# 1 SUMMARY OF FINDINGS

This report presents the results of the traffic analysis (TA) for the proposed West Campus Upper Plateau (Project), which is within the jurisdiction of the March Joint Powers Authority (March JPA) and located west of Cactus Avenue's current terminus, to the east and south of the Mission Grove neighborhood, and to the north of the Orangecrest neighborhood in the City of Riverside, California, as shown on Exhibit 1-1. The Project would include the extensions of Cactus Avenue, Brown Street, and Barton Street.

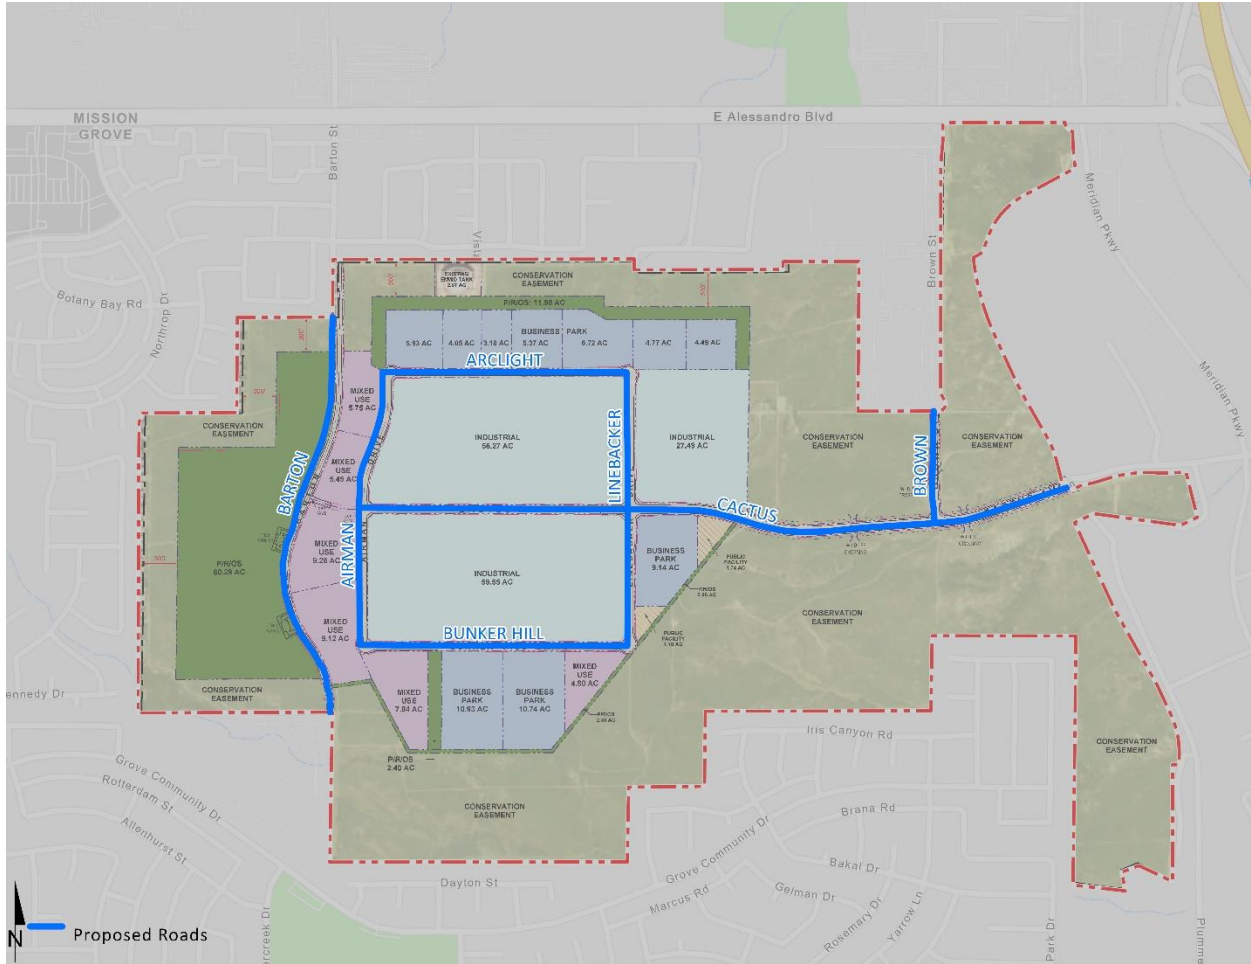

The purpose of this TA is to evaluate the potential circulation system deficiencies that may result from the development of the proposed Project, and where necessary recommend improvements to achieve acceptable operations consistent with General Plan level of service goals and policies. This traffic study has been prepared in accordance with the March JPA's Final Traffic Impact Study Preparation Guide (February 2020), guidance from the California Department of Transportation (Caltrans), and through consultation with March JPA, County of Riverside, City of Riverside, and City of Moreno Valley staff during the scoping process. (1) The Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TA.

## 1.1 SUMMARY OF FINDINGS

The Project is to construct the following improvements as design features in conjunction with development of the site:

- Project to construct signalized intersections at along Cactus Avenue at Airman Drive, Linebacker Drive, and Brown Street.
- Cactus Avenue will be constructed to its ultimate cross-section as a Modified Secondary Highway from Linebacker Drive to the easterly Specific Plan boundary with a 98-foot right-of-way and 76-foot curb-to-curb pavement width. Cactus Avenue will be constructed to its ultimate cross-section as a Modified Industrial Collector west of Linebacker Drive to Airman Drive with a 76-foot right-of-way and 54-foot curb-to-curb pavement width. However, the eastbound approach of Cactus Avenue towards Linebacker Drive will require additional right-of-way to accommodate the lane geometrics needed at the intersection (2<sup>nd</sup> eastbound through).
- Barton Street will be constructed to its ultimate cross-section as a Collector from the existing northerly and southerly termini with a 66-foot right-of-way and 40-foot curb-to-curb pavement width consistent with the City of Riverside's Circulation Element. Once completed, the roadway will provide a connection between the existing Mission Grove community to the north and Orangecrest community to the south
- Brown Street will be constructed to its ultimate cross-section as an Industrial Collector from its existing terminus south of Alessandro Boulevard to Cactus Avenue with a 78-foot right-of-way and 56-foot curb-to-curb pavement width.
- Other streets internal to the Specific Plan such as Arclight Drive, Airman Drive, Bunker Hill Drive, and Linebacker Drive will be constructed at their ultimate cross-section as Modified Industrial Collectors that have a 76-foot right-of-way with 54-foot curb-to-curb pavement width.

**EXHIBIT 1-1: PRELIMINARY LAND USE PLAN**

Additional details and intersection lane geometrics are provided in Section 1.6 *Recommendations* of this report.

The development of the proposed Project is anticipated to require the construction of off-site improvements, in conjunction with additional improvement needs at off-site intersections for future traffic analysis scenarios where the Project would contribute traffic (as measured by 50 or more peak hour trips). As such, the Project Applicant's responsibility for the Project's contributions towards off-site intersection deficiencies is fulfilled through a combination of construction, payment of fair share, and/or participation in the pre-existing fee programs that would be assigned to construction of the identified recommended improvements (see Section 9 *Local and Regional Funding Mechanisms*).

## 1.2 PROJECT OVERVIEW

The Project site is located on either side of Barton Street and Cactus Avenue in the jurisdiction of the March Joint Powers Authority (March JPA) and unincorporated Riverside County. Interstate 215 (I-215) is located approximately 2.5 miles east of the Project site via Cactus Avenue, Alessandro Boulevard, and Van Buren Boulevard. Cactus Avenue will not extend west of Airman Drive to Barton Street; however, an emergency vehicle access (EVA) only connection will be maintained and not be accessible by any vehicular traffic.

The proposed Project (see Exhibit 1-1) consists of the following uses:

- Building B – 1,250,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 587,000 SF of high-cube fulfillment center warehouse use
- Industrial Area – 725,561 SF of high-cube fulfillment center warehouse use and 500,000 SF of high-cube cold storage warehouse use
- Business Park Area – 1,280,403 SF of business park use
- Mixed Use Area – 160,921 SF of retail use (25%)
- Mixed Use Area – 482,765 SF of business park use (75%)
- 42.20 Acre Active Park (with sports fields)
- 18.08 Acres of Public Park
- The proposed Project also includes an approximately 445-acre Conservation Area that is not anticipated to generate traffic.

The proposed Project is anticipated to generate a total of 35,314 trip-ends per day with 1,761 AM peak hour trips, 3,389 PM peak hour trips, and 1,642 Saturday peak hour trips (in actual vehicles). The assumptions and methods used to estimate the Project's trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

### 1.3 ANALYSIS SCENARIOS

For the purposes of this TA, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2021) Conditions
- Existing plus Project (E+P) Conditions
- Existing plus Ambient Growth plus Project (EAP)
- Opening Year Cumulative (2028) Without Project Conditions
- Opening Year Cumulative (2028) With Project Conditions
- Horizon Year (2045) Without Project Conditions
- Horizon Year (2045) With Project Conditions

#### 1.3.1 EXISTING (2021) CONDITIONS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic data based on an adjustment of both historic (2019) traffic count data and new (2021) traffic count data collected in November 2021. Traffic counts were adjusted due to the currently ongoing COVID-19 pandemic. Adjusted factors was calculated based on historic (2019) traffic counts in conjunction with a 2.0% per year growth rate (compounded annually) to reflect 2021 conditions and compared to new (2021) traffic count data at the same intersections. Other locations where historic count data was not available, the traffic counts were adjusted and increased from the 2021 collected data based on a factor derived from the locations with both historic and 2021 traffic count data.

#### 1.3.2 EXISTING PLUS PROJECT CONDITIONS

The E+P analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic. This analysis scenario is a hypothetical analysis scenario in which Project traffic is added to existing traffic without any additional growth; however, the analysis has been presented for the purposes of identifying improvement needs that are attributable to the addition of Project traffic alone.

#### 1.3.3 EXISTING PLUS AMBIENT GROWTH PLUS PROJECT (EAP) (2028) CONDITIONS

The EAP (2028) analysis determines traffic deficiencies that would occur on the existing roadway system with the addition of Project traffic along with additional ambient background traffic that is calculated at 2.0% per year compounded annually over 7 years, or 14.87%.

#### 1.3.4 OPENING YEAR CUMULATIVE (2028) CONDITIONS

The Opening Year Cumulative (2028) conditions analysis determines the potential near-term cumulative circulation system deficiencies. To account for background traffic growth, traffic associated with other known cumulative development projects in conjunction with an ambient growth from Existing (2021) conditions of 14.87% is included for Opening Year Cumulative (2028) traffic conditions (2.0% per year compounded annually over 7 years). A list of cumulative

development projects was compiled from information provided by the March JPA and is consistent with other recent studies in the study area. Relevant projects from other nearby agencies (including the cities of Moreno Valley and Riverside as provided by those respective agencies) have also been included for the purposes of this TA.

### **1.3.5 HORIZON YEAR (2045) CONDITIONS**

Traffic projections for Horizon Year (2045) with Project conditions were derived from the latest Riverside Transportation Analysis Model (RIVCOM). The Horizon Year (2045) conditions analysis has been utilized to determine if improvements funded through regional transportation fee programs, such as the Development Impact Fee (DIF) program or Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF), or other approved funding mechanisms can accommodate the long-range cumulative traffic at the target level of service (LOS) identified by the March JPA (lead agency). Other improvements needed beyond the “funded” improvements (such as localized improvements to non-DIF facilities) are identified as such.

## **1.4 STUDY AREA**

To ensure that this TA satisfies the March JPA’s requirements, Urban Crossroads, Inc. prepared a Project TA scoping package for review by March JPA staff prior to the preparation of this report. The Agreement provides an outline of the Project study area, trip generation, trip distribution, and analysis methodology. The agreement is included in Appendix 1.1 of this TA. The scoping agreement was also shared with the County of Riverside, City of Riverside, and City of Moreno Valley for review and comment, and those comments have also been taken into consideration as part of this TA.

The following 38 study area intersections shown on Exhibit 1-2 and listed in Table 1-1 were selected for this TA based on consultation with March JPA staff. The “50 peak hour trip” criterion generally represents a minimum number of trips at which a typical intersection would have the potential to be affected by a given development proposal. Although each intersection may have unique operating characteristics, this traffic engineering rule of thumb is a widely utilized tool for estimating a potential area of influence (i.e., study area). Other analysis intersections, within the adjacent cities were not selected for evaluation as the Project is anticipated to contribute less than 50 weekday peak hour trips.

### **1.4.1 INTERSECTIONS**

The following 38 study area intersections listed in Table 1-1 and shown on Exhibit 1-2 were selected for this TA.

EXHIBIT 1-2: LOCATION MAP

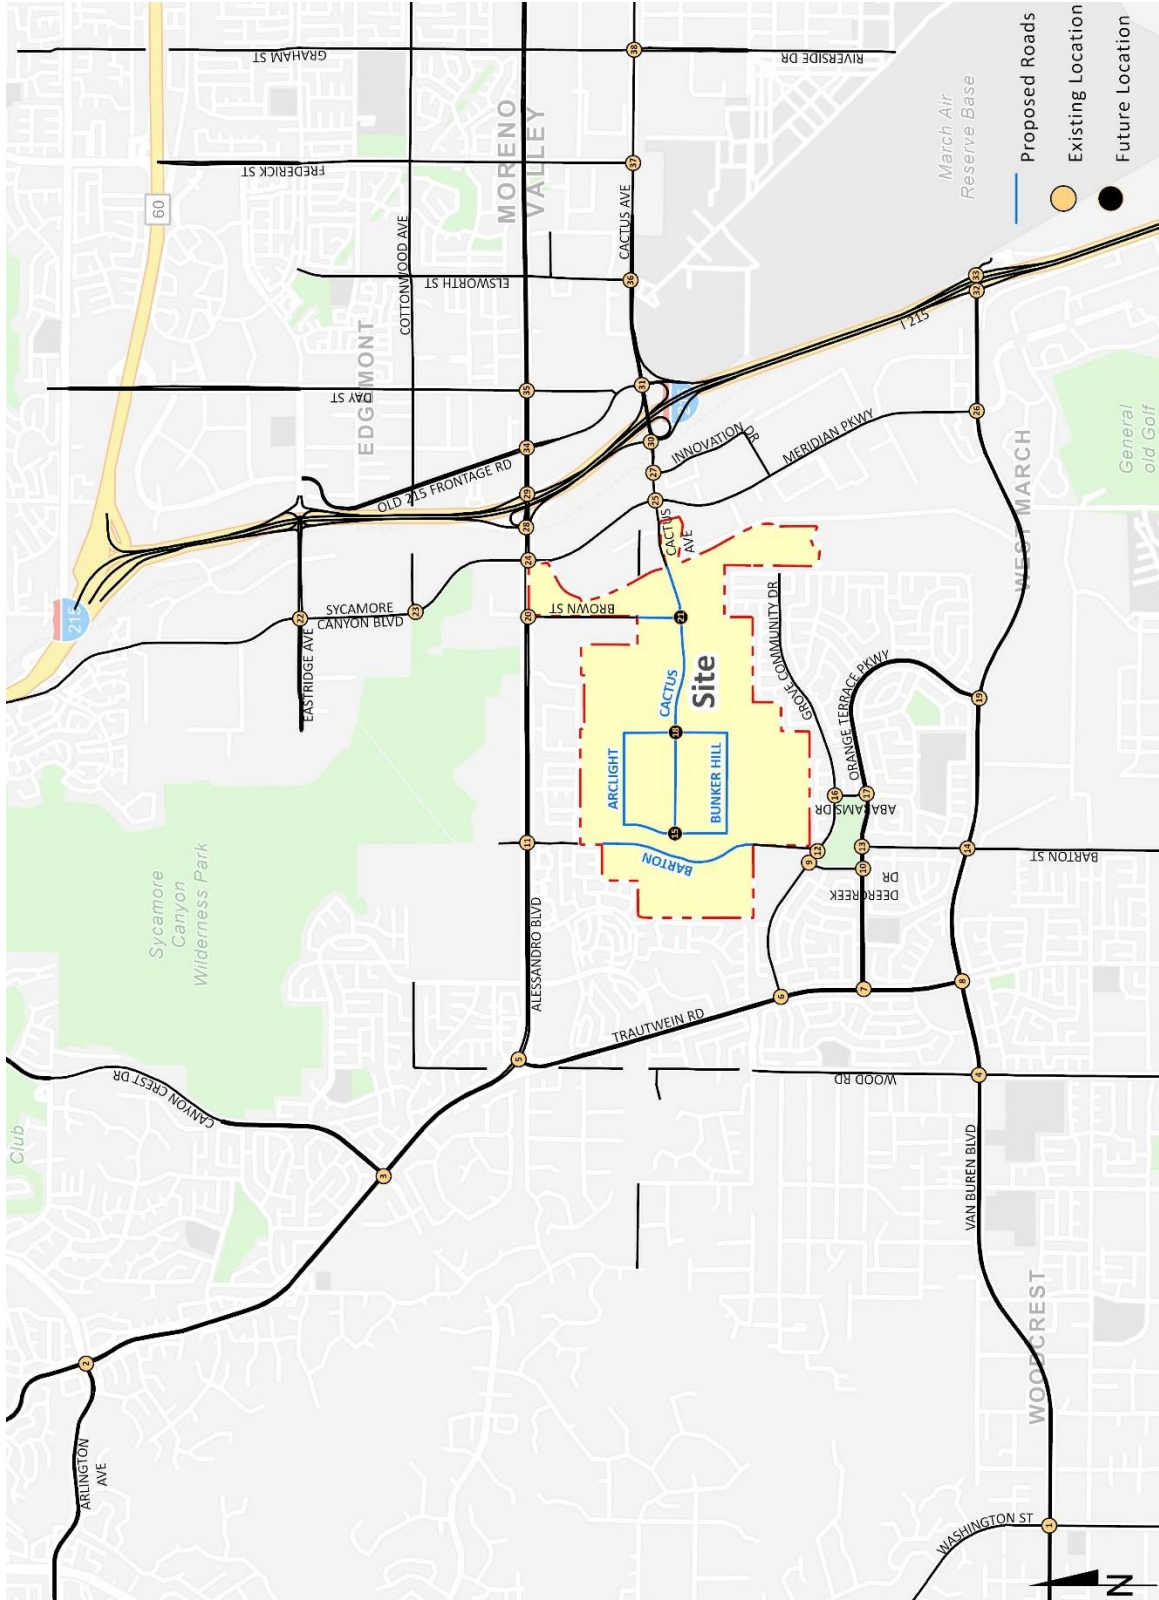

TABLE 1-1: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction	CMP?
1	Washington St. & Van Buren Blvd.	County of Riv.	No
2	Alessandro Blvd. & Arlington Av./Chicago Av.	City of Riverside	No

35	Day St. & Alessandro Blvd.	City of Moreno Valley	No
36	Elsworth St. & Cactus Av.	City of Moreno Valley	No
37	Frederick St. & Cactus Av.	City of Moreno Valley	No
38	Graham St./Riverside Dr. & Cactus Av.	City of Moreno Valley	No

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and most recently updated in 2019 as part of the Riverside County Long Range Transportation Study. The Riverside County Transportation Commission (RCTC) adopted the 2019 CMP for the County of Riverside in December 2019. (2) There are no study area intersections identified as a Riverside County CMP intersection.

#### 1.4.2 ROADWAY SEGMENTS

Pursuant to the approved scoping agreement, the following study area roadway segments have been evaluated for the purposes of this TA (see Exhibit 1-2 and Table 1-2):

**TABLE 1-2: ROADWAY SEGMENT ANALYSIS LOCATIONS**

ID	Roadway Segment	Limits	Jurisdiction
1	Alessandro Bl.	Trautwein Rd. to Mission Grove Pkwy.	City of Riverside
2	Alessandro Bl.	Mission Grove Pkwy. to Barton St.	City of Riverside
3	Alessandro Bl.	Barton St. to Brown St.	County of Riverside, City of Riverside, March JPA
4	Alessandro Bl.	Brown St. to Meridian Pkwy.	County of Riverside, City of Riverside, March JPA
5	Alessandro Bl.	Meridian Pkwy. to I-215 Freeway	County of Riverside, JPA, Caltrans

## 1.5 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 3 *Existing Traffic Conditions*, Section 5 *E+P Traffic Conditions*, Section 6 *EAP (2028) Traffic Conditions*, Section 7 *Opening Year Cumulative (2028) Traffic Conditions*, and Section 8 *Horizon Year (2045) Traffic Conditions* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Exhibit 1-3 for study area intersections and Exhibit 1-4 for study area roadway segments. For the purposes of this analysis, the minimum LOS at study area intersections and roadway segments for all applicable agencies is LOS D.

### 1.5.1 EXISTING (2021) CONDITIONS

#### *Intersections*

The following study area intersections are currently operating at an unacceptable LOS during one or more peak hours under Existing (2021) traffic conditions:

- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS E AM peak hour; LOS F PM peak hour
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM peak hour only
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS E AM peak hour only
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM peak hour only
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only
- I-215 NB Ramps & Cactus Av. (#31) – LOS E AM peak hour only
- Elsworth St. & Cactus Av. (#36) – LOS F AM peak hour; LOS E PM peak hour

#### *Roadway Segments*

The following study area roadway segment is currently operating at an unacceptable LOS under Existing (2021) traffic conditions:

- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS E

#### *Off-Ramp Queuing Analysis*

A queuing analysis was performed for the I-215 Freeway off-ramps at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard for Existing (2021) traffic conditions. The analysis indicates there are currently no queuing issues that may potentially “spill back” onto the I-215 Freeway mainline at the study area interchanges

## 1.5.2 E+P CONDITIONS

### *Intersections*

The study area intersections are anticipated to continue to operate at an acceptable LOS during the peak hours with the addition of Project traffic (for E+P traffic condition), with the exception of the following intersections, which are in addition to those identified previously under Existing (2021) traffic conditions:

- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS E AM peak hour; LOS F PM peak hour
- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS F PM peak hour only

### *Roadway Segments*

The following additional study area roadway segments are anticipated to operate at an unacceptable LOS under E+P traffic conditions, in addition to the location previously identified under Existing (2021) traffic conditions:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

### *Off-Ramp Queues*

There are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for E+P traffic conditions, consistent with Existing (2021) traffic conditions.

## 1.5.3 EAP (2028) CONDITIONS

### *Intersections*

The following study area intersections are anticipated to operate at an unacceptable LOS during one or more peak hours under EAP (2028) traffic conditions, in addition to those locations identified previously under Existing (2021) traffic conditions:

- Washington St. & Van Buren Bl. (#1) – LOS E AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS E AM peak hour; LOS F PM peak hour
- Wood Rd. & Van Buren Bl. (#4) – LOS E AM and PM peak hours
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS E AM peak hour only
- Trautwein Rd. & Van Buren Bl. (#8) – LOS E AM peak hour only
- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours

- Meridian Pkwy. & Cactus Av. (#25) – LOE E AM peak hour; LOS F PM peak hour

### *Roadway Segments*

The following study area roadway segments are anticipated to operate at an unacceptable LOS under EAP (2028) traffic conditions:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

### *Off-Ramp Queues*

There are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for EAP (2028) traffic conditions, consistent with Existing (2021) traffic conditions.

## **1.5.4 OPENING YEAR CUMULATIVE (2028) CONDITIONS**

### *Intersections*

The following study area intersections are anticipated to operate at an unacceptable LOS during one or more peak hours under Opening Year Cumulative (2028) Without Project traffic conditions:

- Washington St. & Van Buren Bl. (#1) – LOS F AM and PM peak hours
- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS F AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS F AM and PM peak hours
- Wood Rd. & Van Buren Bl. (#4) – LOS F AM and PM peak hours
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM peak hour only
- Trautwein Rd. & Grove Community Dr. (#6) – LOS E AM peak hour only
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS F AM peak hour only
- Trautwein Rd. & Van Buren Bl. (#8) – LOS F AM and PM peak hours
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Alessandro Bl. (#11) – LOS E AM peak hour only
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM and PM peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS E AM peak hour; LOS F PM peak hour
- Meridian Pkwy. & Van Buren Bl. (#26) – LOS F AM and PM peak hours
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only

- I-215 NB Ramps & Cactus Av. (#31) – LOS F AM and PM peak hours
- I-215 SB Ramps & Van Buren Bl. (#32) – LOS F PM peak hour only
- Old 215 Frontage Rd. & Alessandro Bl. (#34) – LOS E AM peak hour only
- Elsworth St. & Cactus Av. (#36) – LOS F AM and PM peak hours
- Frederick St. & Cactus Av. (#37) – LOS E AM peak hour only

With the addition of Project traffic, the following additional study area intersection is anticipated to operate at a deficient LOS during one or more peak hours:

- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours

#### *Roadway Segments*

The following study area roadway segments are anticipated to operate at an unacceptable LOS under Opening Year Cumulative (2028) Without Project traffic conditions:

- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS F
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

With the addition of Project traffic, the following additional study area roadway segments are anticipated to operate at a deficient LOS:

- Alessandro Bl., from Meridian Pkwy. to I-215 Freeway (#5) – LOS E
- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E

#### *Off-Ramp Queues*

There are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2028) Without and With Project traffic conditions, consistent with Existing (2021) traffic conditions.

### **1.5.5 HORIZON YEAR (2045) CONDITIONS**

#### *Intersections*

The following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Horizon Year (2045) Without Project traffic conditions:

- Washington St. & Van Buren Bl. (#1) – LOS F AM and PM peak hours
- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS F AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS F AM and PM peak hours
- Wood Rd. & Van Buren Bl. (#4) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM and PM peak hours

- Trautwein Rd. & Grove Community Dr. (#6) – LOS E AM peak hour only
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS F AM and PM peak hours
- Trautwein Rd. & Van Buren Bl. (#8) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Alessandro Bl. (#11) – LOS F AM and PM peak hours
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS F AM, PM, and Saturday peak hours
- Brown St. & Alessandro Bl. (#20) – LOS E AM peak hour only
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM and PM peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS F AM and PM peak hours
- Meridian Pkwy. & Van Buren Bl. (#26) – LOS F AM and PM peak hours
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only
- I-215 NB Ramps & Cactus Av. (#31) – LOS F AM and PM peak hours
- I-215 SB Ramps & Van Buren Bl. (#32) – LOS F AM and PM peak hours
- Old 215 Frontage Rd. & Alessandro Bl. (#34) – LOS F AM peak hour only
- Day St. & Alessandro Bl. (#35) – LOS F AM peak hour; LOS E PM peak hour
- Elsworth St. & Cactus Av. (#36) – LOS F AM and PM peak hours
- Frederick St. & Cactus Av. (#37) – LOS F AM peak hour only
- Graham St./Riverside Dr. & Cactus Av. (#38) – LOS F AM and PM peak hours

With the addition of Project traffic, the following additional study area intersections are anticipated to operate at a deficient LOS during one or more peak hours:

- Orange Terrace Pkwy. & Van Buren Bl. (#19) – LOS E PM peak hour only
- I-215 SB Ramps & Cactus Av. (#30) – LOS F PM peak hour only

#### *Roadway Segment Capacity Analysis*

The following study area roadway segments are anticipated to operate at an unacceptable LOS under Horizon Year (2045) Without Project traffic conditions:

- Alessandro Bl. from Trautwein Rd. to Mission Grove Pkwy. (#1) – LOS F
- Alessandro Bl. from Mission Grove Pkwy. to Barton St. (#2) – LOS E
- Alessandro Bl. from Barton St. to Brown St. (#3) – LOS E
- Alessandro Bl. from Brown St. to Meridian Pkwy. (#4) – LOS E
- Alessandro Bl. from Meridian Pkwy. to I-215 Freeway (#5) – LOS F
- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS F
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

With the addition of Project traffic, the following additional study area roadway segments are anticipated to operate at a deficient LOS:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOE F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS F
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS F

*Off-Ramp Queues*

There are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for Horizon Year (2045) Without and With Project traffic conditions, consistent with Existing (2021) traffic conditions.

A Summary of the traffic signal warrant analysis is shown in Table 1-3.

**TABLE 1-3: TRAFFIC SIGNAL WARRANT ANALYSIS SUMMARY**

**1.6 RECOMMENDATIONS**

**1.6.1 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS**

The following recommendations are based on the improvements needed to accommodate site access. The site adjacent recommendations are shown on Exhibit 1-4.

**Recommendation 1 – Airman Dr. & Cactus Av. (#15)** – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct a northbound shared through lane and right turn lane (225-feet of storage).
- Project to construct a dual southbound left turn lanes (225-feet of storage) and a through lane.
- Project to construct a westbound left turn lane (300-feet of storage) and a right turn lane.

**EXHIBIT 1-4: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS**

15	Airman Dr. & Cactus Av.	18	Linebacker Dr. & Cactus Av.	21	Brown St. & Cactus Av.

- = New Traffic Signal
- = Existing Lane
- = Lane Improvement
- 100'** = Recommended Turn Pocket Length
- TRAP** = Trap Lane
- RTO** = Right Turn Overlap
- TWLTL** = Two Way Left turn Lane

**Recommendation 2 – Linebacker Dr. & Cactus Av. (#18)** – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct the northbound approach with a left turn lane (200-feet of storage), through lane, and right turn lane (250-feet) with overlap phasing.
- Project to construct the southbound approach with dual left turn lanes (325-feet of storage) and shared through-right turn lane.
- Project to construct eastbound approach with one left turn lane (200-feet of storage), one through lane, and one shared through-right turn lane.
- Project to construct westbound approach with one left turn lane (300-feet of storage), one through lane, and one right turn lane (trap lane, no pocket length).

**Recommendation 3 – Brown St. & Cactus Av. (#21)** – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct the southbound approach with a shared left-right turn lane.
- Project to construct the eastbound approach with a left turn lane (two-way-left-turn lane) channelized or otherwise signed to prevent trucks from turning left onto Brown Street and two through lanes.
- Project to construct the westbound approach with a through lane and shared through-right turn lane.

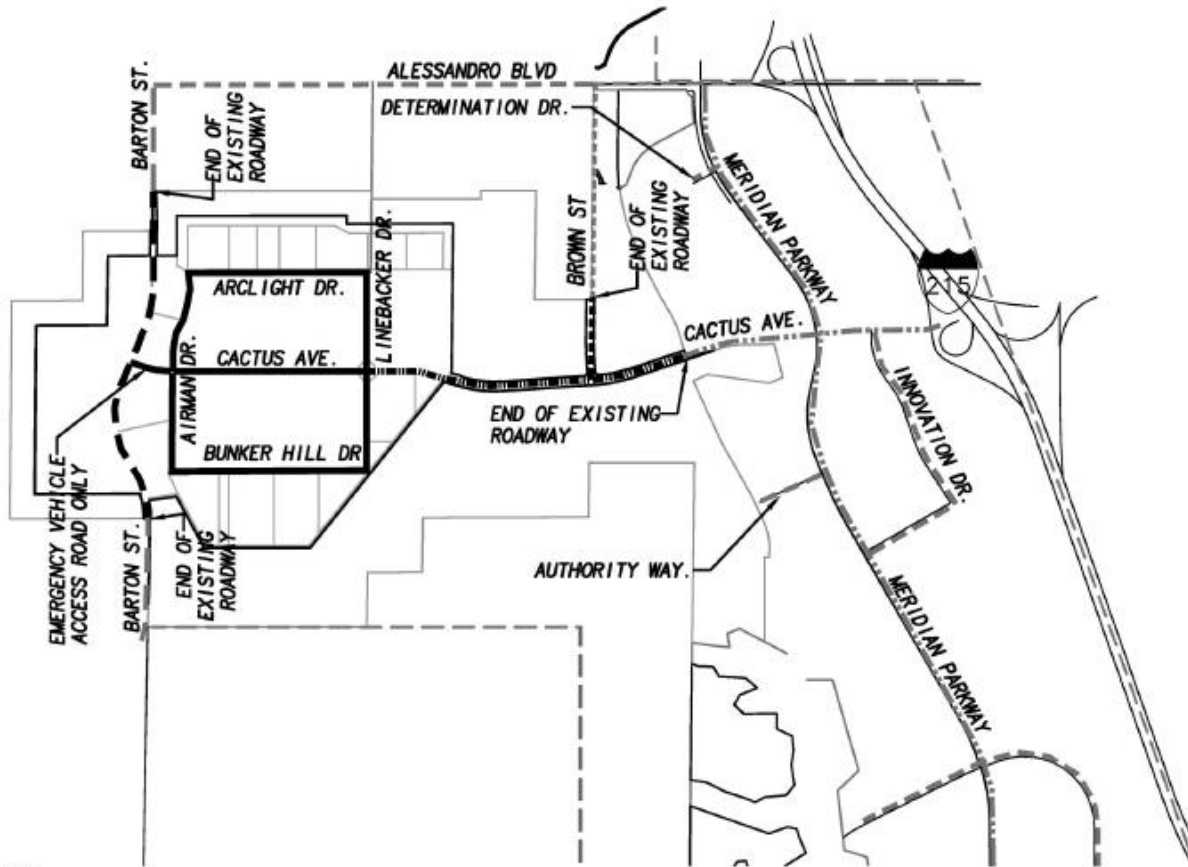

**Recommendation 4 – Cactus Avenue** is an east-west oriented roadway bisecting the Project and will provide the main access to and from the site. The Project will construct Cactus Avenue at its ultimate full-section width as a Modified Secondary Highway (98-foot right-of-way, 76-foot curb-to-curb) between Linebacker Drive and the existing terminus west of Meridian Parkway. The right-of-way will accommodate 6-foot sidewalks and 4.5-feet of parkway on both sides along with a 5-foot bike lane, landscaped median, and two traveled lanes in each direction. The West Campus Upper Plateau roadway cross-sections are shown on Exhibit 1-5.

The Project will construct Cactus Avenue at its ultimate full-section width as a Modified Industrial Collector (76-foot right-of-way, 54-foot curb-to-curb) west of Linebacker Drive to Airman Drive. The right-of-way will accommodate 5-foot sidewalks on both sides along with a 5-foot bike lane and a single traveled lane in each direction (of 16-feet) separated by a 12-foot striped median. Sidewalks along Cactus Avenue, west of Linebacker Drive, will be detached sidewalks. Additional right-of-way will be required on approach to the intersection of Linebacker Drive at Cactus Avenue in order to accommodate the recommended lanes identified on Exhibit 1-4.

An emergency access only connection will be maintained between the terminus of Cactus Avenue at Airman Drive and Barton Street.

**EXHIBIT 1-5: WEST CAMPUS UPPER PLATEAU ROADWAY CROSS-SECTIONS**

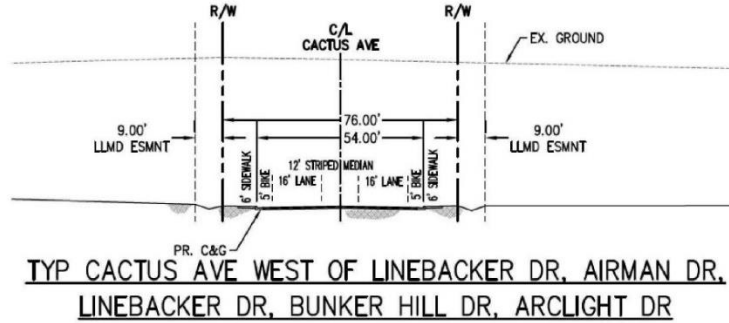

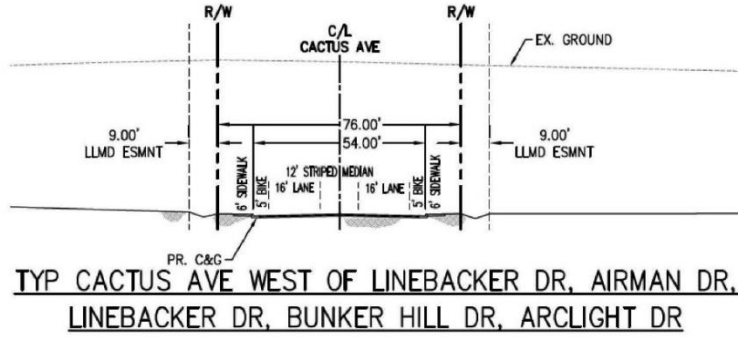

**LEGEND**

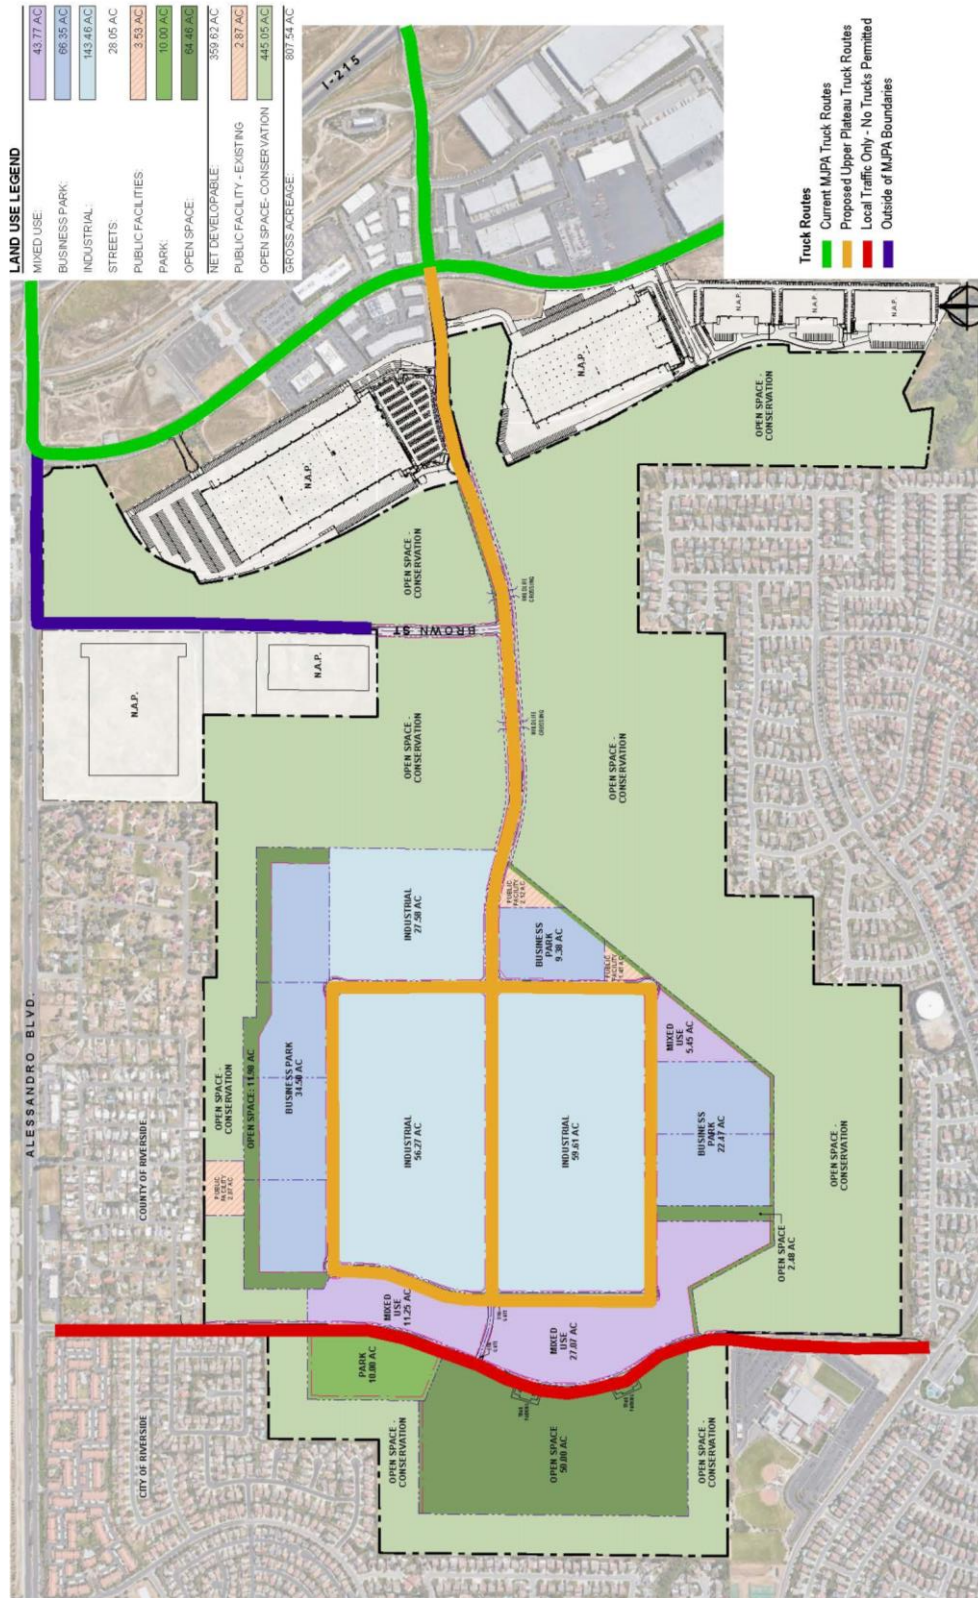

PROPOSED	EXISTING		WIDTH
		MODIFIED SECONDARY HIGHWAY	76' / 112'
		MODIFIED SECONDARY HIGHWAY	76' / 98'
		SECONDARY HIGHWAY	64' / 100'
		INDUSTRIAL COLLECTOR STREET	56' / 78'
		INDUSTRIAL COLLECTOR STREET (MODIFIED)	54' / 76'
		COLLECTOR STREET	40' / 66'
		EXISTING ROADWAY	

**BIKE LANE NOTE:**

STREETS PROPOSED AS PART OF THE MERIDIAN WEST CAMPUS UPPER PLATEAU ARE TO BE DESIGNED WITH DUAL 6' BIKE LANES. THIS INCLUDES CACTUS AVE, BARTON AVE, BROWN ST, AIRMAN DR, LINEBACKER DR, ARCLIGHT DR AND BUNKER HILL DR.

### EXHIBIT 1-6: PROPOSED TRUCK ROUTES

**Recommendation 5 – Barton Street** is a north-south oriented roadway located adjacent to the open space and mixed-use areas of the Project. The Project will construct Barton Street at its ultimate full-section width as a Collector (66-foot right-of-way, 40-foot curb-to-curb) between the existing northerly and southerly termini. Once completed, the roadway will provide a connection between the existing Mission Grove community to the north and Orangecrest community to the south. The right-of-way will accommodate 6-foot sidewalks on the east side with 10-foot multipurpose trail and 5-feet of landscape on the other side along with a 5-foot bike lane and a single traveled lane in each direction (of 14.5-feet). The multipurpose trail will only be accommodated for portions of Barton Street adjacent to the open space/parks. “No Parking” signs should be added along Barton Street to restrict on-street parking. It should be noted, the traffic safety mitigation for Barton Street will be approved by the March JPA Civil Engineer and installed by the developer, in compliance with a three-party memorandum of understanding mitigation executed by the City of Riverside, March JPA, and Meridian Park, LLC.

**Recommendation 6 – Brown Street** is a north-south oriented roadway providing secondary access to the Project from Alessandro Boulevard. The Project will construct Brown Street at its ultimate full-section width as an Industrial Collector (78-foot right-of-way, 56-foot curb-to-curb) between the existing northerly terminus and Cactus Avenue. The right-of-way will accommodate 6-foot sidewalks on both sides along with a 5-foot bike lane and a single traveled lane in each direction (of 17-feet) separated by a 12-foot striped median.

**Recommendation 7 – Remaining Internal Streets such as Linebacker Drive, Airman Drive, Bunker Hill Drive, and Arclight Drive** are internal Project roadways. The Project will construct these roadways at their ultimate full-section width as an Industrial Collector (76-foot right-of-way, 54-foot curb-to-curb). The right-of-way will accommodate 6-foot sidewalks on both sides along with a 5-foot bike lane and a single traveled lane in each direction (of 16-feet) separated by a 12-foot striped median.

The Project will extend the existing March JPA truck routes as shown on Exhibit 1-6. Truck routes will be extended along Barton Street to Cactus Avenue, and Cactus Avenue west from Meridian Parkway. Internal Project roadways of Linebacker Drive, Arclight Drive, Bunker Hill Drive, and Airman Drive will also be truck routes. No trucks access is permitted along Barton Street. The Project Applicant and the City should work together on an appropriate mitigation measure to ensure Project truck traffic adheres to the routes as shown on the Project (Truck) trip distribution exhibit.

On-site traffic signing and striping should be implemented consistent with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site. Sight distance at each project access point should be reviewed with respect to standard Caltrans and March JPA sight distance standards at the time of preparation of final grading, landscape, and street improvement plans.

### **1.6.2 OFF-SITE RECOMMENDATIONS**

The improvements needed to address the cumulative deficiencies identified under Existing (2021), E+P, EAP (2028), Opening Year Cumulative (2028), and Horizon Year (2045) traffic conditions are summarized in Table 1-4. For those improvements listed in Table 1-4 and not constructed as part of the Project, the Project Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fair share and/or fees. Table 1-4 also summarizes the applicable cost associated with each of the recommended improvements.

### **1.7 QUEUING ANALYSIS**

A queuing analysis was performed for the intersections of Airman Drive and Linebacker Drive on Cactus Avenue. The traffic modeling and signal timing optimization software package SimTraffic has been utilized to assess the queues. SimTraffic is designed to model networks of signalized and unsignalized intersections, with the primary purpose of checking and fine-tuning signal operations. SimTraffic uses the input parameters from Synchro to generate random simulations. These random simulations generated by SimTraffic have been utilized to determine the 95<sup>th</sup> percentile queue lengths observed for each applicable turn lane. A SimTraffic simulation has been recorded up to 5 times, during the weekday AM, weekday PM, and Saturday peak hours, and has been seeded for 15-minute periods with 60-minute recording intervals. Queuing analysis worksheets are provided in Appendix 1.2 of this report. The turn pocket storage length recommendations reflected on Exhibit 1-4 are recommended to support the 95<sup>th</sup> percentile peak hour queues reported in Appendix 1.2.

**TABLE 1-4: SUMMARY OF IMPROVEMENTS AND ROUGH ORDER OF MAGNITUDE COSTS**

<sup>1</sup> Improvements included in TUMF fee program. Although identified as a TUMF facility, the improvement is not currently identified on the Central Zone 5-Year Transportation Improvement Program Amendment (2021).

<sup>2</sup> Identifies the Project's responsibility to construct an improvement or contribute fair share or fee payment towards the implementation of the improvements shown. If identified as a Project construct obligation, then no fair share percentage has been identified.

<sup>3</sup> Program improvements constructed by Project may be eligible for fee credit, at discretion of the March JPA. See Table 9-1 for Fair Share Calculations. The highest peak hour fair share percentage for each intersection, as shown in Table 9-1, has been utilized.

<sup>4</sup> Costs have been estimated using the data provided in Appendix "G" of the CMP (2003) for preliminary construction costs. A growth factor of 1.674 has been utilized to reflect 2022 costs.

<sup>5</sup> The 2016 TUMF nexus update study identifies I-215/Cactus overcrossing (\$25,558,000). Although the individual improvements are not specifically identified in the nexus study, they are likely to be part of the overall interchange improvements.

<sup>6</sup> Total project fair share contribution consists of the improvements which are not already included in the County TUMF for those intersections wholly or partially within the March JPA.

<sup>7</sup> Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Riverside.

<sup>8</sup> Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the County of Riverside.

<sup>9</sup> Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within the City of Moreno Valley.

<sup>10</sup> Total project fair share contribution consists of the improvements which are not already included in a fee program for those intersections wholly or partially within Caltrans' jurisdiction.

<sup>11</sup> Rough order of magnitude cost estimate.

<sup>12</sup> Per the City of Riverside, improvements will be constructed as part of the Sycamore Hills project.

<sup>13</sup> There are no feasible intersection improvements. As such, no improvements have been identified.

<sup>14</sup> Improvement includes restricting U-turn movements for the westbound approach. Proper signage should be installed.

<sup>15</sup> Intersection does not meet the City's criteria for a project-related traffic deficiency, based on the thresholds identified in the City's traffic study guidelines. Therefore, no improvements have been identified for this scenario.

## 1.8 PARKING ASSESSMENT

Parking has been assessed for only Buildings B and C as they are the only buildings being processed. Other areas of the Project are comprised of land use assumptions only and no specific development is being proposed for those areas at this time. Per the minimum passenger car parking requirements per the Specific Plan (see Table 3-3 of the Specific Plan), the off-street parking requirements for warehouse/distribution uses are as follows:

- 1 space per 1,000 square feet for the first 20,000 square feet, 1 space per 2,000 square feet of 20,000 – 100,000 square feet of building space, 1 space per 5,000 square feet for the square footage over 100,000 square feet, 1 space per 300 square feet for the office space.

Based on the criteria outlined above, the minimum parking requirements have been calculated for Buildings B and C below:

- Building B consists of 1,250,000 square feet of high-cube fulfillment warehousing use which includes 50,000 square feet of office space. The minimum parking required is 447 spaces:
  - 50,000 square feet of office x 1 space per 300 square feet = 167 spaces
  - 0-20,000 square feet of warehouse/distribution x 1 space per 1,000 square feet = 20 spaces
  - 20,000-100,000 square feet of warehouse/distribution x 1 space per 2,000 square feet = 40 spaces
  - 100,000-1,200,000 square feet of warehouse/distribution x 1 space per 5,000 square feet = 220 spaces
- Building C consists of 587,000 square feet of high-cube fulfillment warehousing use which includes 40,000 square feet of office space. The minimum parking required is 291 spaces:
  - 40,000 square feet of office x 1 space per 300 square feet = 133 spaces
  - 0-20,000 square feet of warehouse/distribution x 1 space per 1,000 square feet = 20 spaces
  - 20,000-100,000 square feet of warehouse/distribution x 1 space per 2,000 square feet = 40 spaces
  - 100,000-587,000 square feet of warehouse/distribution x 1 space per 5,000 square feet = 98 spaces

## 1.9 ACTIVE TRANSPORTATION

Bicycle and pedestrian connections within the Project will help reduce vehicle trips as well as provide recreational opportunities for future employees and visitors. The proposed roadway network includes Class II (on-street, striped) bike lanes along all roadways, a 10-foot-wide multi-purpose trail along the western side of Barton Street fronting the open space and park areas of the Project, and recreational trails. Recreational trails will be retained and maintained within the open space areas of the Project. The currently existing service roads within the Conservation Area may continue to be utilized by the public for passive recreation as authorized by the March JPA; however, public vehicular access will continue to be prohibited. In conjunction with the 5-foot bike lanes on all Project roadways, there are also 6-foot sidewalks to promote walkability. All

these connections within the Project enhance connectivity to the existing Metrolink Station approximately 1.2-miles to the east on Meridian Parkway and travel to and from recreational amenities within the Project from other surrounding existing residential developments in close proximity to the Project. Sidewalks and bike lanes will provide direct access to the proposed Project uses. The Project should construct sidewalk improvements up to the intersection of Grove Community Drive and Barton Street and provide bike racks and bike lockers.

### **1.10 TRAFFIC CALMING – BARTON STREET**

At the request of City of Riverside staff during the scoping process, traffic calming measures have been reviewed for Barton Street. The purpose of implementing traffic calming measures is to reduce volume and/or speed along roadways. In general, wider roadways encourage higher vehicular speeds and the implementation of traffic calming measures that either physically or psychologically encourage drivers to travel at slower speeds. Maintaining low speeds will help to create a pedestrian-friendly environment. In order for traffic calming measures to be effective, most measures should be placed every 250-400 feet. Spreading the measures out too far may lead to speeding between installations. A single traffic calming measure or a combination of multiple traffic calming measures can be utilized to achieve the desired speed control along roadways.

The Project is anticipated to complete the connection of Barton Street between the existing northerly and southerly termini and in order to address potential speeding, the following traffic calming measures have been reviewed for implementation. It should be noted that some of the recommendations listed below may be appropriate for retrofitting onto existing roadways, but for new roadways, such as Barton Street, the roadway should be designed in such a way to discourage speeding (by adding curvature, narrow lanes, etc.).

- **Raised Crosswalks/Sidewalk Extensions:**
  - Advantages: improve safety for both pedestrians and vehicles, add positive aesthetic value, effective in reducing speeds.
  - Disadvantages: textured material can be expensive, potential impacts on drainage should be considered, noise and air pollution may increase.
  - Speed humps are similar to the raised crosswalks but would not be recommended for a roadway like Barton Street. The implementation of speed humps may induce speeding between installations.
- **Raised Intersections:**
  - Could be a retrofit improvement for any existing intersection and/or could be implemented at any new intersections/driveways along the Barton Street extension.
  - Advantages: improved safety for both pedestrians and vehicles, add positive aesthetic value, calming two streets with one installation, ideal for locations with substantial pedestrian activity.
  - Disadvantages: cost of textured materials, potential impacts on drainage should be considered, found to be less effective in reducing speeds as compared to speed humps/speed tables/raised crosswalks.

- **Chicane:**
  - Advantages: effective method of changing the driver perception of the roadway, reduces speed without affecting emergency response, minimum inconvenience to local traffic, reduced crossing distances for pedestrians, greater visual obstruction.
  - Disadvantages: cost, appropriate for midblock locations only (not at intersections), most effective when traffic volumes are relatively equal in both directions of travel, increased maintenance.
- **Centerline & Curb Adjacent Striping (done to visually narrow the roadway):**
  - Advantages: fast and cost effective, typically used on rural roadways with no shoulders.
  - Disadvantages: low success rate
- **Roundabouts:**
  - Could be a retrofit improvement for any existing intersection and/or could be implemented at any new intersections/driveways along the Barton Street extension.
  - Advantages: reductions to potential crashes that typically occur at traditional intersections, reduces speed on approach, low-cost maintenance as compared to a signal, effective for multi-leg intersections, good for cyclists, restrictive for larger vehicles.
  - Disadvantages: may require additional signage and lighting, right-of-way, maintenance of landscaped areas, may push traffic onto adjacent streets.
- **Lane Narrowing (expanding sidewalks/landscaped areas, on-street parking, etc.):**
  - Advantages: good for pedestrians (shorter crossing distance), opportunities for additional landscaping, slows traffic without affecting emergency vehicle response time, effective when used in a series, single lane narrowing reduces vehicle speed and through traffic volume.
  - Disadvantages: double lane narrowing is not as effective as single lane narrowing, can be unfriendly to cyclists if not designed correctly, conflict of opposing drivers crossing simultaneously (especially for larger vehicles).

All of the aforementioned measures can also be supplemented with speed activated speed limit signs/warning signs, additional signage, flashing beacons, etc. Implementation of one or more of the aforementioned measures should be reviewed and discussed with the City of Riverside.

## 2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are consistent with March JPA's guidelines.

### 2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

### 2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The 6<sup>th</sup> Edition Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (3) The HCM uses different procedures depending on the type of intersection control.

#### 2.2.1 SIGNALIZED INTERSECTIONS

The March JPA, City of Moreno Valley, City of Riverside, and County of Riverside require signalized intersection operations analysis based on the methodology described in the HCM. (3) Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1.

The traffic modeling and signal timing optimization software package Synchro (Version 11) is utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

**TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths.	80.01 and up	F	F

Source: HCM (6<sup>th</sup> Edition)

As the March JPA guidelines does not provide saturation flow rates, a saturation flow rate of 1900 vphgpl has been utilized, consistent with County of Riverside guidelines. The peak hour traffic volumes have been adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g.,  $PHF = [Hourly Volume] / [4 \times Peak\ 15\text{-minute Flow Rate}]$ ). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (3)

### 2.2.2 UNSIGNALIZED INTERSECTIONS

The March JPA, City of Moreno Valley, City of Riverside, and County of Riverside require the operations of unsignalized intersections be evaluated using the methodology described in the HCM. (3) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

**TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS**

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C $\leq 1.0$	Level of Service, V/C $> 1.0$
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM (6<sup>th</sup> Edition)

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. The worst LOS for any one movement is reported for any two-way or side-street stop-controlled intersection per HCM. For all-way stop controlled intersections, LOS is computed and reported for the intersection as a whole.

### 2.3 ROADWAY SEGMENT CAPACITY ANALYSIS METHODOLOGY

Roadway segment operations have been evaluated using the applicable average daily traffic (ADT) roadway capacity values provided in either the County or City of Riverside's guidelines (JPA's roadway segment criteria are consistent with the County's). The County guidelines have been used for the roadway segments located within the County or the March JPA. The roadway capacities utilized for the purposes of this analysis are considered "rule of thumb" estimates for planning purposes and are affected by such factors as intersections (spacing, configuration and control features), degree of access control, roadway grades, design geometrics (horizontal and vertical alignment standards), sight distance, vehicle mix (truck and bus traffic) and pedestrian bicycle traffic.

While using ADT for planning purposes is suitable with regards to evaluating potential volume to capacity with future forecasts, it is not suitable for operational analysis because it does not account for the factors listed previously. As such, where the ADT based roadway segment analysis indicates a deficiency (unacceptable LOS), a review of the more detailed peak hour intersection analysis and progression analysis are undertaken. The more detailed peak hour intersection analysis explicitly accounts for factors that affect roadway capacity. Therefore, roadway segment widening is typically only recommended if the peak hour intersection analysis indicates the need for additional through lanes.

The County of Riverside and City of Riverside roadway segment capacities are provided on Tables 2-3 and 2-4.

**TABLE 2-3: ROADWAY SEGMENT CAPACITIES FOR COUNTY OF RIVERSIDE/MARCH JPA**

Roadway Classification	Number of Lanes	Maximum Two-Way Traffic Volume (ADT) <sup>2</sup>		
		Service Level C	Service Level D	Service Level E
Collector	2	10,400	11,700	13,000
Secondary	4	20,700	23,300	25,900
Major	4	27,300	30,700	34,100
Arterial	2	14,400	16,200	18,000
Arterial	4	28,700	32,300	35,900
Mountain Arterial <sup>3</sup>	2	12,900	14,500	16,100
Mountain Arterial	3	16,700	18,800	20,900
Mountain Arterial	4	29,800	33,500	37,200
Urban Arterial	4	28,700	32,300	35,900
Urban Arterial	6	43,100	48,500	53,900
Urban Arterial	8	57,400	64,600	71,800
Expressway	4	32,700	36,800	40,900
Expressway	6	49,000	55,200	61,300
Expressway	8	65,400	73,500	81,700
Freeway	4	61,200	68,900	76,500
Freeway	6	94,000	105,800	117,500
Freeway	8	128,400	144,500	160,500
Freeway	10	160,500	180,500	200,600
Ramp <sup>4</sup>	1	16,000	18,000	20,000

**NOTES:**

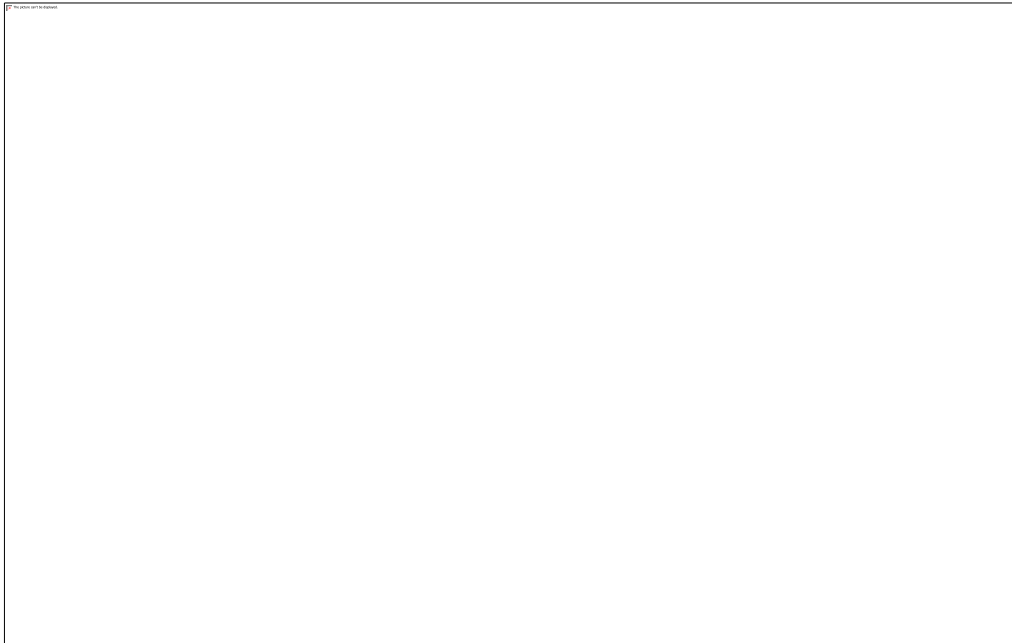

<sup>1</sup> All capacity figures are based on optimum conditions and are intended as guidelines for planning purposes only.

<sup>2</sup> Maximum two-way ADT values are based on the 1999 Modified Highway Capacity Manual Level of Service Tables as defined in the Riverside County Congestion Management Program.

<sup>3</sup> Two-lane roadways designated as future arterials that conform to arterial design standards for vertical and horizontal alignments are analyzed as arterials.

<sup>4</sup> Ramp capacity is given as a one-way traffic volume.

**TABLE 2-4: ROADWAY SEGMENT CAPACITIES FOR CITY OF RIVERSIDE**

**2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS**

Consistent with Caltrans requirements, the 95<sup>th</sup> percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the I-215 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95<sup>th</sup> percentile queue resulting from the Synchro progression analysis. The footnote from the Synchro output sheets indicates if the 95<sup>th</sup> percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95<sup>th</sup> percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95<sup>th</sup> percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays.

**2.5 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY**

The term “signal warrants” refers to the list of established criteria used by the California Department of Transportation (Caltrans) and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (4)

The signal warrant criteria for Existing study area intersections are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (4) Specifically, this TA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing traffic conditions. Warrant 3 is appropriate to use for this TA because it provides specialized warrant criteria for intersections with rural characteristics (e.g., located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets. Pursuant to the scoping agreement, traffic signal warrant analysis has been conducted for unsignalized intersections operating at LOS E or F, which consist of the following study area intersections shown in Table 2-5:

**TABLE 2-5: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS**

ID	Intersection Location	Jurisdiction	CMP?
9	Deercreek Dr. & Grove Community Dr.	City of Riverside	No
10	Deercreek Dr. & Orange Terrace Pkwy.	City of Riverside	No
12	Barton St. & Grove Community Dr.	City of Riverside	No
13	Barton St. & Orange Terrace Pkwy.	City of Riverside	No
15	Airman Dr. & Cactus Av.	March JPA	No
16	Abrams Dr. & Grove Community Dr.	City of Riverside	No
17	Abrams Dr. & Orange Terrace Pkwy.	City of Riverside	No
18	Linebacker Dr. & Cactus Av.	March JPA	No
21	Brown St. & Cactus Av.	March JPA	No

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *E+P Traffic Conditions*, Section 6 *EAP (2028) Traffic Conditions*, Section 7 *Opening Year Cumulative (2028) Traffic Conditions*, and Section 8 *Horizon Year (2045) Traffic Conditions* of this report. It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

## 2.6 MINIMUM ACCEPTABLE LEVELS OF SERVICE (LOS)

Minimum Acceptable LOS and associated definitions of intersection deficiencies has been obtained from each of the applicable surrounding jurisdictions.

### 2.6.1 MARCH JPA

Based on the March Joint Powers Authority Traffic Impact Study Preparation Guide (February 10, 2021), all intersections and roadway segments within the March JPA Planning Area shall operate at LOS D or better with limited circumstances of LOS E to occur. LOS E may also be allowed to the extent that would support transit-oriented development (TOD) and walkable communities. LOS E is also acceptable during peak hours at interchange ramp intersections where ramp metering occurs. The Project is not proposed to be a TOD and neither the Alessandro Boulevard nor Cactus Avenue on-ramps are currently metered, as such, the minimum LOS utilized for the purposes of this analysis is LOS D. (1)

### 2.6.2 COUNTY OF RIVERSIDE

The definition of an intersection deficiency has been obtained from the County of Riverside General Plan. Riverside County General Plan Policy C 2.1 states that the County will maintain the following County-wide target LOS:

*The following minimum target levels of service have been designated for the review of development proposals in the unincorporated areas of Riverside County with respect to transportation impacts on roadways designated in the Riverside County Circulation Plan which are currently County maintained, or are intended to be accepted into the County maintained roadway system:*

- *LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well as those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non-Community Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.*
- *LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.*
- *LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.*

The applicable minimum LOS utilized for the purposes of this analysis is LOS D per the County-wide target LOS for projects located within the Mead Valley Area Plans.

### 2.6.3 CITY OF MORENO VALLEY

The definition of an intersection deficiency has been obtained from the Moreno Valley General Plan. The City's General Plan policies states that the City will maintain the following City-wide target LOS:

- *Policy C.3-1: Strive to maintain Level of Service (LOS) C on roadway links, wherever possible, and LOS D in the vicinity of SR-60 Freeway and high employment centers. Strive to maintain LOS D at intersection during peak hours.*
- *Policy C.3-2: Allow for a list of locations to be exempt from the LOS policy based on right-of-way constraints and goals and values of the community. The City Engineer shall update the excepted intersections and roadway segments list periodically to be included with the traffic impact study guidelines and adopted by ordinance.*
- *Policy C.3-3: Where new developments would increase traffic flows beyond the LOS C (or LOS D, where applicable), require appropriate and feasible improvement measures as a condition of approval. Such measures may include extra right-of-way and improvements to accommodate additional left-turn and right-turn lanes at intersections, or other improvements*

The applicable minimum LOS utilized for the purposes of this analysis is LOS D for study area intersections located within the City of Moreno Valley. Policy C.3-2 is not applicable to the study area intersections.

### 2.6.4 CITY OF RIVERSIDE

The City of Riverside General Plan states the City will strive to maintain LOS D or better on arterial streets wherever possible. At some key locations, such as City arterial roadways, which are used as freeway bypass by regional through traffic and at heavily traveled freeway intersections, LOS E may be acceptable as determined on a case-by-case basis. Locations that may warrant the LOS E standard include portions of Arlington Avenue/Alessandro Boulevard, Van Buren Boulevard throughout the City, portions of La Sierra Avenue, and selected freeway interchanges. A higher standard, such as LOS C or better, may be adopted for Local and Collector streets in residential areas. The City recognizes that along key freeway feeder segments during peak commute hours, LOS F may be expected due to regional travel patterns.

At the City's request, the analysis for all study area intersections and roadway segments that lie within the City of Riverside will be evaluated based on the guidelines outlined in the City's Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (July 2020). As such, the minimum LOS utilized for the purposes of this analysis is LOS D for intersections located partially or wholly within the City of Riverside.

### 2.6.5 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State highway facilities; however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. If an existing State highway facility is operating at less than this target LOS, the existing measure of effectiveness should be maintained. In general, the region-wide goal for an acceptable LOS on

all freeways, roadways segments, and intersections is LOS D. For undeveloped or not densely developed locations, the goal may be to achieve LOS C. As such, the minimum LOS utilized for the purposes of this analysis is LOS D.

**2.7 DEFICIENCY CRITERIA**

**2.7.1 MARCH JPA**

March JPA has determined that the effect of a project’s traffic would result in a deficiency if project traffic (during the AM and/or PM peak hours or during the project’s peak hour or period) is 2%, or more, of total peak hour traffic on a roadway segment or at an intersection. As summarized below and on Table 2-6. The following is a summary of the criteria:

A project-related traffic deficiency will be designated if both of the following conditions occur:

- Peak hour project traffic plus existing traffic causes a roadway segment or intersection to operate at LOS “E” or “F”; and
- Peak hour project traffic comprises 2% or more of the total peak hour traffic on the roadway segment or intersection for LOS “E” and 2% or more for LOS “F”.

A traffic deficiency will be designated if both of the following conditions occur:

- Peak hours project traffic plus existing peak hour traffic and peak hour traffic from other near-term and future projects causes a roadway segment or intersection to operate at LOS “E” or “F”; and
- Peak hour project traffic comprises 2% or more of total peak hour traffic on the roadway segment or intersection for LOS “E” and 2% or more for LOS “F”.

**TABLE 2-6: MARCH JPA DEFICIENCY CRITERIA**

Level of Service with Project	Allowable Percent Increase Due To Project During the Project Peak Hour	
	Roadway Segments	Intersections
E	2%	2%
F	2%	2%

**2.7.2 COUNTY OF RIVERSIDE**

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies. The following deficiency criteria has been utilized for the County of Riverside. To determine whether the addition of project-related traffic at a study intersection would result in a deficiency, the following will be utilized:

- A deficiency occurs at study area intersections if the pre-Project condition is at or better than LOS D (i.e., acceptable LOS), and the addition of project trips causes the peak hour LOS of the study area intersection to operate at unacceptable LOS (i.e., LOS E or F). Per the County of Riverside traffic study guidelines, for intersections currently operating at unacceptable LOS (LOS E or F), a deficiency will occur if the Project contributes 50 or more peak hour trips to pre-project traffic conditions.

**2.7.3 CITY OF MORENO VALLEY**

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies. The following deficiency criteria is utilized for the City per its Guidelines. To determine whether the addition of project-related traffic at a study intersection would result in a deficiency at a signalized intersection, the following will be utilized:

- Any signalized intersection operating at an acceptable LOS without project traffic in which the addition of project traffic causes the intersection to degrade to unacceptable LOS shall identify improvements to provide acceptable LOS.
- Any signalized study intersection that is operating at an unacceptable LOS without project traffic where the project increases delay by 5.0 or more seconds shall identify improvements to offset the increase in delay.

An operational improvement would be required if the study determines that either section a) or both sections b) and c) occur for unsignalized intersections:

- a) The addition of project related traffic causes the intersection to degrade from an acceptable LOS to unacceptable LOS.
- OR
- b) The project adds 5.0 seconds or more of delay to an intersection hat is already projected to operate without project traffic at unacceptable LOS,
  - c) The intersection meets the peak hour traffic signal warrant after the addition of project traffic.

If the conditions above are satisfied, improvement should be identified to achieve LOS D or better for conditions a) above and pre-project LOS and delay for case b) above.

**2.7.4 CITY OF RIVERSIDE**

To determine whether the addition of Project traffic (as defined through the comparison of Existing traffic conditions to E+P traffic conditions) at a study intersection would result in a direct project-specific traffic deficiency, the following will be utilized:

- When the pre-Project condition is at or better than LOS D (i.e., acceptable LOS), and project-generated traffic, as measured by 50 or more peak hour trips, causes deterioration below LOS D (i.e., unacceptable LOS) or increases to the peak hour delay as defined in Table 2-4, a deficiency is deemed to occur.

**TABLE 2-7: CITY OF RIVERISDE INTERSECTION DEFICIENCY CRITERIA**

Pre-Project LOS	Project-Related Delay Increase	Recommended Improvements
A/B	10.0 Seconds or More	Achieve Pre-project delay or better
C	8.0 Seconds or More	Achieve Pre-project delay or better
D	5.0 Seconds or More	Achieve Pre-project delay or better
E	2.0 Seconds or More	Achieve Pre-project delay or better
F	1.0 Second or More	Achieve Pre-project delay or better

However, when the pre-Project condition is already below LOS D (i.e., unacceptable LOS), the Project will be responsible for recommending improvements to achieve a level of service equal to or better than it was without the Project for intersections that receive 50 or more peak hour project-related trips. For intersections currently operating at unacceptable LOS during one or more peak hours under Existing traffic conditions, improvements have been identified to achieve an intersection LOS that is equal to or better than pre-Project conditions.

Cumulative traffic deficiencies are created as a result of a combination of the proposed Project together with other future developments contributing to the overall traffic deficiencies requiring additional improvements to maintain acceptable level of service operations with or without the Project.

### **2.7.5 CALTRANS**

Per guidance from Caltrans, intersections operating at a deficient LOS (LOS E or F) should identify improvements to achieve acceptable LOS (LOS D or better) during the peak hours.

## **2.8 PROJECT FAIR SHARE CALCULATION METHODOLOGY**

Improvements found to be included in the TUMF and/or DIF will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share contribution based on the Project's proportional share may be imposed in order to address the Project's share of deficiencies in lieu of construction. It should be noted that fair share calculations are for informational purposes only and the March JPA will determine the appropriate improvements to be implemented by a project (to be identified in the conditions of approval).

If the intersection is currently operating at acceptable LOS under Existing traffic conditions, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to new traffic, where new traffic is total future traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project Traffic}}{(\text{Horizon Year (2045) Total Traffic} - \text{Existing (2021) Traffic})}$$

This Page Intentionally Left Blank

### 3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the March JPA General Plan Circulation Network, and a review of existing peak hour intersection operations, roadway segment analysis, traffic signal warrant, and off-ramp queuing analyses.

#### 3.1 EXISTING CIRCULATION NETWORK

Pursuant to the agreement with March JPA, County of Riverside, City of Riverside, and City of Moreno Valley staff (Appendix 1.1), the study area includes a total of 38 existing and future intersections as shown previously on Exhibit 1-2. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

#### 3.2 MARCH JPA GENERAL PLAN CIRCULATION ELEMENT

The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on the March JPA General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the March JPA General Plan Circulation Element and Exhibit 3-3 illustrates the March JPA General Plan roadway cross-sections.

#### 3.3 COUNTY OF RIVERSIDE, CITY OF MORENO VALLEY, AND CITY OF RIVERSIDE GENERAL PLAN CIRCULATION ELEMENT

Exhibits 3-4 and 3-5 show the County of Riverside's General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-6 and 3-7 show the City of Moreno Valley's General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-8 and 3-9 show the City of Riverside's General Plan Circulation Element and roadway cross-sections, respectively.

#### 3.4 BICYCLE & PEDESTRIAN FACILITIES

Field observations conducted in 2019 indicate moderate pedestrian and bicycle activity within the study area (last observed pre-COVID), specifically during the lunch time and afternoon hours when employees utilize sidewalks during breaks. March JPA does not have a bike/pedestrian facilities exhibit. Exhibit 3-10 illustrates the City of Moreno Valley Bike Plan and Exhibit 3-11 shows the City of Moreno Valley Master Plan of Trails. Exhibit 3-12 illustrates the City of Riverside Proposed Bikeways and Trails Improvements. Existing pedestrian facilities adjacent to the study area intersections are shown on Exhibit 3-13. It should be noted, the existing pedestrian facilities shown on Exhibit 3-13 are for facilities adjacent to the study area intersections only, and not the study area as a whole.

### 3.5 TRUCK ROUTES

The March JPA designated truck route map is shown on Exhibit 3-14. Alessandro Boulevard, Meridian Parkway, Cactus Avenue, and Van Buren Boulevard are the designated March JPA truck routes within the study area. The City of Moreno Valley designated truck route map is shown on Exhibit 3-15. Alessandro Boulevard, Cactus Avenue, Elsworth Street, Frederick Street, and Graham Street are also designated truck routes within the City of Moreno Valley. The Project will extend the JPA truck routes west on Cactus Avenue and along Airman Drive, Linebacker Drive, Bunker Hill Drive, and Arclight Drive. The designated truck route maps for have been utilized to route truck traffic for the proposed Project and for future cumulative development projects throughout the study area.

### 3.6 TRANSIT SERVICE

The March JPA is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. Existing transit routes in the vicinity of the study area are illustrated on Exhibit 3-16. As shown, the existing RTA Route 20 provides to service from Alessandro Boulevard to the Moreno Valley March Field Metrolink Station. RTA Route 27 also runs along Orange Terrace Parkway and Van Buren Boulevard to the south of the Project. There is an existing bus stop on Alessandro Boulevard near Brown Street. Transit service is reviewed and updated by RTA periodically to address ridership, budget, and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the Project Applicant work in conjunction with RTA to potentially extend the existing routes to accommodate bus service to the site.

### 3.7 EXISTING (2021) TRAFFIC COUNTS

The AM and PM peak hour intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic data based on an adjustment of both historic (2019) traffic count data and new (2021) traffic count data collected in November 2021. The Saturday peak hour traffic counts were collected in September 2022. The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)
- Weekend Saturday Peak Hour (peak hour between 11:00 AM and 2:00 PM)

Adjusted factors were calculated based on historic (2019) traffic counts in conjunction with a 2.0% per year growth rate (compounded annually) to reflect 2021 conditions and compared to new (2021) traffic count data at the same intersections for the AM and PM peak hours. No adjustments were made to the 2022 traffic counts. There were no observations made in the field that would indicate atypical traffic conditions on the count dates, such as construction activity or detour routes and near-by schools were in session and operating on normal schedules. The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1.

Designated Truck Route Map

Revised MAY, 2019

Truck Route Legend

**EXHIBIT 3-16: EXISTING TRANSIT ROUTES**

The traffic counts collected in November 2021 and September 2022 include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 3-Axle Trucks, and 4 or More Axle Trucks. To represent the effects large trucks, buses and recreational vehicles have on traffic flow, truck traffic has been accounted for in the analysis as a percentage of total traffic at the study area intersections. Where historic counts were unavailable, the AM and PM peak hour factors were applied to adjust the 2021 count data. Existing weekday ADT volumes are shown on Exhibit 3-17. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 10.61 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 9.42 percent. As such, the above equation utilizing a factor of 10.61 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 9.42 percent (i.e.,  $1/0.0942 = 10.61$ ) and was assumed to sufficiently estimate average daily traffic (ADT) volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes are shown on Exhibit 3-17. Existing weekend Saturday peak hour intersection volumes are shown on Exhibit 3-18.

For the purposes of this analysis, it is proposed that the actual vehicles be utilized in order to reflect the effects of heavy trucks most accurately in the analysis. Trucks will be accounted for in the analysis as a percentage of total traffic, which will be input into the analysis software (Synchro 11). As such, trip generation is reflected in actual vehicles only and not in passenger car equivalent (PCE).

### 3.8 INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1, which indicates that the study area intersections are currently operating at an acceptable LOS during the peak hours, with the exception of the following intersections:

- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS E AM peak hour; LOS F PM peak hour
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM peak hour only
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS E AM peak hour only
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM peak hour only
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only
- I-215 NB Ramps & Cactus Av. (#31) – LOS E AM peak hour only
- Elsworth St. & Cactus Av. (#36) – LOS F AM peak hour; LOS E PM peak hour

38	Graham St./Riverside Dr. & Cactus Av.	TS	14.7	15.0	16.8	B	B	B

\* **BOLD** = Unacceptable LOS

<sup>1</sup> Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>2</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal

The intersection operations analysis worksheets are included in Appendix 3.2 of this TA.

### 3.9 EXISTING (2021) CONDITIONS ROADWAY SEGMENT CAPACITY ANALYSIS

The roadway segment capacities utilized for the purposes of this analysis are approximate figures only; and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 3-2 provides a summary of the Existing (2021) conditions roadway segment capacity analysis based on the applicable roadway segment capacities. As shown in Table 3-2, the following study area roadway segment is currently operating at an unacceptable LOS based on the applicable planning level daily roadway capacities:

- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS E

**TABLE 3-2: ROADWAY SEGMENT CAPACITY ANALYSIS FOR EXISTING (2021) CONDITIONS**

#	Roadway	Segment Limits	Roadway Section	LOS Capacity <sup>1</sup>	Existing		Acceptable LOS	
					2021	v/c <sup>2</sup>		LOS <sup>3</sup>
1	Alessandro Bl.	Trautwein Rd. to Mission Grove Pkwy.	6D	57,250	42,859	0.75	C	D
2		Mission Grove Pkwy. to Barton St.	6D	57,250	42,275	0.74	C	D
3		Barton St. to Brown St.	6D	57,250	42,360	0.74	C	D
4		Brown St. to Meridian Pkwy.	6D	57,250	41,193	0.72	C	D
5		Meridian Pkwy. to I-215 Freeway	6D	57,250	44,072	0.77	C	D
6	Cactus Av.	Airman Dr. to Linebacker Dr.	2D	18,000	0	0.00	A	D
7		Linebacker Dr. to Brown St.	4D	25,900	0	0.00	A	D
8		Brown St. to Meridian Pkwy.	4D	25,900	0	0.00	A	D
9		Meridian Pkwy. to I-215 Freeway	6D	51,150	19,011	0.37	A	D
10	Barton St.	Alessandro Bl. to Cactus Av. (EVA)	2U	13,000	1,995	0.15	A	D
11		Cactus Av. (EVA) to Grove Community Dr.	2U	13,000	775	0.06	A	D
12	Brown St.	Alessandro Bl. to Cactus Av.	2D	18,000	776	0.04	A	D
13	Sycamore Canyon Bl.	Cottonwood Av. to Alessandro Bl.	4D	33,000	13,151	0.40	A	D
14	Meridian Pkwy.	Alessandro Bl. to Cactus Av.	4D	25,900	<b>23,605</b>	<b>0.91</b>	<b>E</b>	D
15		Cactus Av. to Van Buren Bl.	4D	25,900	22,215	0.86	D	D

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> These maximum roadway capacities are based on the applicable agency's thresholds.

<sup>2</sup> v/c = Volume to Capacity Ratio

<sup>3</sup> LOS = Level of Service

### 3.10 TRAFFIC SIGNAL WARRANTS ANALYSIS

The following unsignalized study area intersections currently meet a peak hour volume-based traffic signal warrant:

- Deercreek Dr. & Orange Terrace Pkwy. (#10)
- Barton St. & Orange Terrace Pkwy. (#13)

Existing traffic signal warrant analysis worksheets are included in Appendix 3.3.

### 3.11 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 3-3. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 3-3, there are no movements that are currently experiencing queuing issues during the weekday AM, weekday PM, or weekend Saturday peak 95<sup>th</sup> percentile traffic flows based on the analysis. Worksheets for Existing (2021) traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

**TABLE 3-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EXISTING (2021) CONDITIONS**

Intersection	Movement	Available Stacking Distance (Feet)	95th Percentile Queue (Feet) <sup>3</sup>			Acceptable? <sup>1</sup>		
			AM Peak	PM Peak	SAT Peak	AM	PM	SAT
I-215 SB Ramps & Alessandro Blvd. (#28)	SBL	525	132	191	68	Yes	Yes	Yes
	SBL/R	1,540	124	178	52	Yes	Yes	Yes
	SBR	525	118	166	48	Yes	Yes	Yes
I-215 NB Ramps & Alessandro Blvd. (#29)	NBL	450	572 <sup>2 3</sup>	342	155	Yes	Yes	Yes
	NBL/T/R	1,345	520 <sup>2</sup>	403 <sup>2</sup>	158	Yes	Yes	Yes
	NBR	450	41	125	64	Yes	Yes	Yes
I-215 SB Ramps & Cactus Av. (#30)	SBR	1,115	155	157	0	Yes	Yes	Yes
	NBR	1,850	18	57	0	Yes	Yes	Yes
I-215 NB Ramps & Cactus Av. (#31)	NBL	145	452 <sup>2 3</sup>	105	34	Yes	Yes	Yes
	NBT/R	1,650	432 <sup>2</sup>	181	78	Yes	Yes	Yes
I-215 SB Ramps & Van Buren Blvd. (#32)	SBL/T	1,510	38	121 <sup>2</sup>	24	Yes	Yes	Yes
	SBR	1,450	233	34	42	Yes	Yes	Yes
I-215 NB Ramps & Van Buren Blvd. (#33)	NBL	1,560	98	62	0	Yes	Yes	Yes
	NBR	580	2	0	0	Yes	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

## 4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project's trip assignment onto the study area roadway network. Access to the proposed Project will be provided via three roadways: Cactus Avenue, Brown Street, and Barton Street. Cactus Avenue will serve as the primary roadway, connecting with I-215 located approximately one mile east of the Project. Brown Street will serve as a secondary access to the industrial center, connecting with Alessandro Boulevard to the north. Barton Street will be completed between the existing termini to the south of Alessandro Boulevard and north of Orange Terrace Parkway. An emergency access only connection will be maintained between Cactus Avenue's terminus at Airman Drive and Barton Street. The mixed-use land use will only take access via Cactus Avenue to the east, and will not take access via Barton Street. For the purposes of this TA, the proposed Project has been evaluated in a single phase with an anticipated Opening Year of 2029. Regional access to the Project site will be available from the I-215 Freeway via the Cactus Avenue interchange although the Project could also access the I-215 Freeway via Alessandro Boulevard and Van Buren Boulevard.

### 4.1 TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project.

#### 4.1.1 DEVELOPMENT OF TRIP GENERATION RATES

Trip generation rates for the Project are shown in Table 4-1. In order to develop the traffic characteristics of the proposed Project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11<sup>th</sup> Edition, 2021), the High Cube Warehouse Trip Generation Study (WSP, January 2019), and the San Diego Association of Governments (SANDAG) (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region (April 2002) were used to estimate the Project's trip generation. (5) (6) (7) For purposes of the Traffic Analysis, the following ITE land use code and vehicle mix will be utilized for the Industrial Area:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 3,012,710 square feet of the proposed Project. The ITE Trip Generation Manual (2021) has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). While there is sufficient data to support use of the trip generation rates for non-sort facilities, the sort-facility rate appears to be unreliable because it is based on limited data (i.e., one to two surveyed sites). The proposed Project is speculative and whether a non-sort or sort facility end-user would occupy the buildings is not known at this time. Lastly, the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the best available source for high-cube fulfillment center use would be the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update in the County of Riverside. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local

high-cube fulfillment center sites located throughout Southern California (specifically Riverside County and San Bernardino County). However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE Trip Generation Manual for Land Use Code 154 (high-cube transload/short-term storage) have been utilized. These rates are consistent with the rates used for other similar projects through Riverside and San Bernardino Counties. The WSP trip generation rates for high-cube fulfillment center use are slightly more conservative than the latest non-sort facility rate provided in the ITE Trip Generation Manual. It should be noted, Saturday peak hour trip generation rates are not readily available in the ITE Trip Generation Manual or the High-Cube Warehouse Trip Generation Study. As such, Saturday weekend peak hour trip generation rates were developed utilizing a ratio of the Saturday and PM peak hour trip generation rates from the Warehousing land use (ITE Land Use Code 150).

- The trip generation rates for both the Active and Public Parks are based on the trip generation rates published by SANDAG in its (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region (April 2002).
- Business Park has been utilized to derive site specific trip generation for up to 1,819,697 square feet of business park uses within the Project. For the Business Park use, a blended rate has been used based on the ITE description for Business Park that the average mix is 20 to 30 percent office/commercial and 70 to 80 percent industrial/warehousing. As such, 30% of the business park area has been designated as office related uses, while the remaining 70% of the business park area has been allocated to warehousing uses. As such, the trip generation rates for ITE Land Use Code 710 (General Office) and ITE Land Use Code 150 (Warehousing) as published in the ITE Trip Generation Manual (2021) have been utilized to calculate trip generation for up to 1,819,697 square feet of business park use.
- Shopping Plaza (ITE Land Use Code 821) is a new land use category from the ITE Trip Generation Manual (2021) for shopping centers between 40,000 to 150,000 square feet. The rates for “without grocery” have been utilized to calculate the trip generation for up to 106,858 square feet within the mixed-use area of the Project.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between commercial retail use and employees of the business park/warehouse uses and can be made either by walking or using internal roadways without using external streets. For example, employees of the business park use may visit the commercial retail use without leaving the site and are therefore considered as vehicle trips that are internal to the site. The internal capture rate for the retail, office, and restaurant uses on-site are based on the NCHRP 684 Internal Trip Capture Estimation Tool. As the project is proposed to include commercial retail uses, pass-by percentages have been obtained from the ITE Trip Generation Handbook (3<sup>rd</sup> Edition, 2017). (8)

**TABLE 4-1: CALCULATED TRIP GENERATION RATES**

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

<sup>2</sup> TSF = thousand square feet; AC = Acres

<sup>3</sup> Vehicle Mix Source: High Cube Warehouse Trip Generation Study, WSP, January 29, 2019.

Inbound and outbound split source: ITE Trip Generation Manual, Eleventh Edition (2021) for ITE Land Use Code 154.

<sup>4</sup> Trip Generation Source: SANDAG (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002. For Developed and Undeveloped Parks.

<sup>5</sup> Trip generation rates based on the regression equation are not available for the Saturday peak hour, due to limitations in the ITE Trip Generation Manual for ITE Land Use Code 710. As such, the average rate has been utilized.

<sup>6</sup> The ITE Trip Generation Manual, Eleventh Edition (2021), does not provide Saturday trip generation rates for industrial uses. As such, the Saturday peak hour trip generation rates are based on the breakdown of the trip rates, by vehicle type, during the PM peak hour.

**4.1.2 PROPOSED PROJECT TRIP GENERATION**

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project are shown on Table 4-2. In order to accurately reflect the impact that heavy trucks would have on the street system, Project trips have been further broken down between passenger cars and trucks for each of the peak hours and weekday daily trip generation for the high-cube fulfillment center warehouse and business park uses. As shown on Table 4-2, the proposed land use anticipated to generate a total of 35,314 trip-ends per day with 1,761 AM peak hour trips, 3,389 PM peak hour trips, and 1,642 weekend Saturday peak hour trips.

For the purposes of this analysis, it is proposed that the actual vehicles be utilized in order to reflect the effects of heavy trucks most accurately in the analysis. Trucks will be accounted for in the analysis as a percentage of total traffic, which will be input into the analysis software (Synchro 11). As such, trip generation is reflected in actual vehicles only and not in PCE.

**TABLE 4-2: PROJECT TRIP GENERATION SUMMARY**

Land Use <sup>5</sup>	Quantity Units <sup>1</sup>	AM Peak Hour			PM Peak Hour			Weekday	Saturday Peak Hour

<sup>1</sup> TSF = thousand square feet; AC = Acres

<sup>2</sup> Total Trips = Passenger Cars + Truck Trips.

<sup>3</sup> Internal trip reduction based on NCHRP 684 Internal Trip Capture Estimation Tool for the passenger car trips and commercial retail.

<sup>4</sup> Pass-by reduction percentage source: ITE *Trip Generation Handbook*, 3rd Edition (2017).

<sup>5</sup> 2-axle trucks have been evaluated as trucks as opposed to delivery vans or passenger cars.

## 4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding land uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the March JPA, City of Moreno Valley, and City of Riverside. At the request of the March JPA, passenger car and truck trip distributions are consistent with other March JPA projects within the immediate vicinity.

Given these differences between passenger cars and trucks, separate trip distributions were generated for both passenger cars and truck trips. Exhibit 4-1 illustrates the truck trip distribution patterns. Exhibits 4-2 illustrates the trip distribution patterns for passenger cars. Each of these distribution patterns were reviewed by the March JPA, County of Riverside, City of Riverside, and City of Moreno Valley as part of the TA scoping process (see Appendix 1.1). Truck traffic will be directed to utilize Cactus Avenue to the I-215 Freeway; however, it is anticipated some trucks may use Meridian Parkway to head north or south to access the I-215 Freeway or other facilities via Alessandro Boulevard and Van Buren Boulevard. All mixed-use traffic will utilize Cactus Avenue to the east instead of utilizing Barton Street.

## 4.3 MODAL SPLIT

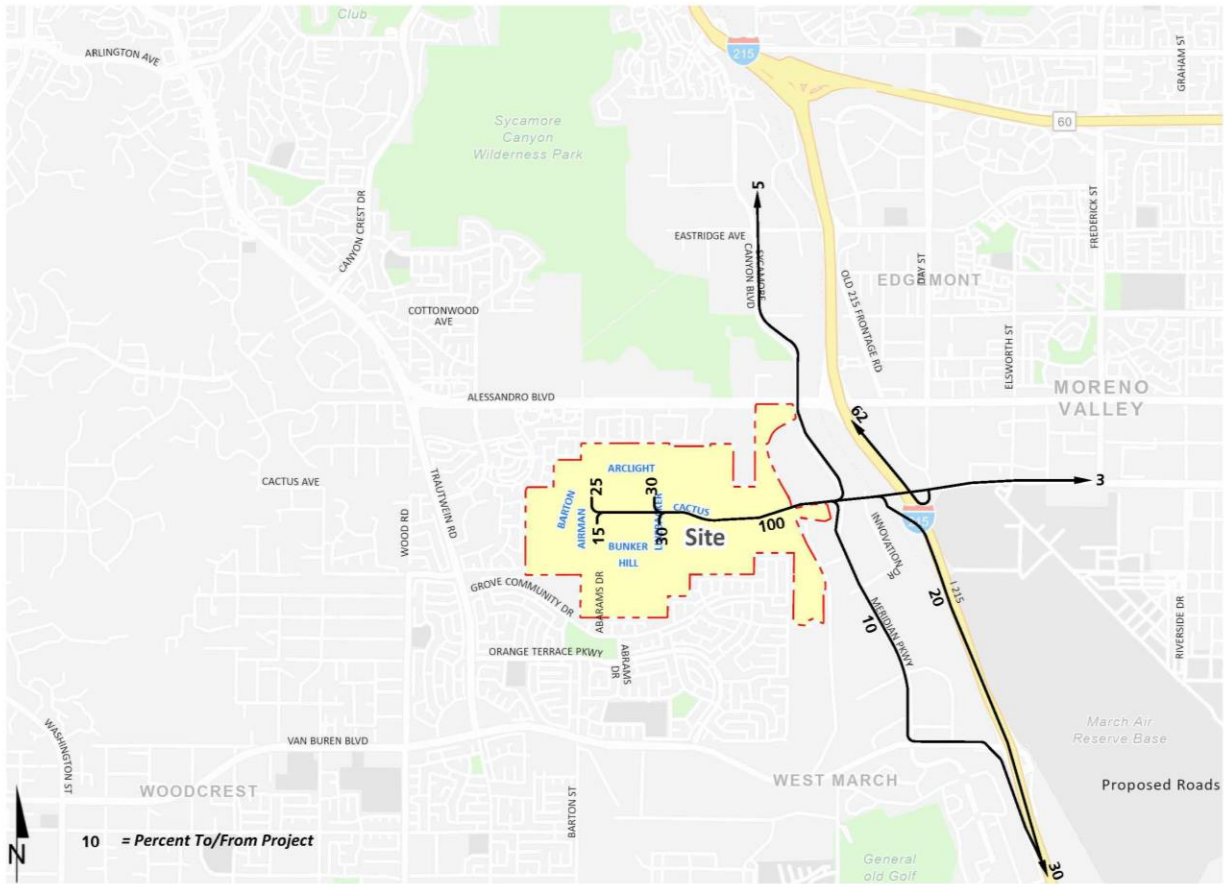

The potential for Project trips to be reduced by the use of public transit, walking or bicycling has not been included as part of the Project's estimated trip generation. Essentially, the Project's traffic projections are "conservative" in that these alternative travel modes would reduce the forecasted traffic volumes.

## 4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, the Project ADT and weekday peak hour intersection turning movement volumes are shown on Exhibit 4-3. The Project weekend peak hour intersection turning movement volumes are shown on Exhibit 4-4.

## 4.5 BACKGROUND TRAFFIC

### 4.5.1 OPENING YEAR CUMULATIVE CONDITIONS

Future year traffic forecasts have been based upon background (ambient) growth at 2.0% per year. The total ambient growth is 14.87% for 2028 conditions (2.0% per year compounded over 7 years). The ambient growth factor is intended to approximate regional traffic growth. This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects. Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies. Opening Year Cumulative (2028) traffic volumes are provided in Section 7 of this report. The traffic generated by the proposed Project was then manually added to the base volume to determine Opening Year Cumulative “With Project” forecasts conditions. Conservatively, this TA estimates the area ambient traffic growth and then adds traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed ambient growth rates; and some of these related projects may not be implemented and operational within the 2028 Opening Year time frame assumed for the Project (see also Section 4.6 *Cumulative Development Traffic*).

### 4.5.2 HORIZON YEAR (2045) CONDITIONS

The Horizon Year (2045) traffic conditions were derived from the latest County of Riverside Transportation Analysis Model (RIVCOM) using accepted procedures for model forecast refinement and smoothing. The traffic forecasts reflect the area-wide growth anticipated between Existing conditions and Horizon Year conditions. See additional discussion in Section 4.7 *Horizon Year (2045) Volume Development*.

## 4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the March JPA. The cumulative projects listed are those that would generate traffic and would contribute traffic to study area intersections. Cumulative projects from the neighboring jurisdictions of County of Riverside, City of Moreno Valley, and City of Riverside have also been included.

Exhibit 4-5 illustrates the cumulative development location map. A summary of cumulative development projects and their proposed land uses are shown in Table 4-3. If applicable, the traffic generated by individual cumulative projects was manually added to the Opening Year Cumulative forecasts to ensure that traffic generated by the listed cumulative development projects in Table 4-3 are reflected as part of the background traffic. In an effort to conduct a conservative analysis, the cumulative projects are added in conjunction with the ambient growth identified in Section 4.5.1 *Background Traffic: Opening Year Cumulative Conditions*. Although it is unlikely that all of these cumulative projects would be fully built and occupied by Year 2028, they have been included in an effort to conduct a conservative analysis and overstate as opposed

to understate potential traffic deficiencies. Any other cumulative projects located beyond the cumulative study area that are not expected to contribute measurable traffic to study area intersections have not been included since the traffic would dissipate due to the distance from the Project site and study area intersections. Cumulative Only ADT and weekday peak hour intersection turning movement volumes are shown on Exhibit 4-6. Cumulative Only weekend peak hour intersection turning movement volumes are shown on Exhibit 4-7.

#### **4.7 HORIZON YEAR (2045) VOLUME DEVELOPMENT**

Traffic projections for Horizon Year (2045) without Project conditions were derived from the latest RIVCOM traffic model using accepted procedures for model forecast refinement. The post processing volume worksheets are provided in Appendix 4.1 of this TA.

In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year peak hour forecasts were refined using the model derived long-range forecasts, along with existing peak hour traffic count data collected at each analysis location in 2021 (or adjusted historic to 2021). Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year peak hour forecasts.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 765), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Long Range traffic conditions. However, review of the resulting model growth indicates negative growth for several study area intersections. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing or Opening Year Cumulative traffic conditions were not assumed as part of this analysis. Additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year forecasts. Horizon Year turning volumes were compared to Opening Year Cumulative volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between Opening Year Cumulative and Horizon Year traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2021) and Horizon Year traffic conditions. Future estimated peak hour traffic data was used for new intersections and intersections with an anticipated change in travel patterns to further refine the Horizon Year peak hour forecasts. Since the Saturday peak hour is not included within the SBTAM, future year forecast for the Saturday peak hour are based on ambient growth factors identified in the Southern California Association of Governments [Demographics and Growth Forecast](#), May 7, 2020.

The future Horizon Year peak hour turning movements were then reviewed by Urban Crossroads for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two freeway ramp locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

<sup>2</sup> DU = Dwelling Units; TSF = Thousand Square Feet; SP = Spaces; VFP = Vehicle Fueling Positions

## 5 E+P TRAFFIC CONDITIONS

This section discusses the traffic forecasts for E+P conditions and the resulting intersection operations, roadway segment analysis, traffic signal warrant, and freeway off-ramp queuing analyses. This analysis scenario is not a “real-world” scenario in that there would be some growth that occurs between baseline conditions and implementation of the Project. However, this analysis scenario has been provided for informational purposes only to identify the deficiencies and improvement needs for study area intersections and roadway segments when Project traffic is added directly to the baseline condition.

### 5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for E+P conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for E+P conditions only (e.g., intersection and roadway improvements at the Project’s frontage and driveways).

### 5.2 EXISTING PLUS PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for E+P traffic conditions are shown on Exhibit 5-1. The weekend Saturday peak hour intersection turning movement volumes for E+P conditions are shown on Exhibit 5-2.

### 5.3 INTERSECTION OPERATIONS ANALYSIS

E+P peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 5-1 for E+P traffic conditions, which indicates that the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours, in addition to intersections previously identified under Existing (2021) conditions:

- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS E AM peak hour; LOS F PM peak hour
- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS F PM peak hour only

The intersection operations analysis worksheets for E+P traffic conditions are included in Appendix 5.1.

\* **BOLD** = Significant Impact

<sup>1</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **TS** = Improvement

<sup>2</sup> For intersections within the jurisdiction of March JPA, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. However, if the pre-project condition is already below LOS D (or acceptable LOS), provide improvements if the Project contributes more than 2% of the total traffic.

<sup>3</sup> For intersections within the jurisdiction of the City of Riverside, deficient occurs (improvements needed) when the addition of project related trips causes either peak hour LOS to degrade from acceptable (LOS A through D) to unacceptable levels (LOS E/F) or the peak hour delay to increase as follows:

- LOS A/B = By 10.0 seconds
- LOS C = By 8.0 seconds
- LOS D = By 5.0 seconds
- LOS E = By 2.0 seconds
- LOS F = By 1.0 seconds

<sup>4</sup> For intersections within the jurisdiction of Caltrans, or the County of Riverside, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels.

<sup>5</sup> For intersections within the City of Moreno Valley, provide improvements if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. If the pre-project condition is at unacceptable LOS and Project increases delay by 5.0 or more, provide improvements to offset the increase in delay.

### 5.4 ROADWAY SEGMENT ANALYSIS

The roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 5-2 provides a summary of the E+P conditions roadway segment capacity analysis based on the applicable roadway segment capacity thresholds. As shown on Table 5-2, the following additional study area roadway segments are anticipated to operate at an unacceptable LOS based on the applicable planning level daily roadway capacity thresholds, in addition to the segment identified under Existing (2021) traffic conditions:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

**TABLE 5-2: ROADWAY SEGMENT ANALYSIS FOR E+P CONDITIONS**

#	Roadway	Segment Limits	Roadway Section	LOS Capacity <sup>1</sup>	Existing			E+P			Acceptable LOS
					2021	V/C <sup>2</sup>	LOS <sup>3</sup>	2021	V/C <sup>2</sup>	LOS <sup>3</sup>

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> These maximum roadway capacities are based on the applicable agency's thresholds.

<sup>2</sup> V/C = Volume to Capacity Ratio

<sup>3</sup> LOS = Level of Service

### 5.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

Based on the traffic signal warrant analysis for E+P traffic conditions, the following study area intersections are anticipated to meet planning level (ADT) volume-based traffic signal warrants in addition to the locations previously warranted under Existing traffic conditions (see Appendix 5.2):

- Airman Dr. & Cactus Av. (#15)
- Linebacker Dr. & Cactus Av. (#18)

## 5.6 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 5-3. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 5-3, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95<sup>th</sup> percentile traffic flows for E+P traffic conditions, consistent with Existing (2021) traffic conditions. Worksheets for E+P traffic conditions off-ramp queuing analysis are provided in Appendix 5.3.

## 5.7 DEFICIENCIES AND IMPROVEMENTS

### 5.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

This section provides a summary of Project deficiencies and identified improvements. Based on the deficiency criteria discussed in Section 2.7 *Deficiency Criteria*, study area intersections were found to be deficient. The effectiveness of the improvement strategies presented in Table 5-4 address the E+P deficiencies as the recommendations improve the operations back to pre-project conditions (or better) or within the allowable net change in delay per the applicable deficiency criteria for each agency. Analysis worksheets, with improvements, for E+P traffic conditions are provided in Appendix 5.4.

### 5.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT ROADWAY SEGMENT

Additional roadway widening for the deficient roadway segments has not been recommended as acceptable or improved peak hour traffic operations can be achieved with the existing lanes or with the improvements shown on Table 5-4.

### 5.7.3 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 5-3, there are no anticipated peak hour queuing issues at the I-215 Freeway off-ramps for E+P traffic conditions, consistent with Existing (2021) traffic conditions. As such, no improvements have been recommended.

**TABLE 5-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR E+P CONDITIONS**

Intersection	Movement <sup>3</sup>	Available Stacking Distance (Feet) <sup>3</sup>	Existing (2021)						E+P

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

**TABLE 5-4: INTERSECTION ANALYSIS FOR E+P CONDITIONS WITH IMPROVEMENTS**

#	Intersection	Traffic Control <sup>3</sup>	Intersection Approach Lanes <sup>1</sup>												Delay <sup>2</sup> (secs.)			Level of Service

\* **BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
 L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn Lane; **1** = Improvement  
<sup>2</sup> Per the Highway Capacity Manual 6th Edition, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.  
<sup>3</sup> AWS = All-Way Stop; CSS = Cross-street Stop; TS = Traffic Signal  
<sup>4</sup> The two intersecting roadways are built to their ultimate width as designated in the General Plan. Based on recent comments and the jurisdiction's traffic study guidelines, infeasible improvements have not been recommended.  
<sup>5</sup> There are no feasible intersection improvements. As such, improvements have not been identified.  
<sup>6</sup> Recommended improvement is for a southbound shared left-through lane which can be accommodated through restriping (no additional pavement required).

## 6 EAP (2028) TRAFFIC CONDITIONS

This section discusses the traffic forecasts for EAP conditions and the resulting intersection operations, roadway segment analysis, traffic signal warrant, and freeway off-ramp queuing analyses.

### 6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for EAP conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for EAP conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways).

### 6.2 EXISTING PLUS AMBIENT GROWTH PLUS PROJECT (EAP) TRAFFIC VOLUME FORECASTS

This scenario includes Existing traffic volumes plus ambient growth (14.87%) plus Project traffic. The ADT and weekday AM and PM peak hour intersection turning movement volumes which can be expected for EAP traffic conditions are shown on Exhibit 6-1. The weekend Saturday peak hour intersection turning movement volumes for EAP traffic conditions are shown on Exhibit 6-2.

### 6.3 INTERSECTION OPERATIONS ANALYSIS

EAP peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2 *Methodologies* of this TA. The intersection analysis results are summarized in Table 6-1 for EAP traffic conditions, which indicates that the following additional study area intersections are anticipated to operate at an unacceptable LOS during the peak hours, in addition to intersections previously identified under Existing (2021) conditions:

- Washington St. & Van Buren Bl. (#1) – LOS E AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS E AM peak hour; LOS F PM peak hour
- Wood Rd. & Van Buren Bl. (#4) – LOS E AM and PM peak hours
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS E AM peak hour only
- Trautwein Rd. & Van Buren Bl. (#8) – LOS E AM peak hour only
- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOE E AM peak hour; LOS F PM peak hour

The intersection operations analysis worksheets for EAP traffic conditions are included in Appendix 6.1.

\* **BOLD** = Significant Impact

<sup>1</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **IS** = Improvement

<sup>2</sup> For intersections within the jurisdiction of March JPA, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. However, if the pre-project condition is already below LOS D (or acceptable LOS), provide improvements if the Project contributes more than 2% of the total traffic.

<sup>3</sup> For intersections within the jurisdiction of the City of Riverside, deficient occurs (improvements needed) when the addition of project related trips causes either peak hour LOS to degrade from acceptable (LOS A through D) to unacceptable levels (LOS E/F) or the peak hour delay to increase as follows:

- LOS A/B = By 10.0 seconds
- LOS C = By 8.0 seconds
- LOS D = By 5.0 seconds
- LOS E = By 2.0 seconds
- LOS F = By 1.0 seconds

<sup>4</sup> For intersections within the jurisdiction of Caltrans, or the County of Riverside, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels.

<sup>5</sup> For intersections within the City of Moreno Valley, provide improvements if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. If the pre-project condition is at unacceptable LOS and Project increases delay by 5.0 or more, provide improvements to offset the increase in delay.

### 6.4 ROADWAY SEGMENT ANALYSIS

The roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 6-2 provides a summary of the EAP conditions roadway segment capacity analysis based on the applicable roadway segment capacity thresholds. As shown on Table 6-2, the following additional study area roadway segments are anticipated to operate at an unacceptable LOS based on the applicable planning level daily roadway capacity thresholds, in addition to the segment identified under Existing (2021) traffic conditions:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

**TABLE 6-2: ROADWAY SEGMENT ANALYSIS FOR EAP (2028) CONDITIONS**

#	Roadway	Segment Limits	Roadway Section	LOS Capacity <sup>1</sup>	Existing			EAP			Acceptable LOS
					2021	V/C <sup>2</sup>	LOS <sup>3</sup>	2028	V/C <sup>2</sup>	LOS <sup>3</sup>

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> These maximum roadway capacities are based on the applicable agency's thresholds.

<sup>2</sup> V/C = Volume to Capacity Ratio

<sup>3</sup> LOS = Level of Service

### 6.5 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional unsignalized study area intersections anticipated to meet either peak hour volume-based or planning level (ADT) volume-based traffic signal warrants for EAP (2028) traffic conditions in addition to the intersections warranted under Existing and E+P traffic conditions (see Appendix 6.2).

## 6.6 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 6-3 for EAP traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 6-3, there are no movements that are anticipated to experience queuing issues during the weekday AM, weekday PM, or weekend Saturday peak 95<sup>th</sup> percentile traffic flows for EAP traffic conditions, consistent with Existing (2021) traffic conditions. Worksheets for EAP traffic conditions off-ramp queuing analysis are provided in Appendix 6.3.

## 6.7 DEFICIENCIES AND IMPROVEMENTS

### 6.7.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

This section provides a summary of Project deficiencies and identified improvements. Based on the deficiency criteria discussed in Section 2.7 *Deficiency Criteria*, study area intersections were found to be deficient. The effectiveness of the improvement strategies presented in Table 6-4 address the EAP deficiencies as the recommendations improve the operations back to pre-project conditions (or better) or within the allowable net change in delay per the applicable deficiency criteria for each agency. Analysis worksheets, with improvements, for EAP traffic conditions are provided in Appendix 6.4.

### 6.7.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT ROADWAY SEGMENT

Additional roadway widening for the deficient roadway segments has not been recommended as acceptable or improved peak hour traffic operations can be achieved with the existing lanes or with the improvements shown on Table 6-4.

### 6.7.3 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 6-3, there are no anticipated peak hour queuing issues at the I-215 Freeway off-ramps for EAP traffic conditions, consistent with Existing (2021) traffic conditions. As such, no improvements have been recommended.

**TABLE 6-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EAP (2028) CONDITIONS**

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

**TABLE 6-4: INTERSECTION ANALYSIS FOR EAP (2028) CONDITIONS WITH IMPROVEMENTS**

\* **BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; >= Right-Turn Overlap Phasing; >>= Free Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual 6th Edition, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-street Stop; TS = Traffic Signal

<sup>4</sup> There are no feasible intersection improvements. As such, improvements have not been identified.

<sup>5</sup> Recommended improvements can be accommodated through implementing N/S from split phasing to protected left turn phasing. Lead-lag operations should be implemented for the northbound and southbound approaches to avoid conflicting left turns. Additionally, the northbound approach should be restriped to provide one left turn lane and one shared through-right turn lane; the southbound approach should be restriped to provide one left turn lane, one through lane, and one right turn lane.

## **7 OPENING YEAR CUMULATIVE (2028) TRAFFIC CONDITIONS**

This section discusses the methods used to develop Opening Year Cumulative (2028) Without and With Project traffic forecasts, and the resulting intersection operations, roadway segment, traffic signal warrant, and freeway off-ramp queuing analyses.

### **7.1 ROADWAY IMPROVEMENTS**

The lane configurations and traffic controls assumed to be in place for Opening Year Cumulative (2028) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Opening Year Cumulative conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Opening Year Cumulative conditions only.

### **7.2 OPENING YEAR CUMULATIVE (2028) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS**

This scenario includes Existing traffic volumes plus an ambient growth factor of 14.87% plus traffic from pending and approved but not yet constructed known development projects in the area. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2028) Without Project traffic conditions are shown on Exhibit 7-1. The weekend Saturday peak hour volumes for Opening Year Cumulative (2028) Without Project traffic conditions are shown on Exhibit 7-2.

### **7.3 OPENING YEAR CUMULATIVE (2028) WITH PROJECT TRAFFIC VOLUME FORECASTS**

This scenario includes Opening Year Cumulative (2028) Without Project traffic in conjunction with the addition of Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Opening Year Cumulative (2028) With Project traffic conditions are shown on Exhibit 7-3. The weekend Saturday peak hour volumes for Opening Year Cumulative (2028) With Project traffic conditions are shown on Exhibit 7-4.

## 7.4 INTERSECTION OPERATIONS ANALYSIS

### 7.4.1 OPENING YEAR CUMULATIVE (2028) WITHOUT PROJECT TRAFFIC CONDITIONS

Opening Year Cumulative (2028) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection analysis results are summarized in Table 7-1, which indicates that the following study area intersections are anticipated to continue to operate at an unacceptable LOS during the peak hours under Opening Year Cumulative (2028) Without Project traffic conditions:

- Washington St. & Van Buren Bl. (#1) – LOS F AM and PM peak hours
- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS F AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS F AM and PM peak hours
- Wood Rd. & Van Buren Bl. (#4) – LOS F AM and PM peak hours
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM peak hour only
- Trautwein Rd. & Grove Community Dr. (#6) – LOS E AM peak hour only
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS F AM peak hour only
- Trautwein Rd. & Van Buren Bl. (#8) – LOS F AM and PM peak hours
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Alessandro Bl. (#11) – LOS E AM peak hour only
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM and PM peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS E AM peak hour; LOS F PM peak hour
- Meridian Pkwy. & Van Buren Bl. (#26) – LOS F AM and PM peak hours
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only
- I-215 NB Ramps & Cactus Av. (#31) – LOS F AM and PM peak hours
- I-215 SB Ramps & Van Buren Bl. (#32) – LOS F PM peak hour only
- Old 215 Frontage Rd. & Alessandro Bl. (#34) – LOS E AM peak hour only
- Elsworth St. & Cactus Av. (#36) – LOS F AM and PM peak hours
- Frederick St. & Cactus Av. (#37) – LOS E AM peak hour only

The intersection operations analysis worksheets for Opening Year Cumulative (2028) Without Project traffic conditions are included in Appendix 7.1 of this TA.

\* BOLD = Significant Impact

-- = Not applicable for this jurisdiction

<sup>1</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **TS** = Improvement

<sup>2</sup> For intersections within the jurisdiction of the March JPA, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. However, if the pre-project condition is already below LOS D (or acceptable LOS), provide improvements if the Project contributes more than 2% of the total traffic.

<sup>3</sup> For intersections within the jurisdiction of the City of Riverside, deficient occurs (improvements needed) when the addition of project related trips causes either peak hour LOS to degrade from acceptable (LOS A through D) to unacceptable levels (LOS E/F) or the peak hour delay to increase as follows:

- LOS A/B = By 10.0 seconds
- LOS C = By 8.0 seconds
- LOS D = By 5.0 seconds
- LOS E = By 2.0 seconds
- LOS F = By 1.0 seconds

<sup>4</sup> For intersections within the jurisdiction of Caltrans, or the County of Riverside, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels.

<sup>5</sup> For intersections within the City of Moreno Valley, provide improvements if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. If the pre-project condition is at unacceptable LOS and Project increases delay by 5.0 or more, provide improvements to offset the increase in delay.

#### 7.4.2 OPENING YEAR CUMULATIVE (2028) WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-1, the following additional study area intersection is anticipated to operate at an unacceptable LOS during the peak hours with the addition of Project traffic, in addition to the intersections identified under Opening Year Cumulative (2028) Without Project traffic conditions:

- Brown St. & Alessandro Bl. (#20) – LOS F PM and Saturday peak hours

The intersection operations analysis worksheets for Opening Year Cumulative (2028) With Project traffic conditions are included in Appendix 7.2.

#### 7.5 ROADWAY SEGMENT ANALYSIS

The roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 7-2 provides a summary of the Opening Year Cumulative (2028) Without Project conditions roadway segment capacity analysis based on the applicable roadway segment capacity thresholds. As shown on Table 7-2, the following additional study area roadway segments are anticipated to operate at an unacceptable LOS based on the applicable planning level daily roadway capacity thresholds:

- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS F
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

With the addition of Project traffic, the following additional study area roadway segments are anticipated to operate at a deficient LOS for Opening Year Cumulative (2028) With Project traffic conditions:

- Alessandro Bl., from Meridian Pkwy. to I-215 Freeway (#5) – LOS E
- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOS F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS E
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS E

**TABLE 7-2: ROADWAY SEGMENT ANALYSIS FOR OPENING YEAR CUMULATIVE (2028) CONDITIONS**

#	Roadway	Segment Limits	Roadway Section	LOS Capacity <sup>1</sup>	2028 Without Project			2028 With Project			Acceptable LOS

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).  
<sup>1</sup> These maximum roadway capacities are based on the applicable agency's thresholds.  
<sup>2</sup> V/C = Volume to Capacity Ratio  
<sup>3</sup> LOS = Level of Service

### 7.6 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional unsignalized study area intersections anticipated to meet either peak hour volume-based or planning level (ADT) volume-based traffic signal warrants for Opening Year Cumulative (2028) Without and With Project traffic conditions in addition to those previously warranted under Existing and E+P traffic conditions (see Appendix 7.3 and Appendix 7.4).

### 7.7 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 7-3 for Opening Year Cumulative (2028) traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 7-3, there are no movements that are anticipated to experience queuing issues during the weekday AM, weekday PM, or weekend Saturday peak 95<sup>th</sup> percentile traffic flows for Opening Year Cumulative (2028) Without and With Project traffic conditions, consistent with Existing (2021) traffic conditions. Worksheets for Opening Year Cumulative (2028) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendix 7.5 and Appendix 7.6, respectively

**TABLE 7-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR OPENING YEAR CUMULATIVE (2028) CONDITIONS**

I-215 NB Ramps & Van Buren Blvd. (#33)	NBL	1,560	284	179	0	Yes	Yes	Yes	284	179	0	Yes	Yes	Yes
	NBR	580	33	47	0	Yes	Yes	Yes	33	47	0	Yes	Yes	Yes

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

## **7.8 DEFICIENCIES AND IMPROVEMENTS**

### **7.8.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS**

This section provides a summary of Project deficiencies and identified improvements. Based on the deficiency criteria discussed in Section 2.7 *Deficiency Criteria*, study area intersections were found to be deficient. The effectiveness of the improvement strategies presented in Table 7-4 address the Opening Year Cumulative (2028) deficiencies as the recommendations improve the operations back to pre-project conditions (or better) or within the allowable net change in delay per the applicable deficiency criteria for each agency. It should be noted, the following study area intersections fall below the applicable agency's deficiency criteria. As such, no improvements have been recommended at these locations:

- Trautwein Rd. & Grove Community Dr. (#6)
- Trautwein Rd. & Orange Terrace Pkwy. (#7)
- Old 215 Frontage Rd. at Alessandro Bl. (#34)
- Frederick St. & Cactus Av. (#37)

If not constructed by the Project, the Project Applicant should contribute to these improvements through payment of fair share or TUMF fees. Worksheets for Opening Year Cumulative (2028) with improvements HCM calculation worksheets are provided in Appendix 7.7.

### **7.8.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT ROADWAY SEGMENT**

Additional roadway widening for the deficient roadway segments has not been recommended as acceptable or improved peak hour traffic operations can be achieved with the existing lanes or with the improvements shown on Table 7-4.

### **7.8.3 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES**

As shown previously in Table 7-3, there are no anticipated peak hour queuing issues at the I-215 Freeway off-ramps for Opening Year Cumulative (2028) traffic conditions, consistent with Existing (2021) traffic conditions. As such, no improvements have been recommended.

**TABLE 7-4: INTERSECTION ANALYSIS FOR OPENING YEAR CUMULATIVE (2028) CONDITIONS WITH IMPROVEMENTS**

\* **BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.  
L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual 6th Edition, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-street Stop; TS = Traffic Signal

<sup>4</sup> The two intersecting roadways are built to their ultimate width as designated in the General Plan. Based on recent comments and the jurisdiction's traffic study guidelines, infeasible improvements have not been recommended.

<sup>5</sup> Recommended improvements shown can be accommodated through restriping (no additional pavement required).

<sup>6</sup> Recommended improvement includes modifying the traffic signal from protected left turn phasing to permissive left turn phasing on the northbound and southbound

<sup>7</sup> There are no feasible intersection improvements. As such, improvements have not been identified.

<sup>8</sup> Recommended improvement is for a southbound shared left-through lane which can be accommodated through restriping (no additional pavement required).

<sup>9</sup> Recommended improvements can be accommodated through implementing N/S from split phasing to protected left turn phasing. Lead-lag operations should be implemented for the northbound and southbound approaches to avoid conflicting left turns. Additionally, the northbound approach should be restriped to provide one left turn lane and one shared through-right turn lane; the southbound approach should be restriped to provide one left turn lane, one through lane, and one right turn lane.

<sup>10</sup> Improvement consists of restriping the southbound through lane to provide a shared left-through-right turn lane.

This Page Intentionally Left Blank

## 8 HORIZON YEAR (2045) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2045) Without and With Project traffic forecasts, and the resulting intersection operations, roadway segment, traffic signal warrant, and freeway off-ramp queuing analyses.

### 8.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2045) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways).
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages and driveways).
- Other parallel facilities, that although not evaluated for the purposes of this analysis, are anticipated to be in place for Horizon Year traffic conditions and would affect the travel patterns within the study area.

### 8.2 HORIZON YEAR (2045) WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes developed from the RIVCOM (see Section 4.7 *Horizon Year (2045) Volume Development* of this TA for a detailed discussion on the post-processing methodology). The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2045) Without Project traffic conditions are shown on Exhibit 8-1. The weekend Saturday peak hour volumes for Horizon Year (2045) Without Project traffic conditions are shown on Exhibit 8-2.

### 8.3 HORIZON YEAR (2045) WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes developed from the RIVCOM plus Project traffic. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2045) With Project traffic conditions are shown on Exhibit 8-3. The weekend Saturday peak hour volumes for Horizon Year (2045) Without Project traffic conditions are shown on Exhibit 8-4.

## 8.4 INTERSECTION OPERATIONS ANALYSIS

### 8.4.1 HORIZON YEAR (2045) WITHOUT PROJECT TRAFFIC CONDITIONS

Horizon Year (2045) peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection analysis results are summarized in Table 8-1, which indicates that the following study area intersections are anticipated to operate at an unacceptable LOS during the peak hours under Horizon Year (2045) Without Project traffic conditions:

- Washington St. & Van Buren Bl. (#1) – LOS F AM and PM peak hours
- Alessandro Bl. & Arlington Av./Chicago Av. (#2) – LOS F AM and PM peak hours
- Canyon Crest Dr./Overlook Pkwy. & Alessandro Bl. (#3) – LOS F AM and PM peak hours
- Wood Rd. & Van Buren Bl. (#4) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Trautwein Rd. & Alessandro Bl. (#5) – LOS F AM and PM peak hours
- Trautwein Rd. & Grove Community Dr. (#6) – LOS E AM peak hour only
- Trautwein Rd. & Orange Terrace Pkwy. (#7) – LOS F AM and PM peak hours
- Trautwein Rd. & Van Buren Bl. (#8) – LOS F AM and PM peak hours; LOS E Saturday peak hour
- Deercreek Dr. & Orange Terrace Pkwy. (#10) – LOS F AM peak hour only
- Barton St. & Alessandro Bl. (#11) – LOS F AM and PM peak hours
- Barton St. & Orange Terrace Pkwy. (#13) – LOS F AM and Saturday peak hours
- Barton St. & Van Buren Bl. (#14) – LOS F AM, PM, and Saturday peak hours
- Brown St. & Alessandro Bl. (#20) – LOS E AM peak hour only
- Meridian Pkwy. & Alessandro Bl. (#24) – LOS F AM and PM peak hours
- Meridian Pkwy. & Cactus Av. (#25) – LOS F AM and PM peak hours
- Meridian Pkwy. & Van Buren Bl. (#26) – LOS F AM and PM peak hours
- I-215 NB Ramps & Alessandro Bl. (#29) – LOS F AM peak hour only
- I-215 NB Ramps & Cactus Av. (#31) – LOS F AM and PM peak hours
- I-215 SB Ramps & Van Buren Bl. (#32) – LOS F AM and PM peak hours
- Old 215 Frontage Rd. & Alessandro Bl. (#34) – LOS F AM peak hour only
- Day St. & Alessandro Bl. (#35) – LOS F AM peak hour; LOS E PM peak hour
- Elsworth St. & Cactus Av. (#36) – LOS F AM and PM peak hours
- Frederick St. & Cactus Av. (#37) – LOS F AM peak hour only
- Graham St./Riverside Dr. & Cactus Av. (#38) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2045) Without Project traffic conditions are included in Appendix 8.1 of this TA.

\* BOLD = Significant Impact

-- = Not applicable for this jurisdiction

<sup>1</sup> CSS = Cross-street Stop; AWS = All-Way Stop; TS = Traffic Signal; **TS** = Improvement

<sup>2</sup> For intersections within the jurisdiction of March JPA, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. However, if the pre-project condition is already below LOS D (or acceptable LOS), provide improvements if the Project contributes more than 2% of the total traffic.

<sup>3</sup> For intersections within the jurisdiction of the City of Riverside, deficient occurs (improvements needed) when the addition of project related trips causes either peak hour LOS to degrade from acceptable (LOS A through D) to unacceptable levels (LOS E/F) or the peak hour delay to increase as follows:

- LOS A/B = By 10.0 seconds
- LOS C = By 8.0 seconds
- LOS D = By 5.0 seconds
- LOS E = By 2.0 seconds
- LOS F = By 1.0 seconds

<sup>4</sup> For intersections within the jurisdiction of Caltrans, or the County of Riverside, deficient occurs (improvements needed) if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels.

<sup>5</sup> For intersections within the City of Moreno Valley, provide improvements if the pre-project condition is at or better than LOS D (or acceptable LOS) and the project-generated traffic causes deterioration below acceptable levels. If the pre-project condition is at an unacceptable LOS and Project increases delay by 5.0 or more, provide improvements to offset the increase in delay.

### 8.4.2 HORIZON YEAR (2045) WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 8-1, the following additional study area intersections are anticipated to operate at a deficient LOS during one or both peak hours for Horizon Year (2045) With Project traffic conditions, in addition to the locations identified above for Horizon Year (2045) Without Project traffic conditions:

- Orange Terrace Pkwy. & Van Buren Bl. (#19) – LOS E PM peak hour only
- I-215 SB Ramps & Cactus Av. (#30) – LOS F PM peak hour only

The intersection operations analysis worksheets for Horizon Year (2045) With Project traffic conditions are included in Appendix 8.2.

### 8.5 ROADWAY SEGMENT ANALYSIS

The roadway segment capacities are approximate figures only and are used at the General Plan level to assist in determining the roadway functional classification (number of through lanes) needed to meet traffic demand. Table 8-2 provides a summary of the Horizon Year (2045) Without Project conditions roadway segment capacity analysis based on the applicable roadway segment capacity thresholds. As shown on Table 8-2, the following additional study area roadway segments are anticipated to operate at an unacceptable LOS based on the applicable planning level daily roadway capacity thresholds:

- Alessandro Bl. from Trautwein Rd. to Mission Grove Pkwy. (#1) – LOS F
- Alessandro Bl. from Mission Grove Pkwy. to Barton St. (#2) – LOS E
- Alessandro Bl. from Barton St. to Brown St. (#3) – LOS E
- Alessandro Bl. from Brown St. to Meridian Pkwy. (#4) – LOS E
- Alessandro Bl. from Meridian Pkwy. to I-215 Freeway (#5) – LOS F
- Meridian Pkwy. from Alessandro Bl. to Cactus Av. (#14) – LOS F
- Meridian Pkwy. from Cactus Av. to Van Buren Bl. (#15) – LOS F

With the addition of Project traffic, the following additional study area roadway segments are anticipated to operate at a deficient LOS for Horizon Year (2045) With Project traffic conditions:

- Cactus Av., from Airman Dr. to Linebacker Dr. (#6) – LOE F
- Cactus Av. from Linebacker Dr. to Brown St. (#7) – LOS E
- Cactus Av., from Brown St. to Meridian Pkwy. (#8) – LOS F
- Barton Rd. from Alessandro Bl. to Cactus Av. (#10) – LOS F

**TABLE 8-2: ROADWAY SEGMENT ANALYSIS FOR HORIZON YEAR (2045) CONDITIONS**

#	Roadway	Segment Limits	Roadway Section	LOS Capacity <sup>1</sup>	2040 Without Project			2040 With Project			Acceptable LOS

14	Meridian Pkwy.	Alessandro Bl. to Cactus Av.	4D	25,900	<b>37,099</b>	<b>1.43</b>	F	<b>38,905</b>	<b>1.50</b>	F	D
15		Cactus Av. to Van Buren Bl.	4D	25,900	<b>32,181</b>	<b>1.24</b>	F	<b>39,389</b>	<b>1.52</b>	F	D

**BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> These maximum roadway capacities are based on the applicable agency's thresholds.

<sup>2</sup> V/C = Volume to Capacity Ratio

<sup>3</sup> LOS = Level of Service

### 8.6 TRAFFIC SIGNAL WARRANTS ANALYSIS

There are no additional unsignalized study area intersection anticipated to meet either peak hour volume-based or planning level (ADT) volume-based traffic signal warrants for Horizon Year (2045) Without Project traffic conditions in addition to those previously warranted under Existing and E+P conditions (see Appendix 8.3). The intersection of Deercreek Drive and Grove Community Drive (#9) is anticipated to meet a planning level (ADT) volume-based traffic signal warrant under Horizon Year (2045) With Project traffic conditions (see Appendix 8.4).

### 8.7 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Alessandro Boulevard, Cactus Avenue, and Van Buren Boulevard interchanges, to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 8-3 for Horizon Year (2045) traffic conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 8-3, there are no movements that are anticipated to experience queuing issues during the weekday AM, weekday PM, or weekend Saturday peak 95<sup>th</sup> percentile traffic flows for Horizon Year (2045) Without and With Project traffic conditions, consistent with Existing (2021) traffic conditions. Worksheets for Horizon Year (2045) Without and With Project traffic conditions off-ramp queuing analysis are provided in Appendix 8.5 and Appendix 8.6, respectively.

**TABLE 8-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2045) CONDITIONS**

Intersection	Movement <sup>3</sup>	Available Stacking Distance (Feet) <sup>3</sup>	HY (2045) Without Project						HY (2045) With Project					
			95th Percentile Queue (Feet)			Acceptable? <sup>1</sup>			95th Percentile Queue (Feet)			Acceptable? <sup>1</sup>

<sup>1</sup> Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

<sup>2</sup> 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

<sup>3</sup> Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

## 8.8 DEFICIENCIES AND IMPROVEMENTS

### 8.8.1 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

This section provides a summary of Project deficiencies and identified improvements. Based on the deficiency criteria discussed in Section 2.7 *Deficiency Criteria*, study area intersections were found to be deficient. The effectiveness of the improvement strategies presented in Table 8-5 address the Horizon Year (2045) deficiencies as the recommendations improve the operations back to pre-project conditions (or better) or within the allowable net change in delay per the applicable deficiency criteria for each agency. It should be noted the following study area intersections fall below the applicable agency's deficiency criteria. As such, no improvements have been recommended at these locations:

- Trautwein Rd. & Grove Community Rd. (#6)
- Trauwein Rd. & Orange Terrace Pkwy. (#7)
- Deercreek Rd. & Orange Terrace Pkwy. (#10)
- Frederick Street at Cactus Avenue (#37)

If not constructed by the Project, the Project Applicant should contribute to these improvements through payment of fair share or TUMF fees. Worksheets for Horizon Year (2045) With Project, with improvements, HCM calculation worksheets are provided in Appendix 8.7.

### 8.8.2 IMPROVEMENTS TO ADDRESS DEFICIENCIES AT ROADWAY SEGMENT

Additional roadway widening for the deficient roadway segments has not been recommended as acceptable or improved peak hour traffic operations can be achieved with the existing lanes or with the improvements shown on Table 8-4. Most roadway segments are already constructed to their ultimate or assume the ultimate lanes.

### 8.8.3 IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 8-3, there are no anticipated peak hour queuing issues at the I-215 Freeway off-ramps for Horizon Year (2045) traffic conditions, consistent with Existing (2021) traffic conditions. As such, no improvements have been recommended.

**TABLE 8-4: INTERSECTION ANALYSIS FOR HORIZON YEAR (2045) CONDITIONS WITH IMPROVEMENTS**

\* **BOLD** = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

<sup>1</sup> When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; >= Right-Turn Overlap Phasing; >>= Free Right Turn Lane; 1 = Improvement

<sup>2</sup> Per the Highway Capacity Manual 6th Edition, overall average intersection delay and level of service are shown for intersections with a traffic signal or all way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

<sup>3</sup> AWS = All-Way Stop; CSS = Cross-street Stop; TS = Traffic Signal

<sup>4</sup> The two intersecting roadways are built to their ultimate width as designated in the General Plan. Based on recent comments and the jurisdiction's traffic study guidelines, infeasible improvements have not been recommended.

<sup>5</sup> Recommended improvements shown can be accommodated through restriping (no additional pavement required). Improvement includes modifying the traffic signal to implement lead-lag phasing for the eastbound and westbound left turns.

<sup>6</sup> Recommended improvement includes modifying the traffic signal from protected left turn phasing to permissive left turn phasing on the northbound and southbound

<sup>7</sup> There are no feasible intersection improvements. As such, improvements have not been identified.

<sup>8</sup> Improvement consists of restriping the southbound through lane to provide a shared left-through-right turn lane.

<sup>9</sup> Recommended improvements can be accommodated through implementing N/S from split phasing to protected left turn phasing. Lead-lag operations should be implemented for the northbound and southbound approaches to avoid conflicting left turns. Additionally, the northbound approach should be restriped to provide one left turn lane and one shared through-right turn lane; the southbound approach should be restriped to provide one left turn lane, one through lane, and one right turn lane.

This Page Intentionally Left Blank

## 9 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the March JPA are funded through a combination of improvements constructed by the Project, fee programs or fair share contributions. Fee programs applicable to the Project are described below.

### 9.1 RIVERSIDE COUNTY TRANSPORTATION UNIFORM MITIGATION FEE (TUMF)

The TUMF program is administered by the WRCOG based upon a regional Nexus Study most recently updated in 2016 to address major changes in right of way acquisition and improvement cost factors. (9) This regional program was put into place to ensure that development pays its fair share and that funding is in place for construction of facilities needed to maintain the requisite level of service and critical to mobility in the region. TUMF is a truly regional mitigation fee program and is imposed and implemented in every jurisdiction in Western Riverside County.

### 9.2 MEASURE A

Measure A, Riverside County's half-cent sales tax for transportation, was adopted by voters in 1988 and extended in 2002. It will continue to fund transportation improvements through 2039. Measure A funds a wide variety of transportation projects and services throughout the County. RCTC is responsible for administering the program. Measure A dollars are spent in accordance with a voter-approved expenditure plan that was adopted as part of the 1988 election.

### 9.3 FAIR SHARE CONTRIBUTION

Project improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the JPA's discretion). When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, for the applicable deficient study area intersection are provided in Table 9-1. These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases. It should be noted, at the time this traffic study was prepared, the City of Riverside does not have a program to collect fair share payments.

## **APPENDIX 1.1:**

### **TRAFFIC STUDY SCOPING AGREEMENT**

This Page Intentionally Left Blank

December 22, 2021

Mr. Dan Fairbanks  
March Joint Powers Authority  
14205 Meridian Parkway, Suite 140  
Riverside, California 92518

**SUBJECT: SCOPING ASSUMPTIONS FOR THE WEST CAMPUS UPPER PLATEAU TRAFFIC ANALYSIS**

Dear Mr. Dan Fairbanks:

The firm of Urban Crossroads, Inc. is pleased to submit this letter documenting the suggested scope of study for the West Campus Upper Plateau development (“Project”), which is located on either side of Barton Street and Cactus Avenue in the jurisdiction of the March Joint Powers Authority (March JPA) and unincorporated Riverside County (see Exhibit 1).

The proposed Project (see Exhibit 2) consists of the following uses:

- Building B – 1,330,000 square feet (SF) of high-cube fulfillment center warehouse use
- Building C – 600,000 SF of high-cube fulfillment center warehouse use
- Building E – 200,000 SF of business park use
- Industrial Area – 1,212,710 SF of high-cube fulfillment center warehouse use
- Business Park Area – 1,170,893 SF of business park use
- Mixed Use Area – 106,858 SF of retail use (25%)
- Mixed Use Area – 448,804 SF of business park use (75%)
- 10.03 Acre Active Park (with sports fields)
- 51.73 Acres of Public Park

The scope of work herein is intended to evaluate potential intersection operational deficiencies resulting from the anticipated trips to be generated by the proposed Project.

## **TRIP GENERATION**

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. Trip generation rates for the Project are shown in Table 1. In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (11<sup>th</sup> Edition, 2021), the High Cube Warehouse Trip Generation Study (WSP, January 2019), and the San Diego Association of Governments (SANDAG) (Not So) Brief Guide of Vehicular Traffic Generation Rates for the

San Diego Region (April 2002) were used to estimate the Project's trip generation. For purposes of the Traffic Analysis, the following ITE land use code and vehicle mix will be utilized for the Industrial Area:

- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 3,142,710 square feet of the proposed Project. The ITE Trip Generation Manual (2021) has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). While there is sufficient data to support use of the trip generation rates for non-sort facilities, the sort-facility rate appears to be unreliable because they are based on limited data (i.e., one to two surveyed sites). The proposed Project is speculative and whether a non-sort or sort facility end-user would occupy the buildings is not known at this time. Lastly, the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the best available source for high-cube fulfillment center use would be the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update in the County of Riverside. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites located throughout Southern California (specifically Riverside County and San Bernardino County). However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE Trip Generation Manual for Land Use Code 154 have been utilized. These rates are consistent with the rates used for other similar projects through Riverside and San Bernardino Counties. The WSP trip generation rates for high-cube fulfillment center use are slightly more conservative than the latest non-sort facility rate provided in the ITE Trip Generation Manual.
- The trip generation rates for both the Active and Public Parks are based on the trip generation rates published by SANDAG in their (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region (April 2002).
- Business Park has been utilized to derive site specific trip generation for up to 1,819,697 square feet of business park uses within the Project. For the Business Park use, a blended rate has been used based on the ITE description for Business Park that the average mix is 20 to 30 percent office/commercial and 70 to 80 percent industrial/warehousing. As such, 30% of the business park area has been designated as office related uses, while the remaining 70% of the business park area has been allocated to warehousing uses. As such, the trip generation rates for ITE Land Use Code 710 (General Office) and ITE Land Use Code 150 (Warehousing) as published in the ITE Trip Generation Manual (2021) have been utilized to calculate trip generation for up to 1,819,697 square feet of business park use.
- Shopping Plaza (ITE Land Use Code 821) is a new land use category from the ITE Trip Generation Manual (2021) for shopping centers between 40,000 to 150,000 square feet. The rates for "without grocery" have been utilized to calculate the trip generation for up to 106,858 square feet within the mixed-use area of the Project.

**TABLE 1: TRIP GENERATION RATES**

Land Use <sup>1</sup>	Units <sup>2</sup>	ITE LU Code	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total	
Warehousing <sup>3</sup>	TSF	150	0.115	0.020	0.135	0.317	0.903	1.220	12.440

General Office (351.268 TSF)			1.24	0.22	1.46	0.23	1.11	1.34	9.86
General Office (134.641 TSF)			1.43	0.26	1.69	0.27	1.33	1.60	11.32
Shopping Plaza (40-150 TSF)	TSF	821	1.07	0.66	1.73	2.54	2.65	5.19	67.52

<sup>1</sup> Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Eleventh Edition (2021).

<sup>2</sup> TSF = thousand square feet; AC = Acres

<sup>3</sup> Vehicle Mix Source: High Cube Warehouse Trip Generation Study, WSP, January 29, 2019.

Inbound and outbound split source: ITE Trip Generation Manual, Eleventh Edition (2021) for ITE Land Use Code 154.

<sup>4</sup> Trip Generation Source: SANDAG (Not So) Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region, April 2002. For Developed and Undeveloped Parks.

Internal capture is a percentage reduction that can be applied to the trip generation estimates for individual land uses to account for trips internal to the site. In other words, trips may be made between commercial retail use and employees of the business park/warehouse uses and can be made either by walking or using internal roadways without using external streets. For example, employees of the business park use may visit the commercial retail use without leaving the site and are therefore considered as vehicle trips that are internal to the site. The internal capture rate for the retail, office, restaurant, and residential uses on-site are based on the NCHRP 684 Internal Trip Capture Estimation Tool. As the project is proposed to include commercial retail uses, pass-by percentages have been obtained from the ITE Trip Generation Handbook (3<sup>rd</sup> Edition, 2017).

The trip generation summary illustrating daily, and peak hour trip generation estimates for the proposed Project are shown on Table 2. In order to accurately reflect the impact that heavy trucks would have on the street system, Project trips have been further broken down between passenger cars and trucks for each of the peak hours and weekday daily trip generation for the high-cube fulfillment center warehouse and business park uses. As shown on Table 2, the proposed land use anticipated to generate a total of 33,238 trip-ends per day with 1,581 AM peak hour trips and 3,251 PM peak hour trips.

For the purposes of this analysis, it is proposed that the actual vehicles be utilized in order to reflect the effects of heavy trucks most accurately in the analysis. Trucks will be accounted for in the analysis as a percentage of total traffic, which will be input into the analysis software (Synchro 11). As such, trip generation is reflected in actual vehicles only and not in passenger car equivalent (PCE).

**TABLE 2: PROJECT TRIP GENERATION SUMMARY**

Land Use	Quantity Units <sup>1</sup>	AM Peak Hour			PM Peak Hour			Daily
		In	Out	Total	In	Out	Total

<sup>1</sup> TSF = thousand square feet; AC = Acres

<sup>2</sup> Total Trips = Passenger Cars + Truck Trips.

<sup>3</sup> Internal trip reduction based on NCHRP 684 Internal Trip Capture Estimation Tool for the passenger car trips and commercial retail.

<sup>4</sup> Pass-by reduction percentage source: ITE [Trip Generation Handbook](#), 3rd Edition (2017).

## TRIP DISTRIBUTION

The Project trip distribution and assignment process represents the directional orientation of traffic to and from the Project site. The trip distribution pattern of passenger cars is heavily influenced by the geographical location of the site, the location of surrounding land uses, and the proximity to the regional freeway system. The trip distribution pattern for truck traffic is also influenced by the local truck routes approved by the March JPA, City of Riverside, City of Moreno Valley, and Caltrans. Truck traffic will be directed to utilize Cactus Avenue to the I-215 Freeway; however, it is anticipated some trucks may use Meridian Parkway to head north or south. Given these differences, separate trip distributions were generated for both passenger cars and truck trips. Exhibit 3 illustrates the trip distribution patterns for passenger cars and Exhibit 4 illustrates the truck trip distribution patterns. Exhibits 7 and 8 show the Project only average daily traffic (ADT) and peak hour turning volumes.

## STUDY AREA

### INTERSECTIONS

The study area intersections (Exhibit 3) were selected based on the guidelines outlined in The March Joint Powers Authority Traffic Impact Study Preparation Guide (dated February 10, 2020). Additional study area intersections have been included at the request of City of Riverside staff.

### ROADWAY SEGMENTS

The following roadway segments will be evaluated based on the applicable roadway capacities:

#	Roadway Segment	Limits
1	Alessandro Bl.	Trautwein Rd. to Mission Grove Pkwy.
2		Mission Grove Pkwy. to Barton Rd.
3		Barton Rd. to Brown St.
4		Brown St. to Meridian Pkwy.
5		Meridian Pkwy. to I-215 Freeway
6	Cactus Av.	Bandit Bl. West to Bandit Bl. East
7		Bandit Bl. East to Brown St.
8		Brown St. to Meridian Pkwy.
9		Meridian Pkwy. to I-215 Freeway
10	Barton Rd.	Alessandro Bl. to Cactus Av. (EVA)
11		Cactus Av. (EVA) to Grove Community Dr.
12	Brown St.	Alessandro Bl. to Cactus Av.
13	Sycamore Canyon Bl.	Cottonwood Av. to Alessandro Bl.
14	Meridian Pkwy.	Alessandro Bl. to Cactus Av.
15		Cactus Av. to Van Buren Bl.

## **ANALYSIS SCENARIOS**

### **EXISTING CONDITIONS**

Information for Existing (2021) conditions will be disclosed to represent the baseline traffic conditions. In light of the current economic conditions, it is recommended that the Existing baseline be developed based on an adjustment of both historic count data and new (2021) traffic count data. Weekday AM peak hour (7 AM – 9 AM) and PM peak hour (4 PM to 6 PM) turning movement counts have been collected at many the study area intersections shown on Exhibit 3 in August 2019. The traffic counts include the following vehicle classifications: Passenger Cars, 2-Axle Trucks, 3-Axle Trucks, and 4 or More Axle Trucks. These traffic counts were conducted while nearby schools were in session and operating on normal bell schedules. For intersections where historic traffic counts are not available, new traffic counts will be conducted and will be compared to historic count data adjusted to 2021 to determine adjustment factors.

### **EXISTING PLUS PROJECT (E+P)**

Existing plus Project analysis will be performed to determine the impacts of the proposed Project and includes the following traffic components:

- Existing (2021) traffic
- Proposed Project traffic

### **EXISTING PLUS AMBIENT GROWTH PLUS PROJECT (EAP)**

Existing plus Ambient Growth plus Project analysis will be performed to determine the impacts of the proposed Project and includes the following traffic components:

- Existing (2021) traffic
- Ambient growth (8.24%)
- Proposed Project traffic

### **OPENING YEAR CUMULATIVE (2025) ANALYSIS**

To assess potential cumulative traffic impacts, Opening Year Cumulative scenarios (identified below) will be evaluated in the traffic study.

- Opening Year Cumulative (2025) Without Project
  - Existing 2021 counts
  - Ambient growth (8.24%)
  - Cumulative Development traffic
- Opening Year Cumulative (2025) With Project

- Opening Year Cumulative (2025) Without Project
- Proposed Project traffic

## **HORIZON YEAR (2045) ANALYSIS**

The Horizon Year (2045) baseline traffic volume forecasts will be derived from the Riverside County Transportation Analysis Model (RivCOM) using accepted procedures for model forecast refinement and smoothing (uses a base year of 2018). Horizon Year scenarios (identified below) will be evaluated in the traffic study.

- Horizon Year (2045) Without Project
  - Horizon Year (2045) baseline traffic forecasts (From RivCOM)
- Horizon Year (2045) With Project
  - Horizon Year (2045) Without Project
  - Proposed Project traffic

## **INTERSECTION ANALYSIS METHODOLOGY**

For the purposes of this analysis, signalized intersection operations analysis will be based on the methodology described in the Highway Capacity Manual (HCM 6<sup>th</sup> Edition). Intersection levels of service (LOS) operations are based on an intersection's average control delay. Unsignalized intersections will be evaluated using the methodology described in the HCM 6<sup>th</sup> Edition. At two-way or side-street stop-controlled intersections, LOS for the intersection will be the worst LOS of all the individual movements. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

To represent the impact large trucks, buses and recreational vehicles have on traffic flow, truck traffic will be accounted for in the analysis as a percentage of total traffic at the study area intersections. In other words, the traffic volumes utilized for intersection analyses will utilize the actual vehicle traffic flow and trucks will be reflected in the analysis as a percentage of the total traffic flow, not PCE.

## **TRAFFIC SIGNAL WARRANTS**

Traffic signal warrant analysis will be conducted for unsignalized intersections operating at LOS E or F. Peak Hour Volume based Warrant 3 based on 2014 California Manual on Uniform Traffic Control Devices (MUTCD) will be utilized to determine whether a signal would be warranted. Planning level (ADT-based) traffic signal warrants will be run for all future intersections.

## LEVEL OF SERVICE (LOS) CRITERIA

The definitions of an operational deficiency for each of the applicable jurisdictions are as follows:

### MARCH JOINT POWERS AUTHORITY

Based on the March Joint Powers Authority Final Traffic Impact Study Preparation Guide (February 10, 2020), all intersections and roadway segments within the March JPA Planning Area shall operate at LOS D or better with limiting circumstances of LOS E to occur. LOS E may also be allowed to the extent that would support transit-oriented development (TOD) and walkable communities. LOS E is also acceptable during peak hours at interchange ramp intersections where ramp metering occurs. The Project is not proposed to be a TOD and neither the Alessandro Boulevard nor Cactus Avenue on-ramps are currently metered, as such, the minimum LOS utilized for the purposes of this analysis is LOS D.

### CITY OF RIVERSIDE

The City of Riverside General Plan states the City will strive to maintain LOS D or better on arterial streets wherever possible. At some key locations, such as City arterial roadways, which are used as freeway bypass by regional through traffic and at heavily traveled freeway intersections, LOS E may be acceptable as determined on a case-by-case basis. Locations that may warrant the LOS E standard include portions of Arlington Avenue/Alessandro Boulevard, Van Buren Boulevard throughout the City, portions of La Sierra Avenue, and selected freeway interchanges. A higher standard, such as LOS C or better, may be adopted for Local and Collector streets in residential areas. The City recognizes that along key free-way feeder segments during peak commute hours, LOS F may be expected due to regional travel patterns.

At the City's request, the analysis for all study area intersections and roadway segments that lie within the City of Riverside will be evaluated based on the guidelines outlined in the City's Traffic Impact Analysis Guidelines for Vehicle Miles Traveled and Level of Service Assessment (July 2020).

### CITY OF MORENO VALLEY

The Minimum LOS for the City of Moreno Valley is LOS D for intersections and roadway segments that are adjacent to freeway on/off ramps, and/or adjacent to employment generating land uses. LOS C is applicable to all other intersections and roadway segments. Boundary intersections are assumed to be LOS D.

### COUNTY OF RIVERSIDE

County of Riverside General Plan Policy C 2.1 states that the following minimum target levels of service have been designated for the review of development proposals in the unincorporated areas of Riverside County:

- LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non- Community

Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.

- LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans. LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.

Notwithstanding the forgoing minimum LOS targets, the Board of Supervisors may, on occasion by virtue of their discretionary powers, approve a project that fails to meet these LOS targets in order to balance congestion management considerations in relation to benefits, environmental impacts and costs, provided an Environmental Impact Report, or equivalent, has been completed to fully evaluate the impacts of such approval. Any such approval must incorporate all feasible mitigation measures, make specific findings to support the decision, and adopt a statement of overriding considerations.

#### **CALTRANS**

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State highway facilities; however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. If an existing State highway facility is operating at less than this target LOS, the existing measure of effectiveness should be maintained. In general, the region-wide goal for an acceptable LOS on all freeways, roadways segments, and intersections is D. For undeveloped or not densely developed locations, the goal may be to achieve LOS C.

#### **CUMULATIVE DEVELOPMENT PROJECTS**

Cumulative projects to be included in the analysis are listed in Table 3 and shown on Exhibit 8. It is requested that the JPA provide any new cumulative projects for inclusion in the traffic study. The same list will be shared with other agencies to obtain the latest cumulative projects for each applicable agency.

#### **SPECIAL ISSUES**

The following special issue will also be addressed as part of the Traffic Study:

- Parking Analysis: A summary of the proposed parking will be provided in the Traffic Study to demonstrate consistency with the JPA standards.
- Active Transportation: The Traffic Study will include a discussion of Active Transportation and will identify connections to the proposed parks.
- Queuing Analysis: Queuing analysis will be conducted for the I-215 Freeway off-ramp locations.

Mr. Dan Fairbanks  
March Joint Powers Authority  
December 22, 2021  
Page 10 of 11

- Traffic Calming: Project will extend Barton Road between its existing southern and northern termini. Traffic Study will identify potential traffic calming measures for Barton Road.
- Vehicle Miles Traveled: A vehicle miles traveled (VMT) analysis will be conducted separately and will be submitted under separate cover for review.

## CONCLUSION

Urban Crossroads, Inc. is pleased to submit this letter documenting the Project trip generation, trip distribution, and the recommended intersection analysis locations for the West Campus Upper Plateau Traffic Impact Study.

If you have any questions, please contact me directly at (949) 861-0177.

Respectfully submitted,

URBAN CROSSROADS, INC.

Charlene So, PE

Associate Principal
