design features that **directly offset NOx reductions** above and beyond what is required by existing air quality regulations
 - Provision of **additional buffers between the new facility and sensitive receptors**, in addition to those setbacks required pursuant to Section 3.1 herein; and

I-836.10
Cont.

Summary

There is a well established and well-understood planning guidance to avoid land-use planning conflicts. The March JPA and the project Applicant have chosen to ignore all those documents and instead are introducing a land-use conflict that harms public health. The March JPA has chosen to ignore its own planning documents, truck route Ordinances, and past pledges to the community by proposing an industrial project between three neighborhoods. Surrounding homes on three sides by warehouses and

I-836.11

warehouses on three sides by homes is just bad planning. The March JPA knows better, and so does the Lewis Group. Their callous disregard for the people living in the neighborhoods surrounding this project is a clear example of the failure of this agency to live up to its mission to serve the public and provide for the greater good.

Good Neighbor Guidelines and Policies are relatively simple ideas – don't put intense industrial land-uses next to people. The March JPA can easily identify non-warehouse uses for this land that will meet project objectives with less environmental impact. Tax revenue and developer greed should not be an overriding consideration for harming residents.

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

- I-836.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- I-836.3** This comment references health risks associated with DPM and the CARB Air Quality and Land Use Handbook and the WRCOG Good Neighbor Guidelines. The comment does not raise any specific issues on the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-836.4** This comment questions community engagement. March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices. With regard to the request for a non-industrial alternative, please see Topical Response 8 – Alternatives, which includes a no-warehouse alternative. The comment summarizes the documents reviewed by the commenter.
- I-836.5** This comment suggests March JPA has informally adopted the WRCOG Good Neighbor Guidelines. JPA Ordinance #21-02, Truck Routes, references the WRCOG Good Neighbor Guidelines in a recital. That reference does not constitute adoption of the WRCOG Good Neighbor Guidelines. JPA Ordinance #21-02 does implement Goal 2 of the WRCOG Guidelines: Eliminate diesel trucks from unnecessarily traversing through residential neighborhoods. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue.

The comment also requests that the 1000-foot distance between warehouses and residences be incorporated into the Project. Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. Industrial buildings must be set back a minimum of 1,000 feet from residential. In addition, any industrial-use building will require a 1,000-foot setback from existing residential to any proposed truck courts or loading docks.

As detailed in Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside. The Project's consistency with the City of Riverside Good Neighbor Guidelines is discussed in Topical Response 4 – Project Consistency. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project

is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses.

I-836.6 This comment questions the Project's consistency with the City of Riverside Good Neighbor Guidelines. The Project's consistency with the City of Riverside Good Neighbor Guidelines is discussed in Topical Response 4 – Project Consistency. In response, please see Response I-836.5, above.

I-836.7 This comment generally questions the Project consistency with the City of Riverside's Good Neighbor Guidelines. Please see Topical Response 4 – Project Consistency for analysis of the Project's consistency with the City of Riverside's Good Neighbor Guidelines.

1. This comment questions the inclusion of business enterprise as a permitted use within mixed use zones and notes similar uses are not allowed in the City of Riverside or the March JPA General Plan. Under the March JPA General Plan definition of Mixed Use, "major warehousing uses are excluded." The Business Enterprise designation is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale industrial warehouse activity. It is understood that this activity may differ from what the City of Riverside currently allows in a mixed-use environment. However, the allowance of business enterprise within the Specific Plan Mixed Use land use is appropriate for this location and the overall development of the site and surrounding uses.
2. This comment questions the allowable square footage on the Mixed Use parcels closest to the Grove Community Church. The Grove Community Church is approximately 794 feet away from the Project's Mixed Use parcels (See Figure 4.2-1b of the Final EIR). Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential.
3. This comment claims the Project does not comply with the City of Riverside Good Neighbor Guidelines because the maximum building height allowed on Industrial parcels is 50 feet and the City standards are limited to 45 feet. The cited City standard is not part of the City's Good Neighbor Guidelines. Please see Topical Response 4 – Project Consistency for analysis of the Project's consistency with the City of Riverside's Good Neighbor Guidelines.
4. This comment requests the Project HRA include the proposed park as a sensitive receptor. The analysis has been revised to include the proposed Park as a sensitive receptor during operation of the proposed Project. As detailed in the Project HRA and Final EIR, the results of the analysis indicate that a less than significant impact would occur for users (including children) of the Park as a result of Project operational emissions. The risk to the Park users would be 1.18 in one million without mitigation and 0.62 with mitigation, both of which are less than the applicable SCAQMD threshold of 10 in one million. Additionally, at this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable threshold of 1.0. The Project HRA contains the model runs and risk calculations.
5. This comment questions the Project's noise impacts and states the Project allows noises starting at 6AM until 10PM, rather than the City's 7-7 guidelines. As discussed in Section 4.11, Noise, the Project will have less than significant construction noise impacts and no mitigation

is required. PDF-NOI-1 has been revised in the Final EIR to reflect construction hours between 7AM and 7PM. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

I-836.8 This comment requests March JPA consider draft policy options being considered for the City of Riverside’s Good Neighbor Guidelines. These options are still drafts and not adopted.

I-836.9 This comment asserts March JPA has adopted the WRCOG Good Neighbor Guidelines through JPA Ordinance #21-02. JPA Ordinance #21-02 references the WRCOG Good Neighbor Guidelines in a recital. That reference does not constitute adoption of the WRCOG Good Neighbor Guidelines. JPA Ordinance #21-02 does implement Goal 2 of the WRCOG Guidelines: Eliminate diesel trucks from unnecessarily traversing through residential neighborhoods. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid for through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. March JPA has not adopted a Good Neighbor Guidelines policy. Please see Topical Response 4 – Project Consistency for a discussion of the Project’s consistency with the WRCOG Good Neighbor Guidelines.

I-836.10 This comment questions the Project’s consistency with the County of Riverside’s Good Neighbor Guidelines. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project’s consistency with the County of Riverside Good Neighbor Guidelines. With regard to the County’s involvement with the Project, please see Topical Response 9 – Long-Term Project Implementation and Enforcement.

I-836.11 This comment expresses opposition to the proposed Project and summarizes the comments made within Comment Letter I-836, which are responded to above.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Michele Muehls

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties in this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans for the industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with a business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. The project meets JPA objectives 1-3, 5-7; the project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitats. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. The project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the goodwill of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. The project meets JPA objectives 2, 6-7; the project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

From: MJ Rivera <milo.rivera21052@gmail.com>
Sent: Thursday, March 9, 2023 4:17 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munition's bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Milo Rivera

INTENTIONALLY LEFT BLANK

From: MJ Rivera <milo.rivera21052@gmail.com>
Sent: Thursday, March 9, 2023 4:19 PM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer proposes an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning to be your lasting legacy. I await your detailed response.

Sincerely,

Milo Rivera

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Matt Silveous

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan!!).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for the opportunity to provide comments on this project.

Sincerely,

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

The draft EIR does not properly analyze the project's impact on air quality, traffic, health risks, geology, soil, greenhouse gas emissions, and housing. It also fails to consider non-industrial alternatives.

Residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have been clear: no more warehouses. Warehouses degrade our quality of life and the health of our community without any clear benefit.

Meanwhile, the JPA and the applicant have shown no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area. Riverside Neighbors Opposing Warehouses (RNOW) has developed three reasonable alternatives to plans for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MIPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

· Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement. A solar facility with battery storage would help the city of Riverside meet it’s sustainability goals.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

I-848.1

I-848.2

I-848.3

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

March 9, 2023

- I-848.1** This comment is Form Letter H – Alternatives. As such, in response to this comment, please see Topical Response 8 – Alternatives.
- I-848.2** This comment requests the consideration of a solar facility with battery storage. Because of the Project site's proximity to an active airfield, solar projects require additional review by the Riverside County Airport Land Use Commission and March Air Reserve Base to ensure glint and glare do not interfere with flight operations. As shown in Table 3-2, Land Uses by Land Use Designation, of Recirculated Chapter 3, Project Description, energy generation and distribution facilities are not allowed in the Specific Plan Area. MM-GHG-1 requires installation of a rooftop solar photovoltaic system sufficient to generate at least 100% of the building's power requirements, or the maximum permitted by the Riverside County Airport Land Use Commission. MM-AES-3 requires the design of solar photovoltaic systems to be reviewed by ALUC and March ARB through a glint and glare study.

To: Dan Fairbanks
Cc: Ortiz, Raquel
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones

I-849.1

underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

We have to drive every day to pick up and drop off the children from home to school. There are days that we have to do it multiple times. Currently, the fast road is thru Meridian. It will be crowded and packed of traffic if more warehouses are built in this area.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Raquel Ortiz

March 9, 2023

- I-849.1** This comment is the same as Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-849.2** This comment raises concerns regarding increased congestion on Meridian Parkway. Meridian Parkway is a March JPA truck route. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. This comment does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- I-849.3** This comment requests that the traffic study be redone. As discussed in Form Letter G Response, no updates to the traffic study are necessary.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wlc-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally. Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023. Sincerely,

Ronald Peters

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you! Sincerely,
Ronald Peters

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community

members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. Thank you for letting me comment on your project. Sincerely,
Ronald Peters

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers. In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance. As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed Thank you for allowing me to provide comments on this project. Sincerely,
Ronald Peters

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted. I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced? Thank you for allowing me to provide comments on this project. Sincerely,
Ronald Peters

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents. The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response. Sincerely,

Ronald Peters
7762 Northrop Dr., Riverside, Ca 92508

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

I love living in Orangecrest and attending the Grove, but the abundance of warehouses being built is making the neighborhood less and less desirable. Please consider other options for this land that will better serve the community for years to come!

Thank you for allowing me to provide comments on this project.

Sincerely,
Rita Schneider

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

I-858.1

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-858.1
Cont.

Because I live in Orangecrest and attend the Grove, I frequently drive the surrounding roads. It makes my heart sink when ugly warehouse after ugly warehouse replaces what used to be vistas of inspiring beauty. The community doesn't want these monstrosities to be such an overbearing part of our everyday lives.

I-858.2

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

I-859.1

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment. As a parent of 3 young children who love to play outside, both at our home in Orangecrest and at our church, The Grove, the air quality is an issue that is very important to me.

Sincerely,

Rita Schneider
8536 Chesterfield Rd, Riverside 92508
Rita.m.schneider@gmail.com

I-859.1
Cont.

I-859.2

Letter I-859

Rita Schneider
March 9, 2023

I-859.1 This comment is Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

I-859.2 This comment expresses concern about air quality. Recirculated Section 4.2, Air Quality, and Appendix C-2R assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Susana Balmer

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. **I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.**

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

INTENTIONALLY LEFT BLANK

From: Sally Quintana <quintanasb@yahoo.com>
Sent: Thursday, March 9, 2023 9:20 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Sally Quintana

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Sally Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,l9w08l0l_WczEokarl18uNY-oKeMQvSXjpaW-14iiq26_Gq3kY1m8RximKZx4FqibajpoR_x7-Q94Pdu4KnSQJtTbfftTzC50iapnFess9s,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,ARxyX0F2VkBIDlwrtJg7jKMja1JREaZXF-slbTj2MSB4sNemXSozLPr-RpT8nnpnSWYocW9KXoqcZrz8wyoLq2kQirOV_rGxE2dK25-tuvb9NgA,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Sally Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Sally Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Sally Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Sally Quintana

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Sally Quintana

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Sally Quintana

It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Letter I-872

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Tim Martin

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Tim Martin

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

INTENTIONALLY LEFT BLANK

From: Tom Schneider <trschneider3@gmail.com>
Sent: Thursday, March 9, 2023 9:19 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

I-876.1

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I-876.1
Cont.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

I have three small children, so I am passionate about this issue. Air quality is already poor enough in this area that it is one of my top health concerns for them. It would be heartbreaking to see this problem increase in our neighborhood instead of moving in a positive direction.

I-876.2

Thank you for the opportunity to comment.

Sincerely,

Thomas R. Schneider
8536 Chesterfield Rd
Riverside, CA 92508

Letter I-876

Thomas R. Schneider

March 9, 2023

I-876.1 This comment is Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

I-876.2 This comment expresses concern about air quality. Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project’s significant and unavoidable air quality impacts identified in the Draft EIR.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Veronica Juarez

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email. Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR. Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement. · Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources. · Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan). · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park. · Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources. · Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation

opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB. · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB. 3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA). · Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire. · Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5. · Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities. These alternate plans are consistent with the March General Plan and Final Land Use Plan. Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college’s OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

I-879.1

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. “Airman State Park” would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

4. A sports complex including Soccer Fields, Rock climbing, mountain biking, and many other sports-related activities. As a trainer and former college athlete, I would love to help with this initiative where our youth and adults can leverage them.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to

I-879.1

Letter I-879**Abdallah Karim****March 10, 2023**

- I-879.1** This comment is Form Letter H – Alternatives. As such, in response to this comment, please see Topical Response 8 – Alternatives.
- I-879.2** This comment suggests an alternative consisting of a sports complex. While developing the entire site as a sports complex would achieve Project Objectives related to open space and recreational uses at the Project site, such an alternative would not be consistent with the intent of the March JPA General Plan, which in part identifies, “commercial, business park and industrial development are needed to recapture the economic loss attributed to base realignment. The development and reuse within the March JPA Planning Area will further the economic recovery of the region and will advance toward an equitable balance between jobs provided within the Western Riverside County subregion and the availability of housing. Land set aside at appropriate locations provide for commercial, industrial development, and job creating commerce. Development of business park and industrial land within the Planning Area should focus on commerce and industrial uses which provide employment opportunities, and capture upon the unique opportunities available at March.” Because a sports complex alternative would generate minimal new employment opportunities, this Alternative was not evaluated further. The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use.
- I-879.3** This comment is the same as the last paragraph of Form Letter H – Alternatives. As such, in response to this comment, please see Topical Response 8 – Alternatives.

INTENTIONALLY LEFT BLANK

From: Abdallah Karim <akarim23@gmail.com>
Sent: Friday, March 10, 2023 9:43 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? Warehouse jobs are barely making ends meet today. Create an alternate plan that can make this community thrive. There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? C

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. The fact that we have to tell you this is ludicrous and prove neither the JPA or developers have done their duties.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is

not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Do you even care what happens to the residents that live here today?

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

<include name, address, email in signature line>

Letter I-880

Abdallah Karim
March 10, 2023

- I-880.1** This comment letter is Form Letter F – Jobs with the addition of: “Warehouse jobs are barely making ends meet today. Create an alternate plan that can make this community thrive.” And “fact that we have to tell you this is ludicrous and prove neither the JPA or developers have done their duties.” Regarding alternatives, please see Topical Response 8 – Alternatives. The modifications to the form letter do not raise any new or different environmental issues. As such, in response to this comment, please see Form Letter F Response.

Sent: Friday, March 10, 2023 9:45 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-881.1

Do you realize how much traffic and pollution will be generated by the trucks that will pollute our neighborhoods? There are 3 schools and 2 major parks all within 1.5 mile radius. Why have you conveniently left out analysis from 215 and Van Buren? I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

I-881.2

I-881.3

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. Our roads and community are not a dumping ground for warehouses.

I-881.4

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

I-881.5

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
<include name, address, email in signature line>

Letter I-881

Abdallah Karim

March 10, 2023

I-881.1 This comment is the same as the first paragraph of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

I-881.2 This comment notes that three schools and 2 parks are within a 1.5-mile radius of the Project site and questions why the analysis did not include the 215 and Van Buren. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

Environmental impacts to sensitive receptors surrounding the Project site were considered and impacts to these receptors are discussed throughout the Draft EIR. In response to concerns regarding 215 and Van Buren, please see Form Letter G Response.

- I-881.3** This comment is the same as Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-881.4** This comment expresses general opposition to the construction of warehouses and does not raise any issues or concerns with the environmental analysis included within the Draft EIR. As such, no further response is provided.
- I-881.5** This comment is the same as the concluding three paragraphs of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-882.1

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. Yet even with this limited analysis and information that was conducted, you still continue to move on with this project. This baffles me and proves the JPA cares nothing about fulfilling their duties to their own charter and is more focused on filling their own pockets.

I-882.2

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-882.3

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site? Why do you continue disregarding our comments? Look at better practices that other developers have done already and be a leader.

I-882.4

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.
1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during

I-882.5

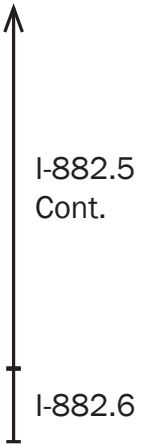

construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected? Or like the rest of the EIR, you simply don't care and will continue moving forward?

Thank you for the opportunity to comment.

Sincerely,
Abdallah Karim

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. How do you continue to ignore the requests of the community that is surrounded by the land that your charter claims to protect?

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? Why are you still moving forward with no legitimate response to us?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as

shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,
Abdallah Karim

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study’s multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren’t tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.
6. Why are you selectively performing an analysis when you know the realities and truth of what the land contains?
7. What analysis has been performed to map the impact to the residents? Is there a heat-map that shows the contaminants and hazardous waste particles that will fill our skies and have our children inhale them?

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Abdallah Karim

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. **Why did you conduct the plant survey during a drought year?** How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?
3. How will you ensure such rare plants thrive after you leave?
4. Why does the JPA and report selectively analyze to its benefit instead of following industry practices?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Abdallah Karim

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? I live in the community and am telling you the impact will be MORE THAN SIGNIFICANT. How can you tell me how my community will be impacted? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. Please also do not use images that we saw in the "community meeting" as they conveniently were taken at angles that do not show the real aesthetic impact.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Abdallah Karim

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Andrew Larratt-Smith

To: Dan Fairbanks
Subject: West Campus Upper Plateau

Dan,

I hope all is well! I am writing to you in opposition to the West Campus Upper Plateau Project. Being that we have worked together at the MJP Authority you are aware of my concerns with number of warehouses being built especially towards the end of my service with MJP. As a commissioner of approximately 14 years, I supported my share of warehouses. However, there comes a time when the number of warehouses overwhelms the infrastructure of roads and freeways. Although attempts are made to try to mitigate them, it is often patch work and does not solve the overriding problem of emissions, noise, traffic and environmental impacts. As warehouses begin to encroach on neighborhoods, we see Cities broaden their buffer areas, place a moratorium on buildings and place more restriction on large 24 hours facilities due to the impacts on the quality of life to the neighborhood. This proposed West Campus Upper Plateau is no different. It definitely will impact the neighbors with noise form trucks, forklifts, refrigerators and refrigerator trailers as well as the constant movement of vehicles during nighttime hours. It is also disheartening to know that Randall Lewis is the responsible party for this development. He has long been an advocate for sustainable building and development. He offered a Fellowship Grant for the Lyle Center for Regenerative Studies which included outreach in sustainable and regenerative agriculture at Cal Poly Pomona as recent as last year. In addition, SCAG named Randall Lewis the President's "Award for Sustainability Leader of the Year". His company is regarded as an "industry leader in promoting the arts, education, HEALTHY LIVING AND SUSTAINABLE DEVELOPMENT INITIATIVES. This includes increasing community awareness of community health. At UCR, his seminars focus on air and water quality, infrastructure planning, affordable housing, designing healthier communities, transit and social issues. All of this unfortunately and disappointedly contrary to what we see in his development here.

I-891.1

I-891.2

I-891.3

I ask you share this email with my past colleagues and encourage them to reduce the size of the development, encourage a greater buffer and allow for more open space to partially create a project that the developer teaches in his seminars.

I-891.4

Dan, as always thank you for time and the work you do. To my past colleagues, thank for your time and efforts. We often speak of the quality of life for our community and constituents, We have the opportunity to act on this with a developer who has preached this for many years. Unfortunately, this plan falls short of his advocacy.

Andy Melendrez

Letter I-891

Andy Melendrez

March 10, 2023

I-891.1 This comment expresses general opposition to the Project and raises concern for impacts to infrastructure (i.e., roads and freeways) as a result of new warehouses, including the Project. Implementation of the Project includes infrastructure improvements to meet the needs of the planned land uses on site. As further detailed in Recirculated Chapter 3, Project Description, the Project would include the installation of utility and roadway networks connecting to and throughout the Specific Plan Area. Additionally, roadway improvements would be constructed in the Project area, as stipulated in PDF-TRA-1. Through PDF-TRA-4, the Project will pay its fair share to address operational deficiencies at off-site intersections. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹¹ The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid for through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

The comment further references actions by other jurisdictions in relation to warehouses. See Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project's consistency with the Good Neighbor Guidelines of the County of Riverside and Topical Response 4 – Project Consistency for a discussion of the Project's consistency with the City of Riverside Good Neighbor Guidelines. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses.

I-891.2 This comment asserts the Project would result in noise impacts related to operations, such as noise from trucks, forklifts, refrigerators and refrigerator trailers, as well as nighttime traffic noise. The Draft EIR analyzes impacts related to air quality, noise, and traffic within Recirculated Section 4.2, Air Quality,

¹¹ <https://www.dmv.ca.gov/portal/dmv-research-reports/department-of-motor-vehicles-dmv-performance-reports/where-did-your-2020-fees-go/>

and Sections 4.11, Noise, and 4.15, Transportation, respectively. Further, the Project would implement a Conservation Easement which would provide a buffer between the proposed Specific Plan Area and the nearby residential areas surrounding the Project site. Regarding 24-hour operations, Section 4.11, Noise, includes analysis with an assumption for 24-hour operations in order to present the potential worst-case noise condition on site. Moreover, the noise analysis assesses a variety of noise sources, including loading dock activity, roof-top air conditioning, parking lot vehicle movements, and truck movement all operating at the same time. To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the March JPA, County of Riverside and City of Riverside exterior noise level standards at the nearest noise-sensitive receiver locations. Table 4.11-27 of the Draft EIR shows the operational noise levels associated with Project would not exceed the daytime and nighttime exterior noise level standards. Therefore, the operational noise impacts are considered less than significant at the nearby noise-sensitive receiver locations, and no mitigation is required. No changes or revisions to the EIR are required in response to this comment.

I-891.3 This comment notes the Project Applicant's history with the Project area and background around sustainability. This description does not raise direct issues, questions or concerns about the adequacy of the environmental analysis in the Draft EIR.

Additionally, the Draft EIR addresses topics related to community health, such as water quality, infrastructure planning, affordable housing, and designing healthier communities with transit. See Sections 4.9, Hydrology and Water Quality, 4.12, Population and Housing, and 4.15, Transportation, for discussion on water quality, population and housing, and transportation. Recirculated Section 4.10, Land Use and Planning, includes a consistency analysis with the March JPA draft Environmental Justice Element. However, the Draft EIR does not address social issues in accordance with Section 15064(e) of the State CEQA Guidelines, "economic and social changes resulting from a project shall not be treated as significant effects on the environment." No changes or revisions to the EIR are required in response to this comment.

I-891.4 This comment requests a Project alternative with a reduction in size. Chapter 6, Alternatives, of the Draft EIR analyzed Alternative 2 – Reduced Development Alternative, which would result in a reduction of the developable acreage in the Campus Development by approximately 18% and an increase in Open Space by approximately 60% in the Specific Plan Area compared to the proposed Project. The Draft EIR also analyzed Alternative 3 – Restricted Industrial Building Size Alternative, which would result in a reduction of 244,550 square feet of potential industrial development (approximately 20% of the potential industrial development for the 56.27-acre Industrial parcel).

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the

past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Wildlife and Biology)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Anecdotally, I have lived in the Orangecrest area for more than three decades, having raised two kids and two grandkids – and said goodbye to my beloved wife – during a good life in this community. We were here before Canyon Crest Drive opened between Alessandro and Central, and when it did open, it was common to see a hawk on every other light post down the hill as I drove my kids to school (before King H.S. was built). On Sundays back in the day, to access (sneak into) the bunker area, I would have to squeeze my mountain bike between the loosest strands of barbed wire I could find and then my wife and myself so we could have our run/ride with our dogs around the bunker road. Eagles were not uncommon. We'd see and hear the coyotes yipping and wailing. I once had an entertaining and almost scary encounter with a pair of burrowing owls.

In the past year and a half or so, I have been out there almost every day with my little dog and my big dog. I get excited on those depressingly rare occasions I see a hawk. There *is* a pair of hawks on one of the few trees out on the west side of the property, so always happy to see one or both of them. I've seen coyotes recently and I'm always scanning for fear of my little walking burrito. I've scared up a jackrabbit less than a handful of times and I don't remember the last time that happened.

I remember how excited I was long ago when I went out there for a ride and saw the no-trespassing signs because the area was a kangaroo rat preserve. That meant the area would be preserved! We did our due diligence before we moved here, and at no point could we have envisioned a heavy industrial project less than a football field from our homes. At some point, my wife and I had looked for a new, more rural, area. We could

I-893.2

not find any area that could make us as happy as this place, and that the bunker area was to be preserved was a big part of the decision that this would always be our home.

I-893.2
Cont.

I am not a trained biologist, but my observations over a sustained period clearly demonstrate that the diversity, number, and frequency of a number of species has severely declined. Further development, especially such intense, heavy industrial development with high levels of pollution, heavy-duty truck traffic, noise and light, will make preservation of the existing struggling ecosystem impossible.

I-893.3

Can the thin open space areas, which are no more than inadequate buffers between the heavy industrial area and neighbors' backyards, support the remaining wildlife in such small areas, and can wildlife be sustained in such an impacted area while also under the stressors of pollution, light, noise and truck traffic?

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

I-893.4

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Andrew Silva

Letter I-893

Andrew Silva
March 10, 2023

- I-893.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-893.2** This comment discusses personal experience at the Project site and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. This comment states the Project site was identified as habitat for Stephens Kangaroo Rat (SKR) and not to be developed. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. Although Exhibit 5-1 of the March JPA General Plan identifies the former Weapons Storage Area as SKR Open Space and the remainder of the Project site as SKR Management Area, the March JPA General Plan states that “ the lands currently designated for SKR management and open space purposes will be available for development.”
- Figure 1-4, Land Use Plan, of the March JPA General Plan designates the former Weapons Storage Area as Park/Recreation/Open Space and the remainder of the Project site as Business Park. The swap of March JPA lands, including the Project site, for more and better quality SKR habitat was the subject of the 2012 Settlement Agreement with the Center for Biological Diversity and San Bernardino Valley Audubon Society (Appendix S). Under the CBD Settlement Agreement, the land uses were inverted, with the Weapons Storage Area identified for development, along with a 60-acre park, and the remainder of the Project site identified as a conservation easement (see Figure 3-4 of Recirculated Chapter 3, Project Description). The Project’s potential direct and indirect impacts to SKR and its habitat are evaluated within Section 4.3, Biological Resources, of the Draft EIR. With implementation of MM-BIO-1 (Best Management Practices), MM-BIO-3 (Operation-Related Indirect Impacts to Special-Status Wildlife), and MM-BIO-4 (Stephens’ Kangaroo Rat Avoidance and Mitigation), the Project’s direct and indirect impacts to SKR and its habitat would be less than significant.
- I-893.3** This comment raises general concerns about the Draft EIR’s analysis of the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- I-893.4** This comment is the same as Form Letter C – Biological Resources. As such, in response to this comment, please see Form Letter C Response.

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304.
(Aesthetics/Noise/Light/Quality of Life)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority Draft Environmental Impact Report on the West Campus Upper Plateau Project.

I am a 30-plus year resident of the Orangecrest neighborhood, and aesthetics, noise, light and quality of life are the issues that will have the most devastating impacts to the local community and residents.

First, a baseline of the project area as it sits now. One of the small bittersweet pleasures of a summer night, is hearing the shouts and cheers of family and friends during Little League and other events through our open bedroom window. (Bittersweet because with the kids and grandkids gone, those sounds always brought back fond memories of our time as parents of that age.)

As I have walked daily with my dogs across the project area, despite proximity to busy roads, and the steady hum of suburban life, the quiet of the area is striking. It may not be perfect silence, but it provides comfort, relief and an almost incongruous feeling of solitude and peacefulness. But sound also travels far and efficiently due to the topography and other conditions. Even when I am approximately 1,000 feet from homes, I can still easily hear people conducting routine activities in their backyards.

For those who live near the project site, the area is quiet, dark and beautiful.

To suggest the impacts can be mitigated to less than significant defies physics and common sense.

I-894.2

I-894.3

Despite the mitigation measures for light spillage, the project site immediately next to neighbors will glow light a football stadium at night, and will be visible for miles. Even a match on a clear night can be visible over great distances even when the measurable light reaching any location is minuscule.

I-894.3
Cont.

Noise, now nonexistent from the site, will absolutely destroy the peace of mind, solitude and quality of life of community residents and families. Rather than the relatively peaceful silence and the occasional squawk of a bird or howl of a coyote that has defined this community for three generations, the back-up beeping of trucks, the clatter of 40-foot steel shipping containers, the grind and growl of heavy trucks, and other intrusive sounds will pierce the night into neighbors' backyards and bedrooms, turning the current almost bucolic atmosphere into a cacophony of chaos and stress.

I-894.4

For aesthetics, though the total project area is less than one and a half square miles, it provides a visual respite from the endless concrete and stucco that define our suburban landscape. In my younger days, I was blessed to backpack some of the most beautiful places in the American west.

I am currently out on the project site almost daily with my two dogs, and, not often enough, on my mountain bike. Though always in plain sight of civilization – houses, the church, the relics on the property itself, the fencing, light poles and the bunkers themselves – I experience a surprising sense of connection, openness and freedom as I look out across the property, capturing some of the same feelings I enjoyed on my most epic backpacking trips. Except that this place is three-minute car or bike ride for me, my dogs and my neighbors to treasure on a daily basis, rather than travelling to a famous scenic area during those too-rare and too-brief vacations.

I-894.5

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. I must comment on the viewpoints in the EIR at the south end of the project. The south side of the project is at a higher elevation than the rest of the property and from those vantage points, one looks down over the project. To suggest that having the two highest mountains in Southern California still visible on the horizon means the visual impacts are less that significant is insulting.

I-894.6

Despite the settlement with the Center for Biological Diversity and the preservation of open space in the project description, building a sea of uniform concrete mega-warehouses will destroy the visual character of the area and will be a visible, intrusive blight to this beautiful neighborhood in perpetuity.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and the plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no

I-894.7

rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for generations to come. Please don't allow one final grand act of poor land use planning be your lasting legacy.

Sincerely,

Andrew Silva

Letter I-894

Andrew Silva
March 10, 2023

- I-894.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-894.2** This comment discusses personal experience at the Project site and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-894.3** This comment expresses concern about nighttime lighting. As discussed in Section 4.1, Aesthetics, of the Draft EIR, PDFs are incorporated into the Project through the proposed Specific Plan such that light trespass is minimized. The following PDFs specifically relate to lighting:
- PDF-AES-2** All exterior lighting shall minimize glare and “spill over” light onto public streets, adjacent properties, and Conservation Easement by using downward- directed lights and/or cutoff devices on outdoor lighting fixtures, including spotlights, floodlights, electrical reflectors, and other means of illumination for signs, structures, parking, loading, unloading, and similar areas. Where desired, illuminate trees and other landscape features by concealed uplight fixtures (on- and off-site).
 - PDF-AES-3** Limit light spillover or trespass to one-half foot-candle or less, measured at the property line for development adjacent to the Conservation Easement (off-site). This shall be confirmed through point-by-point photometric study.
 - PDF-AES-4** Limit light spillover or trespass to one-half foot-candle or less, measured from within five feet of any adjacent property line for development adjacent to nonresidential uses (on-site). This shall be confirmed through point-by-point photometric study.
 - PDF-AES-5** Lighting fixtures shall have a similar design, materials, fixture color, and light color. Use of LED lighting shall be required for parking lot lighting; parking lot lighting shall be within 100 Kelvin of 2700 Kelvin; other lighting techniques for accent lighting shall be allowed (on- and off-site).
 - PDF-AES-6** Lights shall be unbreakable plastic, recessed, or otherwise designed to reduce the problems associated with damage and replacement of fixtures (on- and off-site).
 - PDF-AES-7** Neon and similar types of lighting are prohibited in all areas with the Specific Plan Area (on-site).
 - PDF-AES-11** Use exterior lights to accent entrances, plazas, activity areas, and special features (on-site).

- PDF-AES-12** High-Pressure (HPS) light fixtures are prohibited for site lighting (on-site).
- PDF-AES-13** Lighting is prohibited that could be mistaken for airport lighting or that would create glare in the eyes of pilots of aircraft using the nearby March Air Reserve Base (on-site).
- PDF-AES-14** All exterior on-site light fixtures shall be fully shielded with no light emitted above the horizon (on-site).
- PDF-AES-15** Maximum on-site lighting wattage is 750 (on- and off-site).
- PDF-AES-16** Maximum height of on-site exterior lighting for buildings is 25 feet; sports fields lighting may have a maximum height of 50 feet and shall be located no closer than 450 feet from residences (on site).

In Section 4.1, Aesthetics, of the Draft EIR, an analysis of Project lighting associated with both the Campus Development and the Park is provided. As demonstrated therein, with incorporation of the above PDFs as well as MM-AES-2, which requires the Project applicant to submit a photometric study as part of the building permit application that is subject to March JPA review and approval, and MM-AES-3, which required use of anti-reflective coatings on the PV panels; this measure also requires that the Project Applicant submit a glint and glare study to be approved by March ARB that analyzes potential effects the system(s) could have on aviation, impacts would be less than significant.

- I-894.4** This comment expresses concerns about noise. Section 4.11, Noise, of the Draft EIR, includes analysis with an assumption for 24-hour operations in order to present the potential worst-case noise condition on site. Moreover, the noise analysis assesses a variety of noise sources, including loading dock activity, roof-top air conditioning, parking lot vehicle movements, and truck movement all operating at the same time. To demonstrate compliance with local noise regulations, the Project-only operational noise levels are evaluated against exterior noise level thresholds based on the March JPA, County of Riverside and City of Riverside exterior noise level standards at the nearest noise-sensitive receiver locations. Table 4.11-27 of the Draft EIR shows the operational noise levels associated with Project would not exceed the daytime and nighttime exterior noise level standards. Therefore, the operational noise impacts are considered less than significant at the nearby noise-sensitive receiver locations, and no mitigation is required. No changes or revisions to the EIR are required in response to this comment.
- I-894.5** This comment raises concerns regarding the loss of recreational open space. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses.
- I-894.6** This comment questions the standards used to evaluate aesthetic impacts and visual impacts from the Project. In response to this comment, please see Topical Response 1 – Aesthetics.
- I-894.7** This comment is the last two paragraphs of Form Letter A, Aesthetics. In response, see Form Letter A Response.

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Air Quality)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

I have been directly and indirectly involved in air 23 issues for more than two decades. My last work assignment before I retired was as a board consultant to a South Coast Air Quality Management District Governing Board member. I was in the room during all the stakeholder meetings over a number of years as AQMD drafted its Rule 2305, the Indirect Source Rule for warehouses.

The DEIR fails to properly consider the cumulative impacts on sensitive receptors and all nearby residents due to the heavy pollution burden already borne by residents of the South Coast Basin and particularly the Inland Empire.

Numerous studies have demonstrated that exposure to higher levels of pollution constricts the lung capacity of young children into adulthood. Given the Inland Empire has the worst ozone pollution in the nation and is out of attainment for PM2.5, all additional sources increase the health impacts, especially to growing children.

Proximity to an air pollution source also impacts the level of pollution and increases the health risk to residents. Note that the project area is used regularly by the Woodcrest Christian School Mountain Bike team, and is popular among mountain bikers throughout the area, including myself, and I have seen more and more families with young children utilizing the dirt roads and trails, in addition to numerous regular dog walkers.

The trails where these young people, and old people like me, ride bikes and where families walk with their kids and dogs, will be only a few feet away from the project and

its hundreds of trucks and cars. While ozone is a regional problem, the ozone precursor of directly emitted NOx from heavy trucks poses a localized and immediate health threat, especially as these teenagers' hearts are pounding at 180 beats per minute while inhaling large quantities of NOx and diesel particulate matter.

I-895.3
Cont.

I am also concerned about the state of clean truck technology. I support more rigorous mandatory mitigation requirements for clean vehicles, should this project be approved. While clean truck technology exists and is maturing, it remains for now prohibitively expensive and it is severely limited by the lack of infrastructure to support it. Edison has already expressed concern that the existing local grid cannot support the existing and permitted warehouses, much less the exponentially larger load required to charge medium and heavy-duty trucks. Even if the most stringent mitigation deadlines are imposed, they may not be technologically feasible.

I-895.4

To be clear, there are no mitigation measures that will reduce the impact to below significant. Heavy industry *does not belong* adjacent to long-established residential communities. In addition to the adjacent Grove Church, which includes an active and thriving pre-school, as well as athletic fields that receive regular use, Orange Terrace Community Park is only a few steps farther and is used daily by hundreds of families for baseball, softball, soccer and other activities.

I-895.5

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. There are numerous deficiencies in the analysis and underestimates the air quality impacts.

Your analysis further does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-895.6

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group

should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents).
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening date of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? Which agencies will have which enforcement responsibilities, e.g., Riverside County, South Coast AQMD, CHP, etc.? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Andrew Silva

Letter I-895

Andrew Silva
March 10, 2023

- I-895.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-895.2** This comment cites personal experience with SCAQMD and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR are raised. As such, no further response is provided and no revisions to the Draft EIR are required.
- I-895.3** This comment raises concerns regarding health risks due to Project emissions. The Draft EIR and Recirculated Draft EIR assessed the Project's health risks in Section 4.2, Air Quality and Appendix C-2. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Section 4.2, Air Quality, of the Recirculated Draft EIR, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

- I-895.4** This comment raises concerns regarding clean truck technology. MM-AQ-20 requires all heavy-duty trucks (Class 7 and 8) domiciled at the project site are model year 2014 or later from start of operations and shall expedite a transition to zero-emission vehicles, with the fleet fully zero-emission by December 31, 2030 or when feasible for the intended application, whichever date is later. MM-AQ-20 further requires tenants utilize a “clean fleet” of vehicles/delivery vans/trucks (Class 2 through 6) as part of business operations as follows: For any vehicle (Class 2 through 6) domiciled at the project site, the following “clean fleet” requirements apply: (i) 33% of the fleet will be zero emission vehicles at start of operations, (ii) 65% of the fleet will be zero emission vehicles by December 31, 2026, (iii) 80% of the fleet will be zero emission vehicles by December 31, 2028, and (iv) 100% of the fleet will be zero emission vehicles by December 31, 2030 or when feasible for the intended application, whichever date is later. In response to comments, MM-AQ-20 has been revised to clarify applicable definitions and the factors March JPA will consider in determining the measure’s feasibility as the Project site is developed. PDF-GHG-1 requires conduit to be installed in truck courts in logical locations that would allow for the future installation of charging stations for electric trucks, in anticipation of this technology becoming available. MM-AQ-11 requires main electrical supply lines and panels have been sized to support ‘clean fleet’ charging facilities, including heavy-duty and delivery trucks when these trucks become available.
- I-895.5** This comment notes sensitive receptors surrounding the Project site. The analysis within Recirculated Section 4.2, Air Quality, and specifically Threshold AQ-3, identified each of these sensitive receptors and evaluated whether the Project would expose sensitive receptors to substantial pollutant concentrations. As demonstrated therein, all impacts to sensitive receptors would be less than significant.
- I-895.6** This comment is Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Alternatives analysis)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority Draft Environmental Impact Report on the West Campus Upper Plateau Project.

Easily the area where the DEIR is most inadequate is in its lack of alternatives analysis. The statutorily required no-build alternative, which I would support, is the only non-industrial alternative considered.

Making minor downsizes and insignificant tweaks to the project does not fulfill the CEQA requirement for analyzing alternatives. During the past year-plus, residents have floated any number of ideas, from solar to other kinds of profitable developments.

We now take the opportunity to present three alternatives the community would enthusiastically support, any of which would provide generational, sustainable and resilient economic and social benefits to the local community and, indeed, to the entire region.

For policymakers, this is an opportunity to set the area on a visionary path that will establish a legacy for which they can be proud, and which will be admired by the community for generations to come. (Think Frederick Olmstead and New York's Central Park, or the decision to repurpose the Marine Corps Air Station at El Toro into the Orange County Great Park.)

As discussed in a number of other comments you have received, this proposed project as envisioned violates the March JPA's own statutorily controlling planning documents, it violates the Commission members obligations to protect their constituents, and violates common sense and long established planning doctrine related to siting heavy industry next to residential uses. (Indeed most of the numerous environmental justice

I-896.2

controversies I have witnessed over the past 30 years are the direct result of incompatible and harmful land use decisions by local governments.)

This area is a diminishing treasure in the Riverside area with little open space remaining for wildlife, recreation, familial bonding and spiritual renewal. Paving over this area would be a tragedy during a time when the mental health of our communities, due to loneliness, isolation, stress from daily life and countless other stressors, requires supporting and encouraging connections to nature and each other.

Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. **Alternate plan #1: The Campus Approach**

Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

I-896.2
Cont.

2. **Alternate plan #2: The Veterans Village Approach**

Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. **Alternate plan #3: The State or County Park Approach**

Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project

I-896.2
Cont.

meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for the opportunity to comment.

Sincerely,

Andrew Silva

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Community Engagement)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

Having proudly spent my career(s) both closely observing and working within local government, I find myself increasingly distressed over the (lack of) evolution of this project. I take it personally because it angers me to see an institution I revere fail so utterly in effectively involving the community in a decision that will affect generations of families, and severely impact the health and quality of life of the community they cherish.

The lack of imagination and any good-faith steps to seek alternatives that would at least reduce the inevitable harm to the community mean the DIER is inadequate.

I incorporate by reference the three alternative plans submitted by Riverside Neighbors Opposing Warehouses, all of which would greatly benefit the community and the entire region.

Alternative plans should consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

I-897.2

I-897.3

I-897.4

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

I-897.4
Cont.

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Andrew Silva

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Hazardous Materials)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

I-898.2

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Andrew Silva

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Jobs/Greenhouse Gas)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority Draft Environmental Impact Report on the West Campus Upper Plateau Project.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+,

I-899.2

labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? There is discussion now of "dark warehouses" requiring so few workers that lights, heating and cooling may not be required. It is anticipated that warehouse jobs are the most likely to be lost to automation.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment.

Sincerely,

Andrew Silva

Re: Comments on the West Campus Upper Plateau Project Draft Environmental Impact Report; State Clearinghouse Number 2021110304. (Traffic)

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

I have lived in Orangecrest for more than 30 years and before I retired I worked in downtown San Bernardino. During my morning commute, I would usually take surface streets down to the MLK on-ramp to the 215 to avoid the gridlock on the 60/215 interchange. One weekday afternoon I was able to stop by home for lunch, and as it was early afternoon, I thought it would be safe to take Van Buren to the 215. Wrong. An hour and a half later I made it to my desk. And that was several years ago before many of the numerous, recently built warehouses were dumping more and more heavy trucks onto the already congested freeway and surrounding surface streets, which I now avoid unless absolutely necessary.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary**

I-900.2

I-900.3

freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
<include name, address, email in signature line>

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I am writing to offer my comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas, it is less than 1,500 foot range of residential homes. The Project fails to consider or provide non-industrial alternatives as consistently requested by the community.

I-901.2

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. That is a standard statement that warehouses developers have been using for decades, and they still continue to be allowed to build these warehouses in this region.

I-901.3

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction including but not limited to the World Logistics Center in Moreno Valley. In addition, there are numerous warehouses regionally that combined with this project that will adversely affect the air quality in our region. I am asking that project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, I believe it is important to be more conservative in truck trip rate projections-using the Rule 2305 numbers would almost double the daily truck trips.

I-901.4

Over twenty years ago my daughter was a part of the University of California Children's Health Study. This study lasted ten years. The results of this study showed the harmful effects of diesel emissions on children's developing lungs. Since that time there continues to be more and more warehouses built in this region without regards to the impact on those living in close proximity to them.

I-901.5

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway, the 215/60 corridor, or the 60/215/91 Interchange,

I-901.6

or the 60/15 interchange. These are routes that most of the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, Caltrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis especially since when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site. You also excluded major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who drives around here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, even though the industrial footprint will be doubling in the next few years without this project.

I ask that the March JPA come up with a comprehensive plan for how these mitigations will be Implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets?

Thank you for the opportunity to comment.

Sincerely,

Betty A. Anderson

Letter I-901

Betty A. Anderson

March 10, 2023

- I-901.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-901.2** This comment letter is the same as the beginning of Form Letter B –Air Quality. As such, in response to this comment, please see Form Letter B Response.
- I-901.3** This comment generally states that warehouse project environmental reviews have previously disclosed significant and unavoidable air quality impacts. This comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-901.4** This comment is a shortened version of Form Letter B –Air Quality. As such, in response to this comment, please see Form Letter B Response
- I-901.5** This comment refers to the health effects of diesel particulate matter on children and adjacent residents. Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance

threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR.

- I-901.6** This comment is a shortened version of Form Letter G –Traffic. The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter G Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Brian Wardle

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Cindy Chiek

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Cindy Chiek

Sent: Friday, March 10, 2023 4:12 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Cindy Chiek

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

Thank you for allowing me to provide comments on this project.

Sincerely,
Cindy Chiek

Subject: Opposition to warehouse expansion

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Carlos Lliguin

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Christopher Nielsen

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I am sure you are being bombarded with emails in opposition of this matter. However, this is something that I feel you should hear. I did speak about this in a public comment before but I want to share it with you in writing. I own a rental in the Box Springs area of Moreno Valley. I rent it out to single parents room by room, as I know the rental market for many is out of reach right now. Two of those single parents renting now are Amazon employees. They are barely making ends meet. To live in Orangecrest, or even Box Springs on the salaries these jobs would bring is unrealistic. This means the jobs would not go to locals. That means more traffic, trucks plus commuters. More congestion, more pollution, and more small locally owned businesses competing with yet another employer. Please drive up and down Van Buren from 215 to 91 and survey how many small businesses are hiring. This project is bringing "jobs" that this community doesn't want or need, and is not currently asking for. It would be bringing pollution (noise and air) from both trucks and commuters that we absolutely don't want.

I-912.1

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

I-912.2

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age

16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Christopher Nielsen

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

Christopher Nielsen

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). Input from the community is essential, as we are the ones who will be experiencing the direct effects of this proposed project. The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas,; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. Additionally, I am a PhD student at UC Riverside who actively conducts research on the landscape vegetation in the vicinity of the proposed project. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat that my research is actively trying to find ways to restore critical habitat for many threatened, rare or endangered species. I ask that you require the project applicant to make *every effort* to preserve endangered and threatened species and plant life that you can.

Wildlife

The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.

Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year's timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. **Please redo studies that are more than a year old, as our wildlife and vegetation communities are rapidly changing due to climate change and anthropogenic impacts.**

Plant life

I-914.2

Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?

Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year when this plant would not be present? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project. I greatly appreciate the opportunity for my voice to be heard on this important community matter.

Sincerely,

Clarissa Rodriguez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by our community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Carolina R

To: Dan Fairbanks
Subject: Response to West Campus Upper Plateau Project Environmental Impact Report (State Clearinghouse No. 2021110304)

Mr. Fairbanks:

As an owner of properties in the immediate shadow of the proposed West Campus Upper Plateau project ("Project"), please allow this email correspondence to serve as my official response to Environmental Impact Report (State Clearinghouse No. 2021110304) ("EIR").

I-916.1

In my opinion, the Project lacks sufficient environmental analysis and land use planning logic for a wide variety of reasons.

I-916.2

The proposed Project's ability to be developed hypothetically lies in March Air Force Base Joint Powers Authority's ("JPA") March Air Force Base Final Reuse Plan adopted in October 1996 ("Reuse Plan").

I-916.2

However, the proposed Project is inconsistent with the Reuse Plan (which the Master Environmental Impact Report for the General Plan of the March Joint Powers Authority, dated September 1999, states that "this element (Land Use Element) is based upon the March Air Force Base Reuse Plan preferred land use pattern) in many ways, including but not limited to the following:

I-916.2

1) Under Section II, Reuse Planning Process, subsection A, Planning Phases, , subsection 1, Phase 1 paragraph two (2) of the Reuse Plan states that "alternative land use plans for the reuse lands which 1) are logically and reasonable based upon available information", Page II-7). The proposed Project's million plus square feet of industrial warehouse uses is absolutely NOT logical and reasonable as they are surrounded on three (3) sides by the neighboring residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.3

2) Under Section II, Reuse Planning Process, subsection A, Planning Phases, subsection 1, Phase 1 paragraph two (2) of the Reuse Plan states that "and 3) include a "Community Preferred" pattern, which reflects the ultimate reuse goals of the neighboring communities", Page II-7). The proposed Project's million plus square feet of industrial warehouse uses is absolutely NOT what the neighboring residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.4

3) Under Section II, Reuse Planning Process, subsection C, Planning Process Used, subsection 1, point b "Preferred reuses will be compatible with existing or General Plan land uses in areas adjacent to the base", Page II-11. The proposed Project is definitely NOT compatible with the immediately adjacent and existing and City of Riverside General Plan designated residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.5

4) Under Section II, Reuse Planning Process, subsection C, Planning Process Used, subsection 1, point f. "Serious and careful consideration will be given to the wishes of existing land use users and owners in areas adjacent to the base", Page II-11. The proposed Project's million plus square foot industrial warehouse uses has definitely not taken serious and/or careful considerations from the immediately adjacent and existing residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.6

5) Under Section III, Goals and Policies, JPC Goals, subsection A, Community Interests, subsection 1, point a. "Protect the interests and existing commitments to adjacent residents, property owners and local jurisdictions in planning new land

I-916.7

uses", Page II-15, The proposed Project's million plus square feet of industrial warehouse uses definitely do NOT protect the interests of the immediately adjacent and existing residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.7
Cont.

6) Under Section III, Goals and Policies, JPC Goals, subsection A, Planning, subsection 9, point c, Strategy "Maximize the potential for aviation related land uses", Page II-18. The proposed Project's million plus square feet of industrial warehouse uses do NOT maximize the potential for aviation related land uses, as they're proposed for cold storage and other non-aviation related uses.

I-916.8

7) Under Section III, Goals and Policies, JPC Policy Direction, subsection B, point 2. "Emphasize job-creating land uses which provide a wide range of job types and opportunities", Page II-19. The proposed Project's million square feet of industrial warehouse uses definitely do NOT provide a wide range of job types NOR opportunities.

I-916.9

8) Under Section III, Goals and Policies, JPC Policy Direction, subsection B, point 4. "...ensure compatibility among adjoining uses", Page II-21. The proposed Project's million plus square feet of industrial warehouse uses definitely are NOT compatible with the immediately adjacent and existing residential communities of Orangecrest and Mission Grove in the City of Riverside.;

I-916.10

9) Under Section IV, Planning Considerations, subsection A, Principal Considerations, subsection 3, Land Use, subsection b. Compatibility with Adjacent Land Uses..none of the four (4) land use alternatives proposed ANY industrial warehouse uses in the Upper Plateau area.;

I-916.11

10) Exhibit 4, Constraints Map, Page II-28 shows the entire Upper Plateau area as Stephens Kangaroo Rat Management area, and with the proposed Project's development area as Stephen's Kangaroo Rat Open Space.;

I-916.12

11) Exhibit 7, Conceptual Circulation Map, Page II-36, shows absolutely zero (0) roads going through the Upper Plateau area.;

I-916.13

12) Exhibit "A", Preferred Land Use Plan, Page II-38, shows the majority of the Upper Plateau's developable area as Open Space.;

I-916.14

13) Under Section V, Preferred Land Use Pattern and Alternatives, subsection A, Description of Alternative Land Use Patterns, subsection 1, Preferred Land Use Pattern "Westerly of this area, the pattern shows business park uses surrounding the Orangecrest community of Riverside", Page II-40.. The proposed Project's million plus square feet of industrial warehouse is definitely NOT contemplated.

I-916.15

14) Under Section V, Preferred Land Use Pattern and Alternatives, subsection A, Description of Alternative Land Use Patterns, subsection 1, Preferred Land Use Pattern "Efforts should be taken to land use compatibilities with the existing and planned residential areas adjacent to the base, including Orangecrest....",Page II-40. The proposed Project's million plus square feet of industrial warehouse uses are definitely NOT compatible with the existing residential community of Orangecrest in the City of Riverside.;

I-916.16

15) Exhibit "B", Alternative Pattern, Page II-42, shows the majority of the Upper Plateau's developable area as Open Space.;

I-916.17

16) Exhibit "C", SKR Partially Constrained Pattern, Page II-43, shows the entire Upper Plateau area as Stephen's Kangaroo Rat Management.;

I-916.18

17) Exhibit "D", SKR Fully Constrained Pattern, Page II-44, shows the entire Upper Plateau area as Stephen's Kangaroo Rat Management and/or Open Space.;

I-916.19

Additionally, the proposed Project is inconsistent with the General Plan ("General Plan") and the Master Environmental Impact Report for the General Plan of the March Joint Powers Authority, dated September 1999 ("General Plan MEIR"), in many ways, including but not limited to the following:

1) Section 3.1, Land Use Planning "The proposed Land Use Plan has been designed to prevent adverse impacts on land use, by proposing complementary land use designations, and land use intensities that are consistent with the subregion", Page I-9. The proposed Project's million plus square foot industrial warehouse uses are definitely NOT complementary land uses with the existing residential community of Orangecrest in the City of Riverside;

I-916.20

2) Section 2, Project Description, subsection 2.2, Proposed General Plan, Land Use Element - This element is based upon the March AFB Master Reuse Plan preferred land use pattern. As stated above on multiple occasions, the proposed Project is definitely NOT compatible with the Reuse Plan.

I-916.21

3) TABLE MEIR 2-2 RELATIONSHIP OF MARCH JPA GENERAL PLAN TO STATE-MANDATED ELEMENTS, "Based upon reuse plan preferred pattern of federally prepared master reuse plan", Page 2-10. As stated above on multiple occasions, the proposed Project is definitely NOT compatible with the Reuse Plan.

I-916.22

4) Land Use Element GOAL 1: "Land Use Plan provides for a balanced mix of land uses that contribute to the regional setting, and capitalize on the assets of the Planning Area, while insuring compatibility throughout the Planning Area and with regional plans", Page 2-10. As stated above on multiple occasions, the proposed Project's million plus square foot of industrial warehouse uses are definitely NOT compatible with the existing residential community of Orangecrest in the City of Riverside.;

I-916.23

5) Land Use Element GOAL 2: "Locate land uses to minimize land use conflict or creating competing land uses, and achieve maximum land use compatibility while improving or maintaining the desired integrity of the Planning Area and subregion", Page 2-10. As stated above on multiple occasions, the proposed Project's million plus square feet of industrial warehouse uses conflict with the existing residential community of Orangecrest in the City of Riverside.;

I-916.24

6) Section 3, Environmental Impact Analysis, Significance Conclusion states "The proposed Land Use Plan has been designed to prevent adverse impacts on land use by proposing complementary land use designations, and land use intensities that are consistent with the subregion", Page 3-12. As stated above on multiple occasions, the proposed Project's million plus square feet of industrial warehouse uses are not complementary and/or consistent with adjacent residential uses, specifically, the existing residential community of Orangecrest in the City of Riverside.;

I-916.25

The Developer appears to be basing all of its justifications for the proposed Project's development and imagined lack of impact(s) on a settlement agreement between and among the Center for Biological Diversity (CBD), the San Bernardino Valley Audubon Society, MJPA, and LNR Riverside LLC as the complete settlement of the claims and actions raised in Center for Biological Diversity v. Jim Bartel, et al. (CBD Settlement Agreement, MJPA 2012) ("Settlement Agreement"), although the Settlement Agreement was not contemplated as a project under CEQA nor had any and/or additional environmental analysis done for its part nor resulted in ANY changes/updates to the Reuse Plan nor resulted in any changes/updates to the General Plan nor resulted in any changes/updates to the General Plan MEIR.

I-916.26

As such, based upon the above, and as it is completely incompatible with the existing residential community of Orangecrest in the City of Riverside, it is my position, that the Project can NOT proceed as proposed with among other things, the extension of Barton Road between Alessandro and Grove Community, and the provision for the million plus square foot industrial warehouse uses, etc.

I-916.27

If I can be of any further assistance, please feel free to contact me via either email and/or my phone at (951) 323-4543.

Please advise.

Thank you.
David A. Rose III

Letter I-916

David A. Rose III
March 10, 2023

- I-916.1** This comment is introductory in nature and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-916.2** This comment asserts that the land use document governing the development of the Project is the Final Reuse Plan. The comment further asserts that the Project is inconsistent with the Final Reuse Plan. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.3** This comment asserts that the Project is inconsistent with the Final Reuse Plan with regard to alternative land use plans for the reuse lands. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.4** This comment asserts that the Project is inconsistent with the Final Reuse Plan with reference to the reuse goals of the neighboring communities. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.5** This comment refers to Planning Process C1b of the Final Reuse Plan with reference to compatibility with existing or General Plan land uses in areas adjacent to the base. March JPA used Planning Process C1b to develop the Preferred Land Use Plan outlined in the Final Reuse Plan. The March JPA General Plan was then developed based on that Preferred Land Use Plan. The March JPA General Plan implements the Final Reuse Plan and designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. The March JPA General Plan includes warehousing in the definition of Business Park. Moreover, wholesale, storage and distribution are expressly identified as a allowed uses within the Business Park Zoning District, as identified in the March JPA Development Code. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses and does not introduce new designated uses. Additionally, under the current General Plan land use designations, business park development would be immediately adjacent to the surrounding residential uses, with open space in the center as shown in Figure 3-2, March JPA General Plan Existing and Proposed Land Use Designations. The Conservation Easement would provide a buffer of at least 300 feet on all sides of the Specific Plan Area, with a larger buffer to the south and east of the Specific Plan Area.

Further, as detailed in Recirculated Section 4.10, Land Use and Planning, the Project is consistent with the Good Neighbor Guidelines for the County of Riverside, and as discussed in Topical Response 4 – Project Consistency, the Project is consistent with the City of Riverside Good Neighbor Guidelines. The purpose of these Good Neighbor Guidelines is to minimize land use conflicts by ensuring air quality and

health risks are evaluated when siting new industrial uses, the noise impacts are evaluated and minimized, and that residential uses and neighborhood character are protected. Although the Project is not subject to the City's Guidelines, demonstrating consistency provides additional support for the Project's compatibility with surrounding land uses. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use. The Project is compatible with the surrounding land uses.

- I-916.6** This comment refers to Planning Process C1f of the Final Reuse Plan with specific reference to consideration of the wishes of existing land use users and owners in areas adjacent to the base. March JPA used Planning Process C1f to develop the Preferred Land Use Plan outlined in the Final Reuse Plan. The March JPA General Plan was then developed based on that Preferred Land Use Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.7** This comment asserts that the Project is inconsistent with the Final Reuse Plan goals to protect the interests and existing commitments to adjacent residents, property owners and local jurisdictions in planning new land uses. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.8** This comment asserts that the Project is inconsistent with the Final Reuse Plan goals with regard to maximizing the potential for aviation-related land uses. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.9** This comment asserts that the Project is inconsistent with the Final Reuse Plan policy direction to emphasize job-creating land uses. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.10** This comment questions the Project's compatibility with surrounding uses with reference to policy direction under the Final Reuse Plan. Please see Response I-916.5, above.

- I-916.11** This comment asserts that the Project is inconsistent with the Final Reuse Plan’s land use alternatives. The March JPA General Plan contains the land use regulations applicable to the Project site. The General Plan implements the Final Reuse Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the role and purpose of the Master Reuse Plan.
- I-916.12** This comment refers to the Constraints Map included as Exhibit 4 to the Final Reuse Plan that shows Stephen’s Kangaroo Rat (SKR) Open Space on the Project site. As noted above, the March JPA General Plan governs the land uses at the Project site. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. Although Exhibit 5-1 of the March JPA General Plan identifies the former Weapons Storage Area as SKR Open Space and the remainder of the Project site as SKR Management Area, the March JPA General Plan states that “the lands currently designated for SKR management and open space purposes will be available for development.”
- Figure 1-4, Land Use Plan, of the March JPA General Plan designates the former Weapons Storage Area as Park/Recreation/Open Space and the remainder of the Project site as Business Park. The swap of March JPA lands, including the Project site, for more and better quality SKR habitat was the subject of the 2012 Settlement Agreement with the Center for Biological Diversity and San Bernardino Valley Audubon Society (Appendix S). Under the CBD Settlement Agreement, the land uses were inverted, with the Weapons Storage Area identified for development, along with a 60-acre park, and the remainder of the Project site identified as a conservation easement (see Figure 3-4 of the Draft EIR).
- I-916.13** This comment refers to a Conceptual Circulation Map included in the Final Reuse Plan and notes that it does not show any roads going through the Project site. As noted above, the March JPA General Plan governs the land uses at the Project site. Since the development of the March JPA General Plan in 1999, the Project site has been designated for development. As detailed in Section 3.5.6, Requested Approvals and Entitlements, the Project requests the approval of General Plan Amendment 21-01, which would include a modification to Exhibit 2-1, Transportation Plan, and Exhibit 2-3, Transportation Road Systems, of the General Plan, to allow for road connection and circulation changes. March JPA General Plan Exhibit 2-1 (Transportation Plan) does identify a circulation system serving future development within the West Campus Upper Plateau area, which is not significantly different than that proposed by the Project. One difference is that the Project further adds Barton Street, a planned collector street on the City of Riverside General Plan Mobility Plan, at the request of the City of Riverside.
- I-916.14** This comment refers to the Preferred Land Use Plan included in the Final Reuse Plan that shows Open Space on the Project site. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan. See responses I-916.5 and I-196.12 above for further discussion of the land uses at the Project site.
- I-916.15** This comment refers to the Preferred Land Use Pattern included in the Final Reuse Plan and notes that it shows business park uses surrounding the Orangecrest community. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan. See responses I-916.5 and I-196.12 above for further discussion of the land uses at the Project site.

- I-916.16** This comment refers to the Preferred Land Use Pattern included in the Final Reuse Plan. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan. See response I-916.5 above for further discussion of the land uses at the Project site.
- I-916.17** This comment refers to an alternative land use pattern included in the Final Reuse Plan. This alternative was not selected by the Final Reuse Plan; the Preferred Land Use Pattern was. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan in the Final Reuse Plan.
- I-916.18** This comment refers to an alternative land use pattern included in the Final Reuse Plan. This alternative was not selected by the Final Reuse Plan; the Preferred Land Use Pattern was. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan in the Final Reuse Plan.
- I-916.19** This comment refers to an alternative land use pattern included in the Final Reuse Plan. This alternative was not selected by the Final Reuse Plan; the Preferred Land Use Pattern was. As noted above, the March JPA General Plan governs the land uses at the Project site and was developed based on the Preferred Land Use Plan in the Final Reuse Plan.
- I-916.20** This comment asserts that the Project is inconsistent with Section 3.1, Land Use and Planning, of the March JPA General Plan. Please refer to Recirculated Section 4.10, Land Use and Planning, and Response I-916.5 above for further discussion of the Project's consistency with the March JPA General Plan.
- I-916.21** This comment refers to a statement in the March JPA General Plan that indicates that the land use element thereof is based upon the March AFB Master Reuse Plan preferred land use pattern. The comment further asserts that the Project is inconsistent with the Final Reuse Plan. As noted above, the March JPA General Plan was developed based on the Preferred Land Use Plan in the Final Reuse Plan and the March JPA General Plan governs the land uses at the Project site. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the interplay between the Final Reuse Plan and the March JPA General Plan.
- I-916.22** This comment refers to a table in the General Plan EIR that again refers to the Master Reuse Plan preferred land use pattern. The comment further asserts that the Project is inconsistent with the Final Reuse Plan. As noted above, the March JPA General Plan was developed based on the Preferred Land Use Plan in the Final Reuse Plan and the March JPA General Plan governs the land uses at the Project site. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the interplay between the Final Reuse Plan and the March JPA General Plan.
- I-916.23** This comment asserts that the Project is inconsistent with Land Use Element Goal 1 of the General Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project's consistency with the March JPA General Plan.
- I-916.24** This comment asserts that the Project is inconsistent with Land Use Element Goal 2 of the General Plan. Please see Recirculated Section 4.10, Land Use and Planning, for a discussion of the Project's consistency with the March JPA General Plan.

- I-916.25** This comment refers to the General Plan EIR impact analysis and again asserts that the Project is inconsistent with the General Plan. Please see Recirculated Section 4.10, Land Use and Planning, and Response I-916.5 above for a discussion of the Project's land uses and consistency with the March JPA General Plan.
- I-916.26** This comment asserts without evidence or rationale that the Project "appears to be basing all of its justifications for the proposed Project's development" on the CBD Settlement Agreement discussed in the Draft EIR. The CBD Settlement Agreement informed the development of the Project site plan. The Draft EIR has undertaken the required environmental analysis.
- I-916.27** This comment asserts that the Project is incompatible with the existing residential uses. Please see Recirculated Section 4.10, Land Use and Planning, and Response I-916.5 above, for a discussion of the Project's land uses and consistency with the March JPA General Plan.

March JPA

**RE: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project,
Environmental Impact Report, State Clearinghouse No. 2021110304**

Dear Mr. Fairbanks:

On behalf of concerned area residents and the Rural Association of Mead Valley, please accept these comments regarding the EIR for the West Campus Upper Plateau Project.

The EIR for this Project has numerous areas of concern. The Geo report Appendix G is completely deficient. The entire Geo report contains one paragraph on pages 7-8 that even mentions the Munitions Depot that March Air Base has used for decades. This munitions site is located on the Project.

The following statements in Appendix G.

The majority of the site is currently occupied by the former March Air Force Base ordnance area. This ordnance area is surrounded by approximately 10-foot high barbed-wire-topped chain link fencing, and makes up approximately 70% of the overall Site. The remainder of the Site is vacant and undeveloped land. The ordnance area contains 14 single-story, concrete ordnance storage bunkers (circa 1940's and 1950's), and seven other associated single-story buildings (circa late 1950's to mid 1960's) in various states of abandonment. Numerous asphalt paved roads, as well as some dirt roads, exist within the ordnance area, and connect these various structures/bunkers. The facilities on-site are no longer in use by the military. A tenant is currently using the bunkers as storage for pyrotechnics.

I-918.2

The report states the site contains munition bunkers that are not abandoned. The report continues to state that munitions bunkers are used for the storage of fireworks. There is no information provided in regard to location, type, quantity, safety and who is in charge of the fireworks located on site.

Are the bunkers abandoned or not? Are all of the bunkers used for pyrotechnics?
Are the bunkers currently used for storage of bombs?

“Based on the review of the provided preliminary grading plans, site grading is expected to have cuts of up to approximately 50 feet deep and fills of up to approximately 55 feet thick, plus remedial grading, where applicable” (Page 2).

I-918.3

The site is currently being used to detonate bombs. These bombs can be felt and heard for miles away. One of those bombs was detonated this week. There is no mention of the use of the site for current bomb detonation. No details as to testing for chemicals or black powder contained on the site from these exploded devices. This has been going on for years.

<https://www.march.afrc.af.mil/About-Us/Fact-Sheets/Display/Article/167413/the-march-field-story/>

The story of March Field began at a time when the United States was rushing to build up its military forces in anticipation of an entry into World War I over 100 years ago.

By late April 1918, March was a training facility.

In 1931, March Field became an operational base. Before the end of the year, the 7th Bomb Group, commanded by Major Carl A. Spaatz, brought its Condor B-2 and Keystone B-4 bombers to the picturesque field. The activation of the 17th Pursuit Group and several subordinate units along with the arrival of the 1st Bombardment Wing initiated a period where March Field became associated with the Air Corps' heaviest aircraft as well as an assortment of fighters.

From 1949 to 1953, the B-29 Super fortresses dominated the flightline at March Air Force Base. For four months, July to October, the 22d saw action over Korea and in this brief period, contributed to the elimination of all strategic enemy targets. Involvement in the Korean Conflict had no sooner ended when the wing converted from the huge propeller-driven B-29s to the sleek B-47 jet bombers and their supporting tankers.

By September 16, 1963, brought March its first B-52B bomber, "The City of Riverside." Soon 15 more of the giant bombers appeared on the flightline along with new KC-135 jet "Stratotankers." March's first KC-135, "The Mission Bell," arrived on October 4, 1963. For the next twenty years this venerable team would dominate the skies over what had come to be called the Inland Empire as the 22d Bombardment Wing played a feature role in the Strategic Air Command's mission. During this period, both tankers and bombers stood alert at March as part of America's nuclear deterrent force.

"Originally known as March Field, the base dates to World War I and served as a bomber crew training ground in World War II and a B-52 bomber base during the Cold War. Today, KC-135 tankers, C-17 cargo planes, F-15 and F-16 fighter jets and MQ-9 drones fly out of March" (<https://oldcc.gov/march-air-force-bases-downsizing-created-ghost-town-heres-whats-there-now>).

The B-52B's maximum bomb load was 43,000 pounds (19,505 kilograms). It could carry a maximum of 27 1,000-pound conventional explosive bombs. For strategic missions, the bomber carried one Mark 6 nuclear bomb, which had a yield ranging from 8 to 160 kilotons, depending

I-918.4

on Mod, or two Mark 21 thermonuclear bombs, each with a yield of 4–5 megatons.

I-918.4
Cont.

EPA Federal Facilities Forum Issue Paper:

SITE CHARACTERIZATION FOR MUNITIONS CONSTITUENTS

https://www.epa.gov/sites/default/files/documents/site_characterization_for_munitions_constituents.pdf

EPA Munitions Policy and Guidance.

Explosive soil. Explosive soil refers to any mixture of explosives in soil, sand, clay, or other solid media at concentrations such that the mixture itself is reactive or ignitable. The concentration of a particular explosive in soil necessary to present an explosion hazard depends on whether the explosive is classified as “primary” or “secondary.” Guidance on whether an explosive is classified as “primary” or “secondary” can be obtained from Chapters 7 and 8 of TM 9-1300-214, Military Explosives. (Pg. ix).

Military munitions. All ammunition products and components produced for or used by the armed forces for national defense and security, including ammunition products or components under the control of the Department of Defense, the Coast Guard, the Department of Energy, and the National Guard. The term includes confined gaseous, liquid, and solid propellants, explosives, pyrotechnics, chemical and riot control agents, chemical munitions, rockets, guided and ballistic missiles, bombs, warheads, mortar rounds, artillery ammunition, small arms ammunition, grenades, mines, torpedoes, depth charges, cluster munitions and dispensers, demolition charges, and devices and components thereof.

I-918.5

The term does not include wholly inert items, improvised explosive devices, and nuclear weapons, nuclear devices, and nuclear components, other than non-nuclear components of nuclear devices that are managed under the nuclear weapons program of the Department of Energy after all required sanitization operations under the Atomic Energy Act of 1954 (42 U.S.C. 2011 et seq.) have been completed (10 U.S.C. 101 (e)(4)).¹⁰ (pages xi, x).

Military Munitions has not been sufficiently analyzed in the EIR. This site has been used for chemical storage, nuclear weapons storage and explosive munitions for over 100 years. Hazardous waste at the Project site has not been adequately analyzed. A lot has happened during the past 100 years. There was two World Wars and a Cold War. How deep are these chemicals, explosives and/or their components in the ground? Did some of this leach into the soil? The grading for this project is 55 feet deep.

Fireworks are being stored at the Project site.

<https://www.upi.com/Archives/1996/09/06/Fireworks-explosion-kills-one/6841841982400/>

Fireworks explosion kills one.

<https://www.sandiegouniontribune.com/sdut-fireworks-company-has-had-prior-accidents-2010jul11-story.html>

This Fireworks Company has had prior accidents.

This is a safety concern that residents living nearby are being exposed to dangerous fireworks in the bunkers near their church, schools and homes. What safety measures will be in place to safely remove tons of fireworks from the community?

I-918.7

The explosion at the Rialto facility could be felt at my house in Perris. It felt like a big earthquake. A fireworks explosion that close to hundreds of homes poses a huge safety risk.

Existing development within the Project site consists of a non-operational water tower, an existing Eastern Municipal Water District (EMWD) water tank, paved and dirt access roads, and 16 bunkers and related structures that were previously used for munitions storage by the Air Force prior to March AFB's realignment in 1993. **All of the bunkers are currently used by Pyro Spectaculars Inc. for the storage of fireworks.** While the Specific Plan Area primarily encompasses existing development and previously disturbed land, the Conservation Easement primarily consists of open space and undeveloped land. (EIR Page 3-1)

"The closest schools to the Project site, Benjamin Franklin Elementary School and Amelia

I-918.8

Earhart Middle School, are located south of the Project site in the Orangecrest neighborhood. The Benjamin Franklin Elementary School is located approximately 3,064 feet south of the Specific Plan Area and the Amelia Earhart Middle School is located approximately 3,315 feet south of the Project site. Additionally, Grove Community Church Preschool is located on the **Grove Community Church campus, which is approximately one-quarter mile south of the Specific Plan Area** (EIR 3-1).

This is not accurate as the Grove Church and school measure less than 625 feet to 732 feet from the Project Buildings. The Project is across Barton Street from the Project. The trucks, with their noise and harmful pollution, will be using Barton Street directly next to the church and school. This has not been analyzed in the EIR.

The Grove Church and School are very close to the Project. Barton Ave. borders the church on the east. Hundreds of trucks and vehicles will use Barton south through the Orangecrest Community and past the Community Park to Orange Terrace Parkway and past an Elementary School to Trautwein. The trucks will travel through the heart of the community. Trucks will use Van Buren to the 91 Freeway or use Wood to Cajalco to the I-15 to get to their destinations.

“The closest schools to the Project site, Benjamin Franklin Elementary School and Amelia Earhart Middle School, are located south of the Project site in the Orangecrest neighborhood.

I-918.8
Cont.

Truck Routes

Trucks from this Project will be going through the Communities of Orangecrest, Woodcrest, Mead Valley and Lake Mathews. The trucks will travel directly next to the Orangecrest Community Park. The truck routes are not included in the EIR for analysis. Numerous schools are along these routes. Homes (sensitive receptors) are 415 feet from warehouses along the north portion of the project site. Along the southern portion of the project site the distance is less than a 1000 foot buffer.

Brown Street will allow traffic from the warehouses to travel north on Brown Street entering more residential neighborhoods onto Alessandro.

The Project site should be left vacant considering the past and current use of the site as a munitions and fireworks storage facility.

Over the 100 years this site has been used by the Air Force for numerous types of uses where chemicals, munitions, hazardous waste and nuclear weapons have been used and stored.

The site must have a very thorough geological study performed. It is estimated that the grading will be over 55 feet in depth. The analysis of the soil must be that deep. Grading dirt that is contaminated and mixing with other soils contaminates all of the soil. Boring holes in numerous locations 50 feet deep must be performed to adequately analyze the current status

I-918.9

I-918.10

of the soil. Leaching from chemicals, black powder, and other hazardous materials on the site must be determined before the site can be declared safe.

Please choose the **“NO PROJECT ALTERNATIVE”**. This Project site is not safe. It might never be safe.

The US Government in the past has a history of dumping tons of hazardous waste on Air Force, Army and Navy property. For over 100 years this Air Force base has had hazardous waste dumped on the land surrounding it. This site must have more than the minimum 5 foot boring test holes. The tests must be numerous and go down to a minimum of 55 feet. The soil must be completely analyzed.

A complete report must be made as to how, when and where the pyrotechnic fireworks will be addressed.

Sincerely,

Debbie Walsh

Letter I-918

Debbie Walsh
March 10, 2023

- I-918.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-918.2** This comment raises concern for the Project site's existing conditions, specifically related to munitions storage (i.e., ordnance) and existing operations as storage for fireworks. The comment suggests the Geotechnical Exploration (Appendix G-1) is not sufficient in establishing existing conditions on site. The comment further questions the location, type, quantity, and safety related to existing conditions. The Draft EIR explains that the site includes 14 bunkers that were previously used for munitions storage by the Air Force prior to the March AFB's realignment in 1993. The usage of the bunkers for fireworks by Pyro Spectaculars Inc. is expected to cease in 2024 and all removal activities will be conducted pursuant to all applicable regulatory requirements. As of that date, no fireworks or any other ordnance will be stored on the Project site. The Project does not involve or propose the storage of fireworks on the Project site.
- I-918.3** This comment quotes the Geotechnical Exploration's review of preliminary grading plans. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-918.4** This comment asserts the Project site is used to detonate bombs and details the military history of the March AFB. The comment asserts the munitions have not been sufficiently analyzed in the EIR. Bombs are not currently being detonated at the Project site; the comment presents no evidence to the contrary. The Draft EIR discloses the site includes 14 bunkers that were previously used for munitions storage by the Air Force prior to the March AFB's realignment in 1993. With respect to the munitions stored in the WSA, please see Recirculated Section 4.8, Hazards and Hazardous Materials, which describes the potential hazards associated with the bunkers on site, as well as former uses by March AFB on site. Further, the quotes provided by the comment from the March Air Reserve Base website and the U.S. Department of Defense website detail the prior use of the March AFB as a base for bomber jets. The usage of the base by bomber jets, and even storage of the contents of those jets, does not provide evidence or suggest in any way that bombs are being detonated at the Project site, and does not in any way speak to the current use of the site.
- I-918.5** This comment cites EPA policies regarding munitions and explosive soil and asserts that military munitions have not been sufficiently analyzed in the Draft EIR. The comment further questions whether "some of this" leached into soil and the depth of any "chemicals, explosives and/or their components in the ground." As discussed above, and further addressed in Recirculated Section 4.8, Hazards and Hazardous Materials, the environmental status of the Project site has been fully characterized based on years of analysis under the oversight of multiple regulatory agencies, including the United States Environmental Protection Agency, the Department of Toxic Substances Control, and the Regional Water Quality Control Board, in addition to numerous studies prepared in connection with the Project itself, including a Phase I Environmental Site Assessment (ESA) and Phase II ESA. The Phase I ESA assessed whether soil or other additional testing was necessary to characterize the extent, if any, of

contamination on the Project site. The Phase II ESA sampling was conducted as a result of the recommendations in the Phase I ESA. The Phase II ESA found that all constituents of concern in soil samples collected during the Phase II ESA were below commercial/industrial screening levels. As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, additional research was conducted that confirms that all constituents of concern (COCs) in soil samples collected during the Phase II ESA are also below construction worker and residential screening levels. The Phase I determined the depths at which COCs could be encountered and the Phase II sampled to those depths. Given that all COCs in soil in the Phase II ESA are below the most conservative residential and construction worker standards, rather than only the required commercial/industrial standards, there is no indication that any COCs would be encountered below those depths, much less at 50 feet below ground surface. As discussed in Recirculated Section 4.8, Hazards and Hazardous Materials, the environmental soil sampling was completed “in the locations, and to the depths, judged appropriate based on the potential concern for the former Ordnance Storage Facility / Weapons Storage Area activities to have caused a potential impact to shallow soils. Historical research indicates these former activities occurred at the existing site grade. There is no indication of former activities /features likely to have caused a release (of the chemicals of concern for which analyses were completed) that originated well below the existing ground surface (such as deeply buried tanks or pipelines, etc.). Leighton completed various environmental soil sampling trenches to five feet deep below ground surface (bgs), as well as environmental sampling borings to approximately 25 to 30 feet bgs. ... Given the known site conditions, and future planned site usage, the depth of environmental investigations were appropriate.” As such, no further sampling or analysis is required. Please see Recirculated Section 4.8, Hazards and Hazardous Materials, for further discussion of the Project site’s environmental characterization.

- I-918.6** This comment is a copy of Table 2-1, NOP Comments, from the Draft EIR. The NOP comments were addressed in the preparation of the Draft EIR. The comment does not include any specific issues or concerns related to the adequacy of the environmental analysis included within the Draft EIR. As such, no further response is provided.
- I-918.7** This comment notes the potential risks associated with firework explosions and includes references to instances in which the company that stores fireworks on site (Pyro Spectaculars Inc.) had prior accidents. The comment asks about the safety measures to remove these fireworks off site and is similar to Comment I-918.2. See Response I-918.2 for discussion on handling hazardous materials on site. As noted above in Response I-918.2, the usage of the bunkers for fireworks by Pyro Spectaculars Inc. is expected to cease in 2024 and all removal activities will be conducted pursuant to all applicable regulatory requirements. As of that date, no fireworks or any other ordnance will be stored on the Project site. The Project does not involve the storage of fireworks.
- I-918.8** This comment asserts the preschool on the Grove Community Church campus is between 625 to 732 feet from the Project’s proposed buildings. The Draft EIR recognizes that the existing Grove Community Church preschool is within one-quarter mile of the proposed Campus Development. MM-HAZ-2 (Materials Storage Near School) would prohibit facilities within a quarter mile from storing, handling, or using toxic or highly toxic gases at quantities that exceed threshold levels established by California Health and Safety Code 25532. Further, the comment states the Draft EIR did not analyze potential impacts related to truck traffic noise and associated pollution on Barton Street. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; trucks can only access the parcels within the

Campus Development via Cactus Avenue. Trucks associated with the Project will not have access to Barton Street.

- I-918.9** This comment states the Project would result in truck traffic through the Orangecrest, Woodcrest, Mead Valley, and Lake Mathews residential communities, and that the Draft EIR did not include analysis on the potential impacts. This comment also asserts that the proposed truck routes are not included in the Draft EIR for analysis, which is incorrect. The truck routes for the Project can be found at Figure 3-6 of Recirculated Chapter 3, Project Description. As shown in Figure 3-6, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible from Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, the truck routes will continue to be enforced by the relevant jurisdictions. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-918.10** This comment states the Project site should remain vacant based on past and current uses on site. The comment raises concern for hazardous materials on site and asserts additional analysis is required to assess soil contamination. Please see Recirculated Section 4.8, Hazards and Hazardous Materials, and Response I-918.5 above, regarding additional information about the extent of soil characterization as well as past uses and testing in the bunkers at the Project site.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 202111030

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the

past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

**RE: PUBLIC COMMENT FOR THE WEST CAMPUS UPPER PLATEAU PROJECT,
ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304**

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas. The proposed project is less than a quarter mile from a preschool, and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently and adamantly requested by the community.

This area consists of beautiful, pristine habitat which is home to many birds, reptiles, and animals. As an individual who spent her career protecting threatened and endangered species and their habitats, I have serious concerns about the shrinking of open spaces and destruction of habitat in the City and County of Riverside. I ask that you require the project applicant to make every effort to adequately survey for and preserve endangered and threatened species. Many City and County of Riverside residents consider open-space a treasured amenity.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? It is my understanding that the final EIR should include wildlife studies from within a one-year timeframe to satisfy the requirements of the California Department of Fish and Wildlife and U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

I-922.2

Public Comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Page 2

March 8, 2023

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why was the plant survey during a drought year? How can one say it is absent or assess the significance of impact unless its absence is documented during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that rare plant life is not being destroyed unless a more thorough and meaningful survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing habitat mitigations? How can you ensure the public that these mitigation measures will be enforced? The conservation easement and management entity 10 years after the settlement should be formalized prior to any approvals being granted.

Thank you for allowing me the opportunity to provide comments on this project.

Sincerely,

Honey Bernas

**RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU
PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO.
2021110304**

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently and adamantly requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?

I-922.3

**PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT,
ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304**

Page 2

March 9, 2023

5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis, including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health, and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to the issuance of demolition or grading permits. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be properly removed.

Thank you for allowing me to provide comments on this project.

Sincerely,

Honey Bernas

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

I-922.4

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was

ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Page 3

March 9, 2023

never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for allowing me the opportunity to comment on your project.

Sincerely,

Honey Bernas

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van

I-922.5

March 9, 2023

Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on February 2, 2023, a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. Children were late for school, parents were late for work, etc. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety, not to mention the increased burden of road maintenance costs to the City and County.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Honey Bernas

**RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU
PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO.
2021110304**

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-922.6

March 9, 2023

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I grew up in an area surrounded by warehouses and truck traffic. Many residents and generations of residents suffered from lung issues, including asthma and COPD. There were many days the schools would prohibit us from having recess or participating in physical activity due to the air quality being harmful. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening date of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Honey Bernas

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

I-922.7

March 9, 2023

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for, your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Honey Bernas

Riverside, CA 92518

**RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU
PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO.
2021110304**

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-922.8

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics, quality of life, health, and decreased home values for the residents who will have to live with this development for decades to come.

Letter I-922

Honey Bernas
March 10, 2023

- I-922.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-922.2** This comment is a modified version of Form Letter C – Biological Resources with the addition of the following: “This area consists of beautiful, pristine habitat which is home to many birds, reptiles, and animals. As an individual who spent her career protecting threatened and endangered species and their habitats,”; “Many City and County of Riverside residents consider open-space a treasured amenity.” These modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter C Response.
- The comment also states: “The conservation easement and management entity 10 years after the settlement should be formalized prior to any approvals being granted.” The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity.
- I-922.3** This comment is Form Letter D – Hazards. As such, in response to this comment, please see Form Letter D Response.
- I-922.4** This comment is Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.
- I-922.5** This comment is Form Letter G – Traffic with the addition of: “Children were late for school, parents were late for work, etc.” and “not to mention the increased burden of road maintenance costs to the City and County.” The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter G Response.
- I-922.6** This comment is Form Letter B – Air Quality with the addition of: “I grew up in an area surrounded by warehouses and truck traffic. Many residents and generations of residents suffered from lung issues, including asthma and COPD. There were many days the schools would prohibit us from having recess or participating in physical activity due to the air quality being harmful.” Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be < 0.01 , which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be < 0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts identified in the Draft EIR. In response to the remainder of this comment, please see Form Letter B Response.

- I-922.7** This comment is Form Letter F – Jobs. As such, in response to this comment, please see Form Letter F Response.
- I-922.8** This comment is Form Letter A – Aesthetics with the addition of “quality of life, health, and decreased home values for” in the last paragraph. The modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter A Response.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

I-923.1

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. As a professional in the development industry, we all know what the term "business park" means. It is borderline offensive that the applicant refers to 200,000 sq. ft., 50' tall building as a business park use. That is clearly a high-cube warehouse.

I-923.2

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Why wasn't an alternative design studied which lowered the building pad heights so that the top of each proposed building was no higher than the current topography in the area? As proposed the building pad is nearly level with the elevation of my backyard and pool which look over the property. Adding a 50' building to the proposed pad and the view of the mountains and city area eliminated.

I-923.3

I-923.4

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

I-923.5

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Kyle Warsinski

Letter I-923

Kyle Warsinski
March 10, 2023

- I-923.1** This comment is the first two paragraphs of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.
- I-923.2** This comment questions the definition of “business park”. Table 3-2, Land Uses by Land Use Designation, of Recirculated Chapter 3, Project Description, identifies uses allowed within the “business park” land use designation. The March JPA General Plan includes warehousing in the definition of Business Park uses. Moreover, wholesale, storage and distribution are expressly identified as allowed uses within the Business Park Zoning District, as identified in the March JPA Development Code. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-923.3** This comment is the same as the third paragraph of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.
- I-923.4** This comment requests the inclusion of an alternative that lowers building heights to be no higher than the current topography. CEQA Guidelines Section 15126.6(f) provides that “[t]he range of alternatives required in an EIR is governed by a “rule of reason” that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project.” As examined in Section 4.1, Aesthetics, of the Draft EIR, Topical Response 1 – Aesthetics, and Form Letter A Response, the EIR has disclosed the Project’s aesthetic impacts, applied an appropriate threshold of significance based on 2022 March JPA CEQA Guidelines, and determined the Project’s impacts to be less than significant with implementation of PDF-AES-1 through PDF-AES-16 and MM-AES-1 through MM-AES-3. As such, the reduction of aesthetic impacts would not be required to be considered in the selection of a reasonable range of alternatives to the Project. The alternatives presented in Chapter 6, Alternatives, of the Draft EIR, have all been evaluated for potential aesthetic impacts. Similar to the analysis included in Section 4.1, Aesthetics, consideration of visual changes to publicly available views of the Project site were considered. Alternative 2 (Reduced Development) and Alternative 4 (Reduced Cultural Resource Impact) were determined to have reduced aesthetics impacts compared to the Project. Topical Response 8 – Alternatives, presents and analyzes a new Alternative 5 – Non-Industrial Alternative, determining its aesthetic impacts would be reduced compared to the Project’s.
- I-923.5** This comment is the same as the last for paragraphs of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter A Response.

Subject: Subject: Alternate Plan Proposal/Public comment section 4.12 for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau and comments on the EIR, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational

I-924.1

opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County. Tesla just opened nearby and would probably be excited about contributing to this plan.

2. Alternate plan #2: The Veterans Village Approach

· Concept: A veteran’s village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran’s Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

I-924.1
Cont.

3. Alternate plan #3: The State or County Park Approach

· Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan’s goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Also section 4.12 of the EIR Population and Housing fails to adequately analyze the the population and housing issues by concentrating on the the overall County data for comparison which is not relevant in this situation. The county is bigger than some states and the warehouse building concentration is local and completely overbuilt. Not to mention your report abandons the housing issues by concentrating on jobs that will not be able to afford housing in the local area. The forecast growths are based on county data and not relevant. The truck situation is extreme now and dangerous on the 215 freeway from the 91 coming up the hill and your own office admits there is no plans to extend the 215 with dedicated truck lanes. You already have residential housing with Village West but now claim the land is incompatible for housing. This section is full of nothing but assumptions with no supporting evidence.

I-924.2

I-924.3

I-924.4

You should also review the report in the Press Enterprise, on the World Logistics Center, March 8, 2023, with 40.6 million square feet of warehouse space starting development.

I-924.5

Thank you for allowing me to provide comments on this project.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach & middot; Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
& middot; Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
& middot; Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

• Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach • Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

• Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

• Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

• Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach • Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

• Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

• Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

• Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau Project, EIR, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for the opportunity to provide comments on the March Joint Powers Authority Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents and is less than a quarter mile from a preschool. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.comment

Air Quality:

The draft EIR in section 4.2 refers to the dangers of particulate matter (PM) in the air. It cites that PM increases in the number and severity of asthma attacks, causes or aggregates bronchitis and other lung diseases and reduces the body's ability to fight infections. It also acknowledges that children exposed to PMs may experience a decline in lung function. Further, the draft EIR discloses that more than 90% of Diesel Particulate Matter (DPM), which comes from the operation of diesel trucks, is a subset of PM2.5, one of the most dangerous categories of PM.

While the draft EIR acknowledges some of the ill effects of PM, particularly regarding respiratory issues, I did not see any data or acknowledgment of what we know are serious neurological effects due to air pollution including specifically PM. Epidemiological studies consistently associate exposure to urban air pollution with increased risk of dementia. Air pollution has also been implicated in an increase in autism in children. I have listed just a few scientific articles below as an example of the research linking air pollution with neurological diseases, but there is a whole body of research on this topic. As you will see, particulate matter is especially implicated in neurological harm in children and adults.

Why has the EIR not informed the public of the serious consequences on cognitive health that will result from this Project? Perhaps it is because it would scare the public - asthma is one thing but autism and Alzheimer's Disease are a different kind of devastating outcome that the public should be made aware of. Given this information, the fact that the Project would be 794 feet from the Grove pre-school is quite literally immoral.

Even this overly optimistic draft EIR acknowledges that the Project will have significant and unavoidable impacts on air quality. Specifically, the AQ1 threshold of significance, both consistency criteria 1 and criteria 2, will not be met even with all of the available mitigation measures. What it does not disclose is the full impact of the reduced air quality on those who live in the region.

Research regarding the effects on cognitive health caused by the significant and unavoidable impacts on air quality by the proposed Project **must** be performed and reported to the public before this Project can proceed.

Justifications:

I understand that the draft EIR justifies the human cost of decreased air quality by saying there is an economic benefit to the community. I could see that some projects might bring a benefit to our community, such as projects that, for example, provide significant educational opportunities for our local kids. However, this Project does not provide any significant benefit to our community.

The argument that the 2,600 jobs supposedly created by this Project are sufficient to offset serious health harms is ludicrous. First, even if the Project initially does employ 2,600 workers, these workers will soon be replaced by automation. Indeed, a 2017 study done by researchers at the University of Redlands found nearly two thirds of Inland Empire jobs were at risk of automation in the next decades. Warehouse workers lead a list from the Institute of Spatial Economic Analysis (ISEA), a division of the University's School of Business. In 2016, the Inland Empire had 55,660 warehouse jobs with 47,310 of them automatable according to ISEA. The average annual wage was \$29,000 which is far below what is required to live in the area where the Project will be located.

So, we will be left with the benefit of very few local jobs but all of the costs of air pollution and other significant health harms. And any economic gain would be wiped out by the additional health care costs for caring for people with autism and dementia. Of course the emotional costs of these diseases on loved ones are impossible to calculate.

Thank you for allowing me to provide comments on this project.

Sincerely,

Melody Clark, Ph.D.
5085 Queen St. Riverside, CA 92506

Letter I-926

M. Clark
March 10, 2023

- I-926.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- I-926.2** This comment raises concerns regarding health risks associated with Project DPM emissions. The health risks associated with DPM emissions are discussed in Recirculated Section 4.2, Air Quality. A health risk analysis was performed for the Project to evaluate the risks associated with diesel particulate matter at sensitive receptor locations (including Grove Preschool) using the latest health data for diesel particulate matter available from OEHHA. The analysis indicated that the Project would not result in significant health impacts for any sensitive receptors in the vicinity. Additionally, modeling was performed consistent with SCAQMD LST guidance to evaluate if emissions resulting from the construction or operation of the proposed Project would exceed localized significance thresholds for emissions of CO, NO_x, PM₁₀, and PM_{2.5}. The results of the analysis indicate that neither construction nor operational emissions would exceed the localized significance thresholds established by SCAQMD for any nearby sensitive receptors.
- I-926.3** This comment disagrees with the assessment of the Project's community benefits and Project job generation. Public benefits provided by the Project would include increased job opportunities for local residents, preservation of open space, extension of the roadway infrastructure and the pedestrian and bicycle circulation system, a new approximately 60-acre public park, and construction of the Meridian Fire Station, at the intersection of Opportunity Way and Meridian Parkway (see Topical Response 6 – Meridian Fire Station, for additional details). Regarding Project job generation, please see Topical Response 5 – Jobs. Regarding automation, while existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR.
- I-926.4** This comment cites two articles: “Ambient Air Pollution and Autism in Los Angeles County, California,” and “Air Pollution and Dementia: A Systematic Review.” Both of these articles discuss the potential health effects of air pollution. A detailed discussion about the potential health effects of air pollution is included in Recirculated Section 4.2, Air Quality.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Mason Deluhery, 18870 Lurin ave riverside california 92508

Subject: West Campus Upper Plateau Environmental Impact Report

Dear Mr. Fairbanks:

I am a homeowner in the Orangecrest neighborhood. I have lived in this beautiful neighborhood since 2004 and selected this area for several reasons, of which the open land on the northern border of our neighborhood was a major attraction. I have enjoyed this space for leisure walks, mountain bike rides, and walks with my dogs, for nineteen years. The natural landscape away from traffic, noise, concrete, and anything man made have been an important part of my life and something I treasure and fear of losing.

I-928.1

With that said, thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods (mine just south of this area) located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-928.2

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission

equivalents)

2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Magie Lacambra

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

As an original homeowner in the Orangecrest Community I am writing to you with major concern over the proposed plans for the open land just north of our community known as the March JPA West Campus Upper Plateau. This beautiful open area offers calm and tranquility for those of us in this neighborhood, not to mention the unobstructed view of the beautiful mountain ranges to the north. This escape from the noise, pollution and congestion of the city is a valuable asset to our community and one that I personally enjoy with walks and mountain bike rides.

I-929.1

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-929.2

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I urge you to weigh your decision on the future of this area as if you personally lived in our precious neighborhood.

I look forward to your response.

Sincerely,
Magie Lacambra

Mr. Dan Fairbanks, AICP
Planning Director
March Joint Powers Authority (March JPA)
14205 Meridian Parkway, Suite 140
Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-930.2

I have written a lot of letters on this project, but I wanted to summarize why I believe the Project will never be built as proposed, within the draft EIR context. This letter is not meant to be detailed, but merely a synopsis of the key issues that the Project, as proposed, cannot address.

I-930.3

Inconsistencies with JPA Planning Documents

- Aesthetics p183 – AES-1 and AES-2 – The project will have a significant and unavoidable impact by adversely effecting scenic vistas
- Air Quality p226 – AQ-1, AQ-2, and AQ-3 – The project will conflict with the 2022 AQMP, result in a cumulatively considerably increase in NO₂, ozone, PM_{2.5}, and PM₁₀ and expose sensitive receptors to cumulatively considerable toxic air contaminants.
- Biological Resources p286 -BIO-1 and BIO-2 – The project will have substantial adverse impacts on candidate, sensitive, or special status species and Riversidean sage scrub.
- Cultural Resources p 349 – CUL-1 – The project will irrevocably destroy weapons storage igloos unique to the state of California that have local and state significance. The construction of this project will destroy the property's historic character and a unique piece of March ARB that provides a unique look into Air Force history from World War II through the first Iraq War.
- Energy Resources p 376 – ENG-1 - The project will result in wasteful and inefficient energy usage through unnecessary fossil fuel construction and operation equipment. These effects can be mitigated with appropriate electrification mitigation requirements.
- Geology and Soils p 395 – GEO-1 – No details on given on terracing of slopes or how the temporary or permanent cut slopes will be performed, nor on the final grading of the overall project. Given the lack of detailed information, it is impossible to state that MM-GEO-1 on slope stability will be sufficient to prevent landslides due to the lack of details on the project plans.

I-930.4

I-930.5

I-930.6

I-930.7

I-930.8

I-930.9

- Greenhouse Gas emissions – GHG-1 and GHG-2 – the project will generate substantial extra VMT and substantial emissions of greenhouse gases through construction, pouring of concrete foundations, and operational phase emissions of 2,000 heavy-duty trucks and 33,000 daily passenger trips. This will have a significant impact on the environment and is not adequately mitigated with the existing mitigation measures. I-930.10
- Hazards and Hazardous Materials – HAZ-1 – The Project has not demonstrated that soil to be graded in the project is free of contaminants including PCBs, PFAS, radioactivity, Agent Orange and other herbicides, and potential contaminants from the Air Force Landfill that may have migrated. Gridded soil testing throughout the project construction area is needed to assure the community the soil disturbance will not be hazardous. I-930.11
- Hydrology and Water Quality – HYD-2 – The Project will create impermeable concrete slabs over almost 300 acres of a hilltop, thus clearly decreasing groundwater infiltration and recharge. Groundwater recharge being unrecognized by the RWQCB Basin Plan does not mean it does not happen, it merely means it isn't directly recharging an aquifer used for humans right now. I-930.12
- Land Use and Planning – LU-2 –
 - o The Project conflicts with 30 years of March JPA planning documents (Final Reuse Plan, General Plan, Draft General Plan 2010, 2012 CBD Settlement Agreement) that indicate that the Specific Plan area has never been considered for Industrial Zoning, while proposing industrial land use as the majority land-use category. I-930.13
 - o The Project's proposed redesignation of Mixed-Use for warehouse uses 'business-park enterprises' overturns 25 years of established no warehouse uses in Mixed-Use zoning. I-930.14
 - o The Project is not consistent with Land Use Element Transportation Goal 8 due to its lack of public transit access. I-930.15
 - o The Project is not consistent with March JPA General Plan Goals for Housing – Residential zoning is allowed in the project under C2 or C1 zoning at densities of 6.0 or 3.0 units per/acre, respectively. Residential Zoning is not an incompatible land-use as shown by the surrounding residential communities in the same ALUC zoning categories. I-930.16
- Noise – NOI-1, NOI-2 – The project has not been adequately evaluated for noise levels due to insufficient information on individual parcel site plans and an incomplete analysis of the noise levels of the full 60 acre Park which was not included in the Project's noise analysis. I-930.17
- Population and Housing
 - o P656 – Jobs/housing balance – The County of Riverside is 'out of compliance' with Housing Element Law I-930.18
 - o POP-1 – This project was not included in 2016 SCAG RTP-SCS and would thus potentially induce population growth. I-930.19
 - o This entire section relies on out-of-date and incorrect SCAG projections that do not reflect 2021-2022 population, jobs, and housing numbers that are significantly different and paint an entirely different picture of the local jobs/housing balance. Housing and Rental prices are skyrocketing due to insufficient supply and unemployment is at a 50-year low nationally and an all-time measured low in the county and MSA. The high cost of housing is actually inducing net migration out of the state of California. Finally, the jobs/housing ratio based on current California EDD and census household numbers indicates a ratio of imbalance in favor of jobs (1.35, rather than the 1.05 quoted). I-930.20

- Public Services – PUB-1 – The project will add to existing traffic and enforcement concerns within the March JPA planning area, including drag racing, spin-outs, and truck route violations. \$100,000 Contributions from the project for 2 years will not cover the 30+ year operational lifetime enforcement requirements and will not cover City of Riverside costs at all. I-930.21
- Transportation – TRA-1 –
 - o The proposed circulation throughout the project area is completely inconsistent with the General Plan Circulation. Barton St. does not connect through, Brown St. does not connect to Cactus Ave, and Cactus Ave ends at Camino Del Oro, not at Barton. As a result, the planned circulation is in conflict with program policies. I-930.22
 - o Proposed Class II bike lanes are incompatible with arterial truck collector routes and are a dangerous hazard to cyclists. Class IV bike lands with physical barriers are needed to prevent cyclists from deadly accidents and avoid conflict with TRA-1 and TRA-3. I-930.23
 - o Transportation trip rates are inconsistent with SCAQMD rule 2305 weighted truck trip rates that are appropriate for speculative facilities with unknown tenants. Using Rule 2305 truck trip rates would double the truck trips and VMT and substantially change the air quality and health risk assessment sections. I-930.24
- Tribal Cultural Resources – CUL - 1Impacts to Tribal Cultural Resources are significant and unavoidable with the proposed Project. No agreement has been entered into with the local tribes through direct government-to-government consultation, nor has a boundary been determined. I-930.25
- Environmental Justice – The draft EIR fails to mention Environmental Justice despite the project being located in a 98th percentile impact census tract. I-930.26
- Cumulative Impacts – The Project fails to adequately address cumulative impacts of nearby and regional warehouse projects on all environmental resource areas. We have provided a list for consideration. I-930.27

No Non-Industrial Alternative Plans

Section 6 provided a couple of industrial-centric alternative plans with no real thought behind them. Members of RNOW have been asking for real alternative for 12 months, including residential, solar power generation, battery storage, and other non-industrial uses that would be less intensive. The Residential Alternative ‘Considered but rejected’ indicates that the project (1) fails to generate jobs and (2) is inconsistent with existing land-use zoning.

We agree that a residential alternative would not generate long-term jobs. However, we note that the current jobs situation is such that there are excess jobs and insufficient housing regionally. The RHNA is literally requiring jurisdictions to put in sufficient housing and the member jurisdictions of the MJPA are not doing a particularly great job at adding housing. Additionally, we note that industrial zoning, as proposed by the Project and all alternatives presented by the Project applicant is equally inconsistent with existing land-use zoning. Moreover, industrial zoning is inconsistent with a host of other issues identified in Air Quality, Greenhouse Gases, and other sections. I-930.28

Members of the community have provided three alternative plans that are more consistent with the existing land-use and project goals than the proposed Project.

- 1 – Campus alternative – an actual campus for college students and researchers.
- 2 – Veteran’s village alternative – a mixed-use low density housing and veteran’s services center, including medical, mental-health, jobs, and entrepreneurship support.
- 3 – State or Local Park alternative – a very low impact addition to the March Air Field Museum that would celebrate the cultural heritage of the Air Force, the unique Weapons Storage Igloos, and a walking tour with historical plaques about Camp Haan and Camp Anza.

I-930.28

Sincerely,

Mike McCarthy, PhD

Riverside Neighbors Opposing Warehouses

Letter I-930

Mike McCarthy

March 10, 2023

- I-930.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-930.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- I-930.3** This comment introduces the intent of the comment letter and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-930.4** This comment asserts that the Project would result in significant and unavoidable aesthetic impacts. As discussed in Section 4.1, Aesthetics, of the Draft EIR and Topical Response 1 - Aesthetics, with implementation of mitigation measures, the Project would result in less than significant impacts related to aesthetics. No revisions to the analysis are required in response to this comment.
- I-930.5** This comment asserts the Project would conflict with the 2022 AQMP, result in a cumulatively considerable increase in NO₂, ozone, PM_{2.5} and PM₁₀, and expose sensitive receptors to cumulatively considerable toxic air contaminants. As analyzed in Recirculated Section 4.2, Air Quality, the Project would result in significant and unavoidable impacts related to the conflict with or obstruction of implementing an applicable air quality plan. Similarly, because the Project would exceed the project-level thresholds for regional VOC, NO_x, CO, PM₁₀, and PM_{2.5} emissions during operation, The Project's cumulative impacts with respect to such emissions would be considerable and significant. With regard to toxic air contaminants, as explained in Recirculated Section 4.2, Air Quality, SCAQMD does not have an approved methodology for evaluating cumulative TAC health impacts. Per SCAQMD's White Paper on Potential Control Strategies to Address Cumulative Impacts from Air Pollution, projects that do not exceed the project-specific significance thresholds are generally not considered to be cumulatively significant. Because the proposed Project does not exceed the applicable cancer and non-cancer significance thresholds, TAC emissions generated by the proposed Project would not be considered cumulatively considerable. Please see Recirculated Section 4.2, Air Quality, for additional information.
- I-930.6** This comment asserts that the Project would result in substantial adverse impacts on candidate, sensitive, or special status species and Riversidean sage scrub. As noted throughout Section 4.3, Biological Resources, of the Draft EIR, with incorporation of mitigation, all potentially significant impacts to candidate, sensitive, or special status species and Riversidean sage scrub are reduced to less than significant levels. No revisions to the analysis are required in response to this comment.
- I-930.7** This comment asserts that the Project would destroy weapons storage igloos unique to the state of California that have local and state significance. As detailed in the Revised Weapons Storage Area Report (Appendix E-2) and the BFSAs Response to Comments (Appendix E-3), the WSA report erroneously stated the WSA igloos were the only United States Air Force-associated munitions storage

igloos in California. Travis Air Force Base includes munitions storage igloos as part of the Travis AFB ADC Readiness National Register Historic District Area. Munitions bunkers are also found at Beale Air Force Base in Marysville and Edwards Air Force Base in Edwards. Further, the WSA igloos are not unique or distinctive examples of munitions storage igloos in California or the local region and are among the most common military-related weapons storage constructions. For example, similar igloos are regionally found at Fallbrook Ammunition Depot, Naval Weapons Station Seal Beach, and Marine Corps Air Station El Toro. Additionally, Concord Naval Weapons Station in San Francisco includes a larger weapons storage area that features various underground and overground bunkers constructed in different periods and styles. Sierra Army Depot in Herlong includes over 800 munitions storage igloos and igloos remain from the closed Benicia Arsenal in Benicia. The WSA report has been revised to accurately describe the state and regional context for the WSA igloos. The WSA and its individual buildings were determined not eligible under NRHP, CRHR, or MJPA CEQA Guidelines criteria for historic resources at the national, state, or local level.

- I-930.8** This comment asserts that the Project would result in wasteful and inefficient energy usage through unnecessary fossil fuel use during construction and operations. In response to this comment, please see Section 4.5, Energy, of the Draft EIR, and Recirculated Section 4.2, Air Quality. As discussed in Recirculated Section 4.2, Air Quality, additional mitigation measures that would result in more efficient use of energy and fossil fuels are now incorporated into the Project.
- I-930.9** This comment states that the Draft EIR does not provide specific detail on the proposed grading for the Project. Further, the comment states MM-GEO-1 would not be sufficient to prevent landslides due to lack of details. Appendix B includes the conceptual grading plans for the Project. Additionally, Section 6.8, Grading, of the proposed Specific Plan sets forth the grading plan development standards. As detailed in Section 4.6, Geology and Soils, MM-GEO-1 addresses potential slope stability impacts as a result of grading for the proposed Campus Development. The preliminary geotechnical investigation, included as Appendix G-1 to the Draft EIR, revealed that there are no indications of slope instability and no evidence of on-site landslides, debris flows, or rock falls. Therefore, the Project site would not be susceptible to landslides. However, as noted by the comment, grading could result in slope failure/collapse. As such, MM-GEO-1 is incorporated to reduce the potential for slope instability during grading and construction. Regarding the comment's concern for lack of detail, the Project includes phased construction scenarios for the Specific Plan Area across the Project site. The mitigation measure is designed to be consistent with applicable guidelines and regulations for March JPA and to be triggered prior to the issuance of grading permits for each proposed future development analyzed under the Specific Plan. Moreover, implementation of the mitigation measure would be monitored by a certified engineering geologist for feasibility. Therefore, no revisions to the analysis are required in response to this comment as the proposed mitigation is drafted in accordance with CEQA Guidelines Section 15126.4(a)(1)(B).
- I-930.10** This comment states that the Project will generate substantial extra VMT and substantial emissions of greenhouse gases such that a significant impact on the environment would occur and that impact is not adequately mitigated with existing mitigation measures. Please see Response A-8.7 for a detailed discussion of March JPA's selection of GHG thresholds and the Project's consistency with the Riverside County Climate Action Plan.

- I-930.11** This comment asserts that the Project has not demonstrated soils to be free of contaminants including PCBs, PFAS, radioactivity, Agent Orange, and other herbicides and potential contaminants from the Air Force Landfill. In response to this comment, please see Recirculated Section 4.8, Hazards and Hazardous Materials, and Topical Response 3 – Hazards.
- I-930.12** The comment states the Project’s construction of impermeable concrete slabs across the Project site would decrease groundwater infiltration and recharge. The comment also asserts that groundwater recharge occurs on site. This comment raises concerns with the impact analysis found within Section 4.9, Hydrology and Water Quality, specifically Threshold HYD-2. The Draft EIR determined less than significant impacts would occur as a result of the proposed Project. The impact analysis concurred with the comment’s statement regarding an increase in impermeable surfaces on site. However, as supported by the Master Project Specific Water Quality Management Plan (included as Appendix K-2) of the Draft EIR, the Project site’s soils are characterized by having slow infiltration rates and are underlain by relatively impermeable granitic bedrock. As such, the Project site would not be conducive to substantial groundwater recharge, thus, would not substantially interfere with groundwater recharge and result in potentially significant impacts. No revisions to the analysis are required in response to this comment.
- I-930.13** This comment asserts that the Project conflicts with the Final Reuse Plan, General Plan, Draft General Plan 2010, and the 2012 Settlement Agreement. The Draft General Plan 2010 was never adopted and is not applicable to the Project. In response, please see Recirculated Section 4.10, Land Use and Planning, and Topical Response 4 – Project Consistency.
- I-930.14** This comment questions whether the proposed Specific Plan’s definition of Mixed Use is consistent with the General Plan’s definition regarding warehousing. The March JPA General Plan excludes “major warehousing uses” from Mixed Use designated parcels. The proposed Specific Plan includes business enterprise within the Mixed Use designation. Business enterprise use is not major warehousing and is intended to provide a transitional environment that allows for limited commercial and office uses in conjunction with small scale industrial warehouse activity. Under Table 3-2 Development Standards, of the Specific Plan requires Business Park and Mixed Use buildings greater than 100,000 square feet to be set back a minimum of 800 feet from residential and buildings 100,000 square feet or less to be set back a minimum of 300 feet from residential. The proposed Specific Plan’s Mixed Use definition is consistent with the March JPA General Plan. No changes or additions to the project description or analyses including the Draft EIR are required.
- I-930.15** The comment asserts that the Project is not consistent with Goal 8 of the Land Use Element but references text of Goal 8 of the Transportation Element. As detailed in Table 4.10-1 of Recirculated Section 4.10, Land Use and Planning, the Project site would be served by both local transit and inter-city passenger rail service. Moreover, during construction, bus stops and shelters would be approved by the Riverside Transit Agency, as implemented by MM-GHG-11, which would provide the funding for a bus shelter on Alessandro Boulevard. Therefore, the Project would be consistent with this goal. No changes or additions are required in response to this comment.
- I-930.16** The comment asserts the Project is not consistent with housing goals found within the March JPA General Plan. Recirculated Section 4.10, Land Use and Planning, includes a consistency analysis within Table 4.10-1, Project Consistency with March JPA General Plan Goals. Of note, the General Plan limits residential land uses within the March JPA planning area because housing is incompatible with airfield

uses adjacent to the planning area. The proposed Project does not include residential land uses. As such, the proposed Project maintains consistency with the General Plan's absence of a residential land use designation within the planning area. This comment inaccurately states the Project site is zoned C-2. The March JPA General Plan designates the Project site as Business Park, Industrial, and Park/Recreation/Open Space. The Project site has not been assigned a zoning designation per the official March JPA Zoning Map, as shown on Figure 3-3, March JPA Zoning Designations, of Recirculated Chapter 3, Project Description. The comment may be referencing the Project site's compatibility zone under the March ARB/IPA Airport Land Use Compatibility Plan (ALUCP). Under the ALUCP, the Project site is located within the C1 Primary Approach/Departure Zone and C2 Flight Corridor Zone. The ALUCP provides noise and safety policies governing development of compatible future land uses in areas within the airport influence area.

- I-930.17** The comment asserts the noise impacts analyzed in the Draft EIR are not adequately evaluated due to insufficient information on individual parcel site plans and an incomplete analysis for the proposed Park. The noise analysis is based on field noise measurements and operational noise levels prediction using CadnaA software (a noise prediction model), presented in the Project Noise and Vibration Impact Analysis, included as Appendix M-1 of the Draft EIR. On-site operational noise analyses in Section 4.11, Noise, of the Draft EIR describe noise level impacts associated with the expected typical daytime and nighttime activities within the Specific Plan Area to present the worst-case noise scenarios. The analysis includes potential noise level impacts associated with the Project's Park activities. As such, the analysis concludes that the Project would not exceed the daytime and nighttime exterior noise level standards. Therefore, the operational noise impacts are considered less than significant at the nearby noise-sensitive receiver locations, and no mitigation is required.
- I-930.18** The comment states that Riverside County is out of compliance with Housing Element law. Although the Draft EIR identifies the County of Riverside as a jurisdiction which is required to plan for housing, the agency's compliance with Housing Element law is not applicable or relevant to the adequacy of the Draft EIR's environmental analysis. Regardless of the certification status for its Housing Element, unincorporated Riverside County is required to plan for the RHNA goal. No changes or additions to the Draft EIR are required in response to this comment.
- I-930.19** The comment asserts the Project is not included within the 2016 RTP/SCS and, thus would induce population growth. The analysis within Section 4.12, Population and Housing, of the Draft EIR relies on the latest RTP/SCS by SCAG (i.e., Connect SoCal or the 2020-2045 RTP/SCS). Moreover, as detailed within Section 4.12, the Project would result in employment growth, which would be within the growth projections for the region. Please see Topical Response 5 – Jobs for additional discussion.
- I-930.20** The comment asserts the Draft EIR analysis relies on inadequate data to assess impacts related to jobs/housing balance. The Draft EIR utilized SCAG's data from the most recent RTP/SCS (i.e., Connect SoCal). This is in line with other environmental analysis within the EIR that demonstrates consistency with regional plans such as the Air Quality Management Plan, which is designed to be consistent for regional planning purposes. At the time of drafting the Draft EIR, data from the US Census Bureau was not readily available across all data source needs (i.e., population, housing, and employment). Given this, the Draft EIR identified SCAG's 2020-2045 RTP/SCS (also known as Connect SoCal) as a basis for analysis due to the fact that data sources were all from the same source and to prevent data gaps between topics and available dates. For discussion on employment data, please see Topical Response 5 – Jobs for more discussion.

A jobs/housing balance is a ratio that indicates the number of available jobs in a jurisdiction compared to the number of available housing units. The ratio is one potential indicator of a community's ability to reduce commuter traffic and overall VMT by maintaining a balance between employment and housing in close proximity (Section 4.12, Population and Housing). An analysis of jobs/housing balance is based on the opportunities for a population who lives and works in an area. It is not an indication or requirement of the Project to directly meet the employment needs of the surrounding community. However, this is a desired objective of the Project, as detailed in Recirculated Chapter 3, Project Description.

As suggested by the comment, the jobs/housing ratio would be "jobs-rich," or above the 1.0 to 1.29 jobs per household "balanced" range. However, despite the differences in data sources, the Project would continue to contribute a nominal employment growth to existing and future projected conditions of Riverside County. Thus, the conclusions of the Draft EIR would remain the same. The Project would not result in substantial unplanned population growth.

I-930.21 The comment raises traffic and public safety concerns (i.e., drag racing and truck route violations) and asserts the Project's contribution/payment to the Sheriff's Department would not serve the lifetime of the Project. This comment raises concern for street racing within the Project site's vicinity and asserts existing police protection services would be indirectly impacted due to the proposed Project. The comment's assertion is speculative. Under existing conditions, the isolation and sparse development surrounding the Cactus Avenue cul-de-sac can be attractive to individuals wishing to engage in such activities. Under the proposed Project, this cul-de-sac would be eliminated, and Cactus Avenue would extend to the Project site. Project traffic would significantly reduce the times when that area is isolated, thereby relieving pressure on local law enforcement. Section 4.13, Public Services, determined the Project would not have a significant effect on police protection services. Under PDF-TRA-3, two payments in the amount of \$100,000 would be made to offset cost increases for Sheriff Department services. PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

I-930.22 The comment raises concern with circulation on the Project site and states the Project would not be consistent with the March JPA General Plan. As detailed in Section 3.5.6, Requested Approvals and Entitlements, the Project requests the approval of General Plan Amendment 21-01, which would include a modification to Exhibit 2-1, Transportation Plan, and Exhibit 2-3, Transportation Road Systems, of the General Plan, to allow for road connection and circulation changes not currently allowed or available under the General Plan or existing conditions. No changes or additions are required in response to this comment.

I-930.23 The comment asserts that the proposed Class II bike lanes are incompatible with the truck routes planned for the Project site. The comment requests Class IV bike lanes with physical barriers to prevent hazards to cyclists. As discussed in Section 4.15, Transportation, of the Draft EIR, there are currently Class II bike lanes along Alessandro Boulevard, Cactus Avenue, Meridian Parkway, and Van Buren Boulevard near the Project site. All of these are designated truck routes. Class II bikeways are bike lanes which are established adjacent to traffic lanes and share the same roadway. The Draft EIR

determined the inclusion of 5-foot Class II bicycle lanes where none currently exist would result in no impacts related to safety or the consistency with applicable program, plan, or policy addressing the circulation system. This is consistent with the existing bicycle network throughout the rest of the March JPA Planning Area.

- I-930.24** The comment asserts transportation trip rates are inconsistent with SCAQMD Rule 2305. See Response FL-B.7 for an explanation as to why SCAQMD Rule 2305 is not appropriate to use for truck trip rates.
- I-930.25** The comment asserts that impacts to tribal cultural resources are significant and unavoidable and states no agreement has been entered with the local tribes. As detailed further in Section 4.16, Tribal Cultural Resources, two tribes, the Pechanga Band of Luiseño Indians and Soboba Band of Luiseño Indians consulted with March JPA under AB 52. Furthermore, the incorporation of MM-CUL-1 was approved by the consulting tribes and would fully document the boundaries of the sites within or directly adjacent to the Project site. Moreover, the Draft EIR concluded significant and unavoidable impacts would occur even with the application of MM-CUL-1 through MM-CUL-13.
- I-930.26** The comment asserts the Draft EIR fails to analyze environmental justice. In November 2023, March JPA released a Draft Environmental Justice Element. The Draft Environmental Justice Element incorporates the environmental justice policies of the County of Riverside Healthy Communities Element pursuant to Government Code Section 65301(a) (March JPA 2023). The County of Riverside Board of Supervisors adopted environmental justice policies by Resolution 2021-182 on September 21, 2021. The County's environmental justice policies apply to the disadvantaged communities within unincorporated territory in the County of Riverside. March JPA's land use authority will revert back to the County of Riverside on July 1, 2025, in accordance with the 14th Amendment to the March JPA Joint Powers Agreement. Recirculated Section 4.10, Land Use and Planning, includes a consistency analysis for the Draft Environmental Justice Element policies applicable to the Project.
- I-930.27** This comment asserts that the Draft EIR fails to adequately address cumulative impacts of nearby and regional warehouse project. Furthermore, the comment states a list was provided for consideration. However, there is no list included within this comment letter. Regarding cumulative impacts, the impact analyses throughout the Draft EIR includes an assessment of cumulative considerable impacts in accordance with Section 15355 of the CEQA Guidelines. See Topical Response 7 – Cumulative Projects.
- I-930.28** This comment discusses alternatives to the Project that should be considered. In response, please see Topical Response 8 – Alternatives.

RE:PUBLIC COMMENT FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas. The proposed project is less than a quarter mile from a preschool, and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently and adamantly requested by the community.

This area consists of beautiful, pristine habitat which is home to many birds, reptiles, and animals. As an individual who spent her career protecting threatened and endangered species and their habitats, I have serious concerns about the shrinking of open spaces and destruction of habitat in the City and County of Riverside. I ask that you require the project applicant to make every effort to adequately survey for and preserve endangered and threatened species. Many City and County of Riverside residents consider open-space a treasured amenity.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? It is my understanding that the final EIR should include wildlife studies from within a one-year timeframe to satisfy the requirements of the California Department of Fish and Wildlife and U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Public Comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Page 2

March 8, 2023

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why was the plant survey during a drought year? How can one say it is absent or assess the significance of impact unless its absence is documented during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that rare plant life is not being destroyed unless a more thorough and meaningful survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing habitat mitigations? How can you ensure the public that these mitigation measures will be enforced? The conservation easement and management entity 10 years after the settlement should be formalized prior to any approvals being granted.

Thank you for allowing me the opportunity to provide comments on this project.

Sincerely,

Nicole Bernas

onecosmiclove@icloud.com

Letter I-931

Nicole Bernas
March 10, 2023

I-931.1 This comment is a modified version of Form Letter C – Biological Resources with the addition of the following: “This area consists of beautiful, pristine habitat which is home to many birds, reptiles, and animals. As an individual who spent her career protecting threatened and endangered species and their habitats,”; “Many City and County of Riverside residents consider open-space a treasured amenity.” These modifications to the form letter do not raise any new or different issues. As such, in response to this comment, please see Form Letter C Response.

The comment also states: “The conservation easement and management entity 10 years after the settlement should be formalized prior to any approvals being granted.” The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity.

**RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT,
ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304**

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway.

Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on February 2, 2023, a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. Children were late for school, parents were late for work, etc. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety, not to mention the increased burden of road maintenance costs to the City and County.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic section to reflect the truth.

Sincerely,
Nicole Bernas
19981 St Francis Dr

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently and adamantly requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis, including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health, and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to the issuance of demolition or grading permits. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be properly removed.

Thank you for allowing me to provide comments on this project.

Sincerely,

Nicole Bernas

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project site consists of over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the

adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses."

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first 3/4 mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high- technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for allowing me the opportunity to comment on your project.

Sincerely,

Nicole Bernas

RE: PUBLIC COMMENT ON RECORD FOR THE WEST CAMPUS UPPER PLATEAU PROJECT, ENVIRONMENTAL IMPACT REPORT, STATE CLEARINGHOUSE NO. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

- 1) Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents),
- 2) Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I was born in an area surrounded by warehouses and truck traffic, and suffered with respiratory related illness as was diagnosed with asthma. Many residents and generations of residents suffered from lung issues, including asthma and COPD. There were many days the schools would prohibit us from having recess or participating in physical activity due to the air quality being harmful. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening date of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Nicole Bernas

OneCosmicLove@icloud.com

Letter I-935

Nicole Bernas
March 10, 2023

I-935.1 This comment letter is a modified version of Form Letter B – Air Quality and in response to the comment, please see Form Letter B Response.

The comment includes an additional comment that: “I was born in an area surrounded by warehouses and truck traffic, and suffered with respiratory related illness as was diagnosed with asthma. Many residents and generations of residents suffered from lung issues, including asthma and COPD. There were many days the schools would prohibit us from having recess or participating in physical activity due to the air quality being harmful.” Recirculated Section 4.2, Air Quality and Appendix C-2 assessed the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project’s significant and unavoidable air quality impacts. The Project would result in less than significant human health or cancer risks.

I Owen Turner, a resident of OrangeCrest Community, do oppose the building of Commercial Warehouses. It is a known fact, to build warehouses in our neighborhood will impact our lives. It will give us a higher Police presence by drawing negative elements, reducing our safety and security of our neighborhood. By increasing roadway access for trucks, foot traffic, and other undesirable traffic will increase. To unearth and release components, and chemicals that have long been disregarded by the military and government agencies. This will be a health hazard to our community! Our air we breath and water we drink can be negatively impacted. Are you willing to take this risk over profit? Our Community has a long history of large sporting events for children. Your Warehouses will undoubtably invite an alarming concern for safety of our children. As we get older you are purposely decreasing our Communities quality of life for profit. You risk wild life and any endangered species that reside in the untapped acres.

Mr. Dan Fairbanks, AICP

Planning Director

March Joint Powers Authority (March JPA)

14205 Meridian Parkway, Suite 140

Riverside, CA 92518

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Attention Mr. Fairbanks:

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

I am writing to point out deficiencies found in the Draft Environmental Impact Report (DEIR) concerning the West campus Upper Plateau that was submitted for review and comment. As a concerned citizen, I am deeply troubled by the negative impacts this project will have on the surrounding community and environment and apparent lack of diligence undertaken when completing the DEIR. As there are many issues, I will address the following:

I-937.2

I-937.3

One major issue with this project is the significant increase in diesel truck traffic it will bring and the negative impacts that will be imposed. According to recent studies, the cost per mile to rebuild roadways to commercial truck standards ranges from \$1 million to \$5 million. The Reason Foundation's Annual Highway Report also states that the United States has a significant backlog of road repairs, and the backlog is estimated to be \$740.6 billion, increasing by \$15 billion annually. Increased truck traffic will worsen the condition of our roads, which will be a significant cost to repair. The increase in truck traffic will have a negative impact on roadways, leading to increased congestion, wear and tear, and the need for costly repairs. When considering the cost to build roadways in California, the California Department of Transportation projects it costs approximately \$1.2 million per mile to rebuild roadways to commercial truck standards. Additionally, statistics from the Reason Foundation's Annual Highway Report indicate that the cost to maintain and repair California's roadways is already significantly higher than the national average. The Draft Environmental Impact Report makes no mention of the cost of roadway repair, timelines for roadway repair, projected costs for roadway repair for this project or how this JPA, Developer or future tenants will contribute, meaningfully, and on an ongoing basis, to mitigation measures or any relief of the burden of these costs borne by the taxpayer.

I-937.3
Cont.

The Riverside County Sheriff's Department and the Riverside Police Department will both be called upon to address the increase enforcement burdens this project will impose. Without revenue streams, the costs of those burdens are then passed on to the taxpayer. Combined enforcement by the Riverside County Sheriff's Department and the Riverside Police Department could help ensure that truck drivers are adhering to traffic laws and regulations, reducing the potential for accidents and damage to roads.

I-937.4

However, increased police enforcement comes at a substantial cost. According to the Bureau of Labor Statistics, the average salary for a police officer in California is approximately \$100,000

I-937.5

per year. Additionally, with the cost of living increasing each year, it is likely that these costs will continue to rise. These numbers are the average. The cost of Riverside a County Sheriff's Deputy and/or a Riverside Police Officer are higher. The DEIR fails to address the potential costs associated with the need for increased police enforcement, leaving a significant gap in the analysis.

I-937.5
Cont.

The Riverside County Sheriff's Department has jurisdiction over the project area, but the Riverside Police Department will also be impacted due to increased truck traffic congestion and enforcement along prohibited roadways. While the DEIR mentions that the JPA contracts with the Riverside County Sheriff for additional law enforcement coverage of 40 hours per week, it does not provide any specific details on how this enforcement time is spent. There are no statistics presented that any of this extra contracted time is utilized conducting traffic related enforcement. Furthermore, the DIER does not address the ongoing traffic enforcement and other law enforcement burdens outside of that 40 hours and does not address the traffic enforcement burdens placed on the Riverside Police Department. In addition, the DEIR makes no mention of any additional funding, or lack thereof, to the Riverside Police Department for any additional enforcement required as a result of this project. Without specific information to address these deficiencies, it is impossible to assess the feasibility of this proposal or to determine if any changes would be effective in mitigating the impacts of diesel truck traffic on roads surrounding the project area and spanning several jurisdictions.

I-937.6

I-937.7

Fortunately, Riverside Neighbors Opposing Warehouses (R-NOW) has proposed three alternative plans that would mitigate the negative effects of increased truck traffic on government resources. These alternatives include:

I-937.8

The Campus Approach: A project that focuses on expanding the University of California Riverside's OASIS, CARB, CERT, and economic development programs, mixed with a business

park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

The Veterans Village Approach: A project that includes a veteran's village that incorporates open space and a developed park, low-density affordable veteran housing, medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

The State or County Park Approach: A minimally invasive alternative plan that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas.

I strongly urge the March Joint Powers Authority (JPA) to consider these alternate plans, which hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant. These plans will offer long-term quality job growth, preserve valuable open space, and provide recreational opportunities for residents to enjoy a better quality of life.

Thank you for your attention to this important matter,

Pete Elliott

R-NOW

I-937.8
Cont.

Letter I-937

Pete Elliot
March 10, 2023

- I-937.1** This comment refers to an attachment and does not raise any specific environmental issues or concerns about the adequacy of the environmental analysis within the Draft EIR. As such, no further response is provided.
- I-937.2** This comment describes the Project vicinity and does not raise any specific environmental issues or concerns about the adequacy of the environmental analysis within the Draft EIR. As such, no further response is provided.
- I-937.3** This comment states that the increase in truck traffic associated with the Project would have negative impacts on roadways, leading to increased congestion, wear and tear, and the need for costly repairs. As discussed in Section 4.15, Transportation, of the Draft EIR, WRCOG is responsible for establishing and updating the Transportation Uniform Mitigation Fee (TUMF) program. TUMF is a multijurisdictional impact fee program that funds transportation improvements on a regional and sub-regional basis associated with new growth. All new development in each of the participating jurisdictions is subject to TUMF, based on the proposed intensity and type of development. TUMFs are submitted by the applicant and are passed on to WRCOG as the ultimate program administrator. TUMF funds are distributed on a formula basis to the regional, local, and transit components of the program. March JPA participates in the TUMF program. The Project Applicant will be subject to the TUMF program and will pay the requisite TUMF at the rates then in effect. The Project Applicant's payment of the requisite TUMF at the rates then in effect pursuant to the TUMF Program will mitigate its contribution to deficiencies to TUMF-funded facilities. Additionally, commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹
- I-937.4** This comment is about truck route enforcement. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid for through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included

¹ <https://www.dmv.ca.gov/portal/dmv-research-reports/departments-of-motor-vehicles-dmv-performance-reports/where-did-your-2020-fees-go/>

as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

- I-937.5** This comment is about police salaries and cost of living, which is outside the scope of CEQA and the EIR. The comment does not raise any specific questions or concerns about the adequacy of the environmental analysis included within the Draft EIR. As such, no further response is provided.
- I-937.6** This comment is about enforcement activities and requests a breakdown of how the 40 hours of enforcement time is spent. Regarding enforcement, please see Response I-937.4, above. The breakdown of how the 40 hours of enforcement time is spent is beyond the scope of the environmental impact analysis for the Project, and as such, no further response is provided.
- I-937.7** This comment is about enforcement and funding. In response, please see Responses I-937.3 and I-937.4, above.
- I-937.8** This comment requests consideration of the three additional alternatives presented in Form Letter H, Alternatives. In response to this comment, please see Topical Response 8 – Alternatives.

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Pete Elliott

From: Pete Elliott <speakdiesel@gmail.com>
Sent: Friday, March 10, 2023 3:07 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. In addition, the DEIR makes no mention of mitigation of increased electrical usage through the utilization of any renewable sources. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of any delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Pete Elliott

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Pete Elliott

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes are incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Pete Elliott

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Pete Elliott

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Pete Elliott
Dayton St., Riverside, CA

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Pete Elliott

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). I have lived in Riverside for over 60 years, am a current resident of Canyon Crest, as well as an active community member. It has come to my attention that the EIR for the JPA warehouse development is seriously flawed.

This Project will site over 4.7 million additional square feet of total warehouse space, surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that do not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant have no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area, and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of any of these alternate projects and believe that each holds considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental, medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).
- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.
- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include

incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Sincerely,
Patricia Reynolds

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Rattana Chiek

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its

concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Rattana Chiek

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan

consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Rattana Chiek

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500 foot range of residential homes. The draft EIR does not properly analyze the Project's Biological Resources, Section 4.3.

I-949.2

I have a Ph.D. in Ecology from UC Davis and more than 20 years experience in biological monitoring applied to the conservation of biological diversity. Most recently, I worked for 11 years as a Lead Biologist and Data Manager for the Biological Monitoring Program of the Western Riverside County Multiple Species Conservation Plan (MSHCP). The MSHCP is administered by the Western Riverside County Regional Conservation Authority (RCA). The Biological Monitoring Program conducts surveys and monitoring of 146 rare and endangered plant and animal species on conserved lands throughout western Riverside County. My resume and publications list are attached.

I-949.3

My comments reflect documents available publicly on the March JPA website. These documents include:

- Draft West Campus Upper Plateau Project Environmental Impact Report, State Clearinghouse No. 2021110304 and plus Appendices A-S, January 9, 2023
- Local Guidelines for Implementing the California Environmental Quality Act for March Joint Powers Authority (et al.), 2022
- General Plan of the March Joint Powers Authority[1], assumed 1999 date – last updated 2/17/2022 (General Plan, 1999)
- General Plan Land Use Plan, assumed March 11, 1997
- Planning Related Maps (Zoning General Plan/Land Use), July 2018
- Settlement Agreement: Center for Biological Diversity, September 2012
- Settlement Agreement: CCAEJ and CAREE, August 2003 (not on the JPA website)

I-949.4

Background

Special-status plant and wildlife species (defined on Page 4.3-6, EIR) were evaluated for potential to occur in the Study Area. The EIR defines special-status plant species as those that are: (1) recognized as endangered or threatened in the context of the California Endangered

I-949.5

Species Act (CESA) or the federal Endangered Species Act (FESA); (2) considered rare, endangered, or threatened by the CDFW or local government agencies, or (3) considered rare, threatened, or endangered in California by the California Native Plant Society.

Special-status wildlife species are defined as: (1) endangered or threatened wildlife species recognized in the context of CESA and FESA; 2) California Species of Special Concern (SSC) and Watch List (WL) species as designated by CDFW; and (3) mammals and birds that are fully protected species as described in California Fish and Game Code Sections 4700 and 3511.

The potential for special-status species to be present in the Study Area was assessed through a process that first identified all special-status species that have a documented occurrence within the geographic vicinity of the Study Area (i.e., Project vicinity), defined as including the Study Area and all lands up to three miles from its boundaries. Key database searches were made of the California Natural Diversity Database (CNDDDB), administered by the CDFW Biodiversity Data Branch, the California Native Plant Society's Electronic Inventory, and the US Fish and Wildlife Service's IPaC Database.

The resulting species lists were refined using results of general field surveys that were conducted over two days in the summer of 2021, along with knowledge of species habitat associations, and the presence of habitats within the Study Area. Targeted protocol surveys were conducted for all federal and state listed endangered and threatened species determined to have a moderate to high potential of occurrence, or were detected during the general surveys.

No mention is made in the EIR of the MSHCP Biological Monitoring Program's database which contains extensive records of species occurrence obtained from field surveys dating from 2004 to the present. Most MSHCP-covered species meet the definition of special-status for the EIR and are tracked by CNDDDB. MSHCP data are distributed annually to the CDFW Biodiversity Data Branch and uploaded into their BIOS database. It is important to note that the BIOS and CNDDDB databases are separate entities though managed by the same agency. CNDDDB is in the process of incorporating occurrence records of CNDDDB-tracked species from BIOS data sets, but there is a significant time lag in the process. As a result, CNDDDB does not currently contain all data collected by the Biological Monitoring Program. MSHCP data are available upon request to the RCA or CDFW.

As part of this review, I conducted an analysis of the MSHCP Biological Monitoring Program's database, current as of March 2019, to determine if I could identify any gaps in the lists of special-status species potentially impacted by the proposed project as identified in the EIR.

Critical Errors and Omissions

Special-Status Plants

According to the EIR, 28 special-status plant species were found to have recorded occurrences within the Project vicinity and were assessed for potential to occur in the Study Area (Table 4.3-2, EIR). I found no records of occurrence for any additional special-status plant species in the MSHCP database. Of the 28 species, 27 were determined to have a low to no potential to occur and were omitted from further assessment.

I-949.5
Cont.

I-949.6

I-949.7

I-949.8

This analysis is faulty because it fails to correctly match probability of occurrence with species habitat associations. One example is the failure to recognize the presence of coastal sage scrub (a habitat for some rare plant species) in the Study Area. Note that coastal sage scrub is referred to simply as coastal scrub in the table. Riversidean sage scrub, as described on Page 4.3-4, is the form of coastal sage scrub found in Riverside County. According to the EIR, the study area supports 10.98 intact and 5.47 disturbed acres of this plant community (Table 4.3-1, EIR) located “near the edges of the Study Area, in several small patches in the northern portion of the Study Area, as well as some deerweed-dominated patches near the center of the Study Area”. Of the 27 species omitted from further investigation due to supposed lack of suitable habitat, 16 are known to be associated with Riversidean sage scrub. Therefore, the potential occurrence of these 16 rare plant species needs to be reassessed.

I-949.9

Nine species were considered to have a low to no chance of occurrence based on lack of suitable (i.e. undisturbed) grassland habitat. Virtually all grasslands in western Riverside County are disturbed, yet rare plants are found in them. Rare plants are often sparsely distributed across the landscape, appearing infrequently and often in microhabitats linked to substrate, small scale landscape features, and other factors [2]. While many plants are known to be associated with certain broad habitat types (i.e., plant communities), it is ultimately the right combination of light, air, water, and soils that determine environmental suitability. Thus, while an association of occurrence may exist with one or more plant communities over the scale at which these are often mapped, abiotic factors and microhabitats will tend to be better predictors of occurrence on smaller scales where there may occur a mix of community types. I have personally observed Long-spined spineflower, Many-stemmed dudleya, Munz’s onion, San Jacinto Valley crownscale, and Thread-leaved brodiaea growing in disturbed grassland. Therefore, the potential for grassland-associated rare plant species to occur in the Study Area needs to be reassessed and surveys need to be conducted for species determined to have a greater than low potential to occur.

I-949.10

Two types of plant surveys were conducted for the EIR. One is described as a “general biological survey for plants and wildlife conducted concurrently with vegetation mapping on July 28, 2021, and August 6, 2021” (page 12, EIR Appendix D). It appears that the purpose of this survey was to develop a floristic list. However, there is no protocol included with the report and without knowing anything more about the methods used, effort involved, experience of the surveyors, it is impossible to interpret the likelihood of these surveys to detect populations of rare plants. Since rare plants are often sparsely distributed and possess more specialized habitat requirements, they are easily overlooked in general floristic surveys [3,4]. Additionally, the limitation of these surveys to the summer months precludes the likelihood of detecting rare plant species that bloom at other times of the year. Examples of such species are Munz’s onion which blooms April – May and Chaparral ragwort which blooms February – May (data from the Jepson website (ucjeps.berkeley.edu)).

I-949.11

Another survey was conducted for summer-blooming plant species on June 6 and 7, 2022. On page 13, EIR Appendix D, it is stated that “the project site was surveyed for special-status plants, including Smooth tarplant and Paniculate tarplant. All suitable habitat within the project site was walked and assessed for the presence of special-status floral species.” Did these surveys include all summer-blooming special-status plants? Or did they specifically target the two tarplant species? Again, no protocol is included with the report, so we don’t know what methods were used, which habitats and microhabitats were searched, level of effort, and experience level of surveyors.

I-949.12

Detectability of rare plants is notoriously low, contributing to underestimates of occurrence and reliability of survey data. Sources of error include differences in morphology, life-form, patch size, survey effort, and more. For these reasons, individual surveys should target one or a small number of species with similar habitat requirements to improve detectability. It appears highly unlikely that the surveys conducted for this study were adequate to achieve a reasonable level of detectability of the suite of special-status plants identified as potentially occurring.

I-949.13

One species, the seriously threatened Smooth tarplant, was found to have a moderate potential to occur within the study area but was undetected in the summer-blooming plant surveys. Since plants can remain dormant in the seed bank, often for many years, it is very difficult to rule occurrence out. Generally, surveys over many years are needed to conclude a dormant population is unlikely present. Smooth tarplant grows in moist soils. According to Jepson (ucjeps.berkeley.edu), this species is found in open, poorly drained flats, depressions, waterway banks and beds, grassland and disturbed sites. Southern California was in a state of severe to exceptional drought throughout all of 2022. For all these reasons, it cannot be concluded that the species is absent from the study area.

I-949.14

What needs to be done:

- 1) Recognize the presence of coastal sage scrub in the form of Riversidean sage scrub in the Study Area
- 2) Expand search for special-status species within the Project vicinity using the most current version of the MSHCP database.
- 3) Reassess potential occurrence of all species assessed with low to no potential occurrence recognizing the presence of coastal sage scrub and ability of disturbed grassland to support many of the rare plant species in Table 4.3-2.
- 4) Include survey protocols in the EIR, Appendix D. Protocols should include methods, habitats and microhabitats searched, level of effort, and experience of surveyors.
- 5) Conduct a new series of field surveys designed to detect special-status species in all potentially suitable habitat and during the blooming periods of all species concerned.
- 6) Conduct targeted surveys for Smooth tarplant and any other species deemed to have a greater than low occurrence potential in the Study Area during years with adequate rainfall. Conduct repeat surveys to cover the blooming period.
- 7) Consider Smooth tarplant to be present unless not detected in targeted surveys and avoid disturbance of habitat until absence is confirmed.
- 1) Conduct impacts analyses for any additional species with greater than low potential occurrence.

I-949.15

Plant Communities

Riversidean sage scrub is not considered sensitive globally or in the state of California and no mitigation is required. Nonetheless, the EIR stipulates under MM-BIO-8 that impacts on Encelia scrub, flat-topped buckwheat, and Riversidean sage scrub to be mitigated at a 1:1 ratio, and Project impacts on disturbed Riversidean sage scrub to be mitigated at a 0.5:1 ratio through the purchase of credits at an approved mitigation bank. It further states that these mitigation ratios are appropriate “because these vegetation communities are not considered sensitive under CEQA and do not support special-status species within the Specific Plan Area.” However, as discussed above, the assessment for rare plants is probably inadequate to conclude that Riversidean sage scrub does not support special-status plant species. The EIR should re-evaluate the value of Riversidean sage scrub to potentially occurring rare plants and consider mitigating any loss at a higher ratio.

I-949.16

Wildlife

According to the EIR, 24 special-status wildlife species were found to have recorded occurrences within the Project vicinity and were assessed for potential to occur in the Study Area (Table 4.3-3, EIR). I found an additional 10 species in the MSHCP database, all of which are either State Threatened (ST), Species of Special Concern (SSC), or Watchlist Species (WL). These include Bell's Sparrow (WL), Ferruginous hawk (WL), Golden eagle (WL, Fully Protected), Grasshopper sparrow (SSC), Merlin (WL), Peregrin falcon (Fully Protected), Prairie falcon (WL), Southern California rufous-crowned sparrow (WL), Swainson's hawk (ST), and Yellow-breasted chat (SSC). All of the raptor species and Bell's Sparrow are also federal Bird Species of Concern.

I-949.17

I also found records of another five species covered by the MSHCP in the Project vicinity, including Bobcat, Coyote, Long-tailed weasel, Downy woodpecker, and Turkey vulture. These species are not special-status as defined in the EIR; however the EIR clearly states (Page 4.3-33, EIR) that the significance criteria used to evaluate the Project's impacts related to biological resources are based on the 2022 March JPA CEQA Guidelines. Accordingly, a significant impact related to biological resources would occur if the Project would:

"BIO-1: Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service."

I-949.18

Since the MSHCP is a regional conservation plan, the language in BIO-1 suggests that the guidelines would cover all MSHCP-covered species as well as any federal Bird Species of Concern. In fact, the definition of special-status species (Page 4.3-6, EIR) includes species that are considered rare, endangered, or threatened by "local government agencies" which would presumably include the RCA which administers the MSHCP.

What needs to be done:

- 2) Expand the definition of special-status species to include MSHCP-covered species and federal Bird Species of Concern as per BIO-1 impact threshold in the 2022 March JPA CEQA Guidelines.
- 3) Expand search for special-status species within the Project vicinity using the most current version of the MSHCP database.
- 4) Reassess potential occurrence of additional special-status species using including additional field surveys.
- 5) Conduct any necessary impacts analysis.

I-949.19

Other Errors and Omissions

The habitat description for the Tricolored blackbird is incomplete. The species is well documented to use a wide variety of upland plant species for nesting, including hoary nettle which is present in the Study Area. With the plentiful grassland also present, the site could potentially support a breeding colony.

I-949.20

What references were consulted for habitat preferences of special-status plants (Table 4.3-2) and animals (Table 4.3-3)? The Jepson Manual is the preferred source among botanists in California but it appears that another reference was used.

I-949.21

The species accounts in Appendix D need to be better referenced. It is hard to evaluate the accuracy of the analysis presented without confidence in the foundational information.

I-949.22

Mitigation

Burrowing Owls

The EIR (Page 4.3-37) states: “Direct impacts to burrowing owl would be avoided and minimized through implementation of mitigation measure MM-BIO-5A, which requires pre-construction surveys, establishment of exclusion buffers around occupied burrows or burrow complexes (buffer width is dependent upon breeding versus non-breeding season), and burrowing owl specific monitoring throughout construction to ensure full avoidance of owls.”

“Should it be determined that full avoidance of occupied burrowing owl burrows or burrow complexes is not possible, MM-BIO-5B requires preparation of a Burrowing Owl Relocation and Mitigation Plan that would include methods for passive relocation; description of surrounding suitable habitat conditions; monitoring and management requirements for replacement burrow sites in coordination with CDFW; reporting requirements; and compensatory mitigation, if required by CDFW.”

I-949.23

“With implementation of MM-BIO-5A and MM-BIO-5B, direct impacts to burrowing owl would be less than significant with mitigation incorporated.”

Any disturbance of Burrowing owls or their burrows, whether breeding or over-wintering should be considered significant. Passive relocation alone has been shown to be a failure, leading to complete abandonment of occupied sites and death of “relocated” owls. This is due in part to the fact that few burrows are actually suitable for owls. Burrowing owls in the west do not excavate their own burrows but depend on burrowing mammals to do this. Burrows must meet suitable conditions for owls with respect to depth, slope, drainage, number of openings and possibly other factors, which means owls may not be able to simply move to another burrow or burrow system even if it looks suitable to us. Passive relocation may be most successful with the proper provision of artificial burrows [5].

I-949.24

The EIR should:

- 1) Ensure passive relocation provides for suitable arrays of artificial burrows in a plan approved by CDFW.
- 2) Address the mechanisms and sources of funding that will continue to protect burrowing owls and their burrows on site after completion of the Project or post-2025 when the March JPA sunsets.

Coastal Whiptail and Orange-throated Whiptail

The EIR (Page 4.3-39) states: “Potential direct mortality of coastal whiptail, orange-throated whiptail, and western yellow bat could occur during construction activities and would be considered a significant impact requiring mitigation to reduce impacts on the species to a level below significant. Impacts to these species would be reduced to less than significant by implementation of MM-BIO-1, which requires a biologist flush sensitive species from suitable habitat immediately prior to initial ground disturbing activities, and daily biological monitoring

I-949.25

during the initial vegetation removal and during any ground disturbing activities that result in breaking of the ground surface. In addition, the measure calls for regular random checks at least once a week, after the initial ground disturbance phase, and sets forth best management practices (BMPs) to reduce impacts to these special-status species. With the implementation of the mitigation measures described in MM-BIO-1, impacts to coastal whiptail, orange-throated whiptail, and western yellow bat would be less than significant with mitigation incorporated.”

I-949.25

The EIR must explain how flushing whiptails from their habitat immediately prior to ground disturbing activities is beneficial mitigation. A whiptail cannot travel far on its own in such a short period of time. How can direct harm be avoided? Why is flushing favorable to relocation to a safer location?

Western Yellow Bat

Little is known about the habitat requirements and behavior of this species. The EIR must recognize that the impacts on individuals of flushing from a daytime roost are unknown, unless evidence to the contrary is found. Otherwise, any disturbance must be considered unmitigated.

I-949.26

Interagency Review

I request all revisions be evaluated by the CDFW.

M.S., Ecology. University of California, Davis. 1991
B.A., Ecology. Behavior, and Evolution, University of California, San Diego. 1984

Positions

Lead Biologist and Data Manager

March 2008 – April 2019

Biological Monitoring Program, Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP). Riverside, California.

Significant contributions to the largest Habitat Conservation Plan in the United States, covering 1.2 million acres and 146 species of plants and animals in a U.S. biodiversity and endangered species hotspot.

- Lead author of the Program's Long-term Monitoring Strategy, a key implementing document and primary deliverable for a State Wildlife Grant (SWG) that funded the first eight years of the Program.
- Lead role in an interagency adaptive management project to enhance and restore essential habitat for a threatened land bird and associated avian species.
- Reviewed and commented on draft land management plans, species status assessments. ESA and CESA listing petitions, and project draft environmental impact statements.
- Engaged with a wide variety of audiences including land managers, academic researchers, other federal and state agency personnel, and the public.
- Participated in formal public meetings, staff meetings, and interdisciplinary team meetings relating to complex natural resource issues and studies.
- Developed project plans and monitoring protocols. Trained and supervised staff and volunteers in field methods and species detection. Prepared technical reports and journal articles.
- Participated in field surveys for a wide range of plant and animal species and vegetation communities covered by the MSHCP.
- Full stack database developer. Designed, built, and administered a centralized relational database for the input, storage and retrieval of complex biological, physical, and habitat survey data for terrestrial and aquatic organisms and vegetation communities following best practices and data design principles.
- Programmed custom user interfaces using Visual Basic for Applications (VBA) and SQL following best practices and user input.

- Created mobile data entry applications for tablet (MS Access, Survey 1-2-3), smart phone (Survey 1-2-3), and PDAs (Pendragon). Created applications to reformat and upload field-collected data.
- Balanced high demand coordination of data management tasks and pre-project preparation with multiple project team leaders.
- Developed and implemented data quality assurance and quality control procedures for use throughout the data lifecycle. Developed policy and procedures for data sharing and handling of sensitive data.

Data Manager

April 2004 – February 2007

U.S. National Park Service, Vital Signs Inventory and Monitoring Program, Sierra Nevada Network. Three Rivers, California.

Contributed to the Network's long-term monitoring plan and lead role in all aspects of data management for the Sierra Nevada Network Vital Signs Monitoring Program.

- Developed a standardized relational database template for inventory and monitoring, adopted as a program standard at the national level.
- Led the development of the Network's data management plan, ranked in the top tier of 32 network plans and adopted as the model for a national data management plan.
- Co-authored the Network's long-term monitoring plan.
- Provided data management support and database development to park staff (Natural Resources Management, Concessions, GIS) and USGS partner scientists.
- Prepared detailed, stepwise users-manuals and standard operating procedures for natural resource databases including instructions on entering, checking, querying, summarizing, reporting, and archiving data.

Postdoctoral Research Associate

April 2001 – November 2002

University of Connecticut, Department of Marine Biology and the National Oceanographic and Atmospheric Administration (NOAA) Northeast Underwater Research Technology and Education Center. Groton, Connecticut.

Applied ecological concepts and eco-regional conservation planning approaches to large-scale marine conservation problems using long-term biological monitoring data.

- Demonstrated the applicable use of mathematical optimization and bottom trawl survey data (NOAA Fisheries Science program) to the design of protected area networks for the New England groundfish fishery.
- Analyzed and evaluated alternate spatial models proposed for habitat closures in updates to the New England Fishery Management Council's Groundfish Management Plan.
- Participated in the NOAA expedition Deep East, an exploration of the marine canyons and seamounts on the Northeast Continental Shelf. Data contributed to the decision to designate the Northeast Canyons and Seamounts National Monument by President Obama.

- Consulted with US and Canadian non-governmental organizations to develop a data-driven marine bioregional conservation prioritization and planning framework for the eastern continental shelf of North America.
- Developed a bioregional classification for the continental shelf of Northeastern North America based on physical and biological parameters.
- Modeled benthic sediment data from side-scan sonar surveys to assess optimal representation of coarse-scale seafloor habitats in Stellwagen Bank National Marine Sanctuary.

Wildlife Biologist

February 2000 – November 2000

Hawks Aloft Inc. Albuquerque, NM.

- Field research on reproductive success and prey selection of nesting Ferruginous hawks (*Buteo regalis*) in central New Mexico. With the University of New Mexico Museum of Natural History.
- Aerial and ground surveys for nesting hawks and Gunnison's prairie dog colonies, monitored active nests, collected and analyzed prey remains.
- Aerial surveys and monitoring Golden eagle (*Aquila chrysaetos*) nests in an active oil field in north-eastern New Mexico.
- Identified and mapped nesting sites of raptor species and Common raven (*Corvus corax*) at the Navajo coal mine in Farmington, New Mexico.

Postdoctoral Fellow

December 1996 – November 1999

Colorado State University, Department of Fish, Wildlife, and Conservation Biology. Fort Collins, Colorado.

Lead role in the development of a large geo-spatial database (GIS) and decision support tool for mapping and analysis of species diversity (vertebrates and butterflies) in Arizona and New Mexico. In support of a regional assessment of livestock grazing impacts on ecosystem integrity and species viability on U.S. Forest Service lands in the American southwest.

- Developed project goals and objectives in collaboration with an interdisciplinary team of government and academic scientists.
- Researched, acquired, standardized, and integrated numerous biological datasets and physical/habitat/vegetation spatial data layers from a wide variety of sources.
- Hired, trained, and supervised a GIS analyst and student support staff. Supervised data entry and digitization of more than 50,000 species occurrence records.
- Wrote grant proposals and helped obtain multiple years of funding. Wrote reports and delivered formal and informal presentations.

Member of the Biodiversity Committee of the Forest Sector, National Assessment Synthesis Team, Global Climate Change Impacts on the United States. U.S. Global Change Research Program.

- Spatial statistical analysis of climate change model data to assess relative impacts of federal protected and non-protected areas. Used mixed general linear models to account

for spatial autocorrelation.

- Conducted a literature review on the impacts of climate change on species, natural communities, and biomes. Co-authored a landmark publication and report to Congress on projected impacts of climate change in the United States.

Additional Experience

Database Design and Applications Development

- Independent Contractor, U.S. Geological Survey Climate Change Program. Forest demographics monitoring. MS Access.
- Independent Contractor, U.S. National Park Service, Yosemite and Sequoia/Kings Canyon National Parks. Multiple projects: bear management, invasive plants monitoring and management, natural resources project management, water quality and stream flow monitoring. MS Access.
- Environmental Services Intern, California Department of Parks and Recreation, Natural Heritage Section. Cataloguing aerial photos, tracking wildlife management projects in the parks. DBase III, Visual DBase.

Research

- Independent Contractor, Environmental Defense, Boston, Massachusetts. Alternatives for optimal representation of seafloor habitats in Stellwagen Bank National Marine Sanctuary.
- Independent Contractor, Conservation Law Foundation, Boston, Massachusetts. Marine ecosystem conservation for New England and eastern Canada: A science-based approach to the identification of priority areas for conservation.
- Independent Contractor, U.S. Department of Commerce, National Oceanic and Atmospheric Administration, Office of National Marine Sanctuaries. Changes over time in mean body length of commercially harvested demersal species in the New England groundfish fishery.
- Independent Contractor, NOAA Southwest Fisheries Science Center, La Jolla, CA. Developed a method for rapidly assessing relative caloric content of marine fish prey species of the California sea lion.
- Laboratory Assistant, Scripps Institute of Oceanography, La Jolla, CA. Cultivated, harvested, and counted single cell marine algal species under the microscope.
- Senior Project, University of California, San Diego. Conducted a pedigree analysis of captive populations of Asiatic wild ass (*Equus hemionus*). Discovered evidence of inbreeding depression.

Teaching

- Guest Lecturer. Wildlife Fundamentals, Colorado State University, Department of Fish, Wildlife, and Conservation Biology.
- Teachers Assistant, University of California, Davis. Led discussion sections and labs for undergraduate courses in biology, zoology, and ecology. Mentored students in report writing. 4 quarters.

- Assistant Instructor, University of California, Davis. Led discussion sections for an undergraduate course in oceanography. 1 quarter.
- Teachers Assistant, University of California, San Diego. Led laboratories and mentored students in BASIC computer programming. 4 quarters.

Advanced Training and Skills

Software and Programming

Python, R, SAS, SPlus, ArcGIS, Survey 1-2-3, MS Access, MySQL, SQL Server, Visual Basic Applications (VBA), MS Excel, Fortran.

Modeling Concepts

General Linear Models, Logistic Regression, Classification, Decision Trees, Random Forest, Neural Networks, Spatial Analysis and Autocorrelation, Ecological Null Models, Monte Carlo Simulation, Simulated Annealing.

Letter I-949

Rosamonde Cook, Ph.D.

March 10, 2023

- I-949.1** This comment is introductory and refers to an attached letter. The comment does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-949.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a buildout scenario of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. As this comment does not raise any specific issues with respect to the content and adequacy of environmental analysis within the Draft EIR, no further response is provided.
- I-949.3** This comment and the attached resume and publications list summarize the commenter's subject matter expertise. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis included in the Draft EIR, no further response is provided.
- I-949.4** This comment summarizes the documents reviewed by the commenter. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis within the Draft EIR, no further response is provided.
- I-949.5** This comment is a reiteration of information presented in the Project Biological Technical Report, included as Appendix D-1 to the Draft EIR. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis within the Draft EIR, no further response is provided.
- I-949.6** This comment requests consideration of the MSHCP database. Though database searches are one part of the habitat assessment process and can be very informative, the equally and perhaps more important element is the assessment performed by biologists on the ground using their knowledge of local species and habitat associations as well as overall knowledge of species biogeographic distribution in the region to assess the potential for special-status species on any given project site.

Regarding what databases were consulted as part of the desktop review, Natural Community Conservation Plan (NCCP) biological monitoring, such as MSHCP field surveys, is typically performed on lands already conserved under the NCCP so has a slightly narrower focus than databases like the California Natural Diversity Database (CNDDB), which was reviewed as part of the project research. Since, as noted by the commenter, MSHCP data is conveyed to CNDDB, the CNDDB would typically include most NCCP biological monitoring location data for special-status species.

Based on this comment, the Western Riverside County MSHCP Species Observations Database on CDFW BIOS was reviewed for a three-mile radius surrounding the Project site on March 2, 2023. No special-status wildlife species were recorded within this database for a three-mile radius around the Project site. Please note that species mapped within and near Sycamore Canyon Wilderness Park and Box Springs Mountain Reserve are not considered to be special-status species under this analysis. The

observations included coyote, granite spiny lizard, turkey vulture, Wilson's warbler, Lincoln's sparrow, and MacGillivray's warbler. While these species are Covered Species under the MSHCP, they are not considered to be special-status species. Please note that a discussion regarding whether an MSHCP Covered Species would be considered special-status is included in Response I-949-18, below.

I-949.7 This comment describes the commenter's MSHCP search. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis within the Draft EIR, no further response is provided.

I-949.8 This comment summarizes the commenter's own research, in which she found no records of special status plants not included in this analysis. As this comment does not raise any specific issues with respect to the content and adequacy of the environmental analysis within the Draft EIR, no further response is provided.

I-949.9 This comment asserts that the Draft EIR failed to recognize the presence of coastal sage scrub when assessing suitable habitat for 16 rare plant species that are associated with coastal sage scrub. These 16 species may be found in suitable coastal scrub habitats.

Riversidean sage scrub, disturbed Riversidean sage scrub, and flat-topped buckwheat are recognized as forms of coastal scrub habitat within the Draft EIR and Project Biological Technical Report (Appendix D-1). Table 4.3-2, Special-Status Plant Species with Potential to Occur Within the Upper Plateau Project Study Area, of the EIR has been updated to clarify this. When assessing the potential for these species to occur on the Project site, the original analysis did take the presence of on-site scrub habitats into account. The scrub habitats on-site are smaller areas of buckwheat-dominated scrub and Encelia-dominated scrub and are generally not diverse, well-developed coastal scrub habitats.

Rare plant species that are associated with coastal sage scrub do not occur within all coastal sage scrub. Many other biotic and abiotic conditions determine whether a rare plant may be found in any given locality, even if the proper habitat type is present. The determination of low potential to occur for these 16 species, is not solely based on lack of suitable vegetation communities, but is based on many other factors, including disturbance level, previous land uses, presence of associated plant species, and recorded occurrences. Please also note that the Draft EIR and Project Biological Technical Report assert that these species have a low potential to occur, meaning the probability of occurrence on site is low, and do not imply that there is no possibility of species occurrence.

I-949.10 This comment raises concerns regarding the analysis of grassland-associated rare plant species. Section 4.3, Biological Resources, of the Draft EIR and the Biological Technical Report assess the potential for special-status plant species to occur and did not solely base these assessments on the presence or absence of particular vegetation communities but took into account the biotic and abiotic conditions described by the commenter. It is acknowledged that undisturbed grasslands are virtually non-existent in this region due to many factors, including the pervasive spread of non-native grasses and forbs, and that rare plant species can persist despite these disturbances under certain conditions. Although nearly all grasslands are disturbed and contain non-native species, the relative disturbance level can vary greatly, from indirect disturbances due to adjacent land uses, such as presence of sparse non-natives or trash, to direct disturbances, such as historic land modification by scraping or grading. Rare plants are typically found in non-native grasslands where the annual grasses themselves are the primary disturbance, e.g., habitats that were native that have been invaded by non-native grasslands

but still maintain intact soils, with many occurring in particular soil types like clay or alkaline soils. The grasslands on the proposed Project site are heavily disturbed and profoundly dominated by non-native species with considerable historic land alterations. The land was previously utilized for military activities during which many dirt roads were created through the grasslands and vehicles appeared to have also driven off-road. Such heavy disturbance can reduce the likelihood of rare plant presence because of direct impacts to the soil, which can affect the seed bank, and the introduction and spread of non-native species. Most rare plants are not tolerant of heavy disturbance, which has contributed to their modern-day rarity. Please also note that each species' distribution/range, known habitat 'preferences', and on-site habitat quality/disturbance level were all taken into account during habitat assessments; each species' potential for occurrence is based on the totality of these factors rather than only the disturbed nature of the habitat on-site.

The assessments of the potential for special-status plant species to occur were conducted using the best available data while taking into account the specific conditions on the Project site. Each of the species listed in the comment has a low potential for occurrence on-site, thus impacts are not expected.

I-949.11 This comment questions the protocol used for the plant surveys. The general biological survey is not a focused plant survey, per se, but an overall analysis of habitats occurring on-site and inventory of species observed at the time of the survey. There is no formal protocol for general surveys; the purpose of the general biological survey is to create an overall assessment of habitat types that occur on-site and to perform habitat assessments for special status species (e.g., determine if a given special-status species has potential to occur on-site). The purpose of the survey is not to prepare an exhaustive species list, but all plant species observed during the general biological survey are recorded as part of the survey. The general biological survey was led by Jim Rocks, who holds a master's degree in biological science and has over 30 years of experience in southern California biology, specializing in botany. The general biological surveys were conducted on July 28, 2021, and August 6, 2021 by traversing the Project site on foot and closely examining all unique areas of habitat. All plant species encountered were identified to the species or subspecies level.

It is acknowledged that general biological surveys did not occur during all seasonal windows, which are highly variable in southern California. However, the general biological surveys allow experienced biologists to assess the potential for rare species that may not be visible during the actual general survey. The information collected during the general biological survey allowed for classification of the land into distinct vegetation communities and evaluation of the potential for special-status plants to occur on site. Based on the initial general survey, it was determined that smooth tarplant had a potential to occur on-site and rare plant surveys were performed for this species. Per Table 4.3-2 in Section 4.3, Biological Resources of the Draft EIR, and Table 6 of the Biological Technical Report (Appendix D-1), Chaparral ragwort (CRPR 2B.2) was determined to have a low probability for occurrence and Munz's onion (FE; ST; CRPR 1B.1) was determined to have a very low probability for occurrence on-site. Minor additional details have been added to Table 4.3-2 of the EIR and Table 6 in Appendix D-1 to further elaborate on these species and on-site conditions.

This data provides the necessary information for decision makers to understand the environmental consequences of the proposed Project. In addition, although general and rare plant surveys occurred in June, July, and August, note that biologists were on site for various special-status species surveys throughout the entire year (i.e., at least once during each month of the calendar year) and recorded any encountered plant species not previously detected.

I-949.12 This comment questions the plants surveyed and the protocol used. All Project survey methods are described in Section 2 of the Biological Resources Technical Report, included as Appendix D-1 to the Draft EIR. During the surveys for smooth and paniculate tarplant, complete plant compendiums were recorded by qualified botanists, meaning that any observed summer-blooming special-status species would have been recorded. However, focused surveys did specifically target smooth tarplant in terms of approximate timing since this was the only CRPR 1 or 2 plant species determined to have moderate or high potential to occur on site.

The smooth tarplant rare plant survey was led by Ryan Meszaros, who holds a bachelor of science degree in botany and has nearly 20 years of experience in southern California field biology, with a focus on botany. Surveyor names have been added to the Biological Technical Report. Additionally, the discussion of the survey protocol has been expanded upon within the Project Biological Technical Report to include that surveyors walked parallel transects which were spaced to allow for 100% visualization of ground cover.

I-949.13 This comment raises concerns that the plant surveys did not detect rare plant species. Focused surveys were only conducted for tarplant as smooth tarplant was the only CRPR 1 or 2 plant species determined to have moderate or high potential to occur on site. Focused surveys were not conducted for any CRPR 1 or 2 species determined to have low or no potential for occurrence because no impacts are anticipated to these species. Additionally, no federally or state listed plant species were found to have moderate or high potential to occur on the proposed project site, therefore focused surveys for such species were also not conducted. Please refer to Response I-949-11, above.

I-949.14 This comment questions the determination that smooth tarplant is not present on site. Focused surveys for paniculate tarplant, a CRPR 4.2 species, and smooth tarplant, a CRPR 1B.1 species, were conducted during appropriate seasonal windows by qualified biologists experienced in identifying both species. While it is recognized that smooth tarplant is rarer than paniculate tarplant, it is not listed as threatened under CESA.

Although 2022 was a drought year in Riverside County, there were areas of the proposed Project site that supported conditions suitable for this species to bloom, including near drainages and in/around ponded areas examined during wet season vernal pool branchiopod surveys. During a drought year, it would be unlikely to find a large population of smooth tarplant in bloom as abundance is correlated with rainfall; however, drought conditions do not preclude all individuals in a population from blooming. Tarplant surveys were conducted to allow for 100% visualization; therefore, small numbers of individuals would have been detected, if present.

In addition, smooth tarplant was observed in Riverside County in 2022. It was also recorded annually from 2000 through 2018 and Riverside County experienced drought conditions in the majority of these years.

There is a smooth tarplant population at Sycamore Canyon Wilderness Park north of the Project site. Only one other record of smooth tarplant was located within the 3-mile study area. This record is from a collection made in 1995 from land east of the proposed Project site. There are no additional records of smooth tarplant within a 3-mile radius of the Project site. Other recent surveys for smooth tarplant performed in similar habitat within the vicinity of the Project site were conducted during non-drought years and were also negative for smooth tarplant.

No revisions or updates to the results of the 2022 tarplant survey are required.

I-949.15 This comment provides a list of tasks the commenter would like completed based on the above comments. These tasks are not necessary to adequately analyze the environmental impacts of the proposed Project in terms of compliance with CEQA. Each recommended task in this list pertains to a comment above, for which detailed responses to the concerns raised by the commenter are provided. Please refer to the responses to comments above.

- 1) With regard to recognizing the presence of coastal sage scrub, Riversidean sage scrub is recognized as a form of coastal scrub habitat. When assessing the potential for these species to occur on site, the original analysis did take the presence of on-site scrub habitats into account. It was not the intent to assert that coastal scrub is not present but instead meant that the coastal scrub habitat that is present is unsuitable. Language within Section 4.3, Biological Resources, of the EIR and the Biological Technical Report (Appendix D-1) has been updated. Please see Response I-949.9, above.
- 2) As noted in Response I-949-6, above, the MSHCP database has been reviewed. No additional special-status plant species were documented within the Project vicinity.
- 3) With regard to the potential occurrence of species assessed with low to no potential occurrence, please see Responses I-949.10 and I-949.11, above.
- 4) Please see Response I-949.12, above., regarding survey protocols.
- 5) As discussed in the Responses above, no new field surveys are required.
- 6) As discussed in the Responses above, no new field surveys are required.
- 7) The surveys for smooth tarplant were accurate, and the absence of smooth tarplant was documented. Please see Responses I-949.13 and I-949.14, above.
- 8) The Draft EIR and Biological Technical Report (Appendix D-1) conclusions regarding special-status plant potential to occur are sound, and new analyses are not necessary.

I-949.16 This comment reiterates the mitigation ratios proposed within the Project Biological Technical Report (Appendix D-1) and requests consideration of higher mitigation ratios for Riversidean sage scrub impacts. This comment was based on the adequacy of the special-status plant assessments, which are substantiated in the Responses above. The statement that ‘the assessment for rare plants is probably inadequate’ is highly speculative and no substantial evidence has been provided justifying this claim. In addition, the mitigation ratios proposed are based on the precedent set for mitigation in the area by previously approved projects. As such, no revisions are required in response to this comment.

I-949.17 This comment lists additional wildlife species to be analyzed. Although not observed during surveys or known from the Project vicinity, it is acknowledged that these species occur in the larger 1.26-million-acre MSHCP planning area. All special-status species that are known to occur on the Project site or that have a moderate or high potential to occur on the Project site have been analyzed in detail in Section 4.3, Biological Resources, of the EIR, as well as within Section 4 of the Biological Resources Technical Report included as Appendix D-1 to the EIR. Please see the following additional detail about the specific wildlife species identified by the commenter.

Species	Status	Habitat Description	Potential to Occur
<i>Bell's sparrow</i> (<i>Artemisospiza belli</i>)	WL	Found in coastal scrub and chaparral in low, dense stands of shrubs. In winter, alkali desert scrub, and desert scrub frequently associated with <i>Atriplex</i> spp. in desert habitats.	Low. Suitable sparse scrub habitat is present on site; however, species likely would have been observed during focused coastal California gnatcatcher or least Bell's vireo surveys if present.
<i>Ferruginous hawk</i> (<i>Buteo regalis</i>)	WL (wintering)	Found in grassland, desert, and scrubland habitats and at the edges of low/moderate elevation forests.	Low. Suitable foraging habitat present, but species does not nest in southern California.
<i>Golden eagle</i> (<i>Aquila chrysaetos</i>)	FP; WL (nesting and wintering)	Found in mountainous canyonlands, deserts, agricultural fields, and semiopen habitats.	Low. Suitable foraging habitat present, but suitable nesting habitat is not present.
<i>Grasshopper sparrow</i> (<i>Ammodramus savannarum</i>)	SSC (nesting)	Found in grassland habitat and agricultural areas with little to no scrub cover and often with some bare ground.	None. Not known from project vicinity. Grassland on site is denser than preferred by this species.
<i>Merlin</i> (<i>Falco columbarius</i>)	WL (wintering)	Found in a wide variety of open and semi-open habitats. Primarily found in grasslands when wintering in southern California but will inhabit any habitat except dense woodland.	Low. Suitable foraging habitat present, but species does not nest in southern California.
<i>Peregrine falcon</i> (<i>Falco peregrinus</i>)	FP (nesting)	Found within a variety of habitats, though perennially dependent on wetlands and riparian habitats.	Low. Suitable foraging habitat present, but suitable nesting habitat is not present.
<i>Prairie falcon</i> (<i>Falco mexicanus</i>)	WL (nesting)	Found in desert shrubland and grasslands. Primarily forage in grassland habitats.	Low. Suitable foraging habitat present, but suitable nesting habitat is not present.
<i>Southern California rufous-crowned sparrow</i> (<i>Aimophila ruficeps canescens</i>)	WL	Found in mostly in sage scrub and chaparral, but also grassland habitats with scattered scrubs. Prefers open habitat with rocky slopes.	Low. Grasslands present on site have sparse scrubs; however rocky slopes are limited on site. Species would have likely been observed during focused gnatcatcher or vireo surveys if present.
<i>Swainson's hawk</i> (<i>Buteo swainsoni</i>)	ST (nesting)	Found in open habitats for foraging including grasslands, prairies, and sometimes pastures. Nest in solitary trees or sometimes very small groves near water.	Low. Suitable foraging habitat present, but species does not nest in vicinity.
<i>Yellow-breasted chat</i> (<i>Icteria virens</i>)	SSC (nesting)	Found within a variety of riparian habitats and occasionally disturbed and successional habitats.	Low. Suitable riparian habitat not present within the project site footprint but does occur in buffer. Species would have been likely observed during focused coastal California gnatcatcher or least Bell's vireo surveys if present.

Source: Appendix D-2

I-949.18 This comment asserts the Draft EIR should have evaluated MSHCP-covered species. The assertion that all MSHCP Covered Species are “identified as a candidate, sensitive, or special-status species” is not correct. While many MSHCP Covered Species are special-status species, some Covered Species do not meet that criterion, such as bobcat, coyote, long-tailed weasel, turkey vulture, and downy woodpecker. The MSHCP does not identify these as special-status species by including them as Covered Species. An NCCP may choose to cover, and therefore provide regional protection for, species that are not otherwise considered to have a special status. NCCPs often include such species as a precautionary measure since the ‘lifetime’ of NCCPs can be quite long; some species were likely included so that if they are elevated to a protected status in the future, they would be covered under the NCCP and additional documentation and implementing agreements would not be needed. The MSHCP does not provide rationale for why certain species were selected for inclusion in as Covered Species. As such, the Draft EIR addresses all special-status species that are required to be evaluated under CEQA.

Although not required under CEQA, for informational purposes, USFWS Birds of Conservation Concern (BCC) was added as an additional criterion of “special-status species” and additional information on species with this designation has been added to Table 4.3-3 of the EIR and Table 7 of the Project Biological Technical Report (Appendix D-1). Please note that USFWS BCC species were not originally included in the potential to occur tables or subsequent analysis. There is debate within the industry regarding whether USFWS BCC species meet CEQA’s definition of special-status. Officially, CEQA states that a species is special-status if it is “listed as rare, threatened or endangered by the Federal and/or State governments.” The official definition of BCC is “the migratory and non-migratory bird species (beyond those already designated as federally threatened or endangered) that represent our highest conservation priorities.” The only additional BCC species identified as present on the Project site is Lawrence’s goldfinch. Any impacts to Lawrence’s goldfinch would be less than significant through the implementation of MM-BIO-8 (Upland Vegetation Communities), MM-BIO-1 (Best Management Practices), MM-BIO-7 (Nesting Bird Avoidance and Minimization Measures), as identified in Section 4.3, Biological Resources, of the EIR.

I-949.19 This comment provides a list of tasks the commenter would like completed based on the above comments. Each recommended task in this list pertains to a specific comment above, for which detailed responses to the concerns raised by the commenter have been provided, and in some cases revisions to the analysis have been made, as noted above. Note that the list provided by the commenter does not include an item 1) and instead begins with 2).

- 2) Please see Response I-949.18, above.
- 3) Please see Response I-949.6, above.
- 4) Additional field surveys are not required.
- 5) Though BCC species and all MSHCP species are not required for CEQA compliance, analysis of BCC and additional appropriate MSHCP covered species has been incorporated into the analysis for informational purposes.

I-949.20 This comment questions the habitat description for the tricolored blackbird. The habitat description presented in Table 4.3-3 of the Final EIR and Table 7 of the Project Biological Technical Report (Appendix D-1) have been revised to include grasslands; this was inadvertently omitted from suitable habitat types. The potential to occur has been updated from “none” to “low” as the on-site grasslands have low potential to support a nesting colony. This revision does not change the analysis or

conclusions of the Draft EIR. Tricolored blackbird nesting colonies are unlikely to occur on the Project site; therefore, impacts on this species are not anticipated.

- I-949.21** This comment requests information regarding the plant references consulted and discusses the Jepson Manual. The Jepson Manual was one of two references consulted in preparing the special-status plant potential to occur tables within the Draft EIR and Biological Resources Technical Report. The CNPS Inventory of Rare and Endangered Plants of California was also used, which is considered to be accurate and reliable among botanists.

The following references were consulting for habitat preferences of special-status plants:

Baldwin, B. G., Goldman, D. H., Keil, D. J., Patterson, R., Rosatti, T. J. and Wilken, D. H. 2012. The Jepson Manual. Vascular plants of California (Second edition). Berkeley, Los Angeles, and London: University of California Press.

[CNPS] California Native Plant Society Rare Plant Program. 2021. Inventory of Rare and Endangered Plants of California (online edition, v8-03 0.39). Accessed July 2021.
<http://www.rareplants.cnps.org>

The following references were consulted for habitat preferences of special-status animals:

Poole, A., and F. Gill (eds.). The birds of North America, No. 574.

Unitt, Philip. 2004. San Diego County Bird Atlas. Proceedings of the San Diego Natural History Museum, No. 39. Ibis Publishing, Vista, CA. 644 pages.

Zeiner, D. C., W. F. Laudenslayer, Jr., K. E. Mayer, and M. White, eds. 1988-1990. California's Wildlife. Vol. I-III. California Depart. of Fish and Game, Sacramento, California.

- I-949.22** This comment requests that the species accounts in the Project Biological Technical Report (Appendix D-1) include more references. The species accounts were based on peer reviewed journal articles and agency publications. Additional references have been added to the species account presented in the revised Project Biological Technical Report included in Appendix D-1 of the Final EIR in response to this comment. The references were added as in-text citations to indicate the source of the information that was already presenting in the report. Information presented in the species accounts did not change and the in-text citations do not constitute new information or change any analysis or conclusions.

- I-949.23** This comment is a reiteration of text present within the Draft EIR and Project Biological Technical Report (Appendix D-1).

- I-949.24** This comment requests additional mitigation for burrowing owls. As stated in Section 4.3, Biological Resources, of the Draft EIR and the Project Biological Technical Report (Appendix D-1), as well as within mitigation measure MM-BIO-5A, a pre-construction survey for burrowing owl shall be conducted prior to any site disturbance and potential impacts to the species (if present) are potentially significant. If burrowing owl are detected during pre-construction surveys, any relocation would be done only with CDFW approval. CDFW has vast knowledge concerning the conditions that lead to successful outcomes. Any necessary funding to ensure successful mitigation would be negotiated between the applicant and CDFW prior to approval of relocation plans.

I-949.25 This comment raises concerns regarding the coastal whiptail and orange-throated whiptail. As described in the analysis in both Section 4.3, Biological Resources, of the Draft EIR, as well as within the Project Biological Technical Report (Appendix D-1), impacts on these species are less than significant with incorporation of the direct mortality avoidance measure the commenter references and habitat-based mitigation. Mitigation for species impacts has been completed in part through previous base closure land conservation requirements (664 acres) and will be expanded through sage scrub habitat mitigation (13.66 acres) (orange-throated whiptail and coastal whiptail habitat) as outlined in MM-BIO-8 (Upland Vegetation Communities). The mitigation measure cited by the commenter is included exclusively in order to avoid and minimize direct mortality as much as possible during construction activities and is standard pre-construction minimization and avoidance practice.

I-949.26 This comment raises concerns regarding the western yellow bat. The habitat for this SSC species is typically riparian habitat with palm trees; however, it is acknowledged that the life history of the species is not well understood. Note also that riparian habitat suitable for western yellow bat primarily occurs outside the proposed Project footprint (and given the limited palm trees is not high quality western yellow bat habitat); with the exception of the Cactus Road extension to the east of the Project site, suitable daytime roosting habitat is not present in the Project footprint.

Please see Response I-949.25, above; potential western yellow bat species impacts have been addressed through habitat-based mitigation. The mitigation measure described in this comment is strictly to avoid and minimize direct mortality on all species that may be present in the construction area; it is not intended as a species-specific take mitigation measure. With implementation of MM-BIO-1 (Best Management Practices), impacts to the western yellow bat will be less than significant.

I-949.27 The commenter requests that all revisions be evaluated by the CDFW. This comment is acknowledged.

To: Dan Fairbanks
Subject: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

I-951.1

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance and is especially concerning to me. I have directly experienced deception in a developer’s depictions of a warehouse development’s appearance before, in my University neighborhood. I saw the developer’s graphics and listened to their presentations. How shocked I was to find that the warehouse that went up in my neighborhood was nothing like it was presented. Rather than a low profile building, fitting in with the slope of the land, and reaching no more than two stories, the warehouse that was built is 40 feet tall and half of it is built on a raised mound so that the whole building stands above all of the others around it. Those buildings include two-story high apartment buildings on the other side of the street, and all of the warehouses nearby in the Hunter Business Park. Why was it necessary to put up something so high that it obliterates the view of Sugarloaf Mountain to anyone living across the street? Why was it necessary to destroy the view of our beloved Mount Sugarloaf as we drove up Spruce Street into our neighborhood? It has left me bereft. I feel my neighborhood blighted by this monstrosity and betrayed by our City. What a waste. And for what? This gross, oversized structure has had a drastic impact on the aesthetics of my neighborhood, although it was determined by the developer’s EIR to have less than significant impact. Maybe to them, who live in Orange County. But certainly not to us!

I-951.2

I-951.3

With respect for the beautiful open space that the Project proposes to replace, I have to ask, in what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-951.4

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Rosamonde Cook

March 10, 2023

- I-951.1** This comment is the same as the first two paragraphs of Form Letter A – Aesthetics. As such, in response to this comment, please see Form Letter Response A.
- I-951.2** This comment asserts that the thresholds used to evaluate aesthetic impacts are arbitrary. To the contrary, the aesthetics analysis in the EIR is based on established thresholds. Specifically, as explained in Section 4.1.4, Thresholds of Significance, the significance criteria used to evaluate the Project impacts related to aesthetics are based on the thresholds contained in Form J of the 2022 March JPA CEQA Guidelines, which mirror the thresholds in Appendix G of the CEQA Guidelines. The discretion to choose the applicable threshold rests with the lead agency – in this case, March JPA. CEQA Guidelines Section 15064(b) confirms that lead agencies may exercise their discretion on what criteria to use, and it provides that “[t]he determination of whether a project may have a significant effect on the environment calls for careful judgment on the part of the public agency involved, based to the extent possible on scientific and factual data.”
- I-951.3** This comment discusses the visual character of other warehouse developments and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-951.4** This comment is similar to the remainder of Form Letter A – Aesthetics. The comment does not raise any new or different issues than those raised within Form Letter A. As such, in response to this comment, please see Form Letter Response A.

INTENTIONALLY LEFT BLANK

To: Dan Fairbanks
Subject: FW: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric

vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Rosamonde Cook

INTENTIONALLY LEFT BLANK

From: Rose Cook <RRaeCook@outlook.com>
Sent: Friday, March 10, 2023 4:31 PM
To: Dan Fairbanks
Subject: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is already clogged all day long with trucks. It now takes two hours or more to drive from Temecula to the 215/I60 Intersection. It's terrible! The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Rosamonde Cook

Subject: Alternate Plan Proposal/Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach · Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.

· Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach · Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

· Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

· Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach · Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

· Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

· Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

· Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. It complies with the General Plan and Exhibits 5-1 and 5-4 land uses and is a popular alternate plan among members of the public and local communities.

These alternate plans are consistent with the March General Plan and Final Land Use Plan. I encourage the JPA to consider seriously the voices of the public and investigate further these three alternate proposals to develop the West Campus Upper Plateau area.

Thank you for allowing me to provide comments on this project.

Subject: Meridian West Campus Buildout

To: Dan Fairbanks

14205 Meridian Parkway, STE.140

Riverside, CA 82518

Mr. Fairbanks,

My name is Robert Walker, I'm an executive level general manager of a nearby distribution center for a fortune 200 company. I recently opened a building within the March JPA. Additionally I'm a 20+ year resident of Orangecrest and a former officer in the Air Force assigned at March AFB prior to the March JPA and familiar with the west base located on now JPA land.

I want to address what I keep hearing as more warehouses benefit business, the cities and me as citizen. I manage not one but two operations covering almost a million square feet. Today the business environment for space is nil. There is simply too much space which is frankly opposite of what we hear in your meetings. As I write this letter we and other companies are looking at automation. Infact we currently use a fleet of robots for picking next up packing and finally loading. So no need for people thus little contribution to the community. Business demand is slowing as consumers have figured out that "stuff" isn't needed thanks to the pandemic. A better quality life is found in other avenues such as travel and time spent with love ones. From a pure business standpoint we contribute nothing to the community. Our jobs are low wage so most employees live with extended family, we pay little to no taxes, clog up streets and most of our staff lives outside of the Moreno Valley, Perris and Riverside areas. Actually we are not heroes but pretenders who take advantage of low educated workforce by providing bike friendly access and hours of work ranging from 4 – 12 per day. Actually it's embarrassing that I'm a part of it.

In an average building not more than 3 individuals earn enough to live in the area.

Facts:

1. We are attracting the working poor helping them not to advance to a better life.
2. Encourage an un-educated population.
3. Business volume underwater for two years running and getting worst.
4. Employees commuting from as far as LA County.
5. 70% of employees live outside of the area.
6. Over 13.6+ billion square feet of warehouse space in US. Do we need more?
7. Warehousing space has outpaced need and US economy growth.
8. Average hours for my buildings 20 hours per week.

I-955.2

- 9. Clogged streets and freeways.
- 10. Little to no benefits so strain on health care. Been to hospital lately?

Sir, more warehouses contribute nothing to this area. Instead drives the need for a quality education away, increases crime because of poverty wage and eliminates quality of life for thousands of residents. It was never my intention to look at a block warehouse or drive behind a trailer truck on the way to the market. I'm a part of this cruse but I do think too much of what once was a good thing when well thought out and placed appropriately away from residential areas was a plus. Now it's killing a life style I enjoyed and in the long run diminishes what some people called the American dream but it's nothing more than greed based on a lie of making things better. Our area is nothing more than a Motel 6 for distribution centers, stay cheap, attract the worst of society and contribute nothing.

In summary based on my 30 years of logistics experience need for more distribution centers or a buildout on the west campus is not warranted. Consumers have begun the shift back to brick and mortar stores . Ecomm and retail business will be around but not flourish as it has been sold.

MARCH JPA's job is done, you replaced those jobs lost at March AFB times 10 fold now work for the people who pay taxes and built the area . Not your organization nor the developer.

Respectfully,

Robert Walker

Robert Walker

Orangecrest Resident

Letter I-955

Robert Walker
March 10, 2023

- I-955.1** This comment refers to an attachment and does not raise any specific issues or concerns about the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-955.2** This comment expresses general opposition to the Project and addresses warehousing demand, automation, job generation, and traffic congestion. Overall vacancy rate in the Inland Empire is 2.9% which is historically still low and largely due to turnover in the 100,000 square feet to 250,000 square feet building size range.² While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. Traffic congestion is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Nonetheless, a discussion of potential traffic impacts associated with the Project is included in Section 4.15, Transportation, of the Draft EIR, and a detailed discussion about jobs is included in Topical Response 5 – Jobs.

Letter I-956**Steve Huddleston****March 19, 2023**

- I-956.1** The comment states that it is being provided to multiple parties and does not raise any specific issues or concerns on the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-956.2** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is provided.
- I-956.3** This comment raises general concerns about the Draft EIR's analysis of the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing impacts. Since the comment does not raise specific issues, concerns or questions about the environmental analysis in the Draft EIR, no response is required.
- I-956.4** This comment requests a non-industrial alternative to the Project. In response to this comment, please see Topical Response 8 – Alternatives, where Alternative 5 – Non-Industrial Alternative, is introduced and evaluated.

Dear Mr. Fairbanks:

As this email proposes alternate land use plans for the West Campus Upper Plateau, I have included the Commission and other potentially interested parties on this email.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

For the past year, residents of Riverside, Moreno Valley, Perris, and unincorporated Riverside County have made one thing clear in response to the specific plan: no more warehouses. In every meeting, public engagement, and modification to your site plan you have ignored the community, and it seems you did so intentionally. For 12 months we have asked for alternate plans that did not involve industrial development so close to homes, neighborhoods, and sensitive receptors. It has become clear that the JPA and the applicant had no interest in discussing and offering alternate plans to industrial development of the West Campus Upper Plateau area and I have serious concerns with the lack of alternate plans in the draft EIR.

Fortunately, Riverside Neighbors Opposing Warehouses (RNOW) has worked hard to develop three reasonable alternatives to your plan for the Upper Plateau. I am in favor of these alternate projects and believe they hold considerable appeal to the community and are realistic development opportunities for the JPA and the applicant.

1. Alternate plan #1: The Campus Approach

- Concept: University of California Riverside (or a consortium of colleges) campus facilities and research centers focusing on expanding the college's OASIS, CARB, CERT, and economic development programs, mixed with business park, a developed public park as required in both the 2003 and 2012 settlement agreements, and significant open-space with a conservation easement.
- Environmental Analysis: No impacts to population/housing, and recreation; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, public services, transportation, utilities, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.
- Project Objectives: Support job creation through partnership with UCR (and other area colleges) and their research centers to help college students develop the skills and knowledge needed to lead our world into the future while offering a campus and business park environment that focuses on R&D as well as forward-thinking environmental,

medical and hi-tech, and renewable resources and business. Project meets JPA objectives 1-3, 5-7; project does not meet JPA objective 4 (Cactus would not be connected under this plan).

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a project that would provide for long-term quality job growth in education and technology, and preserve valuable open space for residents to enjoy a better quality of life. This plan also considers a need for the area to provide high-paying jobs and an opportunity for the UC and other colleges to grow in the area. And lastly, it incorporates the need for recreational opportunities and the preservation of open space and unique ecological habitat. It would also allow the JPA to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County.

2. Alternate plan #2: The Veterans Village Approach

- Concept: A veteran's village that incorporates open space and a developed park (like the Great Park in Irvine) memorializing the local history of the US Air Force, with low-density affordable veteran housing (like the Veteran's Village in Moreno Valley), medical offices and services, rehab and therapy center, job training and career transition services, and a small business park.

- Environmental Analysis: No impacts to recreation, and utilities; impacts w/mitigation to aesthetics, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning (done in conjunction with USAF), hydrology, population/housing, public services, transportation, and wildfire; significant and unavoidable impact to air quality, noise, and tribal resources.

- Project Objectives: Support the heritage of March AFB while offering job creation through veteran services such as medical, career training, and housing projects. This option could include incentives for Veteran Owned, Disabled, or Minority Owned businesses to serve local communities while offering active and passive recreation opportunities for youth sports and active and passive community recreation. Project meets JPA objectives 1-7 and was enthusiastically received by the US Veterans Group associated with March ARB.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA and developer a diverse project that would provide for long-term military service, a multi-use park as well as preserve valuable open space. This plan is a clear sign of patriotic investment and development that would allow both the JPA and the developer to capitalize on the good will of the community and connect to the history and present-day operations of March ARB.

3. Alternate plan #3: The State or County Park Approach

- Concept: A minimally invasive alternative plan partnering with the National Park Service's Federal Lands to Parks program that converts former military bases, closed under Base Realignment and Closure Acts (BRAC), to public parks and recreation areas. "Airman State Park" would be similar to Fort Ord State Park (CA), Charlestown State Park (IN), and Wompatuck State Park (MA).

- Environmental Analysis: These public parks help revitalize communities impacted by the closure of the military bases, providing close-to-home recreation, protecting natural and cultural resources, and potentially attracting businesses and increasing property values. No impacts to aesthetics, air quality, biological and cultural resources, energy, geology soils, greenhouse gas emissions, hazardous materials, land use planning, hydrology, population/housing, public services, recreation, transportation, tribal resources, and utilities; impacts w/mitigation to noise and wildfire.

- Project Objectives: Protects a special local natural and recreation attraction for future generations to enjoy while honoring the land and its connection to the USAF. Project meets JPA objectives 2, 6-7; project does not meet JPA objectives 1, 3-5.

- Conclusion: Per the General Plan's goals and policies, this alternate plan offers the JPA the chance to link with the community (State or County) by preserving an ecologically diverse habitat and landscape, and offering residents a better quality of life and extensive recreational opportunities. Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Veronica Juarez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. On my morning commute recently, I saw an 18 wheeler make a left onto Grove Community Dr. and then a right onto Plainview St. straight into a residential neighborhood during school hours. The pedestrians in our neighborhoods are being put in danger by truck drivers that are coming from out of state. Putting more warehouses a few streets down will only increase these infractions.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For

instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Veronica Juarez

Letter I-960

Veronica Juarez
March 10, 2023

- I-960.1** This comment is the same as the first four paragraphs of Form Letter G –Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-960.2** This comment raises concerns about existing truck traffic. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Under PDF-TRA-1, Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-960.3** This comment is the same as the last three paragraphs of Form Letter G –Traffic. As such, in response to this comment, please see Form Letter G Response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Veronica Juarez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Veronica Juarez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed for the well being of the residents in our community.

Thank you for allowing me to provide comments on this project.

Sincerely,

Veronica Juarez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Veronica Juarez

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? The March JPA has already significantly changed the footprint of the Inland Empire. While driving down Alessandro heading into Moreno Valley or the 215 into Perris, all one can see in the horizon are warehouses. It’s a shame that is the legacy the March JPA will leave for the people of this area. Building more warehouses is not the answer.

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents. My family

I-965.3
I-965.4

and I will be forced to see, hear, and smell the impact every time we open our front door. When the March JPA set out to do this project, I'm sure it was in the name of progress, but when that progress can potentially harm others, it is no longer progress.

I-965.4
Cont.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-965.5

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Veronica Juarez

Subject: Warehouse West Campus Upper Plateau

I Yvonne Turner, a resident of this community oppose the building of these warehouses! This will negatively impact our community with noise, pollution, traffic, crime, and destroying our wildlife! To include fire dangers and possible chemical hazards. We are now at this time surrounded by enough warehouses. Enough is enough! The greed must come to a stop 🛑 I want my grandchildren to enjoy what beauty is left of our community. Please stop the building of these warehouses!

March Joint Powers Commission

Verbatim Minutes from January 11, 2023

Agenda Item 8: Public Comments

Kristine Doty

Good evening, my name is Kristine Doty and I have lived in the Orangecrest neighborhood since 1990, 33 years. I am a member of the Riverside Neighbors Opposing Warehouses. I oppose the Meridian West Campus Upper Plateau project for several reasons. First and foremost these warehouses are smack-dab in the middle of our neighborhood, surrounding these industrial buildings on three sides are homes. Homes with families, babies, senior citizens and young adults. Homes where holidays are celebrated, memories are made and children grow up. Homes that will also have contaminated air, traffic noise and humongous warehouses in full view from their back yards. Please ask yourself, would you want to live in a community surrounded by warehouses on all three sides as the houses the North of the plan will be. Would you want to live in a community where trucks spew thousands of pounds of pollutants into the air next to your home and your children’s schools. I suspect the answer would be no, you would not. Well, neither do we. Additionally, I oppose this project because our community, the very people that will be breathing the polluted air, hearing the trucks thundering down the road and seeing the giant industrial buildings have not been consulted about any part of the projects design. Despite ten months of pleas about the warehouses, not one design change has been altered in regards to the size or the setbacks of this monstrous project. This is not engaging meaningfully with the community you serve, this is not listening to what we want for our neighborhoods, the March Joint Powers Authority committee has an obligation to listen to us, your constituents who voted you into the public office you now hold. I ask that the March JPA require the developer to submit a plan for alternative land use ideas that do not involve warehouses. As our groups name suggests, it is the warehouses we oppose. I ask that you create a community advisory group. This would be a unique opportunity to meaningfully engage with our community. Benefits from such a collaboration would include create, new ideas for land use and a solution that would satisfy all stakeholders. Such a group would also demonstrate the JPA is truly interested in engaging with the tax payers who’s land you are charged with repurposing. I truly hope you will take our concerns to heart and create a community advisory group with alternate land use ideas that do not include warehouses. Thank you.

PM-1

PM-1.1

1:44:51

1. Gabriella Mendez

Hi, I’m Gabby, Gabriella Mendez, I’m also with RNOW, I am opposed to the industrial build to warehouses, specifically the Meridian West Campus Upper Plateau. I ask that you push the developer to consider an alternative plan as the community has been asking for that for many, many, many months now. A couple of things, a warehouse job is respectable, hard labor and my parents were warehouse workers. I completely understand the wages that the workers are paid will not be enough for residents in Orangecrest to pay their mortgages so the job payment is not enough for this community to pay their mortgages. This community is already vulnerable as they are already under the flight path for the March JPA so they are already having airplanes flying over their homes

PM-2

PM-2.1

PM-2.2

PM-2.3

PM-2
Cont.

constantly and airplanes are a very dangerous pollutant. Adding more trucks to the community or adding more warehouses is not going to help the residents health at all. There is nothing that this community could benefit from this warehouse in their community and all we ask is that you build an alternative plan and leave the area alone. This is one of the few grey spaces that are left in the City of Riverside that is of this size and we ask that you conserve it. We have bikers that travel to that area, there's a middle school biking group, it's a big recreational area for these residents and is very loved by the community. It is not a logical decision to build it right in the heart of the community. Please listen to your residents as they've been opposing this for several months and I have not heard of a single person supporting it in the various meetings I've been to. I am also here with Arnell opposing this project. Thank you.

PM-2.3

PM-2.4

1:41:23

2. Abdallah Karim

Good evening, my name is Abdallah Karim and I live in the Orangecrest community, center area, I'm here with RNOW to oppose and propose an alternate plan to that doesn't include warehouses for that area. In my opinion for the last ten months, there are three types of members on this board. There's first type of person that actually cares about hearing us out. The second is the one who pretends to care and the third who blatantly doesn't care and is shown by their actions. You sit there and pretend to pledge allegiance to the flag, you can pray, you can do whatever you want but for the second and third type of person is hypocritical and you pretend to hear us out for ten months with no result. Our requests have not been answered and you continue to press on with the developer putting up no trespassing signs and continue to do what's good for the JPA and the JPA alone. I request as many people will request to create a community advisory group so that we can actually have dialog between the JPA developer and can have meaningful input from what is built. Between the traffic, the air pollution, the schools, the fact that it's in the Inland Empire when we don't need anymore warehouses in the Inland Empire is one of the many reasons the project is not supported by this community. I hope if you're the first type of person that somehow the second and third type of people today you can go ahead and help influence them to actually listen to us and work with us. Thank you.

3. Susan Nipper

Hello, my name is Susan Nipper and I'm an introvert so standing up here today is not easy for me but this topic is so important. I'm a member of Riverside Neighborhoods Opposing Warehouses and I'm opposed to the plan to build industrial warehouses essentially in our back yards on that West Campus Upper Plateau. As a homeowner in Orangecrest, a retired elementary school teacher, a long time attendee of the Grove Community Church, I'm passionate about this. These warehouses are planned in very close proximity to the Grove Community Church where we have a robust preschool program and where thousands of children play soccer, football, baseball, close to year-round on our fields. The increase from air pollution from truck traffic will be dangerous for our children and grandchildren escalating childhood asthma and other health concerns as a consequence of your actions. Please do what is right for the families that are living in Orangecrest and surrounding communities and consider an alternate plan other than warehouses. Thank you.

4. Jerry Shearer

Hi, my name is Jerry Shearer, I live in Orangecrest, I'm a member of Riverside Neighbors Opposing Warehouses and I am here to comment on the draft EIR for the Meridian West Campus Upper

PM-5.1

PM-5

Plateau project. I am opposed to the plan to build industrial warehouses in the West Campus Upper Plateau and am especially disappointed. The commission did not hold the JPA employees and the builder accountable for not genuinely engaging with the public during the pro-longed preparation of this plan. For ten months I have spoken to and consistently emailed you asking that you compel the JPA and the builder to consider the health and welfare, quality of life and dreams, the economic reason for creating the land use plan that benefits the communities directly impacted by the development of this land. By shameless proponent of leave it as it is thinking, the reasons to do so are deeply painful for all who live in this part of Riverside county. Our community understands that development of this land may be inevitable due to the greed of developers of the Lewis Group. This is inconceivable to the public, why the Lewis Group and the JPA haven't offered an alternative plan for developing this land. One that addresses the clear and present messaging from the community. No more warehouses. Instead, we have floor plans that include up to 4,986, 650 square feet of industrial warehouse space within 300 to 800 feet of Riverside residents. How are any of these plans expressing the explicit and persistent concerns of the community. No more warehouses. Build baseball, soccer and football fields, build interactive nature trails, build solar and wind farms, build auto repair shops, commercial shops or restaurants, build single family homes, build a true mixed use complex that will allow residents to enjoy the land and the developer to build and profit from the project. Build something that gives back to the environment as much as it extracts from it. None of this will happen unless you, the commission demands it. And since we are here tonight at this point of the process it seems like you are not holding the JPA accountable. Representatives from Riverside will you stand up for your residents. Perris and Moreno Valley, how will you protect the people you were elected to serve. Our county supervisors how will you mitigate the unrestrained logistic sprawl overrunning the western part of our jurisdiction. If it isn't too late, please take action tonight to convene a community advisory group. I'd volunteer for it and involve them in these vital land use decisions. I also ask that you compel the JPA and the builder to reconsider their faulty draft EIR and send them back to develop alternate plans that do not include warehouses and address the real concerns of the community who will have to live with this development on a daily basis. Thank you again for your time. Mr. Fairbanks there were trucks in my neighborhood for more than 20 minutes again today.

5. Jennifer Larrett-Smith

Good evening, my name is Jen Larrett-Smith and I am a member of Riverside Neighbors Opposing Warehouses. I had a really difficult time thinking of what I was going to say to you tonight, you've seen me speak before and I've make arguments, quoted statistics, tried to make the case for how warehouses are hurting our communities and don't even make sense economically anymore but the facts have fallen flat. Every alternate plan other than the no development in the draft EIR West Campus Upper Plateau warehouses. You say that we can't build residential on the land even ALUC zones it C2, the same as my house. We've asked you to look into solar panels, we've asked you to reconsider your original plan for business parks with high tech jobs there are many alternate land uses. Literally the only thing we are asking and what unites us is in the very name of our organization, we oppose warehouses but the draft EIR didn't reflect that and I'm tired. I've been organizing my community around this for almost a year, I've gathered thousands of signatures, spoke at meetings, met with people individually and I just don't know what is going to get through to you. So instead of quoting facts today let me just tell you about a neighbor of mine. I have a neighbor who used to come to these meetings early this year but he's not here tonight. He can't come because he cares for wife who is sick with cancer. She has no family history of cancer and my neighbor has asked me, why has this happened to her. Could it be because of where we live. I honestly don't know what to

PM-6

PM-6.1

PM-6.2

PM-6
Cont.

tell him. We have the worst air quality of any region in the county and according to the California Air Resources Board, diesel engine omissions are believed to be responsible for about 70% California’s estimated known cancer risk attributable to toxic air contaminants. This specific plan wants to bring in three thousand more diesel truck trips every single day. It says that the air impact or quality will be significant and unavoidable. I have two kids, one is 13 and one is 11 so I can’t afford to be tired, I have to keep on fighting. I have to fight for my life, for my children and for my neighbors. Please consider the human impact your decisions have. You’re a public agency tasked with repurposing excess federal land. You have the authority to make decisions. You’re not a rubber stamp for a developer. You have to do better. Please hear our requests tonight and push the developer to come up with an alternate plan that doesn’t include warehouses and create a community advisory group so we have a real say of the land use decisions that will be impacting us and our families for decades. Thank you.

PM-6.2
Cont.
PM-6.2

1:30:10

6. Eric Carlson

My name is Eric Carlson and I’ve been an Orangecrest resident since 1998. My wife and I have raised our two sons in this community and are deeply entrenched here. As well I’ve been a biking coach for Woodcrest Christian Middle School and High School since 2016. I have been the head coach of this program for the last two years. We have about thirty members on our team between student athletes and an all-volunteer coaching staff. Our program has benefited tremendously by enjoying the trails situated behind the land under the control of the March JPA. One year ago our team organized a trail clean up and I had the pleasure of meeting with Dan Fairbanks and he came out to help us with our efforts. That day we removed over two thousand pounds of trash. Largely the result of illegal dumping. Our school team values this land, the hiking and biking trails found here are different than the trails across Alessandro Blvd. in Sycamore Canyon as these trails are more gradual and involve less technical skills for biking. In the time our team has been using these trails I’ve seen several other school teams enjoying them as well. Schools from Corona, Beaumont, Temecula, Murrieta and elsewhere. I’ve met people that have travelled as far as Los Angeles and San Diego to enjoy these trails. Additionally there is a large community of seniors in their 60’s, 70’s and beyond that ride their bikes and hike on these trails. There is plenty of other available land along the 215 corridor that can and is being developed into warehouses. On this land I’ve observed owls, falcons, hawks, raccoons, rats, rabbits, a pack of coyote, different variety of snakes. There is an important eco system that will be jeopardized if this land is developed. The maintenance cost of leaving this land undeveloped could be minimal if the land was placed in public trust. I ask you to model what the City of Corona has done with the Skyline Trail. It’s closed off to vehicles, let the people enjoy it and leave it as is. Thank you.

7. John Lyell

Hello, my name is John Lyell and I’m a lifetime Riverside resident and was born on the military base and am a member of the Riverside Neighbors Opposing Warehouses and am opposed to the plan to develop warehouses. I think we needed to think outside the box, consider following the model that Irvine used with the Great Park, the similar repurpose of federal lands and have a visionary and innovative plan for use of this space. They have a botanical gardens, hiking trails, water parks, sports fields, museums, aquatic centers, food and beverage facilities, they’re building an amphitheater with a partnership with Live Nation which Riverside has a good relationship with and this is a great location close to the desert, San Bernardino, Redlands, Corona, Temecula, sports complexes, some youth tournaments, you know they pull in 200, to 300 thousand dollars per weekend for major

PM-8

PM-8.1

PM-8
Cont.

tournaments, pretty crazy. I think we should be considering large buildings as technical hubs, we should be contacting Google bringing in technical, high paying jobs, not warehouse jobs and with the cost of living here it could be very beneficial for some of those companies. I think that the advisory group that others have discussed is a great idea. I've worked with some of you up there for longer than probably most people and I find you to be honest and honorable and I've never found you to go a different direction than your constituents so I hope in this case it will go the same way. I have major concerns with Riverside stress on infrastructure, streets, water electrical and I know Riverside struggles with making the repairs and maintenance on those items. Thank you very much.

8. Sophia Guzman

Hello my name is Sophia Guzman and I'm back again to voice my opinion on behalf of the community of Riverside. According to UC Berkley, California active transportation safety information page Riverside is in the top 10 for a number of cyclists crashes with a total of 1,608. In the top 5 county for a number of 43 cyclists killed in California within 2017 and 2021. Some of you may have heard of Robert Stockton. He was a dedicated mountain biking coach for my school but was sadly a victim of a driver hitting him. He was a great role model for my team but someone I will not be able to meet because of lack of road cycling and pedestrian laws. I am not only researching from a perspective as a 13 year old athlete or just someone in the Riverside community but I am looking at this new project with a business perspective. 4 in 5 economists expect a long and painful recession in 2023 and 2024 which can bring rising levels of unemployment and failing retail sales. Many others and I believe that you are not listening to the voices of the locals. In addition to beautifying Riverside and supporting local Riverside artists I believe we should help beautify our earth. I would like to end this with a bible verse that my team and I always go back to reflect on. Romans 5, 3 to 4. Not only that but we rejoice in our suffering knowing that suffering produces endurance and endurance produces character and character produces hope. Thank you for your time.

PM-9

PM-9.1

1:22:45

9. Christopher Neilson

Hello guys, my name is Christopher Neilson, first I just want to say great job to the young lady before me, that was quite impressive. I'm a member of Riverside Neighbors Opposing Warehouses. I'm opposed to the plan to build industrial warehouses on the West Campus Upper Plateau. I ask all of you that you push the developer to consider an alternative plan that does not include warehouses for that area. I know you've heard a few comments tonight and they all have great points. I want you to realize that we are united in opposing warehouses whether it's leaving it for mountain bike paths, that's a brilliant plan or using it for mixed use is a brilliant plan. Quick personal story, took me ten years to save up to move from Box Springs to

PM-10.1

PM-10

Orangecrest and I love it here. I still have a rental in Box Springs. I rent it by the room mostly to single parents. I feel bad for how unaffordable housing is. Two of the single parents there are Amazon employees, they can barely afford even a room for rent. The argument that you're bringing jobs to Woodcrest and Orangecrest, these are not jobs that we're asking for or even need. If you know the cost of living now in Orangecrest is insane so you're going to be having people from out of town creating more traffic and traffic on top of trucks, that's traffic on top of security, that's employee traffic. This is from the Chicago Tribune 2015, long term exposure to noise pollution from traffic may reduce life expectancy the news study contends living near busy roads may increase the risk of stroke to older individuals. I live by Barton/Van Buren and love the area, love Gless Ranch, cool market. It is the best that my family can afford. It is obviously a very large complex going in at Barton and Van Buren. I've camped in my back yard and heard the bulldozers with my daughter and

PM-10.2

PM-10.3

PM-10
Cont.

looking at the stars and I find it quite sad that it's the same thing that all of these houses are going to have to endure. I have personally biked these paths and they are amazing. I've ran into coaches from San Dimas. It is a beautiful land and I believe it's something in my opinion that should not be filled with warehouse noise, traffic, pollution that we don't need, jobs that we're not asking for. If you go down Van Buren there are so many places that are hiring right now. Keep our jobs local, don't fill them with warehouse employees at the cost of pollution and noise traffic. Thank you.

PM-10.3
Cont.

1:19:18

10. Aaron Bushong

March JPA Commissioners, my name is Aaron Bushong and I am speaking tonight as a Member of Riverside Neighbors Opposing Warehouses. I have lived in the same house in the Orangecrest neighborhood for almost 23 years. During that time I have joined my neighbors in attempting to work with the March JPA on responsible planning for the 4,400 acres of surplus property. My neighbors and I have worked to oppose the DHL facility and were ignored. And DHL failed within 4 years. My neighbors and I have worked over the past 15 years to oppose the development along the Meridian Parkway and Van Buren Blvd. We have been ignored. And one merely needs to drive those roads to see that one of the most desirable and attractive roads in the city of Riverside has been transformed into a sea of unsightly office buildings and warehouses that is inconsistent with responsible city planning. Now, my neighbors and I are working to oppose the West Campus Upper Plateau project and we are being ignored. Over the past 23 years the March JPA has never meaningfully engaged with the community, has never formed a community advisory board to guide their development decisions and has never pursued a project that respects the safety, wellbeing, and quality of life of residents. Instead, the March JPA has ignored the concerns of the community and hidden from scrutiny withholding information from the community and scheduling meetings in the middle of the day when most community members are unable to attend. Ignoring the concerns and oppositions of the community has resulted in among other disasters an airplane crashing into a warehouse, a warehouse fire and a jack-knifed big rig on a residential street that stopped traffic for 45 minutes. Each of which put residents in danger. All three of which were the result of the lack of foresight and utter disregard for residents' safety and wellbeing demonstrated by the March JPA. The proposed West Campus Upper Plateau project will only increase the possibility of similar disasters and place them even closer to residential homes. Opposing the West Campus Upper Plateau project should not be a difficult decision all you have to do is ask yourself would you want warehouses in your backyard. In your parents backyard or in your children's backyard. Your answer should be obvious. On behalf of the Riverside Neighbors Opposing Warehouses I implore you to consider alternative planning for the West Campus Upper Plateau that does not include warehouses and to immediately create a community advisory board to guide you and the responsible planning for the West Campus Upper Plateau that will preserve the health, safety and wellbeing of the surrounding neighborhoods.

PM-11

PM-11.2

1:15:38

11. Gregory Garnier

My name is Greg Garnier, I've lived in Orangecrest for over 30 years in two different homes, one of them on Barton Street that will be significantly impacted by the connecting of Barton from Alessandro to **Golf Community**???. I do not support any further warehouses. I am a member of RNOW and I have walked most of this part of Riverside. It would be safe to say that maybe one percent of the residents support that. I got by my log that I took months ago. I think that the additional traffic trucks being brought into the area is just going to be a disaster. The air quality is already pretty poor. The 215 which is where the draft EIR report shows can barely manage the traffic

PM-12.1

PM-12

PM-12
Cont.

we have now. This is not going to get better over time. I respectfully request some kind of plan B or a plan C, scaling back this thing. An open area would be kind of nice to have. Expand the parks, but definitely scaling back would be a minimum thing to do. Your constituents don't like this. I really don't see there's any alternative. A community direct feedback advisory committee is a reasonable thing to do with a couple of RNOW members on it. Thank you very much.

PM-12.2

1:13:20

12. Amy Dahdul

Good evening everybody, my name is Amy Dahdul and I am a member of Riverside Neighbors Opposing Warehouses, opposed to the plans to build industrial warehouses on the West Campus Upper Plateau and I am pushing the developer to consider an alternative plan as well as putting together a neighborhood advisory committee. I've been coming to these city council meetings, driving to Moreno Valley, going downtown after work and trying to get more and more people on board with our point of view and what I mean by people on board I mean you guys. I live in Orangecrest, I understand the economic factors behind this project but there is an alternative to warehouses. There definitely is and we feel like you guys are just not listening to us. I understand the business of tilt ups. I have loved ones and friends who work in construction. They did all these tilt-ups around here. I'm a mountain biker, Jensen USA has a warehouse over there. We're not saying you guys never should have done this or warehouses never belonged here but enough is enough and you look at apartments and the jobs you're bring here, I'm not sure how many warehouse employees can afford a \$2,300 rent on a one bedroom apartment and I know because that's how much the apartments are right near 215/60 freeway. I looked at it for a friend of mine. \$2,300 for a one bedroom apartment. I'm not sure with my salary if I could afford that. What I'm asking you guys is to consider the option of doing something really great for Riverside and what we can do is consider the people that come here for recreation activities. I know a lot of teams from San Diego that come up here for mountain biking, it's not just a mountain biking thing, however, I'm just asking you guys to consider an alternative. Warehouses is enough. I know that the builders are looking at something that will make the most profit and I understand that and right now I keep hearing that warehouses are the only way to make money. I just can't imagine that you guys would look at that as being more important than the lives of your constituents and the lives of the children in your neighborhood. Like I said, I appreciate the economic factors behind this project but I'm not sure that bringing in more jobs that don't pay enough to even live here is really helping Riverside. Thank you and please consider an alternative, get us on board so that we can help you with something that would be really great for Riverside. We have the energy, we have the patience, we have the drive, we are showing up after work exhausted and tired, please.

13. Michelle Rodriguez

First of all I wanted to thank everyone for showing up today. Land use is a critical issue that impacts our communities for generations to come. My name is Michelle and I live in Mead Valley and I am a member of Riverside Neighbors Opposing Warehouses. Like most people I do not pay much attention to carcinogens in our environment but I quickly got reality check when my 8 year old daughter was diagnosed with an aggressive case of cancer. A natural response to this is asking why, why did this happen, why this disease and why her. Two things need to happen for a young person to develop cancer. First a genetic disposition and then mutations caused by environmental factors. My daughter Ecstasy courageously fought the disease until she took her last breath at 10. I now have my surviving daughter Evangelin who's 8 years old, the same age her sister was when she got diagnosed. I'm out here today because I'm concerned for Evangelin's health. She has the same

PM-14.1

PM-14

DNA as her sister and I cannot change that but I can do my best to protect her from environmental harms. I do not want her to meet the same fate as her older sister. I want her to live a long and healthy life. According to the International Agency for Research on Cancer, diesel engine exhaust is carcinogenic to humans, meaning that it is found sufficient evidence to conclude that diesel engines exhaust increases ones chance of getting cancer. Building more warehouses will increase the presence of diesel trucks in our communities. We've already seen it. I have lived in Perris since 2003. The American Lung Association's annual reports that the Inland Empire rates worst in particle and ozone pollution in the United States year after year. It is not normal to get alerts on our phones to warn us to avoid going outside. The ALA states that this pollution causes inflammation, shortness of breath and damage to the airways that leads to asthma, cancer and premature death. Living within a half mile of a warehouse increases your chances of having a heart attack. The goliath logistics industry does not have our best interests in mind. This is why I ask the Joint Powers Authority to hear us out and reconsider land use. I ask JPA to urge the developer to consider a substitute plan that does not involve more warehouses and to build a community advisory group so that we can have a voice in the development that will directly impact our families today and for generations to come. Thank you for your time.

14. Christine Martin

Wow, good evening members of the March Joint Powers commission, my name is Christine Martin and I want to thank you for creating a space to hear from concerned members of the community. I am here tonight as a member of RNOW. I'm opposing the plan to build industrial warehouses on the West Campus Upper Plateau. This 800 acres of open space is surrounded by homes, Riverside's Orangecrest neighborhood. Riverside is built on neighborhoods and it's important that we take care of them. Building warehouses in the midst of the Orangecrest neighborhood will create more pollution, more noise pollution, more traffic and more stress for that community and it will negatively impact all of Riverside's population. To remain a desirable city and grow as a community, it is vitally important that we maintain our neighborhoods as healthy, happy places for people to live. Not degrading neighborhoods by building warehouses in the middle of them. I'm here tonight to ask you as other people have to urge the developer to consider an alternative plan that does not include warehouses for that area. Secondly, I ask you to create a community advisory committee so that the people who are directly impacted by land use have a chance to make a meaningful input to what is built. In your role as leaders, it is critically important that you listen to the Orangecrest community before making decisions that are so impactful to this neighborhood and Riverside as a whole. As a resident of Riverside for nearly six decades, I am very grateful that this has been a lovely place to live, work and thrive. Please don't transform Orangecrest from a neighborhood where kids and families thrive into a land of inhospitable warehouses. Thank you.

15. Lewis Lopez

Hello and thank you for allowing me a few minutes to speak on something that I feel very passionate about. My name is Lewis and I'm one of the many parent coaches for the mountain bike team at Woodcrest Christian High School and middle school. I understand your plans to develop the land South of Alessandro and east of Barton Road are based on an opportunity to generate revenue. The idea presented to us as members of the community is that it will attract jobs and will be good for us economically. I whole heartedly believe that this development is going to have a very negative impact on the younger generation of student riders by taking away from them a very accessible part of the trail system. Not all fields are created equal, not all trails or open space is created equal. Some

PM-16

PM-16.1

fields and trails are rockier and steeper than others. I know it's difficult to see the elevation features on Google Maps but this area is extremely unique. It's the perfect training ground for new mountain bikers, the elevation changes you see from Alessandro/Van Buren and from Barton to Meridian are very mild. It's perfect for introducing new mountain bike riders to mountain biking. All of our mountain bike team middle school riders learn to ride on the very same trails that you plan to take away on this development. I am appealing to the humanity in you and I'm asking that you reconsider the location of this development. If anyone listening to us speak today has any influence on voting to move this project somewhere else, I urge you to have an open heart and leverage some of that power you have in your vote to help keep these trails accessible to our students. Not everything in life should be transactional and material in nature. You have an opportunity to support this community of student mountain bikers by keeping these trails in their natural condition. This is not limited to Riverside student athletes. We regularly see students from neighboring communities enjoying these trails. I only have one question, if you've ever had the privilege of visiting any of our nations beautiful national parks, when you were there were you thankful that our politicians before our time had the wisdom and the forethought to protect such pristine land and to protect it from development. If you share the same gratitude and if you admire the wisdom of the politicians that established the protection of our national parks, I would like to remind you that you have the power and opportunity to do the same here at a local level. To you, I'm sure this plot of land is no national park but I promise you that to those of us who use these trails, it is our natural wonder. If you have the ability to sway votes or influence key members to protect this area and to keep it accessible to our students in our community I implore you to take that influence you have to do everything in your power to keep this plot of land in its natural state. Thank you for your time.

16. Anthony Noriega

I want to publicly thank Jennifer Smith for having the courage to stand up and lead the community of Orangecrest and Mission Grove. She had the damn courage to stand up and to lead over 600 community members. I want to thank the people that attended the meeting tonight. and the people that are speaking out. This is our opportunity to be engaged in what happens in our backyard. Good evening, my name is Anthony Noriega, I am the director of District 5 of the League of United American Citizens for the Inland Empire. I am a veteran, I'm a 21 year resident of Orangecrest community and I also retired in 2015 after serving for 26 years as a civilian employee for the United States Air Force. My last retirement was as the personnel advisor to the 4th Air Force Commander located on March Air Reserve Base. I am here tonight to support RNOW in their opposition to the Meridian West Campus Upper Plateau project. The two year old data in the EIR report reflects that some of the pollutant levels exceeds allowable levels that will result in impacts on the air quality in the project site. The homes, the schools, the businesses located in the immediate project site and impact the Orangecrest and Mission Grove communities. We do not believe that the proposed mitigating factors in the EIR are sufficient to override the increased negative air quality impacting the over thirty thousand residents of Orangecrest/Mission Grove and the ten thousand K-12 school children attending the community schools. RNOW is extremely disappointed that the JPA board as a whole has not engaged with them and the community in good faith. They have been expressing to you for over 11 months that they do not want this warehouse on this project site. As we enter the EIR review period, we ask that you do not dismiss the past and present concerns by RNOW and the community. We ask that you give serious consideration to the community opposition input to the EIR. We ask that you work with RNOW and to the community to address and resolve these issues concerning the project. We urge you to vote no on the project or pause the project to allow the

PM-17

PM-17.1

PM-17.2

PM-17.3

PM-17
Cont.

community to build the vision along with you on the future we want to see. That future should consider alternate land use and more warehouses. Thank you.

17. Alice Musumba

Good evening, my name is Alice Musumba and I stand before you as an Orangecrest resident, as a parent, as a public health professional and a cancer survivor who's diagnosis about 15 years ago was attributed to environmental exposure. I have been a resident of Orangecrest for just one year and I stand with RNOW to oppose the warehouses that are being build. It may not strike you as real but I'm going to tell you a story. The doctor told me my cancer was attributed to environmental exposure. My appeal to you guys with all due respect is to consider environmental justice for the lives of me and the others who have shared their stories of the impacted by the environment we live in. What we are creating in our neighborhood will out live us. I'm here for who knows, 10 years, 20 years, 30 years, who knows, God willing. What do I do for my kids, what will you guys do for your children, for the people that voted for you to take care our neighborhood. As a public health professional, I attest to all the statistics that have been given to you. Should be continue polluting our neighborhood for a mere dollar or two that will be here for a day, then what. What happens to our neighborhoods. I appeal to your human nature, to your leadership, you've been placed in power to do something so please involve us. I'll bring my expertise as a public health girl. I'll bring my expertise as a cancer survivor. I will work with you. I'm a parent and my kids are wanting to do things, I say you can do whatever you want but don't play in the yard because there are people working out there. You guys have the power to tell the developers whatever you do get all the money you can but don't build warehouses. Can you do that? Will you make sure that our environment stays undisturbed? That's my prayer for you. That's my appeal for you. Thank you.

PM-18

PM-18.1

54:30

18. Anthony Scimia

Good evening, my name is Anthony Scimia, I've been a resident of Orangecrest for the past 13 years and I just want let the members to know that what we're experiencing as a family with the recent addition of all the warehouses, I'm constantly woken up at night starting at about 11:00 pm I start hearing the back-up devices of the trucks, the constant devices going off. I'll wake up two or three times throughout the evening. This is just with the current warehouse situation so I'm tremendously concerned when we're going to add all these additional warehouses just seconds from my home and all of our homes in Orangecrest what that's going to create in the evening time with all of their devices going off, the trucks, the pollution. It's a very big concern for all of us so please take that into consideration. We moved to Orangecrest to live the lifestyle in Riverside that our family deserves so please preserve that for us. Yes we are opposed to the Meridian West Campus Upper Plateau and hopefully you can take that into consideration. Thank you.

PM-19

PM-19.1

52:46

19. Kevin Heinmann

Good evening, my name is Kevin Heinmann, my family and I have lived in Riverside in the Orangecrest area for over 20 years. I am also a member of RNOW and I am opposing the warehouses being developed in the Upper Plateau area. I'm asking the Joint Powers to come up with another plan. There's got to be something else that can go there. That area is surrounded on three sides by homes. Warehouses will bring truck traffic, pollution, noise, straight into our back yards. I'm going to say that again, have you looked at the map, three sides of that are houses and you're talking about

PM-20

PM-20.1

PM-20.2

PM-20
Cont.

putting warehouses in there. It just doesn't make any logical sense to me. I'm just asking that you do what's right for our neighborhood and don't put warehouses on that land. Thank you.

PM-20.2
Cont.

51:44

20. Pete Elliott

Commissioners, good evening. Thank you for taking the time to listen to us. My name is Pete Elliott and I've been a resident of Orangecrest for about 20 years now. I'm also a public servant and I've served this community for over 25 years. I've learned a lot about my community. So much so that I moved to it, I wanted to be a part of it. But I'll tell you what, these stories and my neighbors that I have met over the last year are so compelling and so pushing on my heart strings, on my morality that it causes me to want to fight, it causes me to want to fight for my neighbors and my kids because no one else is going to do that for me except my neighbors now that I know are here with us today. We're very passionate about this, we know what this will do to our community because I had an activist tell me that you guys sound like a bunch of not in my backyard type of folks. I said stand by, we are no more in our backyard. We have this, we have millions, millions of square feet of warehouses in our backyard. We live it. We have folks here that are suffering with cancer and it infuriates me that they have to be subjected to something like this. It infuriates me that we have no seat at the table, none. Zero. It infuriates me that the developer throws money around like it's free. But I will tell you, we will fight til our last breath. We want a seat at the table. That's what we're asking for. We want people to start listening us. We're very reasonable, we are. We just need a seat at the table. I hate to think that this meeting was scheduled in this building, seven miles away from the people that are affected most so I would like to make a formal ask that before this EIR closes, that we have a nigh time community meeting in the Orangecrest/Mission Grove area so that people who are right now doing homework with their kids and cannot make it here during rush hour have a chance to show up in person and talk to you. God Bless you, do the right thing. Thank you.

PM-21

PM-21.1

48:33

21. Honey Bernas

My name is Honey Bernas and I have been a resident of Riverside county for over 55 years and an Orangecrest resident for 18 years. I grew up in Mira Loma where we were surrounded by warehouses and truck traffic. Almost everyone in my family, nieces, nephews, we all suffer from asthma. We used to go on lock downs and couldn't go out at recess. Our lungs were killing us. We couldn't go outside and play. I know how busy you are but there is a time and place for everything but I don't know what this county is doing with all of these warehouses but I think you would all agree that in the middle of a neighborhood where there are schools, churches, sports fields, that just makes no sense. It is the worse decision and you are the only ones that can make a difference here. We can talk, beg and plead but I would hope that you would put the health and wellbeing of your constituents ahead of the almighty dollar. Especially in our neighborhood. Thank you.

PM-22

PM-22.1

46:33

22. Mike McCarthy

Good evening Commissioners, it's your e-pal and best friend Mike McCarthy here with RNOW. I'm going to hit you at [redacted]jaw stay? We want to go with the strength of this EIR. As a public agency in trust with redeveloping public land. I encourage you to go with economic patriotism, support local businesses, local entrepreneurship and local decision making. This vision aligns with the March JPA's final reuse plan that supports the creation of a quote community preference land use plan consistent with the goals of the community relative to base reuse and to maximize the opportunity for citizen involvement with base reuse. We would like that community advisory report. Just like the final reuse

PM-23

PM-23.1

plan says. Unfortunately, the West Campus Upper Plateau warehouse complex represents the economic interests of Orange County developers, multi-national e-commerce firms and real estate investment trusts instead of local residents. Riverside county residents will not own these warehouses. Riverside county owned businesses won't occupy these mega warehouses. Local residents, business owners and entrepreneurs will be harmed by this project, squeezed out, because of the big businesses that will be put in. There is nothing in the EIR that this project will bring prosperity to our residents with the low paying jobs that are created here. This region is already over concentrated with the **Good Move** industry and the preapproved warehouses along the 215/60 corner are planted double already with the World Logistics Center, the Stoneridge Commerce Center and this plan. Double the existing footprint. We are completely dependent upon an industry enforced cheap goods from Asia via multi-national e-commerce companies with no concern for our regions wellbeing of prosperity. We have low paying temp jobs, traffic, pollution and endless business of ugly high hued Warehouses. Multi-national companies extract the profit. Our region lacks the economic resilience that comes with the diversification. We are vulnerable to trade slowdowns, trade wars and slow down imports from China. Those will go away when A.I. takes over with robots. We're going to have robot jobs, drone jobs in ten years. These warehouses are going to be lean mean, no job machines in ten years because of the technological changes. The draft EIR claims this project will produce 2,600 jobs with 8.9 jobs per acre in 2045 however the current average job rate for warehouses in the March JPA according to your own TAC report from 2022 is 8.8 jobs per acre. Are you telling me there's going to be no more automation in 20 years. There's going to be 5 jobs per acre at best. You're not going to produce 2,000 jobs on this land. Please reject this project. Please form a community advisory board of local residents to actively collaborate in project decision making so we can map out a plan that will help our region to prosper. This could be a win, win rather than a lose, lose. I urge you to be economic patriots, chauvinists for local economic development. Thank you very much for your time.

23. Connie Ransom

Good evening to you Joint Powers, this group that has a big job to do. Thank you for allowing us time tonight to share with you our concerns. I am not a resident of Orangecrest. I'm a resident of the United States, the state of California and the city of Riverside. My name is Connie Ransom, I've lived in Riverside for over 50 years, I've lived downtown in the wood streets and currently in Canyon Crest. What happens in Orangecrest/Mission Grove, Moreno Valley, Perris the whole county of Riverside affects me and affects all of Riverside. The project that has been put on the table without apparently a lot of input from the neighbors is a project that affects every part of Riverside. We are not isolated bubbles. The air we breathe is shared by everybody. I'm wondering if you know what a little lake in north of Minnesota called Lake Ataska. What is has in common with the gulf of Mexico, the Mississippi river, this project is in the March Joint Powers area affects the lakes and the streams along the Santa Ana. The water that runs off the parking lots that are currently along Sycamore Canyon comes down the **Vicarian** stream. A blue line stream which is to be protected and that stream goes all the way through Riverside. Goes through Canyon Crest Country Club. It goes through Victoria Club and it exits by Mt. Rubidoux and the Bonaminio Park. That affects everybody. What lives on it, what breathes around it affects everybody. Please do the right thing and not move forward with another warehouse.

PM-24

PM-24.1

39:48

24. Andrew Silva

I'm Andrew Silva, finding some people have lived in Orangecrest longer than I have goes by fast when you hear things like, I've been here for 30 years. I've lived in Riverside for 40 years and the Inland Empire for my whole life. The last time I spoke to you guys I gave you props for your public service and with that comes this tremendous responsibility, sitting on the County Board of Supervisors you probably go through a thousand consent items each year but these moments count when you have to make a very important or difficult decision that affects literally thousands of lives and that's what this project does. Just a brief moment to celebrate what we're doing here today. Think about folks in Ukraine without water or electricity and getting blown up just because they're there. Think about the young women in Iran who are facing bullets and gallows over a head scarf, reaching for a little bit of freedom so a cost for us for being here today. As already stated and ditto to previous comments, we're not knee-jerk anti-growth folks. I have sat through an hour meeting because the community did not want a Dollar Store because it was going to ruin the character of the community. We're not those people. We're ok with growth and development it's just that the Inland Empire is being treated like the red-headed step child of the West Coast. We're being treated like a third world country. We have land and we have bodies. So many times I've seen bad projects sacrifice a neighborhood or community on the offer of jobs. It's ok if these were good jobs and as already stated these are not never good jobs and they are going to go away with automation. We're going to have thousands of acres tied up. Debates on public land you'll often hear on how much is too much. We've protected a million acres of the desert, why do we have to protect 100,000 acres more. Here it's like how little is too little. We have a handful of organized parks, we have Sycamore Canyon and this is just one and a half square miles of just this absolute jewel. In the middle of our neighborhood, Riverside needs open space, this area is worth protecting. Warehouses are just a horrible, horrible development. I'm an air quality guy, I can ditto how close you are to the emission source, the impact to your kids, my mountain biker friends who are out there at a young age with their hearts pumping 180 beats a minute with this particular matter a few hundred feet away. This is just bad land use planning. We could do good land use planning. Thanks again for your service and thanks everyone for being here.

PM-25

PM-25.1

36:30

25. Christine Heinmann

I'm part of RNOW and I'm opposed to the warehouses being built in our neighborhood down the street. I've been a 21 year resident of this community and I think it's already been mentioned all the aspects that it will impact such as pollution, all the traffic. I also teach at the community center right there and we have a lot of children that are at that park nearby. My other concern is that the property be used for something other than warehouses. My husband has spoken, we're not about having something there but the warehouses would just combat the problems we're having with traffic. I would appreciate that we consider something else, something that would benefit the community. Our recreational activities, something in that aspect of what we can propose in the future. Thank you.

PM-26

PM-26.1

34:46

26. Cameron Barrius

My name is Cameron Barrius, a member of the Riverside Neighbors Opposing Warehouses. I'm opposed to the plan to build industrial warehouses on West Campus Upper Plateau. I'm asking to push the developer to consider an alternative plan and create a community advisory group. That being said, I mean you guys don't really give a damn about us. I mean he just said he was fighting for Meridian Parkway and that didn't work. People with cancer out here fighting for this. You guys just really don't a damn. I've seen movies where people like you could just have a meeting in the

PM-27

PM-27.1

PM-27.2

PM-27
Cont.

background secretly and we won't know anything about it. That's pretty shady. We don't know if that's going to happen. You guys moved the meeting all the way to Moreno Valley just to get us away, trying to separate us from work and this meeting. Forgive me, I'm scared. I just wanted to oppose this project the best way I could. Please and thank you for your time.

32:35

27. Donna Lloyd

My name is Donna Lloyd and I've been an Orangecrest resident since 1996 and I love the area. We have taken all of our dogs out to that land and walked them around all those bunkers, bicyclists are out there, wild life is out there. It's amazing and it's great exercise. You don't know where else to go to have that type of environment where you see the rabbits running and maybe an occasional coyote but they've pretty much been wiped out already because of all these warehouses. At least there's fencing now on Van Buren so I don't see them dead on Van Buren anymore, which is nice. Half of those warehouses from my personal observation aren't even occupied. You're going to plan on building more warehouses in our community, in our backyards and in another 5 or 10 years they're not going to be occupied and then there's going to be all kinds of problems with these empty warehouses in our backyards and I think you need to think about that because I don't think any of you consider your own personal situation if this was you. Do any of you live in Orangecrest? Yeah, do you live near where they're planning on building the warehouses because I don't think you would want to do that if you did. I think you would definitely be sitting here saying no, that's in my backyard, I'm not doing it. I think you need to consider that. You've heard this over and over tonight. I plan on joining RNOW tomorrow. I am not a member but I am going to be. Thanks for listening to us. I hope it helps.

PM-28

PM-28.1

30:35

28. ???

Good evening, thank you for listening to me. I wanted to bring up I'm one voice but if I could I would bring up a million voices from the wildlife community that is in that plateau. Coyotes, foxes, possums, skunks, squirrels, rabbits, gophers, rats, owls, hawks and all the birds and all the likes and on and on. If they could come and talk there would be a million voices up here. If we encroach on their homes, where will they go. They've got a couple of choices. In the street and be killed, most of them would be killed just like it was when all the building went in on Meridian and Van Buren. We would sit in the intersection and it was horrifying to watch. Or they are going to be in our homes or in our backyards, in our streets, in our front yards again and we all spent thousands of dollars unfortunately because we had to call pest control because we had gophers and rats and squirrels like crazy. It was like a parade going down the street. They need to stay in their home. This is their home and everyone needs to consider the wildlife. It's their home. Not only the animals that live on the ground but what about all of those who live above the ground. We have owls, hawks and birds need to feed too. It's the circle of life. Listen to the wildlife. Thank you.

28:26

29. Mia Smith

Hello, I'm Mia Smith and I just wish to speak to the land. This place isn't just the land anymore. It's value is really greater than any money that can be made from any development ever. You're probably getting tired of a bunch of speeches so I'll just talk about my experiences with this land. Last year I joined the Woodcrest mountain bike team and found that my love was just not for the idea but the place. It's a place that would give my team a variety of places and trails or varying difficulty so you could have the newer riders with the older riders. Being able to ride on this land has really

PM-30

PM-30.1

PM-30
Cont.

helped me this past year. A few years back I was diagnosed with tourette syndrome which is a chronic tick disorder, which is hereditary. Riding has really helped me. I've been on medication for it since 3rd grade. I was able to quit this year because of my riding. It helped distract my mind. When I was on the medication it was hard for me to eat because of my ticks. Riding helps me use my energy in a more productive way. This land is home to numerous animals, some of which are verging on endangered. They're threatened. Thank you all for spending your time to consider these speeches that people have given and I hope you consider all that has been said and that soon we'll be safe.

PM-30.1

PM-30.2

26:02

30. Joaquin Castilgos

Good evening, my name is Joaquin Castilgos, I am here as a member of RNOW and resident of the I.E. I'm here to ask March JPA to think about the plans they have for the West Campus Upper Plateau. Think about the impacts that it will have on the people and why we're out here today. This project has not had any type of community involvement or engagement. It's obvious that it doesn't because the plan does not include anything that the people want. I'm going to talk about my own experience as a community member that has been fighting warehouses in my own community. I live in the unincorporated area of Bloomington in San Bernardino county, an area that is flooded by warehouses. An area where it's not safe to walk the streets because trucks are going up and down at all times of the day even when kids are coming out of school. Bloomington used to be a nice area, a beautiful community and because of the greed of many people and because of the lack of engagement of the community we have been seeing the removal of community even last year a project was approved where more than a hundred houses and an elementary school was going to be removed to accommodate the building of a mega warehouse. I believe this is because we don't have courageous leaders in San Bernardino county and we have leaders who do not care about what the community thinks and what they feel the impacts would be. I feel like a lot of leaders look for the easy way out. How can we fix these economic problems, how can we get rid of this land as quick as possible and make the most money. But what you should really be thinking is how the community will be affected. How are the families going to be impacted, how is the Orangecrest community going to be impacted, the future of the schools, the churches and everyone who lives in those areas. As leaders in Riverside county you have the opportunity to be courageous and not look for the easy way out but to actually be creative to talk to your community, to think about 20 years in the future. This plateau will be a beautiful place for families to continue to enjoy. Thank you.

PM-31

22:35

31. Andrew Larrett-Smith

Good evening, my name is Andrew Larrett-Smith, I'm a resident of Orangecrest and I wanted to comment this evening about the Meridian Business Park which is the name of the limited liability corporation that oversees the use of the JPA land, you can see the signs everywhere. I want to start with a bold statement which is to say that the Meridian Business Park does not exist. It's a falsity, a fiction, a fake, a fabrication. A figment of the developers imagine. The developers did not build a business park. They promised a business park but what the developers have built is an industrial park. If you got to Wikipedia, the source of all wisdom, you'll see the first comment on the pages, not to be confused with a business park for an entry in industrial park. It's a very different beast. The original general plan called for less than 10% of the plan to be developed by the March JPA as industrial zone. If this proceeds, I believe that nearly 30% or more of the land will end up designated as industrial and that's not including other land that is also being used for warehouses. This was not the intent. This is not what we, the residents were promised. This is not what has been communicated and it's in the very name of the development. There is no Meridian Business

PM-32

PM-32.1

PM-32
Cont.

Park. Now, Meridian Industrial Park is seeking to move warehouses into the West Campus Upper Plateau. An area that was not originally designated to have any industrial zoning at all. Right into an area as so many of the residents have spoken tonight is surrounded on many sides, more than 3 sides. This is not what we were promised. It's been a bait and switch and so I ask you the commissioners, you have the power to ensure that the JPA lives up to its original commitments to the community and it develops the land that is consistent in a way in the original plan that is a business park and not an industrial zone that our kids will have to live with for generations. Thank you very much.

32. Lewis Allen

Good evening, I'm Lewis Allen, I don't live in the Orangecrest area, I live in Mission Grove but I do have a problem with all these warehouses. I've been in the development industry for more than 40 years, I've worked in development from San Diego to Seattle, inspected projects from developers through the years, been in the industry since 1978 and lived here since 1988. I was part of the Presley homes when the put Hillcrest in. There was a sales agent that sat on the Hillcrest homes got all of 4 people a week to come in and look at those half acre lots so I've known this area for quite a while. I do have a problem with over building and over supply. I think somebody has been conned by the developers by showing all these statistics on the demand for warehouses especially transitional warehouses which are these mega warehouses which don't have very many if any alternative uses. Alternative uses are important for the community. Those transitional warehouses are only good for one thing and they are being over built in the Inland Empire as it is. Once the demand drops off, then you're going to have a bunch of huge warehouses that aren't going to be good for very much except indoor soccer play, or an archery range. I think you've heard a lot of compelling argumentas tonight from people that are very interested in how this land is going to be developed especially when being surrounded by residential especially when we're not enforcing the semi-truck issues on Alessandro and Van Buren. There's no plan to put designated lanes on the 215 for the trucks to go up and down the hill which is going to create more danger for traffic. I encourage you to re-look at this you're the representatives of the people right, the developer is going to come in here and build his stuff and he's going to go home. Please take your decisions very carefully. Thank you.

33. Tim Martin

Good evening, my name is Tim Martin and I prepared no remarks and had no intention of speaking and will not go on for my entire three minutes. I want to share with you an impression I have sitting in this meeting tonight. I came just to listen and support my wife and other friends. I have sat through hundreds of public board meetings as you all have as well. We live in a society that is extremely polarized which I know you're all aware of. But tonight you have not heard one voice of dissent. Not one about the desire to not have industrial parks in this land. Not one person has come up and said, you know I kinda like this idea. You have heard compelling, poignant, moving comments from every single speaker and at the end of the night when you can't remember everything that was said you must have an indelible impression that the people who live in this neighborhood are completely united in the opposition of your plans.

34. Melissa May

PM-35

My name is Melissa May and I'm a resident of the Inland Empire. I've lived here my whole life and I'd like to take a moment to thank all the people that have showed up tonight. It takes incredible courage to speak on behalf of you community and be a true representative of the issues you're facing. To talk about everything that you're experiencing as a family and what your neighbors are going through. Everyone that has spoken here today can make positive change and can affect that change. I won't be speaking so much about my experiences here because I know they're going to fall on deaf ears. In fact, I'm going to speak to the community today. If you spoke here tonight, get ready for 2024. You're a true leader and it should be you in those seats.

PM-35.1

13:44

35. Bryton Mays

Good evening everyone, I want to start by saying that I respect everyone here and what they're trying to achieve to Jen Larrett-Smith, the RNOW organization as well as the other organizations that have shown up today and taken the time and energy and effort to stand up for what you believe is right for your community. To the March JPA commission to be able to listen to the multitude of different stakeholders who have different wants me needs and agendas. Thank you for taking on that leadership role. Your motto is bringing good jobs to Riverside county and that is a goal that I support fully. My name is Bryton Mays and I've come to you all today as many things. I'm a veteran, a traveler, a graduate student and a sustainability consultant. I've spent years of my life devoted to this country into getting the necessary education and experience to be able to have conversations like this one. I am also one of 15% of Riverside's citizens who has asthma and only moved to the West Coast last year from the East Coast with my partner was in the military. Immediately upon arriving as with any big move, we noticed some big differences. We learned what California traffic was like and that because you are only 55 miles away from LA does not mean it won't be three hours away. We also learned what it felt like to live in a place with terrible air quality. It didn't take long for my asthma to start acting up and I found myself struggling to do one our most basic functions, to breathe. Now I'm told that this project will bring more than 35,000 vehicle trips per day to an area that currently has none which means that 35,000 car tires rubbing off micro-plastics into the air, 35,000 engines coughing out green-house gases into the air our loved ones breathe, 35,000 more cars clogging up the highways. Let me be clear that I am not anti-business, I am pro sustainable business and I support the creation of full time jobs that the plan proposes to bring. Anytime an organization, an individual or system chooses to focus on profits alone there are externalities associated with that. In this case the price we're paying is the air we breathe, the noise that neighborhoods will endure and more. I can be sure that these affects will be significant and unavoidable because the recently published EIR even with all mitigation possible being considered says so time and time again. Over a hundred times are this projects impacts referred to as significant and unavoidable in the Environmental Impact Report. Some of them being the air quality that we are breathing right now in this room. Is it possible to find an alternative plan that will still bring full time jobs while not making it harder for the community to breathe. The EIR lists four alternatives. First one being the most environmentally friendly in that being to cancel the project all together. The second one was the environmentally superior alternative to the proposed plan and that to me sounds like it cold bring good jobs to Riverside county while lessening the associated significant and unavoidable environmental impacts. Now that we know more environmentally friendly plans exist I guess the real question is this are we open considering an alternative more sustainable plan. Thank you.

36. Melody Clark

PM-37

Hello, I'm Melody Clark, I'm with RNOW and I live in Riverside. I don't live in Orangecrest but of course this project affects me just as much. You've heard many things tonight and all sorts of areas have been brought up but I want to emphasize and that is the area of jobs. The reason why I want to emphasize that area is that not as the justification given for this project it's the only justification of this project. You all acknowledged that the air quality, traffic, all of these things are negative impacts but because there are jobs involved that it is justification for this. People have talked already tonight and I think you all understand that these are not good jobs, they are all low paying jobs, they are low benefit jobs, there's really no opportunity for people in these jobs to unionize to make them better jobs. The biggest problem is automation which means that these jobs will be gone and there will be no jobs and it's 20 years away or even 10 years away, it's sooner than that. There will be no jobs, that means there's justification for this project. I would like you to reconsider your motto of bringing good jobs to Riverside county and this project. Thank you.

PM-37.1

8:43

37. George Hague

Hello, Prop 13 is a problem for jurisdictions futures that rely on tax bases. I've lived in my house for over 45 years and my property taxes are much less than my neighbors who moved in only two years ago. I'm sure my homes property taxes no longer covers the impact of my city. When Prop 13 was first imposed they knew that property taxes would no longer even cover their costs of impacts to the jurisdictions in which they were situated. This will be especially true for those cement boxes we call warehouses which I'm sure will last much longer than my house or myself. You need to think long term and not approve projects which will not come close to covering the costs to government services. Warehouses currently provide very few jobs per square feet compared with other businesses and those numbers per square feet are becoming smaller every year with increase of robotics and automation. These cement boxes will be around for decades after decade. Therefore every warehouse you approve, you're causing our area workforce to commute because land that could have been providing living wage jobs has been replicated to cement warehouse boxes filled with robotics and automation. Your approval of this warehouse will result in this project site not paying its fair share of taxes in the very near future causing it to be a drain on government services. Cumulative impacts will be great. A lot of the diesel trucks from this will head north to state route 60. I215 right now is already backed up for miles and miles almost every day. The World Logistics Center, the 40 million square foot warehouse project in Moreno Valley is going to be breaking ground this year. It is estimated that 13,000 daily diesel trips will be produced each day by this one project. State Route 60 is already a total mess with diesel trucks.

38. ???

My heart is racing, I wasn't expecting to speak but I've been very inspired by everybody. I've been in Riverside for 34 years. I've moved out of Riverside a few times. I was a sick child with pretty bad asthma. I couldn't run, always got made fun of because my mile was usually the longest mile. I have moved to northern California and have been in nature and have healed myself. I no longer use an inhaler. I moved to Memphis and have moved around but I have always come back to Riverside. It's special here. My mom worked on the RCA preserving 500,000 acres of wildlife, I know Kevin Jeffries knows my mom. Riverside actually has more endangered species than anywhere in the United Stated except for Hawaii so it is special. I recently walked the area recently that we are all talking about to sit and meditate and connect with the land and see what it would be like if huge warehouses were there and as I close my eyes I hear the bird and the peace. We don't get this in LA. We don't get this in San Diego, places I've lived. I really feel for the community, I feel for the children of the

PM-39

Cont.

future. We are the voice for right now. I don't know what is right. I think a restaurant in Riverside would be really cool. I just saw the dog park and that's exciting. I know that we need jobs and businesses and I would volunteer to be on the committee. Unity can be our word for the year. I care deeply about people and what happens in our neighborhood. Please be our voice and make a difference. Thank you

PM-1. Kristine Doty
January 11, 2023

PM-1.1 This comment expresses general opposition to the Project, raises general concerns about air quality, noise and aesthetics impacts and public engagement. As explained in Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The Draft EIR assessed the Project's health risks in Recirculated Section 4.2, Air Quality, and Appendix C-2. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts.

The Draft EIR included a Noise and Vibration Impact Analysis (Appendix M-1) prepared by Urban Crossroads in October 2022. Based on the findings of the noise study, the EIR determined the Project would result in less than significant construction noise impacts. As detailed further in Section 4.11, Noise, of the Draft EIR, the impact analysis is based on quantifiable thresholds and relies on existing regulations and project design features to reduce impacts. The Project would have less than significant impacts due to construction noise and no mitigation is required. The Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling

activities. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project's traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant. Section 4.11, Noise, of the Draft EIR evaluated the mitigation potential of rubberized asphalt but determined such a measure would not lower off-site traffic noise levels below the level of significance for Roadway Segment #13, so the Project's noise impacts for Roadway Segment #13 is significant and unavoidable.

Regarding aesthetics impacts, please see Topical Response 1 – Aesthetics.

March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices.

The comment further requests consideration of an alternative without warehouses. As such, in response to this comment, please see Topical Response 8 – Alternatives, for the evaluation of Alternative 5, Non-Industrial Alternative.

The comment additionally requests the creation of a community advisory group. Creation of an advisory group is outside the scope of CEQA.

PM-2. Gabriella Mendez
January 11, 2023

- PM-2.1** This comment expresses general opposition to the Project and requests the inclusion of a non-industrial alternative. In response, please see Topical Response 8 – Alternatives.
- PM-2.2** This comment questions wage rates for warehouse workers. This comment does not raise any issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- PM-2.3** This comment expresses concern about existing aircraft emissions and health hazards from increased truck traffic. Existing emissions and air quality are part of the existing baseline. Recirculated Section 4.2, Air Quality, has disclosed the Project’s air quality impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project’s significant and unavoidable air quality impacts.

PM-2.4 This comment expresses general opposition to the Project and concern about loss of recreational open space. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses. The comment further requests consideration of an alternative site or plan. In response to this comment, please see Topical Response 8 – Alternatives.

PM-3. Abdallah Karim
January 11, 2023

- PM-3.1** This comment requests the inclusion of a non-industrial alternative. In response, please see Topical Response 8 – Alternatives.
- PM-3.2** This comment expresses concerns about the degree RNOW is being heard and identifies general opposition to the Project. The comment also raises general concerns about the Project's impacts on air quality, traffic and schools. This comment does not raise any issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. The comment additionally requests the creation of a community advisory group. Creation of an advisory group is outside the scope of CEQA. As such, no further response is provided.

PM-7.1 This comment raises concerns about loss of recreational open space. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses. The comment further requests consideration of an alternative site. In response to this comment, please see Topical Response 8 – Alternatives.

PM-7.2 This comment discusses wildlife seen on the Project site, including owls, falcons, hawks, raccoons, rats, rabbits, a pack of coyote, and a variety of snakes. Impacts to special status wildlife are discussed in Section 4.3, Biological Resources of the Draft EIR as well as within the Project Biological Technical Report (Appendix D-1). As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), biological evaluation of the Project site and observed species lists were not intended to be exhaustive, but to provide sufficient information for decision makers to understand the environmental consequences of the proposed Project. Impacts on native vegetation communities were assessed as part of the analysis and mitigation is provided for those impacts; much like NCCP planning, it is generally assumed that habitat mitigation also protects more common (non-special status) species that those habitats support, such as those identified by the comment.

As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.

PM-7.3 This comment asks that the site remain undeveloped. Evaluation of the No Project Alternative, where the site would remain undeveloped, is included in Chapter 6, Alternatives, of the Draft EIR. While the No Project Alternative would avoid potential impacts, this alternative would not meet the basic objectives for the Project.

INTENTIONALLY LEFT BLANK

PM-8. John Lyell
January 11, 2023

- PM-8.1** This comment requests consideration of non-industrial alternatives, including an alternative similar to the Great Park in Orange County. In response, please see Topical Response 8 – Alternatives, which discusses Great Park.
- PM-8.2** This comment requests the formation of an advisory group and does not raise any issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. Formation of an advisory group is outside the scope of CEQA. As such, no further response is provided.
- PM-8.3** This comment expresses concerns about utilities and infrastructure, and specifically streets, water, and electricity. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Section 4.17, Utilities and Service Systems, of the Draft EIR analyzed the Project’s impacts to water, electricity, and other utilities and determined the Project’s impacts to be less than significant.

INTENTIONALLY LEFT BLANK

PM-9. Sophia Guzman
January 11, 2023

PM-9.1 This comment discusses bicycle safety and economic concerns. The Project would accommodate existing and future local transit service, bicycle lanes, and pedestrian facilities. The Specific Plan Area includes a bicycle and pedestrian circulation network to connect to existing facilities and provide internal access. At Project buildout, sidewalks would be constructed on all internal roadways along the individual parcel's frontage. In addition, 6-foot bike lanes and 6-foot sidewalks would be included on internal streets such as Linebacker Drive, Airman Drive, Bunker Hill Drive, and Arclight Drive. The emergency vehicle access driveway would also serve as a pedestrian and bicyclist connection from Barton Street to Cactus Avenue to provide a linkage to the Specific Plan Area and the Metrolink station to the east of the Project site. The comment does not raise any issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

INTENTIONALLY LEFT BLANK

PM-10. Christopher Neilson
January 11, 2023

- PM-10.1** This comment requests the consideration of non-industrial alternatives. In response, please see Topical Response 8 – Alternatives.
- PM-10.2** This comment questions wage rates for warehouse workers and the number of jobs that would be generated by the Project. In response to this comment, please see Topical Response 5 – Jobs.
- PM-10.3** This comment discusses general opposition to the Project and potential noise impacts. The Draft EIR included a Noise and Vibration Impact Analysis (Appendix M-1) prepared by Urban Crossroads in October 2022. Based on the findings of the noise study, the EIR determined the Project would result in less than significant construction noise impacts. As detailed further in Section 4.11, Noise, of the Draft EIR, the impact analysis is based on quantifiable thresholds and relies on existing regulations and project design features to reduce impacts. The Project would have less than significant impacts due to construction noise and no mitigation is required. The Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling activities. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project’s traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant.

The comment further expresses general opposition to the Project and concern about loss of recreational open space. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses.

INTENTIONALLY LEFT BLANK

PM-11. Aaron Bushong
January 11, 2023

PM-11.1 This comment expresses general opposition to the Project and concerns regarding public engagement regarding development decisions. For the Project, March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three Technical Advisory Committee workshops, and one virtual presentation with a public notification radius of 1,200 feet around the perimeter of the project site resulting in 2,172 public notices. The comment does not raise any issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

The comment further identifies airplane crashes, warehouse fires, and trucks on residential streets as potential problems. Airplane crashes are an anomaly and rarely occur. However, given the Project's proximity to the March Inland Port Airport, the risk of airplane crashes remains. The Riverside County Airport Land Use Commission (ALUC) reviews projects to maximize consistency with airport land use plans for projects within close proximity to an active airstrip. This Project has undergone review by ALUC, as discussed in Recirculated Section 4.10, Land Use and Planning. ALUC provided their consistency determination in a letter dated May 16, 2022, which is included within Appendix L of the Draft EIR.

Additionally, as detailed in Recirculated Chapter 3, Project Description, and Topical Response 6 – Meridian Fire Station, the Project will construct the new Riverside County fire station at Meridian Parkway and Opportunity Way. The provision of a new fire station within the Meridian Business Park will allow for more rapid response to any potential future warehouse fire. Given existing fire mutual aid agreements serving March JPA, the Project site would be adequately served by fire protection services through the buildout of the Specific Plan.

The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Leaving the Campus Development, Brown Street would be the first cross-street. Cactus Avenue will be channelized or otherwise signed to prevent trucks from turning left onto Brown Street. Further, the intersection of Alessandro Blvd. and Brown Street is channelized and signed to prevent trucks from turn left and traveling west on Alessandro Blvd. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past the next cross-street, Meridian Parkway.

Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

PM-11.2 This comment requests the consideration of non-industrial alternatives. In response, please see Topical Response 8 – Alternatives. The comment additionally requests the creation of a community advisory board. Creation of an advisory board is outside the scope of CEQA.

PM-12. Gregory Garnier
January 11, 2023

- PM-12.1** This comment expresses general opposition to the Project and concerns regarding the Barton Street extension, air quality and traffic impacts. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- PM-12.2** This comment requests the consideration of non-industrial alternatives that includes more open space and the creation of an advisory committee. In response, please see Topical Response 8 – Alternatives. Creation of an advisory committee is outside the scope of CEQA.

PM-14. Michelle Rodriguez
January 11, 2023

PM-14.1 This comment discusses personal experiences and raises concerns regarding health impacts. See Response PM-14.2, below.

PM-14.2 This comment discusses the health effects of diesel particulate matter. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts.

PM-14.3 This comment requests the consideration of non-industrial alternatives. In response, please see Topical Response 8 – Alternatives. The comment additionally requests the creation of a community advisory group. Creation of an advisory group is outside the scope of CEQA.

INTENTIONALLY LEFT BLANK

PM-19. Anthony Scimia
January 11, 2023

PM-19.1 This comment discusses existing nighttime noise generated by surrounding development. These are existing sources of noise and are not associated with the proposed Project. The Draft EIR analyzed the nighttime noise sources identified by the commenter and determined impacts would be less than significant. As shown in Table 4.11-1, 24-Hour Ambient Noise Level Measurement Results, of the Draft EIR, nighttime (10:00 pm to 7:00 am) ambient noise levels at locations surrounding the Project site range from 43.9 dBA L_{eq} to 56.6 dBA L_{eq} . Table 4.11-7 summarizes the significance thresholds for operations near noise-sensitive receivers. Under the Specific Plan buildout scenario, the Draft EIR evaluated nighttime noise sources from Project activities, including loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements and truck movements. These sources include the noise sources identified by the commenter, such as back-up alarms, people talking, and doors being closed. As shown in Tables 4.11-27 and 4.11-29, the Project will not exceed the nighttime noise thresholds at any receiver location.

Under Table 3-2, Development Standards, and Section 4.4.2, Truck Courts and Loading Docks, of the proposed Specific Plan, truck courts and loading docks must be oriented away, or screened from surrounding residential land uses, which will reduce noise impacts through attenuation. Section 4.4.1, Walls and Fences, of the proposed Specific Plan requires screen walls around the perimeters of individual building sites, loading and dock areas, trailer parking areas, and parking lots, further attenuating Project noise sources. The Project is subject to the March JPA Development Code Section 9.10.140, which states “any loudspeaker, bells, gongs, buzzers, or other noise attention or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property. Sounds emitting from any of the aforementioned devices, including or live or recorded music, shall cease between the hours of 10:00 p.m. and 7:00 a.m. if the sound therefrom creates a noise disturbance across the property line of a residential use.” Section 3.5.4 Off-Street Loading Facilities, of the Specific Plan also includes this restriction. Additionally, the Project includes the Conservation Area, which would serve as a buffer between the Project and residences. Project nighttime noise impacts would be less than significant.

PM-20. Kevin Heinmann
January 11, 2023

PM-20.1 This comment expresses general opposition to the Project and requests the consideration of non-industrial alternatives. In response, please see Topical Response 8 – Alternatives.

PM-20.2 This comment discusses general air quality, noise, and traffic impacts and does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. Recirculated Section 4.2, Air Quality, has disclosed the Project’s air quality impacts, applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27.

The Draft EIR included a Noise and Vibration Impact Analysis (Appendix M-1) prepared by Urban Crossroads in October 2022. Based on the findings of the noise study, the EIR determined the Project would result in less than significant construction noise impacts. As detailed further in Section 4.11, Noise, of the Draft EIR, the impact analysis is based on quantifiable thresholds and relies on existing regulations and project design features to reduce impacts. The Project would have less than significant impacts due to construction noise and no mitigation is required. The Project includes PDF-NOI-1 through PDF-NOI-3, which would limit the hours of construction and blasting and drilling activities. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. With regard to on-site operational noise, the Draft EIR determined the Project would have less than significant noise impacts to all noise-sensitive receiver locations. The Project’s traffic noise would exceed the applicable threshold for Roadway Segment #13, (Cactus Avenue east of Meridian Parkway), a non-sensitive industrial area. All other roadway segments would experience off-site traffic noise level impacts that are considered less than significant.

The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

- PM-23.1** This comment expresses general opposition to the Project and requests support for local business, citizen involvement, regional prosperity, and economic resilience. The comment does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- PM-23.2** This comment questions the number of jobs the Project would create and impacts of future automation. In response to this comment, please see Topical Response 5 – Jobs. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR.
- PM-23.3** This comment requests the formation of a community advisory board and does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. Creation of an advisory board is outside the scope of CEQA. As such, no further response is provided.

INTENTIONALLY LEFT BLANK

PM-24. Connie Ransom
January 11, 2023

PM-24.1 This comment expresses general opposition to the Project and concerns regarding a blue line stream and Sycamore Canyon. The proposed project site and Sycamore Canyon are now separated by residential development and Alessandro Blvd. It appears that water from the project site flows down Avenida Munoz, Camino Del Sol, and several concrete drainages prior to flowing under Alessandro Blvd through culverts to Sycamore Canyon. The Upper Plateau Aquatic Resources Delineation Report (ARDR) identifies two areas that may have been historically connected to the Blue Line stream running through Sycamore Canyon; these are identified as non-wetland water (NWW)-1 and NWW-2 in ARDR figures.

Direct and indirect impacts on non-wetland waters of the U.S. identified on the project site are accounted for within the project impact analysis (please see sections 4.2 and 5.8 of the Project Biological Technical Report [Appendix D-1]) and the project will be permitted through the Army Corps of Engineers, CDFW and the Regional Water Quality Control Board. All requirements by the agencies during permitting, including best management practices as it pertains to water quality, will be adhered to. Impacts would be less than significant with mitigation incorporated.

PM-25. Andrew Silva
January 11, 2023

PM-25.1 This comment expresses general opposition to the Project and raises concerns regarding automation, loss of recreational open space, and health risks associated with Project emissions. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses.

Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts.

PM-28. Donna Lloyd
January 11, 2023

PM-28.1 This comment expresses general opposition to the Project and raises concerns regarding loss of recreational open space, impacts to wildlife, and warehouse vacancy rates. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use. The comment alleged, based on personal observation, that half of the area warehouses are not occupied. This is inaccurate. While observable activity at these facilities may be low, they are occupied. According to Table 1 of the draft “Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects” by Dr. Qisheng Pan that presents 2023 employment data for the various existing developments within the March JPA Planning Area (Final EIR Appendix U), there are few to no vacancies within the March JPA Planning Area.

PM-32. Andrew Larrett-Smith
January 11, 2023

PM-32.1 This comment expresses general opposition to the Project and discusses the General Plan designations. Under the current General Plan land use designations, 85% of the Project site is designated for development; under the Project, only 45% of the Project site is proposed for development. Thus, the Project designates more land for non-development uses. The comment also expresses concerns about the Project becoming a warehouse/industrial site as opposed to a business park. As indicated in the Specific Plan, both industrial and business park uses are considered for the Project site, and as discussed in Topical Response 8 – Alternatives, a non-industrial office park alternative is considered.

INTENTIONALLY LEFT BLANK

PM-33. Lewis Allen
January 11, 2023

PM-33.1 This comment expresses general opposition to the Project and raises concerns regarding warehouse vacancy and truck route enforcement. According to Table 1 of the draft “Economic Impact Analysis of the March Joint Powers Authority (MJPA) Development Projects” by Dr. Qisheng Pan that presents 2023 employment data for the various existing developments within the March JPA Planning Area (Final EIR Appendix U), there are few to no vacancies within the March JPA Planning Area. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

The comment further requests designated truck lanes on I-215 for traffic safety. Improvements to I-215 are under the jurisdiction of Caltrans; neither March JPA nor the developer have the authority to implement such improvements. Regarding I-215 traffic safety, as explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), to improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission, has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging with the SR-60 Freeway. Another regional facility is the Mid-County Parkway (MCP) which is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway.

PM-36.1 This comment discusses the health effects of air pollution and expresses concern about the increased vehicle trips and resulting air emissions associated with the Project. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. Recirculated Section 4.2, Air Quality, and Appendix C-2 assessed the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Please see Recirculated Section 4.2, Air Quality, for the discussion of cumulative health risks from toxic air contaminants and the additional air quality mitigation measures added to address the Project's significant and unavoidable air quality impacts.

PM-36.2 This comment requests the consideration of non-industrial alternatives and also cites the No Project Alternative and Alternative 2 – Reduced Development Alternative, which the Draft EIR identified as the environmentally superior alternative. Chapter 6, Alternatives, of the Draft EIR evaluated the No Project Alternative and Alternative 2. Additionally, please see Topical Response 8 – Alternatives for the evaluation of Alternative 5, Non-Industrial Alternative.

Subject: Public Comments from February 8, 2023

All,

The following is from the public comments from the February 8 JPC meeting, and should be included in the response to comments:

PM-41

1. Andrew Silva – Thanked the commission for having a night meeting. He is opposed to the West Campus Upper Plateau project.

PM-41.1

2. Mike McCarthy – I have read through the EIR and I really think that it’s missing a key component of the cumulative impacts analysis and really it’s the fact that there is a ton of warehouses so I made this map and I also sent you all a link to this map because it’s also on the website and it shows all the approved and planned and existing warehouses along the 215/60 corridor and the EIR table 4-2 shows a cumulative impacts lists project and it shows stuff right here. OK. Are region is not just here and since this bodies comprised of numbers from the City of Moreno Valley, the City of Perris, you have incorporated county areas of Mead Valley and also the City of Riverside and I think that the appropriate regional analysis is of course here and if you do that we are missing about 3,500 acres of approved and existing warehouses. Ok. So this one alone is 2,600 acres, this one is 900 acres. Ok. So, if we assume that those are 10 jobs per acre that’s 35,000 jobs, those aren’t included in the cumulative impacts analysis of jobs. How many people need to move out here to have all those jobs because we don’t have any unemployed people right now. We have the lowest unemployment in this county’s history as long as drivers have been taken and nationally the lowest unemployment numbers so who’s going to take all these 35,000 warehouse jobs that are coming out here because there’s nobody to take them right now. What about the air quality, the regional air quality analysis, what about the traffic analysis. There are 20,000 trucks from this project alone another 5,000 trucks from this project. I’m not even counting or incorporating the ones from, the City of Perris, Moreno Valley, right here. There’s a lot of warehouses already here. We need to take all of them into account. Specifically, along the 215/60 corridor. That’s why I want to talk about the transportation analysis. The transportation analysis right now stops as soon as the trucks go on the freeway, as soon as the cars go on the freeway. It doesn’t model the 215/60 freeway at all, and I don’t know how you can have a transportation analysis as legitimate in this area when you don’t include our major backbone infrastructure the 215/60 corridor which is blocked 6 hours a day by traffic right now before the 3,000 extra acres of warehouses are built over the next 5 years. I know that Andrew said that we shouldn’t take into account the logistics are good or whatever but really it’s just a sprawl right now, it’s everything, we are 100 percent of our eggs in the logistics basket. Have a good day.

PM-42.1

PM-42.2

PM-42.3

PM-42

PM-43

3. Adam Collier, Vice President, Meridian Park West, LLC stated there will be a community meeting regarding the Meridian West Upper Plateau project, February 9th, 6:30 p.m. at the March Field Air Museum.

PM-43.1

PM-41. Andrew Silva
February 8, 2023

PM-41.1 This comment expresses opposition to the Project and does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

INTENTIONALLY LEFT BLANK

PM-42. Mike McCarthy
February 8, 2023

- PM-42.1** This comment questions the scope of the cumulative analysis included in the Draft EIR. In response, please see Topical Response 7 – Cumulative Projects.
- PM-42.2** This comment questions the number of jobs that the Project would generate as well as cumulative impacts regarding the long-term labor supply. In response, please see Topical Response 5 – Jobs.
- PM-42.3** This comment discusses traffic concerns, and specifically cumulative traffic concerns along the 215/60 corridor. Please see Topical Response 7 – Cumulative Projects. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), March JPA has adopted its own guidelines for traffic analysis: the March JPA Traffic Impact Study Guidelines, dated February 10, 2020 (March JPA Guidelines). As March JPA is the lead agency for this Project, the 2022 Traffic Analysis was developed pursuant to the March JPA Guidelines, rather than the WRCOG or County of Riverside Transportation Planning guidance documents. Analysis of LOS was provided for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. As such, Caltrans does not utilize peak hour intersection operations analysis and instead utilizes VMT in compliance with SB 743 through its VMT-Focused Transportation Impact Study Guide (Caltrans VMT Guide), dated May 20, 2020. The March JPA Guidelines were adopted before the Caltrans VMT Guide and reference superseded Caltrans guidance. The 2022 VMT Analysis was prepared in compliance with the Caltrans VMT Guide and meets the transportation analysis requirement for Caltrans.

Pursuant to Caltrans safety requirements, the 2022 Traffic Analysis included an assessment of the I-215 off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard to ensure there is no queuing, or back-up, onto the freeway mainline. These I-215 off-ramps were selected because the Project is anticipated to contribute 50 or more peak hour trips to these off-ramp intersections, consistent with the March JPA Guidelines. The 2022 Traffic Analysis performed a queuing analysis for these I-215 Freeway off-ramps for all scenarios (Existing [2021], Existing plus Project, Existing plus Ambient Growth plus Project, Opening Year [2028] Cumulative Without Project, Opening Year [2028] With Project, Horizon Year [2045] Without Project, and Horizon Year [2045] With Project). Based on the results of this queuing analysis, there are no study area off-ramps that are anticipated to experience queuing issues under any scenario. Caltrans is one of the state reviewing agencies for the Project, and had the opportunity to comment on the transportation analysis. <https://ceqanet.opr.ca.gov/2021110304>. Caltrans did not submit any comments on this Project. (Appendix N-3)

To improve regional operational conditions, Caltrans, in conjunction with the Riverside County Transportation Commission, has completed a number of I-215 Freeway regional improvement projects. The I-215 Freeway South project widened I-215 to provide an additional general-purpose lane in each direction between Murrieta Hot Springs Road and Scott Road. The I-215 Central project widened I-215 to provide an additional general-purpose lane in each direction between Scott Road and Nuevo Road. The latest improvement along the I-215 Freeway corridor is the new interchange at Placentia Avenue that was completed in late 2022. A future planned I-215 Freeway North project proposes to add one carpool lane in each direction of travel between Nuevo Road and the SR-60 Freeway in addition to implementing a new westbound auxiliary lane to improve traffic merging

with the SR-60 Freeway. Another regional facility is the Mid-County Parkway (MCP) which is an east-west transportation corridor generally running along the alignment of Ramona Expressway. The first phase of the MCP includes the recently completed Placentia Avenue interchange at the I-215 Freeway and the second phase is currently under design and is anticipated to go into construction in 2025. The second phase of the MCP project will construct an additional lane in each direction (in addition to other design features along the corridor) between Pico Avenue and Warren Road along Ramona Expressway. (Appendix N-3)

To address identified intersection/roadway segment deficiencies, Table 1-4 of the 2022 Traffic Analysis recommends off-site improvements and the Project's fair share contribution thereto and PDF-TRA-4 requires payment. For each analyzed scenario, the 2022 Traffic Analysis discloses conditions "Without Improvements" and conditions "With Improvements." (Appendix N-3)

PM-43. Adam Collier
February 8, 2023

- PM-43.1** This comment advertises a community meeting on February 9, 2023. This comment does not raise any specific issues or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.

INTENTIONALLY LEFT BLANK
