Letter I-4

Jen Larratt Smith
January 10, 2023

I-4.1 This comment transmits petition comments and names referenced in Comment I-2.1 to the March JPA. This comment does not include any specific issues or concerns regarding the environmental analysis in the Draft EIR; as such, no such, no further response is provided.

I-4.2 The responses to comments listed in the attached petition are provided in the table below:

Commenter Comment Date	Comment	Response
Lenora Mitchell 3/31/2022	“Riverside or Warehouse-side: where do you want to live?”	No environmental issues are raised; comment noted.
Violet Rugh 4/1/2022	“We need open land.”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land.
Kevin Castellanos 4/1/022	“More parks, orange groves, and housing. No more warehouses, mundane jobs or cheap labor!!!”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Esther Cervantes 4/2/2022	“We do no need more warehouse near our homes.”	No environmental issues are raised; comment noted.
Cheryl Voss 4/2/2022	“Our streets and highways are already neglected and traffic is horrid. As residents, the last things we need or want are more pot holes caused by trucks and an infrastructure that can’t support the increased traffic.”	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees, which can be used to maintain local roadways, are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%). ¹

Commenter Comment Date	Comment	Response
Jiovanni Hernandez 4/2/2022	“Stop building so many warehouses.”	No environmental issues are raised; comment noted.
Karissa Hammar 4/2/2022	“There are already too many warehouses in our area. I enjoy looking at and walking in and around the areas of nature. They improve my quality of life.”	The Project includes a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
MARisol Lomeli 4/2/2022	“I love sycamore”	No environmental issues are raised; comment noted.
Cindi Robertson 4/2/2022	“Riverside has enough warehouses and not enough nature areas. This is not needed and only wanted for financial greed.”	The Project includes a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Kelly Wrightstone 4/2/2022	“No more warehouses!”	No environmental issues are raised; comment noted.
Jennifer Stoeber 4/2/2022	“We need wilderness areas to walk and bike!!”	The Project includes a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Elizabeth Young 4/2/2022	“We have more than enough warehouses! We need open spaces for families to enjoy recreation. Bike paths, walking, fishing, etc. Orange County has some beautiful open spaces for families amid their concrete so we can too!!!”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Priscilla Adair 4/2/2022	“I live in this neighborhood, and the big trucks coming through for the warehouses are destroying our streets”	The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. No environmental issues are raised; comment noted.
Charissa Adams 4/2/2022	“The area doesn’t need more semi truck traffic and smog. Don’t decimate the land our wildlife has left”	Recirculated Section 4.2, Air Quality, includes an analysis of air quality impacts. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

Commenter Comment Date	Comment	Response
		The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land.
Rose Daniels 4/2/2022	"I work in Riverside. More warehouses will"	No environmental issues are raised; comment noted.

I-4.3 The responses to comments listed in the attached petition are provided in the table below:

Commenter Comment Date	Comment	Response
Tracie Rodrigues 4/3/2022	"There are no places to walk or play anymore"	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Sherry Miller 4/3/2022	"I live here and I don't want to live in an industrial zone"	Recirculated Section 4.10, Land Use and Planning, evaluates land use impacts.
Tina Ely 4/3/2022	"Stop building industrial buildings a majority of them sit empty for years build more walking areas for hiking and for biking. How about a big park for our kids to play i was in AZ and there Parks are beautiful for kids."	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use.
Noelle Chamberlain 4/3/2022	"We need some natural, open space in this city preserved before it's all gone!"	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land.
Claudia Cervantes 4/4/2022	"Our children need the nature, why take that away from them?"	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land.
Dianna Hentzschel 4/5/2022	"We have enough warehouses and traffic in this area. We need to keep some recreational area of active and healthy."	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine

Commenter Comment Date	Comment	Response
		traffic impact and mitigation measures for CEQA. The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use.
Sherry Marshall 4/5/2022	“My father was an avid mountain biker and enjoyed this place so much. He spent that last moments of his life on these trails. He built a community of friends and spent time with them on this trail, enjoying the city he lived in, the wildlife out on these trails. You can see the warehouses encroaching on this are and it would be terrible to loose these recreational areas and all the amazing wildlife that live and thrive in this natural area. You would displace an ever decreasing amount of area that is home to this wild life. Some amazing huge birds that nest in the trees out here. Please keep it wild and open.”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails available for passive recreational use. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources.

I-4.4 The responses to comments listed in the attached petition are provided in the table below:

Commenter Comment Date	Comment	Response
Sherry Marshall 4/5/2022	“There are so few places for people to go and just enjoy time away from city life without packing up and going away. This area also gets the community out there moving and meeting others in their community. Please don’t take this area for warehouses. The wildlife that this u developed area houses is amazing and so beautiful. You would be displacing so many. What a shame losing this trail would be. Please share on your FB pages and social media accounts.”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources.
Rafael Jimenez 4/5/2022	“I’m signing because my neighborhood is going to be directly affected by these warehouses. If built as planned, these mega-warehouses will be surrounded by homes on three sides, including mine. This undeveloped area is the only buffer left between our neighborhoods and the hundreds of warehouses going up by the 215 Freeway, south of the 60 Freeway interchange.”	The Draft EIR analyzes the Project’s impacts to neighboring communities. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. No environmental issues are raised; comment noted.
Eric Walker 4/6/2022	“Enough is enough. We need wilderness to thrive not useless buildings serving people who live in areas without warehouses and a Better Quality of life! We want and deserve better.”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will

Commenter Comment Date	Comment	Response
		remain open land. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources.
Dawn Villavicencio 4/7/2022	"I want to keep the peace and quiet that we all currently enjoy, keep the wildlife and serenity that nature provides"	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources and noise impacts in Section 4.11, Noise.
Ang Mum 4/7/2022	"No more warehouses"	No environmental issues are raised; comment noted.
Kristy Bauer 4/7/2022	"This lot is directly behind my backyard"	No environmental issues are raised; comment noted.
Helena Craig 4/7/2022	"We do not need anymore warehouses or wildlife being destroyed!"	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources.
Maria Garde 4/7/2022	"That open space is lovely right behind the church and a testament to God's serenity. We don't need more traffic, pollution, etc."	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. Air quality impacts are evaluated in Recirculated Section 4.2, Air Quality. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
Amanda Gomez 4/7/2022	"No more trucks up Van Buren."	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine

Commenter Comment Date	Comment	Response
		traffic impact and mitigation measures for CEQA.

I-4.5 The responses to comments listed in the attached petition are provided in the table below:

Commenter Comment Date	Comment	Response
Gabriela Mendez 4/8/2022	“I would like to preserve this green space and warehousing should not be placed next to sensitive receptors!”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. Impacts to sensitive receptors are evaluated throughout the Draft EIR, including in Section 4.1, Aesthetics, Recirculated Section 4.2, Air Quality, Recirculated Section 4.8, Hazards and Hazardous Materials, Recirculated Section 4.10, Land Use and Planning, Section 4.11, Noise, and Section 4.18, Wildfire.
Gina Binhimaid 4/8/2022	“Too much traffic and pollution already!!”	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Recirculated Section 4.2, Air Quality evaluates air quality impacts.
Michael Kaudze 4/8/2022	“We don't need the warehouses. Keep the land green.”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. No environmental issues are raised; comment noted.
Terry Smith 4/8/2022	“Our land needs our protection. There's enough traffic and warehouses. Keep them out of our neighborhoods!”	The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and

Commenter Comment Date	Comment	Response
		does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
Victoria Bavier 4/8/2022	“My family uses these trails every single day either to walk our dogs, run, bike, or hike. It would be a shame to lose this beautiful preserve!”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.
Marc Feldstein 4/9/2022	“We live kiddie-korner to the barton/alessandro distribution center.1. Barton goes only 2 blocks north and south of alessandro. There is no room for this development.2. This puts a significant burden on public safety where the police department is lacking 20 officers and the fire department would need to engage in multiple change of quarters once the site is complete.3. The area has significant, severe vehicle accidents and this will only make that worse.4. A common concern on highways and local streets is semi trucks and this doubles or triples the semis in the area.”	The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. The Draft EIR evaluates impacts to public services in Section 4.13, Public Services. See Topical Response 6 – Meridian Fire Station, regarding the construction of the Meridian Fire Station. The Draft EIR evaluates transportation hazards impacts under Threshold TRA-3 in Section 4.15, Transportation.
Mark Lien 4/10/2022	“I do not want warehouses by the old March ammunition storage area.”	No environmental issues are raised; comment noted.
Doug Bailey 4/14/2022	“No more warehouses, no more traffic, no more people”	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. The Draft EIR evaluates population impacts in Section 4.12, Population and Housing.

I-4.6 The responses to comments listed in the attached petition are provided in the table below:

Committer Comment Date	Comment	Response
Gary Williams 4/16/2022	“I have lived in this area for 16 years, and I frequent this area on my bike several times per week. As warehousing proliferates in this area, and more open space gets built on, the disappearing habitat for wildlife is creating a litany of impacts for those threatened species, and for local residents and pet owners as well. These are open spaces that will disappear forever.”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources.
Aaron Rolens 4/19/2022	“The warehouse development around here is ridiculous.”	No environmental issues are raised; comment noted.
Sandi Cabrera 4/20/2022	“Pollution, traffic, displacement of precious wildlife(hawks, eagles, coyotes and protected species KRats. Too close to schools, churches and parks- (diesel fumes.) Ruining our community and decreasing property values.”	Recirculated Section 4.2, Air Quality, evaluates air quality impacts, and Section 4.3, Biological Resources, evaluates wildlife impacts. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
Jill McCormick 4/20/2022	“I'm glad to see a petition about this as it's been a concern of mine and the negative impact on surrounding neighborhoods as well as the wildlife. It might be super helpful to others if a clear map or full description of the boundaries was included with the petition pages.”	Recirculated Chapter 3, Project Description, includes a full Project Description and site plan showing Project Boundaries. Section 4.3, Biological Resources, evaluates impacts to wildlife and Recirculated Section 4.10, Land Use and Planning, land use compatibility impacts.
Sara Sara A Martinez 4/23/2022	“I oppose the building of more warehouses as it will have a negative impact on wildlife and cause more pollution.”	Recirculated Section 4.2, Air Quality, evaluates air quality impacts, and Section 4.3, Biological Resources evaluates impacts to wildlife.
Stacey Guzman 4/25/2022	“My daughter is on the mountain bike team at Woodcrest Christian and the team practices twice a week. It's so Nice to see young kids out around nature.”	The Project includes an approximately 60-acre park with active and passive recreational uses and a 445.43-acre Conservation Easement with existing trails for passive recreational use. No environmental issues are raised; comment noted.

Commenter Comment Date	Comment	Response
Selena Wilson 4/27/2022	“No more warehouse! Enough already. NO!!!!”	No environmental issues are raised; comment noted.
Sara Lopez 4/28/2022	“i want to keep riverside green”	No environmental issues are raised; comment noted.
Alma Brigandi 4/28/2022	“To much traffic”	The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
Ashley Trumbull 4/28/2022	“This is our home we need a nice area not to be run down.”	No environmental issues are raised; comment noted.

I-4.7 The responses to comments listed in the attached petition are provided in the table below:

Commenter Comment Date	Comment	Response
Kevin Conklin 4/28/2022	“I don't want gross air and noise pollution in their back yards. In a canyon where all the noise will be amplified and carry well past the homes on the edge. Enough of Fontana is already here.”	The Project site is not located in a canyon. Recirculated Section 4.2, Air Quality, evaluates air quality impacts and Section 4.11, Noise, evaluates noise impacts.
Corinne Perez 4/30/2022	“The City, Joint Powers and Developers can say or work for the outcome they want. How can an environmental study be completed when the warehouses and traffic of 3500 jobs are not here yet? There are plenty of empty warehouses. Think about that, City Counsel espoused at a meeting last year that we should be grateful this will bring 3500 jobs to the area. Presently, there are plenty of jobs that employers can't fill. This means 3500 cars and trucks in our neighborhood all competing for access to and on 215 or Van Buren. Our neighborhood is locked in and does not have enough emergency egress/ingress. Once it is allowed, we won't know the damage to the local population until well after this project is complete, people and property has been damaged, making it too late. They should review environmental studies of Los Angeles neighborhoods that have truck freight traffic. There is plenty of vacant desert land, move out.”	Section 4.12, Population and Housing, discusses jobs, and Recirculated Section 4.8, Hazards and Hazardous Materials, Section 4.15, Transportation, and Section 4.18, Wildfire, discuss emergency access and egress See also, Topical Response 5 – Jobs. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
Connie Austin 4/30/2022	“I like rural”	No environmental issues are raised; comment noted.

Committer Comment Date	Comment	Response
Eunice Ramirez 4/30/2022	“Ton many warehouses that are polluting the air.”	Recirculated Section 4.2, Air Quality evaluates air quality impacts in.
Toni Sandell 5/1/2022	“The VOTERS in this area are being ignored by our politicians who are bowing to big money.”	No environmental issues are raised; comment noted.

I-4.8 The responses to comments listed in the attached petition are provided in the table below:

Committer Comment Date	Comment	Response
Peggy Matthews 5/2/2022	“This is ridiculous!!! Isn’t there enough warehouses in Riverside area already? Or in the I. E. area period? STOP THE HOUSING AND COMMERCIAL BUILDING ALREADY! You are taking homes from what little of wild life we have left in Riverside. It’s bad already that the wild life is having to come deeper into city limits looking for food or a place to make a home. It won’t be much longer before our coyote’s, road runners, snakes, bob cats, etc end up on the endangered species list because they are being kicked out of their natural habitats and being forced to go deeper into the city, which then puts them at more risk of being killed. It’s sad to look around here and see all the unnecessary buildings that once were beautiful wild life areas. Where do you expect Riverside residents to jog, bike, walk, or even hike? Let me guess the bike trail near Fairmount Park? I think not. It’s more dangerous now than I ever known it to be and I was born in Riverside and raised here. I’ve been here 40 years. And what about our health,”	The Draft EIR evaluates impacts to wildlife in Section 4.3, Biological Resources. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses. Further, a Revised Health Risk Assessment Technical Report was prepared analyzing Project construction and operation (Appendix C-2). As summarized in Recirculated Section 4.2, Air Quality, the Project would not result in significant impacts such that health impacts would occur to surrounding residences during construction and operation. Please see Recirculated Section 4.2, Air Quality for the discussion of cumulative health risks from toxic air contaminants.

I-4.9 The responses to comments listed in the attached petition are provided in the table below:

	Riverside. It's bad already that the wild life is having to come deeper into city limits looking for food or a place to make a home. It won't be much longer before our coyote's, road runners, snakes, bob cats, etc end up on the endangered species list because they are being kicked out of their natural habitats and being forced to go deeper into the city, which then puts them at more risk of being killed. It's sad to look around here and see all the unnecessary buildings that once were beautiful wild life areas. Where do you expect Riverside residents to jog, bike, walk, or even hike? Let me guess the bike trail near Fairmount Park? I think not. It's more dangerous now than I ever known it to be and I was born in Riverside and raised here. I've been here 40 years. And what about our health,"	establishment of a 445.43-acre Conservation Easement that will remain open land with existing trails for passive recreational use. The Project also includes an approximately 60-acre park with active and passive recreational uses.
Rose Cook 5/2/2022	"Riverside is irresponsibly approving warehouse developments adjacent to residential neighborhoods with no regard for the people who live there. They even put one in my neighborhood, right across the street from a middle school. "Legal" doesn't make it right. Nobody invests in a home expecting a massive warehouse next door, with all of the truck traffic and pollution they bring. This has to stop! We need careful, thoughtful planning that respects human health, quality of life, and our environment!"	Recirculated Section 4.2, Air Quality, evaluates air quality impacts. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

Commenter Comment Date	Comment	Response
	have you seen trucks make a U-turn on Meridian and go north on Van Buren heading to the 91. We were promised shopping on Van Buren and Barton Instead we get more vacant warehouses. When does it stop. March stopped being an active base before I moved here in 1995. So it's BS about jobs it's about filling up the buildings. Anyone who tries to get around here during school arrivals and departures knows what a mess that is, now add more trucks in the neighborhoods and no one will be able to move. As it is now in the morning's btw Van Buren and Allesandro on Trautwein it can take 30-45 minutes to go 2.5 miles. At th"	Avenue. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. The Draft EIR discusses jobs in Section 4.12, Population and Housing. See also, Topical Response 5 – Jobs.
James Thomson 5/6/2022	"The 1st phase already killed most of my view, "The reason I bought it in the 1st place over 20 years ago when it was a Stephens Kangaroo preserve and would never be developed!!!!!" Subject: Re: Notice of Availability for a Draft EIR (West Campus Upper Plateau)

Dear Mr. Fairbanks,

Thank you for the notice.

Is there a reason the 2003 Settlement Agreement is not included under the technical appendices but the 2012 agreement is?

Thanks for any clarification you can provide.

Jen

Good Evening:

March JPA has posted the West Campus Upper Plateau Draft EIR to the March JPA website. It is available at: <https://marchjpa.com/mjpa-meridian-west-campus/>

This is a request by Meridian Park LLC for a General Plan Amendment and Specific Plan/Zone Change approval at the former March AFB Weapon Storage Area and adjacent property. The Specific Plan Area is a campus development with a buildout scenario including 10 Business Park parcels totaling 65.32 acres, 6 Mixed Use parcels totaling 42.22 acres, 3 Industrial parcels totaling 143.31 acres, 2 Public Facility parcels totaling 2.84 acres, 3 open space parcels totaling 17.72 acres and public streets totaling 37.91 acres. Plot Plans for Buildings B and C totaling 1,837,000 square feet would be constructed on two of the Industrial Parcels. The remaining parcels would be developed with square footages as allowed under the Specific Plan. A proposed park component of the Project, consisting of 60.28-acres located west of the Barton Street extension, is included under the Specific Plan buildout scenario. Vehicular access at the Cactus Avenue and Barton Street location is prohibited, except emergency vehicles through a Knox box gate. Through a recorded Conservation Easement of approximately 445.43 acres, the undisturbed land surrounding the Specific Plan Area would be preserved in perpetuity. Other applications include a Tentative Parcel Map and a Development Agreement. Further details including a land use plan are identified in the attached project description.

Name: Mike McCarthy
Email: uber.snotling@gmail.com
Message: Dear March JPA planner,

The map displayed on the <https://marchjpa.com/mjpa-meridian-west-campus/> web site is incorrect and inconsistent with the Draft EIR map Figure 3-5. Given that this is the landing page of the project, this is misleading the public and liable to lead to confusion. This is especially aggravating because it is extremely likely the Figure 3-5 map has been available for months and not been displayed to the public. Due to your error, I request that the March JPA fix the map and post an errata beneath the map indicating that it has been misleading the public about the current project map for an unspecified amount of time. The March JPA continues to put forth misleading communication about this project and intentionally obfuscate the true details of the project to the public.

Sincerely,
Mike McCarthy

To: Dan Fairbanks; Jennifer Larratt-Smith; Jerry Shearer
Subject: errors and omissions on the Draft EIR

Dear Mr. Fairbanks,

In my initial review of the draft EIR, I've noticed a number of errors and missing figures that are detrimental to the accuracy of the report. I'm hoping these can be rapidly corrected or additional time can be added to the review period due to the applicant's errors and omissions in submitting their draft EIR.

I-8.1

- Figure 3-6 - proposed truck routes - colored orange and red routes do not align with roads on map - which are correct? Additionally, business park and mixed-use parcels are not consistent with Figure 3-5.

I-8.2

- Figure 3-7E, G, & H - electrical, cable, gas backbone - parcel map for business park parcels on the north is inconsistent with Figure 3-5 so connections are not shown for individual parcel not connected to

I-8.3

- Figure 4-1 - described as map of Cumulative Effects projects - not included in draft EIR

I-8.4

- Figure 4.11-9 Inconsistent map with Figure 3-5, park does not match current park footprint, parcels inconsistent for north business park and west mixed-use

I-8.5

- Figure 6-1 - described as Reduced development alternative 2 - does not appear to reduce the north business park footprint at all - looks like it just increased the parcel size and decreased the number of parcels to the plan posted on the website.

I-8.6

There were also omissions and errors in the appendices, but I'll send those in a separate comment letter.

Sincerely,
 Mike McCarthy
 Riverside Neighbors Opposing Warehouses

Letter I-8

Mike McCarthy
January 10, 2023

- I-8.1** This comment generally states the identification of errors and omissions in the Draft EIR and requests the Draft EIR public comment period be extended. As stated in the responses below, these errors and omissions are minor and do not result in material changes to the environmental analysis in the Draft EIR.
- I-8.2** This comment states that Figure 3-6, Proposed Truck Routes, does not reflect the Project site plan in Figure 3-5 and the truck route lines do not align with roadways. These corrections have been incorporated into a revised Figure 3-6 included in the Recirculated Chapter 3, Project Description, and Final EIR. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.
- I-8.3** This comment states that Figures 3-7E, G and H do not reflect the Project site plan in Figure 3-5. The Project site plan in Figure 3-5 has been incorporated into revised Figures 3-7A, 3-7C, 3-7E, 3-7F, 3-7G and 3-7H in the Recirculated Chapter 3, Project Description, and Final EIR. These revisions do not constitute 'new information' under CEQA and do not impact the environmental analysis in the Draft EIR.
- I-8.4** This comment notes that Figure 4-1, Cumulative Development Location Map, is missing from the Draft EIR. This figure was included in Appendix N of the Draft EIR (Exhibit 8) and has been added to the Final EIR. This does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.
- I-8.5** This comment states that Figure 4.11-9, Operational Noise Source Locations, does not fully reflect the Project site plan in Figure 3-5. The Project site plan in Figure 3-5 has been incorporated into revised Figure 4.11-9 in the Final EIR. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.
- I-8.6** This comment states that Figure 6-1, Alternative 2 – Reduced Development Area Alternative, does not reflect Alternative 2's land uses. The revised Figure 6-1 is included in the Final EIR. This revision does not constitute 'new information' under CEQA and does not impact the environmental analysis in the Draft EIR.

Greetings,

Please note that the correct email address for comments is mjpawestcampus@marchjpa.com. This email is to acknowledge receipt of your comments to the West Campus Upper Plateau Draft Environmental Impact Report. Responses to comments will be conducted in a manner consistent with the March JPA's Local CEQA Guidelines. As such, your comment has been submitted for inclusion within the appropriate CEQA process.

Sincerely yours,
 March Joint Powers Authority

Subject: March JPA - West Campus Upper Plateau Comment Submit

Name: Robert Walker
Email: robertdoty32@aol.com

Message: You are a corrupt organization working for the developers not the interest of people living in the neighborhood. This is. Nothing more than economic racism over use of tax payer land and monies. I am filing an EEO complaint and with The department of Justice for corruption. You are taking away from our community a jewel enjoyed by many to simply degrade our quality of life. Honestly I wish the same degrading upon your community and family so you can share the lower quality life we are dealing with due to your vision of Orangecrest. Our families count whether you care or not. Shame on you.

Subject: Public Comment, draft EIR West Campus Upper Plateau

Hello Dan,

I believed that my remarks to the Commission on January 11th would be reflected in the draft EIR, but since it was clear that they would not be included, I thought I would email you the text from my short speech as a record of it related to the EIR. Thank you for your time and help.

I-10.1

Jerry Shearer
92508

Hello, my name is Jerry Shearer. I live in the Orangecrest neighborhood of Riverside, and I am a member of Riverside Neighbors Opposing Warehouses.

I am here tonight to comment on the draft Environmental Impact Report for the Meridian West Campus Upper Plateau project. I am opposed to the plan to build industrial warehouses on the West Campus Upper Plateau and am especially disappointed that this commission did not hold JPA employees and the builder accountable for genuinely engaging with the public during the prolonged preparation of this plan.

I-10.2

For 10 months, I have personally spoken to and consistently emailed you asking that you compel the JPA and builder to consider the health and welfare, the quality of life and the dreams of, and the economic reason for creating a land use plan that benefits the communities directly impacted by the development of this land.

While I am a shameless proponent of “leave it as it is” thinking, the reasons to do so are deeply meaningful for all who live in this part of Riverside County, our community understand that development of this land

may be inevitable due to the greed and avarice of developers like the Lewis Group.

I-10.2
Cont.

Thus, it is inconceivable to the public why the JPA and Lewis Group did not offer an alternative plan for developing this land, one that addresses clear and present messaging from the community: no more warehouses. Instead, we get 4 plans that include up to 4,986,650 square feet of industrial warehouse space within 300-800 feet of Riverside residences. How are any of these plans addressing the explicit and persistent concerns of the community? No more warehouses!

Build baseball, soccer, or football fields. Build interactive nature trails. Build solar or wind farms. Build auto repair shops or commercial shops and restaurants. Build single family homes. Build a true mixed-use complex that allows residents to enjoy the land and the developer to build and profit from the project. Build something that gives back to the environment as much as it extracts from it. None of this will happen unless you the commission demands it and since we are here tonight at this point in the process it seems like you are not holding the JPA accountable.

I-10.3

Representatives from Riverside, will you stand up for your residents? Perris? Moreno Valley? How will you protect the people you were elected to serve? Our county supervisors, how will you mitigate the unrestrained logistics sprawl over-running the western part of your jurisdiction?

If it isn't too late, please take action tonight to convene a community advisory group (I'd volunteer for it) and involve them in these vital land-use decisions. I also ask that you compel the JPA and builder to reconsider this faulty draft EIR and send them back to develop alternate plans that do not include warehouses and address the real concerns of the community who will have to live with this development on a daily basis. Thank you and good night.

I-10.4

Letter I-10

Jerry Shearer Jr.
January 14, 2023

- I-10.1** This comment questions whether or not public comments raised at the January 11, 2023, March JPA Commission meeting will be included in the Final EIR. Responses to comments from the January 11, 2023, Commission meeting are provided in Section 6, Public Meeting Responses to Comments, within this volume of the Final EIR.
- I-10.2** This comment conveys general opposition to the Project and questions the extent of public engagement. The March JPA and the applicant conducted multiple public outreach efforts including three community meetings, three workshops, and one Zoom virtual meeting with a public notification radius of 1,200 feet around the perimeter of the Project site resulting in 2,172 public notices. This comment does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-10.3** This comment requests the inclusion of a non-industrial alternative. Please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative. This comment also requests the inclusion of recreational facilities and open space. The proposed Project, as well as all alternative to the Project, includes the proposed Park with recreational amenities and open space with trails along with the 445.43-acre Conservation Easement with existing trails for passive recreational use.
- I-10.4** This comment requests a community advisory group and a non-industrial alternative. See Response I-10.2, above, regarding community engagement. Creation of an advisory group is outside the scope of CEQA. See Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative.

Subject: Warehouse issues

Good afternoon,

I am emailing all of you today to share an experience related to March JPA warehouses. This morning at 3:53 AM, I was awakened by the repeated "beep, beep, beep" sound of logistics sprawl invading my sleep. The sound of a diesel truck backing up before 4:00 AM, so loud that I could hear it over the sound of my heater, over the sound of rain falling on my alumawood patio cover, and through my closed and shuttered windows; it was enough to end my sleep for the night.

I-11.1

I'd like to say this is a one-off, poor planning and decision-making by a lone driver, but it isn't. This noise pollution is a frequent occurrence in my neighborhood. Some nights (when most people sleep) it is the noise of a truck backing up, some times it is the sound of a large door being slammed closed, some times it is people talking loudly to be heard over the sound of logistics and "e-commerce". And if it isn't noise pollution causing me (and my neighbors) distress, then it certainly is the light pollution which has forced me to plant (at additional personal cost) along my back yard to help mitigate the increased lights from warehouses, trucks, and cars shining into my bedroom. And if it isn't noise or light pollution then it is the smell of diesel exhaust from idling trucks carried by easterly winds blowing in hot from the desert carrying their toxic fumes right into my window as my family and neighbors sleep. Am I exaggerating? Is there truth in my words today? OrangeCrest residents, my neighbors, have noticed a significant uptick in truck and warehouse related pollution directly impacting our lives. The sound of jobs, right? More like the sound of a government that doesn't seem to care.

I-11.2
I-11.3

When many of us bought our homes, especially those bordering the open space along Meridian Pkwy, we were shown JPA maps that clearly identify this area as Stephens Kangaroo Rat habitat not to be developed, especially not warehouses. When the JPA worked out an agreement to develop this land, and residents sparingly commented on their projects, we were told that mitigations would be put into place to lessen the impact of this industrial intrusion on our lives. I am not convinced this has really happened, or if measures have been taken, they are ineffective. "Beep, beep, beep." It is a permanent part of my psyche.

I-11.4

With the release of the West Campus Upper Plateau EIR, you know all too well that the communities of western Riverside County oppose heavy logistics and more industrial blight in this area. We are disproportionately impacted already. The JPA and its developer claim they have mitigated the impact on human life on this project much in the same way they claimed to for the existing warehouses that negatively impact my and my neighbors lives each week. There is a misconception that the community emailing you or speaking out is really just a vocal few. Please understand that with ample evidence based on real world experiences of being a neighbor to the JPA and its developments, whole communities are impacted by their poor land use planning, and even more so by their lack of accountability, and we are fed up.

I-11.5

I have emailed and spoken many times to members of the JPA regarding the negative impacts (noise, light, air pollution that cause real health issues) that are causing people to resent the JPA and their warehouses, but I usually don't get any help or answers. I know the warehouses that are built will not go away and that the only sounds that will wake future me up at night won't be coyotes and the occasional grazing sheep to help with weed abatement. I want to share this experience with you so that you consider the real impacts on the community when the JPA and its developer say they are mitigating impacts. The community is having a difficult time understanding why no one is accountable for this pollution or for the broken laws and promises when they happen. Once again I email asking for help holding the tenants of these warehouses, the building owners, and the permitting agency accountable for the damage they are doing to the lives of the resident forced to live with this scourge. I also email you once again to add to the record that I am asking the JPA to address these issues with existing tenants and show that they care about the lives of its neighbors. Please be considerate of our community and demonstrate you are a good neighbor moving forward.

I-11.6

Thank you for your time today.

Jerry Shearer

Letter I-11

Jerry Shearer Jr.
January 30, 2023

I-11.1 This comment raises concerns about existing sources of nighttime noise from warehouse development within the March JPA planning area. These are existing sources of noise and are not associated with the proposed Project. The Draft EIR analyzed the nighttime noise sources identified by the commenter for the proposed Project and determined impacts would be less than significant. As shown in Table 4.11-1, 24-Hour Ambient Noise Level Measurement Results, of the Draft EIR, nighttime (10:00 pm to 7:00 am) ambient noise levels at locations surrounding the Project site range from 43.9 dBA L_{eq} to 56.6 dBA L_{eq} . Table 4.11-7 summarizes the significance thresholds for operations near noise-sensitive receivers. Under the Specific Plan buildout scenario, the Draft EIR evaluated nighttime noise sources from Project activities, including loading dock activity, roof-top air conditioning units, trash enclosure activity, parking lot vehicle movements and truck movements. These sources include the noise sources identified by the commenter, such as back-up alarms, people talking, and doors being closed. As shown in Tables 4.11-27 and 4.11-29, the Project will not exceed the nighttime noise thresholds at any receiver location. However, the Project would result in one significant and unavoidable operational noise impact along Cactus Avenue east of Meridian Parkway due to increases in traffic along this non-sensitive street segment adjacent to industrial buildings.

Under Table 3-2, Development Standards, and Section 4.4.2, Truck Courts and Loading Docks, of the proposed Specific Plan, truck courts and loading docks must be oriented away, or screened from surrounding residential land uses, which will reduce noise impacts through attenuation. Section 4.4.1, Walls and Fences, of the proposed Specific Plan requires screen walls around the perimeters of individual building sites, loading and dock areas, trailer parking areas, and parking lots, further attenuating Project noise sources. The Project is subject to the March JPA Development Code Section 9.10.140, which states “any loudspeaker, bells, gongs, buzzers, or other noise attention or attracting devices shall not exceed 55 dBA at any one time beyond the boundaries of the property. Sounds emitting from any of the aforementioned devices, including or live or recorded music, shall cease between the hours of 10:00 p.m. and 7:00 a.m. if the sound therefrom creates a noise disturbance across the property line of a residential use.” Section 3.5.4 Off-Street Loading Facilities, of the Specific Plan also includes this restriction. Additionally, the Project includes the Conservation Area, which would serve as a buffer between the Project and residences. Project nighttime noise impacts would be less than significant.

I-11.2 This comment expresses concerns about lighting and lighting impacts upon residential uses. The comment cites existing light intrusion impacts from nearby existing uses and does not specifically relate to this Project. Lighting impacts associated with the proposed Project are evaluated in Section 4.1, Aesthetics, of the Draft EIR. PDF-AES-2 through PDF-AES-16 identify project design features included as part of the proposed Specific Plan that address lighting and light spillover. Prior to the issuance of any building permit, MM-AES-2 requires an exterior point-by-point photometric study demonstrating compliance with these PDFs, the March JPA Development Code and the Specific Plan. For example, PDF-AES-2 requires minimization of glare and spillover light onto public streets, adjacent properties, and the Conservation Easement by using downward-directed lights and/or cutoff devices on outdoor lighting fixtures. PDF-AES-3 limits light spillover to one-half foot candle or less for property adjacent to the Conservation Easement as confirmed through a point-by-point photometric study. As distance

increases, light intensity decreases so residences abutting the Conservation Easement would experience negligible light spillover. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. With implementation of PDF-AES-2 through PDF-AES-16 and MM-AES-2, light spillover impacts would be less than significant.

I-11.3 This comment raises health concerns about truck emissions for nearby residents, and specifically diesel exhaust. For the proposed Project, a Revised Health Risk Assessment Technical Report (Appendix C-2) was prepared to evaluate the potential health-related effects from diesel emissions associated Project construction and operation. As discussed in Recirculated Section 4.2, Air Quality, the land use with the greatest potential exposure to Specific Plan Area construction-source DPM emissions is Location R11, which is located approximately 304 feet north of the mixed-use portion of the Specific Plan Area at an existing residence located at 971 Saltcoats Drive. R11 is placed in the private outdoor living areas (backyard) facing the Specific Plan Area. At the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0. As such, the Specific Plan Area would not cause a significant human health or cancer risk to adjacent land uses as a result of construction activity. All other receptors during construction activity would experience less risk than what is identified for this location. Nonetheless, implementation of MM-AQ-1, which requires the use of Tier 4 Final construction equipment, would further reduce impacts to sensitive receptors.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks. Because all other modeled residential receptors are exposed to lesser concentrations and are located at a greater distance from the Specific Plan Area than the MEIR

analyzed herein, and TACs generally dissipates with distance from the source, all other residential receptors in the vicinity of the Specific Plan Area would be exposed to less emissions and therefore less risk than the MEIR identified herein. As such, the Specific Plan would not cause a significant human health or cancer risk to nearby residences as a result of operational activity.

- I-11.4** This comment states the Project site was identified as habitat for Stephens Kangaroo Rat (SKR) and not to be developed. As discussed in Recirculated Section 4.10, Land Use and Planning, since the development of the March JPA General Plan in 1999, the Project site has been designated for development. Although Exhibit 5-1 of the March JPA General Plan identifies the former Weapons Storage Area as SKR Open Space and the remainder of the Project site as SKR Management Area, the General Plan explains the intent to purchase better quality SKR habitat elsewhere so that “the lands currently designated for SKR management and open space purposes will be available for development.” Figure 1-4, Land Use Plan, of the March JPA General Plan designates the former Weapons Storage Area as Park/Recreation/Open Space and the remainder of the Project site as Business Park. The swap of March JPA lands, including the Project site, for more and better quality SKR habitat was the subject of the 2012 Settlement Agreement with the Center for Biological Diversity and San Bernardino Valley Audubon Society (Appendix S). Under the CBD Settlement Agreement, the land uses were inverted, with the Weapons Storage Area identified for development, along with a 60-acre park, and the remainder of the Project site identified as a conservation easement (see Figure 3-4 of the Draft EIR). The Project’s potential direct and indirect impacts to SKR and its habitat are evaluated within Section 4.3, Biological Resources, of the Draft EIR. With implementation of MM-BIO-1 (Best Management Practices), MM-BIO-3 (Operation-Related Indirect Impacts to Special-Status Wildlife), and MM-BIO-4 (Stephens’ Kangaroo Rat Avoidance and Mitigation), the Project’s direct and indirect impacts to SKR and its habitat would be less than significant.
- I-11.5** This comment conveys general opposition to the Project and does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-11.6** This comment conveys general opposition to the Project, raises concerns about existing development separate from the proposed Project, and does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.

INTENTIONALLY LEFT BLANK

February 5, 2023

Hello JPA Commissioners,

I want to thank all of you that have engaged with the public regarding the Meridian West Campus Upper Plateau project. You have kindly held meetings with us, received many emails from us, and attended public events to hear us talk about this project over the last 11 months. But the time has come for all to focus on the draft EIR released earlier this month as we head to the March 10th deadline for public comment.

I-12.1

While it does make some sense to maintain communication with you during this legally binding comment period, I am confident that you all recognize at this point the public’s overwhelming and unified opposition to more warehouses, especially on this land. I don’t take your obligation as a commissioner lightly and neither should you. For 11 months, since first learning of this project, thousands of community members from all over western Riverside County have come together to try to comprehend the reason for putting mega-warehouses on this extremely unique piece of land. During this time, one answer seems to prevail: money, more specifically one company’s sense of entitlement to take every last dollar out of this land while it can.

My objective here is to summarize where we are regarding the West Campus Upper Plateau project right now, and to implore you and the JPA to engage authentically with the public working cooperatively to find a better plan that addresses the interests and concerns of all who are involved with or impacted by this project. The posting of the February 8th JPA Commission meeting agenda has me concerned that the developer is forcing through a purchase of the land at the West Campus Upper Plateau prior to the completion of an active EIR review. The legalities are fuzzy to me, but that aside, this ongoing push to privatize public land and ignore public involvement goes against everything the JPA is tasked with doing under the General Plan. The action proposed under the agenda for the February 8th meeting seems premature pending the completion of the EIR process; it appears pre-decisional by the builder, and appears to not aligned with the JPA’s CEQA process. I am not sure what you as commissioners can or will do on Wednesday when agenda item 8-11 comes up for discussion, but voting in favor of it sends a negative signal to the public who are diligently working to follow the legal process by commenting on the draft EIR. I implore you, before you discuss and vote in chambers, read the rest of my email below, especially #5.

I-12.2

If you will grant me a bit of your time again, I’d like to review a few things (a top 5 of sorts) about this project with you one last time, and then off to deal with that enormous document.

I-12.3

1. The West Campus Upper Plateau is a unique piece of land. It is an extension of the Sycamore Canyon Park natural area geographically, historically, culturally, environmentally, and recreationally. There is no other place like it in western Riverside County. Any development of this land should complement the unique characteristics and

value (human value, not just economic value) of this land not destroy it. As much as the developer’s EIR tries, this industrial development plan and land use zoning do not preserve the landscape even with the inclusion of the 2012 agreement that sets aside open space and a conservation easement. If you would have spent an hour with me on the trails as I have requested for 11 months, you may have seen this for yourself. Viewing this land from a map or a parking lot don’t begin to do its human value adequate justice. The public wants to understand your thoughts on taking this special piece of land away from residents of western Riverside County and turning it over for private development. The establishment of the 2012 settlement does not adequately reflect how people value and enjoy this land currently. This warehouse project is not like other warehouse projects and it will have a significant negative impact on the community it borders regardless of the developer’s mitigation efforts and claims.

I-12.3
Cont.

2. On page 860/916 of the electronic draft EIR, the JPA and developer address alternatives to the project that were rejected. The first reason listed (6.3.1) is that there is no alternate site for this project (because of its size). This explanation implies that this project (a mega-warehouse complex) is pre-decisional, the realization of a legal entitlement for the developer to build warehouses anywhere it wishes. It implies that because the developer wants mega-warehouses to lease or sell to whomever (foreign or domestic) it wants that it is their right to repurpose public land for private gain. It implies that the decision to build only warehouses here was made long ago and by approving their plans the JPA and this commission are helping to privatize public lands in a way that damages the public interest and our infrastructure but benefits the developer financially. There is absolutely no community sentiment for building warehouses here (nor is there a need for the few temporary, low paying jobs created by these eyesores), but there is wide ranging public support for development that improves our lives and community. The developer does not prioritize the values of the community, the protection of its citizens, or the collaboration with communities impacted by this project. They have a history of sanctioned negligence and their lack of accountability and accuracy is even written in the EIR you are considering today. As our representatives on this commission, we expect you and the JPA to hold the developer accountable for our lives as much as you allow them to profit from this project. What lengths have you taken to do this? How will you hold them accountable on our behalf? How will you enforce the JPA’s own mission identified in the General Plan, the one that protects community values, health, and history from narrowly focused and neglectful land use decisions? The economic risk here is massive; as quickly as the economy moved to demand more storage space, it will in all likelihood swing back and once built that space will sit as an empty concrete monument to bad government decisions and capitalism at its worst.

I-12.4

I-12.5

3. At three meetings with the developer prior to the release of the draft EIR, I joined with members of the community to demand an alternative plan that did not involve warehouses. Instead, we got a plan that brings up to 4.9 million square feet of industrial

I-12.6

buildings to the West Campus Upper Plateau (it's foolish to believe that this space will be used for anything but logistics, this is happening with existing JPA developments today. The Meridian logistics center is not the Amazon warehouse type where goods are received and shipped to local customers, most of these warehouses are long-term storage centers taking advantage of the JPA's Free Trade Zone 244). Instead of diverse land use options, we got three alternate plans that modify this main plan slightly, essentially, we still only have one plan, and one plan that does nothing with the land (more on this one in item 5 below). The four all industrial/business/mixed use building plans ignore the repeated message of thousands of residents from Moreno Valley, Perris, Riverside, and unincorporated Riverside County. These plans also ignore the overwhelming evidence that the cumulative effects of logistics sprawl along the 60/215 corridor is making western Riverside County an undesirable place to live (in fact there is no traffic study of this interchange in the draft EIR). Despite the JPA's insistence that during the August open house many residents offered insightful help to improve the project, we collected 54 signatures that night opposing the project as presented at the gathering and zero signatures supporting it. Again, the unified plea of "no more warehouses" was ever present and the demand by the community for a plan that excluded warehouses was ignored by the JPA and developer once again. The public expects the JPA to honor its commitment (page "v" of the General Plan) to serve as a link between community values and physical (land use) decisions. Is this line guidance or a mission statement? After 11 months of communication with the JPA, why is there no option to develop this land in a way that reflects community values and input? As members of the commission, you must hold the developer and the JPA accountable to this mission. The JPA and the developer should be required to offer a plan that considers community minded development of the Upper Plateau because they have failed to consider the public or the mission of the JPA with this EIR. Anything less implies a pre-decisional nature of the developer to put its profit before anything that the community wants with this public land. Please hold them accountable. We are relying on you.

I-12.6
Cont.

I-12.7

I-12.8

4. Publicly, the JPA consistently points to language in the General Plan and the March JPA website that states the primary justification for this sprawling industrial project is their duty to develop and repurpose March ARB lands and to bring jobs to the area. The JPA has documented that it has already replaced the jobs lost by the realignment of the base in 1993, Dr. Martin proudly stated this in front of the Riverside City Council in October. These jobs numbers are readily available to you now. The draft EIR references in many places that 2,600 jobs would be created at the peak of operations resulting from this project, but later this document admits that the jobs would not result in long-term employment growth for the region (section 4.7.32), and public data suggest that this number is also inaccurate. The unemployment rate in this area is between 3.3-3.7% and the and the average household income is \$103,513. There is no need for a giant concrete campus that will not impact the jobs numbers for this area, nor would those jobs pay the kind of wage that would allow people to live in this area. The EIR contains some mixed

I-12.9

I-12.10

messaging (at best) on jobs for sure, but the end result is this is not an overwhelming driving reason to build warehouses on the Upper Plateau. This argument by the JPA and developer is misleading and is not supported by data on your local agency websites. Please explain how the low quality and temporary jobs this project would provide will employ residents (as stated multiple times by the draft EIR). Western Riverside County cries out for jobs that can support the cost of living in this region and warehouse jobs cannot do this. How is this a primary reason to approve this project? If job creation is a primary driving factor for this project, why hasn't the developer and the JPA created a land use plan that focuses on jobs for residents of western Riverside County? There must be a better use for this special piece of land, one that the Air Force, residents and visitors, local municipalities, lawyers and lawmakers, and the JPA can all support.

I-12.10
Cont.

5. The project objectives identified in section 6.2 of the draft EIR lays out how this plan would amend the overall March JPA General Plan just as every specific plan has done over the years. You can read these objectives on page 859/916 of the PDF for yourself. In this plan, Alternate Plan 1 under consideration is titled "No Project" and under section 6.4.2 the explanation of this plan appears to be a mandated option in the EIR, primarily for comparison purposes with the main plan and the other three alternate plans. This plan can be easily dismissed as naïve and misguided, and more than once I have been accused of being the loudest of the unreasonable proponents of this alternative. But there is another solution wherein Alternate Plan 1 is reasonable, popular, and financially realistic, and that plan is to make it a cultural and historic local or state park via the National Parks Service's BRAC program. I have investigated this idea and have a contact with the NPS who recommended that this would fit the NPS BRAC model but that the JPA would need to work with the US Air Force to reassign land ownership rights. Without going into more details here, I am happy to work with you to investigate this real alternative plan that does exactly what the public is asking by preserving the open space and greenbelt, protecting the natural landscape and sensitive habitats (see Appendix S and the 2012 agreement), preserving a quality of life in western Riverside County, and allowing the public to enjoy this special piece of land forever. It would also allow us to honor the past of March AFB and preserve a part of the munitions bunkers as a memorial to the history of the Air Force in Riverside County. Will you help encourage this truly groundbreaking, forward-thinking alternative for the West Campus Upper Plateau? This option will take courage but you would have 100% support from the public and the Air Force for it.

I-12.11

The community has asked the JPA for an alternative to more warehouses, more traffic, more pollution, more crime, and more anxiety associated with these buildings. We have asked the JPA to use this land to enhance our lives (remember unemployment is at historically low levels right now) instead of privatizing yet more public land. These warehouses only benefit the developer. I will have more to say during public comment of the EIR but it is important that you hear just how much people care about this land. I spoke to a family of 6 today who were enjoying the very

I-12.12

trails that will soon be an intersection for semitrucks if this plan is approved. They could not understand why anyone would allow this plan to go forward, and frankly neither do I.

I-12.12
Cont.

Again, thank you for your time and consideration of my requests over the last 11 months. I know the job you have is not trivial and that you are giving it considerable attention. I trust that you will remember the significance of your decisions as you serve on this commission. You are, by process of elimination, the only ones that can hold the JPA and its exclusive contractor the Lewis Group accountable to the public. You are the ones who must honor the JPA’s mission as written by the original authors of the General Plan and provide the basis for local government decision-making serving as the conduit between the public and any land use decisions that impact us. Approving more warehouses on the West Campus Upper Plateau is a vote for the continued privatization of public lands and interests. A vote in favor of this plan (and in favor of agenda item 8-11 on February 8th) unfairly gives the developer more power in our representative democratic government than citizens have. Approving any of these plans is a vote against those people that you represent and a vote for one man and his private business.

I-12.13

I-12.14

I hate to end on a somber note so I will once again say I appreciate your consideration of my ideas and words today, and I once again invite all of you to join me on the trails throughout this special place so that you might see just how unique this landscape is to western Riverside County, speak with people and understand just what a value it is to our community, and hopefully start to understand how nature and undisturbed open-space improves our lives much more than capitalism.

I-12.15

Respectfully,

Jerry Shearer

Letter I-12

Jerry Shearer Jr.
February 5, 2023

- I-12.1** This comment conveys general opposition to the Project and does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-12.2** This comment raises questions regarding actions taken by the March Joint Powers Commission related to the West March Development and Disposition Agreement (DDA). In response to this comment, please see Topical Response 10 – West March Development and Disposition Agreement.
- I-12.3** This comment describes the commenter’s personal opinion of the Project site. The comment does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. The comment references the CBD Settlement Agreement, and as such, for more details about how the Project relates to the CBD Settlement Agreement, please see Topical Response 4 – Project Consistency.
- I-12.4** This comment raises concerns regarding the Draft EIR’s analysis of alternative sites and the lack of a non-warehouse alternative. “Although CEQA requires that an EIR identify alternatives to a project, it does not expressly require a discussion of alternative project locations. ([Pub. Res. Code] §§ 21001, subd. (g), 21002.1, subd. (a), 21061.) The CEQA Guidelines require a description of ‘a range of reasonable alternatives to the project, or to the location of the project,’ implying that an agency may evaluate on-site alternatives, off-site alternatives, or both. (CEQA Guidelines, § 15126.6, subd. (a).)” *Mira Mar Mobile Community v. City of Oceanside* (2004) 119 Cal.App.4th 477, 491. Chapter 6, Alternatives, of the Draft EIR considered and dismissed an alternate site. In response to the remainder of this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative. The comment also describes the Project site as ‘public land.’ The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- I-12.5** This comment conveys general opposition to the Project. The comment does not raise any comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-12.6** This comment notes that all Project Alternatives considered in the Draft EIR include warehouses. In response to this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative. The comment incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 square feet of warehouse use, 528,951 square feet of office use, and 160,921 square feet of retail use.
- I-12.7** This comment objects to the alternatives evaluated in the Draft EIR and states that the traffic study does not include the 60/215 interchange. In response to this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative. Additionally, please see Form Letter G Response, for a discussion about the 60/215 interchange.

- I-12.8** This comment requests consideration of an alternative without warehousing. In response to this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative.
- I-12.9** This comment states that March JPA has documented that it has already replaced the jobs lost by the realignment of the base. The comment does not raise any comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-12.10** This comment raises questions about Project job generation and unemployment rates. In response to this comment, please see Topical Response 5 – Jobs.
- I-12.11** This comment discusses a potential Project Alternative with the National Park Services’ Base Realignment and Closure Act program. The comment also describes the Project site as ‘public land.’ The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant. In response to this comment, please see Topical Response 8 – Alternatives, which considers a park alternative.
- I-12.12** This comment asks why the JPA has not considered an alternative to more warehouses. In response to this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative. The comment also describes the Project site as ‘public land.’ The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant. The comment further raises concerns regarding the loss of recreational open space. The Project will place 445.43 acres of the Project site under a conservation easement to be managed for its wildlife habitat value for sensitive species. As part of the Conservation Easement, the developer will contribute \$2 million toward a non-wasting endowment to be used for management and monitoring activities by the third-party land management entity. In sum, this will preserve and enhance the open space values of the Conservation Easement in perpetuity. The Project includes another 17.72 acres of open space surrounding the Campus Development to provide further buffer for the Conservation Easement and surrounding neighborhoods. The two retained weapons storage bunkers will be within this open space and accessible to the public. A plaque describing the Weapons Storage Area will also be erected adjacent to the retained bunkers. The Project includes an approximately 60-acre park with active and passive recreational uses and access points for existing trails in the Conservation Easement for passive recreational use.
- I-12.13** This comment expresses general opposition to the Project and does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-12.14** This comment raises questions related to the West March Development and Disposition Agreement. In response to this comment, please see Topical Response 10 – West March Development and Disposition Agreement. The comment also describes the Project site as ‘public land.’ The area proposed for the Conservation Easement is public land under the ownership of March JPA; the Specific Plan Area is private land owned by the applicant.
- I-12.15** This comment is concluding remarks to the letter and does not raise comments or concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you PLEASE abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include "pouring concrete" and having "building inspections" before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust! R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Sincerely,

Mary Viafora

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include “pouring concrete” and having “building inspections” before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community’s concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Sincerely,

Carlos LLiguin 92508

- I-22.1** This comment raises questions regarding actions taken by the March Joint Powers Commission related to the West March Development and Disposition Agreement (DDA). In response to this comment, please see Topical Response 10 – West March Development and Disposition Agreement.
- I-22.2** This comment raises concerns regarding existing noise conditions in the Project area associated with warning beeping. The comment also expresses opposition to future industrial warehouses development in the Project area. As detailed in Section 4.11, Noise, and Appendix M-1 of the Draft EIR, the noise analysis includes potential noise impacts associated with back-up beepers. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR.

R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately. By not communicating and accommodating times for the working class neighborhood you are trying to change so drastically, the good faith and any good feelings that you are trying to negotiate with my community is quickly diminishing. How dare you side step the proper channels and move forward without hearing from the people directly affected?! Muscling and bullying your agenda and not showing interest in what the community is expressing is not a great way to lead to a positive final outcome for either side. Please give us a chance to explain why we are so upset with these future plans and make it so we don't have to take off work to do so.

Thank you!

Sincerely,

Abigail Banning 92508/ Mission Grove

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear March JPA and Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR which I am spending considerable personal time reading and responding to because it is a clear example of bad land use planning, poor government oversight, and a disregard of humanity.

While I cannot attend in person due to the rigors of a full-time job, I thought it important to write today to respectfully request that you vote against or abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda, though I realize the assignment may well take place regardless of your actions. The public comment period for the draft EIR is ongoing, and the March JPA has not completed the CEQA process. The assignment of any part of this land appears pre-decisional. To vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include “pouring concrete” and having “building inspections” before any buildings have been approved, signals to the community directly impacted by this project that the developer never considered non-industrial options in their plans. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider non-industrial alternatives and communicates to the public that the JPA is proceeding without seriously addressing our concerns.

I-32.1

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the draft EIR and was buried in an agenda for a regular JPA meeting happening at a normal Wednesday afternoon meeting. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that the JPA do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. My neighbors and I have asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. I hope you take this time to demonstrate your accountability to the public.

Thank you!

Sincerely,

Jerry Shearer

No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

In closing, please consider the long term effects of the proposed construction. Lack of open space, increases in air pollution, noise, and local traffic. our children and grandchildren will be the recipients of mistakes made today. What will be the outcome 50 years from now? We tend to think in the now and disregard the future effects and costs both in health and monetary.

Thank you!

Sincerely,

Chris Hannon

- I-43.1** This comment raises questions regarding actions taken by the March Joint Powers Commission related to the West March Development and Disposition Agreement (DDA). In response to this comment, please see Topical Response 10 – West March Development and Disposition Agreement.
- I-43.2** The comment raises concerns regarding potential Project impacts on open space, air pollution, noise, and traffic. The analysis of these areas is contained in Chapter 4, Environmental Analysis, of the Draft EIR. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses including the Draft EIR are required.

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include "pouring concrete" and having "building inspections" before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears highly suspect and does not show impartiality to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include items such as "pouring concrete" and having "building inspections" before any buildings have been approved. A vote before the CEQA process is complete seems ill-timed and highly questionable. Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include "pouring concrete" and having "building inspections" before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Sincerely,

Suzanne Page

- I-60.1** This comment raises questions regarding actions taken by the March Joint Powers Commission related to the West March Development and Disposition Agreement (DDA). In response to this comment, please see Topical Response 10 – West March Development and Disposition Agreement.
- I-60.2** This comment provides a link to an article that discusses warehouse related pollution in the Inland Empire. The article discusses how demand for industrial warehouses has continued to grow and to provide employment opportunities, but this growth has come at a cost for the communities in which these warehouses are located. The article further discusses moratoriums being put in place in some Inland Empire cities. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses including the Draft EIR are required.
- I-60.3** This comment states that air quality in the City of Riverside is unhealthy and urges the March JPA to complete the CEQA process before making any decisions. The analysis of Project air quality impacts is included in Recirculated Section 4.2, Air Quality. The comment does not raise specific concerns regarding the adequacy of the environmental analysis in the Draft EIR. No changes or additions to the project description or analyses including the Draft EIR are required. The March Joint Powers Commission will consider the Final EIR as part of the consideration of the Project.

Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

The recent article in the LA Times about the number of warehouses in our area is very concerning as a father of two young ones. I want them to grow up in a good, healthy environment.

Thank you!

Sincerely,

Sergio Salazar,
Orangecrest neighborhood resident, Riverside

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include "pouring concrete" and having "building inspections" before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Sincerely,

Subject: Cumulative impacts map app - Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, Commissioners,

Attached please find a link to a website displaying the warehouses and planned warehouses along the 215/60 corridor surrounding March ARB.

I-68.1

<https://radicalresearch.shinyapps.io/MarchJPA/>

Please include this as part of public comment on the draft EIR indicating the proper domain for regional cumulative impacts effects analyses performed within the EIR. The existing list of projects on Table 4-2 within the draft EIR omits over 3,500 acres of approved and planned warehouse projects within the region. The draft EIR omissions are material; proper inclusion of these projects would demonstrate that transportation impacts are significant and unavoidable, and air quality impacts are substantially greater than claimed.

RNOW March JPA Warehouse Map

Introduction

The Riverside Neighbors Opposing Warehouses (RNOW) (<https://sites.google.com/view/rivnow/>) Map of Warehouses on the 215/60 Corridor is a publicly available tool developed to help visualize the development of warehouses around the March Air Reserve Base. This dashboard is largely based off of the Warehouse CITY (<https://radicalresearch.shinyapps.io/WarehouseCITY/>) tool developed in collaboration by Redford Conservancy at Pitzer College (<https://www.pitzer.edu/redfordconservancy/>) and Radical Research LLC (<http://radicalresearch.llc>). That tool allows additional quantification capabilities. The RNOW community group opposes new warehouse development around the Orangecrest and Mission Grove neighborhoods of the City of Riverside. The communities surrounding the March Inland Port area already have the second highest density of warehouse development in the Inland Empire. Over 280 warehouses around March ARB along the 215 corridor cumulatively cover over 4800 acres and have a footprint over 210 million square feet. We estimate that these warehouses generate about 90,000 truck trips daily.

This map also displays planned warehouses. The estimated warehouse footprint in the planning pipeline will double the space currently built. Most of that space is already fully approved - the biggest addition is the World Logistics Center that will add over 40 million square feet of warehouses along the 60 corridor in east Moreno Valley. The Stoneridge Commerce Center in Unincorporated Riverside County is another 9 million square feet of warehouses. The third largest planned warehouse complex is the West Campus Upper Plateau by the March JPA at about 4.5 million square feet of warehouses.

Land-use (more like warehouse) Authorities

Five land-use authorities contribute to the warehouses around the March ARB and 215/60 corridor.

- City of Riverside (<https://riversideca.gov/>) - Over 50 warehouses in the Sycamore Canyon Business Park (~20M sq.ft.). A few more are planned but Riverside is about 90% built out.
- City of Moreno Valley (<https://moval.gov/index.shtml>) - Over 75 warehouse along Cactus Avenue and along Indian Street near the March ARB. (~39M sq.ft.). The World Logistics Center warehouse complex will double its footprint in the next few years.
- City of Perris (<https://www.cityofperris.org/>) - Over 75 warehouses along Perris Blvd. and Ramona Expressway (~44M sq.ft.). At least another 18 warehouses are in planning or construction phases which will add just under 10M square feet.
- Riverside County (<https://rivco.org/>) - Over 45 warehouses, mostly alongside the 215 Corridor South of Riverside National Cemetary (~14M sq.ft.). The Mead Valley warehouses will add another dozen warehouses

and 6 million square feet while the Stoneridge Commerce Center complex near Nuevo will add another 9.4 million square feet.

- March Joint Powers Authority (<https://marchjpa.com/>) - About 55 warehouses, directly adjacent to March ARB, along Van Buren, and along the 215 Corridor between Alessandro and Van Buren (~36M sq.ft.). Another 9.5 million square feet are under construction or planned.

The March Joint Powers Authority (MJPA) is a quasi-governmental land-use authority that is comprised of eight commissioners (<https://marchjpa.com/about/march-joint-powers-commission/>) from the four governmental agencies. Two commissioners are from each of the cities (Moreno Valley, Perris, Riverside) and another two are from the County.

Map and Data Provenance

The map can be navigated using point, click, and drag features or by clicking on the zoom plus and minus buttons on the top left corner of the map. At the top right of the map, the imagery can be switched between a street level

Basemap and satellite **Imagery**. Polygon overlays can be turned on or off by selecting the check boxes for **Jurisdictions**, **Existing Warehouses**, **Planned Warehouses**, and **800 foot buffer**.

- **Jurisdictions:** This shows the boundaries for Moreno Valley, Perris, Riverside, March JPA, and Unincorporated Riverside County. Data were obtained from RivCo Open Data Cities (<https://gisopendata-countyofriverside.opendata.arcgis.com/datasets/CountyofRiverside::cities/explore>) and census designated places (https://gisopendata-countyofriverside.opendata.arcgis.com/datasets/f84b20601ad84a1e8b6333e5fad041f8_0/about). The March JPA boundary is discontinuous. Note that this dataset was provided as a personal communication with the County of Riverside. As noted by the County - *"The County of Riverside is not the custodian of records for the March Airforce Base Joint Powers Authority and therefore cannot ensure the accuracy of records in its possession that are related to the JPA."* Multiple public records request to the March JPA requesting boundary information were denied as the March JPA *"do not have the requested information available"*.
- **Existing warehouses:** Data processed using methodology established in Warehouse City tool v1.09. Raw data from RivCo assessor data (<https://gis2.rivco.org/>).
- **Planned Warehouses** - Polygons based on EIR documents from March JPA, City of Riverside, City of Moreno Valley, City of Perris, and County of Riverside as of January 2, 2023.
- **800 foot buffer:** This is based on the 2020 City of Riverside Good Neighbor Guidelines (<https://riversideca.gov/cedd/sites/riversideca.gov.icedd/files/pdf/planning/2021/Good%20Neighbor%20Guidelines.pdf>), and Title 19 Zoning standards (https://library.municode.com/ca/riverside/codes/code_of_ordinances?nodeId=PTIICOOR_TIT19ZO_ARTVBAZOREUSDEPR_CH19.130INZOBMIAIAI_19.130.030DESTINZO)

Contact and Support

- If you are interested in supporting or becoming a member of local organizations opposing warehouse development adjacent to residential communities, please check out RNOW (<https://tinyurl.com/RIVNOW>), Center for Community Action and Environmental Justice (CCA EJ) (<https://www.ccae.org/>), and the Redford Conservancy at Pitzer College (<https://www.pitzer.edu/redfordconservancy/>).

Letter I-68

Mike McCarthy
February 8, 2023

- I-68.1** This comment references a website displaying the warehouses and planned warehouses along the 215/60 corridor surrounding the March Air Reserve Base. The website information has been downloaded and included as an attachment to this comment letter. This comment is informational and does not raise any questions, comments, or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is provided.
- I-68.2** This comment alleges that Table 4-2 of the Draft EIR omits over 3,500 acres of approved and planned warehouse projects within the region for analysis of cumulative impacts such that cumulative transportation impacts would be significant and unavoidable and cumulative air quality impacts would be substantially greater than those disclosed in the Draft EIR. With respect to development of the cumulative projects list and the Draft EIR's cumulative analysis for each issue area, please see Topical Response 7 – Cumulative Projects. Regarding transportation impacts, traffic delay is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA. Please see the Final EIR and Appendix C-2 for expanded discussion and analysis of cumulative health risk impacts, including along the Project's truck routes, and cumulative cancer risk utilizing the U.S. EPA's threshold of one in a million. As discussed in the Final EIR and Appendix C-1, because the proposed Project would exceed the project-level regional significance thresholds for emissions of VOCs, NO_x, CO, PM₁₀, and PM_{2.5}, the Project's cumulative impacts with respect to such emissions would be considerable and significant. However, as discussed in briefs filed in the case of *Sierra Club v. County of Fresno* (2018), SCAQMD noted that it may be "difficult to quantify health impacts for criteria pollutants." SCAQMD used O₃ as an example of why it is impracticable to determine specific health outcomes from criteria pollutants for all but very large, regional-scale projects. First, forming O₃ "takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources." Second, "it takes a large amount of additional precursor emissions (NO_x and VOCs) to cause a modeled increase in ambient ozone levels over an entire region," with a 2012 study showing that "reducing NO_x by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion." Additionally, the San Joaquin Valley Unified Air Pollution Control District (SJVUAPCD) ties the difficulty of correlating the emission of criteria pollutants to health impacts to how ozone and particulate matter are formed, stating that "[b]ecause of the complexity of ozone formation, a specific tonnage amount of NO_x or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area." Similarly, the tonnage of PM "emitted does not always equate to the local PM concentration because it can be transported long distances by wind," and "[s]econdary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxides (SO_x) and NO_x," meaning that "the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area." The disconnect between the amount of precursor pollutants and the concentration of ozone or PM formed makes it difficult to determine potential health impacts, which are related to the concentration of ozone and PM experienced by the receptor rather than levels of NO_x, SO_x, and VOCs produced by a source. (Appendix C-4)

As detailed in the Final EIR and Appendix C-1, the LST analysis demonstrates that neither Project construction nor operation would exceed the applicable SCAQMD localized significance thresholds. Therefore, the Project would not be expected to exceed the most stringent applicable federal or state ambient air quality standards for emissions of CO, NO_x, PM₁₀, or PM_{2.5}. (Appendix C-4)

Subject: Public Comment for Agenda Item 8(11) and Comment for DEIR

Dear Commission Members,

This email is meant as both public comment for Agenda Item 8(11) and a comment for the West Campus Upper Plateau Draft EIR.

I respectfully request that you abstain from voting to partially assign the West Campus Upper Plateau to Meridian West, LLC - Agenda Item 8(11) on the February 8 agenda. The public comment period for the DEIR is ongoing, and the March JPA has not completed the CEQA process. It appears pre-decisional to vote on partial assignment of the DDA before comments have been heard, especially when terms of the agreement include "pouring concrete" and having "building inspections" before any buildings have been approved. Why vote before the CEQA process is complete? Approval of this action item makes it more difficult for Commission members to consider alternatives and communicates to the public that you are proceeding without seriously considering the community's concerns.

On October 26, 2022, the Commission voted to allow the Executive Director to convey the 17th Option Parcel to the developer and approved a Schedule of Payment that explicitly outlined payments for four buildings on the site. This vote happened months before the release of the Draft Environmental Impact Report and was buried in an agenda for a regular JPA meeting happening on a Wednesday afternoon. No notification was sent out to the public. R-NOW sent a letter on November 28, 2022 outlining the ways this action could be interpreted as pre-decisional and asked that you do better in informing our active and concerned community about future actions taken in relation to the West Campus Upper Plateau so that we have adequate time to respond.

The fact that the JPA again did not inform the public about this agenda item continues to erode our trust. R-NOW has asked on numerous occasions to be adequately informed of decisions related to the West Campus Upper Plateau. Please inform community members when important votes related to our project are happening so we can comment adequately.

Thank you!

Sincerely,

- I-70.1** This comment states that the commenter is ill from air pollution related to warehouses and trucks. The comment does not raise any specific issues or concerns about the adequacy of the environmental analysis within the Draft EIR and instead expresses general opposition to the Project.

INTENTIONALLY LEFT BLANK

From: matt silveous <mattsilveous1812@gmail.com>
Sent: Tuesday, February 21, 2023 10:18 AM
To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Matt Silveous

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Subject: Action Against Warehouses

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
John Viafora, Indigo Point, 92508

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
John Viafora, Indigo Point, 92508

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

John Viafora, Indigo Point, 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

John Viafora, Indigo Point, 92508

To: Dan Fairbanks
Subject: Jobs

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,IVVhynlCoc_sn7-DDce0ZRzhEhVz4eyJixBTU2AtMqZS6qP7JSY1TRGg1EkVObDuEirqmkRnFCK6IEeXmB7kFW8QIIslu8xbEbeZI2LlbMrVbU,&yp=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,U_swePp_c2KKHNxSFCjvclEk9CWb585aKFcMgNny44lb-

cD6DaXPjYoEHYGIr0r_C9XOguD3lv9wBQj5c8GYs1puKCLd2-0qc5JhREWu_Y,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

John Viafora, Indigo Point, 92508

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

From: Erin Conlisk <erin.conlisk@gmail.com>
Sent: Tuesday, February 21, 2023 8:34 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

- 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
- 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

- 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
- 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. Remaining coastal sage habitat is critically important to conserve as it has declined by over 90% since pre-colonial times. I also ask that you survey severely threatened plants like the tarplant during the wet season - this year might be a good candidate year, but please consult the MSHCP - in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Erin Conlisk, PhD
Ecologist

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

From: FRANK ERDODI <honiebun2k@aol.com>
Sent: Tuesday, February 21, 2023 6:55 AM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Frank and Michelle Erdodi

From: Melissa Suarez <melissaims@yahoo.com>
Sent: Tuesday, February 21, 2023 9:15 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Sent: Tuesday, February 21, 2023 9:20 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Melissa Suarez

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come.

Sincerely,

Melissa Suarez
Riverside, CA 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Melissa Suarez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Molly Brooke Becker

To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Molly Brooke Becker

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

David Doty 8805 Morninglight Cir. Riverside 92508 animal.adventure.army@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

David Doty 8805 Morninglight Cir. Riverside 92508 animal.adventure.army@gmail.com

The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,5EiutS9Ax7Roc->

hmfxwnJkgnL_hogWGG2uTXiLeWVZTBk5NMZYrjkwIUaveuakH5Bhr42ADOp4rW08KCYv8ugMfA0Jg4K_tSo1HxJcJS0SHF_Nx5&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

David Doty 8805 Morninglight Cir. Riverside 92508 animal.adventure.army@gmail.com

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Sent: Wednesday, February 22, 2023 6:38 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Subject: Upper Meridian Project ERI Comment

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,bMWFIF99jMzfSpW2ZT81qy1EDqohD8T8JOQO5PSLCIL5emSP06FBu-ig_TWClZ9TECp4cg80JFtl4UmZNft6dgrVPZKz42EVBdwxNPnAqHjtSkx-g4Kn4wYSA,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,jW5QdF72JpFKvN7h5qaJ269qa0qybQB9Fv36xiay9LPS6xKMkHkSR-hsSruBhguHUuv9gMVH63BBK0NobKpgtduEw_xnrm3_wiXM5OGMF0HVvzoZc3tq-A,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Kristine Doty

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Mark Calhoun

To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Mark Calhoun

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Mark Calhoun

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Mark Calhoun

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Mark Calhoun

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Beth West

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
DJ Weems

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,
DJ Weems

To: Dan Fairbanks
Subject: Opposition

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcdd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,X4dOayCMVlfvNej0Zaf_oz26sTx2OBzJ9XI474D0qP0_PWC7X962tCfZgBn_YCIMp1jqwCE3fSrlmISE7KyWnqsZqNL-4VLtjTYn0wrleGJAWXmiLIA,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,5IKvoDGJOmyzTVgPYrZJWrN8ruApFay9kYzOzC_NK-olg7GpLwCKoWSne6KuX-

F6FkPMi_3yN61tdvdskwr5GikCcNP7aul3cl776YYhpbGr0fu56Lcjrjrm-DA,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
DJ Weems

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

DJ Weems

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

DJ Weems

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

DJ Weems

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Best,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Nicolette Rohr
Riverside, CA. 92506

To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,hCr3kwIkdKpdmIdyf6A2gTTZC5SwpG1ZPKscdb38a_YFceUyInPdWzxPJ2uuCMTNIZZEgdbpDySR64rtXVQM2k9YowAlZA7bFTA-s1umOw,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,BKiGa9KotU5kl9mHPMdKvwfo8jq8IugnOQq6RKE4HDV2TslaYgyEquwU441VLEKWziGftzuPevJhvzMR2ftXp9QnF4UDOUt9sek-99yf3I_FfJfXvdg72g46&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed

people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Richard Stalder

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered

I-136.1

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

<Orangecrest Resident for 28 years. 20646 Gelman dr. This area was once an all American community. A piece of the American Dream. Now no longer a place to dream. We have paid our dues, if this project goes forward, that will kill off our last remaining open space. Please reconsider the project. Maybe a world class sports park, anything other than more concrete tombs. Sincerely Tom Parkinson.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Crystal McCreary

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

To: Dan Fairbanks

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional

warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on

the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics is misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents like myself.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. To: Dan Fairbanks
Subject: Comment on MJPA Draft EIR

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project.

I-148.1

The proposed project would add new warehouses in close proximity to homes and recreation areas - places where people work and play! Yet, the draft EIR does not properly analyze the project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives, which have been consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. However, there is not enough information on these jobs. Where did the number originate? What kinds of jobs will they be? How much will they pay? Will they be temporary jobs? As we have seen in this region, warehouse jobs are often touted as a positive, but they are seldom good jobs. Why trade our natural environment and community health for low-wage, unstable jobs which may soon disappear anyway? The Greenhouse Gas (GHG) section claims the development will have a net positive effect because local community members will have less of a commute driving to work. But who could afford rents in the surrounding neighborhoods with the temporary, part-time, low-paying work that most warehouses provide?

I-148.2

Warehouses are not new to our region and we have seen their environmental impact and their social impact as well. The claims about jobs need more detail and justifications.

Sincerely,

Nicolette Rohr
Riverside, 92506

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. This alone should give pause. Additionally, there is reason to believe it is an underestimate of the air quality impacts. The analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the construction phase of this project. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. I ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development.

I would also like to raise the issue of the responsibility to mitigate significant impacts on the surrounding community as possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered for this site?

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community.

Finally, I ask that the March JPA share a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. We need more information and accountability given the significant threat to our communities and the very air we breathe.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you again for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project. The draft EIR does not properly analyze the project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections.

I have serious concerns about the shrinking of our open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Given that the plant survey was conducted in a drought year, more information about the impact is needed. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine and share what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities, but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses. Appendix B and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of warehouse buildings will mar the land and views. How would warehouses not change the aesthetic? How does the developer justify the impacts as “less than significant”? And does the March JPA simply take the developer’s word for it? Surely the residents of the surrounding neighborhoods will notice the changes aesthetic?

The construction of mega-warehouses will also have effects on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. This draft EIR and plan to build more warehouses on the West Campus Upper Plateau does not do that. The March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no aesthetic beauty or value to the people who live, play, and pray on this land. Minimal low-paying jobs in exchange for destroying a public recreation area does not serve the community.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this guiding document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don’t allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Ana Ramirez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Ana Ramirez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Ana Ramirez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Ana Ramirez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sent: Saturday, February 25, 2023 7:53 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Ana Ramirez

INTENTIONALLY LEFT BLANK

From: aramjim09@gmail.com
Sent: Saturday, February 25, 2023 7:54 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,NEX8YY4zJJiDRH3JiZtUBClgVZRmm3WnB6pTOt4vrva7NptbgcH2fiI5K32BUMR4XWGwWH8aJa9jkDnbs5r3AuKE4hFmA0G_jMr1aNbx&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,qEd3PftIfGLg4ddepITPKYDzeyR2ta-5nRcJlCh_6SiN0Oo4spig3fNOnz4kYj2uCflQt6cSP6V-f4bccS7Q6ibvYiL0K1NNrFJieEHtefF2Z_ABZSxng,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Ana Ramirez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a church preschool and youth outdoor sports, the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Mary Viafora

**Re: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse
No. 2021110304**

Dear Mr. Fairbanks:

As a Riverside resident for the past 30 years, I am writing to submit comments on the draft Environmental Impact Report (EIR) for the proposed West Campus Upper Plateau. I am a former staff attorney for the state Court of Appeal and I have 20 years of experience conducting appellate review of CEQA cases. I have deep concerns regarding elements of the proposed project and its myriad environmental impacts, including air quality, greenhouse gas emissions, land use and planning, housing, and transportation, as well as the developer's questionable claims about job creation.

I-160.2

It is also my professional view that the EIR in its present draft form would be vulnerable to unfavorable review by the Superior Court and the Court of Appeal. The draft EIR does not properly analyze the Project's air quality, health risks, greenhouse gas emissions, land use, housing, and traffic. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

- Air quality impacts

It is undisputed that Riverside County has some of the worst air quality of any region of the United States. The Draft EIR acknowledges that there will be "significant and unavoidable" impacts to an area of the City and County that already bears an undue burden of pollution. Within five kilometers of the proposed building site, there are already 45 million square feet of warehouses, generating over 30,000 truck trips, and spewing over 40 pounds of Diesel Particulate Matter into the air daily. This does not include the other proposed warehouses in the immediate vicinity, including the one at the Sycamore Canyon site, that have already been approved. Given that Diesel PM accounts for 70% of cancers attributable to toxic air contaminants, local residents are legitimately worried about the threatened health effects for themselves, their families, and their community.

I-160.3

I-160.4

I-160.5

- Land Use and Planning, Population and Housing

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses. The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is community feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for "Industrial/Warehousing" uses and it explicitly shows "Industrial/warehousing" land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated: "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located

I-160.6

therein....b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space....d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.”

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to “upzone” the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Finally, with regard to the housing element, the Draft EIR acknowledges the City of Riverside is mandated by state law to provide adequate housing but fails to recognize the City is failing to meet its state-mandated goals for any of four categories of housing ranging from very-low income to above-moderate income, with very-low income housing being wholly inadequate. The City’s overall compliance has been rated as “D” on a scale of “A-F”. Similarly, the cities of Perris and Moreno Valley and the unincorporated areas of Riverside County have been rated “D+”. Nevertheless, the Draft EIR rather blithely suggests that no new housing will be needed because the employees can be housed in the surrounding communities even though there is little such current availability. The EIR should be corrected to reflect honestly the actual challenges presented by increasing the number of employees in an area that already lacks sufficient housing for its citizens.

- Transportation

In its present form, the Draft EIR is deficient in its traffic analysis. The analysis does not account for the 215/60 freeway corridor, which is within one mile of the site and would necessarily be the route the trucks would use. As those who regularly travel that route can attest, the 215/60 is already overburdened with truck traffic. When traveling northbound on the 215 and approaching Van Buren, drivers almost invariably encounter a bottleneck of

I-160.6
Cont.

I-160.7

I-160.8

truck traffic. There are also no viable or legal alternative routes on adjacent arterial streets. The City of Riverside is already struggling to cope with truck traffic illegally using its arterial streets. Not only does it interfere with daily commuting but the additional heavy truck traffic creates safety hazards and additional wear and tear on City roads and residents' vehicles. Furthermore, the overtaxed City and County police and sheriff are tasked with ticketing and enforcing the approved routes, burdening local jurisdictions with the cost of both enforcement and maintenance.

I-160.8
Cont.

The Final EIR should include consultation with CalTrans as part of its traffic analysis of the 215/60 corridor to reflect the reality of the impact of the project on the local area. The Final EIR should also include a plan for enforcement and maintenance that does not shift the burden to local jurisdictions and includes mitigation measures requiring the tenants to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police forces.

I-160.9

I-160.10

- Job creation claims

The claims about job creation are dubious. According to local news reports, most logistics jobs—truck drivers and warehouse workers—will be replaced by automation in the next 25 years. And the lost jobs will not have been particularly lucrative for the employees. According to the Southern California Association of Governments Economic Report (SCAG) for December 2022: "In 2001, GDP per capita in Riverside County and San Bernardino County were 64 percent and 69 percent of U.S. per capita GDP, respectively. When compared to the rest of California, the ratios are worse: 52 percent and 56 percent... Moreover, by 2022, **Riverside County's position had deteriorated to a per capita GDP of only 59 percent of the U.S. level and 40 percent of California.... These numbers are alarming, especially given the success of the Logistics Industry.** ...It also explains why the **Inland Empire's per capita GDP has sunk to a rank of 340 out of 386 MSAs**, despite being the twelfth largest by population count." (Emphasis added.) Job growth in the Inland Empire since 2001 has resulted in numerous jobs but they tend to be relatively lower paying compared to other parts of the state and nation.

I-160.11

In other words, in spite of the low unemployment rate, the economic outlook is worse than it was before the explosion of the logistics industry. The same SCAG report discusses how the logistics industry "will likely go through a transformation as advances in automation and artificial intelligence displace workers." It warns: "There will be further costs from the expansion of the Logistics Sector if the result of the expansion means that **there will be less industrial space available in the future for industries which are able to add more value to the economy per square foot.**" (emphasis added)

I-160.12

Furthermore, the vast majority of companies purchasing warehouses are not local but are mostly from Orange County or outside California. 80% of the warehouses in Riverside County are owned by businesses with mailing addresses outside the region. For instance, more warehouse square footage in the Inland Empire is owned by businesses in Dallas, TX and Denver, CO than Riverside. So, we pay the costs of goods moving through Riverside

I-160.13

County in terms of air quality and traffic but the wealth from this industry is not benefitting our local economy.

↑ I-160.13
I Cont.

In conclusion, the Draft EIR is legally insufficient for multiple reasons. The proposed development does not serve the goals of health, well-being, and long-term economic growth for this community. Considering the significant impacts that cannot reasonably be mitigated and the minimal economic benefit created by the proposed development, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. Please encourage the developer to consider non-industrial, alternative uses of the land for the sake of all Riverside city and county residents, as well those living adjacent to the site.

I-160.14
I-160.15

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

I-160.16

Sincerely,

Vicki L. Broach, Esq.

Letter I-160

Vicki Broach
February 25, 2023

- I-160.1** This comment refers to attached comments on the Draft EIR and does not raise any specific issues, questions or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-160.2** This comment generally challenges the environmental analysis in the Draft EIR but does not raise specific issues or concerns regarding land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing. This comment requests evaluation of a non-industrial alternative. See Topical Response 8 - Alternatives, for the evaluation of Alternative 5 – Non-Industrial Alternative.
- I-160.3** This comment discusses the Project’s significant and unavoidable air quality impacts and air emissions associated with diesel particulate matter (DPM) and notes the region’s poor air quality. The analysis included in Recirculated Section 4.2, Air Quality, as well as included within Appendix C-1, Revised Air Quality Impact Analysis, and Appendix C-2, Revised Health Risk Assessment Technical Report, discusses Project impacts related to air quality and health risks from DPM. Recirculated Section 4.2, Air Quality, also incorporates additional air quality mitigation measures. The existing warehouses mentioned in the comment are included in the baseline as appropriate for the impact areas analyzed in the Draft EIR.
- I-160.4** This comment identifies the Sycamore Canyon site and other proposed warehouses in the immediate vicinity of the Project site. Table 4-2 of the EIR lists the cumulative projects included in the environmental analysis. The Sycamore Hills Distribution Center, north of the Project site and adjacent to Sycamore Canyon, is included.
- I-160.5** This comment raises concerns about the health effects related to DPM. Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks.

I-160.6 This comment is Form Letter E – Project Consistency. As such, in response to this comment, please see Form Letter E Response.

I-160.7 This comment states that the Draft EIR should be corrected to reflect that the City of Riverside is failing to meet its state mandated housing goals and that there is a lack of sufficient housing. Section 4.12, Population and Housing, of the Draft EIR analyzed whether the Project would induce substantial unplanned population growth either directly or indirectly. Based on the County unemployment rate, the EIR assumed the employee will be filled by existing residents and provides substantial evidence for this assumption because the anticipated number of jobs would be a nominal addition to the existing and projected labor force. The Project is consistent with growth projections. See also, Topical Response 5 - Jobs, for additional discussion regarding unemployment rates.

Since 1969, the State of California has required all local governments to adequately plan to meet the housing needs of everyone in the community. California’s local governments meet this requirement by adopting housing plans as part of their General Plan.

The California Department of Housing and Community Development (HCD) is required to prepare a Regional Housing Needs Assessment (RHNA) for each Council of Governments in the State that identifies projected housing units needed for all economic segments based on Department of Finance population estimates. The Southern California Association of Governments (SCAG) is the Council of Governments for Riverside County (as well as Ventura, Los Angeles, Orange, San Bernardino, and Imperial Counties) and allocates to the six counties and 191 cities their fair share of the total RHNA housing needed for each income category. Each local government must demonstrate that it has planned to accommodate all of its regional housing need allocation in its Housing Element.

State law requires that jurisdictions demonstrate in the Housing Element that the land inventory is adequate to accommodate that jurisdiction’s share of the regional growth. Failure to do so has consequences for jurisdictions that are deemed non-compliant. HCD is authorized to review any action or failure to act by a local government that it determines is inconsistent with an adopted housing element or housing element law. This includes failure to implement program actions included in the housing element. HCD may revoke housing element compliance if the local government’s actions do not comply with state law. Examples of penalties and consequences of housing element noncompliance:

- **General Plan Inadequacy:** The housing element is a mandatory element of the General Plan. When a jurisdiction’s housing element is found to be out of compliance, its General Plan could

be found inadequate, and therefore invalid. Local governments with an invalid General Plan can no longer make permitting decisions.

- Legal Suits and Attorney Fees Local governments with noncompliant housing elements are vulnerable to litigation from housing rights’ organization, developers, and HCD. If a jurisdiction faces a court action stemming from its lack of compliance and either loses or settles the case, it often must pay substantial attorney fees to the plaintiff’s attorneys in addition to the fees paid by its own attorneys. Potential consequences of lawsuits include: mandatory compliance within 120 days, suspension of local control on building matters, and court approval of housing developments.
- Loss of Permitting Authority: Courts have authority to take local government residential and nonresidential permit authority to bring the jurisdiction’s General Plan and housing element into substantial compliance with State law. The court may suspend the locality’s authority to issue building permits or grant zoning changes, variances, or subdivision map approvals – giving local governments a strong incentive to bring its housing element into compliance.
- Financial Penalties: Court-issued judgment directing the jurisdictions to bring its housing element in substantial compliance with state housing element law. If a jurisdiction’s housing element continues to be found out of compliance, courts can multiply financial penalties by a factor of six.
- Court Receivership: Courts may appoint an agent with all powers necessary to remedy identified housing element deficiencies and bring the jurisdiction’s housing element into substantial compliance with housing element law.

As such, it is in the City of Riverside’s best interest to have an HCD-compliant and approved Housing Element as expeditiously as possible. Neither March JPA nor the Project applicant have the power or authority to force the City of Riverside to come into compliance with state laws. Additionally, the City of Riverside would not be the only source of housing as the cities of Moreno Valley and Perris and the unincorporated Riverside County are in the vicinity of the Project.

I-160.8 This comment raises the same issues included within Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

I-160.9 This comment states that the Final EIR should include consultation with Caltrans as part of the traffic analysis of the 215/60 corridor. In response to this comment, please see Form Letter G Response.

I-160.10 This comment states that the Final EIR should include a plan for enforcement and maintenance that does not shift the burden to local jurisdictions and includes mitigation measures requiring the tenants to pay an infrastructure fee to local jurisdictions for the cost to our roads and to our police forces. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although

Project Design Features are already part of the Project, they will also be included as separate conditions of approval. And included in the MMRP March JPA shall monitor compliance through the MMRP.

- I-160.11** This comment discusses general job trends in the Inland Empire and does not raise any specific issues, questions or concerns about the Project or the environmental analysis in the Draft EIR. Regarding automation, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. However, to further understand the job estimates for the Project, please see Topical Response 5 – Jobs.
- I-160.12** This comment discusses the future automation of the logistics industry and the impact that would have on the economy. Regarding automation, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR. The comment does not raise any specific issues, questions or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-160.13** This comment discusses warehouse ownership. The comment does not raise any specific issues, questions or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-160.14** This comment conveys general opposition to the Project. The comment does not raise any specific issues, questions or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-160.15** This comment asks March JPA to urge the developer to consider non-industrial alternative uses of the land. In response to this comment, please see Topical Response 8 – Alternatives, for the analysis and evaluation of Alternative 5, Non-Industrial Alternative.
- I-160.16** This comment is a conclusion to the letter and does not raise any specific issues, questions or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the **traffic analysis does not include the 215 Freeway or the 215/60 corridor**, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like **Alessandro, Krameria, and Van Buren**. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing

I-161.1

warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-161.1
Cont.

There is already nearby construction of warehouses, such as the ones on Coyote, Van Buren, and Meridian. This current traffic, combined with more traffic from this project will push the capacity of these streets to their limit.

I-161.2

When looking at this project, you must take into account possible truck accidents. For example, if there is an accident on Van Buren, then people have to take the little residential streets to get past it. Also, more trucks on Van Buren and Meridian will **disturb funeral processions**, which mainly take these routes to get to the cemetery. Will family members have to traverse through truck traffic in order to lay their loved ones to rest?

I-161.3
I-161.4

The Orangecrest and Mission Grove streets are only suited for the people who live here. It is **not** possible for these streets to expand in order to accommodate increased industrial traffic. The recent additions of warehouses and their trucks are already creating havoc on these streets, **especially** in the morning and afternoon when parents are dropping off and picking up their kids at the schools (there are **several** spread out in the community), and people are coming to and from work! Therefore, this new project is not in the best interest of the community.

I-161.5

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Araceli Anaya,
92508,
X Araceli Anaya <chely.ana69@gmail.com>

Letter I-161

Araceli Anaya
February 26, 2023

- I-161.1** This comment is the same as Form Letter G – Traffic. As such, in response to this comment, please see Form Letter Response G.
- I-161.2** This comment expresses concern regarding existing traffic combined with anticipated Project traffic. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- I-161.3** This comment requests that the Draft EIR analyze traffic impacts from truck accidents. Traffic congestion, including congestion due to accidents, is not an impact under CEQA. The Draft EIR analyzed Project transportation hazards impacts under Threshold TRA-3 in Section 4.15, Transportation, and determined with the implementation of PDF-TRA-1 (Roadway Improvements for Site Access), MM-TRA-1 (Construction Traffic Management Plan), and MM-TRA-2 (Traffic Safety Plan for Barton Street), Project impacts would be less than significant. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.
- I-161.4** This comment raises concerns regarding disturbance of funeral processions by Project truck traffic. This comment does not raise any specific environmental issue or concerns about the environmental analysis in the Draft EIR. Primary access to the Project site would be via Cactus Avenue. The Cactus Avenue ramps onto southbound I-215 and northbound I-215 are approximately ¼ miles and ½ miles, respectively, directly past Meridian Parkway. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes, which includes Meridian Parkway and Van Buren Boulevard. Exhibit 4-1 of the Project Traffic Analysis (Appendix N-2) shows approximately 10% of the Project's trucks utilizing Meridian Parkway to access the Van Buren Boulevard I-215 ramps.
- I-161.5** This comment discusses existing truck traffic on Orangecrest and Mission Grove streets. The Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck route enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the

MMRP. March JPA will monitor compliance through the MMRP. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

Subject: West Campus Upper Plateau, EIR, State Clearinghouse No. 2021110304 - Comments on Aesthetic/Visual Impacts
Attachments: Upper Plateau in Winter.jpg

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would construct over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses will be located within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-162.1

The Draft EIR does not properly analyze the Project’s aesthetic/visual impacts. The viewpoints in *Section 4.1 Aesthetics* do not adequately show the beauty of the existing land during the winter and springtime. The existing viewpoints in the EIR were photographed during the driest time of the year, and are not representative of the area. Please provide additional renderings using photos taken in the winter and springtime, when the land is completely green (with wildflowers), and with snow on the mountains, similar to the attached picture. The EIR is also missing viewpoints from the west side of the plateau looking east. Please provide these as well (including winter/springtime), for the residents residing on La Crosse Way and Lomond Drive. Please provide viewpoints located near the warehouses to show the community that the mountains will be completely obscured when the viewer is near the warehouses.

I-162.2
I-162.3

Also, the viewpoints show mature trees next to the proposed warehouses. Please show the trees in their correct sizes when newly planted, at five years, and at maturity for all viewpoints (including winter/springtime).

I-162.4

Even after mitigation, these impacts **will still be significant**, not less than significant as stated in the EIR. The loss of these pristine viewpoints alone is reason enough to cancel this project.

I-162.5

Please let me know that you have received this email.

Sincerely,

George Harvilla
 8736 Desert Rock Lane
 Riverside, CA 92508

I-162.6

Letter I-162

George Harvilla
February 26, 2023

- I-162.1** This comment references the Project vicinity and the Specific Plan buildout scenario analyzed in the Draft EIR, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 SF of warehouse use, 528,951 SF of office use, and 160,921 SF of retail use. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR. No further response is required.
- I-162.2** This comment asserts the viewpoint figures used in the Draft EIR (Figures 4.1-3 through 4.1-7) are not representative of the existing condition and requests additional visual simulations to show the Project site's existing conditions during the winter and springtime. However, regardless of the season, the Draft EIR analyzes the Project's potential impacts to scenic resources in relation to height and massing, for example, and the Project's potential to conceal and/or obstruct specified views. The Project's effects on viewpoints during other seasons would not change the Draft EIR's impact determination on scenic vistas or visual character. CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. CEQA Guidelines §15204(a). The evaluation within the Draft EIR provides a good faith effort in disclosing the potential impacts on scenic vistas and visual character. When responding to comments, lead agencies need only respond to significant environmental issues and are not required to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR. *Id.*
- I-162.3** This comment requests the Draft EIR provide viewpoints from the west side of the Project site looking east and viewpoints within the Project site. Public views of the Project site from the west side are obscured by existing residences, including along La Crosse Way and Lomond Drive. As such, visual simulations from such public vantage points would not show the Project. Viewpoints within the Project site would not demonstrate the Project's aesthetic impacts on the surrounding area. As discussed in Response I-162.2, above, CEQA does not require the provision of all requested information, as long as a good faith effort at full disclosure is made.
- I-162.4** This comment requests viewpoints to show trees at a full range of maturity next to the proposed warehouses, as well as during winter and springtime. The Project's effects on viewpoints during other seasons and during the growth of Project landscaping would not change the Draft EIR's impact determination on scenic vistas or visual character. As discussed in Response I-162.2, above, CEQA does not require the provision of all requested information, as long as a good faith effort at full disclosure is made.
- I-162.5** This comment generally asserts impacts related to aesthetics would be significant and unavoidable even after mitigation is incorporated. In response to this comment, please see Topical Response 1 – Aesthetics.
- I-162.6** This comment presents a photograph of the site from an unidentified vantage point. The comment does not raise concerns regarding the adequacy of the environmental analysis in the Draft EIR.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-165.2

Traffic

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the

area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Air quality

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission

I-165.2
Cont.

I-165.3

equivalents)

2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

 Scan02262023125941.pdf

Dear Mr. Fairbanks:
 I'm a resident of the Mission Grove neighborhood and great concerns about the above proposed development and as it relates to my health and well-being and that of my family and community. Our family has invested our future in this area, and this development was ever a part of that future. I feel this is a misguided project and should have never been given the opportunity to advance. The plateau property is far more valuable than locations for warehouses. This has caused anxieties for all in the community based on the information and group meetings I've been a part of. It's my hope this project reaches its end, and your agency can sit down with the community and discuss a more practical development for this site.

Below is a list of the letters I'm attaching in a combined and single file, as my DEIR Letters of Concern for the above project:

- Geology and Soils, Wind, Blasting & Radon
- Geology and Soils, Blasting & Gas Utility
- Geology and Soils, Landslides & Terraced Lots
- Geology and Soils, Earthwork
- Geology and Soils, Grading Cross Sections

- Hydrology, Camino Del Sol Drainage Sumps
- Hydrology, Ground and Surface Water
- Hydrology, Recharge
- Hydrology, Water Quality

- Utility and Services, Flood Control
- Utility and Services, Landfill
- Utility and Services, Trenchless Technology

Noise, Park

Thank you in advance for reviewing my letters, and I look forward to meeting you in the future.

Ronald J. Peters, P.E.

I-166.1

Riverside, CA 92518

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., Riverside, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding the use of trenchless technology, and how it's being applied to a threshold of less than significance classification.

My specific concerns are as follows:

- Section 4.17.3, Thresholds of Significance (page 788), and Section 4.17.4, Impact Analysis, UTL-1 (page 789), Infrastructure Improvements, Parks- as it relates to sewer improvements, the DEIR states, "Installation of new wastewater lines would consist of either trenching to depth of pipe placement or using a variety of different trenchless technology (page 792). Pipe sizes per DEIR exhibits range between 8 to 15-inches (Figure 3-7A, Page 147). With underlying granite rock, is it not likely trenchless technology would apply at this project site? Is it appropriate to use this technology to classify the threshold as less than significant?"

I-166.2

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely, 

Ronald J. Peters, P.E.

14205 Meridian Parkway, Suite 140
Riverside, CA 92518

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding the area landfills supporting the project. Based on information provided in the DEIR (page 780) two of the three area landfills will cease to operate in or around 2029. The landfills are 15 to 27 miles for the project area. Assembly Bills 939 & 341 (page 782) were sighted in the DEIR to have been in place since 1989 and 2011, related to waste management. Even with these bills in place the DEIR indicates two landfills will close. With one or two landfill remaining in operation, how can the project justify the less than significant impact? The remaining landfills obviously will have a reduction in operation abilities resulting in extended wait times and increase truck traffic. How can the project justify a less than significant impact (Section 4.17.5, page 804)?

Section 4.17.1, (page 780), describes the existing conditions related to solid waste conditions. Section 4.17.4, Threshold UTL-4 (page 801) discusses the capacity of local infrastructure. Section 4.17.6, (page 804), provides the less than significant impact after mitigation.

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely, 
Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., Riverside, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding drainage as described in the DEIR and related hydrology reports. The documents indicate project drainage will surface flow across the Camino Del Sol neighborhood from four project tributary locations to existing drainage systems at the north end of the community (Appendix K-1, Preliminary Hydrology Study, Section III, Table, Watershed, 3, 4, 5, 6, 7, 7a, 18a, 18b, and 18c). The hydrology reports for Building B & C detention basins data indicates various storm events will continue to flow over an extended period of 4 days (Appendix 5 & 6, Hydro Building B & C, Hydrograph Report, Time period indicated, last page of each report). The Preliminary Hydrology Report K-1 indicated slow release over two 2 days. Four days seems excessive since the existing condition lacks detention basins. In addition, flow at the four outlets shown in Section IV table (page 12 & 13) of the Preliminary Hydrology Report K-1 with velocities of 16 to 36 feet/second. This surface flow passes between homes and down streets that have excessive slopes. There are two sump conditions on Avenida Hacienda where it appears overflow will pass between homes without any type of drainage facility.

The drainage exhibits also indicate the project will manage flow by out letting drainage 300-feet from the Camino Del Sol neighborhood with no information shown to reduce the velocity. Has any analysis been completed on the proximity of the outlets, extend duration, high velocities, and erosion the community will experience? Can the existing drainage system in Camino Del Sol neighborhood manage these project flows without providing improvements to the neighborhood? Will a storm drain system be needed for the Camino Del Sol neighborhood to pass flow from south to north? Has the City and County of Riverside been contacted to help provide drainage guidance, since drainage

I-166.4

system may become owned by one of these governing bodies and also impact downstream facilities (Preliminary Hydrology Report K-1, page 6)?

I-166.4
Cont.

My specific concerns related the DEIR sections listed below:

- Section 1.9, Table 1-2, 4.8, Hydrology and Water Quality, HYD-3 (page 81). Would the Project substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would: underlying topics as provided in DEIR.
- Section 4.17.2, Goal 17 (page 787). Adequate flood control facilities shall be provided prior to, or concurrent with, development in order to protect the lives and property within the March JPA Planning Area.
- Section 4.17.2, Policy 17.3 (page 787): Require new development to construct new or upgrade existing drainage facilities to accommodate the additional storm runoff caused by the development.
- Section 4.17.3, Thresholds of Significance, UTL-1 (page 788). Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?

I-166.5

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

I-166.6

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse and park projects throughout my career.

I have serious concerns regarding the proposed project's significant impact related to noise. It's one thing to have noise through construction, and another after the project is completed. The DEIR indicates significant impact on noise through temporary and permanent. The noise level from the park is indicated to be 55 dba, which is a level of normal conversation. I believe that's an incorrect estimate if the park is allowed to have organized games. I live at 7762 Northrop Drive and I can clearly hear screaming parents from soccer games being played at the Grove Community Church on a Saturday and Sunday, which is 3500-feet away. I'm sure everyone knows kids' soccer games are nothing but parents screaming at their kids. Please reassess this noise level at the park or provide justification for using such a low noise level. I would also recommend the park be moved to the eastside of the development if an active park will be allowed. If not, provide justification if park is to remain as currently located. Please see below sections related to the DEIR policies.

My specific concerns are as follows:

- Section 4.11.2, Goal 1, Policy 1.2, (page 591) Noise sensitive uses (such as schools, libraries, hospitals, medical facilities, residential uses, etc.) shall be discouraged in areas where noise levels exceed acceptable limits.
- Section 4.11.2, Goal 2, Policy 2.2 (page 592), Noise generating facilities shall be located in areas with compatible noise generating land uses (i.e., airport noise contour areas) to minimize land use incompatibilities, noise abatement and mitigation measures needed.
- Section 4.11.4, Thresholds Significance, NOI-1 (Page 598), Result in generation of a substantial temporary or permanent increase in ambient noise levels in the

I-166.7

vicinity of the project in excess of standards established in the local general plan or noises ordinance, or applicable standards of other agencies.

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., Riverside, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my career.

My specific concern is related to a section of the DEIR listed below:

4.9.4 Impacts Analysis Threshold HYD-1 (page 504). Would the Project violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or groundwater quality? Specific Plan Area, Campus Development, Construction.

Several statements in the report indicate that these policy's will not be maintained. Section 4.9.4, as construction erosion will result due to phasing over a period of 4.5 years. Several lots will remain rough graded, but not be developed. Open detention basins will be constructed in the interim to address hydrology and water quality. This report indicates bioretention will be limited, and overflow/by-pass will also occur. The report also has concern over wind and water erosion, where pollutants can attach themselves to soil particles and be transported to downstream drainage areas. If a complete seasonal investigation of the site would be completed, the report would be an agreement that during the beginning of the winter soft plant vegetation is non-existent. This is perhaps due to animal habitat overgrazing. What investigation has been completed to investigate this described lack of vegetation, and what measures can be provided to mitigate this perhaps natural condition?

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

I-166.8

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

My specific concern is related to a section of the DEIR listed below:

Land Use Element, Goal 13: Policy 13.2 (page 502): Enhance local groundwater supplies through development designs which promote an on-site recharge and minimize permeable ground coverage with landscaped areas, open space or recreation areas.

The development of 304 acres of limited number of large industrial flat lots over an elevated hilltop area which does not allow for infiltration (Groundwater paragraph, page 494) is clearly not consistent with this above policy. Why wasn't a development proposed that would be in compliant with this policy and what justification would preclude overriding this policy?

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my career.

My specific concerns are related to two sections of the DEIR as listed below:

Per Section 4.9.4, Relevant Plans, Policies, and Ordinances , JPA Water Resources, Goal 1, Policy 1.2 (page 501), Protect groundwater and surface water resources from depletion and sources of pollution.

Goal 2, Policy 2.5 (PAGE 502), To the greatest extent possible, require development to use master flood control facilities and limit use of interim drainage facilities or open channels.

Several statements in the report indicate that these two policies' will not be followed. Section 4.4.9. as it relates to construction erosion will result due to phasing over a period of 4.5 years. Two lots will be built on in the first few years, but several lots will remain rough graded and not be developed until owners are located. Open detention basins will be constructed in the interim to address hydrology and water quality. It's then understandable certain quantity of erosion and infiltration will occur. Erosion will pass downstream and infiltration will pass to underlying soil and migrate into the aquifer. These undeveloped sites will have pollutants that will not be fully addressed until build out.

With open detention basin this condition will not comply with migratory fowl and aircraft avoidance. What consideration was been given to interim open basin condition as it relates to migratory fowl and aircraft avoidance (Federal Aviation Administration Circular 150/5200-33B, page 497)?

What consideration has the project considered for contaminates into the groundwater based on this temporary open basin condition?

I-166.10

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my career.

My specific concern is related to a section of the DEIR listed below:

JPA Water Resources, Goal 2, Policy 2.1 (page 502): Require development within identified flood hazard areas to comply with Floodplain Management Regulations and criteria for the Federal Flood Insurance Program.

The Del Camino neighborhood in the DEIR will have the project surface flow into this community where existing underground storm drain systems can be found at the northerly end of the existing development. There are several existing street sump conditions that will be impacted by these flows. Has the project completed any investigation on the impact to these street sumps, and the surrounding residential homes (Section 4.9.3, HYD-3, part (c), page 503)?

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my career.

I have serious concerns regarding the development's use of retaining walls and grading design. There's no information provided on exterior perimeter of the surrounding development, as to how usable development grades will match into the existing grades in the conservation and park areas. Are retaining walls and large slopes going to be used? The community has been here for years, and has concerns about the visual appearance they will see from their homes. Please provide cross section of the grading design to show slopes and retaining walls at the perimeter of the development.

My additional concerns specifically related to the DEIR are as follows:

- Section 4.6.2., Goal/Policy 3.2 (page 393), Encourages contour grading. How is Goal 3.2 achieved with the limited grading design provided (Plot Plan B & C) and overall lack of site grading information? The use of retaining walls would not be an agreement with this goal, since there is no contour grading with retaining walls.
- Section 4.6.2, Goal 2 (page 394), Under hillside management. Minimize grading and otherwise changing the natural topography. The concern here is limited information from the Plot Plan B & C and overall development provide no grading design of the outside the perimeter of the development. The information does indicate cuts of negative 30-feet and fills of positive 26-feet. There is no cross-sectional information to show relationships with existing topography to show how goal 2 is achieved.

I-166.12

How does a development like large warehouse, that require planer topography work well with a site that's a hilltop and underlined with granite rock. It's hard to believe a development such as this would be undertaken. Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial wareshouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding the amount of dirt/rock that will be moved at the completed site, and to and from the site. The DEIR references dirt and rock quantities from the Project Applicant (Section 4.2.5, page 229), but does not provide any grading exhibits to show an overall concept and dirt quantity estimate from the overall design grading. This is an enormous grading and rock excavation project, so this report needs to provide the complete information to determine what environment impact that will have to the community and provide a level agreement. How many truckloads of dirt will be brought to the site, or removed? Will the sight really balance?

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns about my terraced lot, which is downhill from the development on Northrop Dr. I understand the bio-basins (Section 4.9.4, Threshold HYD-3 (page 516, Specific Plan/Campus Development (last paragraph of page 521 discusses detention basins)), both temporary and permanent, will be open bottom basins. Has any investigation been included that will ensure water infiltrating into the soil from these basins will not flow underground and weaken the soil integrity of the sloped terraces, and cause them to fail? I didn't see any discussion on this in the Leighton Geology Report and the DEIR document.

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding blasting as stated in the DEIR (PDF-NOI-2 & 3, page 29, and Table 1-2, 4.5 Geology and Soils, page 71 & 72, and numerous other locations in the DEIR) and the Seismic Refraction Study (Section 6, Results and Conclusions, page 3) to Leighton Consulting. DEIR Exhibit (3.7H, page 161) indicates a Southern California Gas utility crossing the development (Arc Light Drive alignment) from east to west (field markings in Mission Grove community indicate 30-inch gas). What coordination has been completed with Southern California Gas to include blasting within the project area relative to their utility? And what regulatory requirement would allow such an activity within proximity, and within the surrounding communities? Does the surrounding Cities of Moreno Valley and Riverside, and the County of Riverside provide any direction?

Even using jack hammering near the pipeline should require some level of concern, since there's a history of gas transmission mains exploding throughout the United States, i.e., San Bruno, 2010. The gas main crosses through the Mission Grove neighborhood where thousands of people live.

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

Re: West Campus Upper Plateau, Environmental Impact Report

Dear Mr. Fairbanks:

On behalf of R-Now.com and a concerned resident of 7762 Northrop Dr., *Riverside*, I am writing to submit comments on the draft Environmental Impact Report for the proposed West Campus Upper Plateau. R-Now was formed to fight warehouse development impacting our residential community, and over development of warehouses in the southern California area. I'm a registered civil engineer with over 37 years of experience and have worked on design of warehouse projects throughout my carrier.

I have serious concerns regarding blasting as stated in the DEIR (PDF-NOI-2 & 3, page 29, Table 1-2, 4.5 Geology and Soils, page 71 & 72, and numerous other locations in the DEIR), and the Seismic Refraction Study (Section 6, Results and Conclusions, page 3) to Leighton Consulting, related to airborne dust, debris, gases and general hazardous nature of blasting. Has there been any investigation into exploding granite rock, which is known to contain radon gas and other potential hazardous materials to the surrounding community? Have any wind studies been completed over any seasonal periods to see how air borne matter/gases and construction is general should address wind speeds and direction on the surrounding community? Should mitigation measures curtail blasting activities during AQMD recognized unhealthy periods? Should mitigation eliminate blasting as a result of the surrounding residential neighborhoods? Should mitigation require cleaning of surrounding communities windows, solar panels, air filter replacements, etc.,?

Section 4.6.4 Impact Analysis, Threshold GEO-2 (page 399 & 400), blasting is discussed in several paragraphs as potentially significant impacts related to Campus Development, Parks, and Infrastructure Improvements.

Considering the magnitude and wide scope of impacts and the minimal public benefit that would be afforded by the proposed warehouses, I urge the March Joint Powers Authority to reject the proposal for the West Campus Upper Plateau. It is clear that any industrial warehouses developed at the West Campus Upper Plateau would cause irrevocable harm to this community and to the concerned public.

Thank you for the opportunity to provide comments on this project. Please feel free to contact me with any questions.

Sincerely,

Ronald J. Peters, P.E.

I-166.16

Letter I-166

Ronald Peters
February 26, 2023

- I-166.1** This comment is introductory in nature and does not raise any specific comments or concerns about the environmental analysis in the Draft EIR. As such, no further response is required. Specific comments regarding the Draft EIR are provided and responded to below.
- I-166.2** This comment expresses concerns about the use of trenchless technology. As explained in Section 4.17, Utilities and Service Systems, of the Draft EIR and as noted in the comment, installation of new utility lines would consist of either trenching to the depth of pipe placement or using a variety of different trenchless technology. Use of trenchless technology on sites with underlying granite rock would not be appropriate. There may be some situations where trenchless pipe installation would be beneficial on a limited basis, such as, but not limited to, avoiding existing buried facilities, tying into existing buried facilities, and to avoid disturbing previously undisturbed areas. The use of trenchless pipe installation in these discrete situations is determined by the Project engineer and is based on site conditions and specific situations that warrant the use of this technology. To clarify, the use of trenchless technology is not the determining factor for the threshold of significance or the determination that impacts associated with the installation of utility infrastructure would be less than significant. As explained in the Draft EIR, Threshold UTL-1 is whether the Project would require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. The Draft EIR explains that trenchless technology causes substantially less ground disturbance and that trenching results in a temporary stockpiling of soil along the length of the trench, pending backfilling, which could result in potential short-term soil erosion. However, as the Draft EIR explains, construction would occur in accordance with the requirements of the Construction General Permit and the March JPA WQMP Guidance Document, which require development of a Storm Water Pollution Prevention Plan (SWPPP), and, as a result, impacts would be less than significant.
- I-166.3** This comment expresses concerns about adequate landfill capacity in the future. As discussed in Section 4.17, Utilities and Service Systems, of the Draft EIR, three landfills would serve the Project site: El Sobrante Landfill, which is permitted through January 2051; Lamb Canyon Sanitary Landfill, which is currently permitted through April 2032 per the Solid Waste Information System;¹ and Badlands Sanitary Landfill, which according to the Solid Waste Information System, is permitted through January 2059. As such, of the three landfills, only one has the potential to close within the next decade. As discussed in Section 4.17, Utilities and Service Systems, of the Draft EIR, during construction, 65% of construction and demolition waste must be diverted from landfills. The remaining 35% of construction and demolition material could be accommodated at any of the three permitted landfills, and adequate capacity exists to accept waste at each of these landfills. As explained in the Draft EIR, during operations, AB 1826 (Chapter 727, Statutes of 2014) requires businesses to recycle their organic waste and requires local jurisdictions across the state to implement an organic waste recycling program to divert organic waste generated by businesses. This law phases in the mandatory recycling of commercial organics over time. In particular, the minimum threshold of organic waste generation by businesses decreases over

¹ <https://www2.calrecycle.ca.gov/SolidWaste/SiteActivity/Details/2246?siteID=2368>

time, which means an increasingly greater proportion of the commercial sector will be required to recycle organic waste. Further, as explained in the Draft EIR, the incremental increase in solid waste produced during operation of the Campus Development can be accommodated within existing landfills. Through compliance with regulations to limit the amount of solid waste generated by the Project, and with at least two landfills permitted into 2050, adequate landfill capacity exists to accommodate the Project. The impact determination of less than significant is appropriate and supported by substantial evidence.

I-166.4 This comment expresses concerns regarding the drainage as described in the Draft EIR and accompanying hydrology reports and raises specific concerns about surface flow across the Camino Del Sol neighborhood to existing drainage systems. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), described in the Preliminary Hydrology Study included as Appendix K-1 to the Draft EIR and referenced in the comment, under existing conditions, stormwater drainage includes surface flows toward residential development to the north of the Project site that outlet into Sycamore Canyon Wilderness Park. The Camino Del Sol neighborhood is located north of the Project site. As explained in the Preliminary Hydrology Study, the proposed condition was designed to balance the watersheds as close to existing as possible. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), it is standard in the County of Riverside and within March JPA is to detain stormwater runoff so that the proposed development does not increase the peak discharge rate from the undeveloped condition for the design storm events (100 Year – 24 Hour and 2 Year – 24 Hour design storm events). The existing parcels along the south side of Camino Del Sol that receive concentrated flows in the existing condition have drainage easements at approximately the locations where these existing concentrated flows drain through those properties. Watersheds 5A, 7, 18A, 18B, 18C all exit the Project site via surface flow, as detailed in Appendix K-1. Watersheds 3, 4, 5, 6, 7A outlet to existing infrastructure; Watershed 3 to a parkway drain on Barton Street; Watershed 4 to a concrete channel between existing parcels; Watershed 5 to a concrete channel between existing parcels; Watershed 6 to a concrete channel between existing parcels; and Watershed 7A to a concrete channel between existing parcels.

As explained in Section 4.9, Hydrology and Water Quality, of the Draft EIR, and in Appendix K-1, runoff from finished Project lots would flow into adjacent proposed roadways, which in turn would be routed to detention tanks, located within the landscape easements adjacent to the right-of-way. These tanks would be sized to hold the respective 100-year storm volumes, which would be released over 48 hours at rates less than or equal to existing conditions. All detention tanks would include 2-inch diameter drain lines, leading to a 6-inch diameter to 12-inch diameter storm drain line, and then to proposed modular wetland biotreatment units. The Project design uses modular wetland units (MWS unit) for the design capture volume (volume of rain required to be captured during the 85th percentile storm, which is between the 1- and 2-year storm, per Riverside Water Quality Management Plan requirements). When these MWS units are overwhelmed, flow ‘bypasses’ the MWS units to detention systems, which are buried pipe for stormwater storage, such that the released flow rates do not exceed the existing conditions. As noted in the comment, the Draft EIR includes lot-specific hydrologic analyses for Buildings B and C (included as Appendices K-5 and K-6 of the Draft EIR), and MM-HYD-3 requires lot-specific hydrologic analyses for the remaining parcels (other than Buildings B and C). MM-HYD-3 requires lot-specific hydrology/drainage reports that include measured pre-development flows and demonstration that stormwater runoff flow rate associated with specific lot development, would be less than or equal to existing stormwater runoff conditions, to prevent excessive on- and off-site runoff and

associated erosive scour. With the implementation of MM-HYD-3, impacts related to increased stormwater runoff would be less than significant. (Appendix K-7)

With regard to Buildings B and C, the hydrologic analyses in Appendices K-5 and K-6 of the Draft EIR conclude that post-construction runoff velocities will be less than existing conditions. The comment references data for detention basins associated with Buildings B and C. Exposed detention basins have mandated drawdown standards (i.e., 48-hour drawdown per FAA circular 150/5200-33B). The intent of these drawdown standards is to avoid vector issues (to avoid allowing mosquito larva to form and causing a mosquito problem) as well as eliminating pools of water that could attract waterfowl. As shown in Figures 4.9-4 and 4.9-5 of the Draft EIR, the detention systems proposed for Buildings B and C are underground tanks. For clarification purposes, the Draft EIR has been revised to replace “detention basin” with “detention tank”, as appropriate. (Appendix K-7)

The high velocity concern raised by the comment is in regard to the pipe outlets for the stormdrain hydraulic model. Section III, Offsite, of the Project Preliminary Hydrology Study (Appendix K-1) states: “Rip rap will be placed at each outlet to slow down the velocity of the stormwater and not erode existing conditions.” Those issues are already present. The Project would release the same or less of the pre-Project flowrate to those areas. The riprap erosion protection would act as energy dissipator to slow flow velocities to mitigate for erosion. (Appendix K-7)

Since, as discussed above, this Project is releasing flows from the site at or below the existing condition, and MM-HYD-3 will be implemented to prevent excessive off-site runoff, additional systems are not needed. Therefore, the Project would not exacerbate existing conditions such that new or different impacts would occur. (Appendix K-7)

- I-166.5** This comment cites information and thresholds, goals and policies included in the Draft EIR and does not raise any specific issues or concerns about the analysis related to those statements or thresholds. As such, no further response is provided.
- I-166.6** This comment is a concluding paragraph and does not raise any specific issues or concerns about the environmental analysis in the Draft EIR. As such, no further response is provided.
- I-166.7** This comment raises concerns about operational noise associated with the Project and suggests that 55 dBA noise level for the Park may be underestimated. As explained in the Urban Crossroads Noise Responses to Comments (Appendix M-2) and Section 4.11, Noise, of the Draft EIR, the noise analysis used the reference noise levels to represent the Specific Plan operations and calculate the operational source noise levels, including park activities, that are expected to be generated at the Specific Plan area and the Specific Plan-related noise level increases that would be experienced at the sensitive receiver locations. As explained in Section 4.11, Noise, of the Draft EIR, the reference noise levels collected at an existing park are expected to reflect the noise level of activities within the open space-recreation land use areas of the Project site, since the reference noise level measurement includes youth soccer games, coaches shouting instructions, playground activities, and parents cheering, clapping, and speaking on cell phones. The reference noise levels include the park activities identified by the comment. As further explained in the Draft EIR, and shown in Table 9-1 in the Noise Study, a reference sound power level of 81.1 dBA L_w representing a sound pressure level of 49.4 dBA L_{eq} at 50 feet is used to describe the potential impacts from the Park. The reference noise

levels are used to assess the project related noise levels at the nearest noise sensitive receiver locations and demonstrate compliance with the 55 dBA L_{eq} exterior noise standards.

In addition, the Park noise source activities are limited to the daytime hours of 7:00 a.m. to 10:00 p.m. As indicated on Table 4.11-25 of the Draft EIR, and on Table 9-3 of the Noise Study, the daytime noise levels associated with Project Park activities at the nearest noise sensitive receiver locations R8, R9 and R10 are estimated to range from 20.8 to 27.6 dBA L_{eq} . Park noise source levels are far less than the 55 dBA L_{eq} daytime exterior noise level standards and are well below the existing daytime ambient noise levels presented in Table 5-1. The existing ambient noise levels west of the Project site that are represented by noise level measurement location L8 indicate that the existing daytime noise level is 47.3 dBA L_{eq} . Since the existing ambient noise levels west of the Park (47.3 dBA L_{eq}) are far higher than the potential noise levels from the Park (27.6 dBA L_{eq}), the Park will not generate a measurable increase in the existing ambient noise level at the nearest noise sensitive receiver locations west of the Project site. As indicated on Table 4.11-28 of the Draft EIR, and on Table 9-6 of the Noise Study, the combined ambient and Project noise levels at the nearest noise sensitive receiver locations R8, R9 and R10 are estimated to range from 47.8 to 50.0 dBA L_{eq} , with the noise increase attributed to the Project ranging from 0.3 to 1.4 dBA L_{eq} . (Appendix M-2)

The comment expresses concern with the location of the park and recommends relocating the park to the eastside of the Project site. The comment also cites information on noise-related policies and a significance threshold from the Draft EIR related to noise. However, as explained in the Draft EIR, the operational noise levels associated with the Project, including park activities, would not exceed the daytime and nighttime exterior noise level standards, and operational noise impacts would be less than significant at the nearby noise-sensitive receiver locations. Therefore, no project redesign or mitigation is required.

I-166.8 This comment cites concerns related to potential hydrology and water quality impacts associated with erosion concerns for parcels that would be rough graded and not be immediately developed. The comment also expresses concern regarding potential lack of winter vegetation.

As explained in the DRC Hydrology Responses to Comments (Appendix K-7) and Section 4.9, Hydrology and Water Quality, of the Draft EIR, during Project construction, the proposed Project will meet the requirements outlined in the California Stormwater Construction General Permit. The construction requirements include wind erosion control, sediment control and non-visible pollutant control through Best Management Practices (BMPs) as outlined in the Project Stormwater Pollution Prevention Plan (SWPPP). Typical BMPs that could be incorporated into the SWPPP to control construction-related erosion and sedimentation in dry weather and stormwater runoff include diverting off-site runoff away from the construction site; vegetating landscaped/vegetated swale areas as soon as feasible following grading activities; placing perimeter straw wattles to prevent off-site transport of sediment; using drop inlet protection (filters and sandbags or straw wattles), with sandbag check dams within paved areas; regular watering of exposed soils to control dust during demolition and construction; implementing specifications for demolition/construction waste handling and disposal; using contained equipment wash-out and vehicle maintenance areas; maintaining erosion and sedimentation control measures throughout the construction period; stabilizing construction entrances to avoid trucks from imprinting soil and debris onto the Project site and adjoining roadways; training, including for subcontractors, on general site housekeeping.

In addition, MM-HYD-1 would require an Interim Soil Stabilization Plan prior to issuance of a grading permit for the Specific Plan Area, detailing measures that will be taken to prevent soil erosion subsequent to grading and prior to construction on individual parcels. The Plan would account for onsite vegetation, or lack thereof. Examples of soil stabilization measures include construction of temporary desilting basins, hydroseeding for temporary establishment of grasses, use of natural and/or synthetic soil binders (i.e., tackifiers and soil stabilizers), straw wattle installation at regular intervals across each parcel and around parcel perimeters, and berm construction around the perimeter of each parcel to prevent off-site soil migration. MM-HYD-1 also requires site monitoring to be completed every six months and after rainfall events of 1.0 inch or greater to ensure that soil stabilization methods are continuing to be effective. In the event that erosion is observed during monitoring, corrective actions shall be taken immediately to prevent additional erosion. The Project will also obtain a Notice of Intent through the California State Water Resources Control Board for state inspection and inspection by a contracted Qualified SWPPP Practitioner (QSP). The Project will meet State of California and March JPA construction and post construction requirements for water quality standards. The Draft EIR properly concludes that, given the incorporation of all of the measures discussed above, the Project's construction-related hydrology impacts will be less than significant. (Appendix K-7)

I-166.9 This comment questions the proposed Project's consistency with Policy 13.2 of the March JPA General Plan Land Use Element that is discussed in Section 4.9, Hydrology and Water Quality, of the Draft EIR. March JPA General Plan Land Use Element Policy 13.2 is to enhance local groundwater supplies through development designs that promote on-site recharge and minimize impermeable ground coverage with landscaped areas, open space or recreation areas. Policy 13.2 implements Goal 13: Secure adequate water supply system capable of meeting normal and emergency demands for existing and future land uses. As discussed in Section 4.9, Hydrology and Water Quality, of the Draft EIR in the groundwater discussion referenced in the comment, the Project site is not underlain by a designated groundwater basin. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), the type of soils underlying the Specific Plan Area has a slow rate of transmission with respect to groundwater recharge. In addition, the site-specific Master Project Specific Water Quality Management Plan (Appendix K-2) indicates the site is not suitable for stormwater infiltration BMPs. As explained in the Draft EIR, the Project site is not conducive to substantial groundwater recharge. The underlying soils of the Project site preclude the use of shallow infiltration-based design components. Geotechnically, infiltration is not ideal on hilltops because introducing groundwater into a sloped condition can have adverse effects to soil stability. For more specific information about the soil conditions at the Project site, please see the Geotechnical Exploration, included as Appendix G-1 to the Draft EIR. As explained in Appendix G-1, bedrock was encountered at shallow depths. This precludes the site from use of infiltration-based design components. Table 3-2, Development Standards, of the proposed Project Specific Plan sets forth the minimum landscaping requirements (10% for Business Park and Industrial parcels; 20% for Mixed Use parcels). Additionally, the Project proposes an approximately 60-acre park and 17.72 acres of additional open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. As a result, the proposed Project would not substantially interfere with groundwater recharge, is consistent with Policy 13.2, and impacts would be less than significant.

I-166.10 This comment questions the proposed Project's consistency during construction with Policies 1.2 and 2.5 of the March JPA General Plan Resources Management Element that are discussed in Section 4.9, Hydrology and Water Quality, of the Draft EIR. Policy 1.2, which is to protect groundwater and surface

water resources from depletion and sources of pollution, supports Goal 1 – Conserve and protect surface water, groundwater, and imported water resources. Policy 2.5, which is, to the greatest extent possible, require development to use master flood control facilities and limit use of interim drainage facilities or open channels, supports Goal 2 – Control flooding to reduce major losses of life and property. As discussed in Section 4.9, Hydrology and Water Quality, of the Draft EIR, the proposed Project will comply with the State of California and March JPA construction requirements for water quality standards. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), due to the existing soil characteristics, the amount of water anticipated to be percolated into the soils is considered minimal due to shallow bedrock/granitic rock (from a design perspective no percolation is assumed). Implementation of soil stabilization measures as outlined in MM-HYD-1, would ensure effective control of potential soil erosion following grading and prior to construction on individual lots, such that impacts to surface water quality from the Project would be less than significant after mitigation is incorporated. Regarding the comment's concerns with open detention basins, construction BMPs such as open-air desilting basins are not designed to detain stormwater runoff as they are used prior to the development of tributary impervious surface and would drain within 48 hours as required by FAA circular 150/5200-33B. These designs are used to reduce sediment runoff prior to development of the property. Desilting basins in undeveloped parcels of land would be installed in accordance with the California Stormwater Quality Association (CASQA) recommendations.

- I-166.11** This comment cites Policy 2.1 of the March JPA General Plan Resource Management Element which requires development to comply with Floodplain Management Regulations and criteria for the Federal Flood Insurance Program for development within identified flood hazard areas. As explained in Section 4.9, Hydrology and Water Quality, of the Draft EIR, the Project site is not within a flood plain and the potential for flooding is considered very low. Additionally, the Project site is not located within a Dam Hazard Zone per the County of Riverside Safety Element Figure 5. The Project would not impede or redirect flood flows. Impacts would be less than significant, and no additional mitigation is required.

The comment expresses concerns about Project flows to the Camino Del Sol neighborhood and existing street sump conditions. As discussed in the Draft EIR, MM-HYD-3 requires lot-specific hydrology/drainage reports that include measured pre-development flows and demonstration that stormwater runoff flow rate, associated with specific lot development, would be less than or equal to existing stormwater runoff conditions, to prevent excessive on- and off-site runoff and associated erosive scour. With the implementation of MM-HYD-3, impacts related to stormwater runoff would be less than significant with mitigation incorporated. Please refer also to Response I-166.4 above.

- I-166.12** This comment expresses concerns about the visual appearance of potential retaining walls and large slopes at the perimeter of the Project. The comment asks for a cross section of the grading design to show slopes and retaining walls at the perimeter of the development. The comment also refers to goals and policies of the March JPA General Plan Resource Management Element that are discussed in Section 4.6, Geology and Soils, of the Draft EIR, specifically Policy 3.2, which encourages the use of contour grading methods when grading of hillsides, and Goal 2, which is to minimize grading and otherwise changing the natural topography, while protecting the public safety and property from geologic hazards. The Project requirements do not allow for grading outside of the current proposed limits around the perimeter of the Specific Plan Area, so walls are proposed in locations where grading slopes are not acceptable. The proposed development grading design is based on the existing topography with the north side of the proposed Specific Plan Area lower than the south-east corner with

parcels stepped in between. Appendix B of the Draft EIR provides Conceptual Grading Plans and Sight Line Sections.

As explained in Recirculated Chapter 3, Project Description, the proposed Specific Plan would regulate future development within the Project site. As such, and as explained in the EIR, the EIR evaluates implementation of the Specific Plan at a project level, while development specifics for certain parcels – and specifically Building B and Building C – are more certain at this time.

Simultaneous with the release of the Draft EIR for public review, the proposed West Campus Upper Plateau Specific Plan was made (and still is) available for public review in the following location online: <https://marchjpa.com/mjpa-meridian-west-campus/>. With regard to grading, pursuant to the Section 6.8, Grading, of the proposed Specific Plan, a conceptual grading design will be required for each Tentative Map application consistent with the March JPA Development Code, and grading designs will implement the goals and policies of the March JPA General Plan. Figure 6-9, Conceptual Grading Exhibit, in the proposed Specific Plan shows the proposed grading for each individual parcel in the West Campus Upper Plateau Specific Plan Area. Among other requirements, the Grading Plan Development Standards in the proposed Specific Plan require the overall shape, height, and gradient of any cut and fill slope to be designed to be consistent with the existing natural contours and scale of the natural terrain to the extent feasible. As set forth in Section 4.6, Geology and Soils, of the Draft EIR, the Project would incorporate MM-GEO-1, which requires all grading to be performed in accordance with the grading guidelines outlined in the March JPA Development Code and the West Campus Upper Plateau Specific Plan, among other measures.

The proposed Specific Plan also includes design guidelines and standards for walls and fences and indicates that fences and walls are anticipated to be proposed in conjunction with development of the individual project sites. The final locations and details of these fences and walls will be determined when buildings are designed and oriented during implementation of the Specific Plan. Figure 4-1, Landscape Fence and Wall Plan, of the Specific Plan depicts fence and wall locations and details on the proposed height and type of fences and walls. Proposed walls and fences for Buildings B and C are depicted on the Plot Plans for Buildings B and C included in Recirculated Chapter 3, Project Description, (see Figures 3-9 and 3-10). Figure 4-18 of the Specific Plan shows a typical screen wall. Figure 4-17 provides the Northern Landscape Buffer Interface. Figure 4-19 provides the Southeastern Landscape Buffer Interface.

The comment also references granite bedrock and questions the decision to place a warehouse on a hilltop. As explained in Section 4.6, Geology and Soils, of the Draft EIR, granite bedrock is present near the surface across the majority of the Project site. As explained in the Draft EIR, the bedrock material varies in integrity from completely disintegrated rock, which has become a dense soil-like deposit, to moderately weathered rock. As discussed above, the Project would incorporate MM-GEO-1, which requires compliance with the geotechnical recommendations contained in the geotechnical analysis included as Appendix G-1 of the Draft EIR as well as subsequent design-level geotechnical reports and includes measures to reduce the potential for slope instability during grading and construction.

- I-166.13** This comment expresses concern regarding the movement of dirt and rock from the Project site and raises a question as to the number of truckloads of dirt that will be brought to or removed from the site. As explained in the Draft EIR and noted in the comment, earthwork activities are expected to balance on site and no import or export of soils would be required. As explained in Recirculated Section 4.2, Air Quality,

approximately 7,608,500 cubic yards of dirt and 1,501,055 cubic yards of rock would be moved around the site. Consistent with the comment's suggestion, this information was included in the environmental impact analysis. With regard to grading exhibits, please see Response I-166.12 above.

- I-166.14** This comment questions whether an investigation has been conducted to determine what impacts water infiltration from temporary and permanent detention basins may have on soil integrity. As explained in the DRC Hydrology Responses to Comments (Appendix K-7), due to the existing soil characteristics, the amount of water anticipated to be percolated into the soils is considered minimal due to shallow bedrock/granitic rock (from a design perspective, no percolation is assumed). Construction BMPs such as open-air desilting basins are not designed to detain stormwater runoff as they are used prior to the development of tributary impervious surface and would drain within 48 hours as required by FAA circular 150/5200-33B. Any water infiltration would be minimal.

As referenced in the comment and as explained in Section 4.9, Hydrology and Water Quality, of the Draft EIR, MM-HYD-3 requires the completion of lot-specific hydrology/drainage reports prior to issuance of each building permit. Based on such reports, detention tanks shall be constructed on individual lots that are sized to accommodate stormwater runoff, such that flows do not exceed existing conditions, to prevent excessive on- and off-site runoff and flooding. The tanks at the site are anticipated to be constructed within the bedrock units on-site, which are anticipated to have very low permeability. With implementation of this mitigation, the Project's impacts on surface runoff and flooding would be less than significant. (Appendix K-7)

Infiltrated water, if any, is not expected to impact proposed 2:1 cut or fill slopes constructed according to the recommendations provided in the Geotechnical Exploration included as Appendix G-1 to the Draft EIR. As discussed above, the Project would incorporate MM-GEO-1, which requires compliance with the geotechnical recommendations contained in the geotechnical analysis included as Appendix G-1 of the Draft EIR as well as subsequent design-level geotechnical reports and includes measures to reduce the potential for slope instability during grading and construction. Thus, impacts related to slope instability would be less than significant. (Appendix K-7)

- I-166.15** This comment expresses concerns regarding blasting activities and potential implications to Southern California Gas utility infrastructure in the Project area. Recirculated Chapter 3, Project Description, identifies the Project would require the relocation of SoCal Gas's gas line and states; "As part of grading activities for the Specific Plan Area, the alignment of the gas line would be adjusted to be consistent with the grading activities completed at the Project site. SoCal Gas will be responsible for carrying out the pipeline improvements; however, this EIR will provide the environmental review and clearance for SoCal Gas to proceed with the adjustment of the grade of the gas line to the proposed finished grading surface." The developer has contacted SoCal Gas about relocating the existing gas as part of the proposed development. Based on information provided to March JPA by the developer, during construction, the construction contractor and Project Applicant will coordinate blasting operations with SoCal Gas to provide adequate protection for the 30-inch gas line crossing the Project site. It should be noted that the existing gas line alignment falls within a fill portion of the site and rock removal is not anticipated within close proximity of the gas pipeline. From previous coordination with SoCal Gas, the minimum setback for blasting operations is 125 feet from the pipeline. If any rock removal is required within 125 feet of the SoCal Gas pipeline, an expansive grout will be utilized for rock breaking. The Project will be conditioned accordingly.

The comment also asks about regulatory requirements related to blasting and proximity to surrounding communities. As explained in Section 4.11, Noise, of the Draft EIR, although not specifically proposed, if blasting is determined to be required during excavation and grading, the blasting contractor is required to obtain blasting permit(s) from the state, and to notify Riverside County Sheriff's Department within 24 hours of planned blasting events. In addition, PDF-NOI-2 prohibits blasting within 1,000 feet of any residence or other sensitive receptor. In addition to the distance limits, any blasting or drilling activities shall not exceed the City construction noise threshold of 75 dBA L_{eq} for City residents or the County's construction noise threshold of 65 dBA L_{max} for County residents. The Project also includes PDF-NOI-3, which requires that all blasting activities be designed to meet the regulatory construction noise and vibration thresholds outlined on Table 4.11-7 of the EIR. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

- I-166.16** This comment expresses concern regarding potential dust, debris, gases and hazardous materials resulting from blasting activity carried out during Project construction. As explained in Response I-166.15 above, and in Section 4.11, Noise, of the Draft EIR, although not specifically proposed, if blasting is determined to be required during excavation and grading, the blasting contractor is required to obtain blasting permit(s) from the state. In addition, PDF-NOI-2 prohibits blasting within 1,000 feet of any residence or other sensitive receptor. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. As explained in the Urban Crossroads AQ/GHG Responses to Comments (Appendix C-4), the Draft EIR evaluated emissions related to blasting, including both fugitive dust as well as emissions resulting from the use of explosives (see Appendix C-1, Table 5-2, Table 5-3, Table 5-4, and Table 5-5). The results of the analysis indicate that emissions resulting from blasting activity would be minimal and would result in less than significant impacts. Additionally, the Project would be required to implement dust control measures such as watering that would significantly reduce fugitive dust emissions.

Whether radon is present in the vicinity of the Project site, and if present, the extent to which blasting activities would result in its release, is unknown. The US EPA classifies Riverside County as Zone 2, indicating a moderate potential for radon (<https://www.epa.gov/sites/default/files/2018-12/documents/radon-zones-map.pdf>). However, radon is typically only a concern in enclosed spaces, such as a building or basement, where it can accumulate over time. Per the US EPA, when outdoors, radon disperses rapidly and is generally not a health issue (<https://www.epa.gov/radiation/what-radon-gas-it-dangerous>). Because blasting will occur in an open area at least over 1,000 feet away from any nearby sensitive receptors, any radon gas that is released would dissipate quickly and would not be able to reach potentially harmful concentrations. Given the distance that blasting would occur from any residential development or other sensitive receptor (over 1,000 feet) and given that it would occur outdoors and not indoors, there would be no impact from radon gas to any residences. (Appendix C-4)

Regarding the comment's question about wind studies, the LST and HRA analyses included in the Draft EIR are based on historical geographic wind patterns that are input into the dispersion modeling. Therefore, wind speeds and directions in the Project vicinity are considered in the criteria pollutant and HRA dispersion modeling. Additionally, the Project would also be required to comply with the SCAQMD Rule 403 that prohibits grading activities during high-wind events. (Appendix C-4)

Regarding the comment's requested mitigation, as noted above, PDF-NOI-2 prohibits blasting within 1,000 feet of any residence or other sensitive receptor. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Additionally, MM-AQ-3 prohibits grading on days with an Air Quality Index forecast greater than 150 for particulates or ozone as forecasted for the Project area (Source Receptor Area 23).

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,
Amisha Shah

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Amisha Shah

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Amisha Shah

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Please help us in keeping our neighborhood as a wonderful place to live.

Sincerely,
Ajay Shah

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please help us in keeping our neighborhood as a wonderful place to live.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Ajay Shah

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Please re-consider alternatives to Warehouses.

Thank you for letting me comment on your project.

Sincerely,

Ajay Shah

Sent: Monday, February 27, 2023 9:28 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Ajay Shah

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

I-174.1

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Personally, I enjoy using our remaining opening spaces for hiking and mountain biking. It concerns me that so little thought has been given to preserving more areas for community members to recreate and enjoy the beautiful surroundings that Riverside County has to offer.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

ANDREA WOOD

Sent: Monday, February 27, 2023 9:13 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside.

The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs.

How did the applicant identify this number? On what was it based?

There is no analysis that I can find to justify this assertion.

Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work.

Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide?

On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT?

How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region.

The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs.

However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley).

There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%).

At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>),

that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs.

The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://www.moval.org/cdd/pdfs/projects/wlc/wlc-deir0213.pdf>, p.4.10-32).

It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses.

That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect.

This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses?

Or the fact that Californians are required to purchase electric vehicles by 2035?

Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect.

It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment.

Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside.

The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document.

First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren.

How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account.

Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets.

Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods.

This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic?

Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement?

How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-176.1

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area.

I-176.1
↑
Cont.

As a longtime resident of CasaBlanca, we are subject to the aftermath of these trucks destroying our narrow streets. For decades we have been bringing this to the attention of several of our public officials and the problems increase.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Belle Chang

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips. Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site? We would ask for significant mitigations to be put in place to reduce the impacts on local residents. 1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents) 2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing. I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening date of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028. I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected? Thank you for the opportunity to comment.

Sincerely,
Benjamin Fernandez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public

comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. Thank you for letting me comment on your project.

Sincerely,
Benjamin Fernandez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers. In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance. As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed Thank you for allowing me to provide comments on this project.

Sincerely,
Benjamin Fernandez

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted. I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced? Thank you for allowing me to provide comments on this project.

Sincerely,
Benjamin Fernandez

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents. The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Benjamin Fernandez

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Brian Wardle
OrangeCrest Neighborhood
Riverside, 92508

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images

reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area.

Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,YDrIBil5rXe1PvEQ-O_Nt7QJrvjxnTrQhn7OSPYhHra6MjcX9dbA7mCbg2pwlIG65ufFs-0VNZ_ad-kTiJHSg7i2fPArc34jBEFT1Uw&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,hZljXTkxBcwEX1OPHep3hTA6-ZZuUENAnp2HgExnqi-Apv5FrSITxK6IWJPT2vU3Tw-NhmmNAsL4Bwg_NhJhBgus8PGQzYuJD5FO_BFv7w,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Chad Smith

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive s

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what univer

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely, Denette Lemons 8634 de loss dr Riverside 92508 lemonsdenette@gmail.com <include name, address, email in signature line>

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely, Denette Lemons 8634 de loss dr Riverside 92508 lemonsdenette@gmail.com <include name, address, email in signature line>

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,O80dE0nBs3UvH9ijkbSNGYVRJWlqbQZMfZX_KM0rrwDqJGW3CAOoEwxtPkoOA7zLJCgos6rQCvKqJ7RXznkgPVYzOVII1tG0LQ-9hZh37fb_vJyuEuXVjSI,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,JU9XF80StvZSU01JoLh6lfAfcgBy3NEkaPNQLWPUgkrMrMaXPYOw7bIC_Kg98pP99FgCqna_M2Jxd X-IBzsi8p2aKT5Dku6CMDOSBhAfDjmc5pz35UKu5zFs&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

INTENTIONALLY LEFT BLANK

From: Denette Lemons <lemonsdenette@gmail.com>
Sent: Monday, February 27, 2023 9:40 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,Denette Lemons

D. Stephenson

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000%2

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. **Why did each of the alternative plans include 143 acres of industrial zoning?** The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. **Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.**

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; **how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?**

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing

commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” **How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.**

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). **In what specific ways have you incorporated Community Preference in the development of your plan?**

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Eunhee Kim

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Eunhee Kim

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Eunhee Kim

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities

of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wlc-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Eunhee Kim

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Eunhee Kim
Raleigh, NC 27615

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJP) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Eunhee Kim

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Fernando Sosa Jr , Orangecrest resident

Sent: Monday, February 27, 2023 11:02 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

F6FkPMi_3yN61tdvdskwr5GikCcNP7aul3cl776YYhpbGr0fu56Lcjrjrm-DA,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Fernando Sosa Jr , Orangecrest resident

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Fernando Sosa Jr , Orangecrest resident

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Fernando Sosa Jr, Orangecrest resident

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Fernando Sosa Jr, Orangecrest resident

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Fernando Sosa Jr , Orangecrest resident

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,tgAcba1GNKF0IsyV_K_KFpaAHzidyleYgZ9TCjBnRgQm9DjFGcPfxUA53e7Yd1E89Kqa6E1ii0jaqkiF4CgwZz_Xyb91m1MyhmnIMnRUhTmGCalm3w4ltjSK32x5&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,Czq7iEJ61QIPDEKy6ld9biUBdJUfn-BxAyv6AhSUibaDtD3l_XiAqlljHx_Zii3sDg70r9Aial9Cm0PvBusyrQ-UTUTqQhnnZ2WfVJpJcs11Wi02dg9e2Ud&typo=1p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sent: Monday, February 27, 2023 9:43 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Joseph Aklufi

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Joseph Aklufi
Riverside 92506

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,
Joseph Aklufi

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Joseph Aklufi

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Joseph Aklufi

Sent: Monday, February 27, 2023 6:40 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

John W. Hagmann

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

John W. Hagmann

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

John W. Hagmann

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

John W. Hagmann, Mission Grove 92506

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

I-241.1

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-241.1
Cont.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

This project has all the signs of approval from people who do not live anywhere near the land that is to be completely destroyed. Please reconsider this action.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered

I-244.1

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Serious and thoughtful insight has not been applied to this project please reconsider, the city deserves better decisions
Sincerely, Janice Oien. 92508 <include name, address, email in signature line>

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

I-245.1

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I-245.1
Cont.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

This community deserves clean air and this project will pollute our environment beyond acceptable limits. I assume you read environmental reports therefore there is no reasonable excuse to approve this project Sincerely, Janice Oien.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-246.1

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

↑ I-246.1
Cont.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!
Assuming you do not plan to move from this area how can you possibly approve this project. The traffic ,as you know ,
is now polluting our air traffic control is out of control

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,ltTcW0aXjGbmB7DAS0gBZaSsrW2L1k8dfnVcYArQNIqFn3Qf9VVjx0MIbBVhBK0P4WrxztOeCGNiJP_Z9IbVhebwn9y5Ea0J9OsHWDDH77jkF4H5D5tr&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,nfIUicTFW-8NRAMnmPemqXJ22rU3x_ZZKpLOOxgeC_suPTSLZyxrZ996fpBZJ0BtoEF8hZc4k6BvMiKg54P4IHgW8oJNpOH806rCT_ORIO0ZqrQmgs0oiwRXA,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Josie Sosa 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Josie Sosa 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Josie Sosa 92508

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Josie Sosa 92508

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Josie Sosa 92508

The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-255.1

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000%2.

Our community should stay a community, not a thoroughfare. Homes are too expensive, too many families with kids to add more traffic and potential car accidents, pedestrians hit by vehicles, etc. We don’t want increases in warehouses, trucks, traffic, pollution.

I-255.2

It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-256.1

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area.

Give us back our nice, non- commercial community! We pay a lot to live here...we deserve to know and have a voice.

Sent: Monday, February 27, 2023 11:26 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Kathleen Jump

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Kathleen Jump

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Kathleen Jump

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Kathleen Jump

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Kathleen Jump

From: KELLEY PAGE <kpage68684@verizon.net>
Sent: Monday, February 27, 2023 2:49 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,Q_qRXWqPjUnfqvnER10xNOoAUe0hwbc1KLni5jCxmKXHuo_7FvGX50Hu3mrojITtUr4wpAKkbnEvNhkAu-imMQr2AksbYQEASffeR1ZxYK1J96rvqSo-wH9w,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,iUtqO_NsuA3_JH9TGd3gdDYauR3HwtXtyRuBN3ruekV95q39P-g63ipzGfIfCOt4Esr3i8r5Lx4VL2Zk9wVDRMpk5QBg2glawpYnyF8UWcwsk3DSMQbi1_iu9LI,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sent: Monday, February 27, 2023 2:51 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Suzanne Page

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am

aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Suzanne Page

Sent: Monday, February 27, 2023 2:58 PM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Suzanne Page

It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Michael Dearman

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

INTENTIONALLY LEFT BLANK

From: Mike Dearman <mikedearman61@gmail.com>
Sent: Monday, February 27, 2023 9:25 AM
To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Michael Dearman 19148 Hitching Post Place Riverside CA 92508

Sent: Monday, February 27, 2023 1:39 PM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Maria R

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning to be your lasting legacy. I await your detailed response.

Sincerely,

Maria R

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Are you familiar with Steven Speilberg’s first movie, **Duel**?

I was recently treated to a first hand encounter, on a similar level, by a semi truck and trailer fully loaded on the 215. I felt like it was a life or death situation as he pressed and pressed for me to go faster and faster. I could not even see his headlights he was so close. I couldn’t get off the freeway fast enough. Not anywhere near my destination.

Dangerous encounters like this will become more and more common if we allow warehouses in residential areas.

This is an example of how you have not gone out far enough with your analysis to study the impact on our community. The traffic on the 215 is so daunting it is always at a stand still. Your project will only increase the congestion.

Additionally, **big rigs and young drivers** don’t mix. We have young drivers, 15 and 16 year olds, just learning to drive on our residential streets. Allowing big rigs to plow through our community is a recipe for disaster and a very dangerous proposition.

This is a community of homes, where children live and grow up, it is not an industrial area. Your study doesn’t adequately address the impact of warehouses on the streets and freeways that boarder our bedroom community.

I implore you to rethink the location and place it somewhere safe. Protect the lives of those in our community and build away from our homes and schools.

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project).

The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside.

The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; **it is less than a quarter mile from a preschool** and the entire project is sited within a 1,500-foot range of residential homes.

The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I implore you to **Please** consider our plight and reconsider the location of your project.

Sincerely,

February 27, 2023

- I-284.1** This comment raises concern regarding Project’s potential traffic impacts on Interstate-215 (I-215) and residential streets, as well as the adequacy of analysis contained in the Draft EIR regarding this issue. As explained in the Urban Crossroads Transportation Response to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.
- I-284.2** This comment asks that the Project location be reconsidered and describes the existing land uses surrounding the Project site, but incorrectly identifies the land use square footages. As shown in Table 4.15-1, Project Trip Generation Summary, the Draft EIR analyzed a total of 4,296,779 SF of warehouse use, 528,951 SF of office use, and 160,921 SF of retail use. The comment does not raise any specific issues, questions or concerns about the adequacy of the environmental analysis included in the Draft EIR. As such, no further response is required.
- I-284.3** The comment generally challenges the environmental analysis in the Draft EIR but does not raise specific issues or concerns regarding land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing. This comment requests evaluation of a non-industrial alternative. See Topical Response 8 - Alternatives, for the evaluation of Alternative 5 – Non-Industrial Alternative.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect beca

It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000%2

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what univer

February 27, 2023

- I-304.1** This comment is truncated version of Form Letter C – Biological Resources. As such, in response to this comment, please see Form Letter C Response.
- I-304.2** This comment requests the Draft EIR consider climate change with additional drought and water reductions. The Project Water Supply Assessment (Appendix O) evaluated water availability to serve the Project in a multiple-dry year situation. As such, drought conditions were considered in the environmental analysis within the Draft EIR. The development will comply with the existing March JPA irrigation efficiency ordinance and is planned to provide landscape irrigation through use of reclaimed water. Climate change is also considered within Section 4.7, Greenhouse Gas Emissions, of the Draft EIR. This comment does not raise any specific issues, questions or concerns about the environmental analysis included in the Draft EIR, as such no further response is provided.

I-305.1

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various locations.

Strong research on the effects of trucks' exhaust exists. We community members did not relocate to this region to have the problems we left follow us. Riverside's air quality has improved over the past 30 years; having additional truck exhaust would set these improvements back drastically.

I-305.2

Our community does not want our airt quality further impacted. Relocate your plans for extensive warehouses in an undeveloped location.

Sincerely,

Shannon Dadlez, Ph. D.

Letter I-305

Shannon Dadlez
February 27, 2023

- I-305.1** This comment is truncated version of Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.
- I-305.2** This comment expresses concerns regarding truck exhaust. The health effects of Project truck traffic were evaluated in the Revised Health Risk Assessment Technical Report (Appendix C-2). As stated therein, emissions associated with Project truck traffic would not exceed SCAQMD-established thresholds, and as such, impacts would be less than significant.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in vario

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive s

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what univer

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,MPOrql0KreQh8uZAnwdOEyGoqQJ3m6s3IM_eCgmT5qqWpTrMCQGzd8mVhyUzi9yQc5R3pNs7dra0l-0VWxT9ee57XzrCtvwWE1x6gsfcNmc,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,u5g7o_DyfBI6kjRdghnwCKzJIG-gOib5tR3nICQjEriNzcH6HTteP1JAZkc6BgjKk2bNstX6ohjEF-wRrsK6G7PxUPg8KjNdmuSCCyPfUE_74FXy7loZO1Hlcw,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Tom and Brenda Parkinson. 20646 Gelman dr. 28 year resident of Orangecrest. 92508.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-318.1

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

↑ I-318.1
Cont.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Tom and Brenda Parkinson. 20646 Gelman Dr., 925-0828 year resident of Orange crest what was once a piece of the American dream is now been trampled under heavy duty truck traffic. I drive Van Buren and Cactus daily and whenever I'm on the road, I see more semi trucks than cars especially at especially 1 o'clock in the morning or later. Van Buren and our community roads are crumbling under the weight of these trucks running 24 seven. Our air becomes even more hazardous.

Letter I-318

Tom & Brenda Parkinson

February 27, 2023

I-318.1 This comment is identical to Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.

I-318.2 This comment raises concerns about increased truck traffic, roadway damage, and air quality. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP. Commercial trucks pay annual registration fees to the California Department of Motor Vehicles, including additional fees based on weight. A majority of these fees are distributed to local governments (34.5%), Caltrans (25.1%), and the California Highway Patrol (19%).¹ The Project Traffic Analysis (Appendix N-2) provides analysis of LOS for informational purposes only and does not indicate impacts under CEQA. Peak hour intersection operation analysis (delay and associated LOS) is no longer the measure of effectiveness used to determine traffic impact and mitigation measures for CEQA.

The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments. Recirculated Section 4.2, Air Quality, has applied an appropriate threshold of significance, and determined the Project’s impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR.

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

deir0213.pdf%2c&c=E,1,xBk4v6v77tf0cMWL0kF0yt2Waa4iUsJNKgJun72JmvNWTfK6UDna4hCIRUtBNV_hzUC6M5IAHcyBfyVXlnWWyCLAP9ZgmL0sxOItDXJr-STZN1TMEahrCpJogEA,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,xA2OLfv5Lj0FaYwunSsRV6u_l85AT-0fMgV2TjnNu2JRV-LUmHxB94bQWND1784n2ld20HSI25zNhMz7vxYKAcvTLgP3NdOPscqqZTYUkYObkw6WxA,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl->

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what univer

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

I-329.1

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

↑ I-329.1
| Cont.

We personally take this matter very seriously as our backyard is Alessandro and I can attest to trucks driving up and down Alessandro without a care in the world. Our house shakes, we have more cracks in our cement and the exterior of our home has cracks from the trucks when they thunder down the road. It never fails that when I'm on Van Buren I see trucks where trucks have been restricted, and I am not talking about the trucks that have a legal right to be in the area. The residents shouldn't have to be the ones who suffer.

| I-329.2

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Letter I-329

Ann & Dolores Marchand

February 28, 2023

- I-329.1** This comment is the same as Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-329.2** This comment raises concerns about existing truck traffic using Alessandro Boulevard and Van Buren Boulevard. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff’s Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to “enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years.” PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Ann & Dolores Marchand

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? **The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density.** Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, **millions of square feet of boxy, concrete buildings** will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,

Ann & Dolores Marchand

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-335.2

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? **The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density.** Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for ‘Industrial/Warehousing’ uses and it explicitly shows ‘Industrial/warehousing’ land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen’s Kangaroo Rat.

Moreover, the Draft General Plan 2010 “Draft Vision 2030” Section 2.2.24 stated,

“The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to ‘upzone’ the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

I-335.2

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in vario

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000%2

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what univer

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-351.1

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. That area is home to the Thompson Kangaroo Rat, the Blue-Gray Gnat Catcher, and Bell’s Lesser Virio. Building warehouses on their habitat would be unthinkable.

I-351.2

Thank you,
Kevin Carney
8268 Laurel Ridge Rd, Riverside

Letter I-351

Kevin Carney
February 28, 2023

I-351.1 This comment is a condensed version of Form Letter C – Biological Resources. As such, in response to this comment, please see Form Letter C Response.

I-351.2 This comment states that the Project would result in a loss of habitat area for the Thompson Kangaroo Rat, the Blue-Gray Gnat Catcher, and Bell's Lesser Virio. As explained in the Rocks Biological Resources Responses to Comments (Appendix D-2), since there is not a species known as Thompson Kangaroo Rat, it is assumed the commenter is referring to Stephens' Kangaroo Rat. This species is presumed present on the Project site. As presented in Section 4.3, Biological Resources, of the Draft EIR, Project impacts on this species were addressed as part of the March Air Force Base closure USFWS Section 7 consultation (BO 1-6-99-F-13) and CBD Settlement Agreement (S.D. Cal. No. 09-cv-1854-JAH-POR). Pursuant to those agreements, 664 acres of lands were placed into conservation easement to offset potential species habitat losses due to development of project site and other 'developable lands'. Additionally, the CDFW reviewed the USFWS BO decision and issued a consistency determination (2080-1999-056-6) stating that "Biological Opinion No. 1- 6-99-F-13 is consistent with the California Endangered Species Act (CESA) as to anticipated take of the least Bell's vireo and Stephens' kangaroo rat" (CDFW 1999). Additionally, the USFWS and CDFW confirmed in 2006 that the areas taken out of the "Stephens' kangaroo rat management area" were no longer part of the core reserve and incidental take was authorized within these areas pursuant to the HCP (USFWS/CDFG WRIV-3259.5). The existing Conservation Easement will be expanded to include the Upper Plateau Conservation area acreage. Funding will be established by the Developer upon the expansion of the existing Conservation Easement. Thus, incidental take of Stephens' kangaroo rat on the Project site is permitted and destruction of occupied habitat has been adequately addressed with the responsible agencies.

Blue-gray gnatcatcher is a common species found across the majority of the entire United States and is known from the Project site. Blue-gray gnatcatcher is not considered a special-status species. Regardless, implementation of the Project's mitigation measures, such as MM-BIO-1 (Best Management Practices), would also reduce impacts to the blue-gray gnatcatcher. (Appendix D-2)

Since there is not a species known as Bell's Lesser Virio, it is assumed the commenter is referring to least Bell's vireo. Surveys for least Bell's vireo were performed in accordance with USFWS protocols. The surveys were negative for least Bell's vireo on the Project site. Least Bell's vireo were found to inhabit several drainages adjacent to the Project site. With implementation of MM-BIO-2 (Least Bell's Vireo) to avoid and/or minimize indirect noise impacts on nesting least Bell's vireo, the proposed Project's impacts would be less than significant. (Appendix D-2)

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-352.1

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000. We already have trucks daily disregarding the laws and traveling on Trautwein, Alessandro, and Van Buren where trucks are prohibited. Now with Barton extended into residential neighborhoods we will have truck driving through our neighborhood because we already know they don’t obey traffic laws. Please don’t destroy our city!

I-352.2

Kevin Carney

8268 Laurel Ridge Rd, Riverside

Letter I-352

Kevin Carney
February 28, 2023

- I-352.1** This comment is a condensed version of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-352.2** This comment raises concerns about existing truck traffic using Trautwein, Alessandro Boulevard and Van Buren Boulevard. The comment also expresses concerns about truck traffic through neighborhoods with the extension of Barton. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,wh0_MnumvhGr4MKdeHtLLR3vD_UahB1bFGtQHMenXbnKh6kdrOzLbwIDIC4APHkM2-R1wJNidVP61tQ_ALZRvENewiypNhGXBPRNvfghVpmN&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,7q3vrlHN0hxJz7NPHk7GLenToQIDRwErY0RqoVxMOmb8Sx-bjRUCn0bvU6Ylb8ze9PxF34IjtiSBnIEnFIEkYIYcZFkKiGZvbetxDWys&typo=1> p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be “significant and unavoidable” air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-354.1

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I am very concerned about what chemicals and pollution will be kicked up into the air when the nuclear weapons storage bunkers are demolished.

I-354.2

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

I-354.3

Thank you for the opportunity to comment.

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? Do we need to show you a photoshopped idea of what the warehouses will look like?? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is **misleading** to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are not based in reality and are misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents.

I-363.1

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs (which do not support the housing prices and will in time be taken by A.I) in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty, oxygen and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

I-363.1
Cont.
I-363.2
I-363.3

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please do not allow one final grand act of poor land use planning be your lasting legacy. Please create a beautiful legacy for us and our children: a town-center, community garden, community center, more open space- ANYTHING is better than more industrial business parks and mega warehouses. I await your detailed response. Thank you.

I-363.4

Sincerely,

Nicole Bernas

Letter I-363

Nicole Bernas
February 28, 2023

- I-363.1** This comment is a variation on Form Letter A – Aesthetics, including non-substantive revisions and adding the following to the third paragraph: “Do we need to show you a photoshopped idea of what the warehouses will look like??” The text modifications in this version of Form Letter A do not raise any new or different issues, questions or concerns about the environmental analysis within the Draft EIR. As such, in response to this comment, please see Form Letter A Response.
- I-363.2** This comment suggests the jobs generated by the Project would not support housing prices and will be replaced by automation. Wage ranges and housing prices are outside the scope of CEQA environmental review. While existing warehouse automation would be accounted for in March JPA employment data, at this time, it is speculative to assume future automation and/or incorporate such unknown factors into the Draft EIR.
- I-363.3** This comment identifies oxygen and aesthetics as a benefit provided by the Project site. The Project includes 17.72 acres of open space along with the establishment of a 445.43-acre Conservation Easement that will remain open land. Table 4.3-7, Vegetation Communities and Land Uses Project Impacts Within the Study Area, of the Draft EIR identifies the types and acreage of vegetation communities that would be impacted by the development of the Project. MM-BIO-8 (Upland Vegetation Communities) requires Project impacts on encelia scrub (1.53 acres) flat-topped buckwheat (4.56 acres), Riversidean sage scrub (5.54 acres) be mitigated at a 1:1 ratio, and Project impacts on Riversidean sage scrub – disturbed (4.05 acres) will be mitigated at a 0.5:1 ratio through the purchase of 13.66 acres of coastal or Riversidean sage scrub credits at an approved mitigation bank. Section 4.5, Landscape Design Guidelines, of the proposed Specific Plan requires landscaping “presenting a combination of evergreen and deciduous trees, low shrubs, and masses of groundcovers to create a visually pleasing experience for pedestrians and passing motorists.”
- I-363.4** This comment expresses opposition to the Project. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Riverside's freeways and surface streets are MAXED OUT. We need time for our roads to catch up with the traffic the warehouses are being to our community. Stop!

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How

might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Nancy Magi, Ward 3, Riverside

Dear Mr. Fairbanks:

I am writing to thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-367.1

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Additionally, this is not the best use of this land. Warehouses are like huge megaliths that devalue the scenic view, cannot really be replaced once built, do not provide that many permanent jobs or that much tax/economic benefit to the surrounding area, and result not only in increased air pollution but also more greenhouse gases. You can do better!

I-367.2

Please open up your lens to consider a better use of this land for the environment, the community, and quality of life for all.

I-367.3

Sincerely,

Susan Fahrney

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

I am a 71 retired special education public school teacher who has lived in the Corona-Riverside area since 1975. Many of the special-needs elementary students that I worked with over my 40 years of teaching often had multiple health issues, including respiratory difficulties. I am concerned about the deteriorating air quality as the result of more distribution trucks and warehouses in the Inland Empire, especially by Riverside.

I-368.1

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-368.2

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion.

Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect. I can not image that this is accurate.

Thank you for your time. I await your reply on how this warehouse project and subsequent distribution trucks WILL NOT impact the respiratory health of children living and attending school nearby.

I-368.3

Tinka Friend
Retired Teacher
10483 Killarney Drive, Riverside, CA 92503

Letter I-368

Tinka Friend
February 28, 2023

- I-368.1** This comment is introductory in nature and expresses concerns about air quality. The air quality and GHG project design features and mitigation measures have been revised and expanded to incorporate additional feasible mitigation in response to comments specifically within Recirculated Section 4.2, Air Quality. Recirculated Section 4.2, Air Quality, has disclosed the Project's air quality impacts, applied an appropriate threshold of significance, and determined the Project's impacts to be significant and unavoidable even with implementation of MM-AQ-1 through MM-AQ-27. The comment raises no specific issues, questions or concerns about the analysis in the Draft EIR.
- I-368.2** This comment is a truncated version of Form Letter F – Jobs. As such, in response to this comment, please see Form Letter F Response.
- I-368.3** This comment raises concerns regarding the Project's impacts to the respiratory health of children. The Draft EIR assessed the Project's health risks in Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project's health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD's significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks.

Dear Mr. Fairbanks:

I am a 71 year old retired special education public school teacher who has lived in the Corona-Riverside area since 1975. Many of the special-needs elementary students that I worked with over my 40 years of teaching often had multiple health issues, including respiratory difficulties. I am concerned about the deteriorating air quality as the result of more distribution trucks and warehouses in the Inland Empire, especially in/nearby Riverside.

I-369.1

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes.

I-369.2

The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-369.2

The project applicant conceded that there will be **"significant and unavoidable" air quality impacts** on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts. Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various locations.

What are the mitigation plans for the young children with compromised respiratory systems living and attending school nearby these warehouses? Are they just expected to stay indoors and not go outside to play---as every 7-year old child should be able to do? What will the lack of exercise do to their developing bodies? Will these warehouses build an indoor playground/community center for the nearby neighborhoods to allow them to play and exercise despite the "significant and unavoidable" air quality impacts?

I-369.3

When you struggle to breathe, "significant and unavoidable" negative air quality has a serious impact on your quality of life. I await your response on what is specifically going to be done to mitigate the "significant and unavoidable" negative effects on the children living and attending school nearby. These children can not be expected to suffer for the financial benefits of this proposed project.

Tinka Friend

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
<include name, address, email in signature line>

Subject: Warehouse Concerns

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Drew Ward

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Drew Ward

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Drew Ward

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Drew Ward

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,
Drew Ward

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Drew Ward

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Drew Ward

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,

Alejandra Joseph
7128 Foxcroft St.

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have. Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16? Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate. Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers. It is clear that the immediate region of 630,000 residents doesn’t have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally. Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don’t apply in 2023. I spent 10 years working as a top Safety Professional in warehousing and these are not good jobs for most people and employees have high injury rates, burnout, and are pushed at an unsafe pace for low pay.

Sincerely,
 Bobby Robinette

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project’s own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built? Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project. I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone’s morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety. What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the “ideal”) traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused? Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers. Please redo your traffic study to reflect the actual conditions of the surrounding area.

I-395.1

I spent 10 years working as a top Safety Professional in warehousing and these are not good jobs for most people and employees have high injury rates, burnout, and are pushed at an unsafe pace for low pay. Overworked underpaid truck drivers is not what we need traversing our neighborhoods.

Sincerely,
 Bobby Robinette

I-395.2

Letter I-395

Bobby Robinette

March 1, 2023

- I-395.1** This comment is a variation of Form Letter G – Traffic. As such, in response to this comment, please see Form Letter G Response.
- I-395.2** This comment is about the warehouse employee experience and raises concerns regarding trucks in neighborhoods. The warehouse worker comment does not raise any issues, questions or concerns about the analysis in the Draft EIR. As explained in the Urban Crossroads Transportation Responses to Comments (Appendix N-3), regarding trucks, the Project is designed to funnel trucks away from neighborhoods and onto approved truck routes. Only the Park and open space amenities will be accessible off of Barton Street; the parcels within the Campus Development can only be accessed via Cactus Avenue. Section 4.13, Public Services, explains that March JPA contracts with the Riverside County Sheriff's Department for 40 hours of patrol service per week. The commercial truck enforcement is paid through an existing truck route mitigation fund. Additionally, Section 4.15, Transportation, explains that to "enforce the utilization of the approved truck routes, PDF-TRA-3 directs the Project applicant to provide the March JPA with compensation of \$100,000 to fund a truck route enforcement for a period of two years." PDF-TRA-3 allows more targeted enforcement of truck routes during the initial phases of the Project as drivers become accustomed to the approved truck routes. As the Project builds out, drivers will become accustomed to the approved truck routes and the need for targeted enforcement will lessen. After the Project-funded targeted enforcement program winds down, enforcement activities will still occur, with each jurisdiction addressing any violations of their approved truck routes. Although Project Design Features are already part of the Project, they will also be included as separate conditions of approval and included in the MMRP. March JPA will monitor compliance through the MMRP.

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options. Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies? In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal. Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan? As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat. Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated, "The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein. b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred. Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning. Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business

park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process. Thank you for letting me comment on your project. Sincerely,
Bobby Robinette

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the study’s multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area. Specifically, I would like to ask: 1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section? 2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project? 3. Why were PFAS and perchlorate omitted in soil testing? 4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren’t tests related to radioactive materials or chemical weapons conducted in your analysis? 5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area. Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers. In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm. The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance. As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed. Thank you for allowing me to provide comments on this project.

I-398.1

I spent 10 years working as a top Safety Professional in warehousing and even warehouses that try to be green have a lot of hazardous waste still. Leaking oil, trash and debris are common.

Dear Mr. Fairbanks: Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community. I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Wildlife: 1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB. 2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old. Plant life: 1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life? 2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow? Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted. I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced? Thank you for allowing me to provide comments on this project.

Sincerely,
Bobby Robinette

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks, Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA’s website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley. The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics. The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as “less than significant”? Does the March JPA simply take the developer’s word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development? Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public. The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the “significant and unavoidable” noise impacts which you have identified will also negatively impact the daily lives of residents. The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you. The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don’t allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

I-400.1

When I moved to my current house 6 years ago, I was lied to and told the land behind my house was protected and nothing would be built. Now I see millions of square feet of disgusting warehouses behind my house sitting behind the first row on Meridian Pkwy. When is it enough? I don't think I will live in this community much longer at this rate and home values will plummet and extra money brought in by the warehouses will be lost with the blight.

I-400.2

Sincerely,
Bobby Robinette

Subject: Warehouses

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Cynthia Spring-Pearson

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses. The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,
Cynthia Spring-Pearson

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant

percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Cynthia Spring-Pearson

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¾ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,
Cynthia Spring-Pearson

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the study's multiple omissions and lack of comprehensive soil testing in the hazardous waste section. When construction begins, there will be significant disturbances in the soil, and when trucks begin driving into the complex, more than Diesel PM will be admitted. I urge the March JPA to require the applicant to perform comprehensive soil testing to ensure there are no harmful impacts on local residents from previous Military use of the project construction area.

Specifically, I would like to ask:

1. How did you determine which chemicals to test for and which to omit? Why was Diesel PM the only substance considered in the Human Risk Assessment section?
2. Why were known contaminants from other soil studies at the base not tested for in the soil studies for this project?
3. Why were PFAS and perchlorate omitted in soil testing?
4. What was stored in the munitions bunkers? Were there ever any radioactive materials or chemical weapons? How might this impact the health of surrounding areas when the bunkers are demolished? Why weren't tests related to radioactive materials or chemical weapons conducted in your analysis?
5. Why was soil testing only included in a few sections of the project construction area? Given the long time frame since the base was constructed and operated, contaminants are likely to have migrated. A systematic soil test panel should be conducted in a grid pattern for the entire construction area.

Given these deficiencies, I request that you include other hazardous chemicals in your analysis including PFAS, PFOS, perchlorate, trichloroethylene, perchloroethylene, radioactivity (within bunkers), and chemical weapons such as organo-phosphates, Agent Orange (or Agents White, Blue, Purple, Pink, Green), and any other that may have been stored in the weapons bunkers. I also request that you share with the public any information you have as to what was stored in the bunkers.

In addition, there was no discussion of how the PCB-contaminated soil was to be treated, given its concentration of well over a ppm.

The CEQA process requires that the Lead Agency evaluate and disclose environmental risks. Local residents deserve to know the potential risks to their health and this can only be disclosed with a full evaluation of the Weapons Storage Area that comprehensively evaluates and tests for potential contaminants prior to any soil disturbance.

As a Mitigation Measure, I ask that comprehensive soil and weapons bunker testing be performed to evaluate potential contaminants prior to issues and demolition or grading permits of the area. Should any hazardous materials be found in the soil or bunker in quantities that could be harmful during the project demolition phase, we ask that these materials be removed

Thank you for allowing me to provide comments on this project.

Sincerely,

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,
Cynthia Spring-Pearson

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. I await your detailed response.

Sincerely,
Cynthia Spring-Pearson

To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

This is an important issue to us and our family, community and city!

I-408.1

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project’s warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project’s land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: “Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base.” Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being “seriously” and “carefully” considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

I-408.2

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should “discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions” and “Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses.” How does building 4.7 million square feet of industrial warehouses that have “significant and unavoidable” noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how “the planning processing was designed to incorporate consensus of the adjacent communities, creation of a ‘Community Preference’ land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse” (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as

shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Thank you for letting me comment on your project.

Sincerely,

Erin Swinfard

Subject: West Campus Upper Plateau Project

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,jRQqk5UwbAPUXHiwScv06bB67d31CsKPKWEruJNe8xF5LEX245rbOqpMmdw9R6LffdDqhPXyjTS70kDsA7Rt5hr-lZza_l1sM7qpspYk0U,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone

(https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,D1skamqbx9pRuDdqPF6YdngzD0LORqA4SFY6zLCZkr_Ogx2L53sKyy1fVJHloztMgsRnDgrB4drETC

Hb1khM48gdM2FsSIECOU9f-YRt7uA_P1lhBA,,&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Jennifer Hernandez,
9054 Hope Ave.
Riverside CA 92503.

From: julie weatherford <julieweatherford@gmail.com>
Sent: Wednesday, March 1, 2023 11:06 AM
To: Dan Fairbanks
Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MIPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). As a lifelong Riverside resident and retired public health professional, I am very concerned about the Project's negative health impacts on residents of surrounding areas. The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I-410.1

As a Riverside resident and retired public health professional, I am concerned about negative health effects that the Project will have on residents of surrounding regions due to poor air quality. The project applicant conceded that there will be "significant and unavoidable" air quality impacts on surrounding residents. However, I still believe there are numerous deficiencies in the analysis and that it underestimates the air quality impacts.

I-410.2

Your analysis does not take into account the cumulative impacts of adjacent industrial developments that will be in various stages of construction during the project construction phase of this project. For example, the Sycamore Hills project, multiple Meridian South Campus buildings, the World Logistics Center, the Stoneridge Commerce Center, and dozens of others. Please include these impacts in both the local and regional analysis for the final EIR. The project also failed to properly measure the impact of Transport Refrigeration Units which typically idle for hours at a facility. We ask that the air quality and health-risk assessment be re-evaluated to properly account for the proposed cold-storage warehouse location, its much higher estimated emissions, and the impacts on the community of this type of high-intensity development. Finally, we ask that the project applicant apply the conservative AQMD rule 2305 weighted average truck trip rates, rather than the very optimistic ITE projections. Given the speculative nature of these warehouses, we believe it is important to be more conservative in truck trip rate projections - using the Rule 2305 numbers would almost double the daily truck trips.

I-410.3

Also, you have a responsibility to mitigate significant impacts on the surrounding community if possible. The developer of the Slover and Oleander warehouse project in the City of Fontana was compelled to implement several mitigations to reduce the impact on local residents, including installing solar panels so that tenants use 100% solar energy and creating a community benefit fund. At the very least, the Lewis Group should consider mitigations that have already been implemented in other projects in the local area to reduce air quality impacts. Can you explain why these mitigations were not considered in the DEIR for this site?

We would ask for significant mitigations to be put in place to reduce the impacts on local residents.

1. Require that 40% of the construction vehicles used in the project are battery-electric vehicles (or zero-emission equivalents)
2. Do not allow blasting - the disturbance of dirt, noise, and the potential negative impact on air quality during construction should not be allowed in close proximity to housing.

I also ask that you mitigate the impact on air quality by requiring occupants of the warehouses to have a significant percentage of trucks and cars to be electric. This is the least you can do to protect the surrounding community. I am aware that California regulations are supposed to convert trucks to electrical by 2045, but that will only be after decades of pollution poisoning our lungs. I request that a minimum of 50% of delivery vehicles be required to be battery electric vehicles at the project opening data of 2028, increasing to 100% by 2031. I also request that 30% of trucks be battery-electric (or equivalent zero-emission vehicles) by the project start date of 2028.

I also ask that the March JPA come up with a comprehensive plan for how these mitigations will be implemented and what the consequences will be if they are violated. Who will enforce the mitigations when the March JPA sunsets? How will you assure adjacent residents that our interests will be protected?

Thank you for the opportunity to comment.

Sincerely,
Julie Weatherford, MPH

Letter I-410

Julie Weatherford

March 1, 2023

I-410.1 This comment is the introductory paragraph of Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

I-410.2 This comment raises concerns about the health effects related to DPM. Recirculated Section 4.2, Air Quality, and Appendix C-2 assess the Project’s health risks. At R11 (971 Saltcoats Drive), the maximally exposed individual receptor (MEIR), the maximum incremental cancer risk attributable to Project construction-source DPM emissions is estimated at 4.57 in one million without mitigation and 0.56 in one million with mitigation, both of which are less than the SCAQMD significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01 with and without mitigation, which would not exceed the applicable threshold of 1.0.

For unmitigated operations, the residential land use with the greatest potential exposure to Project operational-source DPM emissions is Location R2 (20351 Camino Del Sol). At the unmitigated MEIR, the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 4.55 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be ≤ 0.01 , which would not exceed the applicable significance threshold of 1.0. At the mitigated MEIR -R12 (20620 Iris Canyon Road), the maximum incremental cancer risk attributable to Project operational-source DPM emissions is estimated at 2.23 in one million, which is less than the SCAQMD’s significance threshold of 10 in one million. At this same location, non-cancer risks were estimated to be <0.01, which would not exceed the applicable significance threshold of 1.0.

The nearest school is the preschool located at Grove Community Church (Location R8), the maximum incremental cancer risk impact attributable to Project construction without mitigation is calculated to be 0.44 in one million, and 0.05 in one million with mitigation, both of which are less than the significance threshold of 10 in one million. The maximum incremental cancer risk impact attributable to Project operations without mitigation is calculated to be 0.65 in one million and with mitigation is calculated to be 0.33 in one million, both of which are less than the significance threshold of 10 in one million. At this same location, non-cancer risks attributable to Project construction and operations were calculated to be <0.01 with and without mitigation, which would not exceed the applicable significance threshold of 1.0. As such, the Project construction and operations would not cause a significant human health or cancer risk to nearby school children. The Project would result in less than significant human health or cancer risks.

I-410.3 This comment is the same as Form Letter B – Air Quality. As such, in response to this comment, please see Form Letter B Response.

To: Dan Fairbanks
Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project. The project site comprises approximately 817.9 acres within the western portion of the March JPA planning subarea (according to documents posted on the JPA's website), located approximately half a mile west of Interstate 215 and Meridian Parkway, south of Alessandro Boulevard, north of Grove Community Drive, and east of Trautwein Road. It is surrounded on two sides by residential neighborhoods in the City of Riverside, on one side by a residential neighborhood within the County of Riverside, and is adjacent to the 215 freeway, more industrial developments, and ultimately the City of Moreno Valley.

The zoning designation in the draft EIR on pages 1-15 (35/916) calls for Mixed Use, Business Park, Industrial, Parks/Recreation/Open Space, and Public Facilities but when looking at the layout and footprint of this developed area, a majority of this construction will be used for warehouses (big and small). Appendix B (which is largely irrelevant as it is not part of this project which makes it misleading to the public) and Table 1-2 on page 1-17 (37/916) summarizes the impacts this project would have including Section 4.1 Aesthetics.

The Aesthetics section of the draft EIR holds an arbitrary standard of significance. In what universe does building mega-warehouses on a pristine open area of nature not significantly impact the aesthetics of the area? Even with mitigations, millions of square feet of boxy, concrete buildings will inevitably mar the beauty of scenic views. How does the developer justify their impacts as "less than significant"? Does the March JPA simply take the developer's word for it because this category is arbitrary and left to the developer to define? What about the perceptions of residents who live near the site or who frequent Orange Terrace Park or The Grove? I assure you that they would unanimously reject your impossibly low standard for aesthetics. Will the March JPA demand that the developer propose an alternate plan that truly considers aesthetics from the point of view of the people who live here? Why has the March JPA dismissed the voices of residents who asked for a plan that does not include warehouses or industrial development?

Furthermore, the images and justifications in the Aesthetics section of the draft EIR are misleading. Figures 4.1-3 to 4.1-7 show existing and proposed views from five different viewpoints (scenic vistas) surrounding the Upper Plateau. In each proposed view image, the graphic presentation of the warehouses is not consistent with any other warehouse or complex within the March JPA jurisdiction. If none of the surrounding buildings resemble the images presented, on what are they based? I also note that the proposed views are inaccurate based on the size and number of buildings being proposed, which is misleading to the public. Please redo your section so that the images reflect the actual layout of the proposed development with the correct number and size of building units. Please also use images that reflect the actual appearance of warehouses in the area. Otherwise, your images and your Aesthetics section are a fantasy and misleading to the public.

The construction of mega-warehouses in what is now a beautiful passive recreation area will also have effects beyond its non-visual impacts on the quality of life in the area. The persistent smell of diesel trucks and the "significant and unavoidable" noise impacts which you have identified will also negatively impact the daily lives of residents.

The March ARB General Plan was written more than 20 years ago and established a goal of repurposing former military land for public benefit and use and creating more jobs for residents of western Riverside County. The spirit of the

general plan was to reignite a community negatively impacted by the closing of March AFB. I object to the draft EIR and plan to build more warehouses on the West Campus Upper Plateau because the March JPA and the developer have largely ignored the general plan as it relates to public benefit. This large industrial mega-warehouse development holds no rational or experiential aesthetic beauty or value to residents (a home, a street of homes, a community, or a neighborhood) and visitors (a congregation and recreationists) to this land. It offers minimal low-paying jobs in exchange for destroying a public active and passive recreation area that offers residents and visitors beauty and value aesthetically. It is a shameful plan and the community, which I am a part of, demands better of you.

The March JPA and the developer have a duty to adhere to the March ARB General Plan and to follow the vision established in this document. You also have a duty to work with local communities to develop this land in conjunction with the people and municipalities that make up the Joint Powers Commission. The West Campus Upper Plateau project should be reconsidered and reasonable alternative configurations should be developed, limiting the negative impacts developing this land will have on aesthetics and the residents who will have to live with this development for decades to come. Please don't allow one final grand act of poor land use planning be your lasting legacy. Please listen to those people who will need to live with your decisions for decades. I await your detailed response.

Sincerely,

Kristine Doty

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can. Open spaces are fast dwindling and are essential to the health of our community.

Wildlife:

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life:

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

Sincerely,

<include name, address, email in signature line>

Subject: West Campus Upper Plateau, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

As a member of the community, I am disappointed that none of the alternative plans consider non-industrial uses, especially since the current plan sparked the formation of a grassroots community group that has opposed it for more than a year. Why did each of the alternative plans include 143 acres of industrial zoning? The area is zoned C-2, much like the surrounding area, which could include residential, commercial, and recreational uses as long as they are low-density. Please specify what other land uses C-2 zoning allows and why you chose not to pursue these options.

Under Planning Process C1F, the Final Reuse Plan (1996) reads: "Serious and careful consideration will be given to the wishes of existing land users and owners in areas adjacent to the base." Given that this industrial complex is surrounded on more than three sides by residential homes and that residents have submitted over 2,500 signatures, hundreds of emails, and dozens of comments at public meetings opposing the project; how is our feedback being "seriously" and "carefully" considered? What significant reductions in warehouse acreage have been made to the project as a result of the extensive opposition? Specifically, how has it impacted the industrial zoning footprint or the alternative plans? If the answer is that it has not, how do you justify your disregard for the community opposition in relation to your own policies?

In your General Plan (1999) Goal 2, Policies 2.3 and 2.4 state that the land uses should "discourage land uses that conflict or compete with the services and/or plans of adjoining jurisdictions" and "Protect the interest of, and existing commitments to adjacent residents, property owners, and local jurisdictions in planning land uses." How does building 4.7 million square feet of industrial warehouses that have "significant and unavoidable" noise and air quality impacts protect adjacent residents? Please specify in what ways this project fulfills this goal.

Historically, the West Campus Upper Plateau was never intended to be an industrial zone. In the initial planning process, the Final Reuse Plan (1996) describes how "the planning processing was designed to incorporate consensus of the adjacent communities, creation of a 'Community Preference' land use plan consistent with the goals of the community relative to base reuse, and to maximize the opportunity for citizen involvement with base reuse" (Final Reuse Plan, 1996, p. II-v). In what specific ways have you incorporated Community Preference in the development of your plan?

As part of the Base Realignment and Closing (BRAC) process, four specific land use alternatives were considered as shown in Exhibits A, B, C, and D in the Final Reuse Plan. Exhibit B is the Alternative Pattern with the largest space reserved for 'Industrial/Warehousing' uses and it explicitly shows 'Industrial/warehousing' land-use was only considered

within the first ¼ mile of the 215 Freeway; the West Campus Upper Plateau was a separate Business Park category for less intense land-uses. The adopted 1999 General Plan reflects the planning assumptions and again designates the West Campus Upper Plateau as Business Park or reserved space for the previously endangered Stephen's Kangaroo Rat.

Moreover, the Draft General Plan 2010 "Draft Vision 2030" Section 2.2.24 stated,

"The Meridian West area shall be developed to provide a variety of land uses that will lead to the creation of high-paying jobs while protecting the environmental resources located therein.

b) The Meridian West area should include an appropriate land use mix to emphasize the interaction between Office, Business Park and Park, Recreation and Open Space

d) When planning and approving future projects within the Meridian West area, projects that provide large quantities of high-paying jobs (such as corporate offices), high-technology jobs, and jobs related to the green building industry are preferred.

Therefore, the historical precedent of the Final Reuse Plan (1996), General Plan (1999), and Draft General Plan (2010-never adopted) are clear. The West Campus Upper Plateau was never considered for intensive Industrial/Warehousing uses in any EIR or planning process that involved community meetings. All March JPA planning documents clearly indicate that warehouse uses should observe appropriate setbacks and be compatible with adjacent land uses to protect adjacent residential zoning.

Within the last year, community members have presented a clear and consistent pattern of opposition to the proposal to 'upzone' the land use as specified in the General Plan from Business Park to Industrial. Community members have submitted petitions with thousands of signatures opposing the Project, provided hundreds of public comments, and commented in multiple Developer-hosted community meetings in opposition to the planned warehouse complex next to residential communities in Orangecrest, Mission Grove, and Camino del Sol. The Project is incompatible with the General Plan, Final Reuse Plan, Draft General Plan, and Community Preference land use. Therefore, I urge the March JPA to reject any Specific Plan that includes more than 50 total acres of warehouses in any zoning type (industrial, business park, mixed-use) as incompatible with its pledge to maximize community preference and protect existing residential property owners in its planning process.

Please consider the requests of the community who will be impacted by this project

Sincerely,

K.Doty

Subject: No warehouses in Riverside neighborhoods

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

The justification for this widely opposed project appears to be the creation of 2,600 jobs. How did the applicant identify this number? On what was it based? There is no analysis that I can find to justify this assertion. Please provide any analysis that you may have.

Your Greenhouse Gas (GHG) section claims that your development will have a net positive effect because local community members will have less of a commute driving to work. Who in the surrounding neighborhoods would be able to afford their rent with the temporary, part-time, low-paying work that most warehouses provide? On what did you base the assumption that local residents would work in that particular industrial complex? On what did you base your VMT? How did you create the traffic models assuming 21-mile commutes would be shortened to 16?

Please justify your data. Gather information about who works at warehouses, how far they commute, how much they make on an average week, and how that might compare to median home prices in the area. I think you will find that your job and greenhouse gas assumptions are wildly inaccurate.

Moreover, the cumulative impact of approved and planned warehouses already in the region FAR exceeds the number of available employees in this region. The current unemployment rate is at a 50-year low and there are over 4,000 acres of approved and planned warehouses in the 215/60 corridor - at 8.8 jobs/acre, that is over 35,000 jobs. However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.riversideca.gov%2fcedd%2feconomic-development%2fdata-reports%2fdata-dashboard&c=E,1,1xK_fOaq65k7XcQHeOnZdlDugLMdBoAJ2kyiCJxUfl4ROv6IhzShI7A34uyObyurAOdnAZQMbjeA27yx51L1TUhJddoMYvHUQoG8zgeb4OJmRQ,,&typo=1), that leaves about 11,000 total unemployed people in the region.

If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://linkprotect.cudasvc.com/url?a=https%3a%2f%2fwww.moval.org%2fcdd%2fpdfs%2fprojects%2fwlc%2fwcl-deir0213.pdf%2c&c=E,1,zWwyl8sjWEtpAupkpxrSGHisz->

NqXyUy2WEUeUxnnwzA9YHQezYVfOqkQsIfNqR7DNrSaFMFdFtN_CM7-eh8TwF_xqIptYJ89-3vnSK42Ozy&typo=1 p.4.10-32). It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect. This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project.

Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035? Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates.

Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful. Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

RE: Public comment on record for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the traffic section of the document. First and foremost, **the traffic analysis does not include the 215 Freeway or the 215/60 corridor, a path most, if not all, the trucks will take to access the warehouses.** The 215 freeway is within 0.5 miles of the project and the project's own traffic estimates indicate that approximately 20,000 additional trips will take the 215 Freeway. Therefore, CalTrans should have been consulted according to standard WRCOG and County of Riverside Transportation Planning guidance documents. This is a significant deficiency in your analysis, especially when you consider that your traffic analysis failed to account for the myriad of approved construction projects in and around the site such as the World Logistics Center, the Stoneridge Commerce Center, and dozens of other approved or planned projects. You also exclude major streets surrounding the development like Alessandro, Krameria, and Van Buren. **How do you justify not considering the main Truck Traffic Routes of the March JPA and the primary freeways in the area? Why did you exclude known construction projects that have already been permitted to be built?**

Please redo your traffic section to include the 215 and the 215/60 corridor, other known construction projects in the area, and the adjacent truck routes of Alessandro, Krameria, and Van Buren into account. Anyone who lives here knows that at any time of day, the 215 is bumper-to-bumper, filled with trucks, and undrivable, even though the industrial footprint will be doubling in the next few years without this project.

I also have concerns about how traffic will affect our arterial streets. Your analysis assumes drivers will stick to approved paths, but we know from experience this is not the case. For instance, on Feb. 2 a semi-truck with an overturned shipping container blocked traffic on Alessandro and Trautwein for several hours, disrupting everyone's morning commute and trapping people in the Orangecrest and Mission Grove neighborhoods. This is but one example of trucks not following the enforcement codes and using our arterial roads such as Alessandro/Central and Van Buren, increasing traffic and endangering public safety.

What are the enforcement mechanisms to ensure the supposed mitigation of traffic? Who pays for this enforcement? When the JPA sunsets, who ensures that mitigation measures are followed for maintenance and enforcement? How might the traffic study change if actual (versus the "ideal") traffic patterns of truck drivers were taken into account? For instance, has there been a study done of EIR predictive numbers versus the actual traffic patterns in existing warehouses? How did the predictions match reality, and why should we trust your analysis to be accurate if past ones underestimated the traffic disruption they caused?

Anyone driving down Central or Van Buren can tell you that truck drivers are not following the agreed-upon paths, and it is not right to leave the burden of maintenance and enforcement to City or County public service officers.

Please redo your traffic study to reflect the actual conditions of the surrounding area. Thank you!

Sincerely,

Lori Nelson

RE: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks:

Thank you for the opportunity to provide comments on the March Joint Powers Authority (MJPA) Draft Environmental Impact Report (EIR) on the West Campus Upper Plateau Project (the Project). The Project would site over 4.7 million square feet of total warehouse space surrounded on three sides by residential neighborhoods located within the City of Riverside and County of Riverside. The Project's warehouses are sited within 500 feet of residents, a proposed park, and reserved passive recreation areas; it is less than a quarter mile from a preschool and the entire project is sited within a 1,500-foot range of residential homes. The draft EIR does not properly analyze the Project's land use, air quality, traffic, health risk assessment, hazards and hazardous materials, biological resources, geology and soils, greenhouse gas emissions, and population and housing sections. It also fails to consider or provide non-industrial alternatives to the Project as consistently requested by the community.

I have serious concerns about the shrinking of open spaces and destruction of habitat, and I ask that you require the project applicant to make every effort to preserve endangered and threatened species and plant life that you can.

Wildlife

1. The applicant should expand their analysis to include the Western Riverside County MSHCP Species Observations Database which contains much more data for our region than does CNDDDB.
2. Are any of the wildlife studies over a year old? My understanding is that the final EIR should include wildlife studies from within a year timeframe to satisfy the requirements of the California Department of Fish and Game or U.S. Fish and Wildlife Service. Please redo studies that are more than a year old.

Plant life

1. Why is the coastal scrub documented in some parts of the EIR and then considered absent in the plant section? How would including it in the plant section potentially impact the significance level of the development on plant life?
2. Some rare plants, including the severely threatened tarplant, thrive in moist environments. Why did you conduct the plant survey during a drought year? How can you say it is absent or assess the significance of impact unless you have documented its absence during a year and season where the rare plant life would grow?

Given these deficiencies, I request that you include the coastal scrub documented in the plant section and address how this might impact the significance level. I also ask that you survey severely threatened plants like the tarplant during the wet season in a non-drought year to verify its absence. The public cannot trust that we are not destroying rare plant life unless a more thorough survey is conducted.

I also request that you determine what will happen when the March JPA sunsets. Who will be tasked with enforcing mitigations for the habitat? How can you ensure the public that these mitigation measures will be enforced?

Thank you for allowing me to provide comments on this project.

However, in the cities of Riverside, Moreno Valley, Perris, and unincorporated Mead Valley, there are about 630,000 residents (318k Riverside, 212k Moreno Valley, 80k Perris, 20k Mead Valley). There are about 300,000 people in the labor force - (age 16+, labor force participation rate 62%). At a 3.6% unemployment rate (<https://www.riversideca.gov/cedd/economic-development/data-reports/data-dashboard>), that leaves about 11,000 total unemployed people in the region. If the average warehouse is generating 8.8 jobs/acre, and there are over 3,000 acres of warehouses approved (World Logistics Center = 2600 acres, Stoneridge Commerce Center = 600 acres, ignore the other 30 warehouses), those two warehouse complexes will generate 25,000+ jobs. The World Logistics Center Draft EIR estimated 34,000+ jobs for that project alone (<https://www.moval.org/cdd/pdfs/projects/wlc/wcl-deir0213.pdf>, p.4.10-32).

It is unlikely that all 11,000 of the unemployed people in the region can or want to work at warehouses, so maybe 50% can work in warehouses. That still leaves a shortage of well over 20,000 jobs and population growth (<1% per year) in our region is not going to add sufficient workers to make up the difference, especially with housing prices being so high and unaffordable for low-wage workers.

It is clear that the immediate region of 630,000 residents doesn't have the workforce to support ANY additional warehouse jobs. The only way to fill these jobs is by importing long-range commuters from outside the region, areas like Hemet and San Jacinto. This demonstrates that the VMT/employee estimates indicating shorter commutes is incorrect.

This project will further exacerbate housing stress by requiring workers that commute from well outside of a 15-mile radius of the project. Even if allowed for your faulty assumption that locals would commute to the site: how would your analysis change if you account for automation in warehouses? Or the fact that Californians are required to purchase electric vehicles by 2035?

Given that your own job numbers are based on the year 2045, your analysis for GHG use should account for these in its estimates. Please justify your current VMT/employee estimates using actual job/population/housing estimates from the last 3 months rather than 7-year-old SCAG projections that are completely incorrect. It is obvious that the region does not have the capacity to staff these warehouses locally.

Thank you for allowing me the opportunity to comment. Please consider more appropriate alternatives such as single-family residential that would actually serve to improve the real-world jobs-housing imbalance; housing is expensive, whereas warehouse jobs are plentiful.

Please stop solving the problems of 1996 when they don't apply in 2023.

Sincerely,

Maria Estabrooks

Subject: Public comment for the West Campus Upper Plateau Project, Environmental Impact Report, State Clearinghouse No. 2021110304

Dear Mr. Fairbanks,

Thank you for considering my comments on the March JPA West Campus Upper Plateau project.
